FBP Food, Beverage and Pharmaceutical

Release: 6.0

CONTENTS

FBP10121 Certificate I in Food Processing 37
FBP10221 Certificate I in Baking 40
FBP20121 Certificate II in Food Processing 42
FBP20221 Certificate II in Baking 48
FBP20418 Certificate II in Pharmaceutical Manufacturing 51
FBP20521 Certificate II in Wine Industry Operations 54
FBP20618 Certificate II in Sugar Milling Support 60
FBP30121 Certificate III in Food Processing 65
FBP30321 Certificate III in Cake and Pastry 78
FBP30421 Certificate III in Bread Baking 81
FBP30521 Certificate III in Baking 84
FBP30721 Certificate III in Rice Processing 88
FBP30821 Certificate III in Pharmaceutical Manufacturing 94
FBP30921 Certificate III in Wine Industry Operations 98
FBP31018 Certificate III in Sugar Milling Industry Operations 106
FBP31121 Certificate III in High Volume Baking 111
FBP40221 Certificate IV in Baking 117
FBP40321 Certificate IV in Food Processing 121
FBP40421 Certificate IV in Food Science and Technology 127
FBP40518 Certificate IV in Pharmaceutical Manufacturing 132
FBP40621 Certificate IV in Artisan Fermented Products 137
FBP50121 Diploma of Food Science and Technology 142
FBP50221 Diploma of Food Safety Auditing 147
FBP50321 Diploma of Artisan Cheesemaking 151
FBPBEV2004 Identify key stages and beer production equipment in a brewery 155
Assessment Requirements for FBPBEV2004 Identify key stages and beer production equipment in a brewery 158
FBPBEV3001 Operate and monitor a wort production process 160
Assessment Requirements for FBPBEV3001 Operate and monitor a wort production process 163
FBPBEV3002 Prepare and monitor beer yeast propagation processes 165
Assessment Requirements for FBPBEV3002 Prepare and monitor beer yeast propagation processes 169
FBPBEV3003 Operate and monitor a brewery fermentation process 172
Assessment Requirements for FBPBEV3003 Operate and monitor a brewery fermentation process 176
FBPBEV3004 Operate and monitor a beer filtration process 179
Assessment Requirements for FBPBEV3004 Operate and monitor a beer filtration process 183
FBPBEV3005 Operate and monitor juice processing 185
Assessment Requirements for FBPBEV3005 Operate and monitor juice processing 188
FBPBEV3006 Control and monitor fruit and/or vegetable washing and milling 191
Assessment Requirements for FBPBEV3006 Control and monitor fruit and/or vegetable washing and milling 194
FBPBEV3007 Operate and monitor a beer maturation process 197
Assessment Requirements for FBPBEV3007 Operate and monitor a beer maturation process 200
FBPBEV3008 Manufacture roast and ground coffee 202
Assessment Requirements for FBPBEV3008 Manufacture roast and ground coffee 205
FBPBPG1001 Pack or unpack product manually 208

Assessment Requirements for FBPBPG1001 Pack or unpack product manually 211
FBPBPG2006 Operate the bottle capsuling process 213
Assessment Requirements for FBPBPG2006 Operate the bottle capsuling process.....216
FBPBPG2009 Operate a beverage packaging process.....219
Assessment Requirements for FBPBPG2009 Operate a beverage packaging process 222
FBPBPG2010 Operate a case packing process.....224
Assessment Requirements for FBPBPG2010 Operate a case packing process 227
FBPBPG2011 Operate a fill and seal process.....230
Assessment Requirements for FBPBPG2011 Operate a fill and seal process 233
FBPBPG2012 Operate a packaging process.....236
Assessment Requirements for FBPBPG2012 Operate a packaging process 239
FBPBPG3008 Operate an automated carton packing process 242
Assessment Requirements for FBPBPG3008 Operate an automated carton packing process.....246
FBPBPG3009 Operate an automated palletising process 249
Assessment Requirements for FBPBPG3009 Operate an automated palletising process .253
FBPBPG3010 Operate and monitor a carbonated beverage filling process.....256
Assessment Requirements for FBPBPG3010 Operate and monitor a carbonated beverage filling process.....260
FBPBPG3011 Operate and monitor a high speed wrapping process.....263
Assessment Requirements for FBPBPG3011 Operate and monitor a high speed wrapping process.....266
FBPBPG3012 Operate and monitor a form, fill and seal process 269
Assessment Requirements for FBPBPG3012 Operate and monitor a form, fill and seal process.....272
FBPBPG4001 Manage bottling and packaging processes 275
Assessment Requirements for FBPBPG4001 Manage bottling and packaging processes.278
FBPBPG4002 Manage filling and packaging of fermented beverages.....280
Assessment Requirements for FBPBPG4002 Manage filling and packaging of fermented beverages 284
FBPBPG4003 Coordinate wine operations packaging processes 286
Assessment Requirements for FBPBPG4003 Coordinate wine operations packaging processes 290
FBPCEL3019 Prepare and apply complex additions and finings 294
Assessment Requirements for FBPCEL3019 Prepare and apply complex additions and finings.....298
FBPCEL4001 Coordinate wine operations vintage processes 304
Assessment Requirements for FBPCEL4001 Coordinate wine operations vintage processes308
FBPCEL4002 Coordinate wine operations clarification processes 313
Assessment Requirements for FBPCEL4002 Coordinate wine operations clarification processes 317
FBPCEL4003 Coordinate wine operations filtration processes 322
Assessment Requirements for FBPCEL4003 Coordinate wine operations filtration processes 326
FBPCEL4004 Coordinate wine operations general cellar processes.....331
Assessment Requirements for FBPCEL4004 Coordinate wine operations general cellar processes 335
FBPCHE3003 Conduct cheese making operations 340
Assessment Requirements for FBPCHE3003 Conduct cheese making operations.....344
FBPCHE3004 Carry out processing for a range of artisan cheeses 347
Assessment Requirements for FBPCHE3004 Carry out processing for a range of artisan cheeses.....351
FBPCHE3005 Operate and monitor a cheese pressing and moulding process 354

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 3 of 4667
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for FBPCHE3005 Operate and monitor a cheese pressing and moulding process 357
FBPCHE4001 Prepare and present cheese 360
Assessment Requirements for FBPCHE4001 Prepare and present cheese 363
FBPCHE5005 Produce lactic acid coagulated artisan cheese 366
Assessment Requirements for FBPCHE5005 Produce lactic acid coagulated artisan cheese370
FBPCHE5006 Produce rennet coagulated artisan cheese 372
Assessment Requirements for FBPCHE5006 Produce rennet coagulated artisan cheese.377
FBPCHE5007 Produce acid and heat coagulated artisan cheese 380
Assessment Requirements for FBPCHE5007 Produce acid and heat coagulated artisan cheese 384
FBPCHE5008 Ripen artisan cheese 386
Assessment Requirements for FBPCHE5008 Ripen artisan cheese 389
FBPCHE5009 Carry out sampling and interpret tests for cheese production 391
Assessment Requirements for FBPCHE5009 Carry out sampling and interpret tests for cheese production....394
FBPCON2010 Operate an enrobing process 397
Assessment Requirements for FBPCON2010 Operate an enrobing process....400
FBPCON2011 Operate a chocolate tempering process 403
Assessment Requirements for FBPCON2011 Operate a chocolate tempering process....406
FBPCON3001 Operate a complex chocolate depositing process 409
Assessment Requirements for FBPCON3001 Operate a complex chocolate depositing process....412
FBPCON3002 Operate and monitor a boiled confectionery process 415
Assessment Requirements for FBPCON3002 Operate and monitor a boiled confectionery process....418
FBPCON3003 Operate and monitor a chocolate conching process 421
Assessment Requirements for FBPCON3003 Operate and monitor a chocolate conching process....424
FBPCON3004 Operate and monitor a confectionery depositing process 427
Assessment Requirements for FBPCON3004 Operate and monitor a confectionery depositing process 430
FBPCON3005 Operate and monitor a granulation and compression process 433
Assessment Requirements for FBPCON3005 Operate and monitor a granulation and compression process 437
FBPCON3006 Operate and monitor a panning process....440
Assessment Requirements for FBPCON3006 Operate and monitor a panning process ...443
FBPCON3007 Operate and monitor a chocolate refining process 446
Assessment Requirements for FBPCON3007 Operate and monitor a chocolate refining process....450
FBPCON3008 Operate and monitor a starch moulding process....453
Assessment Requirements for FBPCON3008 Operate and monitor a starch moulding process....457
FBPDPR2007 Operate a cooling and hardening process 460
Assessment Requirements for FBPDPR2007 Operate a cooling and hardening process..463
FBPDPR3001 Operate and monitor a curd production and cutting process 466
Assessment Requirements for FBPDPR3001 Operate and monitor a curd production and cutting process....469
FBPDPR3002 Operate and monitor a fermentation process 472
Assessment Requirements for FBPDPR3002 Operate and monitor a fermentation process475
FBPDPR3003 Control batch processing for powdered milk products 478
Assessment Requirements for FBPDPR3003 Control batch processing for powdered milk products 481

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 4 of 4667
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPDPR3004 Operate and monitor a butter churning process 483
Assessment Requirements for FBPDPR3004 Operate and monitor a butter churning process....486
FBPDPR3005 Operate and monitor a butter oil process 489
Assessment Requirements for FBPDPR3005 Operate and monitor a butter oil process..492
FBPEGG2003 Work on an egg grading floor....495
Assessment Requirements for FBPEGG2003 Work on an egg grading floor 498
FBPEGG2004 Operate egg grading and packing floor equipment....500
Assessment Requirements for FBPEGG2004 Operate egg grading and packing floor equipment 504
FBPFAV2002 Apply hydro-cooling processes to fresh produce....507
Assessment Requirements for FBPFAV2002 Apply hydro-cooling processes to fresh produce 510
FBPFAV3003 Conduct chemical wash for fresh produce....512
Assessment Requirements for FBPFAV3003 Conduct chemical wash for fresh produce 515
FBPFAV3004 Program fresh produce grading equipment....518
Assessment Requirements for FBPFAV3004 Program fresh produce grading equipment521
FBPFST4009 Label foods according to legislative requirements 523
Assessment Requirements for FBPFST4009 Label foods according to legislative requirements 526
FBPFST4013 Interpret and respond to food and/or beverage test results 528
Assessment Requirements for FBPFST4013 Interpret and respond to food and/or beverage test results....531
FBPFST4014 Apply sensory analysis in food and/or beverage production....533
Assessment Requirements for FBPFST4014 Apply sensory analysis in food and/or beverage production 536
FBPFST5010 Implement and review the preparation of milk for processing....538
Assessment Requirements for FBPFST5010 Implement and review the preparation of milk for processing 541
FBPFST5031 Identify the microbiological and biochemical properties of fermented food and/or beverages 544
Assessment Requirements for FBPFST5031 Identify the microbiological and biochemical properties of fermented food and/or beverages 547
FBPFSY1002 Follow work procedures to maintain food safety 550
Assessment Requirements for FBPFSY1002 Follow work procedures to maintain food safety 553
FBPFSY2002 Apply food safety procedures....555
Assessment Requirements for FBPFSY2002 Apply food safety procedures 558
FBPFSY2003 Maintain food safety when loading, unloading and transporting food 560
Assessment Requirements for FBPFSY2003 Maintain food safety when loading, unloading and transporting food....563
FBPFSY3003 Monitor the implementation of food safety and quality programs 565
Assessment Requirements for FBPFSY3003 Monitor the implementation of food safety and quality programs 568
FBPFSY3004 Participate in traceability activities....571
Assessment Requirements for FBPFSY3004 Participate in traceability activities 574
FBPFSY3005 Control contaminants and allergens in food processing....576
Assessment Requirements for FBPFSY3005 Control contaminants and allergens in food processing 580
FBPFSY4001 Supervise and maintain a food safety plan 582
Assessment Requirements for FBPFSY4001 Supervise and maintain a food safety plan.585
FBPFSY4003 Perform an allergen risk review 587
Assessment Requirements for FBPFSY4003 Perform an allergen risk review....591

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 5 of 4667
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFSY4004 Provide accurate food allergen information to consumers....593
Assessment Requirements for FBPFSY4004 Provide accurate food allergen information to consumers....596
FBPFSY4005 Conduct a traceability exercise....598
Assessment Requirements for FBPFSY4005 Conduct a traceability exercise....601
FBPFSY5002 Develop an allergen management program....603
Assessment Requirements for FBPFSY5002 Develop an allergen management program606
FBPFSY5003 Design a traceability system for food products....608
Assessment Requirements for FBPFSY5003 Design a traceability system for food products611
FBPFSY5004 Plan to mitigate food fraud....613
Assessment Requirements for FBPFSY5004 Plan to mitigate food fraud....616
FBPGPS3001 Operate and monitor a creamed honey manufacture process....618
Assessment Requirements for FBPGPS3001 Operate and monitor a creamed honey manufacture process....621
FBPGRA3017 Operate and monitor a liquid, mash or block stock feed process....624
Assessment Requirements for FBPGRA3017 Operate and monitor a liquid, mash or block stock feed process....627
FBPGRA3018 Operate and monitor a pelleting process....630
Assessment Requirements for FBPGRA3018 Operate and monitor a pelleting process ..633
FBPGRA3019 Prepare malted grain....636
Assessment Requirements for FBPGRA3019 Prepare malted grain....640
FBPGRA3020 Blend and dispatch malt....642
Assessment Requirements for FBPGRA3020 Blend and dispatch malt....645
FBPGRA3021 Control batch processing for micronutrients or additives in stock feed....647
Assessment Requirements for FBPGRA3021 Control batch processing for micronutrients or additives in stock feed....650
FBPGRA3022 Confirm feed product meets animal nutrition requirements....652
Assessment Requirements for FBPGRA3022 Confirm feed product meets animal nutrition requirements....655
FBPGRA3023 Operate and monitor grain conditioning....657
Assessment Requirements for FBPGRA3023 Operate and monitor grain conditioning ..660
FBPGRA3024 Operate and monitor grain cleaning....663
Assessment Requirements for FBPGRA3024 Operate and monitor grain cleaning....666
FBPGRA3025 Receive and handle grain in a storage area....669
Assessment Requirements for FBPGRA3025 Receive and handle grain in a storage area673
FBPGRA3026 Operate and monitor sifting and grading....675
Assessment Requirements for FBPGRA3026 Operate and monitor sifting and grading .678
FBPGRA3027 Monitor a purification system....681
Assessment Requirements for FBPGRA3027 Monitor a purification system....684
FBPGRA3028 Monitor scratch and sizing....687
Assessment Requirements for FBPGRA3028 Monitor scratch and sizing....690
FBPGRA3029 Monitor a break roll....693
Assessment Requirements for FBPGRA3029 Monitor a break roll....696
FBPGRA3030 Operate and monitor a reduction system....699
Assessment Requirements for FBPGRA3030 Operate and monitor a reduction system..702
FBPGRA4005 Lead flour milling shift operations....705
Assessment Requirements for FBPGRA4005 Lead flour milling shift operations....709
FBPGRA4006 Control mill processes and performance....712
Assessment Requirements for FBPGRA4006 Control mill processes and performance...716
FBPHVB2001 Freeze and thaw dough....719
Assessment Requirements for FBPHVB2001 Freeze and thaw dough....722
FBPHVB3001 Operate and monitor a cooling and wrapping process....724

Assessment Requirements for FBPHVB3001 Operate and monitor a cooling and wrapping process....727
FBPHVB3002 Operate and monitor a laminated pastry production process....730
Assessment Requirements for FBPHVB3002 Operate and monitor a laminated pastry production process....734
FBPHVB3003 Operate and monitor a pastry forming and filling process....737
Assessment Requirements for FBPHVB3003 Operate and monitor a pastry forming and filling process....741
FBPHVB3004 Manufacture wafer products....744
Assessment Requirements for FBPHVB3004 Manufacture wafer products....748
FBPHVB3005 Operate and monitor a doughnut making process....751
Assessment Requirements for FBPHVB3005 Operate and monitor a doughnut making process....755
FBPHVB3006 Operate and monitor a forming or shaping process....758
Assessment Requirements for FBPHVB3006 Operate and monitor a forming or shaping process....761
FBPHVB3007 Manufacture crisp breads....764
Assessment Requirements for FBPHVB3007 Manufacture crisp breads....768
FBPHVB3008 Operate and monitor a batter production process....771
Assessment Requirements for FBPHVB3008 Operate and monitor a batter production process....775
FBPHVB3009 Operate and monitor a non laminated pastry production process....778
Assessment Requirements for FBPHVB3009 Operate and monitor a non laminated pastry production process....781
FBPHVB3010 Operate and monitor a pastry baking process....784
Assessment Requirements for FBPHVB3010 Operate and monitor a pastry baking process788
FBPHVB3011 Operate and monitor the production of fillings....791
Assessment Requirements for FBPHVB3011 Operate and monitor the production of fillings....795
FBPHVB3012 Operate and monitor a biscuit dough make up process....798
Assessment Requirements for FBPHVB3012 Operate and monitor a biscuit dough make up process....801
FBPHVB3013 Operate and monitor a baking process....804
Assessment Requirements for FBPHVB3013 Operate and monitor a baking process....808
FBPHVB3014 Finish baked products....811
Assessment Requirements for FBPHVB3014 Finish baked products....815
FBPHVB3015 Operate and monitor a griddle production process....818
Assessment Requirements for FBPHVB3015 Operate and monitor a griddle production process....822
FBPHVB3016 Operate and monitor a cooling, slicing and wrapping process....825
Assessment Requirements for FBPHVB3016 Operate and monitor a cooling, slicing and wrapping process....828
FBPHVB3017 Operate a bread dough mixing and development process....831
Assessment Requirements for FBPHVB3017 Operate a bread dough mixing and development process....835
FBPHVB3018 Operate a final prove and bread baking process....838
Assessment Requirements for FBPHVB3018 Operate a final prove and bread baking process....841
FBPHVB3019 Operate a bread dough make up process....844
Assessment Requirements for FBPHVB3019 Operate a bread dough make up process..847
FBPLAB2001 Use basic laboratory equipment....850
Assessment Requirements for FBPLAB2001 Use basic laboratory equipment....853
FBPLAB2002 Prepare laboratory solutions and stains....855

Assessment Requirements for FBPLAB2002 Prepare laboratory solutions and stains 858
FBPLAB2003 Perform basic analytical tests....860
Assessment Requirements for FBPLAB2003 Perform basic analytical tests 863
FBPOIL3001 Operate a degumming and neutralisation process....865
Assessment Requirements for FBPOIL3001 Operate a degumming and neutralisation process....868
FBPOIL3002 Operate and monitor a bleaching process....871
Assessment Requirements for FBPOIL3002 Operate and monitor a bleaching process ..875
FBPOIL3003 Operate and monitor a deodorising process 878
Assessment Requirements for FBPOIL3003 Operate and monitor a deodorising process882
FBPOIL3004 Operate and monitor a flake preparation process 885
Assessment Requirements for FBPOIL3004 Operate and monitor a flake preparation process....888
FBPOIL3005 Operate and monitor a complecting process 891
Assessment Requirements for FBPOIL3005 Operate and monitor a complecting process894
FBPOIL3006 Operate and monitor a soap splitting process 897
Assessment Requirements for FBPOIL3006 Operate and monitor a soap splitting process900
FBPOIL3007 Operate and monitor an interesterification process....903
Assessment Requirements for FBPOIL3007 Operate and monitor an interesterification process....906
FBPOIL3008 Operate and monitor a hydrogenation process 909
Assessment Requirements for FBPOIL3008 Operate and monitor a hydrogenation process912
FBPOIL3009 Clean and mill olives 915
Assessment Requirements for FBPOIL3009 Clean and mill olives....918
FBPOIL3010 Operate and monitor a malaxer....921
Assessment Requirements for FBPOIL3010 Operate and monitor a malaxer 924
FBPOIL3011 Operate and monitor an olive oil separation process....927
Assessment Requirements for FBPOIL3011 Operate and monitor an olive oil separation process....931
FBPOIL3012 Operate and monitor storage of virgin olive oil....934
Assessment Requirements for FBPOIL3012 Operate and monitor storage of virgin olive oil....937
FBPOPR1003 Communicate workplace information....940
Assessment Requirements for FBPOPR1003 Communicate workplace information 943
FBPOPR1010 Carry out manual handling tasks 945
Assessment Requirements for FBPOPR1010 Carry out manual handling tasks....948
FBPOPR1011 Operate automated washing equipment 950
Assessment Requirements for FBPOPR1011 Operate automated washing equipment....953
FBPOPR1012 Prepare basic mixes....955
Assessment Requirements for FBPOPR1012 Prepare basic mixes 958
FBPOPR1013 Operate basic equipment....960
Assessment Requirements for FBPOPR1013 Operate basic equipment 963
FBPOPR1014 Monitor process operation....965
Assessment Requirements for FBPOPR1014 Monitor process operation....968
FBPOPR1015 Participate effectively in a workplace environment....970
Assessment Requirements for FBPOPR1015 Participate effectively in a workplace environment....974
FBPOPR1016 Take and record basic measurements 976
Assessment Requirements for FBPOPR1016 Take and record basic measurements....979
FBPOPR1017 Follow work procedures to maintain quality....981
Assessment Requirements for FBPOPR1017 Follow work procedures to maintain quality984
FBPOPR2002 Inspect and sort materials and product 986
Assessment Requirements for FBPOPR2002 Inspect and sort materials and product....989

FBPOPR2007 Work in a freezer storage area....992
Assessment Requirements for FBPOPR2007 Work in a freezer storage area....995
FBPOPR2009 Load and unload tankers....997
Assessment Requirements for FBPOPR2009 Load and unload tankers....1000
FBPOPR2010 Work with temperature controlled stock....1003
Assessment Requirements for FBPOPR2010 Work with temperature controlled stock 1006
FBPOPR2023 Operate a packaging process....1009
Assessment Requirements for FBPOPR2023 Operate a packaging process....1013
FBPOPR2028 Operate a mixing or blending process....1016
Assessment Requirements for FBPOPR2028 Operate a mixing or blending process....1020
FBPOPR2034 Operate an evaporation process....1024
Assessment Requirements for FBPOPR2034 Operate an evaporation process....1028
FBPOPR2074 Carry out manual handling tasks....1031
Assessment Requirements for FBPOPR2074 Carry out manual handling tasks....1034
FBPOPR2075 Work effectively in the food processing industry....1037
Assessment Requirements for FBPOPR2075 Work effectively in the food processing industry....1040
FBPOPR2076 Inspect and sort materials and product....1042
Assessment Requirements for FBPOPR2076 Inspect and sort materials and product....1045
FBPOPR2077 Operate a bulk dry goods transfer process....1047
Assessment Requirements for FBPOPR2077 Operate a bulk dry goods transfer process1050
FBPOPR2078 Work in a freezer storage area....1052
Assessment Requirements for FBPOPR2078 Work in a freezer storage area....1055
FBPOPR2079 Work with temperature controlled stock....1057
Assessment Requirements for FBPOPR2079 Work with temperature controlled stock 1060
FBPOPR2080 Operate a blending, sieving and bagging process....1062
Assessment Requirements for FBPOPR2080 Operate a blending, sieving and bagging process....1065
FBPOPR2081 Measure non-bulk ingredients....1068
Assessment Requirements for FBPOPR2081 Measure non-bulk ingredients....1071
FBPOPR2082 Operate a mixing or blending process....1073
Assessment Requirements for FBPOPR2082 Operate a mixing or blending process....1076
FBPOPR2083 Operate a baking process....1079
Assessment Requirements for FBPOPR2083 Operate a baking process....1082
FBPOPR2084 Apply work procedures to maintain integrity of processed product....1085
Assessment Requirements for FBPOPR2084 Apply work procedures to maintain integrity of processed product....1088
FBPOPR2085 Operate a grinding process....1090
Assessment Requirements for FBPOPR2085 Operate a grinding process....1093
FBPOPR2086 Operate a frying process....1096
Assessment Requirements for FBPOPR2086 Operate a frying process....1099
FBPOPR2087 Operate a mixing or blending and cooking process....1102
Assessment Requirements for FBPOPR2087 Operate a mixing or blending and cooking process....1105
FBPOPR2088 Operate pumping equipment....1108
Assessment Requirements for FBPOPR2088 Operate pumping equipment....1111
FBPOPR2089 Operate a production process....1114
Assessment Requirements for FBPOPR2089 Operate a production process....1117
FBPOPR2090 Operate a freezing process....1120
Assessment Requirements for FBPOPR2090 Operate a freezing process....1123
FBPOPR2091 Operate a holding and storage process....1126
Assessment Requirements for FBPOPR2091 Operate a holding and storage process....1129
FBPOPR2092 Operate a continuous freezing process....1132

Assessment Requirements for FBPCEL2008 Carry out inert gas handling operations..2215
FBPCEL2009 Carry out transfer operations 2218
Assessment Requirements for FBPCEL2009 Carry out transfer operations.....2221
FBPCEL3001 Handle and store spirits.....2224
Assessment Requirements for FBPCEL3001 Handle and store spirits.....2227
FBPCEL3002 Operate the continuous clarification by separation (flotation) process....2229
Assessment Requirements for FBPCEL3002 Operate the continuous clarification by separation (flotation) process.....2232
FBPCEL3003 Operate the concentration process.....2234
Assessment Requirements for FBPCEL3003 Operate the concentration process 2237
FBPCEL3004 Operate an earth filtration process.....2239
Assessment Requirements for FBPCEL3004 Operate an earth filtration process 2242
FBPCEL3005 Operate the pressing process.....2244
Assessment Requirements for FBPCEL3005 Operate the pressing process 2247
FBPCEL3006 Operate the fine filtration process 2250
Assessment Requirements for FBPCEL3006 Operate the fine filtration process.....2253
FBPCEL3007 Operate clarification by separation (centrifugation) process.....2255
Assessment Requirements for FBPCEL3007 Operate clarification by separation (centrifugation) process.....2258
FBPCEL3008 Operate the rotary vacuum filtration process 2260
Assessment Requirements for FBPCEL3008 Operate the rotary vacuum filtration process2263
FBPCEL3009 Operate the crossflow filtration process.....2265
Assessment Requirements for FBPCEL3009 Operate the crossflow filtration process ..2268
FBPCEL3010 Operate the decanter process 2271
Assessment Requirements for FBPCEL3010 Operate the decanter process.....2274
FBPCEL3011 Operate the reverse osmosis process.....2276
Assessment Requirements for FBPCEL3011 Operate the reverse osmosis process 2279
FBPCEL3013 Perform rectification (continuous still) operations.....2281
Assessment Requirements for FBPCEL3013 Perform rectification (continuous still) operations 2284
FBPCEL3014 Prepare and monitor wine cultures 2286
Assessment Requirements for FBPCEL3014 Prepare and monitor wine cultures.....2290
FBPCEL3017 Perform single column lees stripping (continuous still brandy) operations2293
Assessment Requirements for FBPCEL3017 Perform single column lees stripping (continuous still brandy) operations 2296

FBP10121 Certificate I in Food Processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the basic skills and knowledge required for entry level workers, who work under direct supervision, in a food processing environment. At this level, workers have the technical skills to use a very limited range of equipment to process food and carry out routine and predictable tasks, guided by a supervisor.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, and health and safety codes, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 9 units of competency:
  - 5 core units plus
  - 4 elective units.

The electives are to be chosen as follows:

- at least 2 units from Group A
- up to 2 units from Group B
- up to 2 units from any currently endorsed Training Package or accredited course. Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Core Units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFSY1002	Follow work procedures to maintain food safety
FBPOPR1017	Follow work procedures to maintain quality
FBPOPR2074	Carry out manual handling tasks
FBPPPL1001	Communicate workplace information
FBPWHS1001	Identify safe work practices

Elective Units

Group A

FBPBPG1001	Pack or unpack product manually
FBPBPG2010	Operate a case packing process
FBPOPR1011	Operate automated washing equipment
FBPOPR1012	Prepare basic mixes
FBPOPR1013	Operate basic equipment
FBPOPR1014	Monitor process operation
FBPOPR1015	Participate effectively in a workplace environment
FBPOPR1016	Take and record basic measurements
FBPOPR2079	Work with temperature controlled stock
FBPOPR2088	Operate pumping equipment
FBPOPR2089	Operate a production process
FBPOPR2094	Clean equipment in place
FBPOPR2095	Clean and sanitise equipment
FBPRBK1001	Finish products
MSMENV272	Participate in environmentally sustainable work practices
TLID0006	Move materials mechanically using automated equipment

Group B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FSKDIG001	Use digital technology for short and basic workplace tasks
FSKLRG002	Identify strategies to respond to short and simple workplace problems
FSKLRG004	Use short and simple strategies for work-related learning
FSKNUM003	Use whole numbers and halves for work
FSKNUM004	Use basic and familiar metric measurements for work
FSKNUM006	Use simple and highly familiar spatial information for work
FSKNUM007	Use simple data for work
FSKOCM002	Engage in short and simple spoken exchanges at work
FSKRDG002	Read and respond to short and simple workplace signs and symbols
FSKRDG004	Read and respond to short and simple workplace information
FSKWTG002	Write short and simple workplace formatted texts
FSKWTG003	Write short and simple workplace information

FBP10221 Certificate I in Baking

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the basic skills and knowledge of an individual preparing for entry level work or training in a commercial baking environment.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 8 units of competency:
  - 6 core units plus
  - 2 elective units.

Elective units must ensure the integrity of the qualification's Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

The electives are to be chosen as follows:

- 1 from the electives listed below
- 1 from the electives listed below, or any currently endorsed Training Package or accredited course that is packaged at a Certificate I or II level.

Core Units

FBPFSY1002	Follow work procedures to maintain food safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR1012	Prepare basic mixes
FBPOPR1013	Operate basic equipment
FBPRBK1001	Finish products
FBPWHS1001	Identify safe work practices
FSKNUM009	Use familiar and simple metric measurements for work

Elective Units

FBPRBK2001	Assist non laminated pastry production
FBPRBK2003	Assist sponge cake production
FBPRBK2004	Assist basic bread production

FBP20121 Certificate II in Food Processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge required for those who work in operational roles, under supervision, in a food processing environment. At this level, workers have the technical skills to use a limited range of machinery and/or equipment to process food and carry out routine tasks guided by established procedures.

Users should note there are specialist components that cover the processing of meat in the *AMP Meat Processing Training Package*, and specialist components that cover the processing of seafood in the *SFI Seafood Industry Training Package*.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, and health and safety codes, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
  - 4 core units plus
  - 9 elective units.

The electives are to be chosen as follows:

- at least 5 units from Group A
- up to 3 units from Group B
- up to 3 units from any currently endorsed Training Package or accredited course. Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Core Units

FBPFSY2002	Apply food safety procedures
FBPOPR2071	Provide and apply workplace information
FBPOPR2096	Follow procedures to maintain good manufacturing practice in food processing
FBPWHS2001	Participate in work health and safety processes

Elective Units

Group A

AMPX219	Follow electronic labelling and traceability systems in a food processing establishment
BSBTEC201	Use business software applications
FBPBEV2004	Identify key stages and beer production equipment in a brewery
FBPBPG2009	Operate a beverage packaging process
FBPBPG2010	Operate a case packing process
FBPBPG2011	Operate a fill and seal process
FBPBPG2012	Operate a packaging process
FBPCON2010	Operate an enrobing process
FBPCON2011	Operate a chocolate tempering process
FBPDPR2007	Operate a cooling and hardening process
FBPEGG2003	Work on an egg grading floor
FBPEGG2004	Operate egg grading and packing floor equipment
FBPFAV2002	Apply hydro-cooling processes to freash produce
FBPFAV3003	Conduct chemical wash for fresh produce
FBPFSY2003	Maintain food safety when loading, unloading and transporting food
FBPHVB2001	Freeze and thaw dough

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR2019	Fill and close product in cans
FBPOPR2062	Work in a clean room environment
FBPOPR2065	Conduct routine maintenance
FBPOPR2066	Apply sampling procedures
FBPOPR2068	Operate a process control interface
FBPOPR2069	Use numerical applications in the workplace
FBPOPR2070	Apply quality systems and procedures
FBPOPR2074	Carry out manual handling tasks
FBPOPR2075	Work effectively in the food processing industry
FBPOPR2076	Inspect and sort materials and product
FBPOPR2077	Operate a bulk dry goods transfer process
FBPOPR2078	Work in a freezer storage area
FBPOPR2079	Work with temperature controlled stock
FBPOPR2080	Operate a blending, sieving and bagging process
FBPOPR2082	Operate a mixing or blending process
FBPOPR2083	Operate a baking process
FBPOPR2084	Apply work procedures to maintain integrity of processed product
FBPOPR2085	Operate a grinding process
FBPOPR2086	Operate a frying process
FBPOPR2087	Operate a mixing or blending and cooking process
FBPOPR2088	Operate pumping equipment
FBPOPR2089	Operate a production process
FBPOPR2090	Operate a freezing process
FBPOPR2091	Operate a holding and storage process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR2092	Operate a continuous freezing process
FBPOPR2093	Operate an automated cutting process
FBPOPR2094	Clean equipment in place
FBPOPR2095	Clean and sanitise equipment
FBPOPR2097	Operate a depositing process
FBPPPL2001	Participate in work teams and groups
FBPPPL2002	Work in a socially diverse environment
FBPSUG2022	Operate a waste water treatment system
FBPSUG2024	Perform standard tests on cane samples
FSKDIG001	Use digital technology for short and basic workplace tasks
FSKLRG008	Use simple strategies for work-related learning
FSKNUM009	Use familiar and simple metric measurements for work
FSKNUM012	Use familiar and simple data for work
FSKOCM003	Participate in familiar spoken interactions at work
FSKRDG005	Read and respond to simple and familiar workplace procedures
FSKWTG009	Write routine workplace texts
MSMENV272	Participate in environmentally sustainable work practices
MSL973013	Perform basic tests
MSS402080	Undertake root cause analysis
SIRRMER001	Produce visual merchandise displays
SIRRRTF001	Balance and secure point-of-sale terminal
SIRXPDK001	Advise on products and services
SIRXRSK001	Identify and respond to security risks
TLID2010	Operate a forklift

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Group B

FBP20221 Certificate II in Baking

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge of a baker's assistant working in a commercial baking environment.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 11 units of competency:
  - 7 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification's Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

The electives are to be chosen as follows:

- 1 from the units listed in Group A
- 2 from the remaining units listed in Group A or units listed in Group B
- 1 from the remaining units listed in Group A, or units listed in Group B, or any currently endorsed Training Package or accredited course that is packaged at a Certificate II or III level.

Core Units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFSY2002	Apply food safety procedures
FBPOPR2069	Use numerical applications in the workplace
FBPOPR2071	Provide and apply workplace information
FBPRBK2002	Use food preparation equipment to prepare fillings
FBPRBK2005	Maintain ingredient stores
FBPRBK3005	Produce basic bread products
FBPWHS2001	Participate in work health and safety processes

Elective Units

Group A

FBPRBK3002	Produce non laminated pastry products
FBPRBK3008	Produce sponge cake products
FBPRBK3014	Produce sweet yeast products

Group B

FBPPPL2002	Work in a socially diverse environment
FBPRBK3009	Produce biscuit and cookie products
HLTAID011	Provide First Aid
SIRRMER002	Merchandise food products
SIRXPDK001	Advise on products and services
SIRXSLS001	Sell to the retail customer

FBP20418 Certificate II in Pharmaceutical Manufacturing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Qualification Description

This qualification describes the skills and knowledge for support roles within pharmaceutical manufacturing environments. Roles covered include equipment and facility cleaners, production machinery operators and packing line workers that work under routine supervision where the work is predictable and structured with limited judgement requirements.

Work must comply with good manufacturing practice, health and safety and environmental regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 5 core units, plus
  - 7 elective units.

Elective units must ensure the integrity of the qualifications' Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 4 must be from electives Group A
- 3 from the remaining units listed in groups A or B, or any currently endorsed Training Package or accredited course.

Core Units

FBP20521 Certificate II in Wine Industry Operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge required for entry level workers in the wine industry. These workers carry out routine work under supervision, in a range of sectors, including:

- process tasks in bottling and packaging, cellar operations and laboratory testing
- customer service tasks in cellar door
- tasks related to viticulture, harvesting and post-harvesting.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, and health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
  - 3 core units, plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

The electives are to be chosen as follows:

- up to 10 may be selected from the elective units listed below

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- up to 3 units may be selected from any currently endorsed Training Package or accredited course.

No more than 4 of the 10 electives selected can be coded with an AQF indicator above level 2 or reflect outcomes above AQF level 2.

Core Units

FBPFSY2002	Apply food safety procedures
FBPOPR2070	Apply quality systems and procedures
FBPWHS2001	Participate in work health and safety processes

Elective Units

Group A Bottling and Packaging

FBPBPG2001	Operate the bottle supply process
FBPBPG2002	Operate the carton erection process
FBPBPG2003	Operate the carton packing process
FBPBPG2004	Operate the palletising process
FBPBPG2005	Operate the electronic coding process
FBPBPG2006	Operate the bottle capsuling process
FBPBPG2007	Operate manual bottling and packaging processes
FBPBPG2008	Perform basic packaging tests and inspections

Group B Cellar Door

FBPCDS2001	Conduct a standard product tasting
FBPCDS2002	Provide and present wine tourism information
FBPCDS2003	Sell cellar door products and services
FBPCDS3001	Conduct winery and site tours
FBPWIN2003	Conduct sensory evaluation of wine
SITHFAB002	Provide responsible service of alcohol

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Group C Cellar Operations

FBPCEL2001	Perform oak handling activities
FBPCEL2002	Perform fermentation operations
FBPCEL2003	Operate the ion exchange process
FBPCEL2005	Perform must draining operations
FBPCEL2006	Operate the crushing process
FBPCEL2007	Prepare and make additions and finings
FBPCEL2008	Carry out inert gas handling operations
FBPCEL2009	Carry out transfer operations

Group D Laboratory

MSL912001	Work within a laboratory or field workplace (induction)
MSL922001	Record and present data
MSL943004	Participate in laboratory or field workplace safety
MSL952001	Collect routine site samples
MSL952002	Handle and transport samples or equipment
MSL972001	Conduct routine site measurements
MSL973013	Perform basic tests

Group E Viticulture

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

AHCCHM201	Apply chemicals under supervision
AHCIRG219	Assist with low volume irrigation operations
AHCIRG221	Assist with pressurised irrigation operations
AHCMOM202	Operate tractors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AHCSOL203	Assist with soil or growing media sampling and testing
FBPVIT2001	Bench graft vines
FBPVIT2002	Carry out potting operations
FBPVIT2003	Hand prune vines
FBPVIT2004	Pick grapes by hand
FBPVIT2005	Maintain callusing environment
FBPVIT2006	Obtain and process rootlings
FBPVIT2007	Tend containerised nursery plants
FBPVIT2008	Train vines
FBPVIT2009	Plant vines by hand
FBPVIT2010	Take and process vine cuttings
FBPVIT2011	Operate vineyard equipment
FBPVIT2012	Identify and treat nursery plant disorders
FBPVIT2013	Recognise disorders and identify pests and diseases
FBPVIT2014	Perform pest control activities
FBPVIT2015	Carry out basic canopy maintenance
FBPVIT2016	Carry out hot water treatment
FBPVIT2018*	Support mechanical harvesting operations

Group F General

AHCWRK209	Participate in environmentally sustainable work practices
FBPOPR2065	Conduct routine maintenance
FBPOPR2066	Apply sampling procedures
FBPOPR2068	Operate a process control interface
FBPOPR2069	Use numerical applications in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR2071	Provide and apply workplace information
FBPOPR2074	Carry out manual handling tasks
FBPOPR2094	Clean equipment in place
FBPOPR2095	Clean and sanitise equipment
FBPPPL2001	Participate in work teams and groups
FBPWHS2002	Identify and control risks in own work
FBPWIN2001	Perform effectively in a wine industry workplace
FBPWIN2002	Communicate wine industry information
HLTAID011	Provide First Aid
RIIWHS202E	Enter and work in confined spaces
SITXCCS003	Interact with customers
TLID2003	Handle dangerous goods/hazardous substances
TLIG2007	Work in a socially diverse environment
TLIK2010	Use infotechnology devices in the workplace
TLILIC0003	Licence to operate a forklift truck

FBP20618 Certificate II in Sugar Milling Support

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 2.0.

Qualification Description

This qualification desdribes the skills and knowledge required for entry level workers in the sugar milling industry. These workers carry out routine work, under supervision, in a range of areas including sugar processing, cane supply and transport, and milling services.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, health and safety and environmental codes, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 3 core units, plus
  - 13 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualifications Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 6 from the electives listed below
- up to 7 may be selected from this or any other currently endorsed Training Package or accredited course.

Core Units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR1003	Communicate workplace information
FBPWHS1001	Identify safe work practices
MSMENV272	Participate in environmentally sustainable work practices

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

CPCCDO3011A*	Perform dogging
CPCCRI3012A*	Perform basic rigging
CPCCSC2002A*	Erect and dismantle basic scaffolding
FBPOPR2034	Operate an evaporation process
FBPORR2068	Operate a process control interface
FBPSUG1004	Check a cane sample for extraneous matter
FBPSUG1005	Manually clean and maintain housekeeping standards
FBPSUG2001	Lay sleepers for cane rail systems
FBPSUG2002	Lay rails for cane rail systems
FBPSUG2003	Lay skeleton track for cane rail system
FBPSUG2004	Operate tamping equipment
FBPSUG2005*	Construct turnouts
FBPSUG2006	Collect and prepare samples
FBPSUG2007	Conduct cane weighbridge operations
FBPSUG2008	Operate a tipping station
FBPSUG2009	Operate an extraction station
FBPSUG2010	Operate a juice clarification process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSUG2011	Operate a mud filtration process
FBPSUG2012	Chemically clean equipment
FBPSUG2013	Operate a pan station
FBPSUG2014	Operate a low grade fugal station
FBPSUG2015	Operate a high grade fugal station
FBPSUG2016	Operate a crystalliser station process
FBPSUG2017	Undertake simple fabrication
FBPSUG2019	Operate a bagasse fuel supply system
FBPSUG2020	Operate a coal fuel supply system
FBPSUG2021	Operate an ash separation system
FBPSUG2022	Operate a waste water treatment system
FBPSUG2023	Operate a cooling water system
FBPSUG2024	Perform standard tests on cane samples
FBPSUG2026	Perform general drilling operations
FBPSUG2027	Perform general lathe operations
FBPSUG2028	Perform general milling operations
FBPSUG3001	Drive a cane locomotive
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurements
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEM18055B*	Dismantle, replace and assemble engineering components
MSMBLIC001	Licence to operate a standard boiler
RIICBM305D	Install pre-cast concrete bridge decks
RIIHAN305D	Operate a gantry or overhead crane

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RIIMPO319E	Conduct backhoe/loader operations
TLID3035	Operate a boom type elevating work platform
TLID3036	Lift and move load using a mobile crane
TLILIC0003	Licence to operate a forklift truck
TLILIC0008	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)
TLILIC2014	Licence to drive a light rigid vehicle
TLILIC2015	Licence to drive a medium rigid vehicle
UEPOPL001	Licence to operate a steam turbine

Prerequisite requirements

Note: Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	**Prerequisite requirement**
CPCCDO3011A Perform dogging	CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

FBP30121 Certificate III in Food Processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification reflects the role of individuals working as operators in a food processing environment who have responsibility for overseeing all or part of a processing plant and related equipment. They are required to work autonomously, use judgement, interpret information, and apply solutions to routine and some non-routine problems. They may also take some responsibility for the output of others.

This qualification offers specialisations in:

- Bottling and Packaging
- Brewing
- Confectionery
- Dairy Processing (cheese, powder and/or milk)
- Distilling
- Edible Oils (refining or cold pressing edible oils)
- Milling
- Non-alcoholic Beverages (fruit juice, cordial)
- Pet Food (companion animals)
- Quality (for operator roles)
- Sales
- Stock Feed (cattle, horses, sheep, pigs, poultry, fish – animals that produce for human consumption).

Users should note there are specialist components that cover the processing of meat and poultry in the *AMP Meat Processing Training Package*, and specialist components that cover the processing of seafood in the *SFI Seafood Industry Training Package*.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, and work health and safety codes, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 17 units of competency:
  - 5 core units plus
  - 12 elective units.

The electives are to be chosen as follows:

- at least 6 units from elective Groups A – M
- up to 3 units from elective Group N
- up to 4 units from this or any other endorsed training package or accredited course. Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Any combination of electives that meets the packaging rules above can be selected for the award of the *FBP30121 Certificate III in Food Processing.*

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows:

- At least 5 Group A electives must be selected for the award of the *Certificate III in Food Processing (Bottling and Packaging)*
- At least 5 Group B electives must be selected for the award of the *Certificate III in Food Processing (Brewing)*
- At least 5 Group C electives must be selected for the award of the *Certificate III in Food Processing (Confectionery)*
- At least 5 Group D electives must be selected for the award of the *Certific*ate III in Food Processing (Dairy Processing)
- At least 5 Group E electives must be selected for the award of the Certificate III in Food Processing (Distilling)
- At least 5 Group F electives must be selected for the award of the Certificate III in Food Processing (Edible Oils)
- At least 5 Group G electives must be selected for the award of the Certificate III in Food Processing (Milling)
- At least 5 Group H electives must be selected for the award of the Certificate III in Food Processing (Non-alcoholic Beverages)
- At least 5 Group I electives must be selected for the award of the Certificate III in Food Pr*ocessing (Pet Food)*
- At least 5 Group J electives must be selected for the award of the *Certificate III in Food Processing (Quality)*
- At least 5 Group K electives must be selected for the award of the *Certificate III in Food Processing (Sales)*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- At least 5 Group L electives must be selected for the award of the *Certificate III in Food Processing (Stock Feed)*

Where two specialisations are chosen the award of qualification would read (for example) *Certificate III in Food Processing (Confectionary and Quality)*

Core Units

FBPFSY3003	Monitor the implementation of food safety and quality programs
FBPFSY3004	Participate in traceability activities
FBPOPR3019	Operate and monitor interrelated processes in a production or packaging system
FBPOPR3021	Apply good manufacturing practice requirements in food processing
FBPWHS3001	Contribute to work health and safety processes

Elective Units

Group A – Bottling and Packaging

FBPBPG3001	Operate the bottle filling process
FBPBPG3002	Operate the labelling process
FBPBPG3003	Operate the softpack filling process
FBPBPG3004	Operate the bottle sealing process
FBPBPG3007	Perform packaging equipment changeover
FBPBPG3010	Operate and monitor a carbonated beverage filling process
FBPBPG3011	Operate and monitor a high speed wrapping process
FBPBPG3012	Operate and monitor a form, fill and seal process
FBPBPG4001	Manage bottling and packaging processes
FBPBPG4002	Manage filling and packaging of fermented beverages
FBPOPR3004	Set up a production or packaging line for operation

Group B – Brewing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPBEV3001	Operate and monitor a wort production process
FBPBEV3002	Prepare and monitor beer yeast propagation processes
FBPBEV3003	Operate and monitor a brewery fermentation process
FBPBEV3004	Operate and monitor a beer filtration process
FBPBEV3007	Operate and monitor a beer maturation process
FBPGRA3019	Prepare malted grain
FBPGRA3020	Blend and dispatch malt
MSL973013	Perform basic tests

Group C – Confectionery

FBPCON3001	Operate a complex chocolate depositing process
FBPCON3002	Operate and monitor a boiled confectionery process
FBPCON3003	Operate and monitor a chocolate conching process
FBPCON3004	Operate and monitor a confectionery depositing process
FBPCON3005	Operate and monitor a granulation and compression process
FBPCON3006	Operate and monitor a panning process
FBPCON3007	Operate and monitor a chocolate refining process
FBPCON3008	Operate and monitor a starch moulding process

Group D – Dairy Processing

FBPCHE3003	Conduct cheese making operations
FBPCHE3004	Carry out processing for a range of artisan cheeses
FBPCHE3005	Operate and monitor a cheese pressing and moulding process
FBPDPR3001	Operate and monitor a curd production and cutting process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPDPR3002	Operate and monitor a fermentation process
FBPDPR3003	Control batch processing for powdered milk products
FBPDPR3004	Operate and monitor a butter churning process
FBPDPR3005	Operate and monitor a butter oil process
FBPFST4002	Carry out sampling and testing of milk at receival
FBPOPR3007	Operate a bulk liquid transfer process
FBPOPR3010	Operate and monitor a filtration process
FBPOPR3011	Operate and monitor a heat treatment process
FBPOPR3012	Operate and monitor a drying process
FBPOPR3013	Operate and monitor an homogenising process
FBPOPR3016	Operate and monitor a separation process
FBPOPR3023	Operate and monitor an evaporation process
FBPOPR4001	Apply principles of statistical process control

Group E – Distilling

FBPCEL3004	Operate an earth filtration process
FBPCEL3013	Perform rectification (continuous still) operations
FBPCEL3017	Perform single column lees stripping (continuous still brandy) operations
FBPCEL3018	Perform dual column distillation (continuous still brandy) operations
FBPTEC3003	Filter fermented beverages
FBPTEC3004	Prepare, fill and store barrels for aging spirits

Group F – Edible Oils

FBPOIL3001	Operate a degumming and neutralisation process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOIL3002	Operate and monitor a bleaching process
FBPOIL3003	Operate and monitor a deodorising process
FBPOIL3004	Operate and monitor a flake preparation process
FBPOIL3005	Operate and monitor a complecting process
FBPOIL3006	Operate and monitor a soap splitting process
FBPOIL3007	Operate and monitor an interesterification process
FBPOIL3008	Operate and monitor a hydrogenation process
FBPOIL3009	Clean and mill olives
FBPOIL3010	Operate and monitor a malaxer
FBPOIL3011	Operate and monitor an olive oil separation process
FBPOIL3012	Operate and monitor storage of virgin olive oil
FBPOPR3007	Operate a bulk liquid transfer process
FBPOPR3010	Operate and monitor a filtration process

Group G – Milling

FBPGRA3023	Operate and monitor grain conditioning
FBPGRA3024	Operate and monitor grain cleaning
FBPGRA3025	Receive and handle grain in a storage area
FBPGRA3026	Operate and monitor sifting and grading
FBPGRA3027	Monitor a purification system
FBPGRA3028	Monitor scratch and sizing
FBPGRA3029	Monitor a break roll
FBPGRA3030	Operate and monitor a reduction system

Group H – Non-alcoholic Beverages

FBPBEV3005	Operate and monitor juice processing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPBEV3006	Control and monitor fruit and/or vegetable washing and milling
FBPBPG3001	Operate the bottle filling process
FBPBPG3004	Operate the bottle sealing process
FBPBPG3010	Operate and monitor a carbonated beverage filling process
FBPOPR3004	Set up a production or packaging line for operation
FBPOPR3010	Operate and monitor a filtration process
FBPOPR3011	Operate and monitor a heat treatment process

Group I – Pet Food

FBPGRA3021	Control batch processing for micronutrients or additives in stock feed
FBPGRA3022	Confirm feed product meets animal nutrition requirements
FBPOPR3014	Operate and monitor a retort process
FBPOPR3015	Pre-process raw materials
FBPOPR3017	Prepare food products using basic cooking methods
FBPOPR3024	Operate and monitor an extrusion process

Group J – Quality

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPFSY3005	Control contaminants and allergens in food processing
FBPFSY4003	Perform an allergen risk review
FBPFSY4004*	Provide accurate food allergen information to consumers
FBPFSY4005	Conduct a traceability exercise
FBPOPR3009	Participate in sensory analyses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPPPL3003	Participate in improvement processes
FBPPPL3005	Participate in an audit process
FBPPPL3008	Establish compliance requirements for work area
FBPSUG3007	Perform factory control tests
MSL933006	Contribute to the achievement of quality objectives
MSL973013	Perform basic tests
MSL974019	Perform chemical tests and procedures

Group K – Sales

BSBESB301	Investigate business opportunities
BSBESB403	Plan finances for new business ventures
BSBESB404	Market new business ventures
BSBOPS304	Deliver and monitor a service to customers
SIRRMER005	Implement visual merchandising concepts
SIRWSLS002	Analyse and achieve sales targets
SIRXCEG006	Provide online customer service
SIRXSLS003	Achieve sales results
TLIX0013X	Maintain stock control and receivals

Group L – Stock Feed

FBPGRA3017	Operate and monitor a liquid, mash or block stock feed process
FBPGRA3018	Operate and monitor a pelleting process
FBPGRA3021	Control batch processing for micronutrients or additives in stock feed
FBPGRA3022	Confirm feed product meets animal nutrition requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPGRA3023	Operate and monitor grain conditioning
FBPGRA3024	Operate and monitor grain cleaning
FBPGRA3025	Receive and handle grain in a storage area
FBPGRA3026	Operate and monitor sifting and grading
FBPOPR3015	Pre-process raw materials
FBPOPR3024	Operate and monitor an extrusion process

Group M – General Electives

AHCBIO303	Apply biosecurity measures
AHCBIO401	Plan and implement a biosecurity program
AHCWRK310	Provide on-job training support
FBPBEV3008	Manufacture roast and ground coffee
FBPFAV3003	Conduct chemical wash for fresh produce
FBPFAV3004	Program fresh produce grading equipment
FBPFST4003	Apply digital technology in food processing
FBPFSY3002	Participate in a HACCP team
FBPGPS3001	Operate and monitor a creamed honey manufacture process
FBPOPR3007	Operate a bulk liquid transfer process
FBPOPR3008	Load and unload tankers
FBPOPR3018	Identify dietary, cultural and religious considerations for food production
FBPOPR3020	Plan, conduct and monitor equipment maintenance
FBPOPR3022	Receive and store raw materials for food processing
FBPPPL3004	Lead work teams and groups
FBPPPL3006	Report on workplace performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPPPL3007	Support and mentor individuals and groups
FBPTEC3001	Apply raw materials, ingredient and process knowledge to production problems
FBPTEC3002	Implement the pest prevention program
FBPTEC4008	Participate in product recalls
FSKDIG003	Use digital technology for non-routine workplace tasks
FSKLRG009	Use strategies to respond to routine workplace problems
FSKNUM015	Estimate, measure and calculate with routine metric measurements for work
FSKNUM019	Interpret routine tables, graphs and charts and use information and data for work
FSKOCM004	Use oral communication skills to participate in workplace meetings
FSKRDG008	Read and respond to information in routine visual and graphic texts
FSKRDG009	Read and respond to routine standard operating procedures
FSKWTG008	Complete routine workplace formatted texts
HLTWHS005	Conduct manual tasks safely
MSL934004	Maintain and calibrate instruments and equipment
MSL973016	Perform aseptic techniques
MSL974017	Prepare, standardise and use solutions
MSMSUP310	Contribute to the development of workplace documentation
MSMSUP390	Use structured problem-solving tools
MSS403010	Facilitate change in an organisation implementing competitive systems and practices
MSS403021	Facilitate a Just in Time system
MSS403040	Facilitate and improve implementation of 5S

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSS403085	Ensure process improvements are sustained
TAEDEL301	Provide work skill instruction
TLIA0015	Organise receival and despatch operations

Group N – Other Electives

FBPBPG2001	Operate the bottle supply process
FBPBPG2002	Operate the carton erection process
FBPBPG2003	Operate the carton packing process
FBPBPG2005	Operate the electronic coding process
FBPBPG2009	Operate a beverage packaging process
FBPBPG2010	Operate a case packing process
FBPBPG2011	Operate a fill and seal process
FBPBPG2012	Operate a packaging process
FBPCON2010	Operate an enrobing process
FBPCON2011	Operate a chocolate tempering process
FBPHVB3001	Operate and monitor a cooling and wrapping process
FBPHVB3002	Operate and monitor a laminated pastry production process
FBPHVB3003	Operate and monitor a pastry forming and filling process
FBPHVB3004	Manufacture wafer products
FBPHVB3005	Operate and monitor a doughnut making process
FBPOPR2068	Operate a process control interface
FBPOPR2069	Use numerical applications in the workplace
FBPOPR2070	Apply quality systems and procedures
FBPOPR2071	Provide and apply workplace information
FBPOPR2074	Carry out manual handling tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR2077	Operate a bulk dry goods transfer process
FBPOPR2078	Work in a freezer storage area
FBPOPR2079	Work with temperature controlled stock
FBPOPR2080	Operate a blending, sieving and bagging process
FBPOPR2081	Measure non-bulk ingredients
FBPOPR2082	Operate a mixing or blending process
FBPOPR2085	Operate a grinding process
FBPOPR2088	Operate pumping equipment
FBPOPR2089	Operate a production process
FBPOPR2091	Operate a holding and storage process
FBPOPR2093	Operate an automated cutting process
FBPOPR2094	Clean equipment in place
FBPOPR2095	Clean and sanitise equipment
FBPOPR2097	Operate a depositing process
FBPOPR3015	Pre-process raw materials
FBPPPL2001	Participate in work teams and groups
FBPPPL2002	Work in a socially diverse environment
FBPSUG2024	Perform standard tests on cane samples
MSS402051	Apply quality standards
MSS402080	Undertake root cause analysis

FBP30321 Certificate III in Cake and Pastry

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge of a pastry cook who bakes cake, pastry and biscuit products working in a commercial baking environment.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 11 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification's Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 2 must be from those units listed in Group A and an additional 2 may be chosen from Group A
- up to 1 from those units listed in Group B
- up to 2 from those units listed in Group C.

Core Units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFSY2002	Apply food safety procedures
FBPOPR2069	Use numerical applications in the workplace
FBPRBK2002	Use food preparation equipment to prepare fillings
FBPRBK3001	Produce laminated pastry products
FBPRBK3002	Produce non laminated pastry products
FBPRBK3008	Produce sponge cake products
FBPRBK3009	Produce biscuit and cookie products
FBPRBK3010	Produce cake and pudding products
FBPRBK3013	Schedule and produce cake and pastry production
FBPRBK3018	Produce basic artisan products
FBPWHS2001	Participate in work health and safety processes

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A

FBPRBK3003	Produce specialist pastry products
FBPRBK3004	Produce meringue products
FBPRBK3005	Produce basic bread products

FBP30421 Certificate III in Bread Baking

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge of a bread baker who bakes bread products working in a commercial baking environment.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 9 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification's Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 2 must be from those units listed in Group A and an additional 3 units may be chosen from Group A
- up to 1 from those units listed in Group B
- up to 2 from those units listed in Group C.

Core Units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFSY2002	Apply food safety procedures
FBPOPR2069	Use numerical applications in the workplace
FBPRBK3005	Produce basic bread products
FBPRBK3006	Produce savoury bread products
FBPRBK3007	Produce specialty flour bread products
FBPRBK3012	Schedule and produce bread production
FBPRBK3014	Produce sweet yeast products
FBPRBK3018	Produce basic artisan products
FBPWHS2001	Participate in work health and safety processes

Elective Units

Group A

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPRBK2002	Use food preparation equipment to prepare fillings
FBPRBK3008	Produce sponge cake products
FBPRBK3011*	Produce frozen dough products
FBPRBK3017*	Operate plant baking processes
FBPRBK4001*	Produce artisan bread products
SITXHRM001	Coach others in job skills

Group B

FBP30721 Certificate III in Rice Processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceuticals Training Package Version 6.0.

Qualification Description

The qualification provides a general vocational outcome in rice production work that enables individuals to mill process and package rice grain products, mill rice flour and manufacture rice consumer products on an industrial scale.

Individuals with this qualification to perform tasks involving a broad range of skills that are applied in a wide variety of contexts, which will involve discretion and judgement in selecting and operating equipment, coordinating resources and applying contingency measures during work.

Job roles vary across different industry sectors and may include:

- Rice miller
- Rice flour miller
- Rice production worker
- Rice packaging worker
- Rice food manufacturing worker.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency made up of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- 8 core units plus
- 7 elective units

Elective units must ensure the integrity of the qualification's Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 2 must be from group A
- 3 must be from any in group B, C, D and E
- 2 from the remaining units listed in groups A, B, C, D, E or F or any currently endorsed Training Package or accredited course packaged at Certificate III or Certificate IV, with no more than 1 unit packaged at Certificate IV.

Any combination of electives that meets the packaging rules can be selected for the award of the Certificate III in Rice Processing.

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows:

- A minimum of 3 electives from Group B must be selected for award of the *Certificate III in Rice Processing (Rice Miller)*
- A minimum of 3 electives from Group C must be selected for award of the *Certificate III in Rice Processing (Rice Flour Miller)*
- A minimum of 3 electives from Group D must be selected for award of the *Certificate III in Rice Processing (Rice Product Manufacturer)*
- A minimum of 3 electives from Group E must be selected for award of the *Certificate III in Rice Processing (Rice Receival and Storage)*

Core Units

FBPFSY2002	Apply food safety procedures
FBPFSY3003	Monitor the implementation of food safety and quality programs
FBPOPR2070	Apply quality systems and procedures
FBPPPL3004	Lead work teams and groups
FBPSUG3008	Analyse and convey workplace information
FBPWHS3001	Contribute to work health and safety processes
FSKNUM031	Apply specialised mathematical calculations for work
MSL973013	Perform basic tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elective Units

Group A Rice Processing

FBPOPR3004	Set up a production or packaging line for operation
FBPOPR3019	Operate and monitor interrelated processes in a production or packaging system
FBPTEC3001	Apply raw materials, ingredient and process knowledge to production problems

Group B Rice Miller

FBPGRA3006	Implement a paddy receival and grain cleaning process
FBPGRA3007	Implement a rice blending and cleaning process
FBPGRA3008	Implement a rice colour sorting process
FBPGRA3011	Implement a rice grading process
FBPGRA3012	Implement a rice hulling and separation process
FBPGRA3015	Implement a rice whitening process

Group C Rice Flour Miller

FBPGRA3009	Implement a rice flour break process
FBPGRA3010	Implement a rice flour grading process
FBPGRA3016	Implement a rice flour blending process
FBPGRA4005	Lead flour milling shift operations
FBPGRA4006	Control mill processes and performance

Group D Rice Product Manufacturer

FBPBPG3002	Operate the labelling process
FBPGRA3013	Implement a rice product manufacturing process
FBPHVB3015	Operate and monitor a griddle production process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPOPR3014	Operate and monitor a retort process
FBPPPL3003	Participate in improvement processes
FBPPPL3008	Establish compliance requirements for work area

Group E Rice Receival and Storage

FBPGRA3005	Conduct rice harvest receivals
FBPGRA3014	Implement a rice seed preparation and storage system
FBPTEC3002	Implement the pest prevention program

Group F General Electives

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

AHCBAC204	Prepare grain storages
FBPFSY3002	Participate in a HACCP team
FBPGRA2014	Operate a rice vitamin enrichment process
FBPGRA3018	Operate and monitor a pelleting process
FBPGRA3025	Receive and handle grain in a storage area
FBPOPR2068	Operate a process control interface
FBPOPR2082	Operate a mixing or blending process
FBPOPR2087	Operate a mixing or blending and cooking process
FBPOPR3012	Operate and monitor a drying process
FBPOPR3024	Operate and monitor an extrusion process
FBPOPR4001	Apply principles of statistical process control
FBPPPL3003	Participate in improvement processes
FBPPPL3005	Participate in an audit process
FBPPPL3006	Report on workplace performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPPPL4001*	Manage people in the work area
FBPPPL4002	Plan and coordinate production equipment maintenance
FBPPPL4003	Schedule and manage production
FBPPPL4009*	Optimise a work process
FBPTEC4002	Apply principles of food packaging
FBPTEC4003	Control food contamination and spoilage
FBPTEC4004	Apply basic process engineering principles to food processing
FBPTEC4005	Apply an understanding of food additives
MSMBLIC001	Licence to operate a standard boiler
MSMENV272	Participate in environmentally sustainable work practices
MSMPER200	Work in accordance with an issued permit
MSMPER201	Monitor and control work permits
MSMPER300*	Issue work permits
MSMSUP303	Identify equipment faults
PMASUP420	Minimise environmental impact of process
SITXHRM001	Coach others in job skills
TLID2003	Handle dangerous goods/hazardous substances
TLIJ0001	Apply grain protection measures
TLIX0004X	Administer inventory systems
TLIX0013X	Maintain stock control and receivals
TLILIC0003	Licence to operate a forklift truck

FBP30821 Certificate III in Pharmaceutical Manufacturing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.

Qualification Description

This qualification describes the skills and knowledge for production and packaging roles carried out under broad supervision within pharmaceutical manufacturing environments. Individuals with this qualification perform tasks involving a broad range of skills that are applied in a wide variety of contexts, which will involve discretion and judgement in selecting and operating equipment, coordinating resources and applying contingency measures during work.

Work must comply with good manufacturing practice, health and safety and environmental regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 5 core units, plus
  - 11 elective units.

Elective units must ensure the integrity of the qualifications' Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 5 must be from group A
- 4 must be from group B
- 2 from the remaining units listed in groups A or B, or any currently endorsed Training Package or accredited course.

FBP30921 Certificate III in Wine Industry Operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge required for operational workers in the wine industry. These workers carry out skilled tasks under broad direction in a range of sectors, including:

- procedural and technical tasks in bottling and packaging, cellar operations and laboratory testing
- customer service tasks in cellar door
- tasks related to wine grape growing, harvesting and post-harvesting.

This qualification offers a general outcome as well as sector-specific specialisations.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 19 units of competency:
  - 4 core units, plus
  - 15 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- up to 15 from the elective units listed below, with no more than 6 units coded with an AQF level 2 indicator or that reflect AQF level 2 outcomes
- up to 4 units may be selected from any currently endorsed Training Package or accredited course that are coded with an AQF indicator above level 2 or reflect outcomes above AQF level 2
- no more than 5 units may be selected that are coded with an AQF indicator above level 3 or reflect outcomes above AQF level 3
- only one of the following units may be selected:
  - FBPCEL2007 Prepare and make additions and finings
  - FBPCEL3019 Prepare and apply complex additions and finings.

Any combination of electives that meets the packaging rules can be selected for the award of the *Certificate III in Wine Industry Operations*.

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows.

- For the award of the *Certificate III in Wine Industry Operations (Bottling and Packaging)* at least 6 units from Group A Bottling and Packaging must be chosen
- For the award of the *Certificate III in Wine Industry Operations (Cellar Door)* at least 6 units from Group B Cellar Door must be chosen
- For the award of the *Certificate III in Wine Industry Operations (Cellar Operations)* at least 6 units from Group C Cellar Operations must be chosen
- For the award of the *Certificate III in Wine Industry Operations (Laboratory)* at least 6 units from Group D Laboratory must be chosen
- For the award of the *Certificate III in Wine Industry Operations (Viticulture)* at least 6 units from Group E Viticulture must be chosen.

Core Units

BSBWHS311	Assist with maintaining workplace safety
FBPFSY2002	Apply food safety procedures
FBPPPL3003	Participate in improvement processes
FBPPPL3006	Report on workplace performance

Elective Units

Group A Bottling and Packaging

FBPBPG2001	Operate the bottle supply process
FBPBPG2002	Operate the carton erection process
FBPBPG2003	Operate the carton packing process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPBPG2004	Operate the palletising process
FBPBPG2005	Operate the electronic coding process
FBPBPG2006	Operate the bottle capsuling process
FBPBPG2008	Perform basic packaging tests and inspections
FBPBPG3001	Operate the bottle filling process
FBPBPG3002	Operate the labelling process
FBPBPG3003	Operate the softpack filling process
FBPBPG3004	Operate the bottle sealing process
FBPBPG3005	Operate the tirage and transfer process
FBPBPG3006	Operate traditional sparkling wine processes
FBPBPG3007	Perform packaging equipment changeover
FBPBPG3008	Operate an automated carton packing process
FBPBPG3009	Operate an automated palletising process
FBPBPG4003	Coordinate wine operations packaging processes
FBPOPR3004	Set up a production or packaging line for operation
FBPOPR3019	Operate and monitor interrelated processes in a production or packaging system

Group B Cellar Door

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPCDS2001	Conduct a standard product tasting
FBPCDS2002	Provide and present wine tourism information
FBPCDS3001	Conduct winery and site tours
FBPCDS3002	Plan and deliver a wine tasting event
FBPCDS3003	Coordinate winery hospitality activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPWIN2003	Conduct sensory evaluation of wine
FBPWIN3001*	Evaluate wines (advanced)
SIRXCEG004	Create a customer-centric culture
SIRXMKT003	Manage promotional activities
SITHFAB002	Provide responsible service of alcohol
SITHFAB012	Provide advice on Australian wines
SITHFAB013	Provide advice on imported wines

Group C Cellar Operations

FBPCEL2001	Perform oak handling activities
FBPCEL2002	Perform fermentation operations
FBPCEL2003	Operate the ion exchange process
FBPCEL2004	Perform heat exchange operations
FBPCEL2007	Prepare and make additions and finings
FBPCEL2008	Carry out inert gas handling operations
FBPCEL2009	Carry out transfer operations
FBPCEL3001	Handle and store spirits
FBPCEL3002	Operate the continuous clarification by separation (flotation) process
FBPCEL3003	Operate the concentration process
FBPCEL3004	Operate an earth filtration process
FBPCEL3005	Operate the pressing process
FBPCEL3006	Operate the fine filtration process
FBPCEL3007	Operate clarification by separation (centrifugation) process
FBPCEL3008	Operate the rotary vacuum filtration process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPCEL3009	Operate the crossflow filtration process
FBPCEL3010	Operate the decanter process
FBPCEL3011	Operate the reverse osmosis process
FBPCEL3013	Perform rectification (continuous still) operations
FBPCEL3014	Prepare and monitor wine cultures
FBPCEL3017	Perform single column lees stripping (continuous still brandy) operations
FBPCEL3018	Perform dual column distillation (continuous still brandy) operations
FBPCEL3019	Prepare and apply complex additions and finings
FBPCEL4001	Coordinate wine operations vintage processes
FBPCEL4002	Coordinate wine operations clarification processes
FBPCEL4003	Coordinate wine operations filtration processes
FBPCEL4004	Coordinate wine operations general cellar processes

Group D Laboratory

MSL904002	Perform standard calibrations
MSL924003	Process and interpret data
MSL924004	Use laboratory application software
MSL933008	Perform calibration checks on equipment and assist with its maintenance
MSL973013	Perform basic tests
MSL973014	Prepare working solutions
MSL973015	Prepare culture media
MSL973016	Perform aseptic techniques
MSL973019	Perform microscopic examination
MSL974017	Prepare, standardise and use solutions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Group E Viticulture

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

AHCCHM304	Transport and store chemicals
AHCCHM307	Prepare and apply chemicals to control pest, weeds and diseases
AHCIRG328	Operate irrigation controller and sensor technology
AHCIRG344	Implement an irrigation schedule
AHCIRG345	Install pressurised irrigation systems
AHCIRG347	Maintain pressurised irrigation systems
FBPVIT2011	Operate vineyard equipment
FBPVIT2012	Identify and treat nursery plant disorders
FBPVIT2013	Recognise disorders and identify pests and diseases
FBPVIT2015	Carry out basic canopy maintenance
FBPVIT3001	Coordinate vineyard operations
FBPVIT3003	Operate spreading and seeding equipment
FBPVIT3004*	Monitor and maintain nursery plants
FBPVIT3005	Install and maintain vine trellis
FBPVIT3006	Field graft vines
FBPVIT3007*	Operate specialised canopy management equipment
FBPVIT3008	Operate a mechanical harvester
FBPVIT3009	Monitor and control vine disorders and damage
FBPVIT3010	Implement a soil management program

Group F General

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AHCMOM202	Operate tractors
AHCMOM213	Operate and maintain chainsaws
AHCWRK309	Apply environmentally sustainable work practices
BSBLDR414	Lead team effectiveness
FBPFSY3003	Monitor the implementation of food safety and quality programs
FBPOPR2094	Clean equipment in place
FBPOPR2095	Clean and sanitise equipment
FBPPPL3005	Participate in an audit process
FBPTEC3002	Implement the pest prevention program
FBPTEC4002	Apply principles of food packaging
FBPWIN2002	Communicate wine industry information
FBPWIN2003	Conduct sensory evaluation of wine
HLTAID011	Provide First Aid
MSL933007	Apply critical control point requirements
MSS402002	Sustain process improvements
MSS402020	Apply quick changeover procedures
MSS402040	Apply 5S procedures
MSS402050	Monitor process capability
MSS402061	Use SCADA systems in operations
MSS402080	Undertake root cause analysis
RIIWHS202E	Enter and work in confined spaces
TAEASS301	Contribute to assessment
TAEDEL301	Provide work skill instruction
TLIA0015	Organise receival and despatch operations

FBP31018 Certificate III in Sugar Milling Industry Operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 2.0.

Qualification Description

This qualification describes the skills and knowledge required for operational workers in the sugar milling industry. These workers carry out skilled tasks under broad direction in a range of areas including sugar processing, cane supply and transport, and milling services.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety, health and safety and environmental codes, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 24 units of competency:
  - 3 core units, plus
  - 21 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 9 from the electives listed below, with at least 3 from Group A
- up to 12 from the electives listed below, or from any currently endorsed Training Package or accredited course.

Core Units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

BSBWHS201	Contribute to health and safety of self and others
FBPSUG3008	Analyse and convey workplace information
MSMENV272	Participate in environmentally sustainable work practices

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A

CPCCDO3011A*	Perform dogging
CPCCRI3012A*	Perform basic rigging
FBPOPR2034	Operate an evaporation process
FBPPPL3004	Lead work teams and groups
FBPSUG2009	Operate an extraction station
FBPSUG2013	Operate a pan station
FBPSUG3002	Control cane traffic movements
FBPSUG3003	Adjust cane delivery schedules to meet daily milling requirements
FBPSUG3004*	Drive a master-slave locomotive
FBPSUG3005	Operate a sugar system
FBPSUG3006*	Monitor a sugar mill powerhouse
FBPSUG3007	Perform factory control tests
MSMBLIC002	Licence to operate an advanced boiler
TLILIC2016	Licence to drive a heavy rigid vehicle
TLILIC3017	Licence to drive a heavy combination vehicle

Group B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
CPCCSC2002A*	Erect and dismantle basic scaffolding
FBPOPR2068	Operate a process control interface
FBPSUG2001	Lay sleepers for cane rail systems
FBPSUG2002	Lay rails for cane rail systems
FBPSUG2003	Lay skeleton track for cane rail system
FBPSUG2004	Operate tamping equipment
FBPSUG2005*	Construct turnouts
FBPSUG2006	Collect and prepare samples
FBPSUG2007	Conduct cane weighbridge operations
FBPSUG2008	Operate a tipping station
FBPSUG2010	Operate a juice clarification process
FBPSUG2011	Operate a mud filtration process
FBPSUG2012	Chemically clean equipment
FBPSUG2014	Operate a low grade fugal station
FBPSUG2015	Operate a high grade fugal station
FBPSUG2016	Operate a crystalliser station process
FBPSUG2017	Undertake simple fabrication
FBPSUG2018	Undertake forming, bending and shaping
FBPSUG2019	Operate a bagasse fuel supply system
FBPSUG2020	Operate a coal fuel supply system
FBPSUG2021	Operate an ash separation system
FBPSUG2022	Operate a waste water treatment system
FBPSUG2023	Operate a cooling water system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSUG2024	Perform standard tests on cane samples
FBPSUG2025	Perform general planing and shaping operations
FBPSUG2026	Perform general drilling operations
FBPSUG2027	Perform general lathe operations
FBPSUG2028	Perform general milling operations
FBPSUG3001	Drive a cane locomotive
MSMBLIC001	Licence to operate a standard boiler
RIICBM305D	Install pre-cast concrete bridge decks
RIIHAN305D	Operate a gantry or overhead crane
RIIMPO319E	Conduct backhoe/loader operations
TLID3035	Operate a boom type elevating work platform
TLID3036	Lift and move load using a mobile crane
TLILIC0003	Licence to operate a forklift truck
TLILIC0008	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)
TLILIC2014	Licence to drive a light rigid vehicle
TLILIC2015	Licence to drive a medium rigid vehicle
UEPOPL001	Licence to operate a steam turbine

FBP31121 Certificate III in High Volume Baking

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the skills and knowledge for workers in a production bakery, where high volume production of bread, pastry products, biscuits and/or cakes is undertaken.

The qualification is designed for production related roles that require application of specific high volume baking skills and knowledge across a range of processes and including some technical and problem solving ability. It caters for multi-skilled outcomes and roles that include team leader functions within the production environment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 17 units of competency:
  - 9 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 units from the Group A electives listed below
- up to 4 units from the Group B electives listed below

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- up to 3 units from any currently endorsed Training Package or accredited course.

Core Units

FBPFSY3003	Monitor the implementation of food safety and quality programs
FBPFSY3004	Participate in traceability activities
FBPFSY3005	Control contaminants and allergens in food processing
FBPOPR2069	Use numerical applications in the workplace
FBPOPR3019	Operate and monitor interrelated processes in a production or packaging system
FBPOPR3021	Apply good manufacturing practice requirements in food processing
FBPTEC3005	Work with bakery ingredients, their functions and interactions
FBPTEC3006	Work with flours and baking additives
FBPWHS3001	Contribute to work health and safety processes

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table below for details.

Group A

FBPHVB2001	Freeze and thaw dough
FBPHVB3002	Operate and monitor a laminated pastry production process
FBPHVB3003	Operate and monitor a pastry forming and filling process
FBPHVB3004	Manufacture wafer products
FBPHVB3005	Operate and monitor a doughnut making process
FBPHVB3006	Operate and monitor a forming or shaping process
FBPHVB3007	Manufacture crisp breads

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPHVB3008	Operate and monitor a batter production process
FBPHVB3009	Operate and monitor a non laminated pastry production process
FBPHVB3010	Operate and monitor a pastry baking process
FBPHVB3011	Operate and monitor the production of fillings
FBPHVB3012	Operate and monitor a biscuit dough make up process
FBPHVB3013	Operate and monitor a baking process
FBPHVB3014	Finish baked products
FBPHVB3015	Operate and monitor a griddle production process
FBPHVB3017	Operate a bread dough mixing and development process
FBPHVB3018	Operate a final prove and bread baking process
FBPHVB3019	Operate a bread dough make up process
FBPOPR2097	Operate a depositing process
FBPOPR3004	Set up a production or packaging line for operation
FBPOPR3024	Operate and monitor an extrusion process
FBPTEC3001	Apply raw materials, ingredient and process knowledge to production problems

Group B

FBPBPG3002	Operate the labelling process
FBPBPG3007	Perform packaging equipment changeover
FBPBPG3011	Operate and monitor a high speed wrapping process
FBPCON2011	Operate a chocolate tempering process
FBPFST4003	Apply digital technology in food processing
FBPFSY3002	Participate in a HACCP team
FBPFSY4003	Perform an allergen risk review

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFSY4005	Conduct a traceability exercise
FBPHVB3001	Operate and monitor a cooling and wrapping process
FBPHVB3016	Operate and monitor a cooling, slicing and wrapping process
FBPOPR2078	Work in a freezer storage area
FBPOPR2081	Measure non-bulk ingredients
FBPOPR2090	Operate a freezing process
FBPOPR2092	Operate a continuous freezing process
FBPOPR3007	Operate a bulk liquid transfer process
FBPOPR3018	Identify dietary, cultural and religious considerations for food production
FBPOPR3020	Plan, conduct and monitor equipment maintenance
FBPOPR3022	Receive and store raw materials for food processing
FBPPPL3003	Participate in improvement processes
FBPPPL3004	Lead work teams and groups
FBPPPL3005	Participate in an audit process
FBPPPL3006	Report on workplace performance
FBPPPL3007	Support and mentor individuals and groups
FBPPPL3008	Establish compliance requirements for work area
FBPTEC3002	Implement the pest prevention program
FBPTEC4008	Participate in product recalls
FSKDIG002	Use digital technology for routine and simple workplace tasks
FSKDIG003	Use digital technology for non-routine workplace tasks
FSKLRG009	Use strategies to respond to routine workplace problems
FSKNUM015	Estimate, measure and calculate with routine metric measurements for work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FSKNUM019	Interpret routine tables, graphs and charts and use information and data for work
FSKOCM004	Use oral communication skills to participate in workplace meetings
FSKRDG008	Read and respond to information in routine visual and graphic texts
FSKRDG009	Read and respond to routine standard operating procedures
FSKWTG008	Complete routine workplace formatted texts
MSL973013	Perform basic tests
MSMPER300*	Issue work permits
MSMSUP310	Contribute to the development of workplace documentation
MSMSUP330	Develop and adjust a production schedule
MSMSUP390	Use structured problem-solving tools
MSMWHS201	Conduct hazard analysis
MSS403010	Facilitate change in an organisation implementing competitive systems and practices
MSS403021	Facilitate a Just in Time system
MSS403040	Facilitate and improve implementation of 5S
MSS403085	Ensure process improvements are sustained
MSS404060	Facilitate the use of planning software systems in a work area or team
MSTGN3017	Monitor and operate trade waste process
SIRRINV002	Control stock
TAEDEL301	Provide work skill instruction
TLIA0015	Organise receival and despatch operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBP40221 Certificate IV in Baking

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification describes the specialist technical skills and knowledge of an advanced bread baker, advanced pastry cook or advanced baker working in a commercial baking environment. It may be packaged to reflect a specialisation in advanced bread baking skills or in advanced pastry skills, or a combination of both.

This qualification includes technical, artisan and creative skills and knowledge required to produce bakery products, solve baking problems, and ensure that baking and business operations are implemented and maintained to optimal performance.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Entry Requirements

To commence this qualification an individual must have:

- completed a Certificate III qualification in a field of study related to commercial baking, or
- at least 3 year's full time relevant employment in a commercial baking environment.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 7 core units plus
  - 7 elective units.

Electives must ensure the integrity of the qualification's Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A minimum of 3 from Group A and B
- Up to 3 from Group C
- Up to 2 from any currently endorsed Training Package or accredited course that is packaged at a Certificate IV or Diploma level.

Any combination of electives that meets the packaging rules can be selected for the award of the Certificate IV in Baking.

Electives may be packaged to provide a qualification with a specialisation area as follows:

- A minimum of 5 electives from Group A must be selected for award of the Certificate IV in Baking (Advanced Bread)
- A minimum of 6 electives from Group B must be selected for award of the Certificate IV in Baking (Advanced Pastry)

Core Units

BSBSUS411	Implement and monitor environmentally sustainable work practices
FBPFSY4001	Supervise and maintain a food safety plan
FBPRBK3016	Control and order bakery stock
FBPRBK4004	Develop baked products
FBPRBK4006	Coordinate baking operations
FBPWHS4002	Maintain work health and safety processes
SITXHRM001	Coach others in job skills

Elective Units

Group A Advanced Bread

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPRBK3005	Produce basic bread products
FBPRBK3011	Produce frozen dough products
FBPRBK3017*	Operate plant baking processes
FBPRBK4001*	Produce artisan bread products
FBPRBK4002*	Develop advanced artisan bread methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPRBK4007	Assess and evaluate bread products
FBPRBK4008	Apply bread baking science

Group B Advanced Pastry

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPRBK3003	Produce specialist pastry products
FBPRBK3010	Produce cake and pudding products
FBPRBK4003*	Produce gateaux, tortes and entremets
FBPRBK4005	Apply advanced finishing techniques for specialty cakes
SITHPAT005*	Produce petits fours
SITHPAT006*	Produce desserts
SITHPAT008*	Produce chocolate confectionery
SITXFSA001	Use hygienic practices for food safety

Group C Bakery Operations

BSBOPS404	Implement customer service strategies
BSBESB406	Establish operational strategies and procedures for new business ventures
BSBLDR414	Lead team effectiveness

Prerequisite requirements

Note: Units listed in the Prerequisite requirement column that have their own prerequisite requirements are shown with an asterisk (*)

FBP40321 Certificate IV in Food Processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification reflects the role of workers who work in supervisory or middle management roles within food processing environments. Workers contribute specialist technical skills and knowledge to solve food production problems and supervise the work of others. Emphasis is on monitoring the implementation and quality control of food processing systems and procedures for optimal performance.

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 20 units of competency:
  - 8 core units, plus
  - 12 elective units, including up to 4 from any currently endorsed Training Package or accredited course.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Core Units

BSBLDR412	Communicate effectively as a workplace leader
BSBPMG430	Undertake project work
BSBOPS403	Apply business risk management processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

BSBWHS411	Implement and monitor WHS policies, procedures and programs
FBPFSY4001	Supervise and maintain a food safety plan
FBPTEC4003	Control food contamination and spoilage
FBPTEC4007	Describe and analyse data using mathematical principles
MSMENV472	Implement and monitor environmentally sustainable work practices

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

BSBLDR411	Demonstrate leadership in the workplace
BSBLDR413	Lead effective workplace relationships
BSBINS401	Analyse and present research information
FBPAUD4001	Assess compliance with food safety programs
FBPFST4001	Apply food processing technologies
FBPFST4002	Carry out sampling and testing of milk at receival
FBPFST4003	Apply digital technology in food processing
FBPFST4005	Document food processes and supporting procedures
FBPFST4007	Establish operational requirements for a food processing enterprise
FBPFST4012	Apply water management principles to the food industry
FBPFST5001	Monitor refrigeration and air conditioning systems in food processing
FBPFST5002	Identify and implement required process control for a food processing operation
FBPFST5003	Construct a process control chart for a food processing operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFST5009	Implement and review the processing of market milk and related products
FBPFST5010	Implement and review the preparation of milk for processing
FBPFST5011	Implement and review the processing of chocolate and sugar-panned products
FBPFST5012	Implement and review the processing of aerated confectioneries
FBPFST5013	Implement and review the production of gums and jellies
FBPFST5014	Implement and review the production of chocolate products
FBPFST5015	Implement and review the processing of chocolate
FBPFST5016	Implement and review the processing of high and low boil confectionery
FBPFST5017	Implement and review the processing of confectionery products
FBPFST5018	Implement and review the processing of chilled or frozen poultry products
FBPFST5019	Implement and review the processing of cooked poultry products
FBPFST5020	Implement and review the processing of egg based products
FBPFST5021	Implement and review the processing of fruit, vegetables, nuts, herbs and spices
FBPFST5022	Implement and review the processing of fish and seafood products
FBPFST5023	Implement and review the production of milk fat products
FBPFST5024	Implement and review the production of fermented dairy products and dairy desserts
FBPFST5025	Implement and review the production of concentrated and dried dairy products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFST5026	Implement and review the production of ice creams and frozen dairy products
FBPFST5027	Implement and review the production of milk and related products by the membrane system
FBPFST5028	Implement and review the manufacturing and processing of edible fats and oils
FBPFST5029	Implement and review manufacturing, packaging and testing of beverage products
FBPFST5030	Implement and review manufacturing of cereal products
FBPFSY4002	Supervise and verify supporting programs for food safety
FBPFSY4003	Perform an allergen risk review
FBPFSY4004*	Provide accurate food allergen information to consumers
FBPFSY4005	Conduct a traceability exercise
FBPGRA4005	Lead flour milling shift operations
FBPGRA4006	Control mill processes and performance
FBPOPR4001	Apply principles of statistical process control
FBPPPL3003	Participate in improvement processes
FBPPPL3007	Support and mentor individuals and groups
FBPPPL4001*	Manage people in the work area
FBPPPL4002	Plan and coordinate production equipment maintenance
FBPPPL4003	Schedule and manage production
FBPPPL4005	Manage supplier agreements and contracts
FBPPPL4006	Manage a work area within budget
FBPPPL4007	Manage internal audits
FBPPPL4009*	Optimise a work process
FBPTEC4001	Determine handling processes for perishable food items
FBPTEC4002	Apply principles of food packaging

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPTEC4004	Apply basic process engineering principles to food processing
FBPTEC4005	Apply an understanding of food additives
FBPTEC4006	Apply an understanding of legal requirements of food production
FBPTEC4008	Participate in product recalls
FBPTEC4010	Manage water treatment processes
FBPTEC4011*	Establish process capability
MSL934004	Maintain and calibrate instruments and equipment
MSMSUP390	Use structured problem-solving tools
MSS403040	Facilitate and improve implementation of 5S
MSS403054	Facilitate breakthrough improvements
MSS404085	Undertake proactive maintenance analyses
MSS404086	Assist in implementing a proactive maintenance strategy
MSS404087	Support proactive maintenance
MSS405013	Facilitate holistic culture improvement in an organisation
PMBTECH406E	Diagnose production equipment problems
SITXHRM002	Roster staff
TAEDEL301	Provide work skill instruction
TLIL3003	Conduct induction process

FBP40421 Certificate IV in Food Science and Technology

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification targets those working in technical and supervisory roles covering product development, food safety and quality, food production and distribution, environmental functions, and the maintenance and monitoring of food processing systems. The job roles require specialist technical skills and knowledge in food science and technology to complete routine and non-routine tasks and functions, and workers have responsibility for their own functions and outputs, along with limited responsibility for the output of others.

This qualification offers an optional specialisation in Food Safety Auditing. Users interested in this option must refer to relevant state, territory and Commonwealth food safety legislation and the National Regulatory Food Safety Auditor Guideline and Policy for details of auditing requirements in low, medium and high-risk settings, and to understand the food safety auditing work context.

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 20 units of competency:
  - 8 core units, plus
  - 12 elective units, including up to 4 from any currently endorsed Training Package or accredited course.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Any combination of electives that meets the packaging rules can be selected for the award of the Certificate IV in Food Science and Technology.

Where appropriate, electives may be packaged to provide a qualification with a specialisation in Food Safety Auditing. All electives from Group A must be selected for the award of the Certificate IV in Food Science and Technology (Food Safety Auditing).

Core Units

BSBWHS411	Implement and monitor WHS policies, procedures and programs
FBPFST4004	Perform microbiological procedures in the food industry
FBPFST4011	Apply the principles of nutrition to food processing
FBPFSY4001	Supervise and maintain a food safety plan
FBPTEC4003	Control food contamination and spoilage
FBPTEC4007	Describe and analyse data using mathematical principles
MSL974020	Perform food tests
MSMENV472	Implement and monitor environmentally sustainable work practices

Elective Units

Group A - Food safety auditing

FBPAUD4001	Assess compliance with food safety programs
FBPAUD4002	Communicate and negotiate to conduct food safety audits
FBPAUD4003	Conduct food safety audits
FBPAUD4004	Identify, evaluate and control food safety hazards
FBPFST5006	Apply food microbiological techniques and analysis
FBPFSY3003	Monitor the implementation of food safety and quality programs
SIRRFSA001	Handle food safely in a retail environment

Group B - General electives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPCHE5002	Produce acid-coagulated soft cheese
FBPCHE5003	Produce a range of rennet-coagulated cheeses
FBPCHE5004	Produce acid and heat coagulated cheese
FBPCHE5009*	Carry out sampling and interpret tests for cheese production
FBPFST4003	Apply digital technology in food processing
FBPFST4005	Document food processes and supporting procedures
FBPFST4006	Apply food preservation technologies
FBPFST4007	Establish operational requirements for a food processing enterprise
FBPFST4008	Preserve food in cans or sealed containers
FBPFST4009	Label foods according to legislative requirements
FBPFST4010	Apply sensory analysis in food processing
FBPFST4012	Apply water management principles to the food industry
FBPFST5003	Construct a process control chart for a food processing operation
FBPFST5009	Implement and review the processing of market milk and related products
FBPFST5014	Implement and review the production of chocolate products
FBPFST5016	Implement and review the processing of high and low boil confectionery
FBPFST5017	Implement and review the processing of confectionery products
FBPFST5021	Implement and review the processing of fruit, vegetables, nuts, herbs and spices
FBPFST5024	Implement and review the production of fermented dairy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	products and dairy desserts
FBPFST5028	Implement and review the manufacturing and processing of edible fats and oils
FBPFST5030	Implement and review manufacturing of cereal products
FBPFSY4002	Supervise and verify supporting programs for food safety
FBPFSY4003	Perform an allergen risk review
FBPFSY4004*	Provide accurate food allergen information to consumers
FBPFSY4005	Conduct a traceability exercise
FBPOPR4001	Apply principles of statistical process control
FBPPPL3003	Participate in improvement processes
FBPPPL4007	Manage internal audits
FBPTEC4001	Determine handling processes for perishable food items
FBPTEC4002	Apply principles of food packaging
FBPTEC4004	Apply basic process engineering principles to food processing
FBPTEC4005	Apply an understanding of food additives
FBPTEC4006	Apply an understanding of legal requirements of food production
FBPTEC4008	Participate in product recalls
FBPTEC4009	Identify the physical and chemical properties of materials, food and related products
FBPTEC4010	Manage water treatment processes
FBPTEC4011*	Establish process capability
MSL973013	Perform basic tests
MSL974019	Perform chemical tests and procedures
MSL974021	Perform biological procedures
MSMOPS401	Trial new process or product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSUP390	Use structured problem-solving tools

FBP40518 Certificate IV in Pharmaceutical Manufacturing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Qualification Description

This qualification reflects the skills and knowledge for team leaders, supervisors and specialist technical roles within pharmaceutical manufacturing environments. The qualification includes technical skills, problem solving and supervisory skills to operate, monitor and improve the performance of pharmaceutical manufacturing systems, processes and team members.

Work must comply with good manufacturing practice, health and safety and environmental regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 8 core units, plus
  - 8 elective units.

Elective units must ensure the integrity of the qualifications' Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 4 must be from group A
- 4 from the remaining units listed in groups A or B, or any currently endorsed Training Package or accredited course packaged at Certificate III, Certificate IV or Diploma, with no more than 2 units packaged at Certificate III or Diploma.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Core Units

BSBSMB407	Manage a small team
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
FBPPHM4001	Monitor and maintain good manufacturing practice requirements
FBPPHM4002	Prepare and review workplace documentation to support good manufacturing practice requirements
FBPPHM4003	Facilitate contamination control
FBPPHM4005	Participate in validation of pharmaceutical manufacturing processes
FBPPHM4006	Respond to non-conformance
FBPPPL3006	Report on workplace performance

Elective Units

Group A

FBPOPR3005	Operate interrelated processes in a production system
FBPOPR3006	Operate interrelated processes in a packaging system
FBPPHM3002	Operate a pharmaceutical production process
FBPPHM3003	Work in a controlled environment
FBPPHM3004	Clean and sanitise facilities and equipment
FBPPHM4004	Participate in change control procedures
FBPPPL4002	Plan and coordinate production equipment maintenance
FBPTEC4007	Describe and analyse data using mathematical principles
FBPTEC4011*	Establish process capability
MSMOPS400	Optimise process/plant area
MSMSUP406	Identify faults in electronic control
MSMWHS401	Assess risk

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSS403011	Facilitate implementation of competitive systems and practices
MSS403032	Analyse manual handling processes
MSS403085	Ensure process improvements are sustained
MSS403087	Mistake proof an operational process
MSS404052	Apply statistics to operational processes
MSS404061	Facilitate the use of SCADA systems in a team or work area
MSS404082	Assist in implementing a proactive maintenance strategy
MSS404084	Undertake process capability improvements
PMBTECH406	Diagnose production equipment problems

Group B

BSBHRM405	Support the recruitment, selection and induction of staff
BSBINN301	Promote innovation in a team environment
BSBLDR402	Lead effective workplace relationships
BSBLDR403	Lead team effectiveness
BSBLED401	Develop teams and individuals
BSBMGT401	Show leadership in the workplace
BSBMGT402	Implement operational plan
BSBMGT403	Implement continuous improvement
BSBRES411	Analyse and present research information
BSBWOR403	Manage stress in the workplace
BSBWOR404	Develop work priorities
FBPOPR2069	Use numerical applications in the workplace
FBPOPR4001	Apply principles of statistical process control
FBPPPL3005	Participate in an audit process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSL922001	Record and present data
MSMPER300*	Issue work permits
MSMSUP390	Use structured problem-solving tools
MSMWHS201	Conduct hazard analysis
MSS402080	Undertake root cause analysis
MSS402083	Use planning software systems in operations
MSS403010	Facilitate change in an organisation implementing competitive systems and practices
MSS403021	Facilitate a Just in Time system
MSS403023	Monitor a levelled pull system of operations
MSS403040	Facilitate and improve implementation in 5S
MSS403041	Facilitate breakthrough improvements
MSS404053	Use DMAIC techniques
MSS404060	Facilitate the use of planning software systems in a work area or team
TAEASS402	Assess competence
TAEASS403	Participate in assessment validation
TAEDEL301	Provide work skill instruction

Prerequisite requirements

Unit of competency	**Prerequisite requirement**
FBPTEC4011 Establish process capability	FBPTEC4007 Describe and analyse data using mathematical principles

FBP40621 Certificate IV in Artisan Fermented Products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification reflects the role of those using artisanal methods to produce fermented food and/or beverage products, such as beer, spirits, miso, table olives and fermented meat products. In this role, makers analyse materials and products, exercising judgement to guide the fermentation process and the work of others.

This qualification offers specialisations in:

- Brewing
- Distilling, and
- Food and non-alcoholic beverages.

Individuals with this qualification apply a broad range of specialised skills and knowledge in varied contexts that involve selecting and operating equipment, coordinating resources and finding solutions to routine and non-routine problems as they arise. They may also have limited responsibility for the organisation of others.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing and food businesses exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 22 units of competency:
  - 9 core units plus
  - 13 elective units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 10 different units from Group A, B, C and/or D
- up to 3 units from this or any other endorsed training package or accredited course.

Any combination of electives that meets the rules above can be selected for the award of the *FBP40621 Certificate IV in Artisan Fermented Products* providing one of the electives chosen is *FBPTEC4015 Manage and propagate yeast* or *FBPTEC4022 Prepare starter cultures for fermentation*.

Where appropriate, electives may be packaged to provide a qualification with a specialisation.

Packaging for Specialisations

Electives must be packaged to provide a qualification with a specialisation area as follows:

- All Group A electives must be selected for the award of the *FBP40621 Certificate IV in Artisan Fermented Products (Brewing)*, plus at least 4 units not already selected from Group B, C and/or D and up to 3 units from this or any other endorsed training package or accredited course
- All Group B electives must be selected for the award of the *FBP40621 Certificate IV in Artisan Fermented Products (Distilling)* plus 3 units not already selected from Group A, C and/or D or from this or any other endorsed training package or accredited course
- All Group C electives must be selected for the award of the *FBP40621 Certificate IV in Artisan Fermented Products (Food and non-alcoholic beverages)* plus at least 6 different units from Group A, B and/or D and up to 3 units from this or any other endorsed training package or accredited course.

Core Units

FBPFST4009	Label foods according to legislative requirements
FBPFST4013	Interpret and respond to food and/or beverage test results
FBPFST4014	Apply sensory analysis in food and/or beverage production
FBPFSY5001	Develop a HACCP-based food safety plan
FBPTEC4003	Control food contamination and spoilage
FBPTEC4006	Apply an understanding of legal requirements of food production
FBPTEC4012	Manage raw materials
FBPWHS4002	Maintain work health and safety processes
MSL973013	Perform basic tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elective Units

Group A – Brewing

FBPBPG4002	Manage filling and packaging of fermented beverages
FBPTEC3003	Filter fermented beverages
FBPTEC4013	Manage wort production for brewing
FBPTEC4014	Manage cellar operations
FBPTEC4015	Manage and propagate yeast
FBPTEC4021	Apply regulatory requirements to the production of alcoholic beverages

Group B – Distilling

FBPTEC3003	Filter fermented beverages
FBPTEC3004	Prepare, fill and store barrels for aging spirits
FBPTEC4014	Manage cellar operations
FBPTEC4015	Manage and propagate yeast
FBPTEC4016	Produce fruit-based wash for distillation
FBPTEC4017	Produce grain-based wash for distillation
FBPTEC4018	Manage still operations to produce white spirits
FBPTEC4019	Manage still operations to produce brown spirits
FBPTEC4020	Blend spirits
FBPTEC4021	Apply regulatory requirements to the production of alcoholic beverages

Group C – Food and non-alcoholic beverages

FBPFST5031	Identify the microbiological and biochemical properties of fermented food and/or beverages
FBPTEC4002	Apply principles of food packaging

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPTEC4022	Prepare starter cultures for fermentation
FBPTEC4023	Control and monitor fermentation

Group D – Other electives

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

AHCBUS516	Develop and review a business plan
BSBESB402	Establish legal and risk management requirements of new business ventures
BSBESB403	Plan finances for new business ventures
FBPBPG4001	Manage bottling and packaging processes
FBPCEL2009	Carry out transfer operations
FBPFST5008	Develop a new food product
FBPFSY4001	Supervise and maintain a food safety plan
FBPFSY4003	Perform an allergen risk review
FBPFSY4004*	Provide accurate food allergen information to consumers
FBPFSY4005	Conduct a traceability exercise
FBPOPR3004	Set up a production or packaging line for operation
FBPPPL3004	Lead work teams and groups
FBPPPL4002	Plan and coordinate production equipment maintenance
FBPPPL4003	Schedule and manage production
FBPPPL4007	Manage internal audits
FBPPPL4008	Prepare and present artisan food and/or beverages
FBPTEC3001	Apply raw materials, ingredient and process knowledge to production problems
FBPTEC4008	Participate in product recalls

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPTEC4024	Produce fermented and dry-cured meat products
FBPTEC5002	Manage utilities and energy for a production process
FBPTEC5003	Design an artisan food production facility
MSL922001	Record and present data
MSMENV272	Participate in environmentally sustainable work practices
SIRRFSA001	Handle food safely in a retail environment
TLIX0004X	Administer inventory systems

Prerequisite requirements

FBP50121 Diploma of Food Science and Technology

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification reflects the role of workers who apply specialist knowledge and skills in food science and technology to food product development and to quality assurance of food manufacturing. They conduct a wide range of specialist tasks to develop, monitor and evaluate food products, including production trials.

Workers contribute to the modification of standard operating procedures (SOPs) and enterprise methods when necessary. They may also have a role in the planning new work and monitoring resources in their work area.

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 20 units of competency:
  - 11 core units, plus
  - 9 elective units including up to 3 from any currently endorsed Training Package or accredited course

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Core Units

FBP50221 Diploma of Food Safety Auditing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification reflects the role of workers who apply specialist knowledge and skills in food safety for auditing purposes. They conduct a range of audits in different environments to monitor food quality and safety according to relevant legislation, including food standards included in the Australia New Zealand Food Standards Code and industry codes of practice relating to validation and verification of a food safety program, and the audit requirements detailed in the National Regulatory Food Safety Auditor Guideline and Policy.

Regulatory food safety audits in Australia are covered by state, territory and Commonwealth legislative frameworks that support the requirements of the National Food Safety Audit Policy 2009. Users must check requirements with the relevant regulatory authority before delivery.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 11 core units, plus
  - 5 elective units including up to 3 from any currently endorsed Training Package or accredited course.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Core Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

BSBAUD512	Lead quality audits
BSBAUD513	Report on quality audits
FBPAUD4001	Assess compliance with food safety programs
FBPAUD4002	Communicate and negotiate to conduct food safety audits
FBPAUD4003	Conduct food safety audits
FBPAUD4004	Identify, evaluate and control food safety hazards
FBPFST5006	Apply food microbiological techniques and analysis
FBPFST6001	Develop, manage and maintain quality systems for food processing
FBPFSY5001	Develop a HACCP-based food safety plan
FBPTEC4006	Apply an understanding of legal requirements of food production
FBPTEC4007	Describe and analyse data using mathematical principles

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

BSBAUD511	Initiate quality audits
FBPAUD5001 *	Audit bivalve mollusc growing and harvesting processes
FBPAUD5002 *	Audit a cook chill process
FBPAUD5003 *	Audit a heat treatment process
FBPAUD5004 *	Audit manufacturing of ready-to-eat meat products
FBPFST4009	Label foods according to legislative requirements
FBPFST5005	Examine the biochemical properties of food

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Qualification Description

This qualification reflects the role of those making premium, high-value cheeses on a small scale, where the provenance of the milk is known, and where specialised techniques that are controlled and monitored by the cheesemaker are used. In this role, makers analyse materials and products exercising judgement to guide the cheesemaking process and the work of others.

Individuals with this qualification apply integrated technical and theoretical concepts in varied contexts, to analyse situations, synthesise information, and design and evaluate approaches to sometimes unpredictable problems. They use initiative and judgement to organise the work of self and others, and plan and coordinate the work of teams.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing and food businesses exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 11 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- up to 5 units from the elective list
- up to 2 units from this or any other endorsed training package or accredited course.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Core Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

FBPCHE5005	Produce lactic acid coagulated artisan cheese
FBPCHE5006	Produce rennet coagulated artisan cheese
FBPCHE5008	Ripen artisan cheese
FBPCHE5009*	Carry out sampling and interpret tests for cheese production
FBPFST4014	Apply sensory analysis in food and/or beverage production
FBPFST5002	Identify and implement required process control for a food processing operation
FBPFST5010	Implement and review the preparation of milk for processing
FBPFSY5001	Develop a HACCP-based food safety plan
FBPTEC4003	Control food contamination and spoilage
FBPWHS4002	Maintain work health and safety processes
MSL973013	Perform basic tests

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

BSBESB402	Establish legal and risk management requirements of new business ventures
BSBESB403	Plan finances for new business ventures
FBPCHE4001	Prepare and present cheese
FBPCHE5007	Produce acid and heat coagulated artisan cheese
FBPFST4006	Apply food preservation technologies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPFST4013	Interpret and respond to food and/or beverage test results
FBPFST5008	Develop a new food product
FBPFST5024	Implement and review the production of fermented dairy products and dairy desserts
FBPFSY4001	Supervise and maintain a food safety plan
FBPFSY4003	Perform an allergen risk review
FBPFSY4004*	Provide accurate food allergen information to consumers
FBPFSY4005	Conduct a traceability exercise
FBPFSY5002	Develop an allergen management program
FBPFSY5003	Design a traceability system for food products
FBPFSY5004	Plan to mitigate food fraud
FBPPPL4002	Plan and coordinate production equipment maintenance
FBPPPL4007	Manage internal audits
FBPTEC3001	Apply raw materials, ingredient and process knowledge to production problems
FBPTEC4002	Apply principles of food packaging
FBPTEC4005	Apply an understanding of food additives
FBPTEC4006	Apply an understanding of legal requirements of food production
FBPTEC4007	Describe and analyse data using mathematical principles
FBPTEC4008	Participate in product recalls
FBPTEC4009	Identify the physical and chemical properties of materials, food and related products
FBPTEC5001	Manage and evaluate new product trials
FBPTEC5002	Manage utilities and energy for a production process
FBPTEC5003	Design an artisan food production facility
MSMENV472	Implement and monitor environmentally sustainable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	work practices
MSS407016	Lead a process to determine and solve root cause for a complex problem
TLIX0004X	Administer inventory systems

Prerequisite requirements

Unit of competency	Prerequisite requirement
FBPCHE5009 Carry out sampling and interpret tests for cheese production	MSL973013 Perform basic tests

FBPBEV2004 Identify key stages and beer production equipment in a brewery

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify key functions within a brewery and the key stages of beer production.

This unit applies to individuals who are preparing to work in a brewery, usually in an operational role under general supervision.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Recognise stages and equipment for brewing beer	1.1 Identify key stages in beer production 1.2 Identify major equipment and equipment function for each beer production stage
2. Identify key information to support beer production	2.1 Identify workplace information for each production stage, including information about safety and standard operating procedures (SOP) 2.2 Identify the key health and safety risks in a brewery, and how each is controlled 2.3 Confirm supervisor or key resource person for each location or stage
3. Identify workplace products and procedures	3.1 Identify products produced and other services provided by the brewery 3.2 Identify key responsibilities of different roles, teams or functions within the workplace 3.3 Identify what makes a quality product at the brewery 3.4 Identify the regulatory requirements that need to be met 3.5 Recognise key responsibilities of operator role

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace information relevant to operator role, including SOPs and safety information

Assessment Requirements for FBPBEV2004 Identify key stages and beer production equipment in a brewery

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified key stages and beer production equipment in at least one brewery, including:

- identifying the stages in the brewing process and how the stages relate to each other
- identifying equipment in the brewery
- identifying at least four health and safety risks within the brewery, and how each is controlled.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the range of products and services that the brewery produces
- key functions and processes within the workplace, including storage of raw materials, preparation of grain, yeast management, wort production, cellar operations, bottling and packaging
- key legal requirements of beer production
- how each function or process contributes to product and services quality
- key health and safety risks in a brewery, and how they are controlled
- own workplace and site layout, roles and responsibilities
- features and purpose of key equipment and work areas
- roles of key staff members and responsibilities within the brewery
- reporting procedures and processes for key stages and beer production equipment in a brewery
- workplace information sources, and updating and accessing of requirements and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a brewery or an environment that accurately represents workplace conditions
- specifications:
  - work procedures, instructions and general workplace information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPBEV3001 Operate and monitor a wort production process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored wort production equipment to produce at least one batch of wort to meet product specifications, including:

- following safe work procedures
- monitoring critical control points
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of the wort production process
- relationship between the wort production process and the fermentation process
- stages and changes that occur during wort production, including milling, mashing and lautering, separation, boiling and cooling
- equipment used in the production of wort
- methods to transfer fluids and materials between vessels
- purpose of malt, hops, water, adjuncts and the preparation procedure for each
- purpose of the addition of processing aids and other ingredients
- good manufacturing practices (GMP) relevant to work task
- correct procedures for handling dangerous goods, including dust explosion hazards and control procedures relevant to wort production
- quality characteristics to be achieved for the wort production process
- wort process specifications, procedures and operating parameters
- the importance of temperature, temperature control systems and temperature intervals during wort production
- purpose of wort production equipment and instrumentation components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- significance and methods of monitoring control points within the wort production process
- sampling methods and typical tests undertaken
- common causes of variation, and corrective action required
- common microbiological, physical, chemical and allergen hazards related to beer production, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment relevant to the work process
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures
- cleaning requirements associated with changeovers and types of shutdowns
- procedures for reporting problems relevant to the wort production process
- cleaning and sanitation procedures
- traceability procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a brewery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - wort production equipment and services
  - raw materials and adjuncts required for product
  - cleaning equipment and materials
- specifications:
  - work procedures, including advice on safe work practices, food safety and environmental requirements
  - batch instructions, control points and production parameters
  - sampling and testing schedules
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBEV3002 Prepare and monitor beer yeast propagation processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare and monitor beer yeast propagation processes.

This unit applies to workers who have responsibility for yeast propagation in the brewing industry. These individuals may have some responsibility for others, and address routine, predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPBEV3002 Prepare and monitor beer yeast propagation processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared and monitored beer yeast propagation processes on at least one occasion, including:

- applying safe work practices
- following food safety procedures
- preparing product and materials, including:
  - culture yeast slopes
  - oxygenated wort
  - yeast nutrients
  - oxygen supply and sterilisation
  - wort heating
  - wort sterilisation
- confirming equipment status and condition, including checking:
  - cleaning and/or sterilisation requirements have been met
  - position and alignment of valves
  - integrity of door seals and small vessel tubing and condition of gas (oxy) filters
- monitoring the process and equipment operation to identify out-of-specification results or non-compliance, including sampling and checking:
  - temperature (wort)
  - wort gravity
  - wort oxygenation levels
  - yeast cell counts
  - yeast viability
  - weight
- taking corrective action in response to out-of-specification results or non-compliance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of propagating yeast cultures
- relationship of propagation to alcoholic fermentation
- stages and changes that occur during culture propagation
- effect of process stages on end product
- quality characteristics and uses of yeast cultures
- product and materials preparation requirements, and the effect of variation on the process
- main methods used in propagating yeast for beer production
- the fermentation reaction for yeast cultures
- techniques that may be used to manipulate the propagation process and end product characteristics, including:
  - temperature
  - yeast strain
  - wort stream
  - wort gravity
  - additions (nutrients)
  - oxygen
- process specifications, procedures and operating parameters relevant to beer yeast propagation
- equipment and instrumentation components, purpose and operation required for beer yeast propagation processes
- basic operating principles of process control systems
- services used in the beer yeast propagation processes
- significance and method of monitoring control points within the process
- common causes of variation with equipment, and corrective action required
- health and safety hazards and controls for beer yeast propagation processes
- lock-out and tag-out procedures required for beer yeast propagation processes
- procedures and responsibility for reporting problems relating to the beer yeast propagation processes
- environmental issues and controls relevant to yeast propagation processes
- shutdown and cleaning requirements associated with changeovers, and types of shutdowns
- waste handling requirements and procedures for beer yeast propagation processes
- recording requirements and procedures for beer yeast propagation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a brewery or an environment that accurately represents workplace conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - personal protective clothing and equipment
  - yeast propagation equipment and related services
  - yeast cultures
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPBEV3003 Operate and monitor a brewery fermentation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, operated, adjusted and shut down brewery fermentation and maturation equipment to process at least one batch of beer to specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- monitoring control points within the fermentation process
- sampling to ensure yeast effectiveness and freedom from bacterial contamination
- undertaking corrective action required in the event of variation to specifications and operating parameters.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, principles and requirements of the fermentation and maturation of beer
- relationship between the fermentation and maturation process, and the wort production process
- stages and changes that occur during fermentation
- fermentation process specifications, procedures and operating parameters
- significance of control points within the fermentation and maturation process
- fermentation equipment and instrumentation components, purpose and operation
- vessel-cooling systems for the brewery fermentation process
- purpose of temperature control and cold storage in the beer maturation process
- purpose of protein absorbing agents
- purpose of oxygen scavenging agents
- purpose of tannin absorbing agents

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for vessel transfer
- quality characteristics to be achieved
- common causes of variation, and corrective action required
- purpose of finings in a beer maturation process
- purpose of dry hopping
- purpose of other flavour additions in cellars
- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment relevant to the work process
- contamination/cross-contamination and food safety risks related to the fermentation and maturation process and related controls
- common microbiological, physical, chemical and allergen hazards related to brewing, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- good manufacturing practices (GMP) relevant to work task
- procedures and responsibilities for reporting problems during the fermentation process
- environmental issues and controls, including waste handling and disposal
- shutdown and cleaning requirements associated with changeovers, and types of shutdowns
- recording requirements and procedures for fermentation
- cleaning and sanitisation procedures for beer fermentation and maturation equipment
- sampling and testing procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a brewery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - relevant hazard control equipment
  - manual handling equipment
  - fermentation and maturation processing equipment
  - wort to be processed
  - sampling and testing equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a beer filtration process to make bright beer.

This unit applies to individuals who have responsibility for filtering beer in a brewery. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a beer filtration process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Beverages (BEV)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare the filtration process for operation	1.1 Confirm beer is available to meet production requirements 1.2 Confirm availability of services according to operating requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear appropriate personal protective clothing, and ensure correct fit 1.4 Conduct pre-start checks of equipment according to operator instructions, including checking that hygiene and sanitisation standards are met 1.5 Set the filtration process to meet production requirements
2. Operate and monitor equipment	2.1 Start up beer filtration equipment according to safe operating procedures 2.2 Monitor equipment and control points to minimise dissolved oxygen, and confirm performance is maintained within specification 2.3 Undertake blending of beer as part of filtration process, as required of product specification 2.4 Confirm system and sub-system outputs meet specifications 2.5 Undertake microbiology testing at control points for risk of bacterial infection or wild yeast contamination 2.6 Identify, rectify and report out-of-specification product, process and equipment performance 2.7 Record production and other workplace information according to workplace procedures
3. Shut down the filtration system	3.1 Shut down the system safely according to operating procedures 3.2 Clean and maintain equipment to meet the workplace cleaning schedule and procedural requirements 3.3 Collect, treat and dispose of or recycle waste generated by both the process and cleaning procedures 3.4 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret workplace and standard operating procedures relevant to work task • Interpret production requirements
Writing	• Complete processing records using electronic, digital and/or paper-based formats
Numeracy	• Monitor and interpret production and process control indicators and data • Use fractions, decimals, proportions and percentages to determine responses to results • Use volumes (ml, L, hL) and weights (mg, g, kg) to describe product quantities

Assessment Requirements for FBPBEV3004 Operate and monitor a beer filtration process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, operated, adjusted and shut down beer filtration equipment to process at least one batch of beer to specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- using fobbing equipment correctly to control oxygen and beer quality
- undertaking required corrective action in the event of variations to specification and procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of the filtration process
- relationship between the wort production process, the fermentation process and bright beer tanks
- stages and changes that occur during filtration
- purpose of filter aids, filtration beds and filters in the beer production process
- significance and methods of monitoring control points within the filtration process
- beer filtration equipment used, including components, purpose and operation
- consequences of turbulence and the procedures to avoid it
- effect of bacteria, oxygen and temperature on quality
- fobbing and its effect on quality
- addition of flavours in filtration
- addition of hop products in filtration
- common causes of variation, and corrective action required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contamination/cross-contamination and food safety risks related to the filtration process, and related controls
- good manufacturing practices (GMP) relevant to work task
- health and safety hazards and controls relevant to the beer filtration process
- environmental issues and controls, including waste handling requirements and procedures
- shutdowns and cleaning requirements associated with changeovers
- recording requirements and procedures for the beer filtration process
- cleaning and sanitisation procedures for beer filtration equipment
- sampling and testing procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a brewery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - relevant hazard control equipment and storage areas for hazardous goods
  - filtration equipment
  - filter aids and stabilising agents
  - beer to be filtered
- specifications:
  - workplace procedures, including safe work practices, food safety, quality and environmental requirements
  - specifications, control points and parameters for the beer filtration equipment and process
  - beer filtration equipment operating and service manuals
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPBEV3005 Operate and monitor juice processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated pressing and pasteurising equipment to process at least one batch of milled fruit and/or vegetables to meet juice specification, including:

- applying safe work procedures
- following food safety procedures
- monitoring stored product to specification
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the juice processing process, including stages and changes that occur during the pressing and pasteurisation process, and that can occur during storage of juice
- basic operating principles of equipment for the pressing and pasteurisation process, including:
  - safety hazards associated with pressing equipment
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - services required for operation of juice processing equipment used in the workplace
- the flow of the pressing, pasteurisation and storage process, and the effect of product output on downstream processes
- quality characteristics of pasteurised juice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods used to monitor the pressing process, including inspecting, measuring and testing in-feed and out-feed solids, and other tests as required by the process
- good manufacturing practices (GMP) relevant to work task
- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment relevant to the work process
- inspection or test points (control points) in the pressing process and the related procedures and recording requirements, including use of refractometers
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- contamination/cross-contamination, spoilage and other food safety risks associated with pressed juice, and related control measures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- standard microbiological techniques to identify food poisoning and spoilage organisms
- the importance of plant hygiene and how it can affect the finished product
- microbiological toxins and aflatoxins
- common chemical reactions that occur in juice processing, including both spontaneous and controlled reactions, including:
  - the role of enzymes, ascorbic acid and nitrogen gas in generating biological reactions
  - tests commonly used to measure phenomena, and related units of measurement
  - the role of temperature and pressure in the transition process
- pH and its impact on fermentation
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for operating the process
- cleaning and sanitisation procedures required for operating pressing, pasteurisation and storage equipment
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the operation of the juice processing process, including handling of waste
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - juice pressing and pasteurisation equipment and related services
  - fruit and/or vegetables to be pressed
  - sampling schedules and test procedures and equipment as required
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPBEV3008 Manufacture roast and ground coffee

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has blended, roasted and ground at least one batch of coffee beans to meet product specifications, including:

- applying food safety procedures to work practices
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- steps and purpose of each stage in the roasting and grinding process
- basic operating principles of roast and ground coffee equipment, including:
  - main equipment components
  - status and purpose of guards
  - basic principles and operation of roasting and grinding system
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
- roasting and grinding flow process, and the effect of outputs on the downstream processes, including:
  - how each stage of the process affects related stages
  - how the outputs of this process affect the filling stage
- quality characteristics to be achieved by the roasting and grinding process, including:
  - varieties of green beans
  - effect of bean characteristics on roasting and grinding processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- inspection or test points (control points) in the roast and ground coffee process, and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the roast and ground coffee process, and related control measures
- common causes of product variation, and corrective action required
- workplace health and safety hazards and procedures, including the purpose and limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdown procedures for the process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
  - isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste collection and disposal, and handling procedures related to the process
- cleaning and sanitisation procedures for roast and coffee grinding equipment and worksite
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - coffee roasting and grinding equipment and manuals
  - green coffee beans
  - suitable water supply
  - sampling schedules, test procedures and related equipment
  - equipment for cleaning roasting and coffee grinding equipment
- specifications:
  - work procedures, including safe work practices, food safety, quality and environmental requirements
  - recipe/batch specifications, control points and processing parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG1001 Pack or unpack product manually

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to manually pack or unpack products including food and raw materials.

This unit applies to individuals who work under direct supervision to pack and unpack items into or from primary or secondary (inner or outer) packaging. Products being packed may be fed on a conveyor or be stationary.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Bottling and Packaging (BPG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to pack or unpack product	1.1 Read or listen to work instructions from supervisor, and ask for clarification where necessary 1.2 Identify health and safety hazards and food safety hazards, and

	report to supervisor 1.3 Use appropriate personal protective equipment according to workplace procedures 1.4 Identify packaging requirements according to job specifications 1.5 Check packaging consumables against product type
2. Manually pack or unpack product	2.1 Pack or unpack product to meet customer and order specifications 2.2 Stack product according to required configurations 2.3 Identify unacceptable packaging consumables, product and packed products, and remove and correct, or inform supervisor 2.4 Maintain the work area in a clean and tidy state according to workplace and food safety requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Recognise and seek guidance to correct simple problems
Writing	• Keep track of work activities
Oral communication	• Follow instructions to complete a limited set of well-defined tasks • Ask simple questions and listen carefully to clarify understanding or seek further information
Numeracy	• Keep track of work activities and supply of packaging consumables • Measure detergents and cleaning agents

Assessment Requirements for FBPBPG1001 Pack or unpack product manually

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has manually packed and/or unpacked at least 10 products, including:

- applying food safety procedures to work practices
- following safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and function of packaging
- quality requirements of packaging components and consumables, the packing process, and the effect of outputs on both the further stages of packaging and storage, and on the final consumer
- packaging components and consumables used for each product type
- packaging, unpacking and/or wrapping and/or placement procedures for each product type
- consequences of incorrect procedures or configuration
- specifications for packing/packaging product and related equipment, components and consumables as required, including identifying any special packing/packaging requirements of particular customers
- storage and handling requirements of product
- contamination/food safety risks associated with manual packing, and related control measures
- common causes of variation in both product presented for packing and packing components and consumables, and corrective action required
- health and safety hazards and controls, including appropriate materials handling techniques related to the role
- services required, and action to take if services are not available.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - relevant materials, packaging components and consumables, and related equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and waste disposal requirements
  - production schedule and packaging specifications
  - documentation and recording requirements
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG2006 Operate the bottle capsuling process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate and shut down a range of semi-automated and automated bottling and packaging equipment involved in the bottle capsuling process.

The unit applies to individuals who work under general supervision in bottling and packaging and are responsible for operating and monitoring a bottle capsuling process and associated equipment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Bottling and Packaging (BPG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to operate bottle capsuling equipment	1.1 Confirm work instructions, including identifying potential health and safety in the workplace hazards and controls with supervisor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Select, fit and use appropriate personal protective equipment 1.3 Ensure that product and dry goods are available to meet bottle capsuling requirements 1.4 Ensure that services are available and ready for operation 1.5 Prepare bottle capsuling equipment and check to confirm readiness for use 1.6 Setup equipment to meet bottle capsuling requirements
2. Operate and monitor the bottle capsuling process	2.1 Start up bottle capsuling equipment according to operating instructions 2.2 Monitor control points to confirm performance is maintained within equipment operation specification 2.3 Ensure bottles are supplied according to requirements 2.4 Monitor bottle capsuling equipment to confirm operating condition 2.5 Identify, rectify and report out-of-specification end product, process and equipment performance according to workplace procedures 2.6 Liaise with operators in other work areas to ensure ongoing bottling process runs efficiently and effectively
3. Shut down the bottle capsuling process	3.1 Shut down bottle capsuling equipment according to operating instructions 3.2 Prepare bottle capsuling equipment for cleaning according to workplace procedures
4. Conduct housekeeping activities	4.1 Carry out cleaning procedures 4.2 Collect, treat and dispose of or recycle waste generated by both the process and cleaning procedures 4.3 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret key messages in standard operating procedures
Navigate the world of work	• Follow clear instructions within defined level of responsibility • Recognise organisational expectations and follows explicit protocols and procedures • Seek clarification when required
Get the work done	• Respond to routine problems using step by step instruction and procedures

Assessment Requirements for FBPBPG2006 Operate the bottle capsuling process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively set up, operated and shut down all items of equipment in the bottle capsuling process on at least one occasion, including:

- confirming equipment is ready for operation, including:
  - cleaning and sanitation processes are completed
  - capsule magazines, wax disc hoppers and wax pots are operational
  - any adjacent coding equipment is set up and operational
  - line controls (conveyors) are operational
  - line lube is operational and being correctly applied
  - heat shrink settings are adjusted to suit capsule type
  - metal-spinner tension is correct for capsule type
  - equipment is set for correct bottle height
  - hot melt for wax disc application is operational
  - bottle feeds are filled with correct screws and stars and accurately aligned
- monitoring and adjusting process equipment to achieve required quality outcomes, ensuring:
  - compressed air pressure is at correct level
  - supply and quality of bottles to be capsuled
  - fill heights of bottles to be capsuled
  - clarity of content in bottles being capsuled
  - ongoing quality and appearance (shrinkage and fit) of capsule application
  - ongoing quality of materials used in the process
  - glue application and supply to wax disc process
- taking corrective action in response to typical faults and inconsistencies
- liaising with other work areas involved in the packaging process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- completing workplace records as required
- applying safe work practices and identifying workplace health and safety hazards and controls.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of bottle capsuling equipment
- key features of bottle capsuling equipment and components
- links to related processes
- effect of process stages on end product
- quality characteristics and uses of end product
- effect of product and materials on process outcomes
- emergency and troubleshooting procedures
- process specification, procedures and operating parameters
- equipment and instrumentation components, purpose and operation
- basic operating principles of process control systems where relevant
- services required
- significance and methods of monitoring control points
- common causes of variation and corrective action required
- technological advances that include automation, such as use of robots
- health and safety in the workplace hazards and controls
- routine maintenance requirements
- lock-out and tag-out procedures
- procedures and responsibility for reporting problems
- shutdown and cleaning requirements associated with changeovers and types of shutdown
- recording requirements and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - bottle capsuling equipment
  - bottle capsuling resources and consumables
  - tools and equipment for adjusting and maintaining equipment
  - personal protective equipment
- specifications:
  - work procedures and operating instructions or instructions.

FBPBPG2009 Operate a beverage packaging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a process for packaging beverages that are in sealed containers such as bottles and cans.

This unit applies to individuals who work under general supervision in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a packaging process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPBPG2009 Operate a beverage packaging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, operated, adjusted and shut down a beverage packaging process to package at least one batch or production run of packages to meet specifications, including:

- following safe work procedures
- monitoring supply of product and consumables
- clearing routine jams and addressing routine problems.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relationship between the packaging process, fillers, labellers, other packaging equipment and palletisers, including stages that occur during filling and packaging
- requirements of the packaging process and types of packers
- effect of packaging on the end product
- process specifications, procedures and operating parameters of the beverage packaging process
- significance and methods of monitoring control points within the packaging process
- packaging equipment and instrumentation components, purpose and operation
- typical faults that can occur, and how they can be rectified, including:
  - glue seals on cartons
  - incorrect pack shape
  - materials faults
  - incomplete shrink wrapping
  - equipment faults
  - services faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- services used in the packaging process
- health and safety hazards and controls relevant to the packaging process
- good manufacturing practices (GMP) relevant to work task
- procedures and responsibility for reporting problems
- shutdown and cleaning requirements associated with changeovers, and types of shutdowns
- waste handling requirements and procedures relevant to the packaging process
- recording requirements and procedures, including down time
- cleaning procedures for the packaging equipment
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage packaging workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - beverage packaging equipment and related services
  - product to be packaged
  - packaging consumables
- specifications:
  - work procedures, including advice on safe work practices, food safety and environmental requirements
  - production schedule and batch instructions, control points and filling parameters
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG2010 Operate a case packing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a secondary packaging process used to form trays or boxes, load and position product, and seal the package.

This unit applies to individuals who work under general supervision and in a food processing packing environment. It typically applies to the worker responsible for applying basic operating principles to the operation and monitoring of a case packing process and associated equipment. Case packers may be configured as side loading, wrap around, drop, or pick and place packers.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPBPG2010 Operate a case packing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a case packing process to produce at least one batch of packing trays or boxes to meet specifications, including:

- monitoring control points and conducting inspections, as required, to confirm process remains within specification:
  - box formation
  - alignment, placement and quantity of units packed
  - operation of suction cups
  - operation of related equipment, including box closers and/or sealers
  - operation of ink jet coders to confirm correct code and clarity/legibility
- following safe work procedures
- addressing routine production issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of secondary packaging, including the requirements of packaging materials used and coding requirements
- basic operating principles of case packing equipment, including main equipment components, status and purpose of guards, purpose and location of electronic eyes and sensors, equipment operating capacities and applications, and services required for operation of case packers used in the workplace
- the flow of product to this stage in the packing process, and the effect of outputs on downstream processes
- quality characteristics and requirements of outer packaging materials and of the packaged product, including board quality and finished packaged product specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods used to monitor the process, including visual inspection of the process and of the quality of the packaged product
- inspection or test points (control points) in the process and the related procedures and recording requirements, and testing gluing or sealing of packages where required
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam-up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation, and corrective action required, including the effect of variation in packaging components/consumables on performance
- contamination/cross-contamination and food safety hazards and risks associated with this stage in the packaging process, and related control measures
- health and safety hazards and controls for operating a case packing process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the packaging process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for case packing equipment
- recording requirements for traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing packing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - automated case packers and related equipment and services
  - personal protective equipment
  - packaging consumables
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems and production/packaging schedules
  - information on equipment capacity and operating parameters
  - specifications, control points and operating parameters

FBPBPG2011 Operate a fill and seal process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a fill and seal process.

This unit applies to individuals who work under general supervision and in a food processing packing environment. It typically applies to the worker responsible for applying basic operating principles to the operation and monitoring of a filling and sealing process and associated equipment. This is a primary packaging process to fill product into packaging, including bottles, jars, boxes, drums, bladders and pails. It can apply to both aseptic and non-aseptic filling and sealing processes.

This unit should not be delivered in a qualification with FBPBPG3012 Operate and monitor a form, fill and seal process.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in processing area	1.1 Confirm work instructions and clarify where required 1.2 Identify health and safety hazards and inform supervisor 1.3 Wear appropriate personal protective equipment and ensure correct fit 1.4 Confirm that materials and packaging components and consumables are available to meet food safety and operating requirements 1.5 Identify and confirm equipment is clean and not locked out
2. Prepare the filling and sealing equipment and process for operation	2.1 Fit machine and adjust machine components and related attachments to meet safety and operating requirements 2.2 Acknowledge operating parameters to meet safety and production requirements 2.3 Carry out pre-start checks, adjusting equipment performance according to work health and safety and operating procedures
3. Operate and monitor equipment	3.1 Start, operate and monitor the process for variation in operating conditions 3.2 Monitor packaging quality and ensure seal integrity meets specifications 3.3 Identify, adjust and report out-of-specification equipment, product or process outcomes according to workplace requirements 3.4 Follow and apply workplace cleaning procedures and environmental requirements
4. Shut down the filling and sealing process	4.1 Identify the appropriate shutdown procedure, and implement 4.2 Report maintenance requirements according to workplace procedures 4.3 Maintain workplace records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**

Assessment Requirements for FBPBPG2011 Operate a fill and seal process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a fill and seal process to package one batch of product to specification, including:

- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - flow rates
  - product weights and volumes
  - fill levels
  - times and temperatures, including product and sealing temperatures
  - supply of packaging components/consumables
  - packaging quality and seal integrity, including testing seal integrity
- following safe work procedures
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of filling and sealing, including the purpose and characteristics required of packaging materials used and the method used to fill and seal product (where methods involve vacuum or map packaging, this includes an understanding of the effect of modified atmosphere on product shelf-life)
- product and packaging coding requirements, including product weight
- basic operating principles of filling and sealing equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - the purpose and location of sensors and related feedback instrumentation
  - services required for operation of filling equipment used in the workplace
- the flow of processes supplying the filling and sealing process, and the effect of outputs on downstream processes
- quality characteristics and requirements of filling and sealing, including:
  - quality requirements of product and packaging components/consumables
  - requirements of filling, including fill levels and weights
  - requirements of seal formation and integrity, and integrity testing procedures, where required
- methods used to monitor the process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including procedures to clear a breach and restart following a crash or jam-up, as appropriate
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation, and corrective action required, including the effect of variation in both product and packaging components/consumables on filling and sealing performance, which also includes the effect of temperature variation on the filling process
- food safety hazards and risks associated with filling and sealing, and related control measures
- health and safety hazards and controls requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the filling and sealing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- aseptic filling and sealing requirements
- cleaning and sanitisation procedures for filling and sealing equipment
- recording requirements for traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing packing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - filling and sealing equipment and related services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - personal protective equipment
  - materials and packaging components/consumables to be formed and filled
  - product
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems and production/packaging schedules
  - information on equipment capacity and operating parameters
  - specifications, control points and operating parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG2012 Operate a packaging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a packaging process or sub-system.

This unit applies to individuals who work under general supervision and operate and monitor a packaging process and associated equipment in a processing packaging environment. A packaging process may relate to primary and secondary packaging activities. It typically requires the operation of a series of related items of equipment to achieve the required outcome.

The unit only applies in a processing packaging environment where no other specific packaging unit is available. It should not be delivered in a qualification that includes another specific packaging unit.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FBPBPG3008 Operate an automated carton packing process

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate and shut down an automated carton packing process using a range of complex equipment, including a case packing machine, divider inserter, case sealer, conveyers and other quality control equipment.

The unit applies to individuals who work under broad direction in a packaging environment and are responsible for operating and monitoring a carton packing process, including safety compliance, production changeovers, consumables, cleaning and solving problems that arise with the process. Operators are responsible for solving problems that arise with machinery and reporting unresolved problems to technical specialists.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Assessment Requirements for FBPBPG3008 Operate an automated carton packing process

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently set up, operated, and shut down two automated packing processes for different work orders. Each process must use a conveyor fed automatic case packing machine packing at least 12,000 containers per hour, and include at least two of the following:

- divider inserter
- case sealer
- check weigher or other quality inspection device
- conveyer controls.

The processes must package at least two of the following carton types:

- 4-pack
- 6-pack
- 12-pack
- 18-pack
- 24-pack
- 30-pack.

For each process, the individual must have safely and efficiently performed the following:

- identified, rectified and/or reported machinery faults, including:
  - defective tulip heads
  - carton divider problems
  - glue application system problems
- reset machinery that is creating products that do not meet specifications
- accurately and effectively handed over a packing process to another team member
- communicated effectively with a supervisor and at least one of the following:
  - maintenance team member
  - laboratory or quality assurance team member

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - bottling and packaging team member
  - logistics team member
- accurately completed workplace production records.

The individual must also complete a packing run changeover that requires a complete machine changeover, including the picking head and centring frame, according to workplace safety and time requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- product knowledge related to the containers to be packaged as stipulated in the performance evidence, including:
  - size, weight and volume
  - client or receiver requirements or specifications
- operating principles of machinery and equipment, including:
  - conveyor fed automatic case packing machine capable of packing at least 12,000 containers per hour
  - divider inserter
  - case sealer
  - check weigher
  - conveyer controls
- features and functions of machinery and equipment, including:
  - manufacturer and workplace instructions for safe operation
  - control panels and ancillary controls
  - operating capacities, efficiencies and applications
  - location and purpose of guards, rails and sensors
  - feedback instrumentation
  - services required, including compressed air, electricity and water
  - cleaning and maintenance requirements
- machinery and equipment checks, including:
  - pre-start checks, including emergency stop checks
  - lock-out and tag-out procedures, including return to service after isolation
- the interrelationships between the bottling, carton packing and palletising
- product and process changeover procedures and responsibilities
- quality control requirements, processes and actions, including:
  - packing order specifications
  - requirements of containers, variation in containers and the packing process
  - methods used to check quality
  - common causes of carton packing quality issues and corrective action required, including removal of out-of-specification containers and cartons

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - planned sampling and testing associated with process monitoring and control
    - responding to machinery alerts and notifications
    - recording of results
    - isolating samples for testing
- product identification and traceability requirements, including:
    - client or receiver requirements or specifications
    - carton coding
- health and safety hazards and controls, including awareness of the limitations of personal protective clothing and equipment relevant to the work process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the carton packing process, including:
    - rework and reuse of products
    - waste processing
- manual handling procedures related to the packing process.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - an industrial carton packaging plant
- resources, equipment and materials:
    - the equipment stipulated in the performance evidence
    - packaging cartons and inserts
    - the containers to be packaged stipulated in the performance evidence
    - packaging consumables, including glue and ink
- specifications:
    - two packing work orders stipulated in the performance evidence
    - workplace procedures for an automatic packing process and the machinery and equipment stipulated in the performance evidence
- relationships:
    - supervisor and others stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPBPG3009 Operate an automated palletising process

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently set up, operated, and shut down two complete palletising processes for different work orders, using automatic palletising machines, including a pallet wrapper. One process must palletise 12-pack cartons and the other 6-pack cartons, that are configured differently.

Each process must complete at least 20 pallets per hour during a three-hour shift. Each pallet must have at least three carton layers, and be correctly configured, stacked and stretch wrapped using an automated pallet wrapper.

For each of the palletising work orders, the individual must have safely and efficiently performed the following:

- confirmed the product and palletising requirements and set up all the equipment and machinery, including individual pallet configuration requirements
- operated, monitored and shut down the palletising process, equipment and machinery
- correctly labelled each pallet for end users to track the date and location of production
- used sample checks to identify quality issues
- identified, rectified and/or reported machinery faults, including:
  - blockages caused by damaged pallets
  - cartons not correctly orientated
  - pallets not stopping in the correct position
  - carriage or pusher not making the end position
  - excessive stretch wrap and slip sheet breakage causing sensor faults
  - machinery settings resulting in incorrect palletising
- accurately and effectively handed over a palletising process to another team member
- accurately completed workplace production records
- communicated effectively with a supervisor and at least one of the following:
  - maintenance team member

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- laboratory or quality assurance team member
- bottling and packaging team member
- logistics team member.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- product knowledge related to the containers to be palletised as stipulated in the performance evidence, including:
  - size, weight and volume
  - client or receiver requirements or specifications
  - regulatory requirements
- operating principles of machinery and equipment, including:
  - conveyor fed automatic palletising machine
  - automated stretch wrapper
  - pallet tag applicators
  - carton orientation devices
- features and functions of machinery and equipment, including:
  - manufacturer and workplace instructions for safe operation
  - control panel and ancillary devices
  - operating capacities, efficiencies and applications
  - location and purpose of guards, rails and sensors
  - feedback instrumentation
  - services required and action to take if services are not available
  - cleaning requirements
- machinery and equipment checks, including:
  - pre-start checks, including emergency stop checks
  - lock-out and tag-out procedures, including return to service after isolation
- consumables including slip sheets, interlayers, hot melt glue and stretch film
- the interrelationships between bottling, carton packing, palletising and end of line dispatch processes
- product and process changeover procedures and responsibilities
- quality control requirements, processes and actions, including:
  - palletising order specifications
  - pallets for domestic and export use
  - methods used to check quality
  - common causes of palletising quality and corrective action required, including removal of out-of-specification pallets
  - planned sampling and testing associated with palletising process monitoring and control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - responding to machinery alerts and notifications
    - recording of results
    - isolating non-conforming pallets
- product identification and traceability requirements, including:
    - workplace requirements
    - client or receiver requirements or specifications
    - pallet identification/tagging requirements
- health and safety hazards and controls, including awareness of the limitations of protective clothing and equipment relevant to the work process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the palletising process, including:
    - rework and reuse of products
    - waste processing
- materials and manual handling procedures related to the palletising process.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - an industrial packaging and/or palletising plant
- resources, equipment and materials:
    - automated palletising equipment, including an automated wrapper
    - pallets and packaging consumables, including glue, slip sheets, interlayers, pallets and stretch wrap
- specifications:
    - two palletising work orders as stipulated in the performance evidence
    - workplace procedures for operating an automatic palletising process, machinery and equipment
- relationships:
    - supervisor and others stipulated in the performance evidence
- timeframes:
    - as stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG3010 Operate and monitor a carbonated beverage filling process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a filling process for a carbonated beverage, including carbonated water, juice and beer.

This unit applies to individuals who are responsible for operating and monitoring a beverage filling process and associated services in a beverage processing environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Bottling and Packaging (BPG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for filling	1.1 Identify and confirm beverage carbonation and filling requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Confirm availability of required product, containers and services to meet filling requirements 1.3 Identify health, safety and food safety hazards, and control risks associated with carbonation and filling 1.4 Wear appropriate personal protective equipment and clothing, and ensure correct fit 1.5 Maintain the work area to comply with good manufacturing practices (GMP)
2. Carbonate beverage in preparation for filling	2.1 Carry out pre-start checks of equipment and product 2.2 Start up equipment and carbonate product to specification 2.3 Add additional ingredients as required, and record for traceability 2.4 Monitor levels of carbon dioxide and dissolved oxygen 2.5 Monitor equipment to identify any variation in operation, and adjust to ensure optimal performance 2.6 Sample beverage to ensure product specifications are met
3. Operate and monitor filling	3.1 Carry out pre-start checks of filling equipment and product 3.2 Check containers against production order and container specifications 3.3 Start equipment and fill containers to specification 3.4 Maintain stock flow to and from filler process within production requirements 3.5 Monitor fill levels and container seals to ensure product meets specification 3.6 Monitor equipment to identify any variation in operation, and adjust to ensure optimal performance 3.7 Pasteurise product as required of product specification
4. Shut down equipment and conduct housekeeping	4.1 Shut down equipment according to safe work procedures 4.2 Clean and maintain equipment to meet cleaning schedules and procedural requirements 4.3 Collect, treat and dispose of or recycle waste generated by both the process and cleaning procedures 4.4 Record filling activity to meet workplace and regulatory requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret directions for the safe operation of equipment • Operate equipment using digital interface
Writing	• Record product and processing information using digital and/or paper-based formats
Numeracy	• Monitor and interpret production and process control indicators and data • Monitor supply and flow of materials to and from the process • Measure volume of product (mL, L)

Unit Mapping Information

Assessment Requirements for FBPBPG3010 Operate and monitor a carbonated beverage filling process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, operated, adjusted and shut down a filling process for at least one batch of carbonated beverage, including:

- applying food safety procedures to work practices
- following safe work procedures
- clearing routine jams and rectifying routine problems.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relationship between the filling process, production and packaging operations
- requirements of the filling process specific to product
- requirements of pre-start checks, including:
  - inspecting equipment condition to identify any signs of wear
  - selecting appropriate settings and/or related parameters
  - cancelling isolation or lock-outs
  - confirming that equipment is clean and correctly configured for processing requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been carried out
  - confirming that all safety guards are in place and operational
- types of fillers used
- typical faults that occur and how they can be rectified, including:
  - flow rates/quantity
  - broken or faulty containers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - contaminated product
  - equipment faults
  - services faults
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- aseptic filling and sealing requirements
- contamination/cross-contamination and food safety risks associated with the filling process, and related control measures
- quality characteristics to be identified, including levels of dissolved oxygen and carbon dioxide
- process specifications, procedures and operating parameters
- significance and methods of monitoring control points within the beverage filling process
- equipment and instrumentation used for filling
- services used in the filling process
- common causes of variation, and corrective action required
- good manufacturing practices (GMP) relevant to work task
- workplace procedures and responsibility for reporting problems
- shutdown and cleaning requirements associated with changeovers, and types of shutdowns
- waste handling requirements and procedures relevant to the filling process
- recording requirements and procedures, including down time
- environmental issues and controls relevant to the filling and sealing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for filling process
- traceability requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - filling equipment and services
  - product to be filled
  - containers
  - cleaning equipment and materials
- specifications:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work procedures, including advice on safe work practices, food safety and environmental requirements
- production schedule, batch instructions, control points and filling parameters
- sampling and testing schedules
- documentation and recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG3011 Operate and monitor a high speed wrapping process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a primary packaging process using high speed wrapping equipment to enclose product in a sealed, airtight film or cello package.

This unit typically applies to the worker responsible for applying basic operating principles to the operation and monitoring of a high speed wrapping process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Bottling and Packaging (BPG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in processing area	1.1 Confirm work instructions and clarify where required 1.2 Identify health and safety hazards and address risks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear appropriate personal protective equipment and ensure correct fit 1.4 Confirm that materials and packaging components and consumables are available to meet food safety and production requirements 1.5 Identify and confirm equipment is clean, according to food safety guidelines, and not locked out
2. Prepare the wrapping equipment and process for operation	2.1 Carry out pre-start checks on process and related equipment to confirm readiness for use 2.2 Load and position packaging components and consumables according to operating procedures 2.3 Set parameters to meet safety and packaging requirements
3. Operate and monitor equipment	3.1 Start, operate and monitor the process for variation in operating conditions 3.2 Monitor packaging to ensure correct content, weights, pack alignment and codes, and seal integrity meets specifications 3.3 Identify, adjust and report out-of-specification equipment, product or process outcomes according to workplace requirements 3.4 Follow and apply workplace cleaning procedures and dispose of waste following environmental requirements
4. Shut down the wrapping process	4.1 Identify the appropriate shutdown procedure, and implement 4.2 Report maintenance requirements according to workplace procedures 4.3 Maintain workplace records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FBPBPG3011 Operate and monitor a high speed wrapping process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a high speed wrapping process on at least one occasion, including:

- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - product alignment
  - product weights
  - packaging quality
  - packaging and product alignment
  - seal integrity, including testing packaging integrity
  - codes, correct content and clarity/legibility
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies, including misaligned seals.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of wrapping, including the properties and requirements of packaging materials used, coding requirements and product weight
- basic operating principles of wrapping equipment, including:
  - main equipment components (conveyors and related guides and alignment adjustments)
  - purpose and location of electronic eyes and sensors
  - status and purpose of guards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - equipment operating capacities and applications, and services required for operation of wrapping equipment used in the workplace
- the flow of product to the wrapping process, and the effect of outputs on downstream processes
- good manufacturing practices (GMP) relevant to work task
- quality characteristics and requirements of product to be wrapped, wrapping materials and the final wrapped product
- methods used to monitor the process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation, and corrective action required, including the effect of variation in both product and packaging components/consumables on performance
- contamination/cross-contamination and food safety hazards and risks associated with the wrapping process, and related control measures
- health and safety hazards and controls relevant to the high speed wrapping process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the filling and wrapping process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for high speed wrapping equipment
- recording requirements for traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a food processing packing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - high speed wrapping machine and related equipment and services
    - personal protective equipment
    - materials to be wrapped, cello/film and other packaging components/consumables
    - packaging documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems and production/packaging schedules
  - information on equipment capacity and operating parameters
  - specifications, control points and operating parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG3012 Operate and monitor a form, fill and seal process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a form, fill and seal process.

This unit applies to individuals responsible for applying basic operating principles to the operation and monitoring of a forming, filling and sealing process and associated equipment. It can apply to both aseptic and non-aseptic form and fill processes.

This unit should not be delivered in a qualification with FBPBPG2011 Operate a fill and seal process.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPBPG3012 Operate and monitor a form, fill and seal process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a form, fill and seal process to process at least one batch of goods to specification, including:

- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - formation of container/packaging
  - flow rates
  - product weights and volumes
  - fill levels
  - temperature, including product and sealing temperatures
  - supply of packaging components/consumables
  - packaging quality and seal integrity, including testing packaging integrity
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies, including incorrect fill levels and misaligned seals.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of forming, filling and sealing, including:
  - the purpose and characteristics required of packaging materials used
  - the methods used to form packaging, fill and seal product (where methods involve vacuum or map packaging, this includes an understanding of the effect of modified atmosphere on product shelf-life)
- product and packaging coding requirements, including product weight
- basic operating principles of forming, filling and sealing equipment, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - services required for operation of form, fill and seal equipment used in the workplace
- the flow of processes supplying the forming, filling and sealing process, and the effect of process output on downstream processes
- good manufacturing practices (GMP) relevant to work task
- quality characteristics and requirements of forming, filling and sealing, including:
  - quality requirements of product and packaging components/consumables
  - requirements of packaging forming stage, and filling, including fill levels and weights
  - requirements of seal formation and integrity, and integrity testing procedures, where required
- methods used to monitor the process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the form, fill and seal process, and related control measures
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam-up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation, and corrective action required, including the effect of variation in both product characteristics and packaging components/consumables on forming, filling and sealing performance
- food safety hazards and risks associated with forming, filling and sealing, and related control measures
- health and safety hazards and controls relevant to the form, fill and seal process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the forming, filling and sealing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- aseptic container preparation/forming, filling and sealing requirements
- cleaning and sanitisation procedures for form, fill and seal equipment
- recording requirements for traceability of product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing packing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - forming, filling and sealing equipment and related services
  - personal protective equipment
  - materials and packaging components/consumables to be formed, filled and sealed
  - product
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems, production/packaging schedules
  - information on equipment capacity and operating parameters
  - specifications, control points and operating parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPBPG4001 Manage bottling and packaging processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed bottling and packaging processes for two different products, including:

- confirming services and staff are ready for operation
- confirming equipment is made ready for operation, including:
  - hygiene and sanitation standards have been met
  - adjusting air pressure
  - checking conveyor speed
  - adjusting heights and widths to accommodate specific product and material specifications
  - completing a test run
  - flow of line lube and water
  - realigning diverters and turners to ensure flow is as instructed
  - cartons, bottles and labels meet specifications
- confirming equipment is monitored and adjusted to achieve required quality outcomes, ensuring:
  - bottle cleanliness and draining effectiveness
  - dryness of bottles
  - glue supply
  - strength of carton seals
  - shrinkage or fit of capsules
  - stacking and stacking patterns meet specifications
  - bottle counters are re-set at the start of each product
  - stencils applied are clear and legible
  - bottle contents levels meet specification
  - ongoing quality of materials used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - ongoing appearance of applications
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bottling and packaging requirements and specifications for product
- stages and changes required for equipment operation, specific to product
- quality characteristics and uses of end product and output
- materials preparation requirements and effect of variation on the equipment operation
- emergency and troubleshooting procedures, including failure of services
- process specification, procedures and operating parameters
- equipment and instrumentation components, purpose and operation
- significance and method of monitoring control points within the equipment operation
- common causes of variation and corrective action required
- hazards and controls, including manual handling
- shutdown and cleaning requirements associated with changeovers and types of shutdown
- routine maintenance requirements
- recording requirements and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
    - product to be bottled and packaged
    - bottling and packaging equipment
    - bottling and packaging resources and consumables
    - tools and equipment for adjusting and maintaining equipment
- relationships:
    - relevant personnel.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for filling and packaging	1.1 Identify hazards and manage risks associated with filling and packaging 1.2 Confirm filling and packaging specifications for product 1.3 Confirm type of containers to be filled

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Confirm labelling requirements for product 1.5 Ensure that product, containers and labels are available to meet production requirements 1.6 Ensure that services and staff are available and ready for operation 1.7 Ensure equipment is cleaned, sanitised, prepared and checked to meet filling and packaging requirements 1.8 Complete records to meet company and regulatory requirements
2. Carbonate beverage for bottling or canning	2.1 Carry out pre-start checks of equipment and product 2.2 Carbonate product to specification 2.3 Add additional ingredients as required, and record for traceability 2.4 Monitor levels of dissolved oxygen 2.5 Monitor equipment to identify any variation in operation, and rectify 2.6 Sample beverage to ensure product specifications are being met 2.7 Adjust equipment parameters as necessary to ensure product meets specifications
3. Monitor filling, labelling and packaging processes	3.1 Carry out pre-start checks of filling equipment 3.2 Ensure enough containers and consumables are prepared for quantity to be packaged 3.3 Monitor control points to confirm performance is maintained within specification 3.4 Ensure that filling levels of containers meet specification 3.5 Ensure container seals or seams meet specification 3.6 Ensure quality parameters are in specification 3.7 Pasteurise product 3.8 Apply labels, batch codes and best before data to containers 3.9 Monitor equipment to confirm operating condition 3.10 Identify out-of-specification product, process and equipment performance and address or rectify where applicable 3.11 Record batch information for record keeping in accordance with workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
4. Oversee shutdown and housekeeping activities	4.1 Ensure equipment is shut down according to workplace procedures 4.2 Ensure cleaning and maintenance procedures are carried out 4.3 Ensure bottling and packaging activity is recorded in line with organisational requirements 4.4 Order stock to replenish supplies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Perform calculations to determine alcohol by volume (ABV), to establish the volume of containers, and to determine pasteurisation units and CO2 levels in product • Check filling tolerances of container, in line with Australian Taxation Office (ATO) guidelines • Measure volume using ATO accepted methods
Navigate the world of work	• Instruct others and demonstrate work requirements where required
Get the work done	• Investigate and respond to routine problems methodically

Assessment Requirements for FBPBPG4002 Manage filling and packaging of fermented beverages

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed filling and packaging processes for two different containers from the following list:

- cans
- bottles
- kegs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bottling and packaging requirements and specifications for product
- safe manual handling practices
- stages and changes required for equipment operation, specific to product
- quality characteristics and uses of end product and output
- classifications for beverages
- materials preparation requirements and effect of variation on the equipment operation
- emergency and troubleshooting procedures, including failure of services
- process specification, procedures and operating parameters
- equipment and instrumentation components, purpose and operation
- significance and method of monitoring control points within the equipment operation
- common causes of variation and corrective action required
- hazards and controls, including manual handling and working with heat and steam
- routine maintenance requirements
- methods for carbonating fermented beverages
- reasons why fermented beverages need to be away from light and oxygen
- temperatures for pasteurisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods and reasons for pasteurising fermented beverages
- shelf life of pasteurised beverages
- labelling, filling and packaging requirements as determined by Australian Taxation Office (ATO), Food Standards Code, trade weights and measures
- recording keeping for ATO excise requirements, including bright beer register and a packed product register.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - stored product to be filled and packaged
  - filling and packaging equipment
  - filling and packaging resources and consumables
  - tools and equipment for adjusting and maintaining equipment
- relationships:
  - relevant personnel.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPBPG4003 Coordinate wine operations packaging processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to coordinate work teams to set up, operate, hand over and shut down wine operation packaging processes, including de-palletising, filling, labelling carton erecting, carton packing, coding and palletising.

The unit applies to individuals who work in an industrial packaging plant and are responsible for coordinating several work teams in wine operations packaging processes. They take responsibility for their own work and the outcomes of others and apply high level planning and problem-solving skills. The processes may also include soft pack filling and storage of palletised wine.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPBPG4003 Coordinate wine operations packaging processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently coordinated the safe and efficient set-up, operation, handover and shutdown of two packaging runs for two different products over two separate shifts. Each shift is to be at least three hours, have its own work order, and include:

- at least four of the following processes and related equipment:
  - de-palletising
  - filling
  - carton erecting
  - carton packing
  - palletising
  - labelling
  - coding.

For each shift, the individual must have:

- ensured sufficient supply of consumables to complete the packaging run
- ensured finished product meets required specifications
- coordinated at least four packaging operations workers, including scheduling start and finish times, meal and rest breaks
- communicated with filling and packaging team members, and at least two of the following:
  - maintenance team member
  - laboratory or quality assurance team member
  - logistics team member
  - supervisor
- addressed quality issues and anomalies caused by equipment failure and operator error
- addressed team members' health and safety requirements, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - correct fit and use of personal protective equipment
    - correct use of machinery guards, including lock-out and isolation
    - compliance with vehicle and pedestrian traffic control
- monitored timely and accurate completion of workplace records, including:
    - packaging notes
    - productivity reports
    - machinery and equipment logs
    - workplace safety reports
- effectively coordinated the changeover of two packaging runs according to workplace time requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- packaging work orders and production schedules
- operating principles of machinery and equipment, including:
    - de-palletiser
    - bottle or other container fillers
    - carton erecter
    - carton packer
    - palletiser
    - delivery tanks
    - labeller
    - coder
    - inert gas related equipment, including bulk and small cylinders, regulators, valves and pipes
- features and functions of machinery and equipment, including:
    - manufacturer and workplace instructions for safe operation
    - control panels and ancillary controls, including manual operations mode
    - operating capacities, efficiencies and applications
    - congestion points and other limiting factors
    - location and purpose of guards, rails and sensors
    - knowledge of maintenance required and action to take if maintenance services are not available
    - cleaning requirements
    - routine and non-routine machine and equipment faults, and process for rectification
- services, including electricity, water, compressed air and inert gases
- vessel cooling and heating systems and equipment
- machinery and equipment checks, including:
    - pre-start checks, including emergency stop checks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - lock-out and tag-out
  - return to service after isolation
- consumables, including:
  - bottles
  - bottle closures
  - pallet dividers
  - cartons
  - carton dividers
  - glue
  - labels
  - pallets
  - water
  - inert gases, including nitrogen and carbon dioxide
  - cleaning products
- typical problems related to consumables, including label glue bleed, label roll tension, packaging colour variations, carton folds and die cuts, damaged bottles and dirty bottles
- staff welfare, including:
  - working conditions, including temperature, vibration, noise and dust
  - rostering, breaks, rest and fatigue management
- product and process quality indicators, including:
  - alcohol
  - temperature
  - oxidation
- packaging quality control requirements, processes and actions, including:
  - product specifications
  - methods used to check quality
  - common causes of packaging process quality issues and corrective action required
  - planned sampling and testing associated with process monitoring and control
  - responding to machinery alerts and notifications
  - recording of results
- records and reporting requirements, including:
  - quality
  - productivity
  - handover
  - health and safety
  - process information, including wine tracking
- product knowledge related to the product being packaged, including:
  - wine variety
  - volume
  - client or receiver requirements or specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - food safety regulatory requirements
- the interrelationships between packaging processes and cellar operations processes
- product/process changeover procedures and responsibilities
- product identification and traceability requirements, including:
    - workplace requirements
    - client or receiver requirements or specifications
- work health and safety hazards and controls, including:
    - awareness of the limitations of controls
    - personal protective equipment
    - hazardous substances, including cleaning products and gases
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including:
    - rework and reuse of products
    - water use and recycling
    - waste processing
- materials and manual handling procedures related to packaging processes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - an industrial packaging plant
- resources, equipment and materials:
    - the machinery and equipment stipulated in the performance evidence
    - packing consumables
- specifications:
    - two work orders for different packaging runs
    - workplace procedures for packaging processes, machinery and equipment stipulated in the performance evidence
- relationships:
    - team members and other workers stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCEL3019 Prepare and apply complex additions and finings

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to receive, test, store, prepare, add and follow up the application of complex additions and finings in wine making processes.

The unit applies to cellar hands who work under broad direction in a cellar operations environment and are responsible for all of the processes related to the application of complex additions and finings in various stages of wine making, including vintage, clarification and filtration. They take responsibility for their own work, have limited responsibility for the outcomes of other workers and solve problems related to cellar operations processes.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret technical text and symbols on raw material information sheets and work orders
Writing	• Complete workplace records using correct terminology and format
Numeracy	• Estimate and calculate quantity, weight, volume and ratio • Interpret readings of gauges and scales • Use fractions, decimals, proportions and percentages to measure materials and record data • Use weight (g, kg, T) and volume (ml, L, ML, KL, HL) to describe product quantities

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the individual, accessibility of the item, and local industry and *regional contexts) are included.*

Additions must include five of the following:	• ammonium bisulfite • caramel • ascorbic acid/erythorbic acid • diammonium phosphate (DAP) • grape concentrate • hydrogen peroxide • malic acid • malolactic bacteria • potassium sorbate • sulphur dioxide products • tannin • tartaric acid • yeast • yeast nurtients

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Finings must include three of the following:	• activated carbon • bentonite • casien • copper sulphate • enzymes • egg white • gelatine • isinglass • polypvinylpolyppyrrolidone (PVPP)
Application method must include three of the following:	• pour in or drip over the top • pump in over the top • pump in through tank valve • venturi via pump • via doorway
Integrating methods must include three of the following:	• gas rummaging • in place agitation • manual mixing • pumping over • submergible mixing • valve to valve

Assessment Requirements for FBPCEL3019 Prepare and apply complex additions and finings

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently prepared, mixed and applied eight different additions and finings to juice or wine according to addition and fining work orders, including:

- used one of the following additions:
  - yeast
  - malolactic bacteria
- used at least four of the following additions:
  - ammonium bisulfite
  - caramel
  - ascorbic acid/erythorbic acid
  - diammonium phosphate (DAP)
  - grape concentrate
  - hydrogen peroxide
  - malic acid
  - malolactic bacteria
  - potassium sorbate
  - sulphur dioxide products
  - tannin
  - tartaric acid
  - yeast
  - yeast nutrients
- used at least three of the following finings:
  - activated carbon
  - bentonite

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- copper sulphate
- enzymes
- gelatine
- polyvinylpolypyrrolidone (PVPP)
- egg white
- isinglass
- casien.

In doing so, the individual must have:

- used at least three of the following media:
  - cold water
  - warm water
  - juice
  - wine
- used at least two of the following vessels and devices:
  - scales and other measuring equipment
  - barrel
  - bucket
  - mixing tub
  - manual agitator
  - mechanical agitator
  - wine tank
- used at least three of the following application methods:
  - pour or drip in over the top
  - pump in over the top
  - pump in through tank valve
  - via doorway
  - venturi via pump
- used at least two of the following integration methods:
  - gas rummaging
  - in place agitation
  - manual mixing
  - pumping over
  - submergible mixing
  - valve to valve
- completed accurate and timely records of additions and finings applied according to workplace requirements, including:
  - juice or wine identification
  - addition or fining identification
  - date, time and operator

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quantity of material added by weight or volume.

After each addition and fining has been applied to a batch of juice or wine, the individual must have:

- collected, labelled and transferred a sample to a laboratory for analysis or tasting, using at least two of the following methods:
  - over the top
  - sample tap or valve
  - in line sample during transfer.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the physical properties, functions and benefits of wine additions, including:
  - ammonium bisulfite
  - ascorbic acid/erythorbic acid
  - caramel
  - hydrogen peroxide
  - grape concentrate
  - malic acid
  - malolactic bacteria
  - potassium sorbate
  - sulphur dioxide products
  - tannin
  - tartaric acid
  - yeast
  - yeast nutrients
- the physical properties, functions and benefits of wine fining agents, including:
  - activated carbon
  - bentonite
  - casien
  - cream of tartar
  - copper sulphate
  - egg white
  - enzymes
  - gelatine
  - isinglass
  - polyvinylpolypyrrolidone (PVPP)
- quality process and indicators related to the storage, mixing and application of additions and finings, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - quarantine and testing of raw materials, including batch codes
  - sampling and testing of juice or wine prior to and after the application of additions and finings
  - contamination risks and controls associated with the preparation and application of additions and finings
  - requirements for vegan and allergen control, including label integrity requirements
- weights and measures for additions and finings, including:
  - calibration of scales
  - units of measurement, including grams, kilograms, tonnes, millilitres, litres, hectolitres and kilolitres
- mixing media used to prepare additions and finings used in wine making, including:
  - cold water
  - warm water
  - juice
  - wine
- mixing vessels and devices used to prepare additions and finings used in wine making, including:
  - barrel
  - bucket
  - mixing tub
  - manual agitator
  - mechanical agitator
- application methods for applying additions and finings to wine, including:
  - pour in over the top
  - pump in over the top
  - tank to tank transfer
  - valve to valve
  - venturi
- equipment and methods for integrating additions and finings with wine or juice, including:
  - gas rummaging
  - in place mixing
  - manual mixing
  - submergible mixing
  - pumping over
  - valve to valve
- record keeping requirements for additions and finings in wine making, including:
  - juice or wine identification
  - addition or fining identification
  - date, time and operator
  - quantity of material added by weight or volume

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles and methods for collection of wine samples for laboratory analysis, including:
  - over the top
  - sample tap
  - in line sample during transfer
  - cross-contamination
  - containers used
  - labelling
  - effects of time
- workplace health and safety hazards and controls, including:
  - awareness of the limitations of controls
  - personal protective equipment
  - entering and working in confined spaces
  - hazardous substances, including additions and finings, cleaning products and gases
- environmental issues and controls relevant to the storage, mixing and application of additions and finings, including:
  - rework and reuse of products
  - water use and recycling
  - waste processing
  - energy usage
- materials and manual handling procedures related to the preparation, mixing and application of additions and finings.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a commercial winery
- resources, equipment and materials:
  - the vessels, machinery and equipment stipulated in the performance evidence
  - the juice or wine stipulated in the performance evidence
  - the additions and finings stipulated in the performance evidence
- specifications:
  - addition and fining work orders stipulated in the performance evidence
  - workplace procedures for preparation and application of the additions, finings, equipment and machinery stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards

FBPCEL4001 Coordinate wine operations vintage processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to coordinate work teams to set up, operate, hand over and shut down vintage wine operation processes, including crushing, must draining, pressing and fermentation.

The unit applies to individuals who work in a commercial winery and are responsible for coordinating several work teams in vintage wine operations processes to produce red or white wine. They take responsibility for their own work and the outcomes of others, and apply high level planning and problem-solving skills.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPCEL4001 Coordinate wine operations vintage processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently coordinated the safe and efficient set-up, operation, handover and shutdown of two shifts of vintage wine operations processes. Each shift must be at least eight hours, have its own work order, and include at least two of the following processes:

- crushing
- must draining
- pressing
- fermentation.

For each shift, the individual must have:

- coordinated at least two cellar operators, including scheduling start and finish times, meal and rest breaks
- coordinated use of at least three of the following:
  - de-stemmer crusher
  - press (either bag or continuous)
  - juice separation vessels and equipment
  - receival tanks
  - fermentation vessels
- communicated with at least two cellar operations workers and at least two of the following:
  - vineyard worker
  - grape receival worker
  - wine maker
  - cellar operations manager
  - maintenance team member
  - laboratory team member

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- addressed quality issues and anomalies caused by equipment failure and operator error
- addressed team members' health and safety requirements, including:
  - correct fit and use of personal protective equipment
  - correct use of machinery guards, including lock-out and isolation
  - compliance with workplace procedures for entry and work in confined spaces, including authorisation
  - compliance with vehicle and pedestrian traffic control requirements
- monitored timely and accurate completion of workplace records, including:
  - production notes, including additions to products
  - machinery and equipment logs
  - workplace safety reports
- effectively coordinated a batch changeover according to workplace time requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- production work orders and production schedules
- general operating principles of machinery and equipment, including:
  - crushers
  - mixers
  - juice separation equipment
  - fermentation vessels
  - presses
  - pumps
- features and functions of machinery and equipment used for the two processes selected in the performance evidence, including:
  - manufacturer and workplace instructions for safe operation
  - control panels and ancillary controls, including manual operations mode
  - operating capacities, efficiencies and applications
  - location and purpose of guards, rails and sensors
  - knowledge of maintenance services required and action to take if services are not available
  - cleaning requirements
  - routine and non-routine machine and equipment faults, and process for rectification
- utility services, including electricity, water, compressed air and inert gases
- heat exchanging systems and equipment
- machinery and equipment processing capacity, including:
  - staging areas
  - crusher capacity
  - press capacity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - constraints and other limiting factors
    - forklifts and other materials handling equipment
- equipment and vessels, including:
    - volume
    - processing capacity
    - openings, doors and seals
    - valves and process flow
    - line check authorisations and procedures
- machinery and equipment checks, including:
    - pre-start checks, including emergency stop checks
    - lock-out and tag-out
    - return to service after isolation
- consumables, including:
    - cleaning products
    - gas supplies
    - wine making consumables
- typical problems related to consumables, including insufficient supplies, preparation, quality and identification
- staff welfare, including:
    - working conditions, including temperature, vibration, noise and dust
    - rostering, breaks, rest and fatigue management
- product and process quality indicators, including:
    - baume
    - pH and acid, sulphur dioxide
    - temperature
    - oxidation
- quality control requirements, processes and actions, including:
    - production and processing order specifications
    - methods used to check quality
    - causes of vintage operations process quality issues and corrective action required, including over-additions, product loss, time constraints and dilution
    - planned sampling and testing associated with process monitoring and control
    - responding to machinery alerts and notifications
    - recording of results
    - isolating samples for testing
- records and reporting requirements, including:
    - quality
    - productivity
    - handover
    - health and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - batch status
- application of push through processes, including:
    - water
    - gas
    - pigging
    - wine or juice
- machinery and equipment maintenance, including:
    - repairs
    - lubrication
    - dismantling and cleaning
- product knowledge related to the batch being processed, including:
    - fruit variety
    - size and volume
    - client or receiver requirements or specifications
    - regulatory requirements
- the interrelationships between the crushing, draining and pressing, and subsequent wine operations processes
- product and process changeover procedures and responsibilities
- product batch identification and traceability requirements, including:
    - workplace requirements
    - client or receiver requirements or specifications
    - batch records
- work health and safety hazards and controls, including awareness of the limitations of protective clothing and equipment relevant to the work process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to vintage processes, including:
    - rework and reuse of products
    - water use and recycling
    - waste processing
    - energy usage
- manual handling procedures related to vintage processes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a commercial winery
- resources, equipment and materials:
    - the machinery and equipment stipulated in the performance evidence
- specifications:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - two work orders as stipulated in the performance evidence
  - workplace procedures for vintage processes, machinery and equipment stipulated in the performance evidence
- relationships:
  - team members and others as stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCEL4002 Coordinate wine operations clarification processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to coordinate work teams to set up, operate, hand over and shut down clarification wine operation processes, including centrifugation flotation and cold settling.

The unit applies to individuals who work in a commercial winery and are responsible for coordinating several work teams in clarification wine operations processes to produce red or white wine. They take responsibility for their own work and the outcomes of others, and apply high level planning and problem-solving skills. The processes may also include rotary drum filtration (RDV).

All work must be carried out to comply with workplace procedures, according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

	maintenance 4.4 Ensure isolation of equipment and machinery according to workplace requirements 4.5 Ensure disposal of waste according to workplace and environmental procedures 4.6 Ensure accurate completion of shutdown records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret technical text and symbols in machinery operations manuals and procedures
Writing	• Complete quality reports using accurate industry terminology
Numeracy	• Estimate and calculate known and expected volumes in litres, hectolitres and kilolitres • Estimate and calculate quantity, weight, time and ratio • Measure and calculate flow rates, including volume per hour
Oral communication	• Use open and closed questions to gather information from team members • Give clear instructions using industry terminology

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently coordinated the safe and efficient set-up, operation, handover and shutdown of two complete shifts of wine clarification processes. Each shift must be a minimum of eight hours. The individual must coordinate the clarification of at least two different batches of juice or wine, according to work orders.

For each shift, the individual must have:

- coordinated at least two of the following processes:
  - centrifuging
  - flotation
  - racking after cold settling
  - rotary vacuum
- coordinated at least three of the following:
  - centrifuge equipment
  - flotation equipment
  - racking and cold settling equipment
  - pumps
  - rotary vacuum drum
  - storage tanks
- controlled the product temperature to meet wine making specifications
- communicated with at least two cellar operations workers and with at least two of the following:
  - wine maker
  - cellar operations manager
  - maintenance team member
  - laboratory team member.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

For each shift, the individual must have:

- coordinated at least two cellar operations workers, including scheduling start and finish times, meal and rest breaks
- addressed quality issues and anomalies caused by equipment failure and operator error
- addressed team members' health and safety requirements, including:
  - correct fit and use of personal protective equipment
  - correct use of machinery guards, including lock-out and isolation
  - compliance with vehicle and pedestrian traffic control
- monitored timely and accurate completion of workplace records, including:

Assessment Requirements for FBPCEL4003 Coordinate wine operations filtration processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently coordinated the safe and efficient set-up, operation, handover and shutdown of two complete shifts of wine filtration processes. Each shift must be a minimum of eight hours. The individual must coordinate the filtration of at least two different batches of juice or wine, according to work orders.

For each shift, the individual must have:

- coordinated at least two of the following:
  - cross flow
  - earth
  - lenticular or pad
  - reverse osmosis
  - membrane
- checked filtration performance parameters, including the specified integrity testing
- controlled product specifications, including:
  - temperature
  - carbon dioxide
  - dissolved oxygen
  - nephelometric turbidity units (NTU)
- communicated with at least two cellar operations workers and with at least two of the following:
  - wine maker
  - cellar operations manager
  - maintenance team member
  - laboratory team member.

For each shift, the individual must have:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- coordinated at least two cellar operations workers, including scheduling start and finish times, meal and rest breaks
- addressed quality issues and anomalies caused by equipment failure and operator error
- addressed team members' health and safety requirements, including:
  - correct fit and use of personal protective equipment
  - machinery lock-out and isolation
  - compliance with vehicle and pedestrian traffic control
- monitored timely and accurate completion of workplace records, including:
  - production notes, including additions to products
  - machinery and equipment logs
  - workplace safety reports
- effectively coordinated a batch changeover according to workplace time requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work orders and production schedules
- general operating principles of machinery and equipment, including:
  - cross flow filter equipment
  - earth filter equipment
  - membrane filter, including lenticular cartridge
  - reverse osmosis machine
  - inert gas related equipment, including bulk and small cylinders, regulators, valves and pipes
- features and functions of machinery and equipment used for the two processes selected in the performance evidence, including:
  - manufacturer and workplace instructions for safe operation
  - control panels and ancillary controls, including manual operations mode
  - operating capacities, efficiencies and applications
  - constraints and other limiting factors
  - location and purpose of sensors
  - knowledge of maintenance required and action to take if maintenance services are not available
  - cleaning requirements
  - filter change-out, integrity testing of filters, filter parameters and actions required to rectify
  - flow rates and differential pressures, and actions to take when filters are compromised
  - routine and non-routine machine and equipment faults, and process for rectification
- utility services, including electricity, water, compressed air and inert gases
- heat exchanging systems and equipment

of the general cellar operations processes	4.2 Coordinate cleaning of machinery, equipment and vessels 4.3 Advise maintenance team that machinery and equipment is ready for maintenance 4.4 Ensure disposal of waste according to workplace and environmental procedures 4.5 Ensure accurate completion of shut down records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret technical text and symbols in machinery operations manuals and procedures
Writing	• Complete quality reports using correct terminology
Numeracy	• Estimate and calculate known and expected volumes in litres, hectolitres and kilolitres • Estimate and calculate quantity and time • Measure and calculate flow rates, including volume per hour
Oral communication	• Use open and closed questions to gather information from team members • Give clear instructions using industry terminology

Assessment Requirements for FBPCEL4004 Coordinate wine operations general cellar processes

Modification History

Release	Comments
Release 1	This version released with Food, Beverage and Pharmaceutical Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has independently coordinated the safe and efficient set-up, operation, hand over and shut down of two complete shifts of general cellar operations processes. Each shift must be a minimum of eight hours.

The individual must have coordinated the processing of at least two different batches of juice or wine, according to work orders, including:

- at least two of the following:
  - preparing wine cultures
  - fermentation
  - additions and finings
  - heat exchanging
  - wine transfer
- controlled product specifications, including:
  - temperature
  - carbon dioxide
  - dissolved oxygen
- coordinated safe and accurate processes, including:
  - handling and use of inert gas
  - preparation and application of at least one addition or fining
  - collection and delivery of samples to the laboratory
- communicated with at least two cellar operations workers and with at least two of the following:
  - wine maker
  - cellar operations manager
  - maintenance team member
  - laboratory team member

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- coordinated use of two of the following:
  - heat exchanger
  - positive displacement pumps
  - centrifugal pumps
  - receival tanks or barrels
- coordinated use of one of the following:
  - manual agitator
  - mechanical agitator
  - pump over
  - valve to valve.

For each shift, the individual must have:

- coordinated at least two cellar operations workers, including scheduling start and finish times, meal and rest breaks
- addressed quality issues and anomalies caused by equipment failure and operator error
- addressed team members' health and safety requirements; including:
  - correct fit and use of personal protective equipment
  - correct use of machinery guards, including lock out and isolation
  - compliance with vehicle and pedestrian traffic control
- monitored timely and accurate completion of workplace records, including:
  - production notes, including additions to products
  - machinery and equipment logs
  - workplace safety reports
- effectively coordinated a batch change over according to workplace time requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work orders and production schedules
- general operating principles of machinery and equipment related to general cellar operations, including at least four of the following:
  - preparing wine cultures
  - fermentation
  - additions and finings
  - heat exchanging
  - transfer of juice and wine
  - vessels including tanks or barrels
  - pumps
  - inert gas related equipment, including bulk and small cylinders, regulators, valves and pipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- features and functions of machinery, equipment, including:
  - manufacturer and workplace instructions for safe operation
  - control panels and ancillary controls, including manual operations mode
  - operating capacities, efficiencies and applications
  - constraints and other limiting factors
  - location and purpose of guards, rails and sensors
  - knowledge of maintenance required and action to take if maintenance services are not available
  - cleaning requirements
  - routine and non routine machine and equipment faults, and process for rectification
- utility services, including electricity, water, compressed air, and inert gasses
- equipment and vessels, including:
  - volume
  - processing capacity
  - openings, doors and seals
  - valves and process flow
  - line check authorisations and procedures
  - vessel maintenance, cleaning and sanitation, including oak storage
- machinery and equipment checks, including:
  - prestart checks, including emergency stop checks
  - lock out and tag out
  - return to service after isolation
- consumables, including:
  - cleaning products
  - water and gas supplies
  - additions and finings
  - typical problems related to consumables, including, insufficient supplies, preparation, quality and identification
- staff welfare, including:
  - working conditions, including temperature, vibration, noise and dust
  - rostering, breaks, rest and fatigue management
- product and process quality indicators, including:
  - baume
  - alcohol
  - carbon dioxide
  - temperature
  - oxidation
- general cellar operations quality control requirements, processes and actions, including:
  - production and processing order specifications
  - methods used to check quality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - common causes of fermentation process quality issues and corrective action required, including a stuck ferment, ferment too cold and ferment too hot
  - common causes of clarification process quality issues and corrective action required
  - common causes of filtration process quality issues and corrective action required
  - planned sampling and testing associated with process monitoring and control
  - responding to machinery alerts and notifications
  - recording of results
- records and reporting requirements, including:
  - quality
  - productivity
  - handover
  - health and safety
  - process information, including wine tracking
- application of push through processes, including:
  - water
  - gas
  - wine or juice
- product knowledge related to the batch being processed, including:
  - juice or wine variety
  - volume
- the interrelationships between cellar operations and previous and subsequent wine making operations processes
- product and process change over procedures and responsibilities
- product batch identification and traceability requirements, including:
  - workplace requirements
  - client or receiver specifications
  - batch records
- work health and safety hazards and controls, including:
  - awareness of the limitations of controls
  - personal protective equipment
  - entering and working in confined spaces, including training and authorisation
  - hazardous substances, including stored pressure, additions and finings, cleaning products, and gases
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including:
  - rework and reuse of products
  - water use and recycling
  - waste processing
  - energy usage
- materials and manual handling procedures related to the general cellar processes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a commercial winery
- resources, equipment and materials:
  - machinery and equipment stipulated in the performance evidence
  - juice or wine stipulated in the performance evidence
- specifications:
  - two batch orders stipulated in the performance evidence
  - workplace procedures for general cellar operations processes, machinery and equipment stipulated in the performance evidence
- relationships:
  - team members and others stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCHE3003 Conduct cheese making operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out cheese making in a bulk production and packaging operation using an integrated industrial process, under the direction of the cheese manufacturing manager. The unit covers a number of cheese types.

This unit applies to individuals working as advanced operators in industrial cheese enterprises who take responsibility for their own work. It does not include milk preparation processes or cheese curing, portioning or retail packaging processes.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

	implement control measures 1.3 Identify food safety and quality non-compliance issues, and report to supervisor 1.4 Select and use appropriate personal protective equipment
2. Monitor milk supply and quality	2.1 Ensure the availability of milk supply for batch according to product specifications 2.2 Check the sample data on milk for composition, homogeneity, somatic cell count and disk assay according to specification 2.3 Maintain milk at temperature required for inoculation with the culture according to recipe and specifications
3. Prepare cheese making equipment and add ingredients	3.1 Ensure ingredients are available to meet product requirements 3.2 Measure ingredients to meet recipe requirements 3.3 Handle ingredients safely and according to procedures to maintain purity and viability 3.4 Ensure equipment is ready for use according to operating procedures and safety requirements 3.5 Set and operate cheese making equipment to meet specified requirements 3.6 Load ingredients into the plant at the required stage 3.7 Check the final mix against specifications
4. Carry out process control and make adjustments according to operating procedures	4.1 Implement equipment start-up and shutdown according to safety requirements and operating procedures 4.2 Identify and report equipment faults 4.3 Monitor cheese making processes, taking required samples according to workplace procedures 4.4 Carry out routine tests and record results according to workplace procedures 4.5 Adjust processing parameters as a result of test results, to ensure product meets specification 4.6 Package cheese for curing and distribution with correct batch number attached for traceability 4.7 Clean equipment to meet production and hygiene requirements after each batch

Assessment Requirements for FBPCHE3003 Conduct cheese making operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted cheese making operations to produce at least one batch of cheese, including:

- applying food safety policies and procedures to work practices
- recording process parameters for traceability.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, basic principles and processes of cheese making, including:
  - the main components of milk and cheese (both curds and whey)
  - milk characteristics and components important in cheese making
  - milk preparation for cheese making (fat and protein standardisation, and pasteurisation)
  - types of starters used and their role in the fermentation process
  - effect of milk characteristics on cheese processing performance
  - use of coagulating enzymes and cutting aids in syneresis
  - use of adjunct cultures
  - moisture control in cheese making
  - organoleptic properties of cheese, and their relationship to processes and ingredients in cheese making
  - effects of pH and temperature on cheese processing performance and product quality
  - types and impact of inhibitory substances in milk
- cheese making equipment and operations, including:
  - equipment start-up, shutdown and emergency procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - quality characteristics to be achieved by a cheese making process
  - operation and routine maintenance requirements of cheese making and packing plant and equipment
  - operational procedures for operating the cheese making process, including adding ingredients, testing, measuring and recording, and making limited adjustments to ingredient recipes or the operation of equipment according to procedures
  - health and safety hazards and controls
- good manufacturing practices (GMP) relevant to work task
- sensory analysis techniques to identify product faults
- common causes of variation, and corrective action required for each stage of the cheese making operation, including:
  - microbial contaminants of cheese (lipolytic bacteria, yeasts, moulds, bacillus, listeria, E. coli, salmonella, coliforms and staphylococci), and their impact on cheese quality
  - impact of bacteriophage on the fermentation process
  - sampling and testing procedures for contaminant microbes
  - contamination risk of inoculants and contaminants
  - food safety risks associated with the process, and related control measures
  - sampling and testing procedures for cheese quality
- packaging procedures
- product/batch changeover procedures
- line responsibility for reporting production and performance information
- cleaning and hygiene management of cheese making, including:
  - food safety and quality assurance standards and procedures
  - hygiene, cleaning and sanitisation procedures in line with best manufacturing practice
  - Food Standards Code relevant to cheese making
  - routine maintenance procedures
- environmental issues and controls relevant to the process, including waste collection and handling procedures related to the process
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a cheese production workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - cheese making production process and related equipment
  - equipment operating procedures, including control points and process settings
  - sampling and testing equipment
  - recording systems to meet food safety and quality assurance requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - cheese making consumables
  - personal protective equipment and safety data sheets (SDS)
  - cleaning procedures, materials and equipment
- specifications:
  - workplace procedures, including safe work practices, food safety, quality and environmental requirements
  - sampling and testing procedures
  - product specifications and recipes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCHE3004 Carry out processing for a range of artisan cheeses

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out artisan cheese making processes.

This unit applies to individuals who work in small scale cheese production enterprises and use discretion and judgement in their work.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

	according to legislative requirements 1.4 Select and use appropriate personal protective equipment
2. Apply sanitisation procedures	2.1 Ensure the storage area for starter cultures is maintained according to workplace hygiene practices 2.2 Keep all surfaces and equipment clean and sanitised according to workplace sanitisation procedures 2.3 Ensure raw milk is kept separate from pasteurised milk operations 2.4 Record food safety related information according to workplace food safety standards
3. Implement procedures to prepare milk for cheese making	3.1 Implement standardisation procedures for milk to be processed into cheese, as required of product specification 3.2 Carry out pasteurisation procedures for milk, as required of product specification
4. Carry out procedures to inoculate milk and cut the curd	4.1 Add inoculants and adjuncts to milk, and allow it to ripen to specification 4.2 Measure rennet accurately and dilute before adding to milk 4.3 Maintain temperature at specified level according to the production requirements 4.4 Test curd for readiness to cut according to production testing procedures
5. Implement procedures to separate, cook and wash the curd	5.1 Carry out curd cutting according to production procedures 5.2 Test whey for pH or acidity and temperature to ensure curd cutting efficiency 5.3 Ensure optimal syneresis according to cooking schedule and curd stirring requirements 5.4 Carry out draining procedures to ensure curd is at required moisture, pH level and consistency
6. Carry out fermentation, salting and optional pressing treatments	6.1 Transfer curd to hoops to form the correct shape for the type of cheese 6.2 Maintain temperature profile required for the cheese type to complete fermentation 6.3 Add salt after draining according to cheese type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	6.4 Apply salting treatments according to cheese type 6.5 Press dry salted cheese in hoops according to product specification
7. Implement cheese curing and packaging procedures	7.1 Apply maturing requirements according to cheese type 7.2 Monitor the maturing environment according to the cheese type 7.3 Apply ripening agents to cheese according to requirements of cheese type 7.4 Carry out packaging and labelling procedures either before or after maturing according to cheese type and workplace requirements
8. Assess the organoleptic properties of cheese, and relate to specifications	8.1 Check that flavour meets specifications for the cheese type 8.2 Examine the texture of cheese and compare to specifications 8.3 Examine cheese for evenness of colour and finish according to specifications 8.4 Identify possible causes of out-of-specification results, and make changes to procedures to address quality issues for future cheese production
9. Meet workplace requirements for food safety, quality and environmental management	9.1 Keep records of cheese manufacture according to workplace procedures 9.2 Dispose of waste according to workplace environmental and waste management procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret cheese making procedures and specifications
Writing	• Accurately complete production records to ensure traceability
Numeracy	• Interpret and manipulate numerical information for volumes, weights and measures of ingredients

Assessment Requirements for FBPCHE3004 Carry out processing for a range of artisan cheeses

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out processes to produce at least two separate batches of different artisan cheese types, with each batch showing consistent quality, texture, colour and flavour.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and basic principles of cheese making
- main cheese types produced at the workplace, their characteristics, and the common processes for making them
- main components of milk
- milk characteristics and components important in cheese making
- milk preparation for cheese making, including when standardisation and pasteurisation are required
- effect of milk quality on cheese processing performance
- types and impact of inhibitory substances in milk
- types of starters used, and their role in the fermentation process
- moisture control in cheese making
- processes of coagulation and syneresis and their role in cheese making
- effects of acidity (either pH or titratable acidity) and temperature on cheese processing performance and product quality
- role of yeasts, moulds and adjunct cultures in cheese making
- temperature and humidity requirements for maturing
- ripening agents for different cheese types

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contamination/food safety risks associated with the process, and related control measures, including:
  - microbial contaminants of cheese (lipolytic bacteria, yeasts, moulds, bacillus, listeria, E. coli, salmonella, coliforms and staphylococci) and their impact on cheese quality
  - the impact of bacteriophage in fermentation and ripening
  - contamination risk of inoculants and other contaminants
- techniques used to monitor and sample during the cheese making process for quality control, including:
  - inspecting
  - measuring
  - testing
- good manufacturing practices (GMP) relevant to work task
- common causes of variation, and corrective action required for each cheese making process
- organoleptic properties and their relationship to processes and ingredients in cheese making
- sensory analysis techniques to identify product faults
- health and safety hazards and controls relevant to artisan cheese operations
- procedures for:
  - routine maintenance
  - product/batch changeover
  - hygiene, cleaning and sanitisation in line with best manufacturing practice
  - food safety and quality assurance in line with the Food Standards Code for cheese making
  - environmental issues and controls, including waste collection and handling procedures
- procedures and responsibility for recording and reporting production and performance information, and records required, including:
  - measurements for timing of operations
  - temperature
  - milk and curd acidity
  - curd weight
  - hooped yield
  - maturing data
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a cheese production workplace or an environment that accurately reflects a real workplace setting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - production process and related equipment for making artisan cheeses
  - personal protective equipment
  - sampling and testing equipment
- specifications:
  - specifications for each cheese type
  - sampling and testing procedures
  - manufacturer advice and operating procedures for cheese making equipment
  - methods for collecting data and calculating yields, efficiencies and material variances appropriate to the type of cheese and the production environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to prepare and present cheese to a customer in a retail environment.

This unit applies to individuals who work in a cheesemongering setting, with responsibility for storing, cutting, wrapping, displaying and presenting cheese to a customer.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Cheese (CHE)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Recognise and identify cheese types	1.1 Identify different cheese types and characteristics 1.2 Identify cheeses made from different processes 1.3 Identify cheeses made from different milk types 1.4 Identify factors affecting cheese affinage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Cut different cheeses	2.1 Sanitise hands, equipment and workspace, ready to handle cheese 2.2 Cut small and large cheeses to specified weight using correct utensils 2.3 Cut soft and hard cheeses to specified weight using correct utensils
3. Present cheese	3.1 Design a display of a selection of cheeses for a display cabinet 3.2 Design a cheese tasting with an identified theme 3.3 Cut cheese for customer tasting 3.4 Present cheese for customer tasting with specified theme, identifying the characteristics, provenance and processing techniques of each 3.5 Make recommendations for post-purchase storage
4. Wrap cheese	4.1 Identify appropriate wrap material for different cheeses 4.2 Wrap different shaped cheeses and cut pieces neatly, with appropriate folding
5. Store cheese	5.1 Store different cheeses to maintain quality and flavour 5.2 Complete records to meet regulatory and sales requirements 5.3 Clean workspace to meet regulatory requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Interact effectively with customers in a retail environment • Describe cheese characteristics using industry-specific language
Numeracy	• Estimate weights of cheese with reasonable accuracy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for FBPCHE4001 Prepare and present cheese

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively prepared and presented cheeses, including:

- identifying and describing the main characteristics of the following cheeses, including a summary of the processing and ripening conditions for each:
  - fresh cheese
  - soft ripened
  - surface mould ripened
  - semi-soft
  - semi-hard
  - hard
  - eye cheese
  - blue cheese
  - pasta filata
- cutting cheese for retail sale, to specified weights
- wrapping at least three different cheeses appropriately
- preparing and presenting a cheese tasting to a customer, based on an identified theme.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- different cheese types and varieties, including: fresh cheese, soft ripened, surface mould ripened, semi-soft, semi-hard, hard, cheese with and without eyes, blue cheese and pasta filata
- cheese ripened principally with bacteria, with bacteria and surface microorganisms, and blue mould

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- main processing steps in making cheese, including setting the milk, cutting or breaking curd, cooking curd, draining or dipping, knitting curd, salting, pressing, applications and treatments
- different milks used to make cheese and their properties and characteristics, including cow, sheep, and goat
- the effects that animal breed, diet and seasonality can have on cheese
- the effect of pH on the cheese making process
- various coagulants used in cheese making
- factors that affect affinage of cheese
- packaging and wrapping for different cheese types
- language to describe the characteristics of cheese
- use of the five senses for describing cheese
- origin of cheese defects
- temperature for storing cheese
- methods for maintaining cheese quality from packaging through to retail sale
- general nutritional properties of cheese
- ways to organise cheese for display
- ways to select cheese for tastings and appropriate accompaniments
- cutting methods and equipment for different styles of cheese
- differences between pre-cut versus cut to order, and the requirements of business for each
- Food Standards Code in relation to dairy processing
- pathogens that can exist in cheese
- raw milk cheeses and regulations in Australia
- general requirements for importing cheese.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a retail cheese environment
- resources, equipment and materials:
  - different types of cheeses and suitable accompaniments
  - materials to cut, present and store cheeses
  - access to potential customer/s.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCHE5005 Produce lactic acid coagulated artisan cheese

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to produce lactic acid coagulated soft cheese in an artisan cheese making environment.

This unit applies to cheesemakers who have responsibility for overseeing the production of cheese, adapting the process where required to suit the specified outcome, and complying with workplace health and safety, food safety, record keeping and quality assurance requirements for the cheese making process.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Unit Sector

Cheese (CHE)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for cheese making	1.1 Identify characteristics, make parameters and production goals of type of lactic acid coagulated cheese to be produced 1.2 Identify hazards and manage risks associated with producing cheese of specific type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Prepare milk and starter cultures using good hygiene practice (GHP) 1.4 Ensure all surfaces meet cleanliness and sanitisation requirements 1.5 Manage GHP and good manufacturing practice (GMP) throughout cheese making process 1.6 Record cheese production information according to workplace procedures
2. Prepare milk	2.1 Sample raw or pre-pasteurised milk to assess milk composition (fat, proteins, minerals, pH, titratable acidity) of milk in vat, and adjust make parameters accordingly 2.2 Confirm desired outcome of the cheese making process, based on milk composition and production goals 2.3 Standardise milk or modify make process for consistent outcome, as required
3. Inoculate milk to promote coagulation	3.1 Add starter culture to the milk and mix evenly according to cheese type and production goals 3.2 Add coagulating enzymes to the milk according to production goals 3.3 Maintain temperature throughout the tank or vat according to production goals 3.4 Maintain a log of pH, titratable acidity and temperature to control make, ripening and yield according to production goals
4. Process curds	4.1 Manage curd ladling, breaking or cutting to meet production goals 4.2 Plan the curd processing schedule to meet production goals 4.3 Drain curd to ensure required pH level and consistency according to production goals
5. Monitor and adjust cheese processing	5.1 Monitor the amount of moisture in cheese by regulating syneresis 5.2 Adjust calcium phosphate levels to influence basic cheese structure if required 5.3 Control texture of the cheese by regulating pH, salt, moisture and fat 5.4 Control cheese flavour through choice of ingredients, such as milks, cultures, coagulating agents and salt, make parameters and pH levels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	5.5 Optimise yield by refining process control parameters
6. Manage ripening	6.1 Observe effects of ripening agents on cheeses 6.2 Optimise curing and ripening agents by planning for and adjusting the key composition ratios of acid-coagulated soft cheeses 6.3 Use surface treatments according to cheese type and recipe 6.4 Maintain records of cheese production and ripening, as specified by legislation
7. Conduct housekeeping activities	7.1 Clean equipment and work area in line with workplace procedures 7.2 Conduct routine maintenance activities 7.3 Dispose of waste in line with regulatory requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret cheese make requirements from a variety of sources to consolidate information for cheese production
Writing	• Document details of make process, including weights, temperature, humidity, pH, titratable acidity, salt and organoleptic parameters
Numeracy	• Accurately weigh and measure ingredients for cheese making • Sample cheese to analyse pH, fat, moisture and salts • Calculate cheese yields
Get the work done	• Adjust processing parameters and problem-solve issues as they arise

Assessment Requirements for FBPCHE5005 Produce lactic acid coagulated artisan cheese

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced at least one type of lactic acid coagulated cheese, on two different occasions, with consistent texture, colour, finish and flavour.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the main types of lactic acid coagulated cheeses
- the chemical and physical composition of bovine and non-bovine milks (including on a seasonal basis) and components important in cheese making
- the main components of milk and cheese (both curds and whey, proteins, fats, carbohydrates and minerals) and how they change through processing and ripening
- types and impact of inhibitory substances in milk
- specifications of desired cheese product at each stage of making and ripening
- milk assessment and preparation for cheese making
- ways to adjust the make process for the desired cheese depending on the milk composition
- types of starters and adjuncts used and their role in the fermentation and ripening processes
- typical bacterial, yeast and mould cultures and the flavours and textures they produce
- control points and critical control points in the manufacture and ripening of each cheese type
- moisture and drainage control in cheese making
- processes of coagulation and syneresis and their role in cheese making and ripening
- curd size and its impact on moisture and acidification
- buffer power in cheese and how it affects the cheese

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effects of pH, temperature, humidity and time on cheese processing performance and product quality
- impact of unwanted microorganisms in cheese (lipolytic bacteria, yeasts, moulds, bacillus, listeria, Escherichia coli, salmonella, coliforms and staphylococci)
- contamination risk of inoculants and contaminants
- temperature and humidity requirements for curing and ripening
- ripening agents for lactic acid coagulated cheeses
- techniques used to monitor the cheese making process, such as inspecting, measuring and testing
- common causes of variation and corrective action required for each cheese making process
- principles of dry salting for dry salted cheeses
- organoleptic properties of lactic acid coagulated cheeses and their relationship to processes and ingredients in cheese making
- sampling and testing procedures for microbes
- sampling procedures for cheese making
- yield efficiency
- cleaning and sanitation procedures for cheese making and ripening
- workplace safety hazards and controls
- procedures for recording production and performance information
- environmental issues and controls relevant to the process, including waste recycling, collection and handling procedures
- Food Standards Code in relation to dairy processing
- state/territory, Commonwealth and industry requirements relevant to food processing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food processing workplace
- resources, equipment and materials:
  - cheese making ingredients and production process equipment
  - cheese ripening resources
  - sampling and testing equipment and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for artisan cheese making	1.1 Identify characteristics, make parameters and production goals of type of rennet coagulated cheese to be produced 1.2 Identify hazards and manage risks associated with producing cheese of that type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Prepare make and ripening sheet for the cheese to be made, showing reference parameters for that cheese type, and record all actual make and ripening parameters on the sheet as they occur 1.4 Prepare milk and starter culture using good hygiene practice (GHP) 1.5 Ensure all surfaces meet cleanliness and sanitisation requirements 1.6 Manage GHP and good manufacturing practice (GMP) throughout cheese making process 1.7 Record cheese production and ripening information according to workplace procedures
2. Prepare milk	2.1 Sample raw or pre-pasteurised milk and analyse composition 2.2 Confirm desired outcome of the cheese making process, based on milk composition and production goals 2.3 Standardise milk or modify make process for consistent outcome, as required
3. Inoculate milk and mix cheese ingredients in vat	3.1 Add colour to the milk to change the colour of the cheese according to cheese type 3.2 Add starter cultures and mould spores according to cheese type 3.3 Add adjunct cultures to influence the texture and flavour of the ripened cheese according to cheese type 3.4 Add enzymes to alter the flavour profile of the ripened cheese according to required cheese type 3.5 Acidify the milk with organic or inorganic acids before renneting according to required cheese type 3.6 Use acid to partly acidify the milk prior to adding culture to control the calcium phosphate level in the curd during cheese making, according to required cheese type 3.7 Add cultures and rennet to milk and hold at temperature according to required cheese type 3.8 Maintain a log of pH and temperature to monitor yield
4. Cut, stir and process the curd	4.1 Calculate total time, flocculation and hardening times for optimum acidification curve, coagulation and moisture content, according to desired cheese type and parameters 4.2 Supervise curd hardening, temperature and cutting to achieve

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	optimal yield and the required acidification curve and moisture level for the cheese 4.3 Monitor stirring, agitation, temperature and size of the curd and whey 4.4 Plan the heating schedule to ensure optimal syneresis for cheese type 4.5 Heat and stir curd and whey as required and check for uneven curd or overheating according to required outcome 4.6 Remove part of the whey and replace with water to wash lactose and lactic acid from the curd if required for specific cheese 4.7 Mat the curd under the whey to achieve required outcome if required for specific cheese 4.8 Remove all or part of the whey from the curds by draining out the vat, in line with required outcome 4.9 Prepare moulds into which curds will be hooped 4.10 Prepare curd for milling if required for specific cheese 4.11 Prepare curd for stretching if required for specific cheese 4.12 Prepare curd for hooping into chosen moulds
5. Monitor and adjust processing	5.1 Monitor processing to control moisture in cheeses 5.2 Control the rate and the amount of acid development 5.3 Control calcium phosphate levels to influence basic cheese structure 5.4 Control flavour and texture of the cheese by cutting and stirring, turning and draining and regulating pH, salt, moisture and fat 5.5 Control cheese flavour and pH levels by adding ingredients, such as milks, cultures, coagulating agents and salt 5.6 Control processing parameters to achieve optimal yield and parameters of desired cheese
6. Mould, turn, salt, press and age cheese	6.1 Hoop curd into prepared moulds at appropriate time 6.2 Turn cheeses in moulds at appropriate intervals to maximise optimal drainage and acidification 6.3 Press cheese and remove from moulds where appropriate for cheese type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	6.4 Prepare the curd or cheese for salting if required 6.5 Apply salting treatments to ensure adverse salt profile effects are minimised in the finished product 6.6 Maintain brine bath, if used, for optimal salting and food safety outcomes, according to type of cheese being brined 6.7 Apply treatments to, and age, rennet coagulated cheeses to develop optimal flavour and texture, in line with required outcome and food safety requirements 6.8 Monitor, adjust and record ripening parameters for the cheese according to type, including turning, washing, brushing, ambient air temperature, humidity, air movement, air renewal
7. Conduct housekeeping activities	7.1 Clean equipment and work area in line with workplace procedures 7.2 Conduct routine maintenance activities 7.3 Dispose of waste in line with regulatory requirements

Foundation Skills

Assessment Requirements for FBPCHE5006 Produce rennet coagulated artisan cheese

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced at least three varieties of rennet coagulated cheeses, including:

- one washed curd cheese
- one mould ripened cheese
- one milled curd cheese.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the common types of rennet coagulated cheeses
- processes for making different types of rennet coagulated cheeses
- the chemical and physical composition of bovine and non-bovine milks, including on a seasonal basis, and components important in cheese making
- the main components of milk and cheese (both curds and whey, proteins, fats, carbohydrates and minerals) and how they change through processing and ripening
- specifications of desired cheese product at each stage of making and ripening
- typical bacterial, yeast and mould cultures and the flavours and textures they produce
- moisture control in cheese making
- types and impact of inhibitory substances in milk
- microbial contaminants of cheese (lipolytic bacteria, yeasts, moulds, bacillus, listeria, Escherichia coli, salmonella, coliforms and staphylococci) and their impact on cheese quality
- milk assessment and preparation for cheese making
- how to adjust the process for the desired cheese depending on the milk's composition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types of starters and adjuncts used and their role in the fermentation and ripening processes
- types of adjunct cultures and their role in the flavour and texture characteristics of the ripened cheese
- using rennet as a coagulating enzyme
- processes of coagulation and syneresis and their role in rennet coagulated cheese making
- curd size and its impact on moisture and acidification
- buffer power in cheese and how it affects the cheese
- moisture and drainage control in cheese making
- white and blue mould and yeast treatments and their role in cheese making and ripening
- control points and critical control points in the manufacture and ripening of each cheese type
- the relationship between acidification and various physical manipulations of the curd, including cutting, stirring, washing, hooping, turning and pressing
- effects of pH and temperature on cheese processing performance and product quality
- principles of brine salting and maintenance of brine salting systems for brine salted cheeses
- principles of dry salting for dry salted cheeses
- sampling and testing procedures for microbes
- sampling procedures for cheese making
- contamination/food safety risks associated with the process, and related control measures
- techniques used to monitor the cheese making process, such as inspecting, measuring and testing
- common causes of variation and corrective action required for each cheese making process
- organoleptic properties of rennet coagulated cheeses and their relationship to processes and ingredients in cheese making
- yield efficiency
- cleaning and sanitation requirements for cheese making and ripening
- workplace health and safety hazards and controls
- procedures for recording production and performance information
- environmental issues and controls relevant to the process, including waste recycling, collection and handling procedures
- Food Standards Code in relation to dairy processing
- state/territory, Commonwealth and industry requirements relevant to food processing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ingredients, production process and related equipment for rennet coagulated cheese
- sampling and testing equipment and procedures
- food safety related information, including requirements for raw milk.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCHE5008 Ripen artisan cheese

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to ripen different types of artisan cheeses. The process is also referred to as cheese maturation or affinage.

This unit applies to cheesemakers who have responsibility for overseeing the ripening of cheese, adapting the process where required to suit the specified outcome, and complying with workplace health and safety, food safety, record keeping and quality assurance requirements for the cheese making and ripening process.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	aeration conditions, time 1.4 Identify make parameters and processes for the cheese and prepare ripening sheet, showing reference parameters for that cheese type 1.5 Record all actual ripening parameters and processes on the ripening sheet, as they occur, in line with regulatory requirements 1.6 Prepare cheese for ripening, including wrapping as required
2. Monitor ripening	2.1 Check conditions for ripening, including racks to be used, humidity, temperature and aeration 2.2 Place cheese for ripening 2.3 Inspect cheese through ripening process 2.4 Take samples and test for appearance, pH, salt, texture, consistency, colour 2.5 Carry out treatments required of specific maturation process 2.6 Turn and rotate cheese to ensure ripening is even 2.7 Identify optimal ripening stage and ongoing care requirements for the cheese and communicate these to cheese buyers and sellers
3. Problem-solve issues with ripening	3.1 Identify defects in cheese through the maturation process 3.2 Make adjustments to conditions to correct defects wherever possible 3.3 Maintain records of cheese maturation in accordance with workplace procedures 3.4 Record any wastage that occurs throughout maturation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret maturation requirements from a variety of sources to consolidate information for cheese production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Writing	• Document details of maturation, including weights, temperature, humidity, pH, salt and organoleptic parameters
Navigate the world of work	• Problem-solve issues as they arise

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up conditions and processes to ripen at least one soft cheese and one hard cheese.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ripening processes, including interior ripening and surface ripening
- the effect that temperature and humidity have on the maturation process and product quality
- surface treatments carried out during maturation, such as washed rind, dry scraped
- various wraps used for ripening
- set-up and composition of shelving for maturation of cheese
- organoleptic properties of different cheeses throughout the maturation process, for quality products and for the identification of defects
- typical tests carried out during ripening, including sensory
- typical testing equipment, including pH meter
- ripening agents
- typical ripening times and environments for different types of cheese
- the requirement to turn cheese during maturation
- microbial contaminants of cheese (lipolytic bacteria, yeasts, moulds, bacillus, listeria, Escherichia coli, salmonella, coliforms and staphylococci) and their impact on cheese quality
- contamination risk of inoculants and contaminants
- yeasts and moulds and other microorganisms of significance in cheese maturation
- cross-contamination risks when working with blue and washed rind mould cheeses
- record keeping requirements of cheese maturation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Food Standards Code in relation to dairy processing
- state/territory, Commonwealth and industry requirements relevant to food processing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food processing workplace
- resources, equipment and materials:
  - cheese to be ripened
  - suitable environment for ripening cheese.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCHE5009 Carry out sampling and interpret tests for cheese production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to carry out sampling and basic testing, and interpreting the results for artisan cheese production.

This unit applies to individuals employed as production managers who take responsibility for their own work and for the quality of the work of others in an artisan cheese enterprise. They develop and implement procedures, prepare ingredients and maintain product safety and quality throughout production.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- MSL973013 Perform basic tests.

Unit Sector

Cheese (CHE)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Implement sampling procedures in cheese	1.1 Determine and document sampling points for physical, chemical and microbial properties

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
making	1.2 Determine an appropriate sampling size 1.3 Select and sterilise sampling equipment 1.4 Document and implement the sampling plan
2. Monitor chemistry in cheese making	2.1 Develop, implement and record an acidity profile for each stage in the production process 2.2 Carry out tests at stages for indicators, including pH, moisture levels and fat levels, according to workplace procedures 2.3 Carry out tests post-production for indicators, including moisture, pH, water activity (Aw), and observe fat and salt levels 2.4 Analyse whey content for fat and other solids to gauge efficiency of acidification, curd cutting and yield potential 2.5 Establish and review safe work procedures for processes requiring handling of chemicals and microbes, and involving chemical and microbial reactions in cheese making
3. Monitor microbiological changes through the cheese making process	3.1 Prepare samples for testing according to workplace procedures 3.2 Make observations and record data for yeasts and moulds 3.3 Carry out sampling and testing for inhibitory substances in milk
4. Carry out testing and interpret results to make adjustments to cheese making processes	4.1 Use tactile and visual senses to detect physical and chemical changes during milk receival and cheese making 4.2 Evaluate organoleptic properties of final cheese product using sensory testing 4.3 Record and interpret test results for information on composition, properties and reactions 4.4 Document recommended specifications for physical, chemical and microbial properties 4.5 Evaluate yield efficiency by comparing to established process control parameters 4.6 Reference specifications against test data 4.7 Implement changes to cheese making process based on test results

Assessment Requirements for FBPCHE5009 Carry out sampling and interpret tests for cheese production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out sampling and interpreting tests for cheese production, including:

- interpreting and applying three different sampling plans and procedures, including:
  - in relation to the process chart for a cheese product
  - hard cheeses using a cheese trier or sample shaft
  - liquid cheese homogenate for microbiological analysis
- measuring and altering pH
- interpreting test results for yeasts and moulds, coliforms and staphylococci
- determining and applying methods for the control of growth of microorganisms
- identifying and reviewing safety hazards and control methods required when handling microbes and chemicals and working with processes that involve microbial and chemical reactions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- use of technical terms used to communicate information on properties of food and materials commonly used in the food industry
- physical characteristics or phenomena that occur through cheese processing:
  - chemistry, including pH and titratable acidity
  - microbiological development and counts
  - handle and feel of the product
  - total solids (or moisture)
  - heat and temperature
  - timeframes for processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - taste, smell and appearance of the final cheese product
- processes for the making of different types of cheese
- the processing stages designed to affect the structure of these compounds (e.g. the use of fermentation to coagulate the casein micelles for acid-coagulated cheeses, compared to the use of rennet for rennet-coagulated cheeses)
- common chemical reactions that occur, factors required to cause a reaction, and the effect of reactions for cheese making, including both spontaneous and controlled reactions, such as:
  - oxidation
  - enzymic
  - acid-based reactions
  - other reactions relevant to a given cheese type and production process
- physical changes that occur to ingredients and product through cheese making and ripening
- reactions and properties of carbohydrates, proteins and fats through the cheese making process
- behaviour of each type of matter and its relationship to the production process
- changes in acidity through the cheese making process and its influence on spoilage, moisture and mineral content, texture and flavour
- instruments used for measuring and how each is calibrated (and calibration schedules)
- temperature control and its impact throughout a cheese making process
- acidity profile (either pH or titratable acidity) ranges for the different types of cheeses
- the significance of fermentation for the control of spoilage and pathogens in cheese, and its influence on moisture levels, mineral content, texture and flavour
- the basic molecular structures of carbohydrates, proteins and fats and minerals
- the role of enzymes in generating biological reactions (e.g. the use of rennet as a coagulating agent)
- coagulation time and setting time for rennet
- factors that influence syneresis, proteolysis and lipolysis and their importance in cheese making
- types of microbial cells and their components and function
- the main types of microorganisms and their activity in cheese making, both those that enhance the process and those that impact negatively on cheese characteristics
- types of pathogenic bacteria that can be present in milk and cheese products
- sampling requirements for cheese making
- pH, moisture and salt gradients in brine salted cheese (need for homogeneity in sampling)
- buffering in milk and the role of casein and phosphate levels
- basic molecular structures of carbohydrates, proteins and fats
- disinfection and sterilisation as applied to practical aspects of microbiological diversity and growth
- microorganisms of significance in the production and spoilage of cheese
- raw milk quality tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- testing methods and interpretation of results for salmonella, staphylococcus, listeria and E. coli in both pasteurised and raw milk cheese
- interpreting measurements at stages in a cheese making process, covering:
  - salt to moisture ratio (S/M)
  - moisture in the non-fat substance (MNFS)
  - fat in the dry matter (FDM)
- biological, chemical and physical methods available for controlling microbial growth
- health and safety hazards and control methods, and food safety standards relevant to the workplace
- sources of technical information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - production process and related equipment for cheese production
  - sampling and testing equipment
  - a range of cheeses at different stages of production for sampling
  - test results for a range of different cheeses or different stages of production
- specifications:
  - manufacturer advice and product specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCON2010 Operate an enrobing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a confectionery enrobing process.

This unit applies to individuals who work under general supervision and in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of an enrobing process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPCON2010 Operate an enrobing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated an enrobing process to produce at least one batch of enrobed confectionery to meet specifications, including:

- following safe work procedures
- applying food safety procedures to work practices
- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - supply of chocolate or compound to the enrobing reservoir
  - temperatures of chocolate or compound and pipelines
  - compound supply pump speed
  - curtain flow
  - blower and vibrator settings
  - chocolate or compound coverage
  - backing off and tailing
  - product weight
  - appearance
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the enrobing process, including the effect of chocolate or compound viscosity on enrobing, and types of chocolate suitable/used for coverage and backing off
- basic operating principles of equipment used for the enrobing process, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required for the enrobing process, and action to take if services are not available
- the flow of the enrobing process and the effect of outputs on downstream processes
- conditioning requirements for centres/bars/biscuits and chocolate or compound, including understanding of temper test procedures
- quality characteristics of centres/bars/biscuits and chocolate for use in the enrobing process, and the effect of variation on process performance and outputs
- quality characteristics to be achieved by the enrobing process
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the enrobing process, including inspecting, measuring and testing
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the enrobing process, and related control measures
- common causes of variation for the operation of the enrobing process, and corrective action required
- health and safety hazards and controls relevant to the operation of the enrobing process
- requirements of different shutdowns as appropriate to the enrobing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the enrobing process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the enrobing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitising procedures required for enrobing equipment
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions

FBPCON3001 Operate a complex chocolate depositing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a depositing process that deposits chocolate parts, such as wafers, fillings and chocolate, into moulds.

This unit applies to individuals who are responsible for the operation and monitoring of chocolate depositing equipment in a confectionery production environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPCON3001 Operate a complex chocolate depositing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a complex chocolate depositing process to produce one batch of confectionery products, each made up of more than one part, to specification, including:

- applying food safety procedures to work practices
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the chocolate depositing process, including ingredients and components used, handling and conditioning requirements, and process stages
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the chocolate depositing process and the effect of outputs on downstream processes
- quality characteristics and types of chocolate used for depositing
- quality requirements of centres, wafers and other additions, as appropriate to product, and the effect of variation on process outputs
- quality characteristics to be achieved by the deposited product
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods used to monitor the chocolate depositing process, including inspecting, measuring and testing as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the chocolate depositing process, and related control measures
- common causes of variation, and corrective action required
- work health and safety hazards and controls relevant to process (or complex chocolate depositing process)
- requirements of different shutdowns as appropriate to the chocolate depositing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the chocolate depositing process, including waste and rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for chocolate depositing and moulding equipment
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - process and related equipment and services
  - ingredients used in the preparation of chocolate depositing or moulding product as required
  - sampling schedules and test procedures and equipment
  - cleaning materials, equipment and procedures
- specifications:
  - work procedures, including advice on safe work practices, food safety and quality requirements
  - information on equipment capacity and operating parameters
  - recipe/batch specifications, control points and processing parameters
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCON3002 Operate and monitor a boiled confectionery process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a high boil and low boil confectionery process.

This unit applies to individuals who work as production workers and are responsible for the operation and monitoring of confectionery boiling equipment in a confectionery production environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPCON3002 Operate and monitor a boiled confectionery process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated at least one high and/or low boiled confectionery process to produce a batch of confectionery to meet specifications, including:

- applying food safety procedures to work practices
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the high and low boil process relating to the range of products to be produced, including:
  - ingredients used and their purpose
  - syrup making (super saturated solutions)
  - relationship between temperature and moisture content
  - the effect of vacuum on processing
  - reactions including crystallisation
  - process stages
- basic operating principles of equipment, including main equipment components, status and purpose of guards, the effect of vacuum on the cooking process and further processing, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required, and action to take if services are not available
- the flow of the high and low boil process, and the effect of outputs on downstream processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quality requirements of materials used in low and high boil manufacture, and effect of variation on process performance and outputs
- quality characteristics required of process outputs
- good manufacturing practices (GMP) relevant to work task
- methods used to further process high and low boils, including basic forming or extruding and stamping, cooling, pulling and aerating as required by product range
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the high and low boil process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination and food safety risks associated with the high and low boil process, and related control measures
- health and safety hazards and controls relevant to boiled confectionery process
- requirements of different shutdowns as appropriate to the high and low boil process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- product and process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the high and low boil process, including waste and rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - mixing equipment, cookers and coolers
  - ingredients used in the preparation of high and low boil product
  - sampling schedules and test procedures and equipment
  - cleaning materials, equipment and procedures
- specifications:

FBPCON3004 Operate and monitor a confectionery depositing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a depositing process to deposit confectionery syrup into solid or flexible moulds. This is sometimes known as starchless moulding.

This unit applies to individuals who work as production workers and are responsible for the operation and monitoring of confectionery depositing equipment in a confectionery production environment.

This unit does not apply to depositing chocolate. The skills and knowledge required for depositing chocolate are covered in FBPOPR2097 Operate a depositing process.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

- operating requirements of both granulation and compression, related parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods used to monitor the granulation and compression process, including inspecting, measuring and testing as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the granulation and compression process, and related control measures
- health and safety hazards and controls relevant to granulation and compression process
- requirements of different shutdowns as appropriate to the granulation and compression process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the granulation and compression process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for the granulation and compression process
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - granulation and compression equipment
  - ingredients used in the preparation of granulation and compression confectionery products as required
  - sampling and testing procedures and equipment
  - cleaning materials, equipment and procedures
- specifications:
  - granulation and compression work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on granulation and compression equipment capacity and operating parameters
  - recipe/batch specifications, control points and processing parameters
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPCON3006 Operate and monitor a panning process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a panning process to coat tablets and/or centres with a hard or soft coating that is sometimes polished.

This unit applies to individuals who work as production workers and are responsible for the operation and monitoring of panning equipment in a confectionery production environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Confectionery (CON)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare the panning equipment and process for operation	1.1 Confirm materials are available for product specification 1.2 Identify safety requirements and wear appropriate personal protective equipment and clothing, ensuring correct fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Identify food safety requirements for the task and product 1.4 Select and prepare centres and coating according to batch or recipe instructions 1.5 Identify and confirm cleaning and maintenance requirements 1.6 Prepare the panning process to meet safety and production requirements 1.7 Check and adjust equipment performance according to operating parameters 1.8 Carry out pre-start checks according to operating procedures
2. Operate and monitor the panning process	2.1 Start and operate the panning process safely according to operating instructions and safety procedures 2.2 Monitor equipment to identify variation in operating conditions 2.3 Adjust equipment operations to ensure product meets specification 2.4 Take samples and confirm that specifications for coating and conditioning are met at each stage 2.5 Identify, adjust or report out-of-specification product or process outcomes according to workplace procedures 2.6 Maintain the work area according to workplace procedures 2.7 Maintain workplace records according to workplace procedures
3. Shut down the panning process	3.1 Identify the appropriate shutdown procedure according to operating instructions 3.2 Shut down the process safely according to shutdown procedures 3.3 Identify and report maintenance requirements according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret information in recipes, equipment operational instructions and workplace procedures
Writing	• Accurately enter operational data into production equipment • Complete processing records using electronic, digital and/or paper-based formats
Numeracy	• Read and interpret equipment gauges and scales • Apply basic calculations to quantities in recipes for production volume and equipment • Measure parameters for coating

Assessment Requirements for FBPCON3006 Operate and monitor a panning process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a panning process to produce a batch of hard or soft coated confectionery, to meet product specifications, including:

- applying food safety procedures to work practices
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of the panning process, including centre preparation and conditioning procedures and requirements, coating preparation and the stages in the panning process
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required, including heat and air, and action to take if services are not available
- the flow of the panning process and the effect of outputs on downstream processes
- coatings typically used for panning, including glucose, starch and chocolate
- conditioning requirements for centres and coatings
- quality characteristics of centres and coatings for use in the panning process, and the effect of variation on panning process performance and outputs
- quality characteristics to be achieved by the process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the panning process, including inspecting, measuring and testing as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- food safety/contamination risks associated with the process, and related control measures
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to panning process
- requirements of different shutdowns as appropriate to the panning process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the panning process, including waste and rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures relevant to the panning process
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions

FBPCON3007 Operate and monitor a chocolate refining process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a chocolate mixing and refining process to produce 'flake', which will be conched.

This unit applies to individuals who work as production workers and are responsible for the operation and monitoring of mixing and refining equipment used in the manufacture of chocolate.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPDPR2007 Operate a cooling and hardening process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated cooling and hardening equipment to process at least one batch of product, including:

- following safe work procedures
- following food safety requirements
- identifying out-of-specification or non-conforming products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the cooling and hardening process, including:
  - the principles of heat transfer
  - the difference between latent heat energy transfer and sensible heat energy transfer
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- the flow of the cooling and hardening process and the effect of product output on downstream processes
- quality characteristics to be achieved by cooling and hardening process
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - early warning signs of potential problems
- techniques used to monitor the cooling and hardening process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process, and the related procedures and recording requirements
- contamination, cross-contamination and food safety risks associated with the process, and related control measures
- work health and safety hazards and controls relevant to cooling and hardening process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
    - emergency and routine shutdowns
    - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the cooling and hardening process, including waste collection and handling procedures
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for cooling and hardening equipment
- recording requirements for traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment
    - cooling and hardening equipment and services
    - cleaning materials, equipment and procedures
- specifications:
    - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
    - production schedules and batch or recipe instructions
    - specifications, control points and processing parameters
    - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPDPR3001 Operate and monitor a curd production and cutting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the knowledge and skills required to set up, operate, adjust and shut down a curd production and cutting process in cheese making.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of a curd production and cutting process, and associated equipment in a dairy processing environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPDPR3001 Operate and monitor a curd production and cutting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, operated and monitored, and shut down curd production and cutting, to process at least one batch of curd to specification, including:

- applying food safety procedures to work practices
- following safe work practices
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the curd production and cutting process, including the methods used to coagulate milk for cheese making
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- the flow of the curd production and cutting process, and the effect of product output on downstream processes
- stages and changes that occur during curd production, including physical and chemical changes that occur during curd production and cutting
- quality characteristics required for curd production and cutting
- factors that affect curd firmness
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- the effect of raw material characteristics on curd production and cutting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- techniques used to monitor the curd production and cutting process, including inspecting, measuring and testing as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process, and the related procedures and recording requirements
- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the curd production and cutting process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures
- cleaning and sanitisation procedures for the curd production and cutting process
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - vat for producing curd
  - curd cutting equipment
  - raw materials to produce curd
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety and quality requirements
  - product specifications, control points and processing parameters
  - documentation and recording requirements.

FBPDPR3002 Operate and monitor a fermentation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the knowledge and skills required to set up, operate, adjust and shut down a fermentation process typically used in the production of dairy products.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of machines and equipment used for the fermentation of dairy products in a dairy processing environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FBPDPR3003 Control batch processing for powdered milk products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Application

This unit of competency describes the skills and knowledge required to handle, feed and dose micronutrients and additives when undertaking batch processing of powdered milk products.

This unit applies to individuals who handle, measure, set dosages and record micronutrients and additives in batch processing of powdered milk products.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

	recipe, SOP or supervisor
2. Obtain correct micronutrient or other additive	2.1 Identify storage location for micronutrient or additive according to workplace requirements 2.2 Obtain micronutrient or additive according to SOP 2.3 Read micronutrient or additive label to determine any special mixing, dosing or health and safety requirements 2.4 Confirm micronutrients and additive requirements with nutritionist and/or other technical staff
3. Add micronutrient or additive to product	3.1 Match micronutrient or additive to powdered milk product 3.2 Determine appropriate volume, measurement or proportion of micronutrient or additive 3.3 Measure, prepare and pre-mix micronutrient or additive in line with safety and production requirements 3.4 Add micronutrient or additive to product at appropriate location and stage of processing in line with workplace procedures 3.5 Follow appropriate contamination, quality and traceability procedures according to health, safety and food safety procedures 3.6 Take samples of product and conduct basic tests to ensure product meets specifications 3.7 Dispose of waste according to environmental guidelines
4. Record use of micronutrient or additive	4.1 Record type and amount of micronutrient or additive used in required format 4.2 Generate correct product batch labels and add to product using required method 4.3 Complete workplace records, including traceability records, according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret names of powdered milk micronutrients and additives • Read and check information on product specification
Writing	• Record use of micronutrients and additives using electronic, digital and/or paper-based formats
Oral communication	• Use industry vocabulary, including names of micronutrients and additives
Numeracy	• Measure products and ingredients by weight (mg, g, kg, T) and volume (ml, L)

Assessment Requirements for FBPDPR3003 Control batch processing for powdered milk products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has controlled batch processing of at least one run of powdered milk product to meet specification, including:

- applying safe work practices
- applying food safety procedures to work practices
- accurately measuring micronutrients and/or additives.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- milk powder manufacturing process, including spray drying
- properties of powdered milk products, including particle size, powder density, solubility and stability
- nutritional make-up of powdered milk products produced at the workplace
- four categories of food safety hazards, including biological, chemical, physical and allergenic, and relevant controls and procedures for identifying unsafe and/or non-conforming product
- common microbiological hazards typically found in powdered milk, and their controls
- principles of a critical control point (CCP) analyses approach to managing food safety, including identifying hazards that are likely to occur, establishing appropriate methods of control, and confirming that controls are met
- contamination and cross-contamination risks, and controls used when mixing powdered milk products
- risk factors for cross-transference for batch processing
- good manufacturing practices (GMP) relevant to work task
- requirements of the Food Standards Code in relation to dairy processing
- preparation procedures required for batch processing of powdered milk products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sampling techniques used to check product against specification
- basic tests carried out on powdered milk products
- mathematical techniques to determine appropriate volume, measurement or proportion of additives in the batch
- health and safety procedures for working with powdered milk products
- environmental issues and controls relevant to working with powdered products, including waste disposal
- cleaning and sanitisation procedures for processing equipment
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a powdered milk processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - powdered milk product for processing
  - product recording and labelling system
- specifications:
  - sample production schedule, customer order or standard operating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPDPR3005 Operate and monitor a butter oil process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the knowledge and skills required to set up, operate, monitor and shut down the components of a butter oil process. This process, also known as an anhydrous milk fat (AMF) process, is used for the preparation of butter oil from either cream or melted butter.

This unit applies to individuals who apply operating principles to the operation and monitoring of butter oil equipment and processes in a dairy product production environment. Operators must be capable of operating a butter oil process using either cream or melted butter.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

  - early warning signs of potential problems
- methods used to monitor the production process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- good manufacturing practices (GMP) relevant to work task
- Food Standards Code requirements for the production of butter
- common causes of variation, and corrective action required, including how earlier stages in the process could contribute to cloudy product
- contamination/cross-contamination and food safety risks, and related control measures
- health and safety hazards and controls relevant to butter oil process
- isolation, lock-out and tag-out procedures and responsibilities
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste or rework collection and handling procedures related to the process
- cleaning and sanitisation procedures for the butter oil processing equipment
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a dairy processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - butter oil production equipment and related services
  - cream or butter to be processed
  - cleaning materials, equipment and procedures
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and documentation requirements
  - information on equipment capacity and operating parameters
  - recipe/batch specifications, control points and processing parameters
  - sampling schedules and test procedures and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPEGG2003 Work on an egg grading floor

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Application

This unit of competency describes the skills and knowledge required to grade eggs, which requires knowledge of basic egg characteristics and quality principles in egg production and packing.

This unit applies to individuals who work in egg grading and packing facilities in a poultry production environment in either an operations or quality role.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Egg (EGG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for egg grading operation	1.1 Identify key work locations and egg grading and packaging equipment on egg grading floor 1.2 Identify grades of eggs packed by the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Identify trays and packaging used for all orders, and location of best before dates on trays and cartons 1.4 Identify storage locations for packed orders prior to dispatch 1.5 Identify safe work procedures for egg grading, including use of personal protective equipment 1.6 Identify workplace environmental guidelines for egg grading floor operations, including disposal of waste
2. Recognise egg grades and common egg faults	2.1 Identify different grades of fresh eggs, including by size 2.2 Recognise gross, hairline and star cracks, black rot, dirt and other faults in eggs 2.3 Identify defects though the candling process
3. Operate on the egg grading floor	3.1 Confirm method for egg cleaning 3.2 Identify key risks to food safety on egg grading floor, including food safety plan and egg grading floor critical control points 3.3 Confirm steps and locations for detecting eggs with gross defects 3.4 Identify quality system, including sampling program and tests conducted both on and off the grading floor 3.5 Ensure eggs are individually stamped in line with Food Standards requirements 3.6 Identify and confirm steps and requirements for the packaging process, including process for printing best before date 3.7 Confirm temperature and humidity requirements for storing eggs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret standard operating procedures required for working on an egg grading floor
Writing	• Record processing data using digital and/or paper-based formats

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Numeracy	• Read and monitor gauges and scales • Identify grades of eggs by weight (g) and size (small, medium, large, extra large) • Identify appropriate best before dates

Assessment Requirements for FBPEGG2003 Work on an egg grading floor

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked on an egg grading floor to grade eggs over a period of one shift, including:

- identifying and addressing food safety risks
- recognising eggs faults
- ensuring eggs are stamped and washed in line with food safety standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- functions of key work areas, including washing equipment, weighing and automatic fault detection equipment, lanes, denesters, backpack side, quality room and cool rooms
- egg components and purpose, including shell, shell membranes, yolk, albumen and air cell
- Food Standards Code requirements for eggs and egg products
- commonalities and differences between egg grades
- importance of early grading and packing eggs on freshness
- purpose and methods for egg cleaning
- the need to separate dirty/unwashed eggs from clean/washed eggs
- key egg faults, including types of cracks, faulty colouring, faulty shapes, and blood and other inclusions, and the methods used to detect faults
- contamination and foreign bodies likely to be present in eggs and egg products
- food safety risks present in egg pulp and egg products, including biological, chemical, physical and allergenic risks
- measures used to control food safety risks
- temperature and humidity requirements for storing eggs, and effects of variation from these requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental issues and controls relevant to the process, including waste or rework collection and handling procedures related to the process
- health and safety procedures for egg grading, including the use of personal protective equipment
- workplace cleaning and sanitisation procedures relevant to the egg grading process
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an egg grading and packing workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - egg washing, grading and packing equipment
  - eggs of different grades and condition, including eggs with common faults
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPEGG2004 Operate egg grading and packing floor equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate and monitor specialist egg washing, grading and packaging equipment.

This unit applies to individuals who work under general supervision, and who apply basic operating principles to the operation and monitoring of equipment directly in contact with eggs, including washing station, denester and backpack workstations.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Egg (EGG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Operate and monitor egg receiving equipment	1.1 Check production schedules for egg type requirements 1.2 Wear appropriate personal protective equipment, and ensure correct fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Conduct pre-start checks on egg receiving equipment according to operator instructions 1.4 Place eggs requiring manual loading onto conveyor 1.5 Check conveyor, finger sorter and other egg receiving equipment for jams and faults 1.6 Check primary and secondary wash and rinse machines and dryers for correct operation 1.7 Check passage of eggs through crack and leak detectors and weighing stations to confirm that faulty eggs are being identified and dropped out 1.8 Monitor sorting of eggs into different size lots for conformance to enterprise and job specification
2. Operate and monitor denester side egg packing lanes	2.1 Load printed packaging onto lane take off holders according to production instructions or orders 2.2 Ensure ink in egg stamper is correct temperature 2.3 Supply the correct number of size and grade of egg pallets and packs to each lane according to customer order 2.4 Enter packing order requirements, including number of eggs per carton or tray, and number of cartons or trays per order type, into each lane through key pad terminal 2.5 Ensure individual eggs are stamped with weight, in line with Food Standards Code 2.6 Undertake mechanical setting of the lane machinery for different size trays where required 2.7 Check setting of best before date printer 2.8 Monitor lanes to ensure that lanes do not run out of egg trays
3. Operate and monitor backpack side egg packing lanes	3.1 Determine number of cartons per order from lane boards or other job instructions 3.2 Monitor packing lanes to ensure trays are being packed into correct outer packaging, and adjust or report any out-of-specification outcomes according to workplace requirements 3.3 Stack trays not requiring packing into outer containers 3.4 Undertake quality checks of eggs throughout all stages of process for compliance with food safety standards and workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
4. Process damaged and faulty eggs	4.1 Collect and transport containers of faulty eggs from washers, and damaged eggs from packing machines, to liquid egg processing station 4.2 Sort eggs into edible and inedible waste product according to food safety standards and workplace requirements 4.3 Weigh and record edible waste product within specified time intervals 4.4 Feed faulty and damaged edible eggs to egg breaking or egg pulping machine 4.5 Start egg pulping machine according to workplace procedures 4.6 Monitor temperature of egg pulping machines and report any over-temperatures 4.7 Monitor and adjust speed of pumps to suit pulping and container filling operations 4.8 Weigh, record and dispose of inedible egg waste product according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret standard operating procedures for operating egg grading and packing floor equipment • Interpret safety data sheets for cleaning chemicals
Writing	• Complete processing records using digital and/or paper-based formats
Numeracy	• Monitor supply and flow of eggs through washing and packing equipment • Check egg weights and best before dates • Interpret Haugh unit readings

Assessment Requirements for FBPEGG2004 Operate egg grading and packing floor equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated grading and packing floor equipment over the period of at least one work shift, including:

- undertaking quality checks of egg grading, washing and packing process
- addressing routine processing issues
- applying safe work practices
- applying food safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- grading floor layout, including conveyors, washing, drying, weighing and checking equipment, lanes, denester side, backpack side, lane boards and other instruction boards, store rooms and cool rooms
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- Food Standards Code requirements for eggs and egg products
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- inspection or test points (control points) and the related procedures and recording requirements
- requirements for different types of eggs, including cage, barn laid, free range and organic
- common causes of variation in mechanical settings, and corrective action required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- food safety risks present in egg pulp and egg products, including biological, chemical, physical and allergenic risks
- measures used to control food safety risks
- method used for communicating daily orders, including lane boards
- purpose of best before dates for egg packaging
- method of setting best before date printer for egg packaging
- types and implication of cracks in eggs
- location and contents of all material safety data sheets (SDS) for chemicals used in washing and cleaning processes
- types of trays, outer packaging, buckets and other containers used on grading floor, and system used to identify containers used for first grade, seconds and defective eggs
- determining first grade, seconds and defective eggs
- maximum collection times for seconds and defective eggs from grading floor collection points
- quality checks, including checks on outer quality, date printing, eggs weights, cleanliness, Haugh unit reading and misshapen and cracked eggs in cartons
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an egg grading and packing workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - egg washing, grading and packing equipment
  - eggs to be processed
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - production schedule/batch instructions
  - documentation and recording requirements and procedures
  - cleaning procedures, materials and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFAV2002 Apply hydro-cooling processes to fresh produce

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to use hydro-cooling equipment and processes to cool fresh fruit or vegetables in preparation for storage or transportation.

This unit applies to individuals who apply hydro-cooling processes in a food processing environment or at a farm or production site where produce is processed directly after harvest to maximise longevity.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Fruit and Vegetables (FAV)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify hydro-cooling requirements	1.1 Identify produce for hydro-cooling and confirm specific cooling and transfer requirements 1.2 Conduct pre-start checks of cooling equipment, prepare and fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	personal protective equipment 1.3 Check and adjust equipment performance to meet work requirements 1.4 Place goods in storage areas to meet storage temperature, stores handling and stock rotation requirements 1.5 Record stores information in required format
2. Conduct hydro-cooling	2.1 Check storage facility for readiness and allocation of space for produce 2.2 Transfer produce in a manner that is safe and maintains produce quality 2.3 Set operating parameters for hydro-cooling equipment to meet safety and cooling requirements 2.4 Apply hydro-cooling to produce according to cooling requirements 2.5 Transfer produce to storage according to workplace procedures 2.6 Record process information in required format 2.7 Maintain the work area according to workplace standards, food safety and health and safety requirements
3. Monitor hydro-cooling process	3.1 Check temperature to ensure required levels are maintained 3.2 Identify and act on non-compliance issues or problems

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret standard hydro-cooling information, including impacts of timing and temperature on fresh produce
Writing	• Record product and processing information using digital and/or paper-based formats
Numeracy	• Interpret temperature gauges (°C)

Assessment Requirements for FBPFAV2002 Apply hydro-cooling processes to fresh produce

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied hydro-cooling processes to at least one batch of fresh produce to meet specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- taking corrective action in response to typical faults and inconsistencies with cooling equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment
- hydro-cooling facilities and capacities available in the work area
- key steps in the hydro-cooling process, including impact of timing and temperature
- good manufacturing practices (GMP) relevant to work task
- temperature control requirements of produce handled in the work area, including acceptable temperature ranges, consequences of failing to meet these ranges, and requirements for gradual temperature change
- handling procedures for receiving and locating produce, including procedures for identifying, segregating and disposing of damaged or potentially unsafe stock
- stock handling procedures for transferring cooled stock from a temperature-controlled environment, including the maximum duration stock can be held outside a controlled environment
- food safety and quality consequences of stock temperature control requirements not being met

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- monitoring procedures and instrumentation, including the use of thermometers or other temperature-measuring instrumentation
- notification, recording and reporting requirements and procedures for apply hydro-cooling processes
- operating procedures for goods handling equipment
- housekeeping requirements for work area
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a fresh food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - hydro-cooling specifications and facilities
  - produce requiring cooling
  - load-shifting equipment
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - stock information recording system and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFAV3003 Conduct chemical wash for fresh produce

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement a wash process for fresh produce where chemicals, including chlorine, are used to achieve quality standards.

This unit applies to individuals who set and monitor levels of cleaning chemicals while conducting wash operations in a food processing production environment. It typically applies to produce that includes leafy greens and fruit, where chemicals are used to ensure required cleaning outcomes.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Fruit and Vegetables (FAV)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Confirm required use of chemicals	1.1 Identify chemicals used for the washing of fresh produce, and confirm required quantities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Identify hazards and risks associated with using chemicals, and implement control measures throughout operations 1.3 Prepare and use personal protective equipment according to workplace safety procedures 1.4 Identify and apply storage and handling requirements for chemicals
2. Prepare for washing operation	2.1 Confirm and prepare raw materials for washing according to production specifications 2.2 Confirm equipment for operational readiness, and fit and adjust components and related attachments 2.3 Carry out pre-start checks according to operator instructions 2.4 Measure chemicals and add dose according to specifications 2.5 Check performance of chemical-dosing equipment to confirm accuracy 2.6 Check water quality and confirm suitability for use
3. Operate and monitor the washing process	3.1 Start and operate the washing process according to operating instructions and health and safety requirements 3.2 Check water mix to confirm correct levels of chemicals 3.3 Monitor washing process to ensure raw materials meet product specifications 3.4 Transfer washed materials for further processing or packaging 3.5 Identify variation in equipment operation, and report maintenance requirements 3.6 Identify, rectify and report out-of-specification product or process outcomes 3.7 Maintain the work area according to workplace procedures, food safety and work health and safety requirements 3.8 Maintain workplace records in required format
4. Shut down the washing process	4.1 Implement the appropriate shutdown procedure 4.2 Handle, store and dispose of chemicals according to workplace procedures and environmental regulations 4.3 Identify and report maintenance requirements according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Identify routine problems and implement standard solutions according to workplace guidelines
Reading	• Read and interpret standard operating procedures and directions for the safe operation of equipment when operating the chemical wash process
Writing	• Record product and processing information using digital and/or paper-based formats
Numeracy	• Measure (ml, L) and mix correct ratios of chemicals to water in the wash process

Assessment Requirements for FBPFAV3003 Conduct chemical wash for fresh produce

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a chemical wash of at least one batch of fresh produce to meet product specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- taking corrective action in response to typical faults and inconsistencies with the washing process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the washing process, including the importance of water quality and the role of chemicals in the washing process
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required for the chemical wash process, and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the washing, including the consequences of out-of-specification moisture levels on further processing and final product
- quality requirements of raw materials, and effect of variation on process performance, including how variation in microbial load can affect the washing process
- implications of incorrect chemical levels on fresh produce

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements, parameters and corrective action required, where operation is outside specified operating parameters
- good manufacturing practices (GMP) relevant to work task
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the washing process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures, and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation, and corrective action required
- workplace health and safety hazards and controls relevant to chemical wash process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
  - isolation, lock-out and tag-out procedures and responsibilities
- product or process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and waste disposal
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control
- routine maintenance procedures for washing equipment
- cleaning and sanitisation procedures for washing equipment
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a fresh food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - washing equipment and services, including water and chemicals
  - raw materials to be processed
  - cleaning materials and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and batch instructions
  - sampling schedules and test procedures and equipment
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFAV3004 Program fresh produce grading equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to program grading equipment to identify key characteristics of fresh produce, and sort accordingly.

This unit applies to individuals who operate mechanical and computer-based technology to sort fresh fruit and vegetables according to key characteristics, including size, weight, density, quality or colour.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Fruit and Vegetables (FAV)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Confirm produce grading specifications	1.1 Examine characteristics of produce and confirm purpose for grading 1.2 Confirm customer and packaging requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Determine specifications for grading based on customer requirements 1.4 Identify and address hazards and risks associated with grading produce, including food safety risks
2. Program grading equipment	2.1 Enter grading specifications into equipment 2.2 Use computer program or equipment components to enable a variety of grading outcomes to be achieved 2.3 Test or monitor program or equipment operation against specified outcomes 2.4 Investigate problems or inconsistencies in grading outcomes to determine cause 2.5 Implement corrective action where applicable, or report to appropriate personnel 2.6 Complete documentation and records of grading specifications for customer

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Read and interpret standard operating procedures and instructions for the safe operation of grading equipment
Writing	• Record product and processing information using digital and/or paper-based formats
Numeracy	• Estimate sizes, shapes and measurements (mm, cm) of fresh produce to be graded and sorted • Set specifications for grading produce

Assessment Requirements for FBPFAV3004 Program fresh produce grading equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has programmed fresh produce grading equipment for at least one batch of fresh produce to meet client specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- taking corrective action in response to typical faults and inconsistencies in the grading process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- grading equipment features, processes and technologies
- factors that influence grading outcomes
- typical problems that occur in the grading process, and likely causes and appropriate response options
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- good manufacturing practices (GMP) relevant to work task
- workplace health and safety hazards and controls relevant to programming grading equipment
- characteristics of produce used for grading and the process of identification
- routine maintenance procedures for grading equipment
- cleaning and sanitisation procedures for grading equipment
- procedures to track traceability of product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a fresh food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - produce, grading equipment and consumables
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, standard operating procedures, food safety, quality and environmental requirements
  - grading specifications
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFST4009 Label foods according to legislative requirements

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to label foods and/or beverages according to legislative requirements.

The unit applies to individuals who have responsibility for maintaining the product safety, quality and legislative requirements for labelling food and/or beverage items.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Unit Sector

Food science and technology (FST)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify specific criteria required for a food and/or beverage	1.1 Identify legal requirements of food and/or beverage labels 1.2 Identify the relationship between label and consumer information 1.3 Confirm that the ingredients in a food or beverage product are

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
label	accurately described 1.4 Confirm that date marking is completed and linked to information on batch number and date of processing 1.5 Confirm that directions for use and storage information are provided 1.6 Confirm that country of origin information is completed to comply with requirements for food source and place of processing 1.7 Identify additional general information requirements 1.8 Source commodity-specific labelling requirements
2. Document information from the processing operation required on the product label	2.1 Identify exemptions for nutrition information panel 2.2 Provide information on energy, protein, fat, saturated fat, carbohydrate, sugars and sodium content, and any other nutritional information required by legislation 2.3 Provide the number of servings, the average quantity of food or beverage in a serving and the unit quantity of the product 2.4 Document the declaration of weights and measures 2.5 Confirm that legislative requirements for specifying allergens and irradiated food or beverages, percentage labelling and mandatory warning and advisory statements and declarations (including genetically modified ingredients) are included on the label
3. Produce a label for a specified food or beverage product	3.1 Collate label data and format 3.2 Use software packages to produce a nutritional panel for a food or beverage label 3.3 Assess food and/or beverage labels to determine compliance, and modify if necessary 3.4 Monitor the operation of labelling equipment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret legislative requirements and standards for food and/or beverage labelling • Interpret food safety guidelines, codes of practice, standards and regulations relevant to a food and/or beverage processing enterprise • Identify the legal responsibilities of a food processing company relating to product content, packaging, nutritional panels and use-by dates
Numeracy	• Source, collect and organise a range of data for use on product labels • Apply units of measurement and percentage compositions of food make-up for nutrition information panel

Assessment Requirements for FBPFST4009 Label foods according to legislative requirements

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced accurate labels for two different items of food and/or beverages that comply with the current Food Standards Code.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, regulations and standards relating to food and/or beverage labelling
- legal, industry and enterprise requirements of a food or beverage label, including requirements for specifying allergens and irradiated foods or beverages, percentage labelling and mandatory warning and advisory statements and declarations (including genetically modified ingredients)
- data to be accessed to populate a product label
- legal implications of incorrect food or beverage labelling
- exemptions for nutrition information
- the relationship between the consumer and information required on a label.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - personal protective equipment required for labelling food and/or beverages according to legislative requirements
  - labelling equipment
- specifications:
  - production process, manufacturer advice and operating procedures
  - workplace documentation, including specifications and procedures for food and/or beverage labels
  - food and/or beverage labelling legislation, codes of practice and guidelines
  - workplace information recording systems, requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFST4013 Interpret and respond to food and/or beverage test results

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to interpret test results and make decisions about how to manage the production process in response to the results.

This unit applies to those workers who have responsibility for overseeing the production of food and/or beverages and the quality assurance requirements associated with those products.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Food Science and Technology (FST)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Review food and/or beverage test results	1.1 Access and read test results 1.2 Compare test results to reference standards and expectations 1.3 Identify trends in data and/or results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Identify atypical results
2. Source cause of food and/or beverage atypical data	2.1 Identify a range of possible causes for atypical results 2.2 Gather data and other information to eliminate or confirm possible causes
3. Act on results of analysis	3.1 Determine options to correct processing of food and/or beverage 3.2 Determine options to correct cause of atypical results 3.3 Select the most appropriate solution/s 3.4 Take action to correct atypical results in accordance with product specification 3.5 Record actions taken in response to analysis in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy skills	• Interpret test results, including carrying out simple calculations
Get the work done	• Think through options to identify and respond to atypical results of tests • Trace and source obvious cause of artefact or malfunction

Assessment Requirements for FBPFST4013 Interpret and respond to food and/or beverage test results

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has accurately interpreted and suitably responded to test results in a food production environment, including:

- at least four of the following test types most relevant to the job role:
  - pH
  - alcohol
  - bitterness
  - colour
  - microbiological counts
  - moisture
  - vicinal diketones (VDKs)
  - carbon dioxide (CO2) and nitrogen (N2)
  - dissolved oxygen (DO)
  - total packed oxygen (TPO)
  - water activity (Aw)
  - test type specific to food or beverage product
- performing calculations that include decimals and percentages, volume, ratios, dosage and concentration
- recording actions carried out in response to test results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of tests performed as part of job role and principles of the standard methods/specifications used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical basic tests, equipment and methods relevant to product
- measurements used for typical tests
- acceptable parameters for typical test results
- sources of uncertainty in measurement and methods for control
- workplace and/or legal traceability requirements
- numeracy skills relevant to job role:
  - convert units involving multiples and submultiples
  - use fractions, decimals, proportions and percentages to determine responses to results
  - use areas (m2) and volumes (ml, L, m3) to describe product quantities
  - calculate dose (mg), average mass, mass percentage, density, moisture, relative and absolute humidity
  - determine ratios, such as mass to mass, mass to volume and volume to volume percentages
  - calculate concentration, such as g/100mL, mg/L and dilution ml/L
  - analyse statistical data to identify processing issues
  - calculate food properties, such as % concentration (dry), % content of moisture, ash, fat, protein, alcohol, sulphur dioxide and trace metals
- methods for controlling atypical outcomes of tests, relevant to process.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food or beverage production environment
- resources, equipment and materials:
  - food or beverage process test results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFST4014 Apply sensory analysis in food and/or beverage production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to carry out sensory analysis of food and/or beverages, and to use appropriate terminology when describing the organoleptic properties.

This unit applies to workers who have responsibility for overseeing the production of food and/or beverages and the quality assurance requirements, and who are responsible for making changes to processing based on the results of the sensory analysis.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Unit Sector

Food Science and Technology (FST)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify the organoleptic properties of food or beverage	1.1 Recognise the five basic tastes (sweet, salty, bitter, sour and umami)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Identify the textural properties of food or beverage 1.3 Identify aromas and flavours 1.4 Recognise the effect of colour on the visual properties of food or beverage 1.5 Recognise any personal sensory blind spots
2. Analyse food or beverage samples	2.1 Determine required organoleptic properties for specified product 2.2 Devise or access appropriate recording documentation for the sensory evaluation test 2.3 Prepare samples for analysis in accordance with workplace procedures 2.4 Analyse sensory properties of food or beverage 2.5 Identify any faults with product that do not fit product specification 2.6 Identify the factors influencing sensory evaluation tests 2.7 Identify differences between standard specified for product and sample
3. Act on results of analysis	3.1 Record details of analysis using predetermined format 3.2 Discuss outcomes of analysis with team 3.3 Determine action to be taken as a result of the analysis

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Use appropriate terminology and effective communication skills to discuss sensory analysis results and determine actions
Get the work done	• Think through options to solve problems as they arise

Assessment Requirements for FBPFST4014 Apply sensory analysis in food and/or beverage production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively applied sensory analysis in a food and/or beverage production environment, including:

- analysing and describing the organoleptic properties of three different food products, or three different beverage products, including:
  - taste – sweet, salty, bitter, sour and umami (savoury)
  - texture
  - aroma
  - flavour
  - colour
  - visual properties
- identifying differences between the three products
- identifying product faults
- identifying any personal sensory blind spots.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry codes of practice relevant to industry sector
- anatomy, physiology and functions of taste and smell to determine sample appearance, texture, aroma and flavour
- the primary flavour characteristics of sweet/sour, umami (savoury) and bitter/salty
- frameworks for organoleptic evaluation, relevant to product
- clarity around what makes a quality product (style, context, specification)
- interaction of sensory activity, including the interaction between taste and smell, and effect of temperature on samples

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- associated characteristics of mouth feel and appearance
- the various sensory evaluation tests used in the food processing industry
- principles and purpose of test methods implemented (why they are used and what they demonstrate)
- quality requirements for conducting a taste panel
- sensory panels and their makeup (and acknowledgement that people have different sensory skills)
- descriptive, discriminative and affective sensory methods
- typical samples used for sensory analysis, including:
  - raw materials, ingredients, final products, packaging materials, and materials that come in contact with the product
  - materials at stages of production
  - process aids and adjuncts
- common testing methods:
  - triangular test, duo-trio test, ranking test, paired comparison test and blending test
  - flavour profile
  - threshold analysis
  - discriminative testing, descriptive testing and affective testing
- typical uses of the results obtained from the sensory analysis:
  - quality assurance at various stages of production
  - quality control and troubleshooting
  - research and development of new products
  - blending.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food or beverage production environment
- resources, equipment and materials:
  - food and/or beverage product samples for analysis.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFST5010 Implement and review the preparation of milk for processing

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to implement and review the standards and procedures for receiving and preparing milk for product manufacture.

This unit applies to individuals who are responsible for maintaining product safety, quality and efficiency in the dairy processing sector, utilising knowledge of food science and processes to determine the required food safety, quality and performance of food production equipment.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Receive fresh milk and blend using standard industry data	1.1 Provide a safe working environment for milk receival and testing 1.2 Apply receival and testing procedures for milk 1.3 Record and store test data 1.4 Blend milk to requirements, based on test data 1.5 Store milk to meet industry standards
2. Implement procedures for separation and/or pasteurisation of received milk in preparation for further processing	2.1 Implement a sequence of activity to prepare the system for separation and/or pasteurisation 2.2 Implement the production schedule to ensure all resources and requirements are available and meet company requirements 2.3 Document data requirements and collection points for food safety, quality and production standards 2.4 Implement procedures to deal with non-conformance in relation to process and the final product 2.5 Set the production system to operating specifications before and during preparation and testing of received milk 2.6 Implement process control system for the preparation of milk for further processing
3. Diagnose, rectify and report problems arising from the preparation of milk for manufacture	3.1 Interpret product tests to ensure compliance with requirements 3.2 Implement a system to identify defects and abnormalities in delivered milk 3.3 Make adjustments to processes and equipment in response to analysed results 3.4 Record and report problems
4. Review production processes for preparing milk for further processing	4.1 Review the critical control points and critical limits for product safety 4.2 Undertake food tests to check product composition and compliance with further manufacturing requirements 4.3 Review operating procedures for food safety and quality 4.4 Review safe work systems for processing 4.5 Review environmental impacts and energy efficiencies for preparation of milk for processing

Assessment Requirements for FBPFST5010 Implement and review the preparation of milk for processing

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively implemented and reviewed the preparation of milk for processing on at least one occasion, including:

- assessing the impact of processing on milk
- establishing critical control points (CCPs) and critical limits for each step in the preparation of milk for processing
- monitoring production of milk for further processing
- monitoring the implementation of the Hazard Analysis and Critical Control Points (HACCP) plan
- determining data collection and documentation requirements
- carrying out milk sampling and testing according to the HACCP plan and operational procedures
- accurately interpreting test results
- making procedural adjustments to address non-compliance
- ensuring relevant food safety standards and associated regulations are adhered to.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the components of milk
- the hazards associated with raw milk
- the various spoilage organisms associated with milk
- the testing and processing stages in preparing milk for further processing
- the risks to milk product quality from incorrect preparation and handling of fresh milk

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- output of each of the processes used in the preparation of milk for further processing
- compositional requirements for milk prepared for further processing for a range of processed milk products
- principles of operation of equipment and accessories used in the preparation of milk for further processing
- critical factors in the testing and preparation of received milk for further processing into dairy products
- processes used in the preparation and manufacture of non-fermented dairy products
- resource requirements for the preparation of milk for further processing
- potential product defects and their causes, which may arise in the preparation of milk for further processing
- milk sampling and testing
- data requirements appropriate for food safety, quality and production standards
- manufacturing processes, including materials and equipment, involved in preparing delivered milk for further processing
- milk handling and its impact on properties for further processing
- chemical and physical hazards that may affect milk
- procedures for milk storage, handling and preparation
- health and safety in the workplace procedures
- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- food safety standards and regulatory requirements associated with the preparation of milk for processing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real milk processing workplace
- resources, equipment and materials:
  - production process and related equipment, manufacturers' advice and operating procedures
  - testing equipment
- specifications:
  - tests used to report relevant product/process information and recorded results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFST5031 Identify the microbiological and biochemical properties of fermented food and/or beverages

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to identify the microbiological and chemical properties of fermented food and/or beverages, including the identification of food contamination and spoilage.

This unit applies to individuals who apply technical and theoretical knowledge and who design and communicate solutions to sometimes complex problems.

No licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	fermented food and beverage categories 1.3 Determine the correct microbiological quality control program for specific fermented food and beverage in terms of the Food Standards Code
2. Identify key microorganisms involved in fermentation	2.1 Identify the key microorganisms used in different fermentation processes 2.2 Identify the differences between different fermentation processes and when they are used 2.3 Identify the indicators of successful fermentation for each different fermentation process
3. Identify food poisoning and spoilage microorganisms that may result from incorrect fermentation practices	3.1 Identify the major pathogenic organisms and any associated toxins that may be present in an unsuccessful ferment 3.2 Interpret and determine appropriate action based on microbiological and chemical test results 3.3 Determine the ramifications of fermented product contamination in terms of public health and product shelf-life quality
4. Perform microbiological sampling and testing techniques	4.1 Perform microbiological sampling techniques to collect production samples 4.2 Take samples to determine the presence of the pathogenic and spoilage organisms to confirm adequacy of operating processes, including plant sanitation 4.3 Organise appropriate storage and transport of samples to testing facility 4.4 Identify the appropriate range of actions required when out-of-specification test results are received
5. Identify the biochemical pathways that occur in fermented food and beverage production	5.1 Identify the biochemical pathways associated with the different categories of fermented food and beverages 5.2 Identify the reactions and properties of sugars and starches through a fermentation process
6. Identify and conduct simple biochemical tests to track the process of fermenting food	6.1 Identify the significance of a range of chemical parameters to track the progress of the fermentation process, including sugar levels, pH, acidity, water activity (Aw), salinity, alcohol 6.2 Test for sugar levels to determine fermentation progress

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and analysed microbiological and biochemical effects that take place in the fermentation of three different food and/or beverage products, including:

- conducting relevant in-process tests required to monitor the progress of fermentation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of fermentation, including yeasts, bacteria, symbiotic culture of bacteria and yeast (SCOBY) and fungi
- types and effects of microbiological and chemical hazards from incorrect fermentation (for each product)
- spoilage in fermented food and/or beverages and how they could be avoided
- processes used in the control of microbial growth in food products
- criteria for successful fermentation of different types of fermented food and beverages, including: organism, fermentation time, fermentation temperature, fermentation atmosphere (aerobic vs anaerobic), pH for different fermented food and beverage categories, water activity (Aw)
- major microorganisms responsible for food poisoning and spoilage
- Food Standards Code in relation to fermented food and beverages
- standard microbiological techniques to identify food poisoning and spoilage organisms
- the importance of plant hygiene and how it can affect the finished product
- microbiological toxins and aflatoxins
- typical spoilage patterns in fermented foods caused by chemical and microbiological issues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- microbiological quality control programs
- plant hygiene, including sanitation and verification techniques
- rapid microbiological techniques:
  - accelerated culture techniques
  - rapid biochemical tests
  - measurement of total bacteria metabolism
  - measurement of spoilage
  - non-traditional methods
  - automated and mechanised methods
- the relevance of rapid microbiological technology, as related to control of plant hygiene
- potential microbiological pathogens
- chemical hazards
- critical control limits and microbiological processes and species in fermented food and beverage production
- characteristics and phenomena that occur during fermentation
- common chemical reactions that occur in food processing, including both spontaneous and controlled reactions, including:
  - the role of enzymes in generating biological reactions
  - tests commonly used to measure phenomena, and related units of measurement
  - transition phases applicable to a given production process
  - the role of temperature and pressure in the transition process
- pH and its impact on fermentation
- role of secondary fermentation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - test equipment, manufacturers' advice and operating procedures
- specifications:
  - product standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY1002 Follow work procedures to maintain food safety

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to maintain food safety (including food allergen management) when carrying out work tasks. Basic food safety practices include personal hygiene and conduct, safe food handling, housekeeping and waste disposal related to work tasks, and responsibilities where work involves routine manual processes and operation of simple automated equipment.

This unit applies to individuals who work alongside a supervisor in most situations and is relevant to a number of job roles throughout food processing industries at various levels.

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Assessment Requirements for FBPFSY1002 Follow work procedures to maintain food safety

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained food safety, including food allergen management, following workplace procedures on at least one occasion, including:

- handling and/or disposing of out-of-specification or contaminated materials, ingredients and product, waste and recyclable material as required by workplace
- recording food safety information according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- food safety requirements related to own work responsibilities
- four categories of food safety hazards, including biological, chemical, physical and allergens
- basic concepts of critical control point (CCP) approach to controlling food safety hazards
- possible consequences of not following these procedures
- contamination that can typically occur in the work area, including cross-contamination (bacterial, physical and chemical)
- the effects of cross-contact allergens
- storage and handling requirements for ingredients, materials and product used related to work role
- housekeeping requirements and responsibilities, and use and storage of housekeeping/cleaning equipment
- purpose and importance of cleaning and sanitation procedures
- suitable standard for materials, equipment and utensils used in the work area
- waste collection, recycling and handling procedures relevant to own work responsibilities
- procedures to follow in the event of pest sighting or discovery of infestation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- clothing and footwear requirements for working in and/or moving between food handling areas
- personal clothing maintenance, laundering and storage requirements
- appropriate bandages and dressings to be used when undertaking food handling
- recording/reporting requirements and responsibilities for workplace food safety.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - appropriate personal protective equipment and clothing
- specifications:
  - food safety information relating to the workplace, including a food safety program outlining food safety hazards and control methods
  - work instructions and procedures, including for cleaning and sanitation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPFSY2002 Apply food safety procedures

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively implemented the food safety program and procedures on two separate occasions in a food processing and/or food packaging environment, including:

- identifying own responsibilities with regard to food safety, including food allergen management
- identifying food safety risks in the workplace, and the control measures used to manage them
- applying control measures in own work
- monitoring compliance with food safety standards
- identifying and acting on non-compliances.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- sources of information and expertise on procedures and responsibilities for food safety relating to own work
- basic concepts of critical control point (CCP)-based food safety, including identification of hazards that are likely to occur, establishing appropriate methods of control and confirming that controls are met
- food safety management arrangements in the workplace, including:
  - workplace policies and procedures to implement responsibilities
  - the relationship between the quality system and the food safety program
  - the role of internal and external auditors
  - procedures followed to investigate contamination and cross-contact allergenic events
- Food Standards Code and why it exists, relevant to work role

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- good manufacturing practices (GMP) relevant to work role
- state/territory food legislation, relevant to workplace
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area
- handling and storage requirements of ingredients, materials and products handled and used
- methods used to monitor that food safety is under control, including the purpose of sampling
- action required in the event of non-compliance (corrective action is typically described in the food safety program and/or related workplace information)
- purpose of keeping records, and the recording requirements of the food safety program
- methods used in the workplace to isolate or quarantine food that may be unsafe or non-conforming
- product and ingredient recall procedures where required by work responsibilities
- personal protective clothing and footwear, clothing maintenance, laundering and storage requirements
- housekeeping requirements and responsibilities relating to own work, and use and storage of housekeeping/cleaning equipment where relevant
- procedures to follow in the event of pest sighting or discovery of infestation
- purpose and importance of cleaning and sanitisation procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents actual workplace conditions
- resources, equipment and materials:
  - food safety information relating to the workplace, including a food safety program outlining food safety hazards and control methods
  - personal protective equipment and clothing
- specifications:
  - work instructions and procedures relevant to work task
  - cleaning and sanitisation policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY2003 Maintain food safety when loading, unloading and transporting food

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to maintain food safety when loading and transporting temperature-sensitive ingredients and products.

This unit applies to loading, unloading and transport activities where the transport operator does not have direct physical contact with food.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPFSY2003 Maintain food safety when loading, unloading and transporting food

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained food safety when loading, unloading and transporting food for at least one delivery of temperature-sensitive ingredient or product, including:

- applying safe work practices
- completing records accurately.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment
- food safety critical control points (CCPs) in the loading/unloading and transportation of food materials and product, and related methods of control
- characteristics of food transported and related transport environment requirements
- key requirements of the Food Standards Code in relation to product transported
- microbiological, physical, chemical and allergenic hazards that can occur when loading, transporting and unloading food, appropriate to nature and method of food transported, including the types of hazards likely to occur, the conditions under which they occur, and possible consequences
- methods and procedures used to control food safety hazards (this depends on the type of controls and equipment used), including the purpose and operation of equipment procedures in place to maintain food safety, and workplace records, such as temperature control charts and cleaning and sanitisation records
- procedures used to confirm that transportation and related food safety equipment is operational and appropriate for use, such as equipment capacity to maintain a given temperature environment appropriate to the food product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaning and sanitisation requirements for maintaining food safety when loading, unloading and transporting food
- potential for cross-contamination resulting from location in proximity to other food or non-food items that are transported, where contamination by osmosis is a possibility.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - workplace information, including temperature charts and cleaning records
  - personal protective clothing and equipment
  - food storage vehicles, containers and receptacles
  - food ingredient and/or product to be loaded/unloaded and transported
- specifications:
  - work procedures relevant to loading/unloading and transportation, including advice on required temperature parameters to be maintained
  - food safety requirements
  - loading/unloading and transport advice/schedules
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY3003 Monitor the implementation of food safety and quality programs

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to provide a leadership role in supporting day-to-day implementation of the food safety (including food allergen management) and quality programs and procedures in a work area.

The unit applies to individuals who monitor, maintain and oversee quality standards and food safety programs, and take corrective action in response to non-compliance. It does not apply to the pharmaceutical industry.

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Assessment Requirements for FBPFSY3003 Monitor the implementation of food safety and quality programs

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively monitored the implementation of food safety and quality programs on two different occasions, including:

- confirming food safety and quality program requirements, risks and control measures of the work area
- confirming that control measures are in place and that personnel in the work area are equipped and informed to implement programs, including controls for managing allergens
- identifying, addressing and following up on non-compliances
- identifying causes of non-compliance
- conducting risk assessments and recommending responsive actions
- providing support to others to implement the food safety and quality programs
- completing and maintaining documentation, including observations and test results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- procedures and responsibilities for food safety relevant to the workplace
- principles of a critical control point (CCP) analyses approach to managing food safety, including identifying hazards that are likely to occur, establishing appropriate methods of control, and confirming that controls are met
- Food Standards Code and its purpose, relevant to work role
- state/territory food legislation, relevant to workplace
- consumer legislation, relevant to food
- food quality requirements relevant to workplace
- basic concepts of food safety and quality assurance, including hazards, risk assessment and control methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods to manage and support food safety and quality in the workplace, including systems for maintaining and updating documents, including operating procedures and specifications
- personal protective clothing and footwear, clothing maintenance, laundering and storage requirements
- procedures to follow in the event of pest sighting or discovery of infestation
- purpose and importance of cleaning and sanitisation procedures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- suitable standard for materials, measuring devices, equipment and utensils used in the work area
- properties of food and ingredients used that affect food safety, including an understanding of related storage, processing and handling requirements
- options for responding to non-compliance, including legal responsibility, risk management and cost/implications of different responses, and level of responsibility for decision-making
- waste collection, recycling, handling and disposal, including handling/disposal requirements for different types of waste, including hazardous waste
- traceability requirements relevant to the food items produced
- recall procedures within level of responsibility
- documentation system and procedures, including recordkeeping to meet both company and legal requirements, procedures for developing and/or reviewing workplace procedures, and document control systems used in the workplace
- internal and external auditing arrangements, roles and responsibilities as they relate to own work responsibilities
- appropriate communication skills and techniques to convey information on food safety and quality requirements to others in the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - reporting and monitoring systems
- specifications:
  - food safety program for the work area that identifies critical control points, control measures and corrective actions
  - quality policy, system and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relationships:
  - interactions with work team and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY3004 Participate in traceability activities

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to participate in traceability and product recall activities to track food through all stages of production, processing and distribution. Participation in these activities allows for the withdrawal or recall of products that have been identified as unsafe or unsuitable, which includes cross-contact with food allergens and erroneous addition of food allergens.

The unit applies to individuals who work in operational roles in food and/or beverage processing.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Food Safety (FSY)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for traceability or recall activity	1.1 Receive work instructions for traceability activity, including the reason for the activity, and clarify where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Identify the product to be tracked 1.3 Identify system used to document traceability of products 1.4 Identify the label, specification and/or unique identifier for the product 1.5 Confirm own role and responsibilities in team activity
2. Work with others to track product details	2.1 Track product through storage, distribution and packaging records 2.2 Track processing of product through batch records and processing records, including any rework or overrun ingredients used 2.3 Track product ingredients through raw material and ingredient storage records, records of receival of raw materials and ingredients, and ingredient specifications 2.4 Present details of product traceability to team and/or supervisor
3. Work with team to identify flaws and improvements	3.1 Identify any mislabelling or processing details that are not represented on the product label or specification 3.2 Make recommendations according to workplace procedures to rectify product traceability details to ensure accuracy and efficient recall

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Track and problem-solve issues that arise with traceability
Reading	• Interpret traceability records and ingredient specifications
Oral communication	• Listen to instructions and clarify where required
Numeracy	• Complete mass balance calculations • Measure volume or quantity of product

Assessment Requirements for FBPFSY3004 Participate in traceability activities

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in a team to identify the traceability of at least one processed food or beverage product, including at least two of the following:

- raw materials
- additives
- processing
- packaging.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of traceability
- traceability requirements for food businesses identified in the Food Standards Code, particularly Standard 3.2.2 and any standards relevant to the items produced at the organisation
- workplace requirements to ensure that food does not become unsafe or unsuitable, including for those with food allergies
- the requirement to be able to track food products one step forward and one step back at any point in the supply chain
- the concept of mass balance and the requirement to account for all quantities of raw materials, waste, work in progress and finished product
- traceability framework or system used within the organisation, and the requirement for food businesses to be able to recall unsafe food through readily accessible records that include:
  - reason for a recall
  - production records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- mass balance records
- what products are manufactured or supplied
- volume or quantity of products manufactured or supplied
- batch or lot identification (or other markings)
- where products are distributed
- any other relevant production records.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing, production or retail workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - food or beverage products
- specifications:
  - food and ingredient labels or specifications
  - food/ingredient packaging
  - workplace production records
  - guidelines for traceability
- relationships:
  - team members
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY3005 Control contaminants and allergens in food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to control food safety risks, including physical, chemical, microbiological and allergen risks, at a food processing facility, including raw materials, incoming goods, inputs and auxiliary materials and packaging.

This unit applies to individuals who take responsibility for operations in a food or beverage processing environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Food Safety (FSY)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Assess physical risks	1.1 Identify types and sources of physical contamination at the food

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
safety risks	5.2 Identify corrective actions and conditions for implementation 5.3 Identify and complete reporting and documentation associated with controls, as required 5.4 Conduct control measures in accordance with workplace environmental guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Read and interpret food safety program requirements • Interpret workplace food safety practices, procedures and control measures
Writing	• Record results of inspection, sampling and testing • Report contamination and allergen risk
Oral communication	• Use effective methods to communicate with team members, including active listening, asking for clarification, providing clear instructions and seeking advice from supervisor
Numeracy	• Monitor and interpret gauges and scales

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented controls to eliminate physical, chemical, microbiological and allergenic risks for at least one food processing site or food processing line.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and intent of food safety legislation and control measures for physical, chemical, microbiological and allergenic risks
- roles and responsibilities for development and maintenance of the control measures
- food processing methods used at the site or work area, and the risks to food safety
- sources of technical expertise on contaminants and allergens
- the role of control measures in the food safety program
- documentation relating to the food safety program, including process flow diagrams, hazard analysis charts and tables, support program requirements, data analysis reports, corrective action reports and verification reports
- main types of food safety hazards likely to occur given the type of product and processing methods used
- acceptable control methods for the hazards identified, and required corrective action when control requirements are not met
- Food Standards Code in relation to product and site
- foods most likely to prompt allergic reactions
- ways to identify the presence of allergens in raw materials, ingredients and processing aids

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recording requirements to support communication and monitoring of the food safety program, including procedures for maintaining and updating relevant documents, including operating procedures
- validation and verification processes, techniques and responsibilities to control contaminants and allergens in the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents a food processing workplace
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on monitoring requirements, control methods and corrective action for risks
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY4001 Supervise and maintain a food safety plan

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to maintain and implement a hazard analysis critical control point (HACCP) based food safety plan. It includes the ability to monitor the implementation of a food safety plan, to revise, verify and validate the system, and to respond to audit findings for the system.

This unit applies to individuals who monitor and maintain a food safety plan in the workplace.

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Pre-requisite Unit

Food Safety (FSY)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Review the existing food safety plan	1.1 Collect data and results from critical control point (CCP) records to verify the food safety system 1.2 Identify major and minor non-conformances to the food safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	plan 1.3 Monitor critical control points to confirm performance 1.4 Analyse problem areas and suggest corrective actions and strategies to prevent recurrence of the problem 1.5 Document required amendments to the food safety plan 1.6 Report recommendations and amendments to appropriate personnel
2. Communicate the requirements of the food safety plan	2.1 Explain food safety principles, food safety procedures and requirements, including regulatory requirements, to the team 2.2 Develop commitment to and responsibility for food safety through work team communication 2.3 Define, document and implement procedures to support the food safety plan 2.4 Provide training and mentoring to the team to assist implementation
3. Monitor the implementation of the food safety plan	3.1 Monitor team's implementation of the food safety plan 3.2 Monitor personal behaviour, including hygiene, housekeeping and use of clothing and equipment, and correct where necessary 3.3 Complete and maintain records and reports 3.4 Take prompt action to correct non-conformance 3.5 Identify and analyse causes of non-conformance 3.6 Implement control measures to prevent future non-conformance 3.7 Report non-conformance to appropriate personnel
4. Maintain the food safety plan	4.1 Seek feedback from all personnel to identify potential hazards, corrective actions and controls 4.2 Identify processes or conditions that could result in breaches of food safety procedures, and take preventive or corrective action 4.3 Update corrective action and control procedures to improve food safety 4.4 Complete safety plan documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret food safety program • Interpret workplace food safety practices and procedures
Oral communication	• Select and use appropriate communication strategies to interact effectively with team and supervisor
Get the work done	• Use problem-solving skills to investigate non-conformance, and revise procedures where necessary

Assessment Requirements for FBPFSY4001 Supervise and maintain a food safety plan

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 3.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively supervised and maintained a critical control point (CCP) food safety program in a food processing environment, working with a small team on at least one occasion, including:

- reviewing a food safety plan for a food processing operation
- communicating the requirements of a food safety plan to workers
- demonstrating safe food handling work practices
- completing records and reports related to the implementation of food safety
- responding to non-compliances and taking corrective actions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Food Standards Code and relevant food legislation
- current technical and process knowledge required to participate in investigations of food safety/quality hazards, risks and incidents
- common microbiological, physical and chemical hazards to food safety, and related control methods
- the way changes in equipment and/or processing methods can affect food safety hazards and level of risk
- the objectives of a hazard analysis critical control point (HACCP) based food safety program
- the steps in the development of a CCP-based food safety plan
- the steps in the systematic introduction of a HACCP-based food safety program

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace recall and traceability procedures
- purpose of the CCP development and review process
- the document controls associated with a procedure change
- the purpose of standard operating procedures and work instructions
- the process of auditing and verifying a HACCP-based food safety program
- the importance of role-modelling good personal hygiene, safe food handling and quality procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - food processing equipment
  - methods and related software systems for collecting data, analysing data and compiling a report
- specifications:
  - workplace operating procedures
  - a CCP-based food safety plan for the food processing workplace
- relationships:
  - interactions with work team and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY4003 Perform an allergen risk review

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to perform an allergen risk review to establish the likelihood of allergens or cross-allergens being present in food and/or beverage products.

The unit applies to individuals who work in food and/or beverage processing sites and who have responsibility for managing or investigating the allergen status of food and/or beverage products.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPFSY4003 Perform an allergen risk review

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed at least one allergen risk review at a food processing site, including:

- determining absence or presence of allergens and cross-contact allergens
- troubleshooting options to reduce and eliminate allergens and cross-contact allergens
- identifying known allergens that must be declared to consumers.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- reasons to manage food allergens
- different types of allergic reactions (dermal, gastrointestinal, respiratory, circulatory), including anaphylaxis
- the difference between a food allergy, food intolerance and hypersensitivity
- legal requirement to produce food that is safe for human consumption
- requirements for truth in labelling under Australian Consumer Law
- definition of cross-contact as a residue or other trace amount of a food allergen that is unintentionally incorporated into another food
- how cross-contact occurs, which can be from ingredients, raw materials, personnel, inadequate cleaning of equipment, or concurrent and/or co-located plants
- validated tests for identifying allergens
- typical, basic manufacturing-based allergen tests and their purpose, including:
  - ATP (adenosine triphosphate) test kits used as a general indicator of sanitation
  - protein swabs
  - lateral flow devices (LFD) or strip tests used to screen for presence of low level allergens in cleaning rinses and on surfaces

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical allergen laboratory tests and their purpose:
  - enzyme-linked immunosorbent assay (ELISA) laboratory kits
  - liquid chromatography mass spectrometry (LC–MS)
  - polymerase chain reaction (PCR)
- units used for reporting results of laboratory tests, including differences between quantitative and qualitative
- developing a baseline of allergen cross-contact
- typical sampling methods
- ongoing sampling plan
- how an allergen risk review sits within the context of a Voluntary Incidental Trace Allergen Labelling (VITAL) Program
- substances that require mandatory declaration if present in food, according to Australia and New Zealand Food Standards Code (Section 1.2.3–4), including peanuts, tree nuts, milk, eggs, sesame seeds, fish and shellfish, soy, lupin and wheat
- industry references to guide best practice management of allergens in food
- how allergens are dealt with according to the hazard analysis and critical control point (HACCP) principles, for the location.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents a food processing workplace
- resources:
  - food and/or beverage processing plant
  - raw materials, ingredients, additives, processing aids
  - sample products
- specifications:
  - sample and test methods
  - work procedures, including advice on safe work practices and food safety requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPFSY4004 Provide accurate food allergen information to consumers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided accurate food allergen information to meet regulatory and industry best practice guidelines, for at least:

- one packaged food and/or beverage product (with a label on product)
- and one non-packaged food and/or beverage product (with a product declaration, which may cover multi-packs or bulk products).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- reasons to communicate information about food allergens
- substances that require mandatory declaration if present in food, according to Australia and New Zealand Food Standards Code (Section 1.2.3–4) including peanuts, tree nuts, milk, eggs, sesame seeds, fish and shellfish, soy, lupin and gluten (including the source of gluten)
- requirements for truth in labelling under Australian Consumer Law
- Food Industry Guide to Allergen Management and Labelling
- standardised allergen risk assessment processes for the food industry, such as Voluntary Incidental Trace Allergen Labelling (VITAL)
- VITAL Best Practice Labelling Guide (for Australia and New Zealand)
- substances that do not require mandatory declaration on labels, according to the Food Standards Code
- units of measurement used for reporting results of laboratory tests for allergens
- plain English for food labels and declarations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources:
  - sample food and/or beverage product to have allergen declared on label
  - sample bulk or multi-packed food and/or beverage product to have allergen declaration (not physically attached to product)
- specifications:
  - regulatory requirements and industry best practice guidelines for allergen risk assessment and declaring allergens in food and/or beverages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY4005 Conduct a traceability exercise

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to supervise a team to conduct a traceability exercise, or mock recovery, to track any food through all stages of ingredient receival, production, processing and distribution. This allows for the withdrawal or recall of products that have been identified as unsafe or unsuitable. Running a traceability exercise is a check of the tracking system.

The unit applies to individuals who work in supervisory or compliance roles in food and/or beverage processing.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Food Safety (FSY)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for traceability exercise	1.1 Identify regulatory requirements for tracking processed food or beverages

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Identify the product to be tracked or recalled 1.3 Identify the label, specification and/or unique identifier for the product 1.4 Identify system used to document traceability of products 1.5 Brief team members on purpose of exercise and requirements for each individual
2. Oversee tracking of product	2.1 Track product through ingredient receival, storage, distribution and packaging records 2.2 Track processing of product through batch records and processing records, including any rework or overrun ingredients used 2.3 Track product ingredients through raw material and ingredient storage records, records of receival of raw materials and ingredients, and ingredient specifications 2.4 Gather team and collate information provided by team members 2.5 Present overview of product traceability exercise records to team and manager
3. Identify improvements to tracking	3.1 Identify any mislabelling or processing details that are not represented on the product label or specification 3.2 Make recommendations to rectify product traceability details to ensure accuracy and efficient recall

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Track and problem-solve issues that arise with traceability
Reading	• Interpret traceability records and ingredient specifications
Writing	• Document traceability details of product
Oral communication	• Instruct team members about individual role requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	• Effectively coordinate team activities • Present information to superiors using appropriate method and tone

- raw materials received
- additives
- storage
- processing
- packaging
- dispatch.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of traceability
- traceability requirements for food businesses identified in the Food Standards Code, particularly Standard 3.2.2 and any standards relevant to the items produced at the organisation
- workplace requirements to ensure that food does not become unsafe or unsuitable
- the concept of mass balance and the requirement to account for all quantities of raw materials, waste, work in progress and finished product
- the requirement to be able to track food products one step forward and one step back at any point in the supply chain
- traceability framework or system used within the organisation, and the requirement for food businesses to be able to recall unsafe food through readily accessible records that include:
  - production records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - mass balance records
    - what products are manufactured or supplied
    - volume or quantity of products manufactured or supplied
    - batch or lot identification (or other markings)
    - where products are distributed
    - any other relevant production records
- food with specific traceability requirements (Chapter 4 of the Food Standards Code)
- food identification labelling/information requirements for food for retail and non-retail sale
- effective communication methods to facilitate team activities
- effective information presentation methods.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a food or beverage processing, production or retail workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - food or beverage products
- specifications:
    - food and ingredient labels or specifications
    - food/ingredient packaging
    - workplace production records
    - guidelines for traceability
- relationships:
    - team members
    - manager.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY5002 Develop an allergen management program

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop a food allergen management program, which is a site-specific, systematic approach to identifying and controlling allergens in a food processing plant. The program incorporates the collective procedures, policies and practices that are implemented to control allergens in the facility and encompasses the whole supply chain.

This approach to allergen risk management may contribute to a hazard analysis critical control point (HACCP) program.

The unit applies to individuals who have responsibility for managing allergens and in ensuring the food business meets food safety, quality and legal requirements.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify legislative requirements and assemble a cross-function team	1.1 Identify food safety legislation and regulations relevant to identifying allergens in product and process 1.2 Access and interpret industry guidance documents to identify allergens in product 1.3 Identify team members to participate in the development of the allergen management program 1.4 Ensure team members collectively have knowledge of all parts of business and all aspects of the food product supply chain
2. Plan and prepare for allergen management	2.1 Identify procedures to identify and manage allergens across all areas of business, including new allergens that may be introduced through new products 2.2 Identify procedures to manage cross-contact allergens 2.3 Set targets for the management of allergens 2.4 Validate the control measures, including cleaning procedures, to ensure allergens are controlled 2.5 Verify the allergen control measures are suitable
3. Document and monitor allergen management program	3.1 Review and finalise documentation of work procedures to support allergen management 3.2 Document the allergen management program 3.3 Maintain allergen management records, including collection of continuous monitoring data 3.4 Monitor data to identify opportunities to improve allergen risk controls 3.5 Identify and resolve anomalies in data in consultation with cross-function team 3.6 Update documented allergen management program to incorporate continuous improvements
4. Ensure staff are trained to manage allergen risks	4.1 Review staff awareness of allergen risks to identify gaps in skills and knowledge 4.2 Plan training to ensure food allergen risks are controlled 4.3 Implement training for staff to ensure they are equipped with knowledge and skills to contribute to allergen management

Assessment Requirements for FBPFSY5002 Develop an allergen management program

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed, implemented and monitored an allergen management program for at least one processed product at one food processing site, which includes at least one known (declared) allergen with opportunities for cross-contact.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legal requirement to produce food that is safe for human consumption
- requirements for truth in labelling under Australian Consumer Law
- areas of business that should be included in allergen management, from receival of raw materials and goods, storage, premises and equipment layout, batch assembly, processing, testing, cleaning, labelling, packaging and distribution, new product development, approved supplier program (vendor assurance), engineering and maintenance
- other food safety management systems used in the workplace, including hazard analysis critical control point (HACCP) and good manufacturing practices (GMP)
- key areas for staff training in allergen risk management, including:
  - receipt and storage of raw materials
  - avoiding cross-contact of non-allergenic ingredients with allergenic materials, or between different allergenic ingredients
  - production scheduling
  - equipment and premises design
  - GMP, such as cleaning procedures, control of rework
  - post-manufacturing controls
  - new product development

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- how an allergen management program sits within the context of a Voluntary Incidental Trace Allergen Labelling (VITAL) Program
- units used for reporting results of laboratory tests, including differences between quantitative and qualitative
- typical sampling methods
- ongoing sampling plans
- team leadership techniques
- industry references to guide best practice management of allergens in food.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents a food processing workplace
- resources:
  - food and/or beverage processing plant
  - raw materials, ingredients, additives, processing aids
  - sample products
- specifications:
  - work procedures, including advice on allergen management
- relationships:
  - food processing team members representing different parts of the business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPFSY5003 Design a traceability system for food products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to design a traceability system to track any food through all stages of production, processing and distribution. This system allows for the efficient withdrawal or recall of products that have been identified as unsafe and is a requirement under Food Standards Australia and New Zealand (FSANZ).

This unit applies to individuals who are responsible for food product development and who undertake roles in product design, quality assurance or production management.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed a traceability system for at least one manufactured food or beverage product, that includes identification of records for:

- production
- supplied ingredients and/or materials
- volume or quantity of products manufactured or supplied
- batch or lot identification (or other markings)
- where products are distributed
- any other relevant production records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- traceability requirements for food businesses identified in the Food Standards Code, particularly Standard 3.2.2 and any standards relevant to the items produced at the organisation
- the requirement for food businesses to be able to recall unsafe food through readily accessible records that include:
  - production records
  - what products are manufactured or supplied
  - volume or quantity of products manufactured or supplied
  - batch or lot identification (or other markings)
  - where products are distributed
- specific traceability requirements of food or beverage produced at the organisation
- different types of traceability systems used in the food processing environment, including bar codes, radio frequency identification, paper-based systems

FBPFSY5004 Plan to mitigate food fraud

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop a plan to mitigate food fraud, and manage the vulnerabilities to the supply chain for processed foods.

This unit focuses on food fraud as a deception for economic gain, concerned with incidents such as counterfeiting, adulteration, smuggling, stolen goods, dilution and mislabelling. It incorporates conducting a food fraud assessment (vulnerability assessment and critical control points, or VACCP).

This unit applies to individuals who are responsible for managing supply chains for processed food or who assure quality and safety of food products.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
and scope for the plan	assessment 1.2 Identify food product to form the basis of the assessment 1.3 Obtain the appropriate raw material, ingredient and product knowledge
2. Gather information about raw materials	2.1 List all raw materials included in processed product 2.2 Identify country of origin, supplier, source manufacturer, and pricing trends for each raw material 2.3 Identify known sampling and testing activities for each raw material
3. Collect information on producers and suppliers	3.1 List all producers and suppliers of raw materials, including brokers and/or agents 3.2 Gather information on each supplier and/or producer, including certifications 3.3 Cross-check information to ensure certifications are valid and current
4. Conduct a risk assessment of the raw materials in the supply chain	4.1 Identify vulnerabilities and risks of food fraud within the raw material supply chain, including suppliers 4.2 Assess the risk to identify the likelihood of adulteration or food fraud event and its impact 4.3 Plan detection methods and control measures to mitigate the identified risk 4.4 Document the risk assessment of each raw material in the supply chain
5. Monitor ongoing risks and vulnerabilities	5.1 Develop procedures for conducting regular risk assessments 5.2 Conduct horizon scanning to identify trends and emerging issues that could increase the likelihood of food fraud for a particular raw material 5.3 Record outcomes of review and action trigger points

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Analyse food fraud risks, and problem-solve controls
Reading	• Interpret food fraud data, research and initiatives
Numeracy	• Recognise trends in numerical data

Assessment Requirements for FBPFSY5004 Plan to mitigate food fraud

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out a vulnerability assessment on at least one processed food product, and planned to mitigate the risks associated with food fraud for that product.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- international trends, standards and compliance systems used to ensure the supply of safe, quality food and beverages
- market requirements for identifying food fraud, including certification information for suppliers, producers and products
- information on raw material supply chain for each raw material:
  - country of origin
  - the suppliers (importers/agent/brokers)
  - source manufacturers
  - pricing trends
  - all known testing and sampling activities carried out on material
- horizon scanning as the act of looking for and analysing threats and opportunities that will emerge in the medium to long term, including political, environmental and socioeconomic factors that may present food fraud risks
- technological systems used to track and validate the supply chain of products and ingredients, including QR codes, barcodes, microdots
- techniques used to map operations and analyse food safety requirements, such as the preparation of flow charts, hazard analysis charts and tables, and data analysis reports
- methods to collect information about raw materials and suppliers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical tests used to assess quality, legitimacy and authenticity of raw materials and ingredients
- the need for ongoing monitoring of the raw material supply chain.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents a workplace context
- resources, equipment and materials:
  - defined food processed product and details of raw materials, ingredients, suppliers and producers
  - reporting/recording system
  - access to food/supplier certification databases
- specifications:
  - organisational policies on food fraud and risk management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPGPS3001 Operate and monitor a creamed honey manufacture process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a creamed honey manufacturing process to produce at least one batch of creamed honey to product specification, including:

- applying safe work practices
- applying food safety procedures to work practices
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of crystallisation, including:
  - an understanding of crystal structure and methods to reduce crystal size, where appropriate
  - the effects of temperature and agitation on crystal formation
  - appropriate ratio of seed to liquid honey
  - factors that influence the crystallisation process, including moisture content and crystal size
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
- services required for creamed honey manufacture, and action to take if services are not available
- good manufacturing practices (GMP) relevant to work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quality and organoleptic characteristics of honey processed
- quality characteristics to be achieved by the final product, and related test methods used to confirm quality
- quality requirements of seed and liquid honey used, and the effect of variation on the final product
- honey floral blend to use based on the honey colour, flavour, type of grain in the seed blend
- hardness required of end product and the effect of seasonal temperatures
- operating requirements, parameters and corrective action required where the process is outside specified operating parameters (including ambient and processing temperatures, agitation speeds, and holding times and temperatures)
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor each stage of the production process, including inspecting, measuring and testing as required
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process and related control measures (this relates specifically to air inclusion and moisture content, and related methods of control)
- common causes of variation, and corrective action required
- factors that affect the stability and shelf-life of the finished product, and options to extend shelf-life, including storage conditions for packed product
- health and safety hazards and controls, including the purpose and limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and waste disposal
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures for creamed honey manufacturing equipment
- cleaning and sanitisation procedures for creamed honey manufacturing equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - processing equipment and related services
  - seed and liquid honey
  - personal protective equipment
  - sampling schedules, and test procedures and equipment
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and batch instructions
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3017 Operate and monitor a liquid, mash or block stock feed process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor and shut down process equipment used to produce liquid, mash or block stock feed. It also includes troubleshooting routine problems that occur with processing.

The unit applies to plant operators involved in the production of liquid, mash and block stock feeds for a variety of animal species and animal production requirements. Operators take responsibility to implement standard operating procedures as directed. Stock feeds can be prepared as standard products or to particular customer specification.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

- applying safe work practices
- applying food safety procedures to work practices
- adding and mixing ingredients, micronutrients and additives to meet product specification
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of each part of the process, including:
  - volumetric metering, mixing, steam conditioning, pouring, pressing, cooling, adding and mixing in micronutrient and other additives to achieve specified proportions
  - sequencing of production to minimise transference and cross-contamination
  - traceability procedures
  - biosecurity procedures
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required, and action to take if services are not available
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- good manufacturing practices (GMP) relevant to work task
- the flow of the stock feed production process and the effect of outputs on downstream processes
- quality characteristics and uses of finished stock feed
- effect of variation in inputs and services on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- the effect on final product of variation in variables, including:
  - oil and fat content
  - micronutrient and additive
  - consistency and appearance of mash, liquid or block stock feed
  - retention time and temperatures for steam conditioning, including consequences of temperatures that are too high and too low on chemical composition
  - retention time and temperature for liquid addition
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the mash, liquid or block feed process, including inspecting, measuring and testing
- inspection or test points (control points) in the process, and the related procedures and recording requirements
- common causes of variation, and corrective action required
- contamination/cross-contamination and food safety risks and related controls
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
  - routine maintenance procedures
- cleaning and sanitisation procedures relevant for producing liquid, mash and block stock feed
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- cleaning and sanitisation procedures for workspace and equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a stock feed processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and clothing
  - stock feed inputs and additives
  - processing equipment
- specifications:
  - workplace procedures, including safe work practices, food safety, quality, and environmental requirements
  - stock feed orders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3018 Operate and monitor a pelleting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down process equipment to compress mash into pellets and to finish pellets.

The unit applies to individuals who work in an animal feed production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of pelleting equipment and processes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Grain Processing (GRA)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare the pelleting equipment and process for operation	1.1 Confirm materials are available to meet product specification requirements 1.2 Select, fit and use personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Identify and confirm cleaning and maintenance requirements have been met according to health, safety and food safety requirements 1.4 Fit and adjust machine components and related attachments according to product specification and operating requirements 1.5 Enter processing or operating parameters to meet safety and production requirements 1.6 Carry out pre-start checks according to operator instructions
2. Operate and monitor equipment	2.1 Start and operate process according to safe operating procedures 2.2 Monitor equipment to ensure optimal operations 2.3 Identify variation in equipment operation, troubleshoot to identify solution, and adjust 2.4 Confirm product specifications are being met at each stage according to production specifications 2.5 Identify, rectify or report out-of-specification product or process outcomes 2.6 Maintain the work area according to safe work and food safety procedures 2.7 Maintain workplace records, including traceability and biosecurity records, according to workplace procedures
3. Shut down the pelleting process	3.1 Identify appropriate shutdown procedure 3.2 Shut down process safely according to operating procedures 3.3 Identify and report maintenance requirements records according to workplace procedures 3.4 Ensure waste is disposed of in line with environmental requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for FBPGRA3018 Operate and monitor a pelleting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a pelleting process to produce at least one batch of pellets to meet product specification, including:

- applying safe work practices
- applying food safety procedures to work practices
- checking quality of pellets meets specifications
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of each part of the process, including volumetric metering, steam conditioning, pellet formation, cooling, crumbling and sieving and post-pelleting liquid addition
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required, and action to take if services are not available
- good manufacturing practices (GMP) relevant to work task
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- the flow of the pelleting process and the effect of outputs on downstream processes
- quality characteristics and uses of finished pellets
- effect of variation in inputs and/or services on process performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- the effect on final product of variation in variables, including:
  - pellet diameter to length ratios
  - oil and fat content
  - retention time and temperatures for steam conditioning, including consequences of temperatures that are too high and too low on chemical composition
  - retention time and temperature for liquid addition
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the pelleting process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation, and corrective action required
- contamination/cross-contamination and food safety risks related to the pelleting and pellet finishing process, and related controls
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace pelleting requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls, including waste/rework collection and handling procedures
- routine maintenance procedures for pelletiser
- cleaning and sanitisation procedures for work space and equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an animal feed processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - production schedule/batch instructions

FBPGRA3019 Prepare malted grain

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate commercial equipment associated with preparing malted barley or wheat. It covers operating and monitoring steeping, germinating and kilning equipment.

The unit applies to operators in commercial malting plants who are responsible for converting stored grain into malted barley or wheat. These operators are often known as maltsters.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Grain Processing (GRA)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Steep grain	1.1 Identify work requirements with relevant personnel, including batch requirements for steeping, germination, kilning and malt cleaning processes 1.2 Select, fit and use personal protective equipment according to

Assessment Requirements for FBPGRA3019 Prepare malted grain

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated commercial equipment associated with preparing malted barley or wheat, to prepare at least one batch of grain to meet malting specification, including:

- applying safe work practices
- applying food safety procedures to work practices
- controlling absorption of water by grain during steeping to achieve specified water content
- undertaking sampling and testing during steeping, germination and cleaning to determine if grain and malt are within specifications
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- changes to grain from the steeping process
- changes in grain during germination
- role of humidity and temperature in initiating and controlling germination of grain
- common variations in grain quality and type
- common customer malt recipes used in the enterprise, and implications for malt production
- standard transfer times between stages, including receiving to steeping, steeping to germination, and germination to kilning
- procedures for dealing with contingencies, breakdowns and other non-standard events for preparing malted grain
- good manufacturing practices (GMP) relevant to work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contamination/cross-contamination and food safety risks associated with the scalping and grading process, and related control measures, including microbiological, physical, chemical and allergen hazards
- contamination avoidance procedures for preparing malted grain, including:
  - jewellery and loose objects in work area
  - security and access procedures to work areas
  - pest control procedures
- appearance of grains before and after cleaning (deculming)
- cleaning requirements associated with changeovers and types of shutdowns for preparing malted grain
- purpose of moisture and acrospires testing within the malting process
- health and safety hazards and controls relevant to preparing malted grain
- cleaning and sanitisation procedures for malting equipment
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a grain processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - steeping, germination, kilning and deculming equipment
  - grain for malting
  - malted grain cleaning equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety and environmental requirements
  - steeping, germination and kilning specifications and procedures
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPGRA3020 Blend and dispatch malt

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has blended and dispatched at least one batch of malt to meet product specification, including:

- applying safe work practices
- applying food safety procedures to work practices
- determining blending dispatch requirements and matching product specification
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common terms for malt types and blends
- malts used in the enterprise and their relationship to blends required by customers
- purpose and basic principles of the blending process
- basic operating principles of equipment used to blend and dispatch malt, including main equipment components, equipment operating capacities and applications
- loading techniques for modes of dispatch used in the workplace
- cleaning requirements associated with changeovers and types of shutdowns for blending and dispatching malt
- good manufacturing practices (GMP) relevant to work task
- contamination/cross-contamination and food safety risks associated with the scalping and grading process, and related control measures, including microbiological, physical, chemical and allergen hazards
- contamination avoidance procedures relevant to blending and dispatching malt, including:
  - jewellery and loose objects in work area
  - security and access procedures to work areas

FBPGRA3021 Control batch processing for micronutrients or additives in stock feed

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to select and use micronutrients and additives when undertaking batch processing of grain-based products.

This unit applies to individuals who handle, measure, add and record micronutrients and additives in batch processing of grain-based products. The work is carried out under the direction of a mill or production manager.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Grain Processing (GRA)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify finish feed requirement	1.1 Identify product to be manufactured from production schedule, customer order or standard operating procedure (SOP)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Identify micronutrient or additive requirements from screen, recipe, SOP or supervisor
2. Obtain correct micronutrient or other additive	2.1 Identify storage location for micronutrient or additive according to workplace requirements 2.2 Obtain micronutrient or additive according to SOP 2.3 Read micronutrient or additive label to determine any special mixing, handling or health and safety requirements 2.4 Confirm micronutrients and additive requirements with nutritionist and/or other technical staff
3. Add micronutrient or additive to product	3.1 Match micronutrient or additive to product 3.2 Determine appropriate volume, measurement or proportion of micronutrient or additive 3.3 Measure, prepare and pre-mix micronutrient or additive in line with safety and production requirements 3.4 Add micronutrient or additive to product at appropriate location and stage of processing in line with workplace procedures 3.5 Follow appropriate contamination, quality and traceability procedures according to health, safety and food safety procedures 3.6 Take samples of product and conduct basic tests to ensure product meets specifications
4. Record use of micronutrient or additive	4.1 Record type and amount of micronutrient or additive used in required format 4.2 Generate correct product batch labels and add to product using required method 4.3 Complete workplace records, including traceability and biosecurity records, according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret names of micronutrients and additives • Read and check information on labels to identify target and non-target species, storage and handling requirements, manufacturer name, product and active ingredient name
Writing	• Record use of micronutrients and additives using electronic, digital and/or paper-based formats
Oral communication	• Use industry vocabulary, including names of micronutrients and additives, when interacting with staff and customers
Numeracy	• Measure products and ingredients by weight (mg, g, kg, T), volume (ml, L) • Scale recipes up and down • Interpret dosages, withholding period, expiry dates

Assessment Requirements for FBPGRA3021 Control batch processing for micronutrients or additives in stock feed

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has controlled processing of micronutrients and/or additives for at least one batch of product to meet specification, including:

- applying safe work practices
- applying food safety procedures to work practices
- accurately measuring micronutrients and/or additives.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- contamination and cross-contamination risks, and controls used when mixing grains and additives
- risk factors for cross-transference for batch processing
- four categories of food safety hazards, including biological, chemical, physical and allergenic, and relevant controls and procedures for identifying unsafe and/or non-conforming product
- principles of a critical control point (CCP) analyses approach to managing food safety, including identifying hazards that are likely to occur, establishing appropriate methods of control, and confirming that controls are met
- good manufacturing practices (GMP) relevant to work task
- preparation procedures required for using micronutrients and additives in batch processing
- sampling techniques used to check product against specification
- basic tests carried out on grain products
- mathematical techniques to determine appropriate volume, measurement or proportion of micronutrient or additive in the batch
- withholding periods that may be relevant to batched product
- health and safety procedures for working with grains and additives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaning and sanitisation procedures for work space and equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a grain processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - micronutrients or additives
  - grain-based product
  - product recording and labelling system
- specifications:
  - sample production schedule, customer order or standard operating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3022 Confirm feed product meets animal nutrition requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify animal nutrition principles required in animal feed, and confirm these requirements with nutritionists and other technical staff.

This unit applies to feed processing operators who are required to have knowledge of animal nutrition principles and the effect of feed on companion animal or production animal performance. This knowledge would be applied in liaison with professional and technical staff on customer requirements.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
requirements	supported by feed product 1.2 Confirm type of animal and range of products that would meet target animal requirements 1.3 Check particle size and pellet quality on order, and confirm palatability for target animals 1.4 Identify proposed impact of feed on animal health and/or performance
2. Evaluate key quality factors affecting feed performance	2.1 Identify feed safety requirements for target species and phase of animal's life or production 2.2 Identify type and proportion of raw materials in feed and their effect on animal performance, with advice from professionals 2.3 Identify the purpose of additives on animal health or performance and feed quality 2.4 Identify effects of processing on feed nutrition quality and animal health or performance, with advice from professionals 2.5 Identify substitution guidelines, including the effect of substitution on feed performance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Reading	• Interpret details of customer feed orders • Interpret information about animal nutrients and feed additives
Oral communication	• Interact effectively with customers
Numeracy	• Formulate feed recipes to match target animal needs

Assessment Requirements for FBPGRA3022 Confirm feed product meets animal nutrition requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has confirmed feed product meets the target animal nutrition requirements specified in at least one customer order, including:

- identifying target species, animal type and phase of animal growth or production
- liaising with nutritionist and other professional and technical staff on animal nutrition requirements of feed.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- typical nutrition requirements of companion animals and/or production animals – knowledge would be restricted to standard daily requirements of main food groups (proteins, carbohydrates, etc.), typical daily volume of feed required and type of feed (solid, liquid, plant or animal based)
- how nutritional needs of target animal may vary according to species, gender, health, pregnancy, lactation, age, season, geography, production purpose and form of production and feeding
- factors affecting animal acceptance of feed, including palatability and presentation
- range of raw materials typically used in feed, including grains, molasses/liquids, proteins (vegetables and animal), additives (vitamins, minerals and medications) and fibre
- impact of operator-controlled factors on feed quality, including temperatures, moisture, sizing, sieving and liquid additions
- impacts of feed on animal performance, including positive effects on animal performance or health, and effects of incorrect feed on animal safety, animal performance and export contamination.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - customer feed orders
- specifications:
  - reference and resource materials about feed products and processes
  - animal nutrition requirement information
  - feed data, formulas/recipes
- relationships:
  - access to nutritionists or other livestock or companion animal professionals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3023 Operate and monitor grain conditioning

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor and shut down equipment, to condition grain by adding water at the required parameters to achieve optimum milling results.

This unit applies to individuals who work in a grain processing environment under the direction of the miller or head miller, to produce food or feed. It typically targets the production worker responsible for applying operating principles to the operation and monitoring of grain conditioning equipment and processes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPGRA3023 Operate and monitor grain conditioning

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a grain conditioning process on at least one occasion, including:

- applying safe work practices
- applying food safety procedures to work practices
- checking moisture content of grist meets product specifications following the miller's instructions
- reporting inconsistencies or variations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of grain conditioning, and effects on the milling process and the end product:
  - target moisture of grain
  - time grain has been conditioned
- underlying principles to ensure that grain can be effectively milled, good separation of bran from endosperm
- reasons for conditioning grain
- basic operating principles of equipment, including:
  - main equipment components, including settings and the number of steps required to add moisture
  - status and purpose of guards
  - the purpose and location of sensors and related feedback instrumentation
- services required, and action to take if services are not available
- good manufacturing practices (GMP) relevant to work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the flow of the grain conditioning and the basic effect of outputs on downstream milling processes
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor conditioning, including:
  - using online moisture analysis device
  - visually inspecting conditioned grain
  - testing moisture levels
  - checking silo allocations are correct
- typical problems with conditioning grain:
  - high moisture
  - low moisture
  - inconsistent moisture patches through grist
  - inconsistent time for conditioning
  - inconsistent milling results
  - faulty product sensors, solenoids or water flow meters
  - product bridges
  - inconsistent or inadequate water pressure
  - the need for offsets and/or calibration of moisture sensors
  - grain hardness/water hardness
- basic contamination/cross-contamination and food safety risks associated with the conditioning grain, and related control measures
- health and safety hazards and controls
- requirements of different shutdowns as appropriate to the conditioning process and workplace production requirements, including:
  - routine cleaning/conditioning section shutdown
  - unexpected production stop
  - emergency shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the conditioning process, including waste and rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures for grain conditioning equipment
- cleaning and sanitisation procedures for workspace and equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a grain processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - grain conditioning equipment and services
  - personal protective equipment
  - grain for conditioning
- specifications:
  - grain conditioning specification
  - production schedule including target moisture and target conditioning time
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- relationships:
  - supervisor/head miller.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3025 Receive and handle grain in a storage area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to receive grain and handle grain in a storage area, taking samples, testing samples, segregating and moving grain in a manner that minimises dust and exposure to pests.

This unit applies to individuals who work in a grain processing environment for human or animal consumption. It typically targets the production worker responsible for applying basic operating principles to the receival and storage of grain in permanent or temporary storage facilities.

Note: This unit does not cover work in confined spaces.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPGRA3025 Receive and handle grain in a storage area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has received, handled and moved at least one delivery of grain, to meet product order and storage requirements, including:

- applying safe work practices
- applying food safety procedures to work practices
- recognising different grain types and varieties (relevant to site operations)
- taking corrective action in response to pests, contamination or inconsistencies with storage conditions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- operating principles of grain receival and storage
- grain hygiene and sealing requirements
- the need to identify grain as out-of-specification or unsound
- receival charts including common defects
- vendor declarations, organic certifications
- basic tests typically carried out on grain, including protein, moisture, screenings
- escalation procedures for grain that is out-of-specification
- segregation requirements to maintain integrity and quality of grain
- flow of grain in storage area from receipt to dispatch
- typical storage equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contamination/cross-contamination and food safety risks associated with the grain storage process, and related control measures, including microbiological, physical, chemical and allergen/cross-contact allergen risks
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- environmental issues and controls relevant to the grain storage process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for storage area and grain handling equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a grain processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment required to handle grain in a storage area
  - grain storage and transfer equipment and services
  - grain to be received and stored
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - storage and transfer instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3026 Operate and monitor sifting and grading

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor and shut down sifting and grading equipment used to separate the break stock (chop) into appropriate flows to the next break, purifiers and sizing rolls.

This unit applies to individuals who work in a grain processing environment under the direction of the miller or head miller, to produce food or feed. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of equipment and processes used for sifting and grading stock.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

  - visually inspecting the sieves
  - visually inspecting the break stock
- basic contamination/cross-contamination and food safety risks associated with sifting and grading, and related control measures
- basic common causes of poor sifting and/or grading
- health and safety hazards and controls
- requirements of different shutdowns as appropriate to the sifting and grading process and workplace production requirements, including:
  - routine shutdown
  - unexpected production stop
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- environmental issues and controls, including waste and rework collection and handling procedures
- routine maintenance procedures for sifting and grading equipment
- cleaning and sanitisation procedures for workspace and equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a grain processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - sifting and grading equipment and related services
  - personal protective equipment
  - product for sifting and grading
  - production schedule
  - cleaning materials and equipment
- specifications:
  - sifting and grading specification
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - recording requirements.
- relationships:

FBPGRA3027 Monitor a purification system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and safety knowledge required to set up, operate, monitor and shut down a separation and grading system to effectively separate break or sizing stocks into clean semolina (endosperm), composite stock (endosperm with bran adhering) and branny stocks.

This unit applies to individuals who work in a grain processing environment, under the direction of the miller or head miller. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of purification equipment and processes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPGRA3027 Monitor a purification system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that individual has monitored a purification system on at least one occasion, including:

- applying safe work practices
- applying food safety procedures to work practices
- effectively separating break or sizing stocks, following the head miller's instructions
- reporting inconsistencies or variations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the purification system
- how flour is graded
- basic operating principles of equipment, including:
  - main equipment components, including air flow, movement of machine, size of sieves, layers of sieves
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- good manufacturing practices (GMP) relevant to work task
- the flow of the purification process and the basic effect of outputs on downstream flour milling processes
- basic quality characteristics to be achieved by the purification process
- product to be purified: semolina, not flour
- basic equipment faults and related causes, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - signs and symptoms of faulty equipment
    - early warning signs of potential problems
- methods used to monitor purification, including removing and inspecting (and cleaning) sieves
- basic problems with purification:
    - inconsistent agitation/movement of the machine
    - blinded sieves
    - sieves incorrectly positioned
    - drawers incorrectly positioned
    - poor air flow/air adjustment
    - valves incorrectly set
    - inconsistent flow of product
    - inconsistent distribution of feed in
    - drop in yield/quality
    - inconsistent flow of product into purification passage
    - excessively wide granulation range
- basic contamination/cross-contamination and food safety risks associated with the purification, and related control measures
- health and safety hazards and controls
- requirements of different shutdowns as appropriate to the purification process and workplace production requirements, including:
    - routine cleaning shutdown
    - unexpected production stop
    - emergency and routine shutdowns
    - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- environmental issues and controls, including waste/rework collection and handling procedures related to the process
- routine maintenance procedures for workspace and equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a grain processing workplace or an environment that accurately represents workplace conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - product to be purified
  - personal protective equipment
  - purification process equipment and related services
  - cleaning materials and equipment
- specifications:
  - production schedule
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements.
- relationships:
  - supervisor/head miller.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA3028 Monitor scratch and sizing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor and shut down a separation process to ensure there is good separation between the endosperm and bran for further processing.

This unit applies to individuals who work in a grain processing environment under the direction of the miller or head miller. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of scratch and sizing equipment and processes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FBPGRA4005 Lead flour milling shift operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to lead milling operations during a shift, including acting as a technical resource to other mill employees.

This unit applies to a miller who is responsible for the flour mill operations during a shift, and relates to the milling of all grains for flour and other milling processed food and non-food products.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Grain Processing (GRA)

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Apply required costing and control procedures to achieve set key performance indicators (KPIs) 1.4 Establish range of available equipment and any unique design or operating factors 1.5 Identify staffing and work organisation for shift 1.6 Identify any budget and/or budget operating procedures relevant for shift operations
2. Monitor quality during shift	2.1 Identify specifications for flour to be produced during shift 2.2 Identify performance indicators and production targets for mill and mill departments during shift 2.3 Supervise testing regime for mill during shift 2.4 Monitor performance against targets and indicators 2.5 Report non-conformances and take appropriate corrective actions
3. Set and supervise grain supply and intake procedures	3.1 Supervise grain receival operations, including compliance with instructions for rejected deliveries 3.2 Set screening criteria and procedures for re-use of screenings 3.3 Set blending criteria for holding bins/silos
4. Set and supervise grain conditioning process and specifications	4.1 Specify and communicate grain cleaning requirements to operators 4.2 Set water volume for each grain batch 4.3 Set conditioning time per batch 4.4 Determine any blending and treatment criteria 4.5 Monitor tests and specifications for conditioned grain 4.6 Supervise transfer to storage or mill
5. Supervise production	5.1 Identify shift production targets 5.2 Obtain or determine product specifications 5.3 Formulate and supervise preparation of grist 5.4 Supervise milling of different grains 5.5 Set blending requirements, including any use of additions and adjuncts 5.6 Allocate production specifications for shift to departments 5.7 Ensure production records are kept

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	5.8 Monitor production against targets
6. Integrate maintenance schedule with shift operations	6.1 Identify shift preventative maintenance requirements from maintenance department and/or equipment suppliers 6.2 Supervise equipment monitoring and maintenance responsibilities for operators, maintenance department and other staff 6.3 Identify and approve timing for any regular maintenance activities that will disrupt production 6.4 Supervise breakdown notification and repair procedures
7. Implement risk management procedures	7.1 Supervise implementation of workplace health and safety and dust control procedures 7.2 Monitor Hazard Analysis and Critical Control Points (HACCP) procedures during shift 7.3 Monitor compliance with environmental and sustainability regulations and targets 7.4 Monitor operations against any required regulatory compliance, including required reporting procedures
8. Provide guidance to other mill employees	8.1 Monitor and maintain standard operating procedures (SOPs) 8.2 Supervise any required training for employees during shift operations 8.3 Ensure availability of reference materials 8.4 Implement communication and feedback mechanisms to and from employees

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret food safety, food labelling and other regulations affecting flour mills
Oral communication	• Communicate production requirements and technical information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	to other employees • Use effective communication skills to allocate tasks and provide feedback to team members • Liaise with other departments on flour product requirements
Writing	• Record flour milling operations using digital and/or paper-based formats
Numeracy	• Calculate water required to achieve target moisture content, extraction rates, protein loss for each grist, and milling gains/losses

Assessment Requirements for FBPGRA4005 Lead flour milling shift operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has led flour milling shift operations on at least one occasion, including:

- interpreting production requirements and grain tests for desirable mill settings
- establishing shift operating environment, including required equipment, staffing and work organisation, and costing requirements
- monitoring quality of shift operations, including identifying specifications for product to be produced, identifying performance indicators, supervising testing of product, monitoring performance and reporting non-conformances
- assisting employees with conduct and interpretation of grain and flour tests
- matching grain receival, screening and storage processes to production requirements during shift
- preparing or supervising production of grist according to recipes
- setting and managing milling and blending operations
- supervising dust control, Hazard Analysis and Critical Control Points (HACCP) and health and safety procedures during shift operations
- identifying equipment maintenance procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- differences in types of milling processes, including differences in milling of different grains, varieties and milling for flour or for semolina
- process and purpose of flour milling, including:
  - opening of grain to enable removal of endosperm
  - separation of bran

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - grinding of endosperm to flour, including sifting of ground stock to remove oversize endosperm particles, flour, or any bran and endosperm that has not been ground
    - kibbling
    - middlings and semolina process
- methods used to establish the most economic grist for a particular flour, including the balancing of flour specification, grain availability and cost of grain available
- financial impacts of mill performance/settings
- principles of preventative maintenance, including failure mode and effects analysis (FMEA)
- food safety, food labelling and other regulations affecting flour mills
- grain varieties and specifications
- flour types and specifications
- food labelling regulations relevant to flour products
- HACCP principles and procedures
- dust control procedures
- health and safety standards and requirements
- environmental regulations relevant to flour milling
- feedback techniques
- enterprise budget operating procedures
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a flour mill or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment
    - break and reduction roll equipment and related services
    - conditioned grain suitable for the break and reduction roll process
    - sampling schedules, and test procedures and equipment
    - cleaning procedures, materials and equipment
- specifications:
    - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
    - equipment manuals, including operating parameters
    - specifications, control points and processing parameters
    - documentation and recording requirements and procedures.
- relationships:
    - operators/team members.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPGRA4006 Control mill processes and performance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to control flour and by-product production in a flour mill.

This unit applies to a shift miller who is required to set equipment in a flour mill to control the processes and performance across the mill to achieve maximum extraction and specification compliance. The unit applies to all industrial flour mills, including semolina mills and mills without purifiers.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Grain Processing (GRA)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Maintain mill flow sheet	1.1 Identify all breaking, reduction and dressing stages in mill 1.2 Show destinations for all stock separations according to operating

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	requirements 1.3 Identify all optional and ancillary equipment required to control flour and by-product production 1.4 Identify all bins, silos, chutes, conveyors and exhausts that control processes and performance across the mill
2. Prepare for flour and by-product production	2.1 Establish customer requirements for shift or production period 2.2 Follow specification required to meet desired production quality and quantity targets 2.3 Check availability of required wheat stock 2.4 Determine if any changes to grist stock will be required, and plan for changes to settings
3. Determine break system settings	3.1 Adjust break rolls for desired percentage release 3.2 Conduct visual inspection and test sieving where required to monitor release percentage 3.3 Monitor break roll passages to avoid saturation of later stages 3.4 Set bran finishers according to workplace procedures and to ensure optimum performance 3.5 Set plansifters for desired grading, including adjusting spaces between plansifters for varying grains and moisture levels 3.6 Monitor performance of break system to ensure system is free from semolina
4. Set settings for purifiers where fitted	4.1 Maintain and monitor sieve covers according to workplace procedures and to ensure optimum performance 4.2 Monitor feed rate to purifiers according to workplace procedures and to ensure optimum performance 4.3 Monitor horizontal and vertical movement of sieve covers 4.4 Set and monitor air pressure for each aspiration section 4.5 Select destinations for throughs and lifted bran and other particles 4.6 Ensure purifier stock is free from flour
5. Set settings for scratch or sizing system	5.1 Set scratch equipment or sizing rolls according to operator instructions 5.2 Monitor performance of scratch and sizing rolls

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
6. Set settings for reduction passages	6.1 Set each set of reduction rolls for desired flour and capacity of succeeding reduction passages 6.2 Monitor covers on sifters for effective dressing from each reduction roll 6.3 Monitor flake disrupters and impact detachers where fitted 6.4 Set and monitor reduction settings to achieve required starch damage 6.5 Specify collection conveyors and bins for each flour stream
7. Set settings for final production stages	7.1 Specify use of flour divides for blends 7.2 Monitor redressing equipment according to workplace procedures 7.3 Monitor weighing, infestation destroying, and metal removal equipment according to work health and safety and operating procedures 7.4 Send finished flour to packing or storage according to workplace requirements
8. Monitor mill equipment	8.1 Check flutes and rolls for wear and defects 8.2 Monitor temperature of reduction rolls and performance of water cooling if used 8.3 Check automatic roll adjustment and protection mechanisms are working correctly 8.4 Adjust mill settings when required for effect of breakdowns and urgent maintenance 8.5 Complete milling records
9. Monitor mill performance	9.1 Ensure all grain and flour tests are carried out to required schedule and procedures 9.2 Adjust settings where required for variation in grain, grist and atmospheric conditions 9.3 Monitor milling and invisible loss per production period

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret mill flow diagrams • Interpret food safety, food labelling and other regulations affecting flour mills
Writing	• Record flour milling equipment status using digital and/or paper-based formats
Oral communication	• Communicate production requirements and technical information to other employees • Use effective communication skills to allocate tasks and provide feedback to team members • Use appropriate vocabulary, including technical language directly relevant to role
Numeracy	• Estimate break roll percentages through visual examination, hand stratification and test sieving

Unit Mapping Information

Assessment Requirements for FBPGRA4006 Control mill processes and performance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has controlled mill processes and performance on at least one occasion, including:

- interpreting mill flow diagrams and production requirements
- identifying customer requirements
- determining correct settings for equipment
- setting and monitoring break and reduction system equipment
- achieving flour specifications through correct use of grist and mill settings
- monitoring equipment settings and performance
- adjusting mill settings for breakdowns and other contingencies
- setting all related processes for:
  - break
  - scratch
  - sizing
  - reduction and other milling
- supervising wheat conditioning
- ensuring settings take into account the capability of equipment and the need to avoid imbalances, product build-ups and chokes
- ensuring all grain and flour tests are carried out to required schedule and procedures
- applying safe work practices and identified work health and safety hazards and controls.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- alternative and historical milling techniques, including:
  - stone grinding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - ‘low’ or one pass through grinding
  - use of small manual or electric milling machines
  - semolina process compared with traditional flour milling process
- conventions and techniques in drawing mill flow diagrams
- characteristics of different grist and their milling requirements
- purpose, design and steps of the break process, including:
  - overall aim of removing bran from endosperm in large pieces while minimising bran powder and flour
  - roller design
  - flute design
  - roller speed
  - number of passages
  - destinations of product from each break roll
- purpose, design and principles of the purification process, including:
  - sieve design
  - role of sifting, shaking, gravity and aspiration (upward air)
  - screening decks
  - exhaust ports and chambers
  - collection of throughs
  - overtails
  - relationship of purification to later reduction stages
- scratch equipment and process to remove small pieces of bran and germ from endosperm after sizing or purification
- relationship of particle size to reduction roller efficiency
- reduction that grinds flour into required fineness while controlling damage to starch granules and minimising abrasion to any bran and germ particles present
- features and performance characteristics of milling equipment as specified in manufacturer reference material
- relationship between total dressing surface ratio to mill capacity
- calculation of break roll percentages
- techniques to avoid imbalances, product build-ups and chokes
- mill balance requirements and techniques, including:
  - ensuring that stock does not return to immediate preceding passage or equipment
  - feed to first break at a constant rate
  - evenness of feed into rolls
  - maintenance of conveyor and air settings to achieve constant feed
- calculation of mill performance, including:
  - invisible loss rate
  - theoretical and actual milling loss rate
- procedures to track traceability of product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a mill or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - break and reduction roll equipment and related services
  - conditioned grain suitable for the break and reduction roll process
  - sampling schedules and test procedures and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - equipment manuals, including operating parameters
  - specifications, control points and processing parameters
  - documentation and recording requirements and procedures.
- relationships:
  - operators/team members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB2001 Freeze and thaw dough

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to freeze, store and thaw dough.

This unit applies to individuals who work under general supervision in a food processing or high volume production baking environment. It typically applies to the production worker responsible for applying basic operating principles to freeze dough.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

High Volume Baking (HVB)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to freeze dough	1.1 Confirm dough is available for freezing 1.2 Identify freezing requirements for dough 1.3 Set freezers to meet parameters for snap freezing and for storage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Wear appropriate personal protective clothing according to safe work procedures
2. Store frozen dough	2.1 Confirm storage conditions will retain quality characteristics of frozen dough 2.2 Transfer dough to snap freezer, ensuring minimal damage to dough 2.3 Package snap frozen dough for freezer storage to prevent moisture loss 2.4 Transfer snap frozen dough to freezer storage, ensuring minimal damage 2.5 Monitor frozen dough to ensure that product meets food safety and quality requirements 2.6 Adjust temperature settings as required to ensure product remains within specification
3. Thaw frozen dough	3.1 Thaw dough ensuring food safety and quality requirements 3.2 Identify, rectify and/or remove unacceptable dough 3.3 Dispose of waste according to workplace procedures 3.4 Conduct work in accordance with workplace environmental guidelines 3.5 Maintain workplace housekeeping standards for freezing, storing and thawing dough 3.6 Maintain workplace records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify requirements from basic instructions and procedures
Writing	• Maintain basic records and observations using digital and/or paper-based formats

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Numeracy	• Accurately interpret readings on a thermometer or temperature gauge (°C) • Estimate and calculate storage and thawing times

Assessment Requirements for FBPHVB2001 Freeze and thaw dough

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared to freeze, stored and thawed at least one batch of dough to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- conducting inspections as required to confirm storage remains within specification
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of freezing dough, including what occurs to dough during snap freezing and storage stages
- freezing equipment used, freezing capacity and the effect of freezing method on product
- different handling requirements of made-up and proofed dough to preserve the dough structure
- purpose and characteristics of packaging liners used to pack frozen dough
- procedures for maintaining temperature parameters of freezing equipment, including procedures to be followed when loading and removing dough to preserve temperature conditions
- storage patterns to make efficient use of space, allow for product rotation and minimise temperature fluctuations
- contamination/cross-contamination and food safety risks associated with freezing dough, and related control measures
- the significance of timeliness when both freezing and thawing dough
- optimal storage times for frozen dough

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the significance of variables, including dough type and size, on freezing and thawing processes
- procedures for efficiently thawing frozen product, and the consequences of slow thawing
- the effect of freezing/thawing on the quality of the final product
- inspection/control points used to confirm that product meets quality requirements, and related monitoring requirements
- causes of variation, and corrective action required when freezing, storing and thawing dough
- health and safety hazards and controls related to freezing, storing and thawing dough
- waste handling and cleaning requirements and procedures for freezing, storing and thawing dough
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - dough
  - personal protective equipment
  - packaging materials and liners
  - freezing equipment
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on relevant freezing, storing and thawing requirements, safe work practices, food safety, quality and environmental requirements
  - product specifications and related inspection/control points.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3001 Operate and monitor a cooling and wrapping process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a process to cool and wrap baked products such as cake, bread or muffins.

The unit applies to operators who take responsibility for cooling and wrapping operations in a production baking environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPHVB3001 Operate and monitor a cooling and wrapping process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored cooling and wrapping equipment to cool and wrap at least one batch of product to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- confirming cooling equipment settings, including:
  - conveyor speed
  - cooling tunnel settings
  - guides
  - feeders
- monitoring and adjusting process equipment to achieve product specifications, including:
  - temperature gauges
  - throughput
  - product appearance, dimensions and weight
  - packaging materials and seals
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of cooling and wrapping process
- basic operating principles of cooling and wrapping equipment and main components, including:
  - status and purpose of guards
  - operating capacities and applications of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - purpose and location of sensors and related feedback instrumentation
- types and safe operating procedures for cooling and wrapping equipment, including:
  - conveyors
  - cooling tunnels
  - guides
  - packaging material feeds
  - wrapping sealers
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- basic operating principles of process control and relationship between control panels and systems, and cooling and wrapping equipment
- key features of flow of cooling and wrapping process, and effect of outputs on downstream processes
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including:
  - effect of ambient temperature on the cooling process
  - possible cause of condensation formation on product from the cooling tunnel
  - issues with wrapping seals
- methods used to monitor the cooling and wrapping process, including:
  - inspecting, measuring and testing
  - inspection or test points (control points)
  - related procedures and recording requirements
- common causes of variation, and corrective action required
- good manufacturing practices (GMP) relevant to work task
- health and safety hazards and controls, including:
  - risks associated with working with refrigerant, and action required in the event of a leak
  - isolation, lock-out and tag-out procedures and responsibilities
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- fundamentals of common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- equipment shutdown requirements relevant to performance evidence, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- procedures and responsibility for reporting production and performance information
- emerging technologies related to high volume production baking
- cleaning and sanitisation procedures required for production equipment and work area
- recording procedures to track traceability of product.

Assessment Requirements for FBPHVB3002 Operate and monitor a laminated pastry production process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored pastry production equipment to produce at least one batch of rolled, laminated pastry to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- monitoring and adjusting pastry production process equipment to achieve production outcomes, including setting up and starting up mixers, rollers and laminating processes
- monitoring supply and flow of materials to and from the dough preparation process and equipment operation to confirm process remains within specification, including:
  - flour temperature and type
  - water temperature
  - fat type, distribution and percentage required for pastry types
  - rework pastry addition
  - dough characteristics
  - mixing time
- rolling and laminating dough to specification, including:
  - ensuring in-line hoppers are filled with flour to prevent pastry sticking to rollers
  - ensuring roller settings are within specification
  - checking pastry thickness, fat percentage and number of pastry layers
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose and basic principles of the laminated pastry production process
- procedures for selecting ingredients and materials for laminated pastry production, including:
  - recipe and production specifications
  - supply, condition and quality of ingredients
- laminated pastry ingredients and their purpose
- types of processing equipment, including:
  - weighing equipment
  - mixing equipment
  - laminating and rolling equipment
  - cutting and stacking equipment
  - testing equipment
  - spike rollers and cutters
  - conveyors
  - rework bins
- basic operating principles of laminated pastry production equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
- basic operating principles of process control, including the relationship between control panels and systems and laminated pastry production equipment
- key features of the flow of the laminated pastry production process, and the effect of outputs on customer satisfaction and downstream processes, including filling, forming and baking
- quality requirements, including:
  - materials and ingredients, and effect of variation on laminated pastry production process performance
  - finished laminated pastry
- laminated pastry production process specifications, procedures and operating parameters
- methods used to monitor the laminated pastry production process, including:
  - inspecting, measuring and testing processes
  - inspection or test points (control points) in the process
  - related procedures and recording requirements
- common causes of variation, and corrective action required, including the relationships between time and temperature and humidity in the laminated pastry production process
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- good manufacturing practices (GMP) relevant to work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- fundamentals of common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety procedures to ensure safe work
- environmental issues and controls relevant to the pastry production process, including waste/rework collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- procedures and responsibility for reporting production and performance information
- cleaning and sanitisation procedures required for production equipment and work area
- recording procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - laminated pastry production equipment
  - ingredients to produce laminated pastry products
  - cleaning materials and equipment
- specifications:
  - work instructions, including control points and laminated pastry production parameters
  - production schedule, and recipe and batch specifications for laminated pastry products
  - information on equipment capacity and operating parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3003 Operate and monitor a pastry forming and filling process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a process to deposit fillings into a pastry shell or onto a pastry sheet which is then topped or formed to product specifications.

This unit applies to individuals who take responsibility for the operation and monitoring of a pastry forming and filling process and associated equipment in a high volume baking environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored pastry forming and filling equipment to produce at least one batch of pastries to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- confirming supply and condition of necessary materials and services, including:
  - transfer of fillings and pastry to the production line to meet production requirements
  - pastry types and fillings match product specifications
  - availability of tin spray, water and egg yolk spray
  - suitability of rework pastry
- monitoring and adjusting pastry forming and filling process equipment to achieve production specifications, including:
  - pastry thickness
  - alignment of deposited filling in relation to pastry sheet or shell
  - amount and/or rate of filling deposited
  - product weight
  - enclosure of pastry product by forming, rolling or covering with a pastry top
  - application of toppings and finishes according to production schedule
  - appearance (size and shape)
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the pastry forming and filling process

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, operated, adjusted and shut down doughnut-making equipment to produce at least one batch of doughnuts to specification, including:

- applying safe work procedures
- following food safety procedures
- conducting pre-start checks for equipment, including:
  - doughnut mixing and forming equipment
  - deep frying equipment
  - cooling tunnels/spirals
- monitoring and adjusting process equipment to achieve required outcomes, including monitoring:
  - materials transfer prior to commencing mixing
  - mixing parameters for water and flour temperature
  - sequence of ingredient addition and mixing times
  - forming parameters, including air pressure to maintain weight of doughnut
  - proving parameters – humidity and temperature within prover and time
  - frying parameters – oil temperature, appearance of cooked doughnuts and time
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the doughnut manufacturing process
- stages and requirements of each processing stage in doughnut manufacture, including:

- procedures to track traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - doughnut making and frying equipment and related services
  - equipment to apply toppings and fillings
  - ingredients for batter
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule/batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3006 Operate and monitor a forming or shaping process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a biscuit forming or shaping process.

This unit applies to individuals who take responsibility for the operation and monitoring of processing machines and equipment to form and shape biscuit dough. The work includes identifying and providing solutions to routine and some non-routine problems. Biscuits may be for human consumption or animal feed.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a forming or shaping process on at least one occasion, including:

- applying safe work practices
- confirming supply and condition of necessary materials and services, including transferring and loading dough into hoppers
- confirming condition of dough, including:
  - dough type matches product specification
  - dough temperature, consistency/texture, moisture level, weight and colour
  - dough standing time
  - dough supply/quantities
- confirming setting selection, including:
  - setting parameters for process type
  - setting equipment speeds
  - adjusting roller and web settings (as required)
  - adjusting depositing/extrusion settings (as required)
- monitoring and adjusting process equipment to achieve required outcomes, including control points, and conducting inspections as required to confirm process remains within specification, including:
  - biscuit size, shape and thickness
  - biscuit weight
  - dough temperature
- taking corrective action in response to typical faults and inconsistencies.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of biscuit forming
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the biscuit forming process, and the effect of outputs on downstream processes
- effect of dough quality on process outcomes
- quality characteristics to be achieved by the process
- quality requirements of materials, and effect of variation on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including procedures for incorporating reworked dough and procedures for mending webs as required
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common microbiological, physical, chemical and allergenic hazards that can occur when processing biscuits, including the types of hazards likely to occur, the conditions under which they occur, and possible consequences
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to operating a forming or shaping process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for biscuit forming and shaping equipment
- recording procedures to track traceability of product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - forming and shaping equipment and services
  - biscuit dough to be formed
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and recipe/batch instructions
  - control points and processing parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3009 Operate and monitor a non laminated pastry production process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a non laminated pastry production process, including mixing and rolling processes.

Non laminated pastry is also described as short pastry, typically used for sweet and savory products, including pie bases, tarts and shortbreads. The production of choux pastry can also be covered by this unit.

The unit applies to individuals who take responsibility for the operation and monitoring of the non laminated pastry production process and associated equipment in a production baking environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPHVB3009 Operate and monitor a non laminated pastry production process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored pastry production equipment to produce at least one batch of non laminated, rolled pastry to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- monitoring supply and flow of materials to and from the dough preparation process and equipment operation to confirm process remains within specification, including:
  - flour temperature and type
  - water temperature
  - fat type, distribution and percentage required for pastry type
  - rework pastry addition
  - dough characteristics
  - mixing time
- rolling dough to specification, including:
  - ensuring in-line hoppers are filled with flour to prevent pastry sticking to rollers
  - roller settings are within specification
  - checking pastry thickness
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the non laminated pastry production process

- procedures for selecting ingredients and materials for non laminated pastry production, including:
  - recipe and production specifications
  - supply, condition and quality of ingredients
- non laminated pastry ingredients and their purpose
- types of processing equipment, including:
  - weighing equipment
  - mixing equipment
  - rolling equipment
  - testing equipment
  - spike rollers and cutters
  - conveyors
  - rework bins
- basic operating principles of non laminated pastry production equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
- basic operating principles of process control, including the relationship between control panels and systems and non laminated pastry production equipment
- key features of the flow of the non laminated pastry production process, and the effect of outputs on customer satisfaction and downstream processes, including filling, forming and baking
- quality requirements, including:
  - materials and ingredients, and effect of variation on non laminated pastry production process performance
  - finished non laminated pastry
- non laminated pastry production process specifications, procedures and operating parameters
- methods used to monitor the non laminated pastry production process, including:
  - inspecting, measuring and testing processes
  - inspection or test points (control points) in the process
  - related procedures and recording requirements
- common causes of variation, and corrective action required, including the relationships between time and temperature and humidity in the non laminated pastry production process
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- good manufacturing practices (GMP) relevant to work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety procedures to ensure safe work
- environmental issues and controls relevant to the pastry production process, including waste/rework collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- procedures and responsibility for reporting production and performance information
- cleaning and sanitisation procedures required for production equipment and work area
- recording procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - non laminated pastry production equipment
  - ingredients to produce non laminated pastry products
  - cleaning materials and equipment
- specifications:
  - work instructions, including control points and non laminated pastry production parameters
  - production schedule, and recipe and batch specifications for non laminated pastry products
  - information on equipment capacity and operating parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3010 Operate and monitor a pastry baking process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a pastry baking process.

This unit applies to individuals who take responsibility for operating and monitoring ovens to bake pastries in a high volume baking environment. Products may include par-baked and double baked pastries. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures, in accordance with state/territory work health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPHVB3010 Operate and monitor a pastry baking process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a baking process to bake at least one batch of pastries to meet product specifications, including:

- applying safe work procedures
- following food safety procedures
- confirming oven settings and parameters, including:
  - correct oven settings for baking time
  - oven zone temperatures
  - conveyor speed, loaders and dischargers
  - circulation and exhaust fans
  - water seals
  - burner controls and steam
  - heights, guides and air blowers
- monitoring baked pastries, including quantities and pastry appearance (colour and sheen, uniformity of shape, weight and size, and moisture)
- taking corrective action in response to typical faults and inconsistencies in separated product.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of each stage of the baking process, including the stages of the baking process and changes that occur in the product, the effect of variables (time, temperature and humidity), and oven zones as appropriate to oven type
- basic operating principles of equipment, including:
  - the difference between convection and impingement ovens

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- types of ovens typically used in high volume baking environments, and the principles of heat transfer, including:
  - convection
  - conduction
  - radiation
  - electromagnetic radiation
- quality characteristics to be achieved by the baked product
- process specifications, procedures and operating parameters for different baked pastry products
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the baking process, including inspecting, measuring and testing, by the process
- inspection or test points (control points) in the baking process and the related procedures and recording requirements, including the ability to conduct dew point and/or wet bulb tests
- contamination/cross-contamination and food safety risks associated with the baking process, and related control measures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety hazards and controls
- requirements of different shutdowns as appropriate to the baking process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to operating a baking process
- environmental issues and controls relevant to the baking process, including waste/rework collection and handling procedures related to the process
- purpose and operating procedures for related processes, including in-line proving and finishing equipment where relevant
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- emerging technologies related to high volume production baking
- routine maintenance procedures for baking equipment
- cleaning and sanitisation procedures for baking equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures and responsibility for reporting production information and traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - baking and depanning equipment and services, and related equipment
  - product to be baked
  - sampling schedules and test procedures and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - specifications, control points and processing parameters
  - production schedule and recipe/batch instructions
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3011 Operate and monitor the production of fillings

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down processes used to produce fillings, toppings and sauces that may be used to finish sweet or savory breads, pastries, cakes, puddings and biscuits.

This unit applies to individuals who take responsibility for the operation and monitoring of a filling production process and associated equipment in a high volume baking environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPHVB3011 Operate and monitor the production of fillings

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored production equipment to produce at least two different types of fillings, toppings or sauces, using different methods, to meet product specifications, including:

- applying safe work procedures
- following food safety procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of each stage of the mixing process, and the effect of variables (time, temperature and mixing speed)
- purpose of mixing equipment
- quality characteristics of filling, topping or sauce to be achieved and how it will be applied to the baked product
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the mixing process and the effect of outputs on downstream processes
- process specifications, procedures and operating parameters for fillings, toppings and sauces for different products, including:
  - mixing time and speed

- methods used to monitor the baking process for cakes, puddings and biscuits, including inspecting, measuring and testing, by the process
- temperature control of baked products
- inspection or test points (control points) in the baking process and the related procedures and recording requirements, including the ability to conduct dew point and/or wet bulb tests
- contamination/cross-contamination and food safety risks associated with the baking process, and related control measures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety hazards and controls
- requirements of different shutdowns as appropriate to the baking process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to operating a baking process
- environmental issues and controls relevant to the baking process, including waste/rework collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures for ovens at workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaning and sanitisation procedures for ovens at workplace
- procedures and responsibility for reporting production information and traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - baking and depanning equipment and related services
  - product to be baked
  - sampling schedules and test procedures and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - specifications, control points and processing parameters
  - production schedule and recipe/batch instructions
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3014 Finish baked products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down processes used to apply pre-bake and post-bake finishes to baked products, including breads, pastries, cakes and biscuits.

This unit applies to individuals who work in commercial or high volume bakeries. It typically applies to the production worker responsible for finishing baked products, which may include bread, pastries, cakes and/or biscuits. The work includes identifying common faults and identifying solutions.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPHVB3014 Finish baked products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored equipment to finish at least one batch of baked products to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- monitoring the spread and application of finish and the quantity and appearance of finished product
- taking corrective action in response to typical faults and inconsistencies in separated product.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the finishing process
- typical pre-bake finishes that are carried out on sweet and savoury baked products
- typical post-bake finishes that are carried out on sweet and savoury baked products, including:
  - fillings – sweet and savoury
  - icings
- methods used to apply finishes
- basic operating principles of equipment, including the relationship between control panels and systems and the physical equipment
- the flow of the finishing process and the effect of outputs on downstream processes, including packaging
- quality characteristics to be achieved by the finish

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the finishing process, including inspecting, measuring and testing:
  - temperature of toppings
  - spread and application of toppings and glazes
  - placement of jams and fillings
  - quantity and appearance of finished product
- contamination/cross-contamination and food safety risks associated with the baking process, and related control measures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety hazards and controls, including risks of spontaneous combustion and limitations of protective clothing and equipment used
- requirements of different shutdowns as appropriate to the finishing process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to operating a baking process
- environmental issues and controls relevant to the baking process, including waste/rework collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- routine maintenance procedures for finishing equipment
- cleaning and sanitisation procedures for finishing equipment
- procedures and responsibility for reporting production information and traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - finishing equipment and related services
  - product to be finished
  - monitoring procedures and equipment
  - cleaning equipment
- specifications:

FBPHVB3015 Operate and monitor a griddle production process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a griddle production process to produce pancakes, muffins and simple bread products.

This unit applies to individuals who take responsibility for the operation and monitoring of a griddle production process and associated equipment in a high volume baking environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a griddle production process to produce at least one batch of product to meet specifications, including:

- applying food safety practices
- following safe work procedures
- monitoring control points and conducting inspections to confirm process remains within specification, including:
  - characteristics of the mix, including colour, viscosity, density and consistency
  - time and temperature
  - weight of product
  - characteristics of the cooked product
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of griddle product manufacturing
- type and purpose of griddle equipment, including:
  - weighing equipment
  - mixing equipment
  - depositing equipment
  - cooking equipment
  - cooling fans and tunnels
  - extraction fans
  - conveyors

Assessment Requirements for FBPHVB3017 Operate a bread dough mixing and development process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a dough mixing and development process to produce at least one batch of two different formulations of bread dough to meet product specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- loading ingredients in correct quantities and sequences for the recipe and the process
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the

- elements and performance criteria of this unit. This includes knowledge of:
- purpose and basic principles of dough-making process, including components of wheat, flour types and grades relevant to products produced, yeast activity and dough development
- effects of variation in ingredient quality on the dough produced
- basic operating principles of equipment, including equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- good manufacturing practices (GMP) relevant to work task
- settings relevant to dough making equipment being used, including:
  - mixing rate
  - mixing time and work input
  - ice and water requirements
  - water temperature

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - speed
    - flour temperature
    - cooling
    - vacuum delay and level
    - slurry addition
- flow of the dough-making process, including the stages and changes that occur during baking, and the effect of outputs on downstream processes
- significance of factors such as dough temperature, development, time, water addition and temperature, yeast activity
- required characteristics of dough, and effect of dough characteristics and variation on the final product
- typical faults that occur as a result of ingredients or processing parameters, and corrective action required where operation is outside specified parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems, and procedures and responsibilities for addressing issues
- methods used to monitor the dough making process, including inspecting, measuring and testing
- contamination/cross-contamination, cross-contact allergen risks and food safety risks associated with mixing dough, and related control measures
- requirements of different shutdowns as appropriate to the dough making process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- procedures and responsibility for reporting production and performance information
- workplace cleaning procedures for the dough making process
- environmental issues and controls relevant to the dough making process, including waste collection and handling procedures
- emerging technologies related to high volume production baking
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - ingredients to be processed
    - dough mixing and development equipment and related services
    - personal protective equipment
    - cleaning materials and equipment
- specifications:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- dough specification/recipe
- work procedures, including advice on safe work practices, food safety, quality, cleaning and environmental requirements
- manuals related to operation of dough making equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPHVB3018 Operate a final prove and bread baking process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down the process used to carry out the final proving (or proofing) and baking of bread dough.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of a final prove and baking process of bread in a high volume baking environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPHVB3018 Operate a final prove and bread baking process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a final prove and baking process for at least one batch of bread to meet product specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- conducting inspections to confirm product conforms to specifications
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and basic principles of each stage of the final proving and baking process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- good manufacturing practices (GMP) relevant to work task
- flow of the final proving and baking process, and the effect of outputs on downstream processes
- changes that occur in dough during baking, including starch gelatinisation, gluten coagulation and enzyme activity, and their effect on the final product
- the effect of process variables, such as time, temperature and humidity, on process stages
- the effect of yeast activity on the end product
- quality characteristics to be achieved by final proving and baking process, including factors influencing crust formation and colour
- quality requirements of materials, and effects of variation on final prove and baking process performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective actions required if operations fall outside specified parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment
- methods used to monitor the final proving and baking process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in final prove and baking process, and the related procedures and recording requirements
- contamination/cross-contamination, cross-contact allergen risks and food safety risks associated with mixing dough, and related control measures
- work health and safety hazards and controls relevant to the work process, including the limitations of personal protective equipment
- requirements of different shutdowns as appropriate to the final prove and baking process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- workplace cleaning and sanitisation procedures
- environmental issues and controls relevant to the final prove and baking process, including waste collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - panned dough
  - dough transfer equipment
  - personal protective equipment
  - final bread proving, baking and depanning equipment and related services
  - cleaning materials and equipment
- specifications:
  - production schedule and batch instructions
  - work procedures, including advice on safe work practices, food safety, quality, cleaning and environmental requirements
  - information on equipment capacity and operating parameters
  - documentation and recording procedures.

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a dough make up process to produce at least one batch of product to meet specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- conducting inspections to confirm process conforms to specifications, including:
  - dough height in hopper
  - dough weight
  - oil flow to divider
  - size and shape of dough piece
  - skin formation during intermediate proof
  - presence of 'doubles'
  - process variables such as time, temperature and humidity
- taking corrective action in response to results that fail to meet specifications.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and basic principles of each stage of the dough make up process
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- good manufacturing practices (GMP) relevant to work task
- flow of the dough make up process, and the effect of outputs on downstream processes
- effect of process variables, including time, temperature and humidity, on process stages
- procedures for carrying out pre-start checks, including:

FBPLAB2001 Use basic laboratory equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to operate a range of basic laboratory equipment to accurately measure, weigh, separate and filter substances.

The unit applies to those who work in food and wine production and processing environments and carry out routine tests in line with established test methods and clear workplace procedures.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, accurately used and cleaned basic laboratory equipment to perform four tasks from the following list:

- weighing
- centrifuging
- separating
- pipetting
- measuring
- titrating
- sterilising.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and methods of use for a range of basic laboratory equipment
- purpose and methods used to calibrate equipment
- operation of equipment and instrumentation components
- standard tests carried out in the workplace and their purpose
- health and safety requirements for hazards and controls relevant to work role
- environmental issues and controls relevant to work role
- safety data sheets (SDS) for chemicals used
- workplace requirements for recording and reporting problems
- cleaning and sanitising requirements of equipment and work area.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared laboratory solutions and stains, including:

- safely preparing at least three examples of working solutions and/or stains
- accurately labelling each solution or stain
- calculating the quantities involved on each occasion and any dilutions required
- storing solutions and stains appropriately according to light, temperature, contamination and shelf-life
- disposing of waste in line with environmental guidelines on each occasion
- ensuring work takes place in a sanitised environment
- accurately recording workplace information.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and features of basic laboratory equipment
- purpose and features of a range of basic laboratory solutions and stains
- effect of inappropriate storage on solution and stain quality and performance
- effect of process stages on results and outcomes
- calculations required to prepare specified amounts of solutions of specified concentration
- common causes and consequential effects of inaccuracies or contamination, and preventive or corrective action required
- workplace procedures for preparing solutions
- health and safety hazards and controls
- procedures and responsibility for reporting problems
- environmental issues and controls

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed basic analytical tests, including:

- prepared samples using at least two different methods
- performed at least three basic tests using standard methods and procedures
- recorded results accurately.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of tests performed as part of job role and principles of the standard methods/specifications used
- sample preparation processes relevant to job role
- typical basic tests and methods relevant to job role
- measurements used for typical tests
- function of key components of the test equipment, pre-use equipment and safety checks
- common causes and effects of inaccuracies or contamination, and preventive or corrective action required
- normal range of results for products tested
- relevant standards, specifications and legislative requirements (quality, health, food safety, labelling and equipment) and their implications on testing requirements
- health and safety hazards and controls
- safety data sheets (SDS) for chemicals used
- environmental issues and controls relevant to work role
- workplace requirements for recording and reporting problems
- cleaning and sanitising requirements of equipment and work area.

FBPOIL3001 Operate a degumming and neutralisation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a neutralisation process to remove impurities from crude oils.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of a neutralisation process in an edible oils production environment. Processes may be batch or continuous, and apply to single or multiple product types.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Edible Oils (OIL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare the degumming and neutralisation equipment for operation	1.1 Ensure oil stock is available for production requirements 1.2 Identify safety requirements and wear appropriate personal protective equipment, ensuring correct fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Take samples and test oil stock to determine free fatty acid (FFA) levels 1.4 Check equipment and services are ready for operation 1.5 Acknowledge and load recipe to meet production requirements 1.6 Conduct pre-start checks according to operator instructions
2. Operate and monitor the degumming and neutralisation process	2.1 Start up and operate the neutralisation process according to work health and safety and operating procedures 2.2 Monitor equipment to ensure optimal operations 2.3 Identify irregularities in equipment operation, and report any maintenance requirements 2.4 Take samples and test to confirm that specifications are met at each stage according to production specifications 2.5 Identify, adjust or report out-of-specification product and process outcomes according to workplace procedures 2.6 Maintain the work area according to workplace guidelines 2.7 Enter workplace records in required format
3. Shut down the degumming and neutralisation process	3.1 Identify the appropriate shutdown procedure 3.2 Shut down the process safely according to operating procedures 3.3 Identify and report maintenance requirements 3.4 Ensure waste is disposed of in line with environmental requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Solve routine problems according to workplace guidelines and using experience of past solutions
Reading	• Interpret standard operating procedures for the degumming and neutralisation process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Writing	• Record processing data using digital and/or paper-based formats
Numeracy	• Read oil sample graphs and processing gauges • Monitor and adjust control points for temperature, flow rates and dosages • Interpret FFA tests (using % oleic acid)

Assessment Requirements for FBPOIL3001 Operate a degumming and neutralisation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a degumming and neutralisation process to remove impurities from crude oil to produce at least one batch of oil to meet product specifications, including:

- applying safe work practices
- following food safety procedures
- making adjustments to the operating parameters to ensure quality outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the degumming and neutralisation process, including the role of acid (for degumming) and alkali (for neutralisation) used
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- health and safety hazards and controls, including for risks associated with using acids
- good manufacturing practices (GMP) relevant to work task
- services required for a degumming and neutralisation process, and action to take if services are not available
- the flow of the degumming and neutralisation process, and the effect of outputs on downstream edible oils and fats processes
- quality characteristics to be achieved by the degumming and neutralisation process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the degumming and neutralisation process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the degumming and neutralisation process and the related procedures and recording requirements
- contamination and food safety risks associated with the degumming and neutralisation process, and related control measures
- common causes of variation, and corrective action required
- requirements of different shutdowns as appropriate to the neutralisation process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the neutralisation process, including waste/rework collection and handling procedures related to the process
- operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning procedures for neutralisation equipment
- product traceability procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an oil processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - degumming and neutralisation equipment and services
  - oil for the neutralisation process, and acid and alkali materials as required by the process
  - sampling schedules, test procedures and equipment
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- information on equipment capacity and operating parameters
- production schedule/batch specifications, control points and processing parameters
- documentation and recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOIL3002 Operate and monitor a bleaching process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate, adjust and shut down a bleaching process to remove colour and impurities from partially refined oil.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of bleaching equipment and processes in an edible oils production environment. Processes may be batch or continuous, and apply to single or multiple product types.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FBPOIL3005 Operate and monitor a complecting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate, monitor, adjust and shut down a complector used to refine oil products that are most often used to make pastries.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of complecting equipment in an edible oils production environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOIL3005 Operate and monitor a complecting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a complecting process to produce at least one batch of pastry fat to meet refined product specifications, including:

- applying safe work practices
- following food safety procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of preparing pastry margarine using a complector, including:
  - a basic understanding of crystallisation
  - the relationship between stages of crystal formation, work input and temperature
  - the purpose and requirements of a holding stage
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards and lagging
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required for a complecting process, and action to take if services are not available
- good manufacturing practices (GMP) relevant to work task
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the final pastry margarine
- variations of quality characteristics according to types of pastry margarine produced
- quality requirements of flake used, and effect of variation on process performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the production process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to complecting process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection, and handling procedures related to the process and procedures for containing spills
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine process maintenance procedures for complectors
- cleaning procedures for complectors
- product traceability procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an oil processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - oil complector and services
  - flake to be processed
  - personal protective equipment
  - sampling schedules and test procedures and equipment
  - cleaning materials and equipment
- specifications:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch details
- specifications, control points and processing parameters
- documentation and recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOIL3006 Operate and monitor a soap splitting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate, monitor, adjust and shut down a soap splitting process. It covers the splitting of soap stock into an acid oil stream and an acid water stream. This may also be referred to as an acid oil process.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of a soap splitting process in an edible oils production environment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOIL3006 Operate and monitor a soap splitting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a soap splitting process to split at least one batch of soap stock into an acid oil stream and an acid water stream, to meet product specifications, including:

- applying safe work practices
- following food safety procedures
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of soap splitting, including an understanding of the process used to split soap stock and the end uses of each stream
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required for a soap splitting process, and action to take if services are not available
- good manufacturing practices (GMP) relevant to work task
- the flow of this process and the effect of outputs on downstream processes, including:
  - the impact of acid water pH on the performance of the effluent plant
  - impact of allowing 'fatty' acid water to flow downstream
- requirements of acid oil and acid water streams to be achieved
- the effect of variation in soap stock on the soap splitting process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the production process, including the purpose and methods used to conduct relevant tests (including pH, moisture and free fatty acids tests)
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation, and corrective action required
- health and safety hazards and controls, including hazards associated with handling hazardous substances
- safe handling and manual handling procedures
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste or rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment

FBPOIL3007 Operate and monitor an interesterification process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down an interesterification process to rearrange the chemical composition of oil molecules to create an oil more suitable for deep frying or making margarine with good taste and low saturated fat.

This unit applies to individuals who apply basic operating principles to the operation and monitoring of an interesterification process in an edible oils production environment. Processes may be batch or continuous, and apply to single or multiple product types.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FBPOIL3009 Clean and mill olives

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate and monitor de-leafing, washing and hammer milling equipment to crush olives, ready for further processing, including the production of olive oil

This unit applies to individuals who work in an olive oil processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a hammer mill and associated olive cleaning equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Edible Oils (OIL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in processing area	1.1 Confirm olives are available to meet production requirements 1.2 Confirm standards for cleaning and milling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3 Evaluate olive condition and confirm olive washing and de-leafing requirements 1.4 Weigh olives and record details on production run sheet 1.5 Confirm de-leafing, washing and milling equipment is clean according to health, safety and food safety requirements 1.6 Wear appropriate personal protective clothing and ensure correct fit 1.7 Carry out pre-start checks according to safe operating procedures
2. Prepare and operate washing and de-leafing equipment	2.1 Check wash water is clean (potable) and supply is ready for operation 2.2 Enter processing and operating parameters to meet washing and de-leafing requirements 2.3 Load olives into hopper in preparation for cleaning 2.4 Start, operate and monitor olive cleaning process 2.5 Keep work area clean of blown leaves to avoid hazards
3. Operate and monitor milling	3.1 Inspect condition of the mill hammers to ensure they are fit for purpose 3.2 Conduct start-up checks of hammer mill according to safe operation procedures 3.3 Enter processing parameters, including setting grid size to achieve optimal outcomes 3.4 Start, operate and monitor hammer milling process according to workplace procedures 3.5 Add citrus to olive feed for agrumato method oils, or fresh herbs and spices for other co-processed olive oil products 3.6 Inspect olive paste to ensure specifications are met 3.7 Identify, rectify and report out-of-specification equipment, product or process outcomes according to workplace requirements 3.8 Shut down process according to safe work procedures 3.9 Maintain records of washing and milling according to workplace procedures
4. Conduct housekeeping and identify maintenance requirements	4.1 Follow and apply workplace housekeeping and environmental procedures 4.2 Identify and report any maintenance requirements according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace and standard operating procedures relevant to work task • Interpret production requirements
Writing	• Record processing data for batch using digital and/or paper-based formats
Numeracy	• Monitor and interpret production and process control indicators and data • Monitor supply and flow of raw materials to the mill, and crushed product from the mill • Recognise capacity of storage tanks (L, hL), weights of raw product (kg, T) and energy consumption units (amps) • Set grid size for crushing

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a hammer mill and associated cleaning equipment to de-leaf and clean, and to crush at least one batch of olives to specification, including:

- applying safe work procedures
- following food safety procedures
- taking corrective action in response to typical faults and inconsistencies in washing and crushing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the process, including stages and changes that occur during de-leafing, washing and milling
- Australian Standard for Olive Oils and Olive-Pomace Oils (AS 5264-2011)
- Australian Olive Industry Code of Practice
- basic operating principles of equipment for the de-leafing, washing equipment and hammer mill, including:
  - safety hazards associated with washing and milling equipment
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required for de-leafing, washing and milling equipment used in the workplace
- the flow of the de-leafing, washing and milling process and the effect of product output on downstream processes
- methods to evaluate and determine olive condition prior to crushing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- circumstances where olives may not require washing
- quality characteristics and uses of crushed olives
- agrumato method and other co-processed oils and their characteristics
- methods used to monitor the washing and milling of olives, including inspecting, measuring and testing in-feed and out-feed solids, and other tests as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements, including use of refractometers
- health and safety hazards and controls, including limitations of hearing and protective clothing and equipment relevant to the work process
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- contamination/cross-contamination, spoilage and other food safety risks associated with milling olives, and related control measures
- common microbiological, physical, chemical and allergen hazards related to milling olives, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- standard microbiological techniques to identify food poisoning and spoilage organisms
- the importance of plant hygiene and how it can affect the finished product
- microbiological toxins and aflatoxins
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for operating the washing and milling process
- cleaning and sanitisation procedures required for operating the washing and milling equipment
- environmental issues and controls relevant to the operation of the washing and milling process, including handling and safe disposal of waste
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an oil processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - washing and milling equipment and related services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - olives to be crushed
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOIL3010 Operate and monitor a malaxer

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a malaxer, used to process crushed olives and release oil from olive paste.

This unit applies to individuals who work in an olive oil processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a malaxer and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory food safety and work health and safety regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Edible Oils (OIL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in processing area	1.1 Confirm olive mill paste is available to meet production requirements 1.2 Wear appropriate personal protective clothing, and ensure correct

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	fit according to health, safety and food safety requirements 1.3 Identify and confirm equipment is clean and not locked out
2. Prepare the malaxer for operation	2.1 Fit machine components and related attachments, and adjust to meet operating requirements 2.2 Enter processing or operating parameters to meet production requirements 2.3 Perform pre-start checks according to operator instructions 2.4 Ensure malaxer is at appropriate temperature prior to adding paste
3. Operate and monitor equipment	3.1 Deliver olive paste to malaxer in required quantities to meet recipe specifications 3.2 Start, operate and monitor process to ensure optimal operations 3.3 Monitor temperature of agitation process to ensure it is kept within 25–30°C, and paste consistency meets specifications 3.4 Keep malaxation times within 75 minutes to allow for a steady kneading of paste and a slow release of the oil 3.5 Add water, talc and/or approved enzymes as required to assist malaxing process 3.6 Identify, adjust and report out-of-specification equipment and/or issues with emulsified paste according to workplace requirements 3.7 Maintain records of malaxing process according to workplace procedures
4. Shut down the malaxer	4.1 Identify appropriate shutdown procedure 4.2 Shut down process safely according to operating procedures 4.3 Apply workplace cleaning procedures and dispose of waste according to environmental requirements 4.4 Identify and report maintenance requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Learning	• Problem-solve issues with process to ensure quality outcomes
Reading	• Interpret workplace and standard operating procedures relevant to work task • Interpret production requirements
Writing	• Record batch processing data using digital and/or paper-based formats
Numeracy	• Weigh ingredients (mg, g, kg) • Monitor and interpret production and process control indicators and data, including temperature of paste (°C) • Monitor supply and flow of materials to and from the process • Calculate malaxation time: Malaxation time (batch) = (filling time/2) + malaxer full time + (emptying time/2)

Unit Mapping Information

Assessment Requirements for FBPOIL3010 Operate and monitor a malaxer

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored a malaxer to release oil from at least one batch of crushed olive paste, to meet specifications, including:

- applying food safety practices
- following safe work procedures
- taking corrective action in response to typical faults and inconsistencies in the malaxing process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of malaxing olive paste
- Australian Standard for Olive Oils and Olive-Pomace Oils (AS 5264-2011)
- Australian Olive Industry Code of Practice
- basic operating principles of mixing/blending equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - awareness of calibration schedules for scales and related weighing/measuring equipment
- services required, and action to take if services are not available
- ingredient-handling requirements and shelf-life or coding
- quality characteristics required of olive paste
- the characteristics of pastes made from different types of olives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- additives and enzymes that can be added to the agitation process to ensure enough oil is released, including: pectinases, cellulases and hemicellulases; talcum or micro talcum powder (hydrated magnesium silicate); water – these technological coadjuvants should not be detectable in the final product
- the effect of temperature on the olive paste, and the need for paste to be kept at 25–30°C
- the effect of malaxation time on the efficiency of oil separation and oil quality
- calculation of malaxation time
- inspection or test points (control points) in the process and the related procedures and recording requirements, including times/temperatures and agitator speeds
- contamination/cross-contamination and food safety risks associated with the process, and related control measures, including cross-contamination risks and associated cleaning requirements
- operating requirements and parameters, and corrective action required when operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to the mixing and blending process
- requirements of different shutdowns as appropriate to the blending or mixing process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to the mixing and blending process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the malaxing process, including waste or rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for mixing or blending equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an olive oil processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - malaxer process equipment and related services
  - personal protective clothing and equipment
  - crushed olives
  - cleaning materials and equipment
- specifications:

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Standard for Olive Oils and Olive-Pomace Oils (AS 5264-2011)
- Australian Olive Industry Code of Practice
- the flow of the holding and storage process and the effect of product output on downstream processes
- contamination/cross-contamination and food safety risks associated with the holding and storage process, and related control measures
- time required for oil to settle
- settling of olive oil, including the processes of purging, racking-off and filtration
- when filtration is required
- ideal storage conditions for virgin olive oil, including temperature, container properties, length of time product is stored
- organoleptic properties of different types of olive oil
- factors that accelerate the breakdown of virgin olive oil, including:
  - exposure to air (oxidation)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - heat
  - light (and using transparent containers)
  - contact with sediments and water (hydrolysis)
  - delayed processing of harvested fruit (causing fermentation)
  - processing damaged (high FFA) fruit (diseased, mummified, split, over-ripe, frosted), which will result in defective oils
  - variety and style (oxidative stability)
  - time
- types of containers used to store bulk olive oil, and their characteristics
- techniques used to monitor the holding and storage process, including inspecting, measuring and testing by the process
- characteristics of different types of olive oil (extra virgin, virgin, refined, light, pomace)
- sampling methods
- typical tests undertaken to determine the quality of olive oil, including tests to detect alteration and refining processes, including soft deodorisation
- parameters that identify olive oil as fresh, well processed and stored appropriately, including:
  - free fatty acids (FFAs) in the vicinity of ≤0.4
  - peroxide value (PV) in the vicinity of ≤12
  - K232 values under 2.00 and K268 values under 0.18
  - pyropheophytin a (PPP) <1 % of PPPs (which will increase 6–8 % per year, under ideal storage conditions)
  - around 90% of 1,2-diacylglycerols (DAG) (which will decrease 20–25 % per year, under ideal storage conditions)
- common olive oil defects and how each is caused:
  - fusty
  - musty
  - winey (vinegary)
  - muddy (sediment)
  - rancid
- methods for maintaining oil temperature during storage or distribution
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- environmental issues and controls relevant to the process, including disposal of waste water and defect products
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for the storage containers, storage area and equipment
- recording requirements to ensure traceability and biosecurity of product.

FBPOPR1003 Communicate workplace information

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to gather, convey and receive workplace information and to interact with others at work.

This unit applies to individuals working in a food production environment. It typically targets the production worker responsible for applying basic communication skills to support work practices while working alongside a supervisor in most situations and exercising limited autonomy.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Exchange verbal information	1.1 Identify information requirements according to workplace procedures 1.2 Ask questions to seek or clarify information 1.3 Apply effective listening skills to receive information 1.4 Use interactive skills to communicate effectively with others

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.5 Provide information in a timely and appropriate form
2. Locate and use workplace information	2.1 Locate sources of workplace information according to workplace procedures 2.2 Use information to carry out work responsibilities 2.3 Respond to instructions
3. Complete workplace documentation	3.1 Identify forms required for work operations 3.2 Complete and submit forms as required according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Navigate the world of work	• With guidance, identify main tasks, rights and responsibilities of own role • Meet a limited range of explicit workplace conventions and protocols
Interact with others	• Follow basic communication protocols and conventions • Recognise and respect the different expectations of others
Get the work done	• Follow instructions to complete a limited set of well-defined tasks

Assessment Requirements for FBPOPR1003 Communicate workplace information

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has communicated workplace information covering each of the following points at least once:

- seeking information from people in the workplace to support work roles and responsibilities
- providing information to other people
- locating and using information to respond to a workplace instructions
- correctly completing a workplace form or other required document.

In completing the above points, the individual must demonstrate:

- the use of questions to obtain or clarify information requirements
- interactive communication processes
- communicating effectively.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- communication channels and forums, including consultative arrangements established in the workplace
- common colloquial and technical terms relating to work function
- sources of information and advice relating to own job
- methods used to access information in a food production workplace
- interactive techniques, including active listening, questioning, seeking and responding to feedback, and interacting effectively with others
- recognition of different methods and styles of communication.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - workplace information
  - workplace forms
- relationships (internal and/or external):
  - person/s with whom to communicate.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR1010 Carry out manual handling tasks

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to identify manual handling requirements of a work function, use manual handling aids to lift or move items and identify and assess manual handling risks.

This unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Participate in processes to identify and assess manual handling	1.1 Identify the manual handling components of a work function 1.2 Identify manual handling risks to self and others within level of responsibility and tell supervisor
2. Contribute to manual handling risk minimisation	2.1 Check that manual handling equipment is available and ready for use 2.2 Ensure that personal protective equipment, including clothing and

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	footwear, is fit or use,
3. Plan and conduct manual handling	3.1 Identify sources of risks 3.2 Modify workplace layout and environment within area of control to minimise manual handling risk 3.3 Modify work tasks within area of control to minimise the risk of injury 3.4 Use manual handling aids according to workplace procedures 3.5 Use movement and postures to minimise the risk of injury within the limits of the work environment and the demands of the task

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Interact with others	• Ask simple questions and listen carefully to clarify understanding or seek further information
Get the work done	• Follow simple, clear instructions • Recognise and seek guidance to correct simple problems

Assessment Requirements for FBPOPR1010 Carry out manual handling tasks

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively carried out a minimum of three, different manual handling tasks, including:

- identifying the risks associated with each manual handling task (to self and others)
- eliminating risks, including through movement, posture and effectively using equipment provided
- modifying work to eliminate or minimise risk
- applying safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- different types of manual handling activities, including lifting, reaching, pushing, pulling, holding, restraining, throwing and carrying
- types of injuries that can result from manual handling
- aspects of manual handling that may be risks (hazard identification), including:
  - repetitive or sustained application of force
  - repetitive or sustained awkward posture
  - repetitive or sustained movement
  - application of high force
- manual handling of unstable or unbalanced loads, such as liquids or animals
- workplace procedures and responsibilities for identifying and reporting manual handling hazards
- factors to be considered when assessing manual handling risks relevant to work role (refer to workplace risk assessment sheets and code of practice advice where available), including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - postures
  - movements
  - force required
  - duration and frequency of manual handling activity
  - environmental conditions, such as hot and cold work environments
- procedures and responsibilities for conducting risk assessments of manual handling tasks
- typical options for eliminating or controlling manual handling risks associated with work functions, including principles of hierarchy of control and the advantages and disadvantages of different options
- types of equipment and/or techniques used to eliminate or reduce manual handling risks in the workplace, including when and how to use each type of technique/equipment relevant to manual handling tasks in work role
- level of authority to address health and safety issues related to manual handling and related workplace arrangements for managing safety issues
- sources of advice on manual handling relevant to work function
- equipment available to assist manual handling, related inspections required to identify faulty equipment and related reporting procedures
- personal protective equipment checks including:
  - check for correct fit
  - appropriate for task
  - undamaged
- movement and postures that increase the risk of injury, and movements and postures to minimise the force in the body as applied to specific tasks in the workplace.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - work procedures, including advice on manual handling requirements and safe work practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR1011 Operate automated washing equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated automated washing equipment to clean at least two loads of items to be cleaned to specification, including:

- applying food safety procedures to work practices
- following safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, functions and basic operation of equipment
- operating cycles and application to washing requirements
- required output and quality of cleaning/sanitising to be met by the washing process
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of faults or unacceptable performance of the container washing process, and related troubleshooting procedures within level of responsibility
- health and safety hazards and controls
- common food safety risks in the work area and how they can be controlled
- shutdown and cleaning procedures, including isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting problems
- environmental issues and controls relevant to equipment operation, including waste collection and handling procedures related to the container washing process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recording procedures and responsibilities
- cleaning and sanitisation requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - automated washing equipment, services and accessories
  - items to be washed
  - personal protective equipment
  - cleaning procedures, materials and equipment
- specifications:
  - work procedures, including advice on safe work practices
  - washing schedules and specifications
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR1012 Prepare basic mixes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to combine ingredients and additives in the correct quantities and to operate mixing and blending equipment to prepare basic mixes.

This unit applies to individuals who work under direct supervision. It has application in a variety of food processing operations, involving basic mixes made using pre-mix ingredients, where the knowledge of ingredient sequencing and ingredient characteristics is minimal.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

	inform supervisor 1.3 Use appropriate personal protective equipment as required 1.4 Check that materials are available to meet production requirements 1.5 Identify and measure required ingredients according to workplace procedures 1.6 Enter processing or operating parameters for mixing or blending to meet safety and production requirements 1.7 Check equipment performance and adjust according to operating requirements 1.8 Perform pre-start checks according to operator instructions
2. Operate and monitor the mixing or blending process	2.1 Add ingredients to the mixer in the required quantities to meet recipe specifications 2.2 Start the mixing and blending process according to safe operating procedures 2.3 Monitor equipment to identify variation in operating conditions, and report issues to supervisor 2.4 Monitor the mixing process to confirm that specifications are met 2.5 Identify and report or adjust out-of-specification product and process outcomes 2.6 Maintain a clean and tidy work area according to workplace procedures
3. Shut down the mixing or blending process	3.1 Identify and apply the shutdown procedure safely according to operating procedures 3.2 Identify and report maintenance requirements 3.3 Clean equipment and work area to meet workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret work instructions • Interact with process control screens • Interpret simple workplace forms and records (digital and/or paper-based) • Read best before dates
Writing	• Complete simple workplace records and checklists
Oral communication	• Follow simple, clear instructions • Ask questions to clarify understanding
Numeracy	• Measure ingredients by weight (g, kg) and/or volume (ml, L) according to product specification • Correctly sequence the addition of ingredients to mix

Assessment Requirements for FBPOPR1012 Prepare basic mixes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a basic mix for at least one batch of products, to specification, including:

- applying food safety procedures to work practices
- following safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic functions and operating principles of equipment used
- services required and action to take if services are not available
- the flow of the mixing process and the effect of mix preparation on downstream processes
- ingredient shelf-life and handling requirements
- quality characteristics required of ingredients used
- required attributes of the mixed/blended output
- the effect of the mixing or blending parameters
- common contamination and cross-contamination risks involved with the process and ingredients used
- food safety risks associated with the process, and related control measures, including product compatibility and associated cleaning requirements
- operating requirements and parameters, and corrective action required, where operation is outside specified operating parameters
- procedures and responsibility for reporting production and performance information
- health and safety hazards and controls
- shutdown and cleaning procedures, including isolation, lock-out and tag-out procedures and responsibilities
- environmental issues and controls, including waste/rework collection and handling procedures related to the process

FBPOPR1013 Operate basic equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate basic equipment that requires limited application of equipment and process knowledge, and limited equipment adjustment.

This unit applies to individuals who work under direct supervision. The unit has generic application in a wide range of situations and should be contextualised for equipment not covered by any other specific unit.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

productive work environment	designated work goals are met 6.2 Share knowledge and skills with co-workers through conversations and meetings 6.3 Recognise and seek contributions of individuals of different gender and social and cultural backgrounds 6.4 Ensure work is consistent with workplace standards relating to antidiscrimination and workplace harassment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Learning	• Recognise and seek guidance to correct simple problems
Reading	• Interpret simple work instructions, standard operating procedures and information about the industry
Writing	• Update workplace logs
Oral communication	• Ask simple questions to clarify understanding of instruction or information • Interact effectively with other staff members

Assessment Requirements for FBPOPR1015 Participate effectively in a workplace environment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated effectively in at least one workplace environment, including:

- identifying and accessing information on conditions of employment and workplace policies and procedures
- following safe work practices
- communicating effectively with others in the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace structure and key personnel
- rights and responsibilities of employees as defined in employment conditions
- enterprise policies and procedures relating to work responsibilities, including areas covered by legislation and related responsibilities
- appropriate personal conduct in a work area, including:
  - minimum clothing and personal hygiene standards when entering and moving around the work environment in order to protect both employees and product safety
  - behaving appropriately towards others in the work area
  - basic features of antidiscrimination and workplace harassment
- health and safety hazards and controls
- industrial representation arrangements
- site security arrangements, including responsibility to report when coming on and off site
- site layout, including main facilities, such as canteens, parking areas, storage areas, processing and packing areas, and location of emergency exits and assembly areas
- the main products/product range produced in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- stages and processes used to manufacture and package products
- personal reporting roles and responsibilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - site maps
- specifications:
  - advice on work roles and responsibilities
  - advice on workplace policies, codes of practice, procedures, structure and personnel
  - advice on conditions of employment and entitlements
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR1016 Take and record basic measurements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to use basic measuring equipment and devices, and read and record the results.

This unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy. Applications include simple tests that involve automated measuring devices.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify measurement requirements	1.1 Identify the purpose of the measuring task 1.2 Identify measuring requirements, including frequency and accuracy range 1.3 Confirm that measuring equipment is available and fit for purpose

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Take measurements	2.1 Carry out measuring tasks to requirements and according to safe work practices 2.2 Check measurement results for accuracy 2.3 Identify non-standard or out-of-range results, and report to supervisor 2.4 Record the results of measurements in the required format

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria

Skill	Description
Numeracy	• Measure length (mm, cm, m, km), weight (mg, g, kg, tonne), volume (ml, L), time (sec, min, H) and temperature (°C) • Measure rates per hour (or nominated time) • Identify measurements to two decimal points • Estimate measurements to check accuracy • Read gauges and scales

Assessment Requirements for FBPOPR1016 Take and record basic measurements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has taken and recorded basic measurements for different purposes, including:

- estimating and accurately measuring length, weight, volume, flow and time using the correct units
- using at least three different items of measuring equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of measuring as applied to work responsibilities, and related measuring equipment and units of measurement, including the required accuracy of the measurement and the capability/accuracy level of equipment used
- measuring equipment/device preparation requirements and purpose, including calibration requirements and responsibilities for maintaining accurate measuring equipment/devices
- health and safety hazards associated with using the measuring equipment/device, and related safe operating procedures
- typical/required range for measurement results
- common factors and conditions that could affect the measurement result
- procedures to follow where measurements are out of range, such as repeating the measurement one or more times
- consequences of measurements that are out of range
- responsibilities to report measurement information.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - measuring equipment/devices
  - materials/items to be measured
  - recording and reporting system
- specifications:
  - safe work procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR1017 Follow work procedures to maintain quality

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to follow basic quality assurance practices related to monitoring quality where work involves routine manual processes or operation of simple automated equipment.

This unit applies to individuals who work under direct supervision. It typically targets the production worker responsible for following quality procedures for limited operations.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Monitor quality of work outcome	1.1 Identify quality requirements for work task 1.2 Inspect production input to confirm capability to meet quality requirements 1.3 Follow work procedures to ensure quality outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Identify and report unacceptable inputs and outputs	2.1 Check work area, materials, processes and product routinely to ensure compliance with quality requirements 2.2 Identify unacceptable quality, and take corrective action within the level of responsibility to maintain quality standards 2.3 Report any variation in quality according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Recognise and seek guidance to correct simple problems
Reading	• Interpret simple work instructions and workplace procedures • Interpret quality requirements
Oral communication	• Ask simple questions to clarify understanding of instructions or information
Numeracy	• Check outcome/products meet quality guides (including measuring and counting)

Assessment Requirements for FBPOPR1017 Follow work procedures to maintain quality

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has followed work procedures to maintain quality for at least one batch or production run, including:

- following safe operating procedures
- addressing routine operation issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- quality policy, procedures and responsibilities
- quality personnel and their respective responsibilities, such as internal personnel and external auditors
- requirements of internal and external customers
- sources of advice on quality requirements for own work
- control points for own work, including the purpose of the control point, the risk if not controlled, and the method of control where relevant
- monitoring, inspection and checking procedures related to process control requirements
- types of out-of-specification or unacceptable performance
- procedures for responding to out-of-specification or unacceptable performance/outcomes
- responsibilities for reporting and recording quality information
- recording requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- specifications:
  - quality guidelines
  - safe work procedures
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2002 Inspect and sort materials and product

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to inspect and sort product and incoming materials ready for processing.

This unit has application in a production environment within the food processing industry. Inspection at this level is typically limited to visual inspection.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. This includes identifying and providing solutions to a limited range of predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Inspect materials and product to confirm	1.1 Read or listen to work instructions from supervisor and clarify where required

Assessment Requirements for FBPOPR2002 Inspect and sort materials and product

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has inspected and sorted product and incoming materials, on at least one occasion, including:

- accessing workplace information on materials specification/quality requirements
- selecting, fitting and using personal protective equipment
- inspecting quality of materials to confirm compliance with quality specifications, including:
  - product type and quantity
  - product condition, such as identifying any bruising, discolouration or other damage, confirming product is clean, and checking size and weight
- identifying out-of-specification or non-conforming product and following procedures to separate unacceptable product
- responding to and/or reporting equipment failure within level of responsibility
- maintaining work area to meet housekeeping standards
- completing workplace records as required according to workplace procedures
- procedures for operating materials transfer equipment as required according to workplace procedures
- following work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and standards to be met by the inspection and sorting process, including criteria and specifications as they apply to inspection and sorting requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the relationship between visual inspection and sorting and other inspection procedures, such as those that may be conducted by a laboratory or at subsequent processing stages
- typical causes of unacceptable or out-of-specification product, including causes of product damage that can occur prior to arrival at the plant and as part of the handling process
- the stages that occur in the inspection and sorting process and their effect on product, such as in-line cleaning or conditioning and product or materials transfer stages
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- contamination/food safety risks associated with the sorting process and related control measures
- work health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to equipment operation, including waste collection and handling procedures related to the process
- basic operating principles of equipment used, where relevant, including main equipment components, status and purpose of guards, emergency stop, isolation and lock-out controls, equipment operating capacities and applications
- services required and action to take if services are not available
- recording procedures and responsibilities for inspecting and sorting materials and product.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - product and incoming materials
  - appropriate personal protective equipment and othe equipment
  - reporting and monitoring systems
- specifications:
  - workplace information on materials specification/quality requirements
  - work instructions and procedures
  - basic operating principles of equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2007 Work in a freezer storage area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to enter and work in a freezer storage or cold room area.

This unit applies to individuals working in in a food processing environment who work under general supervision and exercise limited autonomy, with some accountability for their own work.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to enter a freezer storage environment	1.1 Read or listen to work instructions from supervisor and clarify where required 1.2 Identify work health and safety hazards for working in a freezer

Assessment Requirements for FBPOPR2007 Work in a freezer storage area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has prepared to enter and worked in a freezer storage area on at least one occasion, including:

- locating and fitting appropriate PPE
- following procedures to enter and work in a freezer environment to ensure safety of self and others, including carrying out relevant checks and inspections prior to entry as required by workplace procedures
- following procedures to handle product to avoid product damage
- monitoring operating performance of equipment used in the freezer and identifying signs of unsafe or unfit operation
- conducting work in a manner appropriate to minimising risk of contamination
- maintain work area to meet housekeeping standards
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and conditions required in a freezer storage environment, including how temperature parameters are maintained in the freezer/cold room
- safety requirements and hazards associated with entering and working in a freezer storage/cold room area, including required PPE, limitations of PPE, and maximum work duration
- symptoms associated with hypothermia and action to take if these occur
- the effects of freezer/cold room temperatures and frozen condensation on equipment used in a freezer/cold room but designed for room temperature operation, including symptoms that equipment is unsafe or unfit for use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effects of room temperatures on equipment using hydraulic oils designed for freezer/cold room temperatures
- typical freezing rates for product handled, including products stacked on pallets
- handling requirements for moving pallets of frozen product and how this differs from moving pallets of fresh product
- the differences in product stability of pallets loaded with fresh compared with frozen product, and related wrapping requirements
- the effect of freezing on product packaging and related handling requirements
- cleaning requirements for a freezer storage area.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - freezer storage/cold room area
  - stock to be held in frozen storage
- specifications:
  - work roles and responsibilities, training and career information
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2009 Load and unload tankers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to prepare, load and unload transport tankers with bulk product.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare transport tankers for loading	1.1 Read or listen to work instructions from supervisor and clarify where needed 1.2 Identify work health and safety hazards and tell supervisor 1.3 Wear appropriate personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Check the loading schedule to confirm loading requirements 1.5 Confirm that transfer equipment is in operational condition 1.6 Select transfer equipment settings and operating parameters to meet safety and loading requirements 1.7 Locate bulk materials to confirm type, quantity available and clearance for loading 1.8 Confirm priorities for loading to meet delivery requirements
2. Prepare to unload transport tankers	2.1 Check that receivals documentation confirms material type and quantities 2.2 Clear materials for unloading according to workplace procedures and safety requirements 2.3 Identify bulk storage locations, holdings and capacities 2.4 Confirm actual-to-recorded holding levels 2.5 Confirm transfer equipment is in operational condition 2.6 Confirm priorities for unloading to meet delivery requirements
3. Operate and monitor the tanker loading and unloading process	3.1 Start and operate the tanker loading process according to work health and safety and operating procedures 3.2 Monitor equipment to confirm load transfer to correct tanker in correct quantities 3.3 Identify and report variations in equipment operation 3.4 Maintain a clean and tidy workplace according to work health and safety procedures 3.5 Maintain workplace records according to workplace procedures 3.6 Conduct work according to workplace environmental guidelines
4. Complete loading operations	4.1 Select equipment settings to complete loading operation 4.2 Purge in-flight product from lines 4.3 Clean equipment and prepare for further loading according to work health and safety and food safety procedures 4.4 Record information on the loading operation according to workplace procedures 4.5 Identify and report maintenance requirements according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Interpret capacities, quantities and product levels
Reading	• Locate information relevant to product and other loading requirements
Writing	• Record data and observations on written and digital media
Navigate the world of work	• Apply workplace procedures relevant to own responsibilities • Understand main tasks, responsibilities and boundaries of own role, including use of personal protective clothing and equipment, housekeeping standards and procedures, quality requirements and operating procedures
Interact with others	• Communicate and report operational and safety information to relevant persons
Get the work done	• Make routine decisions relating to loading and unloading process • Recognise and respond to non-conforming product and equipment

Assessment Requirements for FBPOPR2009 Load and unload tankers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has loaded and unloaded tankers on at least one occasion, including:

- accessing workplace information relating to loading/unloading requirements
- selecting, fitting and using personal protective equipment
- inspecting loading/unloading equipment for signs of wear
- confirming that tankers are in suitable condition for loading
- checking receivals/despatch documentation to confirm material types, quantities and transfer requirements
- confirming that bulk product/materials meet quality requirements for loading/unloading
- using workplace records and systems to confirm storage holdings and capacities and source/destination for loads
- planning and sequencing loading/unloading to meet delivery requirements/storage capacity and production requirements
- preparing transfer equipment for use
- operating and monitoring the loading/unloading process to confirm that correct quantities are transferred at the required times, to the required locations
- responding to and/or reporting equipment failure within level of responsibility
- completing transfer operations
- completing records of product/materials transfer
- maintaining work area to meet housekeeping standards
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- bulk storage facilities layout and related management systems
- basic operating principles of the system and equipment used, including the features of the tanker loading/unloading and materials transfer systems
- equipment that controls the flow and transfer of bulk materials, equipment operating capacity and the status and purpose of guards
- tanker types and capacities
- planning and scheduling systems and responsibilities to prioritise loading and unloading processes, including the characteristics of materials received and related storage requirements, production requirements and storage capacities
- signs and symptoms of faulty equipment and early warning signs of potential problems including leaks, unusual noises and/or vibrations in pumps
- operating parameters and corrective action required where operation is outside specified operating parameters
- product inspection and procedures within level of responsibility
- steps in preparing transfer equipment for use, including confirming that equipment is clean, lines are purged, isolation or lock-outs are cancelled as required, and any scheduled maintenance has been completed
- steps in confirming that tankers are in suitable condition for loading, including checking cleaning records and confirming that any scheduled maintenance has been carried out
- steps in confirming that correct quantities are transferred at the required times, to the required locations, including monitoring pump loads, flow rates and filter/strainer condition
- clearance procedures, including relevant test methods and action required if results are not within specification or clearance is not provided
- work health and safety hazards and controls, including emergency procedures to respond to hazardous situations
- when and how to use emergency stop functions on equipment
- contamination risks and controls, including cross-contamination risks, product compatibility and storage requirements
- isolation, lock-out and tag-out procedures and responsibilities
- environmental issues associated with bulk liquid materials transfer, including consequences of spills and appropriate control/containment procedures
- recording requirements and procedures, including related receivals and despatch documentation
- cleaning procedures for loading and unloading tankers.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - loading/unloading schedules and related receivals and/or despatch documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - tankers, storage facilities, materials transfer equipment and related equipment and services
  - materials for loading/unloading
  - cleaning procedures, materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information about equipment capacity and operating parameters and tanker types and capacities
  - loading/unloading information recording system and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2010 Work with temperature controlled stock

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to store and retrieve temperature controlled stock from appropriate storage facilities.

This unit applies to individuals who work in controlled temperature environments under general supervision and exercise limited autonomy with some accountability for their own work.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Store stock to meet temperature control requirements	1.1 Read or listen to work instructions from supervisor and clarify where needed 1.2 Identify work health and safety hazards and tell supervisor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear appropriate personal protective equipment and ensure correct fit 1.4 Identify goods requiring temperature control according to workplace requirements 1.5 Locate goods in correct storage areas to meet storage temperature, stores handling and stock rotation requirements 1.6 Record stores information according to workplace procedures
2. Monitor and maintain temperature of stock within specifications	2.1 Monitor stock temperature to confirm temperature is within specified limits 2.2 Monitor storage areas to confirm temperature is within storage zone limits 2.3 Monitor residence time in temperature controlled stores to meet stock control requirements 2.4 Identify and report out-of-specification storage temperatures and take corrective action according to workplace procedures
3. Transfer temperature controlled stock	3.1 Handle and transfer goods to maintain temperature control and meet stock rotation requirements according to work health and safety and food safety requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Identify stock weights and quantities • Read instrumentation gauges
Reading	• Identify and locate stock • Identify requirements from basic order forms • Interpret workplace procedures and specifications
Writing	• Complete records of stock receival and transfer
Navigate the world of	• Apply workplace procedures relevant to own responsibilities • Understand main tasks, responsibilities and boundaries of own

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
work	role, including use of personal protective clothing and equipment, housekeeping standards and procedures, quality requirements and operating procedures • Take steps to develop skills and knowledge of stock
Interact with others	• Communicate and report operational and safety information to relevant persons • Select and use appropriate terminology when communicating with personnel • Participate in conversations relevant to role by responding and explaining as required
Get the work done	• Make routine decisions relating to freshness and handling of stock • Recognise and respond to non-conforming stock • Use digital technologies including thermometers and temperature probes

Assessment Requirements for FBPOPR2010 Work with temperature controlled stock

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has worked with temperature controlled stock on at least one occasion, including:

- accessing workplace information to determine stock handling and storage requirements
- identifying storage requirements, including temperature limits, minimum duration at given temperatures, and segregation and co-storage requirements
- identifying temperature controlled storage facilities and temperature zones available
- selecting, fitting and using PPE
- using materials handling equipment in a temperature controlled environment as required to undertake work functions
- following procedures to measure core and surface temperature of stock
- reading instrumentation
- identifying and reporting out-of-specification temperatures in stock and storage facilities
- taking corrective action in response to out-of-specification temperatures, including implementation of procedures to segregate damaged or potentially unsafe stock
- completing records of stock receival and transfer as required
- maintaining work area to meet workplace cleaning standards
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work health and safety hazards and controls, including the purpose and limitations of PPE
- temperature controlled storage facilities and capacities available in the work area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- temperature control requirements of stock handled in the work area, including acceptable temperature ranges and consequences of failing to meet these ranges and, where required, requirements for gradual temperature change
- stock handling procedures for receiving and locating stock within a store, including stock rotation and procedures for identifying, segregating and disposing of damaged or potentially unsafe stock
- stock handling procedures for transferring temperature controlled stock from a temperature controlled environment, including maximum duration stock can be held outside a controlled environment
- food safety and quality consequences of stock temperature control requirements not being met
- monitoring procedures and instrumentation, including use of thermometers or other temperature measuring instrumentation
- notification, recording and reporting requirements for temperature controlled stock
- operating procedures for goods handling equipment as required
- workplace cleaning standards for the work area
- recording requirements and procedures for working with temperature controlled stock.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - controlled temperature storage facilities
  - stock requiring storage
  - load shifting equipment as required
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - temperature storage specifications
  - stock information recording system and procedures
  - stock handling and rotation systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2023 Operate a packaging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a packaging process or sub-system.

This unit applies to individuals who operate and monitor a packaging process and associated equipment in a food processing packaging environment. The unit applies in a food processing packaging environment where no other specific packaging unit is available.

A packaging process may relate to primary and secondary packaging activities. It typically requires the operation of a series of related items of equipment to achieve the required outcome.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in	1.1 Read or listen to work instructions from supervisor and clarify

processing area	where needed 1.2 Identify work health and safety hazards and tell supervisor 1.3 Wear appropriate personal protective equipment (PPE) and ensure correct fit 1.4 Confirm that packaging components and consumables, materials and items to be packaged are available to meet operating requirements 1.5 Identify and confirm cleaning and maintenance requirements and status according to workplace procedures
2. Prepare the equipment and process for operation	2.1 Fit and adjust machine components and related attachments 2.2 Enter operating parameters to meet safety and production requirements 2.3 Load or position materials, product and packaging components and consumables according to food safety and operating requirements 2.4 Check and adjust equipment performance according to operating and job requirements 2.5 Carry out pre-start checks according to operator instructions
3. Operate and monitor the process	3.1 Start, operate and monitor the process for variation in operating conditions according to work health and safety and operating procedures 3.2 Monitor the process to confirm that specifications are met 3.3 Identify, rectify and report out-of-specification equipment, product or process outcomes according to workplace requirements
4. Shut down the process	4.1 Identify the appropriate shutdown procedure 4.2 Shut the process down safely according to operating procedures 4.3 Report maintenance requirements according to workplace procedures 4.4 Maintain workplace records according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace and standard operating procedures relevant to job role • Interpret production requirements
Writing	• Record operating, routine maintenance and shutdown information on paper-based and electronic media
Numeracy	• Monitor and interpret production and process control indicators and data • Monitor supply and flow of materials to and from the process
Navigate the world of work	• Apply workplace procedures to own role and responsibilities • Identify skills, knowledge and experience required for performing own role in the workplace • Ask questions to clarify understanding or seek further information
Interact with others	• Communicate and report operational and safety information to relevant personnel
Get the work done	• Access and interpret process control panels and system • Maintain a clean and hazard-free work area • Identify out-of-specification standards and maintain quality specifications • Confirm equipment status and condition • Interpret process and equipment information to monitor process and respond to abnormal performance and variations

Assessment Requirements for FBPOPR2023 Operate a packaging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has operated a packaging process on at least one occasion, including:

- accessing workplace information to identify packaging requirements
- selecting, fitting and using PPE
- confirming supply of necessary packaging components/consumables, materials and services
- conducting pre-start checks, including:
  - inspecting equipment condition to identify any signs of wear
  - setting coders and printers
  - selecting appropriate equipment settings and/or related parameters
  - cancelling isolation or lock-outs as required
  - confirming that equipment is clean and correctly configured for packaging requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been completed
  - confirming that all safety guards are in place and operational
- starting, operating, monitoring and adjusting packaging equipment to achieve required outcomes, including:
  - packaging components/consumables and/or product
  - monitoring control points (for example, weights, codes, placement, glue temperatures, alignment and appearance, configuration and seal integrity) as required to confirm process remains within specification
- monitoring supply and flow of materials to and from the process
- taking corrective action in response to out-of-specification results
- responding to and/or reporting equipment failure within level of responsibility
- locating emergency stop functions on equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- following isolation and lock-out/tag-out procedures as required to take packaging equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- completing workplace records as required
- maintaining work area to meet housekeeping standards
- using process control systems according to enterprise procedures
- cleaning and sanitising equipment according to enterprise procedures
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the packaging process, including:
  - the purpose and characteristics required of packaging materials used
  - the principles of the packaging process used (where methods involve vacuum or map packaging, it includes an understanding of the effect of modified atmosphere on product shelf-life)
- product and packaging coding requirements and related legal requirements, including product weight
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of processes supplying the packaging process and the effect of outputs on downstream processes
- quality characteristics required of the packaging process, including seal integrity requirements
- effect of variation in inputs, including packaging components/consumables, materials and/or services, on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam-up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the packaging process, including visual inspecting, and measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks related to stages in the packaging process, and related control measures
- common causes of variation and corrective action required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work health and safety hazards and controls relevant to the packaging process
- requirements of different shutdowns as appropriate to the packaging process, including;
  - emergency and routine shutdowns and procedures to follow in the event of a power outage
  - conducting basic equipment referencing where required
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitation procedures for packaging equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - packaging and related equipment and services
  - materials to be packaged and packaging components/consumables
  - sampling schedules, test procedures and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - specifications, control points and operating parameters
  - documentation and recording procedures
  - cleaning procedures, materials and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2028 Operate a mixing or blending process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to combine ingredients and additives in the correct quantities and sequence, and to operate and shut down mixing and blending equipment to achieve the required mix characteristics.

This unit applies to individuals who work under general supervision and exercise limited autonomy in the food processing industry. Mixes may include concentrated pre-mixes or bulk blends. The output of this process may be a product requiring further processing or for external use.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR2028 Operate a mixing or blending process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has operated a mixing or blending process on at least one occasion, including:

- accessing workplace information to identify mixing/blending requirements
- selecting, fitting and using personal protective clothing and/or equipment
- confirming supply of necessary materials and services
- conducting pre-start checks, including:
  - inspecting equipment condition to identify any signs of wear
  - selecting appropriate settings and/or related parameters
  - cancelling isolation or lock-outs as required
  - confirming that equipment is clean and correctly configured for processing requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been carried out
  - confirming that all safety guards are in place and operational
- adding/loading materials in correct quantities and sequence, including monitoring automatic ingredient addition and/or manual addition
- starting, monitoring and adjusting mixing or blending process equipment to achieve required outcomes, including monitoring flow rates/quantity, time or temperature and mix/blending settings
- monitoring control points and conducting inspections to confirm process remains within specification
- monitoring supply and flow of ingredients and additives to and from the mixing or blending process
- pacing mixing/blending to meet production requirements
- taking corrective action in response to out-of-specification results
- responding to and/or reporting equipment failure within level of responsibility

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- locating emergency stop functions on equipment
- following isolation and lock-out or tag-out procedures to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- completing workplace records
- maintaining work area to meet housekeeping standards
- using process control systems according to workplace procedures
- labelling and storing pre-mixes and/or mixes according to workplace procedures
- cleaning and sanitising equipment according to workplace procedures
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of preparing mixes and blends, including the characteristics and basic function of ingredients and additives used, method and sequence of ingredient addition required to achieve required blend characteristics and, where relevant, the purpose of conditioning, maturation or holding stages required prior to further processing of the mix
- specific gravity and bulk density as appropriate for ingredients used
- basic operating principles of mixing/blending equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - awareness of calibration schedules for scales and related weighing/measuring equipment
- services required and action to take if services are not available
- the flow of the mixing process and the effect of mix preparation on downstream processes
- procedures for requisitioning, receiving and returning ingredients from stores
- ingredient-handling requirements and shelf-life or coding
- quality characteristics required of ingredients and additives and their effect on mixing process performance, including methods used to condition or prepare ingredients prior to addition
- methods used to monitor the blending or mixing process, including inspecting, measuring and testing, by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements, including:
  - flow rates
  - ingredient/additive addition sequence
  - times/temperatures and agitator speeds
  - required characteristics of blend, including viscosity, appearance and temperature

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- required attributes of the mixed or blended output, including chemical, texture and flavour profiles as required
- the effect of the mixing or blending parameters, including temperature and length of mix time on mixing outcome
- contamination and food safety risks associated with the process and related control measures, including product compatibility and cross-contamination risks and associated cleaning requirements, as well as common allergens used in mixes prepared
- operating requirements and parameters, and corrective action required when operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required
- work health and safety hazards and controls relevant to the mixing and blending process
- requirements of different shutdowns as appropriate to the blending or mixing process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to the mixing and blending process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the mixing or blending process, including waste or rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- characteristics of solutions, suspensions and emulsions for the mixing and blending process
- product labelling and storage requirements for the mixing and blending process
- cleaning and sanitation procedures for mixing or blending equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - mixing/blending process equipment, services and related storage facilities as required
  - ingredients and additives required for the mixing/blending process
  - sampling schedules and test procedures and equipment as required
  - cleaning procedures, materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems, production schedules, batch/recipe instructions

FBPOPR2034 Operate an evaporation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down an evaporation process.

This unit applies to individuals who work under general supervision and exercise limited autonomy in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of an evaporation process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR2034 Operate an evaporation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has operated an evaporation process on at least one occasion, including:

- accessing workplace information to identify processing requirements
- selecting, fitting and using personal protective clothing and/or equipment
- confirming supply of necessary materials and services
- preparing materials for an evaporation process
- conducting pre-start checks, including:
  - inspecting equipment condition to identify any signs of wear
  - selecting appropriate settings and/or related parameters
  - cancelling isolation or lock-outs as required
  - confirming that equipment is clean and correctly configured for processing requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been carried out
  - confirming that all safety guards are in place and operational
- starting, operating, monitoring and adjusting evaporation equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - temperatures
  - vacuum
  - motor amperage
  - condensate flow
  - steam flow and pressure
  - throughput
  - time/speed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - evaporated product characteristics
- monitoring supply and flow of materials to and from the evaporation process
- taking corrective action in response to out-of-specification results
- reporting and/or recording corrective action as required
- locating emergency stop functions on equipment
- following isolation and lock-out/tag-out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- preparing equipment for cleaning
- responding to and/or reporting equipment failure within level of responsibility
- completing workplace records as required
- maintaining work area to meet housekeeping standards
- using process control systems according to workplace procedures
- cleaning and sanitising equipment according to workplace procedures
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of evaporation, including:
    - an understanding of the principles of steam
    - the relationship between boiling point and pressure as applied to evaporation
    - the changes that occur to product as it moves through the evaporation process
- basic operating principles of evaporation equipment, including:
    - main equipment components
    - status and purpose of guards
    - equipment operating capacities and applications
    - the purpose and location of sensors and related feedback instrumentation
- quality characteristics to be achieved by the evaporation process
- the flow of the evaporation process and the effect of product output on downstream processes
- quality requirements of materials and the effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the evaporation process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures relevant to the evaporation process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- common causes of variation and corrective action required
- work health and safety hazards and controls relevant to the evaporation process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the evaporation process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitation procedures for evaporation equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - evaporation process and related equipment and services
  - materials to be evaporated
  - sampling schedules and test procedures and equipment
  - cleaning procedures, materials and equipment
- specifications:
  - work procedures including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule, batch/recipe instructions
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2074 Carry out manual handling tasks

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify manual handling requirements of a work function, use manual handling aids to lift or move items, and identify and assess manual handling risks.

This unit applies to individuals who work under supervision in most situations and exercise limited autonomy.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Participate in processes to identify and assess manual handling	1.1 Identify the manual handling components of a work task 1.2 Identify manual handling risks to self and others within level of responsibility, and inform supervisor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Contribute to manual handling risk minimisation	2.1 Determine approximate weight of item to be handled 2.2 Identify whether manual handling equipment is required and, if so, select appropriate equipment 2.3 Check that manual handling equipment is available and ready for use 2.4 Ensure that personal protective equipment (PPE), including clothing and footwear, is fit for use 2.5 Follow safe work procedures
3. Plan and conduct manual handling	3.1 Identify hazards involved with manual handling task 3.2 Use appropriate PPE and clothing, and ensure correct fit 3.3 Modify workplace layout and environment within area of control to minimise manual handling risk 3.4 Modify work tasks within area of control to minimise the risk of injury 3.5 Use manual handling aids according to workplace procedures 3.6 Use movement and postures to minimise the risk of injury within the limits of the work environment and the demands of the task

Assessment Requirements for FBPOPR2074 Carry out manual handling tasks

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively carried out a minimum of three different manual handling tasks, including:

- identifying the risks (to self and others) associated with each manual handling task
- eliminating risks, including through movement, posture and effectively using equipment provided
- modifying work to eliminate or minimise risk
- applying safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- different types of manual handling activities, including lifting, reaching, pushing, pulling, holding, restraining, throwing and carrying
- types of injuries that can result from manual handling
- aspects of manual handling that may be risks (hazard identification), including:
  - repetitive or sustained application of force
  - repetitive or sustained awkward posture
  - repetitive or sustained movement
  - application of high force
- manual handling of unstable or unbalanced loads, such as liquids or animals
- workplace procedures and responsibilities for identifying and reporting manual handling hazards
- factors to be considered when assessing manual handling risks relevant to work role (referring to workplace risk assessment sheets and code of practice advice where available), including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - postures
  - movements
  - force required
  - duration and frequency of manual handling activity
  - environmental conditions, such as hot and cold work environments
- procedures and responsibilities for conducting risk assessments of manual handling tasks
- typical options for eliminating or controlling manual handling risks associated with work functions, including principles of hierarchy of control and the advantages and disadvantages of different options
- types of equipment and/or techniques used to eliminate or reduce manual handling risks in the workplace, including when and how to use each type of technique/equipment relevant to manual handling tasks in work role
- level of authority to address health and safety issues related to manual handling and related workplace arrangements for managing safety issues
- sources of advice on manual handling relevant to work function
- equipment available to assist manual handling, related inspections required to identify faulty equipment, and related reporting procedures
- personal protective equipment (PPE) checks, including checking:
  - correct fit
  - appropriate for task
  - undamaged
- movement and postures that increase the risk of injury, and movements and postures to minimise the force in the body as applied to specific tasks in the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - personal protective clothing and equipment
  - work procedures, including advice on manual handling requirements and safe work practices
  - manual handling equipment

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2075 Work effectively in the food processing industry

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to work effectively in the food processing industry by applying an understanding of the structure of the industry, workplace policies and procedures, and work conditions relevant to the level of responsibility.

This unit applies to individuals who perform a defined range of routine and predictable activities under general supervision in any sector of the food processing industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOPR2075 Work effectively in the food processing industry

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked effectively in the food processing industry in a specified role over a period of at least one shift, including:

- applying safe work procedures
- communicating effectively with supervisor and team members.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace structure and key personnel
- rights and responsibilities of employees as defined in employment conditions
- workplace policies and procedures relating to work responsibilities, including areas covered by legislation and related responsibilities
- appropriate personal conduct in a work area, including minimum clothing and personal hygiene standards when entering and moving around a food processing area in order to protect both employees and product safety, and behaving appropriately towards others in the work area
- industrial representation arrangements
- site security arrangements, including responsibility to report when coming on-site and off-site
- the main products/product range produced in the workplace
- stages and processes used to manufacture and package products
- health and safety hazards and controls relevant to the workspace
- food safety risks and controls relevant to product
- critical control point (CCP) approach to monitoring food processing
- personal reporting roles and responsibilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - site maps
  - access to a workplace
- specifications:
  - workplace policies, codes of practice, procedures, structure and personnel
  - work roles and responsibilities, training and career information
  - conditions of employment and entitlements
- personnel:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2076 Inspect and sort materials and product

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to inspect and sort incoming products and materials, such as fruit or vegetables, ready for processing.

This unit has application in a production environment within a processing industry. Inspection at this level is typically limited to visual inspection.

This unit applies to individuals who work under general supervision.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOPR2076 Inspect and sort materials and product

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has inspected and sorted at least 50 items of incoming materials and/or workplace products, including:

- following safe work procedures
- following quality requirements
- using standards that identify quality criteria of product or material
- identifying out-of-specification or non-conforming products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and standards to be met by the inspection and sorting process, including criteria and specifications as they apply to inspection and sorting requirements
- the relationship between visual inspection and sorting and other inspection procedures, such as those that may be conducted by a laboratory or at subsequent processing stages
- typical causes of unacceptable or out-of-specification product, including causes of product damage that can occur prior to arrival at the plant and as part of the handling process
- the stages that occur in the inspection and sorting process, and their effect on product, such as in-line cleaning or conditioning and product or materials transfer stages
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- contamination/cross-contamination risks associated with the sorting process, and related control measures
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- procedures and responsibility for reporting production and performance information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental issues and controls relevant to equipment operation, including waste collection and handling procedures related to the process
- basic operating principles of equipment used, where relevant, including main equipment components, status and purpose of guards, emergency stop, isolation and lock-out controls, equipment operating capacities and applications
- services required, and action to take if services are not available
- recording procedures and responsibilities for inspecting and sorting materials and product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - product and incoming materials
  - appropriate personal protective equipment and clothing
  - reporting and monitoring systems
- specifications:
  - workplace information on materials specification/quality requirements
  - work instructions and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2077 Operate a bulk dry goods transfer process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to receive and transfer bulk (dry) raw materials to storage areas.

The unit applies to individuals who work under general supervision in a food processing production environment. It typically applies to workers responsible for the operation and monitoring of a dry ingredients transfer process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR2077 Operate a bulk dry goods transfer process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a bulk dry goods transfer process to transfer at least one delivery of dry goods to a storage area, including:

- applying food safety procedures to work practices
- following safe work procedures
- addressing routine transfer issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bulk dry materials storage layout, capacities and related management systems
- basic operating principles of equipment, such as the system of sensors, valves, pipework and related equipment that controls the transfer of bulk dry materials, equipment operating capacity and the status and purpose of guards
- planning and scheduling systems and responsibilities to prioritise materials transfer processes, including the characteristics of materials received and related storage requirements, production requirements and storage capacities
- signs and symptoms of faulty equipment, and early warning signs of potential problems
- operating parameters, and corrective action required where operation is outside specified operating parameters
- health and safety hazards and controls, including the risk of spontaneous combustion, and dust control
- common microbiological, physical, chemical and allergen hazards related to dry goods, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- contamination/cross-contamination and food safety risks and controls, including product compatibility and storage requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- isolation, lock-out and tag-out procedures and responsibilities
- product inspection procedures within level of responsibility, including types of pest infestation and common contamination relevant to dry materials transferred
- procedures for separating and handling non-conforming or unacceptable product
- clearance procedures, such as relevant test methods, and action required if results are not within specification or clearance is not provided
- environmental issues associated with dry goods handling and storage
- recording requirements and procedures for dry goods handling and storage, including procedures to record traceability of product
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - storage locations, capacities and bulk receival equipment capacity and operating parameters
  - bulk transfer system, equipment and services
  - materials to be transferred
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - documentation and recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2078 Work in a freezer storage area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to enter and work in a freezer storage or cold room area.

This unit applies to individuals working in a processing environment who work under general supervision.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to enter a freezer storage environment	1.1 Read or listen to work instructions from supervisor and clarify, where required 1.2 Identify health and safety hazards and quality risks in freezer storage area, and inform supervisor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear appropriate personal protective equipment according to safe work requirements 1.4 Confirm clothing and footwear are correctly fitted prior to entering freezer 1.5 Carry out checks and inspections of freezer storage area
2. Identify and monitor equipment operation	2.1 Identify the effects of freezing temperatures on equipment 2.2 Monitor equipment when in use in freezer to ensure effective functioning
3. Handle frozen product safely	3.1 Identify handling requirements for frozen product according to workplace procedures 3.2 Handle frozen product safely according to workplace requirements 3.3 Use safe manual handling techniques to move frozen products 3.4 Complete workplace records in line with workplace requirements
4. Respond to emergencies	4.1 Identify signs and symptoms of exposure to low temperatures 4.2 Take appropriate action to minimise effects of exposure on self and others

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace procedures and safety information • Identify product types and storage requirements
Numeracy	• Identify product weights (kg) for manual lifting purposes • Interpret storeroom temperature gauges (°C) • Count product quantities • Interpret freezing rates for products

Assessment Requirements for FBPOPR2078 Work in a freezer storage area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked in a freezer storage area and handled frozen products over a period of at least two hours, including:

- following safe work procedures and taking appropriate breaks
- applying quality standards to work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and conditions required in a freezer storage environment, including how temperature parameters are maintained in the freezer/cold room
- safety requirements and hazards associated with entering and working in a freezer storage/cold room area, including required personal protective equipment (PPE), limitations of PPE, and maximum work duration
- contamination/cross-contamination and quality risks associated with frozen products at workplace
- the effects of freezer/cold room temperatures and frozen condensation on equipment used in a freezer/cold room but designed for room temperature operation, including symptoms that equipment is unsafe or unfit for use
- effects of room temperatures on equipment using hydraulic oils designed for freezer/cold room temperatures
- typical freezing rates for product handled, including products stacked on pallets
- symptoms associated with hypothermia, and action to take if these occur
- handling requirements for moving pallets of frozen product, and how this differs from moving pallets of fresh product
- the differences in product stability of pallets loaded with fresh compared with frozen product, and related wrapping requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the effect of freezing on product packaging and related handling requirements
- cleaning requirements for a freezer storage area
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a freezer storage work area or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - freezer storage/cold room area
  - stock to be held in frozen storage
- specifications:
  - work procedures, including advice on safe work practices and quality requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2079 Work with temperature controlled stock

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to store and retrieve temperature controlled stock from appropriate storage facilities.

This unit applies to individuals who work in controlled temperature environments under general supervision.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Store stock to meet temperature control requirements	1.1 Receive work instructions and clarify, where required 1.2 Identify health and safety hazards, and inform supervisor 1.3 Wear appropriate personal protective equipment and ensure correct fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Identify goods requiring temperature control according to workplace requirements 1.5 Locate goods in correct storage areas to meet storage temperature, stores handling and stock rotation requirements 1.6 Record storage information according to workplace procedures
2. Monitor and maintain temperature of stock within specifications	2.1 Monitor stock temperature to confirm temperature is within specified limits 2.2 Monitor storage areas to confirm temperature is within storage zone limits 2.3 Monitor residence time in temperature controlled stores to meet stock control requirements 2.4 Identify and report out-of-specification storage temperatures, and take corrective action according to workplace procedures
3. Transfer temperature controlled stock	3.1 Handle and transfer goods to maintain temperature control and meet stock rotation requirements according to health and safety requirements 3.2 Complete records in line with workplace requirements

Foundation Skills

is section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace procedures and specifications • Identify requirements from basic order forms
Numeracy	• Identify stock weights and quantities • Read gauges and scales

Assessment Requirements for FBPOPR2079 Work with temperature controlled stock

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked with temperature controlled stock to correctly store at least one delivery of new stock, and rotate and monitor storage of existing stock, including:

- applying quality standards to work practices
- following safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work health and safety hazards and controls, including the purpose and limitations of personal protective equipment (PPE)
- temperature controlled storage facilities and capacities available in the work area
- temperature control requirements of stock handled in the work area, including acceptable temperature ranges and consequences of failing to meet these ranges, and, where required, requirements for gradual temperature change
- stock handling procedures for receiving and locating stock within a store, including stock rotation and procedures for identifying, segregating and disposing of damaged or potentially unsafe stock
- stock handling procedures for transferring temperature controlled stock from a temperature controlled environment, including maximum duration stock can be held outside a controlled environment
- contamination and cross-contamination risks and controls
- consequences to quality of product if stock temperature control requirements are not met
- monitoring procedures and instrumentation, including use of thermometers or other temperature measuring instrumentation
- notification, recording and reporting requirements for temperature controlled stock

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating procedures for goods handling equipment as required
- safe work procedures for working with temperature controlled stock
- recording requirements for traceability.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - controlled temperature storage facilities
  - stock requiring storage
  - load shifting equipment as required
- specifications:
  - work procedures, including advice on safe work practices, quality and environmental requirements
  - temperature storage specifications
  - stock information recording system and procedures
  - stock handling and rotation systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2080 Operate a blending, sieving and bagging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a blending, sieving and bagging process.

This unit applies to individuals who work under general supervision blending and bagging dry goods as bulk blends or for use in food service. This process is typically used for the blending and packaging of low-moisture products, including dry flavours and marinades, donut mix, cake mix, bakery ingredients, batters, cheese powders, spice mixes and herb blends.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in processing area	1.1 Confirm work instructions from supervisor and clarify, where required 1.2 Confirm that materials and equipment are available to meet

Assessment Requirements for FBPOPR2080 Operate a blending, sieving and bagging process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a blending, sieving and bagging process to produce at least one batch of bagged products to specification, including:

- monitoring control points and conducting inspections to confirm process remains within specification, including:
  - characteristics of blend
  - flow to sieves
  - sieve/screen condition
  - supply of packaging components/consumables
  - integrity of finished seals (stitching or thermal)
- applying food safety procedures to work practices
- following safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the process, including the method and sequence of ingredient addition required to achieve required blend characteristics
- the purpose of packaging and the properties required of packaging materials used, coding requirements, and related legal requirements, including product weight
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required, and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quality characteristics required of process outputs, including packaging quality and seal integrity as required
- effect of variation in inputs, including ingredient quality/condition, packaging components/consumables and/or services, on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems, including sieve or screen damage
- methods used to monitor the process, including monitoring blend characteristics and weights
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures, including product compatibility, and associated cleaning requirements
- common causes of variation, and corrective action required, including procedures to manage the reprocessing (return to blend) of the first part of the blend to minimise non-conforming output
- health and safety hazards and controls relevant to the blending, sieving and bagging process
- requirements of different shutdowns as appropriate to the process and workplace production/packaging requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for blending, sieving and bagging equipment
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - blending, sieving and bagging equipment and services
  - personal protective equipment
  - materials to be processed, and packaging components/consumables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule/batch specifications, control points and operating parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2081 Measure non-bulk ingredients

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to weigh, measure and label non-bulk ingredients to meet production requirements.

This unit applies to individuals who work under general supervision in a production environment within the food processing industry. It typically applies to the production worker responsible for the dispensing of ingredients in order to support production operations. Ingredients may be highly concentrated materials, including colours, flavours, buffered acids and preservatives.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FBPOPR2081 Measure non-bulk ingredients

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has accurately measured and labelled at least five non-bulk ingredients by weight and/or volume, to meet specification requirements, including:

- conducting pre-start checks on measuring equipment, including:
  - inspecting the condition and cleanliness of equipment and utensils
  - taring scales and carrying out any related procedures to confirm that equipment is accurately calibrated and fit for use
- following safe work procedures, including use of breathing apparatus and fume cabinets
- identifying out-of-specification or unacceptable ingredient condition
- taking corrective action in response to out-of-specification results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- quality characteristics and related handling requirements of raw materials/ingredients and additives used, including best-by/use-by codes, ingredient compatibility and common allergens used
- storage requirements and shelf-life of ingredients and additives, including ingredients with special storage and handling requirements and including hydroscopic ingredients
- relevant legislative responsibilities and workplace systems for recording and tracing the use of ingredients and additives, and related workplace labelling requirements and purpose
- the relationship between the dispensing process and related operations, including accuracy and tolerance and consequence of error
- purpose, measuring and accuracy capacity of instrumentation, and related equipment calibration responsibilities and procedures
- control points in the dispensing process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contamination/cross-contamination and food safety issues associated with dispensing, and related control measures
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- cleaning, care and storage of equipment and instrumentation used for measuring non-bulk ingredients
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the dispensing process, including waste collection and handling procedures related to the process
- recording requirements for traceability.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - measuring instrumentation and equipment
  - personal protective equipment
  - containers, bags, labelling and storage facilities
  - non-bulk raw materials, ingredients and additives to be measured
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems, production schedules, batch and recipe instructions
  - information on equipment and instrumentation capacity and operating parameters
  - recording requirements
  - cleaning and sanitisation materials and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2082 Operate a mixing or blending process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to combine ingredients and additives in the correct quantities and sequence, and to operate and shut down mixing and blending equipment to achieve the required mix characteristics.

This unit applies to individuals who work under general supervision in a processing industry. Mixes may include concentrated pre-mixes or bulk blends. The output of this process may be a product requiring further processing or for external use.

This unit should not be delivered in a qualification with FBPOPR2087 Operate a mixing or blending and cooking process

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FBPOPR2082 Operate a mixing or blending process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a mixing or blending process to produce at least one blended product to meet specifications, including:

- conducting pre-start checks, including:
  - inspecting equipment condition to identify any signs of wear
  - selecting appropriate settings and/or related parameters
  - cancelling isolation or lock-outs as required
  - confirming that equipment is clean and correctly configured for processing requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been carried out
  - confirming that all safety guards are in place and operational
- adding/loading materials in correct quantities and sequence, including monitoring automatic ingredient addition and/or manual addition
- applying relevant product safety practices
- following safe work procedures
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of preparing mixes and blends, including the characteristics and basic function of ingredients and additives used, method and sequence of ingredient addition required to achieve required blend characteristics and, where relevant, the purpose of conditioning, maturation or holding stages required prior to further processing of the mix

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specific gravity and bulk density as appropriate for ingredients used
- basic operating principles of mixing/blending equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - awareness of calibration schedules for scales and related weighing/measuring equipment
- services required, and action to take if services are not available
- the flow of the mixing process and the effect of mix preparation on downstream processes
- ingredient-handling requirements and shelf-life or coding
- quality characteristics required of ingredients and additives and their effect on mixing process performance, including methods used to condition or prepare ingredients prior to addition
- methods used to monitor the blending or mixing process, including inspecting, measuring and testing, by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements, including:
  - flow rates
  - ingredient/additive addition sequence
  - times/temperatures and agitator speeds
  - required characteristics of blend, including viscosity, appearance and temperature
- required attributes of the mixed or blended output, including chemical, texture and flavour profiles as required
- the effect of the mixing or blending parameters, including temperature and length of mix time on mixing outcome
- contamination/cross-contamination and relevant product safety risks associated with the process, and related control measures, including product compatibility and cross-contamination risks and associated cleaning requirements, as well as common allergens used in mixes prepared
- operating requirements and parameters, and corrective action required when operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to the mixing and blending process
- requirements of different shutdowns as appropriate to the blending or mixing process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to the mixing and blending process
- procedures and responsibility for reporting production and performance information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental issues and controls relevant to the mixing or blending process, including waste or rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- characteristics of solutions, suspensions and emulsions for the mixing and blending process
- cleaning and sanitisation procedures for mixing or blending equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - mixing/blending process equipment and related services
  - personal protective clothing
  - ingredients and additives required for the mixing/blending process
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, product safety, quality and environmental requirements, stock flow systems, production schedules, batch/recipe instructions
  - information on equipment capacity and operating parameters
  - production schedule/batch/recipe specifications, control points and processing parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2083 Operate a baking process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down processes used to bake and depan baked products.

This unit applies to individuals who work under general supervision in a food processing production workplace. It typically applies to the production worker responsible for producing baked products that may include pastry, biscuits, cake and other dough-based products that may be fresh or frozen.

This unit does not apply to production of bread. For bread baking, refer to the relevant plant baking and/or retail baking units of competency.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare the baking equipment and process for operation	1.1 Confirm materials are available to meet production requirements 1.2 Wear appropriate personal protective clothing and ensure correct fit 1.3 Prepare materials and pans to meet production requirements 1.4 Confirm services are available and ready for operation 1.5 Set the process to meet safety and production requirements 1.6 Conduct pre-start checks according to operator instructions
2. Operate and monitor equipment	2.1 Start, operate and monitor the baking process for variation in operating conditions 2.2 Load product and bake product to specification according to food safety and operating requirements 2.3 Identify, adjust and report out-of-specification equipment, product or process outcomes according to workplace requirements 2.4 Follow and apply workplace cleaning procedures and environmental requirements
3. Shut down the baking process	3.1 Identify the appropriate shutdown procedure 3.2 Shut down the process safely according to operating procedures 3.3 Identify and report maintenance requirements 3.4 Maintain workplace records in appropriate format

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace and standard operating procedures relevant to work task • Interpret production requirements
Writing	• Record processing data using digital and/or paper-based formats

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a baking process to bake at least one batch of product to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of each stage of the baking process, including the stages of the baking process and changes that occur in the product, including starch gelatinisation, the effect of variables (including time, temperature and/or humidity), and oven zones as appropriate to oven type
- basic operating principles of equipment, including:
  - the difference between convection and impingement ovens
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required, and action to take if services are not available
- the flow of the baking process and the effect of outputs on customer satisfaction and downstream processes, including packaging
- quality requirements of materials and the effect of variation on baking process performance
- quality characteristics to be achieved by the baked product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- process specifications, procedures and operating parameters for different baked pastry products
- operating requirements, parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the baking process, including inspecting, measuring and testing, by the process
- inspection or test points (control points) in the baking process and the related procedures and recording requirements, including the ability to conduct dew point and/or wet bulb tests
- contamination/cross-contamination and food safety risks associated with the baking process, and related control measures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- common causes of variation, and corrective action required
- health and safety hazards and controls, including risks of spontaneous combustion and limitations of protective clothing and equipment used
- requirements of different shutdowns as appropriate to the baking process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities relevant to operating a baking process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the baking process, including waste/rework collection and handling procedures related to the process
- purpose and operating procedures for related processes, including in-line proving and finishing equipment where relevant
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures for baking equipment
- cleaning and sanitisation procedures for baking equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - personal protective clothing
  - baking and depanning equipment and services, and related equipment
  - product to be baked
  - sampling schedules and test procedures and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - specifications, control points and processing parameters
  - production schedule and recipe/batch instructions
  - documentation and recording requirements and procedures
  - cleaning procedures, materials and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify materials and specifications for work process	1.1 Identify materials required for work processes 1.2 Identify specifications and tests required to determine suitability of materials for work processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear personal protective clothing and equipment and ensure correct fit 1.4 Inspect or test materials according to operating procedures 1.5 Conduct work in accordance with workplace environmental guidelines 1.6 Reject and report out-of-specification materials according to operating procedures
2. Handle materials and products safely	2.1 Identify handling requirements for input materials and products of workstation or process according to health, safety and food safety requirements 2.2 Handle materials and product according to health and safety requirements 2.3 Maintain workplace in a clean and tidy order to meet workplace standards and avoid contamination
3. Maintain integrity of product during processing	3.1 Protect materials and products from contamination and exposure to pests 3.2 Follow product changeover procedures to avoid cross-contamination of products 3.3 Identify processes and conditions that are inconsistent with specifications and safety procedures, and take corrective action within level of responsibility 3.4 Restrict and monitor access to work area during processing according to workplace procedures
4. Maintain integrity of product post-processing	4.1 Conduct visual, metal scanning, and other contamination checks prior to packing and dispatch 4.2 Check packing materials for cleanliness and integrity before use 4.3 Seal, pack or dispatch product from work area according to product and process requirements 4.4 Maintain workplace records in the appropriate format
5. Comply with personal hygiene standards	5.1 Follow personal hygiene requirements appropriate to the process, product and workplace 5.2 Use personal protective clothing and equipment appropriate to the process, product and workplace

FBPOPR2085 Operate a grinding process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a grinding process.

This unit applies to individuals who work under general supervision and exercise limited autonomy in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a grinding process and associated equipment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOPR2085 Operate a grinding process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a grinding process to process at least one batch of grain or product to specification, including:

- applying safe work procedures
- following food safety procedures
- operating feed control panel to transfer and grind product
- monitoring and adjusting the grinding process and equipment operation to achieve required outcomes, including running adjustments to hammer mills and roller mills
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the grinding process, including the characteristics of materials that can be reduced to a suitable form for product, including stock feed
- basic operating principles of equipment used to operate the grinding process, including:
  - main equipment components
  - bulk materials transfer systems and equipment
  - dust collection equipment
  - grinding equipment operating capacities and applications
  - the purpose and location of magnets, sensors and related feedback instrumentation
- services required for the grinding process, and action to take if services are not available
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- the flow of the grinding process and the effect of product output on downstream processes
- quality characteristics and uses of ground product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effect of the grinding process on the end product
- effect of raw material characteristics on grinding process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- good manufacturing practices (GMP) relevant to work task
- typical equipment faults related to the grinding process, and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- techniques used to monitor the production process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the grinding process, and related control measures
- common causes of variation for the grinding process, and corrective action required
- health and safety hazards and controls related to the grinding process, including:
  - the risk of dust explosion
  - an understanding of the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the grinding process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- cleaning and sanitisation procedures required for equipment
- recording procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing
  - grinding equipment and related services
  - product for grinding
  - cleaning materials and equipment
- specifications:

Assessment Requirements for FBPOPR2086 Operate a frying process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a frying process on at least one occasion, including:

- applying safe work procedures
- following food safety procedures
- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - product throughput/belt speeds
  - oil levels/temperatures
  - operation of oil filtration process
  - visual appearance of product, including breaking open to inspect
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of frying, including optimal frying conditions and the role of oil filtration
- basic operating principles of equipment used in the operation of a frying process, including:
  - main equipment components
  - the configuration of valves, pumps and pipework
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the flow of the frying process and the effect of product output on downstream processes
- quality characteristics to be achieved by the frying process
- effect of product and oil quality characteristics on the frying process, final product and shelf-life
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the frying process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the frying process, and related control measures
- common causes of variation related to the frying process, and corrective action required
- health and safety hazards and controls, including the fire suppression system, and procedures to follow if temperatures exceed the specified range
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the frying process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the frying process, including procedures for recycling oil and for disposing of spent oil, and the consequences of incorrect disposal
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for frying equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - in-line frying equipment and related services
  - frying oil suited to product type and product to be fried
  - personal protective clothing
  - cleaning materials and equipment
- specifications:

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a mixing or blending and cooking process to produce at least one batch of product to specification, including:

- applying food safety practices
- following safe work procedures
- monitoring control points and conducting inspections to confirm process remains within specification, including:
  - time and temperature
  - agitation settings
  - weights
  - flow rates
  - flow diversion
  - characteristics of the mix, including colour, viscosity, density and consistency
  - characteristics of the cooked product
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of preparing mixes and blends, including the characteristics and basic function of ingredients and additives used, method and sequence of ingredient addition required to achieve required blend characteristics and, where relevant, the purpose of conditioning, maturation or holding stages required prior to further processing of the mix
- the flow of the mixing or blending and cooking process, and the effect of product output on downstream processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic operating principles of equipment used in the mixing/blending and cooking process, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - calibration schedules for scales and related weighing/measuring equipment
- services required for the mixing/blending and cooking process, and action to take if services are not available
- quality characteristics and conditioning required of ingredients used, and their role in the product, including reconstituting dry ingredients and bringing ingredients to a required temperature
- effect of ingredient quality/condition on the process, including variables, including temperature, viscosity/texture, microbial load and acidity quality
- heat treatment/cooking requirements for low and/or high acid foods as appropriate to production requirements
- stages and changes that occur during the blending and heat treatment/cooking stages
- quality requirements of the cooked product, including chemical, textural and flavour profiles
- relationship between time and temperature in the cooking process
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- common causes of variation in the mixing/blending and cooking process, and corrective action required
- contamination/cross-contamination and food safety issues associated with mixing and blending, and related control measures
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety hazards and controls relevant to the mixing/blending and cooking process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the mixing/blending and cooking process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaning and sanitisation procedures required for mixing/blending and cooking equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - mixing/blending and cooking equipment and related services
  - ingredients to be cooked
  - personal protective clothing
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule/batch/recipe specifications, control points and operating parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2088 Operate pumping equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate and monitor pumping equipment.

This unit applies to individuals who work under general supervision and in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of pumping and associated equipment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare pumps for operation	1.1 Confirm pumps and related equipment are available to meet operating requirements 1.2 Wear appropriate personal protective clothing and ensure correct

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	fit 1.3 Carry out pre-start checks on pumps and related equipment according to safe work procedures 1.4 Select appropriate settings to meet safety and production requirements 1.5 Monitor and maintain condition of pumps and related equipment, and identify and report maintenance requirements according to workplace reporting requirements
2. Monitor pump operation	2.1 Start and monitor pumps and related equipment to identify variation in operating conditions 2.2 Take corrective action to maintain pump operation within equipment capacity and operating parameters
3. Complete pump operation	3.1 Prepare pumps for cleaning and/or maintenance according to health, safety and food safety requirements 3.2 Conduct work in accordance with workplace environmental guidelines 3.3 Maintain the work area according to workplace procedures 3.4 Maintain workplace records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret standard operating procedures relevant to job task • Interpret pumping requirements
Writing	• Record operating, routine maintenance and shutdown information using digital and/or paper-based formats
Oral communication	• Report operational and safety information to relevant personnel
Numeracy	• Monitor and interpret pumping control indicators, including amperage, speed and flow rates

Assessment Requirements for FBPOPR2088 Operate pumping equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated pumping equipment to effectively transfer at least one batch of product, including:

- applying safe work procedures
- following food safety procedures
- conducting pre-start checks, including:
  - inspecting pump flanges, gaskets and seals to identify any signs of wear
  - checking related valve assemblies to identify any signs of leaks
  - cancelling isolation or lock-outs (where pumps have variable settings that involve selecting appropriate settings and confirming that related pipework is correctly configured for pumping requirements)
- monitoring and adjusting pump operation, including identifying variation in amperage and adjusting pump speeds/flow rates to meet pumping requirements
- addressing routine operational issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic operating principles of pumps and related equipment, including:
  - main pump components
  - status and purpose of guards
  - pump system configuration, including valves, taps and hoses or pipework
- the effect of pumping system design on operating performance, including flow resistance, pressure and head
- operating capacities of pumps used in the work area, including different pump types to perform pumping operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effect of raw material characteristics on pump performance, including variables that include soluble solids, temperature and viscosity
- effect of pump operating parameters on product/materials pumped
- corrective action required where pump operation is outside specified operating parameters
- typical equipment faults and related causes relevant to operating pumping equipment, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
  - services required
- isolation, lock-out and tag-out procedures and responsibilities required for operating pumping equipment
- contamination/cross-contamination and food safety risks associated with pumping, and related control measures
- health and safety hazards and controls relevant to operating pumping equipment
- procedures and responsibility for reporting problems
- environmental issues and controls, including action required in the event of significant leaks or spills
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning procedures required for operating pumping equipment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pump, hoses and related equipment and services
  - personal protective clothing
  - product to be pumped
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR2091 Operate a holding and storage process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a holding and storage process on at least one occasion, including:

- applying safe work procedures
- following food safety procedures
- monitoring control points and conducting inspections to confirm process remains within specification, including:
  - time/temperature
  - stock rotation or agitation speed
  - equipment condition and performance
- addressing routine holding or storage issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the holding and storage process, including the importance of stock rotation
- basic operating principles of equipment for the holding and storage process, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
- the flow of the holding and storage process and the effect of product output on downstream processes
- contamination/cross-contamination and food safety risks associated with the holding and storage process, and related control measures

Assessment Requirements for FBPOPR2092 Operate a continuous freezing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a continuous freezing process to freeze at least one batch of product to meet specifications, including:

- applying safe work procedures
- following food safety practices
- monitoring control points and conducting inspections to confirm process remains within specification, including:
  - flow rates
  - churn speed
  - time/temperature
  - ingredient addition systems
  - pressures
  - equipment condition and performance
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the continuous freezing process, including the stages that occur during the churning and freezing process, and the required physical and microstructure of the product
- basic operating principles of equipment required to operate a continuous freezing process, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - purpose and location of sensors and related feedback instrumentation
- services required to operate a continuous freezing process, and action to take if services are not available
- the flow of the freezing process and the effect of outputs on downstream processes
- additives and ingredients used in the continuous freezing process, and their role in the product
- quality characteristics to be achieved by the freezing process
- quality requirements of materials/ingredients, and effect of variation on process performance
- operating requirements and parameters, and corrective action required where operation of the continuous freezing process is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the production process, including inspecting, measuring and testing by the process
- inspection or test points (control points) in the continuous freezing process operation and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the continuous freezing process, and related control measures
- common causes of variation in the operation of a continuous freezing process, and corrective action required
- health and safety hazards and controls relevant to the operation of a continuous freezing process, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the continuous freezing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of a continuous freezing process
- procedures and responsibility for reporting production and performance information of the continuous freezing process
- environmental issues and controls relevant to the continuous freezing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of continuous freezing process control, including the relationship between control panels and systems and the physical equipment
- cleaning procedures required for the continuous freezing equipment
- recording procedures to ensure traceability.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective clothing
    - freezing process and related equipment and services
    - materials/ingredients to be frozen
- specifications:
    - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
    - information on equipment capacity and operating parameters
    - production schedules and batch specifications, control points and processing parameters
    - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2093 Operate an automated cutting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down an automated cutting process.

This unit applies to individuals who work under general supervision in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of an automated cutting process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR2093 Operate an automated cutting process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated an automated cutting process to cut at least one batch of product, to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- conducting pre-start checks, including:
  - inspecting equipment condition to identify blade sharpness and other signs of wear
  - selecting appropriate settings and/or related parameters for product
  - cancelling isolation or lock-outs
  - confirming that equipment is clean and correctly configured for cutting process requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been carried out
  - confirming that all safety guards are in place, and operational and running
  - trialling cut to confirm accuracy/positioning where required
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the automated cutting process
- basic operating principles of equipment required to operate an automated cutting process, including:
  - main equipment components
  - status and purpose of guards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - equipment operating capacities and applications
    - purpose and location of sensors and related feedback instrumentation
- the flow of the automated cutting process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the automated cutting process, including quality specifications and ability to assess cut quality and determine any required adjustments
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the automated cutting process, including inspecting the quality of cuts
- inspection or test points (control points) in the automated cutting process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the automated cutting process, and related control measures
- common causes of variation, and corrective action required when operating an automated cutting process
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the automated cutting process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities for an automated cutting process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the automated cutting process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for automated cutting equipment
- recording procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective clothing
    - automated cutting equipment and related services
    - product to be cut

FBPOPR2094 Clean equipment in place

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare process equipment for cleaning in place (CIP) or in-line. It applies to food processing equipment that is fixed in place and cannot be moved to a cleaning station. It requires the operator to initiate, monitor and control variables during cleaning.

This unit applies to individuals who work in food processing facilities performing a defined range of activities, most of which are routine and predictable.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for cleaning	1.1 Receive instructions from supervisor and clarify where required 1.2 Identify health and safety hazards in the workplace and inform

Assessment Requirements for FBPOPR2094 Clean equipment in place

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cleaned food processing equipment that is fixed in place, on a minimum of two occasions, including:

- applying safe work practices and identifying health and safety hazards and controls in the workplace
- applying food safety procedures.
- shutting down equipment and preparing for cleaning
- preparing and using chemicals according to safe work requirements
- cleaning equipment to meet work standards
- monitoring cleaning and reporting or addressing any non-compliances
- flushing equipment and disposing of waste according to environmental guidelines
- completing required documentation

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of cleaning in place (CIP) and cleaning out of place (COP), including the use and functions of caustic and acid solutions, and cleaning sequence and stages as required in the workplace
- difference between cleaning and sanitising, why each are done and when
- cleaning and sanitising requirements, including different levels of cleaning requirements
- purpose and use of cleaning equipment and chemicals used
- cleaning schedules/cleaning matrices for equipment being cleaned
- terminology relating to the chemical solutions used
- safe work procedures, including appropriate signage of cleaning activities, and safe handling and storage of cleaners and sanitisers used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- health and safety workplace procedures, including purpose and limitations of personal protective equipment
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- characteristics of cleaning and sanitising chemicals used, including basic composition as well as compatibility of chemicals with types of equipment
- methods used to render equipment safe to clean, including the status and purpose of equipment guards, relevant lock-out/tag-out and isolation procedures
- equipment settings required for cleaning and operating
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- inspection points for cleaning and sanitising
- methods to verify that cleaning has been effective, including adenosine triphosphate (ATP) or protein swabbing
- consequences of contamination of process flows by cleaning solutions, and related safeguards
- types of waste generated by both the production and the cleaning process and related collection, treatment and disposal requirements
- environmental consequences of incorrect cleaning waste disposal procedures
- requirements to liaise with/advise related work areas
- reporting and recording systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment to be cleaned, and related CIP system
  - chemicals and/or automated chemical addition system
- specifications:
  - workplace standard operating procedures and task-related documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2095 Clean and sanitise equipment

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to clean, sanitise and carry out related procedures for food processing production equipment.

This unit applies to individuals who are primarily responsible for cleaning or where a more detailed knowledge of cleaning and sanitisation processes is required in order to carry out cleaning responsibilities. This unit applies to both wet and dry cleaning methods.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR2095 Clean and sanitise equipment

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cleaned and sanitised a minimum of two different items of equipment, including:

- applying safe work practices and identifying health and safety hazards and controls in the workplace
- applying food safety procedures.
- preparing equipment for cleaning
- preparing and using chemicals according to safe work requirements
- cleaning and sanitising equipment to meet work standards
- monitoring cleaning, and reporting or addressing any non-compliances
- disposing of waste according to environmental guidelines
- completing required documentation

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose of cleaning and sanitisation, and importance in maintaining food safety
- the difference between cleaning and sanitisation, when each is used and why
- the difference between wet and dry cleaning
- functions of cleaners, sanitisers and related equipment
- safe work procedures, including appropriate signage of cleaning activities, safe handling and storage of cleaners and sanitisers used, and safety when using cleaning methods
- health and safety requirements in the workplace, including purpose and limitations of personal protective equipment (PPE)
- cleaning and sanitisation requirements relating to work responsibilities, including the need for different levels of cleaning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- different products and PPE used for different equipment
- impact that cleaning and sanitising products have on food
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- procedures for preparing cleaners and sanitisers as required
- cleaning methods to be followed relating to workplace procedures
- other work areas/operators who need to be consulted/advised on timing of cleaning
- methods used to render equipment safe to clean, including understanding the status and purpose of equipment guards, relevant lock-out/tag-out and isolation procedures and related equipment settings for both cleaning and operating as required
- procedures for cleaning and sanitising
- types of waste generated by the cleaning process, and related collection, treatment and disposal requirements
- potential environmental impact of incorrect waste handling
- inspection, cleaning and storage requirements of cleaning equipment used
- inspection points and methods for confirming the effectiveness of cleaning and sanitisation, including visual inspection and, where required, recording of cleaning conducted
- inspection requirements to confirm equipment condition, including acceptable equipment condition, ability to identify faulty or unacceptable equipment, and take required corrective action
- methods to verify that cleaning has been effective, including adenosine triphosphate (ATP) or protein swabbing
- recording requirements and responsibilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - cleaning and sanitising equipment according to workplace requirements
  - cleaning equipment and chemicals
  - PPE
- specifications:
  - workplace standard operating procedures and task-related documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2096 Follow procedures to maintain good manufacturing practice in food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to comply with relevant good manufacturing practice (GMP) requirements and workplace quality standards in a food or beverage processing facility.

The unit applies to individuals who follow GMP requirements to undertake routine food processing work, under supervision.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify requirements of GMP related to own	1.1 Locate sources of information on GMP requirements in the workplace

Assessment Requirements for FBPOPR2096 Follow procedures to maintain good manufacturing practice in food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has followed work procedures to maintain good manufacturing practice (GMP) in food processing work, and demonstrated each of the following points at least once:

- locating and following workplace information relating to GMP responsibilities
- maintaining good personal hygiene consistent with GMP requirements, including at least:
  - making team leader or supervisor aware of reportable illness
  - appropriate wearing of jewellery and makeup
- using appropriate work methods and personal protective clothing and equipment to prevent contamination and cross-contamination of raw materials and ingredients
- using and storing personal clothing and footwear consistent with GMP requirements and workplace procedures
- following workplace procedures when moving around the workplace to maintain GMP
- following GMP requirements when carrying out work functions
- identifying and responding to performance that fails to meet GMP requirements, including:
  - making adjustments
  - reporting to relevant personnel
- appropriately handling and disposing of materials that are contaminated or non-conforming
- identifying and reporting a situation that could compromise GMP requirements
- maintaining work area in a clean and tidy state
- following workplace procedures for traceability.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- sources of advice on GMP requirements in relation to own work
- regulatory frameworks relevant to food processing:
  - Food Standards Code, relevant to work role and products
  - state and territory Food Acts and their associated regulations
  - hazard analysis and critical control point (HACCP) principles for the workplace
- the role of GMP in preventing contamination, cross-contamination and potential implications of non-compliance
- the relationship between GMP and the quality system, including:
  - personnel responsible for designing and managing GMP
  - personal role to maintain GMP
  - the role of internal and external auditors
- personal protective clothing and equipment requirements, including rules around removal of clothing when moving between areas of different risk
- personal protective clothing and footwear use, condition, storage and disposal requirements
- storage and handling requirements for raw materials, product and packaging components relevant to work role
- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- control methods and procedures used in the work area to maintain GMP, including:
  - the purpose of control
  - the consequences of lack of control
  - control monitoring
- performance that is unacceptable or fails to meet specifications
- actions required in response to non-conformance
- workplace environmental procedures
- workplace procedures for reporting and recording information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - cleaning products
  - food processing equipment
- specifications:
  - GMP information relating to the workplace
  - reporting and monitoring systems
  - workplace instructions and procedures
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2097 Operate a depositing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a depositing process, to deposit products such as chocolate, dough or toppings into tins, onto belts or directly onto product, where a further processing outcome is usually required.

This unit applies to individuals who work under general supervision in a food processing production environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a depositing process and associated equipment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in	1.1 Receive work instructions and clarify where required

Assessment Requirements for FBPOPR2097 Operate a depositing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a depositing process to deposit at least one batch of product to meet specifications, including:

- applying food safety procedures to work practices
- following safe work procedures
- monitoring control points and conducting inspections to confirm the process remains within specification, including:
  - maintaining supply of materials for depositing
  - controlling weights
  - checking dimensions and positioning of deposited material
  - visually inspecting to identify faults, including unacceptable placement
  - checking pump stroke settings
  - checking line speed
- addressing routine processing issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the depositing process, including product preparation and conditioning requirements and product depositing
- basic operating principles of equipment used in the depositing process, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - services required and action to take if services are not available
- the flow of the depositing process and the effect of outputs on downstream processes
- quality requirements of materials for depositing, and the effect of variation on depositing process performance and outputs
- quality characteristics required of outputs from the depositing process
- operating requirements and parameters of the depositing process, and corrective action required where operation is outside specified operating parameters
- scope to adjust for weight variation within workplace quality parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the depositing process, including inspecting, measuring and testing by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the depositing process, and related control measures
- common causes of variation in the operation of the depositing process, and corrective action required
- health and safety hazards and controls relevant to the operation of the depositing process
- requirements of different shutdowns as appropriate to the depositing process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the depositing process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the depositing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitising procedures required for depositing equipment
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - depositing equipment and related services
  - product to be deposited

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - cleaning materials and equipment
- specifications:
    - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
    - information on equipment capacity and operating parameters
    - recipe/batch specifications, control points and processing parameters
    - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3005 Operate interrelated processes in a production system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and monitor interrelated processes in a production system.

This unit of competency describes the skills and knowledge required to set up, operate, adjust and monitor interrelated processes in a production system. A production system typically involves a series of interrelated processes that must be coordinated and concurrently operated to produce the required outcome.

This unit applies to individuals who have skills and knowledge the operational requirements of the production system for the industry in which it is applied. Individuals apply higher level planning and problem-solving skills, work under broad direction and take responsibility for their own work.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOPR3005 Operate interrelated processes in a production system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively operated interrelated processes in a production system, on at least one occasion, including:

- conducting pre-start checks on production system components
- confirming machine set-up is ready to achieve production requirements
- applying safe work practices and identify hazards and controls
- selecting and fitting personal protective equipment (PPE)
- starting, operating, monitoring and adjusting process equipment throughout the system to achieve required quality outcomes
- identifying system problems and taking corrective action
- conducting operational handovers
- shutting down system
- identifying and investigating opportunities for operational improvements within areas of responsibility
- completing workplace records
- shutting down equipment according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the production system, including the system process flow, the interrelationships of each process to identify the impact of variation on related processes, and optimisation options
- basic operating principles of equipment and related accessories used by the system, including equipment adjustment points, status and purpose of guards, and range and location/alignment requirements of sensors and related feedback instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating capacities of equipment used in the system, including different types of equipment and/or components by processing/packaging operations
- related systems and responsibilities for interaction, including related production systems, services supply, packaging/warehousing, maintenance, laboratory/quality assurance and planning and scheduling
- product characteristics and common types of variation in materials and/or ingredients used, including the effect of variation on each stage of the system and scope to adjust or correct
- typical production related problems, including equipment faults, common causes and warning signs, incorrect or poor supply of materials, incorrect settings and poor operator control
- relevant procedures, specifications and operating parameters for the system and the individual processes
- isolation, lock-out and tag out procedures and responsibilities
- hazards, risks, controls and methods for monitoring processes within the system, including health and safety in the workplace, food safety, quality and environmental hazards and risks
- workplace system and approach to equipment maintenance
- process improvement procedures and related consultative arrangements
- troubleshooting procedures and problem-solving techniques
- communication responsibilities to inform related work areas/support functions and other shifts of operational status and production issues
- procedures and responsibility for reporting production and performance information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - PPE
  - production system equipment and related accessories and services
  - materials/consumables required by the process
  - communication and recording systems and procedures
- specifications:
  - production schedule and related advice on system requirements
  - information on equipment capacity and operating parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR3006 Operate interrelated processes in a packaging system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively operated interrelated processes in a packaging system on at least two separate occasions, including:

- setting and/or adjusting equipment to meet packaging requirements
- inspecting equipment condition to identify any signs of wear
- confirming selection of appropriate settings and/or related parameters
- ensuring that isolation or lock outs are cancelled
- confirming that equipment is clean and correctly configured for packaging requirements, positioning sensors and controls correctly
- ensuring any scheduled maintenance has been carried out
- confirming that all safety guards are in place and operational loading and/or positioning product, packaging components and consumables.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the packaging system, including:
  - the process flow and the interrelationships of each previous processes that can affect packaging outcomes, packaging technology, and packaging equipment components
- basic operating principles of equipment and related accessories used by the system, including:
  - equipment adjustment points, status and purpose of guards, and range and location/alignment requirements of sensors and related feedback instruments
- operating capacities of equipment used in the system, including different types of equipment and/or components by processing/packaging operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- related systems and responsibilities for interaction, including related production and further packaging/storage stages, services supply, maintenance, laboratory/quality assurance and planning and scheduling
- technical knowledge of product/packaging characteristics and the main factors that impact on shelf-life
- typical packaging related problems, including equipment faults, common causes and warning signs, incorrect or poor supply of materials and finished product, incorrect settings and poor operator control
- relevant procedures, specifications and operating parameters for the system and the individual processes
- isolation, lock out and tag out procedures and responsibilities
- hazards, risks, controls and methods for monitoring processes within the system, including health and safety, food safety, quality and environmental hazards and risks in the workplace
- workplace system and approach to equipment maintenance
- process improvement procedures and related consultative arrangements
- troubleshooting procedures and problem-solving techniques
- communication responsibilities to inform related work areas/support functions and other shifts of operational status and production issues
- procedures and responsibility for reporting production and performance information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - personal protective equipment
  - production schedule and related advice on system requirements
  - packaging system equipment and related accessories and services
  - product, packaging components and consumables by the process
  - communication and recording systems and procedures
- specifications:
  - information on equipment capacity and operating parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3007 Operate a bulk liquid transfer process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to receive and load out bulk liquid product or raw materials.

This unit applies to individuals transferring bulk liquid product and materials from tankers and between storage and production storage facilities.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for bulk materials transfer work	1.1 Confirm work instructions and clarify where required 1.2 Identify health, safety and food safety hazards for the bulk liquid transfer process and inform supervisor 1.3 Wear appropriate personal protective equipment and ensure

Assessment Requirements for FBPOPR3007 Operate a bulk liquid transfer process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has received and loaded out at least one bulk liquid product or raw material, including:

- applying safe work procedures
- following food safety procedures
- inspecting equipment for signs of wear, including visual inspections to detect leaks, listening for unusual noises and/or vibrations in pumps, and checking gauges and meters
- using workplace records and systems to confirm tank holdings and capacities and determining appropriate source/destination holding facilities, including verifying by physically inspecting storage facilities and checking materials/product compatibility
- preparing equipment for materials transfer, including confirming that equipment is clean, lines are purged, isolation or lock-outs are cancelled as required, any scheduled maintenance has been completed, and safety guards/equipment are correctly positioned
- operating and monitoring transfer process to confirm that correct quantities are transferred at the required times, to the required locations, including monitoring pump loads and flow rates, and filter/strainer condition
- completing transfer operations, including purging lines and selecting appropriate equipment/system settings
- taking corrective action to address transfer issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bulk liquid materials storage facilities layout and related management systems
- basic operating principles of the system and equipment used, including the features of the bulk liquid handling system
- good manufacturing practices (GMP) relevant to work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment used, including sensors, valves, pumps, pipework and other related equipment that controls the flow and transfer of bulk liquid materials, equipment operating capacity and the status and purpose of guards
- planning and scheduling systems and responsibilities to prioritise materials transfer processes, including characteristics of materials received and related storage requirements, production requirements and storage capacities
- signs and symptoms of faulty equipment, and early warning signs of potential problems
- operating parameters, and corrective action required where operation is outside specified operating parameters
- health and safety hazards and controls, including emergency procedures to respond to hazardous situations
- product inspection procedures within level of responsibility
- clearance procedures, including relevant test methods and action required if results are not within specification or clearance is not provided
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- isolation, lock-out and tag-out procedures and responsibilities
- environmental issues associated with bulk liquid materials transfer, including consequences of spills, and appropriate control/containment procedures
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- workplace cleaning and sanitisation procedures required for the bulk liquid transfer process
- recording requirements and procedures for the bulk liquid transfer process
- recording requirements to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - bulk transfer system, equipment and services
  - bulk materials (liquid)
  - receival schedules and sequencing systems
  - sampling equipment as required
  - documentation and recording requirements and procedures
  - cleaning materials and equipment
- specifications:
  - work roles and responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- sampling schedules and test procedures
- storage capacities and bulk receival equipment capacity and operating parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3008 Load and unload tankers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare, load and unload transport tankers with bulk product, and maintain records of product.

This unit applies to individuals who have responsibility for loading and unloading tankers and who resolve routine problems with that process.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare transport tankers for loading	1.1 Confirm work instructions and clarify where required 1.2 Identify health, safety and food safety hazards, and confirm controls are in place 1.3 Wear appropriate personal protective equipment and clothing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Check the loading schedule to confirm loading requirements 1.5 Confirm that transfer equipment is in operational condition 1.6 Select transfer equipment settings and operating parameters to meet safety and loading requirements 1.7 Locate bulk materials to confirm type, quantity available and clearance for loading 1.8 Confirm priorities for loading to meet delivery requirements
2. Check product for loading	2.1 Check that receival record confirms product type and quantities 2.2 Clear product for loading according to workplace procedures and safety requirements 2.3 Identify bulk storage locations, holdings and capacities 2.4 Confirm actual-to-recorded holding levels 2.5 Confirm transfer equipment is in operational condition 2.6 Confirm priorities for loading to meet delivery requirements
3. Operate and monitor the tanker loading and unloading process	3.1 Start and operate the tanker loading process according to safe work procedures 3.2 Monitor equipment to confirm load transfer to tanker in correct quantities 3.3 Monitor equipment to ensure optimal operations 3.4 Take samples of product for testing 3.5 Select equipment settings to complete loading operation 3.6 Purge in-flight product from lines 3.7 Clean equipment and prepare for further loading according to safe work and quality standards 3.8 Record information on the loading operation according to workplace procedures
4. Unload product and complete housekeeping	4.1 Start and operate the tanker unloading process according to safe work procedures 4.2 Select equipment settings to complete unloading operation 4.3 Purge in-flight product from lines 4.4 Clean and shut down equipment and prepare for further work in line with workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	4.5 Ensure waste is disposed of in line with environmental requirements 4.6 Record information on the unloading operation according to workplace procedures 4.7 Identify and report maintenance requirements according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Resolve routine problems with pumping equipment
Reading	• Interpret information relevant to product and loading requirements
Writing	• Record data and observations using digital and/or paper-based formats
Numeracy	• Interpret capacities (m3), quantities (mL, L, hL), temperature (°C)

Assessment Requirements for FBPOPR3008 Load and unload tankers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has loaded and unloaded at least one load of product into and out of a tanker, including:

- applying safe work practices
- applying quality standards to work practices
- completing records accurately.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bulk storage facility layout and related management systems
- basic operating principles of the system and equipment used, including the features of the tanker loading/unloading and materials transfer systems
- equipment that controls the flow and transfer of bulk materials, equipment operating capacity and the status and purpose of guards
- tanker types and capacities
- planning and scheduling systems and responsibilities to prioritise loading and unloading processes, including the characteristics of materials received, and related storage requirements, production requirements and storage capacities
- signs and symptoms of faulty equipment and early warning signs of potential problems, including leaks, unusual noises and/or vibrations in pumps
- operating parameters, and corrective action required where operation is outside specified operating parameters
- product inspection and procedures within level of responsibility
- steps in preparing transfer equipment for use, including confirming that equipment is clean, lines are purged, isolation or lock-outs are cancelled as required, and any scheduled maintenance has been completed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- steps in confirming that tankers are in suitable condition for loading, including checking cleaning records and confirming that any scheduled maintenance has been carried out
- steps in confirming that correct quantities are transferred at the required times, to the required locations, including monitoring pump loads, flow rates and filter/strainer condition
- clearance procedures, including relevant test methods, and action required if results are not within specification or clearance is not provided
- health and safety hazards and controls, including emergency procedures to respond to hazardous situations
- contamination risks and controls, including cross-contamination risks, product compatibility and storage requirements
- awareness of common microbiological, physical, chemical and allergen hazards related to the foods and/or products handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- when and how to use emergency stop functions on equipment
- isolation, lock-out and tag-out procedures and responsibilities
- environmental issues associated with bulk liquid materials transfer, including consequences of spills and appropriate control/containment procedures
- recording requirements and procedures, including related receivals and dispatch documentation
- cleaning procedures for loading and unloading equipment and tanker
- procedures to record traceability of product and ingredients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - loading/unloading schedules and related receivals and/or dispatch documentation
  - tankers, storage facilities and materials transfer equipment
  - product for loading/unloading
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, quality and environmental requirements
  - information about equipment/tanker capacity and operating parameters
  - loading/unloading information recording system and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3009 Participate in sensory analyses

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to participate in sensory analyses of food products and ingredients.

This unit applies to individuals who work in the food processing industry within a team. It covers analyses of food product or ingredients using taste, texture, appearance and smell.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to conduct sensory analysis	1.1 Interpret work instructions from supervisor and clarify where required 1.2 Identify health and safety hazards and ensure controls are in place 1.3 Wear appropriate personal protective clothing and equipment and ensure correct fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Ensure that personal conduct and the test environment are appropriate to conducting sensory analysis 1.5 Recognise any personal sensory blind spots
2. Conduct sensory analysis	2.1 Ensure that samples are available for analysis 2.2 Use the correct method and criteria for sampling according to workplace procedures and requirements 2.3 Analyse samples using analysis criteria 2.4 Identify and report defects or abnormalities in sample 2.5 Record results according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret standard operating procedures (SOPs), specifications and sampling plans
Writing	• Complete sampling records using electronic, digital and/or paper-based formats
Oral communication	• Use industry terminology to describe sensory properties of samples

Assessment Requirements for FBPOPR3009 Participate in sensory analyses

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in sensory analyses of food and/or beverage products and ingredients to analyse at least three different products, including:

- describing the products using appropriate industry terminology, against set criteria
- identifying product faults
- declaring any personal blind spots.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls, including the purpose and limitations of personal protective equipment (PPE) and clothing
- principles of sensory analysis, including attributes that can be detected by taste and smell, how these different tastes are detected, and an understanding of attributes detected by mouth feel and appearance
- sensory analysis system and procedures
- specific criteria used to evaluate material/product samples, and the associated descriptions
- sample preparation requirements, including the effect of sample temperature on sensory analysis
- the effect of personal conduct on analytical ability, including stimuli and conditions that can dull sensitivity
- requirements of the environment appropriate to conducting sensory analyses
- the components of material/product sampled that contribute to flavour, aroma, appearance and texture
- the likely causes of variation in results, including typical variation that can occur in the material/product, and how these occur, as well as how the method of analysis, the environment and the state of individual participants can affect the outcome

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures and responsibility for recording and reporting sensory analysis information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - recording and reporting media
  - products or ingredients to be sampled
- specifications:
  - work instruction, sensory analysis criteria.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3010 Operate and monitor a filtration process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a filtration process to filter products such as juice, milk and edible oils. The unit includes the use of membrane and other filter systems.

This unit applies to individuals who work in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a filtration process and associated equipment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR3010 Operate and monitor a filtration process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a filtration process to filter at least one batch of product to meet product specifications, including:

- applying safe work procedures
- following food safety procedures
- conducting pre-start checks, including:
  - inspecting equipment/filter condition to identify any signs of wear
  - selecting appropriate settings and/or related parameters
  - cancelling isolation or lock-outs
  - confirming that equipment, including pumps, valves and pipework, is clean and correctly configured for the filtration requirements
  - confirming sensors and controls are correctly positioned
  - confirming all safety guards are in place and operational
- starting, operating, monitoring and adjusting membrane processing equipment to achieve required outcomes, including monitoring control points and conducting inspections to confirm process remains within specification, including monitoring:
  - temperatures
  - flow rates
  - total solids
  - pressure/vacuum
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose and basic principles of filtration or membrane processing, including:
  - particle size of component of product
  - methods used to achieve the outcome
- basic operating principles of filtration processing equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
  - material composition of membranes and filters used in the workplace, and related operating, cleaning and storage requirements
- the flow of the filtration process, including the different processing streams and the effect of the filtration outputs on downstream processes
- good manufacturing practices (GMP) relevant to work task
- quality characteristics required of the filtration processing outputs
- the effect of variation in raw material characteristics on filtration performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including the effect of variation in processing parameters, including temperature, pressure, total solids and flow rates on filtration performance
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- techniques used to monitor filtration, including inspecting filters or membranes, measuring and testing by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation, and corrective action required when operating a membrane process
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to filtration and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage and shutdown
- cleaning and sanitisation requirements required for filtration equipment and filters/membranes
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to filtration, including waste collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- recording requirements to ensure traceability of product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - filtration equipment and related services
  - product to be filtered
  - cleaning and sanitisation materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and batch specifications, control points and processing parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR3011 Operate and monitor a heat treatment process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a heat treatment process to treat at least one batch of product to specification, including:

- following safe work procedures
- monitoring control points and conducting inspections to confirm process remains within specification, including:
  - time and temperature
  - pressure
  - flow rates
  - flow diversion
- taking corrective action in response to out-of-specification results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of heat treatment, including the effect of heat treatment on product and on microbiological characteristics
- the relationship between time, temperature and pressure in the heat treatment process, including associated holding and cooling profiles according to product requirements
- basic operating principles of equipment used in the heat treatment process, including:
  - main equipment components
  - types and characteristics of heating mediums used
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the flow of the heat treatment process and the effect of product output on downstream processes
- quality characteristics required of the heat-treated product
- effect of raw material characteristics on the heat treatment process, including variation in viscosity/texture, microbial load and acidity
- heat treatment requirements for food to be treated, including low and/or high acid foods
- operating requirements and parameters for the heat treatment process, and corrective action required where operation is outside specified operating parameters
- typical equipment faults for the heat treatment process, and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the heat treatment process, including inspecting, measuring and testing by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation in the operation of the heat treatment process, and corrective action required
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the heat treatment process
- procedures and responsibility for reporting production and performance information
- cleaning and sanitisation procedures required for heat treatment process, including purpose, water flow
- environmental issues and controls relevant to the heat treatment process, including waste/rework collection and handling procedures related to the process
- operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - personal protective clothing and equipment
  - heat treatment process and related equipment and services
  - product to be heat treated
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule/batch specifications, control points and processing parameters
  - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and basic principles of the drying process, including the stages that occur during the drying process and the effect on product structure of each stage
- basic operating principles of equipment used in the drying process, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required to operate the drying process, and action to take if services are not available
- quality characteristics to be achieved by the drying process
- materials preparation requirements, and the effect of variation on the process
- the flow of the drying process and the effect of outputs on downstream processes
- operating requirements and parameters of the drying process, and corrective action required where operation is outside specified operating parameters
- typical equipment faults related to the operation of the drying process, and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the drying process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- good manufacturing practices (GMP) relevant to work task
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation, including air temperature, air velocity, humidity and pressure, and corrective actions required if these are out-of-specification
- health and safety hazards and controls, including limitations of protective clothing and equipment relevant to the operation of the drying process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the drying process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the drying process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for drying equipmen

- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - drying equipment and related services
  - product to be dried
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule, batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3013 Operate and monitor an homogenising process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a homogenising process.

This unit applies to individuals who work in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a homogenising process and associated equipment.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety, environmental, and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work in processing area	1.1 Confirm materials are available to meet processing requirements 1.2 Identify and confirm cleaning and maintenance requirements and status according to health and safety and food safety requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear appropriate personal protective clothing and equipment and ensure correct fit
2. Prepare homogenising process for operation	2.1 Fit machine components and related attachments and adjust to meet operating requirements 2.2 Enter processing and operating parameters as required to meet safety and production requirements 2.3 Carry out pre-start checks according to workplace health and safety and operating procedures
3. Operate and monitor equipment	3.1 Start, operate and monitor the process to ensure optimal operations 3.2 Monitor the process to confirm that specifications are met 3.3 Identify, rectify and report out-of-specification equipment, product or process outcomes according to workplace requirements 3.4 Follow and apply workplace housekeeping and environmental procedures
4. Shut down homogenising equipment	4.1 Identify the appropriate shutdown procedure 4.2 Shut down the process according to health and safety and operating procedures 4.3 Identify and report maintenance requirements according to workplace procedures 4.4 Maintain workplace records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret workplace and standard operating procedures relevant to work task • Interpret production requirements
Writing	• Record operating, routine maintenance and shutdown information using digital and/or paper-based formats

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Numeracy	• Read and interpret gauges and scales • Monitor and interpret production and process control indicators and data, including temperature (°C), pressure, volume (mL, L)

Assessment Requirements for FBPOPR3013 Operate and monitor an homogenising process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a homogenising process to homogenise at least one batch of food to specification, including:

- conducting pre-start checks, including:
  - inspecting equipment condition to identify any signs of wear
  - selecting appropriate settings and/or related parameters
  - cancelling isolation or lock-outs as required
  - confirming that equipment is clean and correctly configured for processing requirements
  - positioning sensors and controls correctly
  - ensuring any scheduled maintenance has been carried out
  - confirming that all safety guards are in place and operational
- monitoring control points and conducting inspections as required to confirm the homogenising process remains within specification, including:
  - temperature
  - pressure
  - throughput
- taking corrective action in response to out-of-specification results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of homogenising
- basic operating principles of equipment used in the operation of a homogenising process, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- effect of raw materials on homogenisation process outcomes, including variables, including solids (brix), acidity, temperature, consistency and colour
- quality requirements to be achieved by the homogenisation process
- the flow of the homogenising process and the effect of product output on downstream processes
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults related to the homogenising process, and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- techniques used to monitor the homogenising process, including inspecting, measuring and testing
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process, and the related procedures and recording requirements
- common causes of variation in the operation of the homogenising process, and corrective action required
- health and safety hazards and controls relevant to the operation of the homogenising process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the homogenising process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the homogenising process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for homogenising equipment
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - personal protective clothing and equipment
  - homogenisation equipment and related services
  - product to be homogenised
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule/batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3014 Operate and monitor a retort process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a retort process.

This unit applies to individuals who work under general supervision in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of a retort process and associated equipment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOPR3014 Operate and monitor a retort process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a retort process to treat at least one batch of product to specification, including:

- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - time
  - temperature
  - pressure at each stage
- taking corrective action in response to out-of-specification results
- following safe work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of heat treatment and retort process, including:
  - relationship between time and temperature in the retort process
  - changes and requirements of each stage, including cooking, cooling and post-treatment container handling
- the purpose and requirements of container coding
- basic operating principles of equipment required for operating a retort process, including main equipment components, including:
  - thermometers, chart recorder, temperature control system, clock and pressure gauges
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- different types of retort processes and products treated
- the flow of the retort process and the effect of product output on downstream processes
- quality characteristics required of the retorted product
- effect of raw material characteristics on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults for a retort process operation, and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- techniques used to monitor the retort process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures, including both the risks of contamination related to processing and to post-processing handling of containers
- time and temperature required to ensure product becomes sterile
- common causes of variation, and corrective action required, including the effects of variables, including container size, product particulates, pH, time/temperature and pressure on process outcomes
- health and safety hazards and controls relevant to operating a retort process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- good manufacturing practices (GMP) relevant to work task
- isolation, lock-out and tag-out procedures and responsibilities required for operating a retort process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for retorting equipment
- procedures to record traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions

FBPOPR3015 Pre-process raw materials

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down machinery used for the preparation of raw materials that may be used in human food or animal feed, including pulses and/or animal products.

This unit applies to individuals who work in a food or feed processing environment. It typically applies to the production worker responsible for applying operating principles to the operation and monitoring of machinery to prepare raw materials.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPOPR3016 Operate and monitor a separation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored separation equipment to process at least one batch of product to specification, including:

- applying safe work procedures
- following food safety procedures
- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - separation speed
  - solids in in-feed and out-feed streams
  - flow rates
  - time/temperatures
  - pressures
  - air/water/oil levels
  - condition of seals and valves
  - discharge/desludging
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the separation process, including stages and changes that occur during the separation process
- basic operating principles of equipment for the separation process, including:
  - safety hazards associated with separation equipment and the implications of interchanging parts/incorrect bowl balance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
  - services required for operation of separation equipment used in the workplace
- the flow of the separation process and the effect of product output on downstream processes
- impact of in-feed quality and concentration levels on the separation process
- quality characteristics and uses of separation process outputs
- methods used to monitor the separation process, including inspecting, measuring and testing in-feed and out-feed solids, and other tests as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the separation process and the related procedures and recording requirements, including use of refractometers, Baume tests and spin tests to measure solids
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation, and corrective action required, including how variation in temperature and solids affects the process
- contamination/cross-contamination, spoilage and other food safety risks associated with separation, and related control measures
- health and safety hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for operating the separation process
- cleaning and sanitisation procedures required for operating the separation process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the operation of the separation process, including handling of effluent
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - separation equipment and related services
  - product for separating
  - sampling schedules and test procedures and equipment as required
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule and batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3017 Prepare food products using basic cooking methods

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare food products using basic cooking methods.

This unit applies to individuals who can work independently and who take responsibility for preparing food products using basic cooking methods in a food processing environment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Select and handle cooking tools and equipment	1.1 Prepare work area for operations, and confirm hygiene standards 1.2 Wear appropriate personal protective clothing and ensure correct fit 1.3 Identify, handle and store cooking utensils required for work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	according to workplace procedures 1.4 Identify and prepare equipment and machinery required for cooking operation according to workplace procedures 1.5 Identify and implement maintenance requirements for knives and other utensils 1.6 Implement food safety requirements at all times when handling and using cooking utensils and equipment
2. Prepare ingredients	2.1 Examine recipe and identify required ingredients 2.2 Determine sequence for preparation 2.3 Select ingredients and confirm quantity and quality using measuring or weighing devices or sensory analysis techniques 2.4 Prepare and assemble ingredients according to recipe requirements 2.5 Store ingredients according to workplace procedures
3. Use basic cooking methods	3.1 Identify the range of basic cooking methods and their effect on quality, taste and nutritional value 3.2 Identify cooking methods required by recipe, and determine sequence 3.3 Apply cooking method to achieve quality standards for food item 3.4 Identify and address typical problems as they arise 3.5 Use cooking utensils and equipment according to manufacturer instructions 3.6 Apply waste minimisation and environmental considerations during cooking process 3.7 Clean cooking area, utensils and equipment, and store according to workplace standards
4. Finish product	4.1 Transfer cooked ingredients for further processing 4.2 Assemble final product and present or pack according to recipe or operating requirements 4.3 Record product details to ensure traceability

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Read cooking instructions from recipe books • Read and interpret hygiene and food safety requirements from food safety program information
Writing	• Record processing information using digital and/or paper-based formats
Oral communication	• Use common terminology used in cooking
Numeracy	• Scale recipes up and down • Determine preparation and cooking times from packaging and recipes • Measure quantities of ingredients using weight (mg, g, kg) and volume (ml, L) • Control temperatures (°C)

Assessment Requirements for FBPOPR3017 Prepare food products using basic cooking methods

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared two different batches of food products using two different basic cooking methods, including:

- applying safe work procedures
- following food safety procedures
- identifying cooking problems and taking corrective action, including reporting abnormalities or problems, repeating processes and/or making required adjustments.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- uses and characteristics of basic food ingredients
- major food groups and classifications
- range of ingredients typically used in the workplace, and their characteristics and effect on food quality and taste
- basic cooking methods and their effect on quality, taste and nutritional value
- Food Standards Code relevant to product and workplace
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- common causes of variation for cooking process, and corrective action required
- health and safety hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- maintenance requirements for knives and other utensils

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- waste minimisation and environmental considerations related to preparing food products using basic cooking methods
- cleaning and sanitisation procedures required for the production equipment and work area
- recording procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - ingredients, utensils and equipment to be used for preparation and cooking of food products
  - recipes
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule/batch specifications, control points and processing parameters
  - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3018 Identify dietary, cultural and religious considerations for food production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify dietary, cultural and religious considerations for food production.

This unit applies to individuals who take responsibility for identifying and addressing dietary, cultural and religious considerations of different customers in a food or beverage processing business.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify dietary requirements of	1.1 Identify a range of specific dietary requirements and their impact on food production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria

customers	1.2 Identify food products that cater for specific dietary requirements 1.3 Assess the suitability of current food production methods and current food products against dietary requirements 1.4 Identify alternative processes and products for customers with dietary requirements related to food production
2. Identify requirements of customers with food-related allergies	2.1 Identify common food-related allergies 2.2 Identify life-threatening food-related allergies 2.3 Conduct risk assessment of current products and processes against food-related allergies 2.4 Identify food production procedures to avoid cross-contact with allergens 2.5 Identify allergen ingredients from food labels and Product Information Forms (PIFs)
3. Identify requirements of customers with cultural and religious backgrounds	3.1 Identify cultural and religious practices and events that influence food production requirements 3.2 Identify food production methods and food products that cater for cultural and religious practices and events 3.3 Assess the suitability of current food production methods and current food products against cultural and religious requirements 3.4 Identify alternative processes and products for customers with cultural and religious requirements related to food production

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret information about life-threatening food-related allergies • Interpret information about cultural, religious and dietary requirements
Oral communication	• Ask questions and listen carefully to gather, interpret and evaluate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Numeracy	• Interpret tolerances and unit measures

Assessment Requirements for FBPOPR3018 Identify dietary, cultural and religious considerations for food production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has analysed the ingredients and processing of food products for five clients, each with different cultural, religious and/or dietary considerations, to assess suitability, including:

- identifying common food-related allergens
- identifying life-threatening food-related allergens
- identifying food not acceptable to customers with different cultural and religious beliefs
- identifying procedures to avoid food contamination, cross-contamination and cross-contact allergens.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ingredients of available food products that can impact on specific dietary, cultural and religious requirements of customers
- Product Information Forms (PIFs), their layout and content
- food production processes of products that can impact on specific dietary, cultural and religious requirements of customers, including:
  - food safety principles and regulations
  - food safety hazards and risks
  - food safety program requirements
  - client conditions and associated needs and requirements
- specific dietary requirements, including:
  - food allergies (peanuts, tree nuts, milk, eggs, sesame seeds, fish and shellfish, soy, lupin and wheat)
  - swallowing problems requiring food texture modification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - malnutrition
    - vegetarian
    - vegan
    - coeliac
    - diabetes
    - food intolerances (including FODMAP requirements)
- additional dietary guidelines for specific populations, including older people and unwell people
- key health and legal consequences of failing to address special food requirements, including:
    - drug-food interactions
    - allergic reactions, including anaphylaxis (severe allergic reaction)
    - food sensitivity or intolerance reactions
    - choking
- different religious and cultural requirements that impact on food production processes, including:
    - halal
    - kosher
    - Hindu
    - Buddhist
    - other specific religious requirements of clients to the business.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - food production process
    - food product to analyse
- specifications:
    - work procedures, including advice on relevant product requirements, safe work practices, food safety and quality
    - recipes and customer specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3019 Operate and monitor interrelated processes in a production or packaging system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and monitor interrelated processes in a production, processing or packaging system. A production or packaging system typically involves a series of interrelated processes that must be coordinated and concurrently operated to produce the required outcome.

This unit applies to workers who have responsibility for the operational requirements of the production, processing or packaging system for the industry in which it is applied. These individuals may have some responsibility for others, and address routine, predictable problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare the production or packaging system for operation	1.1 Confirm availability of equipment, materials and services to meet production or packaging requirements 1.2 Identify and confirm equipment is clean and maintenance requirements have been met, according to health, safety and quality requirements 1.3 Select and fit personal protective equipment according to job requirements 1.4 Confirm operating parameters and select or adjust machine settings according to workplace procedures 1.5 Load or position materials, ingredients and/or product according to workplace procedures 1.6 Conduct pre-start checks, adjust equipment performance and confirm equipment is ready and safe to operate
2. Operate and monitor the system	2.1 Start up, operate and monitor the system and equipment to ensure optimal operations 2.2 Identify any variation in equipment operation, and troubleshoot to identify solution 2.3 Adjust equipment to ensure optimum performance 2.4 Identify, rectify or report out-of-specification product or process outcomes 2.5 Maintain the work area and report maintenance requirements according to workplace procedures 2.6 Conduct work according to workplace and environmental procedures
3. Hand over system operation	3.1 Maintain production and traceability records according to workplace procedures 3.2 Conduct handover according to workplace procedures 3.3 Confirm process operators are properly informed of system and related equipment status at completion of handover
4. Shut down the production or packaging system	4.1 Identify the appropriate shutdown procedure 4.2 Shut down the system according to workplace procedures 4.3 Identify and report maintenance requirements 4.4 Dispose of waste in line with environmental requirements

Assessment Requirements for FBPOPR3019 Operate and monitor interrelated processes in a production or packaging system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated interrelated processes in a production or packaging system, to process at least one batch of goods or packaged products to meet specification, including:

- applying safe work practices
- applying quality standards to work practices
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the production or packaging system, including the system process flow, the interrelationships of each process to identify the impact of variation on related processes, and optimisation options
- basic operating principles of equipment and related accessories used by the system, including equipment adjustment points, status and purpose of guards, and range and location/alignment requirements of sensors and related feedback instruments
- good manufacturing practices (GMP) relevant to work task
- contamination/cross-contamination associated with the process, and related control measures
- operating capacities of equipment used in the system, including different types of equipment and/or components, by processing/packaging operations
- related systems and responsibilities for interaction, including related production systems, services supply, packaging/warehousing, maintenance, laboratory/quality assurance and planning and scheduling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product characteristics and common types of variation in materials and/or ingredients used, including the effect of variation on each stage of the system, and scope to adjust or correct
- typical production related problems, including equipment faults, common causes and warning signs, incorrect or poor supply of materials, incorrect settings and poor operator control
- relevant procedures, specifications and operating parameters for the system and the individual processes
- isolation, lock-out and tag-out procedures and responsibilities
- hazards, risks, controls and methods for monitoring processes within the system, including health and safety in the workplace, quality and environmental hazards and risks
- workplace system and approach to equipment maintenance
- troubleshooting procedures and problem-solving techniques
- communication responsibilities to inform related work areas/support functions and other shifts of operational status and production issues
- traceability procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a production or packaging workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - production or packaging system equipment and related accessories and services
  - materials/consumables required by the process
- specifications:
  - production schedule and batch instructions
  - information on equipment capacity and operating parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify maintenance requirements according to workplace procedures	1.1 Determine whether production equipment will be maintained in-house or by contractor 1.2 Source and assess advice on equipment maintenance requirements according to manufacturers' specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Assess and prioritise special maintenance requirements
2. Plan maintenance according to workplace procedures	2.1 Identify and secure resources required to carry out maintenance 2.2 Develop a maintenance schedule to provide reliable equipment performance with minimal disruption to production 2.3 Ensure the maintenance schedule takes account of production schedules, equipment capability, special maintenance requirements, efficient resource utilisation, food safety, workplace health and safety requirements, and workplace environmental guidelines 2.4 Record the maintenance schedule in the appropriate workplace format 2.5 Consult personnel affected by the maintenance program, and advise of maintenance process
3. Carry out maintenance	3.1 Wear appropriate protective clothing and equipment 3.2 Inspect equipment to identify signs of wear 3.3 Investigate and assess the nature of maintenance requirement 3.4 Carry out routine maintenance on equipment, or oversee contractor access to perform maintenance 3.5 Record and report maintenance activities in line with workplace procedures
4. Monitor implementation of the maintenance schedule	4.1 Monitor progress of maintenance to identify variance to schedule 4.2 Identify, assess and address unplanned events that could affect the schedule 4.3 Identify and communicate potential failure to meet maintenance deadlines to relevant personnel 4.4 Adjust maintenance schedule to meet requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Learning	• Take responsibility for planning, sequencing and prioritising tasks • Apply systematic and analytical decision-making processes for routine and non-routine situations
Reading	• Read and interpret manuals, specifications, and other documentation from a variety of sources, and consolidate information to determine maintenance requirements
Writing	• Record maintenance data using digital and/or paper-based formats
Numeracy	• Analyse and consolidate test results and data from a range of sources to assist with determining maintenance requirements

Assessment Requirements for FBPOPR3020 Plan, conduct and monitor equipment maintenance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned, conducted and monitored maintenance for the equipment on at least one processing line, including:

- applying safe work practices
- developing a maintenance schedule to suit workplace processing requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maintenance approaches and differences between reactive, preventative and proactive maintenance models, including:
  - reliability centred maintenance (RCM)
  - total productive maintenance (TCM)
- organisational systems, processes and responsibilities for:
  - collecting equipment condition information
  - analysing information
  - carrying out required servicing and maintenance
- sources of data on equipment performance and maintenance requirements, related recording systems and data analysis tools, including:
  - manufacturer specifications
  - equipment capability data
  - condition monitoring data
  - equipment operation/performance reports and log sheets
  - workplace environmental guidelines
- maintenance requirements and scheduling processes, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - production process
  - impact of scheduling on production
  - maintenance activities
  - maintenance priorities
  - effect on related activities, including purchasing and contract management
- factors that influence the reliability of equipment, including:
  - equipment capability
  - equipment/process design
  - operating conditions and practices
- methods used to measure effectiveness of maintenance, including:
  - plant availability
  - cost of maintenance
  - downtime
  - alternate resource utilisation
- health and safety, environmental and food safety requirements and responsibilities associated with maintenance activities
- relevant staff to be consulted/notified of maintenance schedule and related activities
- conditions that can affect achievement of the maintenance schedule, including:
  - unusual or unplanned conditions
  - related options for response to equipment breakdowns/emergencies.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - processing equipment
  - personal protective clothing and equipment
- specifications:
  - work procedures, including advice on safe work practices, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - maintenance scheduling and recording requirements
- relationships:
  - operational staff.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3021 Apply good manufacturing practice requirements in food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to comply with relevant good manufacturing practice (GMP) requirements and workplace quality standards in a food or beverage processing facility.

The unit applies to individuals who apply GMP requirements to operations in a food or beverage processing environment. Individuals work under broad direction and take responsibility for their own work.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Assessment Requirements for FBPOPR3021 Apply good manufacturing practice requirements in food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied good manufacturing practice (GMP) requirements to food and/or beverage processing work, and demonstrated each of the following points at least once:

- following workplace information relating to GMP responsibilities
- completing forms according to GMP and traceability requirements
- maintaining workplace cleanliness and tidiness to meet GMP requirements
- maintaining personal hygiene consistent with GMP requirements
- using appropriate work methods and personal protective clothing and equipment to prevent contamination and cross-contamination.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- GMP as a regulatory concept, including regulatory obligations of employees, and the potential implications of non-compliance
- GMP practices that cover the processing chain
- legal requirement to produce food that is safe for human consumption
- Australian and other applicable regulatory frameworks relevant to the safe processing of food:
  - Food Standards Code, relevant to work role and products
  - state and territory Food Acts and their associated regulations
  - Hazard Analysis and Critical Control Point (HACCP) principles for the workplace
- industry references to guide best practice management of hazards in food

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- definition of allergen cross-contact as a residue or other trace amount of a food allergen that is unintentionally incorporated into another food
- how allergen cross-contact occurs, which can be from ingredients, raw materials, personnel, inadequate cleaning of equipment, or shared equipment
- implications of not reporting illness and not following jewellery and make-up policies
- inspection or test points (control points) in the process and the related procedures and recording requirements
- the relationship between GMP and the food safety and quality systems, and the consequences of not following procedures, including:
  - personnel responsible for designing and managing GMP
  - personal role to maintain GMP
  - the role of internal and external auditors
  - quality assurance
  - quality control
  - risk management procedures
- personal protective clothing and equipment use, storage and disposal requirements and hygiene requirements
- personal protective equipment, clothing and footwear requirements for working in and moving between work areas
- workplace cleaning standards and responsibilities relating to own work, including:
  - waste collection
  - recycling, safe handling and disposal of different types of waste
  - safe handling and disposal of hazardous waste
- properties, handling and storage requirements of:
  - raw materials
  - packaging materials
  - final product
- GMP requirements for maintaining plant and process equipment
- GMP requirements for transferring of equipment and material between areas
- procedures for responding to out-of-specification or unacceptable process performance or outcomes
- controls to protect personnel and the environment from contamination by products and materials.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - cleaning products
  - food processing equipment
- specifications:
  - GMP requirements
  - workplace reporting procedures
  - workplace procedures related to GMP
  - workplace environmental procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3022 Receive and store raw materials for food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to recognise the key characteristics of raw materials used at the workplace, and to receive and store them appropriately.

The unit applies to individuals who take responsibility for receiving and storing raw materials in a food or beverage processing environment. The work includes identifying and providing solutions to routine and some non-routine problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify quality parameters for raw materials	1.1 Identify raw materials used at workplace 1.2 Identify key quality attributes of raw materials, including any

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	declared allergens 1.3 Identify workplace/product compliance issues associated with each raw material 1.4 Identify hazards associated with each raw material 1.5 Identify material product specifications
2. Receive raw materials	2.1 Check details of order for raw materials 2.2 Compare order details to details on delivery docket 2.3 Check quality of raw material meets specifications, including any substitution ingredients 2.4 Take appropriate action to respond to out-of-specification materials according to workplace procedures 2.5 Perform basic analytical tests on raw materials to confirm they meet processing requirements 2.6 Receive raw materials that meet quality requirements 2.7 Record delivery of raw materials, in line with organisational procedures
3. Move raw materials	3.1 Identify risks and hazards of handling raw materials specific to job role 3.2 Wear appropriate personal protective equipment to manage risks 3.3 Use appropriate equipment to move raw materials to storage area
4. Store and monitor raw materials	4.1 Check storage conditions meet food safety and quality requirements 4.2 Adjust storage conditions that do not meet quality requirements 4.3 Ensure stock is rotated so that older stock is used before new stock 4.4 Monitor storage to ensure quality of raw material is maintained 4.5 Maintain records of storage conditions and quantities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interpret Product Information Forms (PIFs), including allergen information
Writing	• Document any substitution ingredients
Numeracy	• Interpret readings of gauges and scales for temperature, moisture • Use areas (m2), weight (g, kg, T) and volumes (ml, L, m3, ML, GL) to describe product quantities

Assessment Requirements for FBPOPR3022 Receive and store raw materials for food processing

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has received and appropriately stored at least three different raw materials, including:

- applying safe work practices
- applying food safety procedures to work practices
- taking corrective action in response to out-of-specification materials/goods
- completing records accurately.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- raw materials used in production of food and/or beverages, relevant to job role
- specifications for raw materials utilised for job role
- Certificates of Analysis for raw materials, and their purpose
- Product Information Forms (PIFs), their layout and content
- typical analytical tests and checks to determine quality of raw materials, including observation, smell and rapid tests
- range of actions to take in response to out-of-specification materials, including reporting issues to supervisor, rejecting delivery, quarantining materials
- contamination risks and controls, including cross-contamination risks, product compatibility and storage requirements
- common microbiological, physical, chemical and allergen hazards related to raw materials handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- storage requirements to ensure quality of raw material is maintained, including the effects of temperature, moisture, contamination from other materials, allergen management, pest control
- safe work practices to handle raw materials, relevant to job role
- procedures to record traceability
- safe work requirements relevant to the job role.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food processing/food storage workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - raw materials for delivery
  - manual handling equipment
  - storage facilities
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - recording requirements and procedures
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR3023 Operate and monitor an evaporation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down an evaporation process.

This unit applies to individuals who work under general supervision in a food processing environment. It typically applies to the production worker responsible for applying basic operating principles to the operation and monitoring of an evaporation process and associated equipment.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPOPR3023 Operate and monitor an evaporation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated an evaporation process to produce at least one batch of product to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- monitoring control points and conducting inspections as required to confirm process remains within specification, including:
  - temperatures
  - vacuum
  - motor amperage
  - condensate flow
  - steam flow and pressure
  - throughput
  - time/speed
  - evaporated product characteristics
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of evaporation, including:
  - an understanding of the principles of steam
  - the relationship between boiling point and pressure as applied to evaporation
  - the changes that occur to product as it moves through the evaporation process
- basic operating principles of evaporation equipment, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - main equipment components
    - status and purpose of guards
    - equipment operating capacities and applications
    - the purpose and location of sensors and related feedback instrumentation
- quality characteristics to be achieved by the evaporation process
- the flow of the evaporation process and the effect of product output on downstream processes
- quality requirements of materials and the effect of variation on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- good manufacturing practices (GMP) relevant to work task
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- techniques used to monitor the evaporation process, including inspecting, measuring and testing
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross-contamination and food safety risks associated with the process, and related control measures relevant to the evaporation process
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to the evaporation process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the evaporation process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for evaporation equipment
- recording procedures to ensure traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a food processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - evaporation equipment and related services
    - personal protective clothing and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - materials to be evaporated
  - sampling schedules and test procedures and equipment
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - production schedule, batch/recipe instructions
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR3024 Operate and monitor an extrusion process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored an extrusion process to produce at least one batch of product to meet product specifications, including:

- applying safe work practices
- applying food safety procedures to work practices
- checking moisture content of output
- taking corrective action in response to typical faults and inconsistencies in line with operating procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of each part of the process, including the purpose and methods used to achieve each stage of the extrusion process
- basic operating principles of equipment used for the extrusion process, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- good manufacturing practices (GMP) relevant to work task
- services required for the extrusion process, and action to take if services are not available
- the flow of the extrusion process and the effect of outputs on downstream processes
- quality characteristics of extruded output, including required characteristics of mass or blend to be extruded, including:
  - gelatinisation and viscosity
  - dimensions, texture and hardness of extruded product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - moisture content
- effect of variation in inputs and/or services on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including the effect of variation in key variables, including:
    - throughput and work input at each stage of the process
    - effect of time and temperature
    - barrel pressures and temperatures at each zone
- typical equipment faults for the extrusion process and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems, including:
    - screw and barrel assembly wear
    - die plate configuration and wear
    - wear of conditioner paddles
    - extruder knife condition
- methods used to monitor the extrusion process, including inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation in the operation of the extrusion process, and corrective action required
- contamination/cross-contamination and food safety risks related to the extrusion process, and related control measures
- health and safety hazards and controls relevant to the operation of the extrusion process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the extrusion process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the extrusion process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures required for extrusion equipment
- procedures to track traceability of product
- procedures to ensure biosecurity requirements are met.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - a food or feed processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - extrusion and related equipment and services
    - personal protective clothing
    - ingredients/blend/mass to be extruded
    - cleaning procedures, materials and equipment
- specifications:
    - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
    - information on equipment capacity and operating parameters
    - production schedule/batch specifications, control points and processing parameters
    - documentation and recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3018 Operate a sterilisation process using an autoclave

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a sterilisation process using an autoclave.

The unit applies to individuals who apply Good Manufacturing Practice (GMP) or other accreditation or certification requirements if relevant in other industries/settings, and operating principles to the terminal sterilisation of product and sterilisation of goods for aseptic processing using an autoclave. Individuals work under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare and initiate operation of equipment	1.1 Check autoclave is operational and sterilisation load is available 1.2 Prepare items for sterilisation load by stacking, wrapping, taping or sealing according to Standard Operating Procedures (SOP) 1.3 Mark bags as required according to SOP

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Load autoclave and position temperature load probe according to load pattern requirements detailed in the SOP 1.5 Run pre-start leak test cycle and select the correct sterilisation cycle according to SOP 1.6 Initiate the autoclave cycle
2. Review autoclave printout at end of cycle	2.1 Review autoclave cycle printout or electronic report and confirm correct cycle was run with no faults or alarms detected 2.2 Complete documentation according to SOP
3. Remove items and follow shut down procedures	3.1 Commence shutdown of autoclave by confirming autoclave cycle is complete and autoclave is safe to open according to SOP 3.2 Remove items safely from autoclave and check contents 3.3 Check data logging or relevant indicators have been activated according to SOP 3.4 Confirm items are dry and sterilised 3.5 Clean autoclave according to SOP 3.6 Complete records according to SOP

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify relevant information from workplace documentation and interpret requirements for the sterilisation process
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Confirm number of items according to loading pattern • Interpret time and temperature specifications for cycle parameters • Confirm post cycle results meet sterilisation requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for FBPPHM3018 Operate a sterilisation process using an autoclave

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated at least one sterilisation process using an autoclave, including:

- accessed Standard Operating Procedure (SOP) information to confirm sterilisation requirements
- confirmed supply of product or materials for the sterilisation process
- prepared items by stacking autoclave dolly with product for terminal sterilisation or wrapping, taping, or sealing in an autoclave bag product for aseptic processing
- marked bags with temperature-sensitive tape or chemical indicators
- positioned any moveable load probe and loaded items in correct orientation according to SOP and validated load pattern requirements
- conducted pre-start checks required for safe operation of the autoclave, including:
  - carried out required area or line clearances
  - inspected equipment condition to identify signs of wear
  - confirmed all safety equipment in place and operational
  - confirmed sterilising equipment clean or sanitised
  - confirmed all pre-start cycles have been run, including a leak test
- confirmed sterilising equipment correctly set up for processing requirements
- selected correct sterilisation cycle as per the SOP
- reviewed cycle print out to confirm the cycle was completed satisfactorily with no alarms or faults
- taken corrective action in response to a non-conformance
- opened autoclave and removed items from autoclave according to workplace procedures
- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to SOP.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- requirements for autoclaving for microbial reduction/sterility
- stages of the sterilisation process, including:
  - relationship between time, temperature and pressure as they affect kill rate
  - variables that impact effectiveness of sterilisation
- nature of items to be sterilised using an autoclave, different cycle types used and related handling and preparation requirements, including:
  - porous loads
  - non-porous loads
  - position of probes
- nature of wrapping materials suitable for use, including:
  - methods used to wrap or bag items
  - methods used to monitor whether time and temperature parameters are met, including heat-sensitive tape or markers
  - significance of validated loading patterns in achieving effective sterilisation
- basic operating principles of equipment, requirements and parameters of autoclave, including:
  - main equipment components including filters, vacuum pumps, condensers and the autoclave chamber
  - utilities requirements for a GMP autoclave including compressed air, electricity, processed water steam supply and cooling water
  - time and temperature parameters required to achieve sterilisation and corrective actions required where operation falls outside specified parameters
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - status and purpose of guards
  - equipment operating capacities and applications
  - purpose and location of sensors and related feedback instrumentation
  - corrective actions required where operation is outside of specified parameters
  - calibration schedule and procedures to confirm that instruments are within calibration
- health and safety hazards related to autoclave operation and associated control measures, including working with superheated steam and hot surfaces, manual handling and steam leaks
- pre-start check requirements, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment in place and operational
  - confirming equipment is clean or sanitised
  - confirming equipment is correctly configured for processing requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- evaluation and in-process monitoring of sterilisation process indicators, including:
  - biological
  - chemical
  - physical
- methods used to monitor the sterilisation process, including:
  - inspecting
  - measuring
  - testing
- requirements of different shutdowns, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- operating principles of process control
- Good Manufacturing Practice (GMP) requirements associated with a sterilisation process and related control measures
- environmental issues and controls relevant to the sterilisation process including waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - autoclave and handling equipment
  - loading bags or wrapping materials and tape/heat sensitive markers
  - materials for sterilisation
  - test equipment
  - cleaning materials and equipment associated with sterilisation process
  - record keeping system
- specifications:
  - sterilisation specifications, control points and processing parameters
  - recording requirements and procedures
  - product and intermediate product specifications, control points and processing parameters
  - workplace documentation relating to sterilisation process and procedures that comply with GMP
  - load pattern requirements
  - sampling schedules and test procedures

FBPPHM3019 Operate a chromatography manufacturing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a chromatography separation process in a pharmaceutical manufacturing facility.

The unit applies to individuals who use Good Manufacturing Practice (GMP) and operating principles in the chromatography separation process. Individuals work under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare chromatography equipment for operation	1.1 Identify production requirements from workplace documentation 1.2 Confirm materials meet production requirements 1.3 Confirm required facilities, storage, equipment and personnel are available

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Select and fit personal protective equipment and contamination prevention clothing according to workplace procedures 1.5 Clean, assemble and adjust equipment according to workplace procedures and operation and maintenance manual 1.6 Set equipment components and related instrumentation to meet production requirements 1.7 Conduct pre-start checks according to workplace procedures 1.8 Complete equipment status reports according to workplace procedures
2. Prepare samples and load products	2.1 Conduct pre-sampling tests and interpret test results to confirm process operation 2.2 Identify and report out of limit test results according to workplace procedures 2.3 Load product and pack into columns according to specifications and production requirements
3. Operate and monitor separation process	3.1 Start up and monitor separation process to confirm process cycles occur in correct sequence according to specifications and production requirements 3.2 Identify and report out of limit products or processes according to workplace procedures 3.3 Confirm separation of solution meets specifications 3.4 Conduct process according to safety and environmental requirements 3.5 Complete documentation according to workplace requirements
4. Shut down separation process	4.1 Confirm isolation and lock out procedures and product and process changeovers for shutting down 4.2 Safely shut down process 4.3 Clean work area according to workplace procedures 4.4 Complete records according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify relevant information from workplace documentation and interpret requirements for the chromatography separation process
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Interpret specifications for number of cycles and flow meters

Assessment Requirements for FBPPHM3019 Operate a chromatography manufacturing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely operated at least one separation process using chromatography, including:

- accessed workplace information to confirm requirements for the process
- selected, fitted and used personal protective equipment and contamination prevention clothing
- conducted pre-start checks required for the safe operation of a chromatography separation process, including:
  - carried out required area or line clearances
  - inspected equipment condition to identify signs of wear
  - confirmed all safety equipment in place and operational
  - confirmed that equipment is clean or sanitised
  - confirmed that equipment is correctly configured for processing requirements
- performed procedures for packing columns and for loading material into columns
- started, operated, monitored and adjusted a process to achieve required outcomes
- conducted in-process control checks to confirm the process remains within limits
- maintained security, integrity and traceability of:
  - samples
  - sub-samples
  - documentation
- followed isolation and lock out procedures to take process and related equipment off-line in preparation for cleaning and maintenance according to workplace procedures
- performed product and process changeovers, including demonstrating column storage procedures
- taken corrective action in response to out-of-specification results
- safely shut down the process according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaned and maintained work area to meet workplace cleaning standards and environmental requirement
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the chromatography separation process, including:
  - the purpose, methods and outcomes of each stage
  - quality characteristics achievable by the separation process
  - methods of analysis
- basic operating principles, requirements and parameters of chromatography equipment, including:
  - main equipment components, operating capacities and applications
  - consequences of incorrect equipment preparation, such as incorrectly positioned non-return valve, supply pump failure and air in the column
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- line clearance cleaning and sanitation procedures
- functions and limitations of personal protective equipment and contamination prevention clothing
- pre-start check requirements, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment is in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
  - sample test methods analysis and interpretation of results
  - implications and actions taken if results are out-of-specification
- procedures used for:
  - collecting in process samples as specified in documentation appropriate to columns and process requirements
  - interpreting traces and corrective action where traces are not within specifications
- typical profile for a production cycle and events to be monitored during the cycle
- common causes of out-of-specification product or process and corrective actions required
- procedures and requirements of different shutdowns, including:
  - an understanding of the requirements for column storage
  - emergency and routine shutdowns
  - procedures to follow in the event of power outage
- isolation, lock out and tag out procedures and responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Good Manufacturing Practice (GMP) requirements associated with a separation process and related control measures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - chromatography equipment
  - materials dispensed for the process
  - cleaning materials and equipment associated with a separation process using chromatography
  - record keeping system
- specifications:
  - product and intermediate product specifications, control points and processing parameters
  - workplace documentation relating to separation process and procedures that comply with GMP requirements
  - cleaning procedures associated with a separation process using chromatography.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL1001 Communicate workplace information

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to gather, convey and receive workplace information and to interact with others at work.

This unit applies to individuals who work under direct supervision who use basic communication skills to interact with others and follow workplace directions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Exchange verbal information	1.1 Identify information requirements according to workplace procedures 1.2 Ask questions to seek or clarify information 1.3 Apply effective listening skills to receive information 1.4 Use interactive skills to communicate effectively with others 1.5 Provide information in a timely and appropriate manner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Locate and use workplace information	2.1 Locate sources of workplace information to inform work tasks 2.2 Read and use information to carry out work responsibilities 2.3 Ask questions to clarify written or diagrammatic instructions
3. Complete workplace documentation	3.1 Identify forms or digital records that require completion for work operations 3.2 Complete written forms or records in line with workplace requirements 3.3 Submit or save records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret simple work instructions
Writing	• Complete basic work records (digital or paper-based)
Oral communication	• Follow instructions to complete a limited set of well-defined tasks • Follow basic communication protocols and conventions
Numeracy	• Recognise basic symbols, signage and graphics to guide work tasks

Assessment Requirements for FBPPPL1001 Communicate workplace information

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has communicated workplace information effectively, covering each of the following situations at least once:

- seeking information from people in the workplace to support work roles and responsibilities
- clarifying work requirements by using appropriate questions
- providing information to others
- locating and reading simple workplace instructions
- correctly completing a workplace form or record.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- communication channels and forums, including consultative arrangements established in the workplace
- common workplace and technical terms relating to work role
- sources of information and advice relating to own job
- methods used to access workplace information and procedures
- interactive techniques, including active listening, questioning, seeking and responding to feedback, and interacting effectively with others
- recognition of different methods and styles of communication
- how workplace forms and/or records are to be completed and to what standard.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - workplace information and procedures
  - workplace forms or records (digital or paper-based)
- relationships:
  - co-worker or supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL2002 Work in a socially diverse environment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to interact effectively with people in a socially diverse workplace environment.

This unit applies to individuals who facilitate communication with customers and colleagues from backgrounds that are different to one's own, and who allow for cultural considerations when identifying issues that may cause misunderstandings in the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Communicate with people from a background different to one's own	1.1 Identify responsibilities according to the principles of anti-discrimination legislation 1.2 Treat people from all social and cultural groups with respect and sensitivity 1.3 Use verbal and non-verbal communication that takes into account social and cultural differences

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Make efforts to communicate through use of gestures or simple words where language barriers exist 1.5 Seek assistance from colleagues, specialist resources or outside organisations when cultural considerations could be affecting workplace communication
2. Respond to cross-cultural misunderstandings	2.1 Identify issues that may cause conflict or misunderstanding in the workplace 2.2 Consider possible cultural and social differences when difficulties or misunderstandings occur 2.3 Address difficulties with appropriate personnel in the workplace and seek assistance to facilitate understanding where required 2.4 Make efforts to resolve misunderstandings, taking into account cultural and social considerations 2.5 Refer issues and problems that cannot be resolved to appropriate personnel for follow up

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Listen respectfully • Speak to people from differing backgrounds with respect and sensitivity

Assessment Requirements for FBPPPL2002 Work in a socially diverse environment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked effectively in a socially diverse environment on a minimum of two different occasions, including:

- recognising cultural and social differences in the workplace
- responding to cross-cultural or cross-social misunderstandings.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to company and employee rights and responsibilities in the workplace
- recognition of differences between people from different cultural and social backgrounds, including those differing from own
- understanding of the basis of cultural difference, including behaviour or practices that can cause offence, and related strategies for interacting in ways that are culturally and socially sensitive
- communication strategies and styles appropriate to diverse audiences related to the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents a real workplace
- specifications:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- rights and responsibilities relating to anti-discrimination and EEO
- relevant company policies and procedures

- relationships:
  - opportunities to interact with others using typical workplace communication processes
  - interactions with team members and supervisors, or realistic scenarios or role-plays.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
