<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply sensory analysis techniques in food processing</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of recognising the organoleptic properties of foods implementing procedures for sensory testing coordinating a taste panel and recording the results.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Sensory testing procedures and related equipment and product for samples • Methods and related software systems as required for collecting data from sensory testing • An appropriate sensory testing environment
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <p>Observation of candidate organising and running a range of tests and procedures</p> <ul style="list-style-type: none"> • written and/or oral questioning to assess knowledge and understanding • completing workplace documentation for the conduct of sensory testing • third party reports from experienced practitioner • role play • case studies • field reports.
<p>Guidance information for assessment</p>	<p>Evidence should be gathered over a period of time in a</p>

	range of actual or simulated environments.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Legislative requirements including national codes of practice and state food regulatory requirements</p> <p>Safety procedures and MSDS</p> <p>Australian and international standards including:</p> <ul style="list-style-type: none"> • professional association regulations • industry guidelines and codes of practice • Federal and state food safety regulations • Food Standards Code • ISO Standards • codex alimentarius.
<p>The purpose of sensory testing</p>	<p>Tests may be performed to determine the following aspects of a sample: flavour, appearance, aroma, texture.</p> <p>The primary flavour characteristics may include: sweet, sour, umamic, bitter, salty.</p>
<p>Testing methods</p>	<p>Testing methods may include:</p> <ul style="list-style-type: none"> • triangular test, duo-trio test, ranking test, paired comparison test, blending test • flavour profile • threshold analysis • discriminative testing, descriptive testing, affective testing.

Unit Sector(s)

Technical.

FDFST4011A Apply the principles of nutrition to food processing

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to provide nutritional information for processed food, and to implement procedures to optimise the nutritional value of a product.

Application of the Unit

This unit applies to production and technical supervisors and quality managers who are required to monitor the nutritional value of foods through processing and to interpret label information, and to members of product development teams who are required to assist in development and testing of products.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret labelling requirements to provide nutritional information	1.1 Food storage and preparation information on food labels is reviewed 1.2 The nutritional values of similar processed food products based on information supplied on the label are compared 1.3 Nutritional information on product labels to develop a diet plan for customers with specific requirements is interpreted
2. Evaluate the impact of processing methods on the nutritive value of processed compared to fresh food	2.1 The effect of processing on the stability and availability of macro and micro nutrients in a range of food products is determined 2.2 Processes for modification of processed foods to enhance nutritional value are investigated 2.3 Food storage methods are compared for the retention of nutritive value and the introduction of food chemicals such as preservatives 2.4 The nutritional impact of a range of additives for flavour or colouring enhancement is investigated 2.5 Health warnings and permissible levels for the use of artificial additives to food products are compiled for a food product range
3. Contribute to the development of a food product to meet a specified dietary requirement	3.1 Appropriate diets for customers with specific requirements or health challenges are identified 3.2 Common nutritional deficiencies and related diseases are evaluated 3.3 The nutritional properties of foods are matched to specified requirements 3.4 A food product is developed and nutritional advice provided

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- recognise key macronutrients required for a healthy diet
- establish the processes of digestion and absorption
- establish the process of energy metabolism in the human body
- describe the role of proteins in nutrition
- describe the role of carbohydrates in nutrition
- describe the role of vitamins and minerals in nutrition
- describe the role of dietary fibre
- describe the role of lipids in nutrition
- describe the body's processes for storing and using water and its role in nutrition
- identify, review and apply key and current nutritional information
- compare the nutritional needs of special population groups
- evaluate nutritional issues in relation to product development, labelling and marketing of processed foods
- identify nutritional related risk factors and diseases
- establish public health and environmental hazards, in relation to nutrition.

Required knowledge includes:

Knowledge of:

- impacts of processing on nutritive properties of food
- nutritional information on food label
- product development processes
- additives as nutritional enhancers
- impacts of processing on nutritive properties of food
- nutritional information on label
- product development to reduce negative nutritional effects or meet nutritional deficiencies
- additives as nutritional enhancers
- key macro and micro nutrients for a healthy diet
- the processes of digestion, absorption and energy metabolism in the human body
- human energy requirements
- dietary guidelines and legislative requirements related to processed foods
- the effects of processing and storage on nutrients, and the methods for overcoming these effects.
- nutrition related risk factors and diseases
- food intolerances and allergies
- diseases caused by nutritional deficiencies
- modified and functional foods and nutraceuticals.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to evaluate processing methods and additives for their effects on the nutritional value of food products, and to apply nutritional knowledge in product development.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to compare the nutritive value of processed food products based on nutritional information, to assess the impact of food processing and preservation techniques on nutrient retention in the food product, and to apply knowledge of food properties and nutrition as part of contributing to product development or planning.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, food testing data and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results • Nutritional information on ingredients and food products.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding

	<ul style="list-style-type: none">• Third party report for contribution to product development and application of nutritional knowledge in a food processing operation• A comparison of food products based on label information• Case studies.
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Occupational health and safety requirements</p>	<ul style="list-style-type: none"> • Codes of practice • Material Safety Data Sheets • Enterprise OHS policies, procedures and programs.
<p>Regulations</p>	<ul style="list-style-type: none"> • Australian and international standards including: <ul style="list-style-type: none"> • industry guidelines and codes of practice • industry regulations • Australia New Zealand Food Standards Code • ISO Standards • codex alimentarius • State food regulations • Legislation.
<p>Workplace requirements</p>	<ul style="list-style-type: none"> • Enterprise QA policy, practices and procedures • Enterprise-specific procedures • SOPs • Task requirements • Work instructions.
<p>Food processing Regulations/ Standards/ Guidelines</p>	<ul style="list-style-type: none"> • Australian and international standards • Codex Food Processing Standards • Federal and state legislation • NHMRC Australian dietary guidelines • FSANZ labelling regulations.
<p>Organisations</p>	<p>May include:</p> <ul style="list-style-type: none"> • National Health & Medical Research Council (NHMRC) • National Heart Foundation of Australia (NHFA) • Federation of Australian Nutrition Organisations (FANO) • Nutrition Australia • The Nutrition Society of Australia • Dietitians Association of Australia • The Australian Institute of Food Science & Technology • Australian society of clinical immunology and allergy.

Functional foods	Any fresh or processed food claimed to have a health-promoting or disease-preventing property beyond the basic function of supplying nutrients. Fermented foods with live cultures are considered as functional foods with probiotic benefits.
Nutraceuticals	Includes functional foods that also aid in the prevention and/or treatment of disease(s) and/or disorder(s) (except anaemia),
Modified foods	Fresh or processed food which has had components added (e.g. Vitamin C enriched) or reduced (e.g. low fat milk).

Unit Sector(s)

Technical.

FDFST4012A Apply water management principles to the food industry

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to monitor and manage water quality and usage in a food processing operation.

Application of the Unit

This unit applies to quality assurance and technical staff who have responsibility for maintaining product safety, quality and efficiency of food processing operations that use water as part of the food production processes. The unit does not apply to the management of water used in a plant for non food production purposes e.g. for cleaning, showers, gardens etc. Responsible management of water for these purposes is covered under MSAENV472A Implement and monitor environmentally sustainable work practices.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the sources and quality of water available to food processing plants	1.1 Current and possible future sources and quality of raw water are identified 1.2 The water quality requirements for required food processing operations are identified 1.3 The suitability of water supplied from a range of sources, including water recycled from the food processing plant, is assessed 1.4 The consumption of non recycled water is assessed and a reduction strategy formulated
2. Identify raw water pre treatment processes	2.1 The steps involved in water purification are documented and data on quality for supplied water is obtained 2.2 Water disinfection methods and equipment for a range of food processing operations are identified and evaluated
3. Apply efficient and sustainable water management principles to the food processing industry	3.1 Opportunities for reducing water usage in the food processing operation is identified 3.2 Sources and characteristics of waste water generated across the food processing operation are identified 3.3 Methods for treating and recycling water for re-use in food processing operation are identified 3.4 Opportunities to reduce the volume of waste water and improve treatment methods are identified 3.5 Procedures for future water management are reviewed and critical limits set

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to

- assess the suitability of water supplied from a range of sources, and water recycled within the food processing plant
- identify the water quality requirements for a range of food processing operations
- map the steps involved in water purification at municipal water treatment plants
- identify water disinfection methods, suitable for a range of food processing operations
- appraise suitable systems and equipment for water disinfection in the food processing industry
- identify the sources and characteristics of waste water generated across food processing operations
- identify methods for treating and recycling water and minimising potable water consumption
- identify legal requirements for water discharge.

Required knowledge includes:

Knowledge of:

- water quality requirements, including:
 - chemical specifications e.g. pH, Total Suspended Solids (TSS), Total Dissolved Solids (TDS), heavy metals
 - microbiological specifications eg. BOD, presence of Fecal coliform, bacteria, Cryptosporidium, Giardia
- water purification processes in general
- water disinfection methodologies and systems suitable for the food processing industry including chlorination, ozonation and UV irradiation
- waste water treatment (relevant to a food processing plant) including primary, secondary and tertiary waste water treatment stages
- waste stream characteristics and classification in relation to the food processing industry
- methods of reducing, reusing and recycling water in a food processing operation, e.g. implementation and routine monitoring of waste reduction practices, use of consumable, returnable, refillable or reusable packaging
- State legislation and local bylaws governing prescribed wastes
- legal requirements for water discharge
- regulations relating to the processing and disposal of food waste
- the major requirements contained in the environmental protection legislation, including State environmental regulatory certification procedures, permits and waste discharge agreements.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to implement and review water and waste procedures for a food processing operation.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to assess water quality for use in food processing, monitor water usage for a food processing operation, integrate water quality monitoring into process planning, and implement and review water management procedures in food processing.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • production process and related equipment, manufacturers’ advice and operating procedures • methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • observation of candidate conducting a range of tests and procedures • written and/or oral questioning to assess knowledge and understanding • completing workplace documentation • third party reports from experienced practitioner • case studies • field Reports.

Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.
-------------------------------------	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Legislation</p>	<p>Legislation refers to any relevant Commonwealth and State Acts of Parliament, Statutes and Regulations including legislation and regulations covering:</p> <ul style="list-style-type: none"> • the use of water for commercial and industrial use • environmental protection • waste generation and disposal • food standards and food safety • occupational health and safety.
<p>Policies and procedures</p>	<ul style="list-style-type: none"> • Codes of practice, e.g. Manual Handling and Small Wastewater Treatment Plants • Australian and international standards e.g. ISO14000.
<p>Water sources</p>	<p>Water sources may include:</p> <ul style="list-style-type: none"> • reticulated supply from water authorities • municipal treatment plants • bores • dams • rainwater tanks • recycled water.
<p>Water quality requirements</p>	<p>Water quality requirements for food processing operations may include chemical, microbiological, physical and radiological specifications.</p>
<p>Treatment and disposal methods</p>	<p>Treatment and disposal may include on site storage and disposal; dilution; specifying/controlling discharge rates; recycle and reuse options; on site pre-treatment.</p>
<p>Waste management documentation</p>	<p>Waste management documentation may include information on applicable trade waste laws or other requirements; complaint records; training records; process information, process operation log book; inspection, maintenance and calibration records; relevant contractor and supplier information; incident reports. Information on emergency preparedness and response, records of significant trade waste impacts; audit results; management reviews; trade waste charging policy; industrial trade waste generators register.</p>

Unit Sector(s)

Technical.

FDFST4020A Implement and review the processing of market milk and related products

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to implement and review production standards and procedures for the processing of market milk and related products

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and food safety, or production management. The unit typically applies to staff with responsibility for maintaining product safety, quality and efficiency in food production in the dairy processing sector. This unit includes using knowledge of food science and processes to determine the required food safety, quality and performance required from food production equipment. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive fresh milk and blend using standard industry data	<ul style="list-style-type: none">1.1 Receival and testing procedures for milk from farm are applied1.2 A safe working environment is provided for milk receival and testing1.3 Received milk is tested and data is recorded and stored1.4 Received milk is stored under correct conditions and adjusted or blended based on test data
2. Monitor the manufacture of market milk and related products to meet quality standards	<ul style="list-style-type: none">2.1 The specifications for the end product are determined2.2 A safe working environment is provided for the manufacture of product samples2.3 Resource requirements for the preparation and manufacture of market milk and related products are identified2.4 A production schedule to ensure all resources and requirements are available and meet company requirements is used2.5 Critical factors in the preparation and manufacture of market milk and related products are addressed2.6 Data requirements appropriate for food safety, quality and production standards are identified2.7 Data collection points consistent with equipment capabilities and data requirements are established2.8 Procedures to deal with non-conformance in relation to process and the final product are developed2.9 Market milk and related product manufacture is carried out and monitored
3. Report problems arising from the preparation and manufacture of market milk and related products	<ul style="list-style-type: none">3.1 Potential product defects and their causes, which may arise in the preparation and manufacture of market milk and related products, are identified3.2 System to identify defects in the preparation and manufacture of market milk and related products, and to apply adjustments to process/equipment is implemented and reviewed3.3 Problems are reported to designated person according to company policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- implement handling and storage procedures for market milk and related products
- establish CCPs and critical limits for each step in production of market milk and related products
- monitor production of market milk and related products
- apply procedures to ensure the product is fit for further processing and meets regulatory, food safety and quality requirements
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- the statutory compositional requirements for the different types of market milk and related products
- domestic and export markets for market milk and related products
- production systems used for the preparation and manufacture of market milk and related products
- formulation of market milk and related products
- role of major ingredients found in market milk and related products
- the purpose of each process, and processing sequence, used in the preparation and manufacture of market milk and related products
- principles of operation of equipment and accessories used in the preparation and manufacture of market milk and related products are determined
- output of each of the processes used in the preparation and manufacture of market milk and related products are identified
- production system requirements for the preparation and manufacture of each market milk and related products are determined
- the resource requirements for the preparation and manufacture of market milk and related products
- chemical and physical hazards which may affect milk

- procedures for milk storage, handling and preparation
- safe work procedures
- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- identification of CCPs and critical limits
- water and energy use and recycling in processing
- regulatory requirements associated with the processing of market milk and related products
- environmental impacts of the food processing operation

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to implement and review production standards and procedures for the processing of market milk and related products.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to: implement process control procedures and data collection to process milk and related products; carry out sensory evaluation and product testing; diagnose and report problems for manufacturing; and review the production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • A report on a review of the production system.

Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.
-------------------------------------	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labeling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
Safe work procedures	<p>Examples of specific task related procedures may include:</p> <ul style="list-style-type: none"> • handling of chemicals • use of PPE.
Materials and equipment	Food processing chemicals, Food processing equipment, fermenting vessels, centrifuge, heat exchangers, homogeniser, mixing vats, sanitary pumps, conveying belts, fillers and aseptic fillers.
Market milk and related products	Includes standardised milk, whole fresh milk, recombined milk, vitamised milk, irradiated milk, mineralised milk, reconstituted or rehydrated milk, skimmed milk, heat treated or UHT milk, flavoured milks.

Unit Sector(s)

Technical.

FDFST4021A Carry out sampling and testing of milk at receipt

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit describes the skills and knowledge required to carry out sampling and testing procedures for milk received off farm.

Application of the Unit

This unit applies to dairy processing personnel who have roles in product design, quality assurance and food safety, or production management. The unit typically applies to staff with responsibility for receiving and testing milk from the dairy farm as the first operation in market milk processing or the manufacturing of milk based products.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement and monitor personal hygiene standards	1.1 Personal hygiene meets the requirements of the food safety program for milk receival and handling 1.2 Risks to food safety are identified and reported 1.3 Clothing and footwear worn is appropriate for testing and handling milk and meets the requirements of the food safety program 1.4 Movement around the milk processing plant complies with the food safety program
2. Carry out standard tests to determine the blending and further processing requirements of milk	2.1 Implement procedures for receiving and handling milk 2.2 Requirements and procedures for milk testing are complied with 2.3 Sampling of milk is carried out as per sampling procedures 2.4 Milk testing equipment is prepared and operated 2.5 Data is recorded and stored in required format 2.6 Results are interpreted to determine that milk is within compositional and quality requirements
3. Respond to issues of contamination or other forms of non-conformance in the receival of fresh milk	3.1 Procedures for taking corrective action are identified 3.2 Corrective and preventative measures are implemented to prevent recurrence 3.3 Procedures are devised or revised to support control measures 3.4 Processes or conditions which could result in a breach of procedures are identified and corrective action is taken 3.5 Process changes are introduced and controlled so that quality assurance requirements are accomplished
4. Review sampling, handling and testing procedures for fresh milk	4.1 Product sampling procedures are identified 4.2 Post collection procedures are identified according to SOPs 4.3 Test results are reviewed and responded to in accordance with workplace requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- maintain hygiene in the milk processing environment
- carry out sampling of milk on receival according to procedures
- carry out standard tests on milk for plate counts, somatic cell counts, fat and protein levels, solids non fat, disk assay, rapid test for inhibitors and compositional analysis
- record the results of testing in standard formats
- implement procedures for standardising milk
- implement procedures for dealing with non compliance to farm milk quality standards including rejection.

Required knowledge

Ability to:

- the different types of market milk and related products
- proximate analysis profiles for milk from different commercial species of animals
- the properties of milk fats and spoilage reactions in milk fats
- the characteristics and importance in further processing of the two types of milk proteins
- the impact of nutrition and genetics on P/F ratios
- the mineral composition of milk and relationship between mineral and protein, fat and lactose levels
- the types of microorganisms present in fresh milk and their impact on milk storage and processing characteristics
- characteristics and food safety implications of antibiotic residues and mastitic milk
- nutrients and micronutrients levels in fresh milk as a source of human nutrition
- pathogenic organisms in fresh milk and processing and environmental controls
- the importance of trace antibiotics in milk in effecting market milk and milk for further processing
- the characteristics of mastitic milk and its impact on market milk and milk for further processing
- hygiene procedures for handling fresh milk
- sampling procedures
- raw milk quality tests
- interpretation of raw milk test results.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to carry out sampling and testing of milk at receival including: interpreting the results of milk testing, responding to issues with milk composition or quality, and reviewing the receival and testing process.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers’ advice and operating procedures • Milk testing equipment • A milk receival facility at a dairy processing plant or simulation • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • Third party report on sampling and testing milk in a dairy processing plant • A report on a review of milk receival for the effectiveness of hygiene, sampling and testing

	procedures.
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
OHS requirements	<ul style="list-style-type: none"> • Legislation, regulations and Codes of practice • safety data sheets (SDSs) • enterprise and process specific occupational health and safety requirements
Workplace requirements	<ul style="list-style-type: none"> • Enterprise QA policy, practices and procedures • Enterprise-specific procedures • SOPs • Task requirements • Work instructions.
Production system and product requirements	<ul style="list-style-type: none"> • These may include food safety, product quality, regulatory compliance, animal welfare (if required) and preventative maintenance.
Market milk and related products	Includes standardised milk, whole fresh milk, recombined milk, vitamised milk, irradiated milk, mineralised milk, reconstituted or rehydrated milk, skimmed milk, heat treated or Ultra Heat Treated (UHT) milk, flavoured milks.
Manufactured dairy products	These include condensed milk, cream and butter, milk powder, butter, cheese, dairy blends, yoghurt, anhydrous milk fat and milk products with amendments or additives.

Unit Sector(s)

Technical.

FDFST4022A Implement and review the preparation of milk for processing

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to implement and review the standards and procedures for receiving and preparing milk for product manufacture.

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and food safety, or production management. The unit typically applies to staff with responsibility for maintaining product safety, quality and efficiency in food production in the dairy processing sector. This unit includes using knowledge of food science and processes to determine the required food safety, quality and performance required from food production equipment. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive fresh milk and blend using standard industry data	1.1 Receival and testing procedures for milk from farm are applied 1.2 A safe working environment is provided for milk receival and testing 1.3 Received milk is tested and data is recorded and stored 1.4 Received milk is stored under correct conditions and adjusted or blended based on test data
2. Implement procedures for separation, homogenisation and pasteurisation of received milk in preparation for further processing	2.1 The preferred sequence of activity to prepare the system for operation is implemented 2.2 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements 2.3 Data collection points consistent with equipment capabilities and data requirements are documented 2.4 Procedures to deal with non-conformance in relation to process and the final product are implemented 2.5 Production system is set to operating specifications before and during preparation and testing of received milk 2.6 Process control system for the preparation of milk for further processing is implemented
3. Diagnose, rectify and/or report problems arising from the preparation of milk for manufacture	3.1 Product tests are interpreted according to enterprise procedures 3.2 System used to identify defects and abnormalities in delivered milk is implemented and monitored 3.3 Adjustments to process/equipment as identified are implemented. 3.4 Problems are recorded and reported according to company policies and procedures
4. Review production processes for preparing milk for further processing	4.1 The critical control points (CCPs) and critical limits for product safety are reviewed 4.2 A sampling plan is developed and implemented 4.3 Food tests are undertaken to check product composition and compliance with further manufacturing requirements 4.4 Operating procedures are reviewed for food safety and quality 4.5 Safe work systems for processing are reviewed 4.6 Environmental impacts and energy efficiencies are reviewed for preparation of milk for processing

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- implement handling and storage procedures used to prevent spoilage of raw milk
- assess the impact of processing on milk
- establish CCPs and critical limits for each step in production of milk for processing
- carry out milk testing
- monitor production of milk for further processing
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations.
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- the various components of milk
- the hazards associated with raw milk
- the various spoilage organisms associated with milk
- compositional requirements for a range of milk based products
- the testing and processing stages in preparing milk for further processing
- the risks to milk product quality from incorrect preparation and handling of fresh milk
- output of each of the processes used in the preparation of milk for further processing
- compositional requirements for milk prepared for further processing for a range of processed milk products
- principles of operation of equipment and accessories used in the preparation of milk for further processing
- critical factors in the testing and preparation of received milk for further processing into dairy products
- processes used in the preparation and manufacture of non-fermented dairy products
- processes used to prepare milk for further processing
- resource requirements for the preparation of milk for further processing
- potential product defects and their causes which may arise in the preparation of milk for further processing

- milk sampling and testing
- data requirements appropriate for food safety, quality and production standards
- manufacturing processes, including materials and equipment, involved in preparing delivered milk for further processing
- manufacturing processes used to produce specialised dairy products such as whey powders, caseinates, industrial butters and infant formulas
- milk handling and its impact on properties for further processing
- chemical and physical hazards which may affect milk
- procedures for milk storage, handling and preparation
- safe work procedures
- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- identification of CCPs and critical limits
- water and energy use and recycling in processing
- regulatory requirements associated with the preparation of milk for processing
- environmental impacts of the food processing operation

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to implement and review the processes associated with receiving and preparing milk for product manufacture. Milk is not homogenised in the manufacture of some cheeses and need not be included in evidence for assessment where this is the case.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to implement and review the processes associated with receiving and preparing milk for product manufacture including: implementing process control procedures and data collection to prepare milk for further processing; carrying out food testing of raw and processed milk; diagnosing and reporting problems for manufacturing of dairy product; and reviewing the production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results..
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Observation of candidate conducting a range of processes and tests • Written and/or oral questioning to assess knowledge

	<p>and understanding</p> <ul style="list-style-type: none"> • A report on a review of the milk receival system
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
OHS requirements	<ul style="list-style-type: none"> • legislation, regulations, Codes of practice • safety data sheets (SDSs) • enterprise and process specific occupational health and safety requirements.
Manufactured dairy products	These include condensed milk, cream and butter, milk powder, butter, cheese, dairy blends, yoghurt, anhydrous milk fat and milk products with amendments or additives.
Materials used to manufacture milk products	Dairy products processing equipment to prepare milk for further processing may include fermenting vessels, butter and cream centrifuge, heat exchangers, homogenisers, aseptic fillers, mix tanks, autoclaves, vacuum evaporation and spray drying equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the manufacture of chocolate and sugar-panned products	1.1 The statutory compositional requirements for the different types of chocolate and sugar-panned products is established 1.2 The required formulation of chocolate and sugar-panned products is selected 1.3 The appropriate production system and the preferred sequence of activity to prepare the system for operation is selected. 1.4 Equipment is prepared and safe operating procedures accessed for its operation
2. Monitor the preparation and manufacture of chocolate and sugar-panned products to ensure quality standards are met	2.1 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements 2.2 Production system is set to operating specifications before and during production 2.3 Data requirements and collection points appropriate for food safety, quality and production standards are documented 2.4 Procedures to deal with non-conformance in relation to process and the final product are developed 2.5 Concentration and drying procedures are implemented and monitored 2.6 Process controls for chocolate and sugar-panned products are monitored
3. Diagnose, rectify and/or report problem arising from the manufacture of chocolate and sugar-panned products	3.1 Sensory evaluation and product testing protocols are established to identify defects and maintain organoleptic quality of product 3.2 Identified adjustments to inputs, process and equipment are implemented 3.3 Problems are reported to designated person according to company policies and procedures
4. Review production processes	4.1 The critical control points (CCPs) and critical limits for product safety are reviewed 4.2 A sampling plan is developed and implemented 4.3 Sensory analysis is conducted and analysed 4.4 Food tests are undertaken and data generated for the product label 4.5 Operating procedures and the process control system are reviewed for food safety and quality 4.6 Safe work systems for processing of chocolate and sugar-panned products are reviewed 4.7 Environmental impacts and energy efficiencies are reviewed for processing of chocolate and sugar-panned products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret market specifications for chocolate and sugar-panned products
- plan production processes to manufacture chocolate and sugar-panned products
- monitor the output of each of the processes used in the preparation and manufacture of chocolate and sugar-panned products
- implement production systems for preparation and manufacture of chocolate and sugar-panned products
- recognise the organoleptic properties of different types of chocolate and sugar-panned products
- operate equipment and accessories used in the preparation and manufacture of chocolate and sugar-panned products.

Required knowledge includes:

Knowledge of:

- the types of chocolate and sugar panned products, their formulation, and the type of coating process used in their production
- the relevant properties of the various centres used in panned products, including melting point, moisture content, shape, size, surface finish and preparation
- crystallisation behaviour of fats, sugars and sugar substitute materials
- the effect of air flow, air temperature and air humidity on the drying/setting rates of coatings and the relationship to product characteristics
- polishing materials and methods and their application
- production systems used for the production of panned products including types of coating pans, methods of coating material addition and process air supply requirements
- the production system for the preparation and manufacture of chocolate and sugar-panned products including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials
- critical factors in the preparation and manufacture of chocolate and sugar-panned products
- resource requirements for the preparation and manufacture of chocolate and sugar-panned products
- potential product defects and their causes, which may arise in the preparation and manufacture of chocolate and sugar-panned products
- stages of production, CCPs and critical limits
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- safe systems of work.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to review the preparation and manufacture of chocolate and sugar-panned products based on product testing and sensory analysis</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to produce chocolate and sugar-panned products to specification including: implementing process control procedures and data collection; diagnosing and reporting problems for manufacturing; carrying out sensory evaluation and product testing; and reviewing the production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- interpret market specifications for aerated confectioneries
- select the formulation, method of manufacture, method of forming and packaging of aerated confectioneries
- monitor the output of each of the processes used in the preparation and manufacture of aerated confectioneries
- carry out processes to aerate different confectionery masses and form these masses to maintain the desired degree of aeration
- operate each process used in the preparation and manufacture of aerated confectioneries
- operate equipment and accessories for the preparation and manufacture of aerated confectioneries
- identify defects during production and of final products.

Required knowledge

Knowledge of:

- the range of aerated confectioneries including chocolate, fat based fillings, nougats, jelly foams, marshmallows, high boils, and brittles
- the formulation, method of manufacture, method of forming and packaging of aerated confectioneries
- the range of aerated confectioneries including chocolate, fat based fillings, nougats, jelly foams, marshmallows, high boils, and brittles
- the processes used to aerate different confectionery masses and form these masses to maintain the desired degree of aeration.
- identify the role of the major ingredients found in aerated confectioneries
- the role, properties and use of different aerating agents
- critical aspects of product aeration including product viscosity, bubble size, product graining or crystallising
- production systems used for the preparation and manufacture of aerated confectioneries
- preparation and manufacture of aerated confectioneries including packaging, storage and distribution
- different types and formulation of aerated confectioneries
- potential product defects and their causes, which may arise in the preparation and manufacture of aerated confectioneries
- stages of production, CCPs and critical limits
- packaging procedures
- resource requirements for the preparation and manufacture of aerated confectioneries
- quality and continuous improvement processes
- sensory analysis techniques

- safe systems of work.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret market specifications for gums and jellies
- plan the production processes related to gums and jellies
- monitor the output of each of the processes used in the preparation and manufacture of gums and jellies
- finish gelatinised products to prevent sticking
- check product against market specifications
- operate equipment and accessories for the preparation and manufacture of gums and jellies
- identify defects during production and for final products

Required knowledge includes:

Knowledge of:

- the formulations, methods of manufacture, methods of forming and packaging of gums and jellies
- the range of gelatinised products including "gummi" and other types of starch moulded products, licorice and Turkish delight, and their formulations
- processes used to gelatinise different confectionery masses and form these masses to maintain the desired product shape
- the role of the major ingredients found in gums and jellies
- the role, properties and use of different gelatinising agents such as gelatine, starches, pectins and agar
- critical factors in the preparation and manufacture of gums and jellies
- the production system for the preparation and manufacture of gums and jellies including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials
- potential product defects and their causes, which may arise in the preparation and manufacture of gums and jellies
- the interrelationships between suppliers of products and internal/external customers
- stages of production, CCPs and critical limits
- resource requirements for the preparation and manufacture of gums and jellies
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- safe systems of work.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to manufacture gums and jellies to specifications including: implementing process control procedures and data collection; diagnosing and reporting problems for manufacturing; carrying out sensory evaluation and product testing; and reviewing the production system for food safety and quality and environmental impact.
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Observation of candidate carrying out product development and conducting a range of tests and procedures for gums and jellies • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation • Third party reports from experienced practitioner

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Case studies • Field Reports
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
OHS requirements	<p>legislation, regulations, Codes of practice safety data sheets (SDSs)</p> <p>enterprise and process specific occupational health and safety requirements</p>
Gums and jellies	Gums and jellies include all confectionery products that include a gelatinising agent such as gelatine, starches, pectins and agar etc to give a characteristic gelled texture to the product. Can be consumed as is or included as a centre for processes such as chocolate enrobing, moulding or panning.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<ul style="list-style-type: none"> • 1. Prepare for the manufacture of chocolate products 	<ul style="list-style-type: none"> • 1.1 The statutory compositional requirements for the different types of chocolate products is established • 1.2 The required formulation and design of chocolate products is selected • 1.3 The appropriate production system and the preferred sequence of activity to prepare the system for operation is selected • 1.4 Equipment is prepared and safe operating procedures accessed for its operation
<ul style="list-style-type: none"> • 2. Monitor the manufacture of chocolate products to ensure quality standards are met 	<ul style="list-style-type: none"> • 2.1 Bulk chocolate is sourced to meet the product specifications • 2.2 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements • 2.3 Production system is set to operating specifications before and during production • 2.4 Data requirements and collection points appropriate for food safety, quality and production standards are identified • 2.5 Procedures to deal with non-conformance in relation to process and the final product are developed • 2.6 Process control systems are implemented and monitored confectioneries
<ul style="list-style-type: none"> • 3. Diagnose, rectify and/or report problem arising from the preparation and manufacture of chocolate products 	<ul style="list-style-type: none"> • 3.1 Sensory evaluation and product testing protocols are established to identify defects and maintain organoleptic quality of chocolate products • 3.2 Identified adjustments to inputs, process & equipment are implemented • 3.3 Problems are reported to designated person according to company policies and procedures
<ul style="list-style-type: none"> • 4. Review production processes 	<ul style="list-style-type: none"> • 4.1 The critical control points (CCPs) and critical limits for product safety are reviewed • 4.2 A sampling plan is developed and implemented • 4.3 Sensory analysis is conducted and analysed • 4.4 Food tests are undertaken and data generated for the product label • 4.5 Operating procedures and the process control system are reviewed • 4.6 Safe work systems for processing of chocolate products are reviewed • 4.7 Environmental impacts and energy efficiencies are reviewed for processing of chocolate products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret market specifications for confectionery products
- carry out the production processes related to chocolate products
- monitor the output of each of the processes used in the preparation and manufacture of chocolate products
- manage production systems for preparation and manufacture of chocolate products
- check product against market specifications for chocolate products
- operate equipment and accessories used for the preparation and manufacture of chocolate products
- check product against market specifications.

Required knowledge includes:

Knowledge of:

- types of chocolate and compound chocolate and the ingredients used to manufacture each
- critical factors in the preparation and manufacture of chocolate products
- forming processes used in the manufacture of chocolate products such as enrobing, moulding (shell, one-shot, pocket, etc), hollow goods moulding ("spinning"), drop depositing and cluster depositing
- the role of tempering especially, with regard to chocolate, and its relationship to key product attributes such as shine, bloom formation, snap, hardness and shrinkage.
- the rheological properties (plastic viscosity and yield value) of liquid chocolate and their relationship to the forming process use
- the role of the major ingredients found in chocolate products
- the production system for the preparation and manufacture of chocolate products including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials
- cooling processes used for chocolate and compound chocolate identification of defects during production and of final products stages of production, CCPs and critical limits
- resource requirements for the preparation and manufacture of chocolate products
- product defects and their causes, which may arise in the preparation and manufacture of chocolate products
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- safe systems of work.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Critical aspects of assessment must include evidence of the ability to prepare and manufacture chocolate products including: implementing process control procedures and data collection; diagnosing and reporting problems; carrying out sensory evaluation and product testing; and reviewing the production system for food safety and quality and environmental impact.</p>
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers’ advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Observation of candidate carrying out product development and conducting a range of tests and procedures • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation • Third party reports from experienced practitioner • Case studies

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Field Reports
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
OHS requirements	<ul style="list-style-type: none"> • legislation, regulations, Codes of practice • safety data sheets (SDSs) • enterprise and process specific occupational health and safety requirements
Chocolate products	Chocolate products include all confectionery products that include chocolate or compound chocolate in a recognisable solid form including moulded bars, blocks or shapes, moulded and enrobed filled chocolate pieces, hollow goods such as eggs or seasonal figures, and deposited items such as drops or nut clusters. Chocolate products can be consumed as is or included as a centre for further processes such as sugar panning.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the manufacturing of chocolate	1.1 The required formulation of chocolate is selected 1.2 The appropriate production system and the preferred sequence of activity to prepare the system for operation is selected 1.3 Equipment is prepared and safe operating procedures accessed for its operation
2. Carry out preparation and manufacture of chocolate	2.1 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements 2.2 Production system is set to operating specifications before and during production 2.3 Data requirements appropriate for food safety, quality and production standards are documented 2.4 Data collection points consistent with equipment capabilities and data requirements are identified 2.5 Procedures to deal with non-conformance in relation to process and the final product are developed 2.6 Process control system is implemented and monitored
3. Diagnose, rectify and/or report problem arising from the preparation and manufacture of chocolate	3.1 Sensory evaluation and product testing protocols are established to identify defects and maintain organoleptic quality of chocolate 3.2 Identified adjustments to inputs, process & equipment are carried out as required 3.3 A system to identify defects in the preparation and manufacture of chocolate is implemented 3.4 Adjustments to process and equipment, as identified, are made 3.5 Problems are reported to designated person according to company policies and procedures
4. Review production processes	4.1 The critical control points (CCPs) and critical limits for product safety are reviewed 4.2 A sampling plan is developed and implemented for 4.3 Sensory analysis is conducted and analysed 4.4 Food tests are undertaken and data generated for the product label 4.5 Operating procedures and the process control system are reviewed for food safety and quality 4.6 Safe work systems for processing of chocolate are reviewed 4.7 Environmental impacts and energy efficiencies are reviewed for processing of chocolate

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- carry out production processes for the manufacture of chocolate including mixing, refining, conching and storage
- plan the production processes related to chocolate manufacture
- monitor the output of each of the processes used in the preparation and manufacture of chocolate
- monitor process controls for preparation and manufacture of chocolate
- recognise the organoleptic properties of different types of chocolate
- compare chocolate to market specifications for high and low boil confectionery
- operate equipment and accessories for the preparation and manufacture of chocolate.

Required knowledge includes:

Knowledge of:

- critical factors in the preparation and manufacture of chocolate
- types of chocolate and compound chocolate and the ingredients used to manufacture each type
- crystallisation behaviour of fats, especially cocoa butter
- rheological properties of chocolate and compound chocolate as a liquid and the role of emulsifiers in these
- the role of particle size and particle size distribution on chocolate properties
- preparation and manufacture of chocolate through to packaging, storage and distribution
- the production system for the preparation and manufacture of chocolate including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials
- resource requirements for the preparation and manufacture of chocolate
- identification of defects during production and of final products
- the statutory compositional requirements for the different types of chocolate
- stages of production, CCPs and critical limits
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- safe systems of work.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to review the preparation and manufacture of chocolate including product testing and sensory analysis.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to manufacture chocolate including implementing process control procedures and data collection diagnosing and reporting problems for manufacturing, carrying out sensory evaluation and product testing, and reviewing the chocolate production system for food safety and quality and environmental impact.
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Observation of candidate manufacturing samples and conducting a range of tests and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out the preparation and manufacture of high and low boil confectionery to meet quality standards	<ul style="list-style-type: none">1.1 Equipment and accessories used in the preparation and manufacture of high and low boil confectionery are prepared1.2 Ingredients are assembled and prepared and product formulations checked1.3 Standard Operating Procedures are put in place1.4 A production schedule is implemented to ensure all resources and requirements are available and meet company standards1.5 Production system is set to operating specifications before and during production1.6 Data requirements appropriate for food safety, quality and production standards are interpreted1.7 Data collection points consistent with equipment capabilities and data requirements are determined1.8 Procedures to deal with non-conformance in relation to process and the final product are developed1.9 Process control system is implemented and monitored
2. Diagnose, rectify and/or report problem arising from the preparation and manufacture of high and low boil confectionery	<ul style="list-style-type: none">2.1 Sensory evaluation and product testing protocols are established to identify defects and maintain organoleptic quality of confectionery2.2 Identified adjustments to inputs, process & equipment are implemented2.3 Adjustments to process/equipment as identified are implemented2.4 Problems are reported to designated person according to company policies and procedures
3. Review production processes	<ul style="list-style-type: none">3.1 The critical control points (CCPs) and critical limits for product safety are reviewed3.2 A sampling plan is developed and implemented3.3 Sensory analysis is conducted and analysed3.4 Food tests are undertaken to check product composition and compliance with label information3.5 Operating procedures and the process control system are reviewed for food safety and quality3.6 Safe work systems for processing of high and low boil confectionery are reviewed3.7 Environmental impacts and energy efficiencies are reviewed for processing of high and low boil confectionery

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- interpret market specifications for high and low boil confectionery
- select the formulation, method of manufacture, method of forming and packaging of high and low boil confectionery
- implement a production schedule to ensure all resources and requirements are available and meet company requirements
- set the production system to operating specifications before and during production
- implement the production system for the preparation and manufacture of high and low boil confectionery
- identify the potential product defects and their causes which may arise in the preparation and manufacture of high and low boil confectionery
- determine and implement a system used to identify defects in the preparation and manufacture of high and low boil confectionery
- implement adjustments to process/equipment as identified
- report problems to designated person according to company policies and procedures.

Required knowledge includes:

Knowledge of:

- different types of high and low boil confectionery
- formulation of high and low boil confectionery
- purpose of each process used in the preparation and manufacture of high and low boil confectionery
- relationships between the processes used in the preparation and manufacture of high and low boil confectionery
- outputs of each of the processes used in the preparation and manufacture of high and low boil confectionery
- potential product defects and their causes which may arise in the preparation and manufacture of high and low boil confectionery
- the interrelationships between suppliers of products and internal/external customers
- critical factors in the preparation and manufacture of high and low boil confectionery
- solubility and crystallisation properties of ingredients used and their relationship to texture
- relationship of the boiling point of a confectionery syrup to its soluble solids content
- the relationship of pressure and vacuum to the boiling point of a confectionery syrup of a specific soluble solids content and the uses made in production of this relationship
- the concept of equilibrium relative humidity (ERH) or water activity (A_w) of a confectionery product
- resource requirements for the preparation and manufacture of high and low boil confectionery

- testing procedures for raw materials through to manufactured product
- stages of production, CCPs and critical limits
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques and analysis
- safe systems of work.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to review the production of high and low boil confectionery through monitoring inputs and processes
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to produce high and low boil confectionery including; implementing process control procedures and data collection, diagnosing and reporting problems for manufacturing, carrying out sensory evaluation and product testing, and reviewing the production system for food safety and quality and environmental impact.
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the manufacture of confectionery products	1.1 The statutory compositional requirements for the different types of confectionery products is established 1.2 The required formulation of confectionery products is selected 1.3 The appropriate production system and the preferred sequence of activity to prepare the system for operation is selected 1.4 Equipment is prepared and safe operating procedures accessed for its operation
2. Monitor the manufacture of confectionery products to ensure quality standards are met	2.1 Production schedule is implemented to ensure all resources and requirements are available and meet company requirements 2.2 Production system is set to operating specifications before and during production 2.3 Concentration and drying procedures are implemented and monitored 2.4 Data requirements appropriate for food safety, quality and production standards are identified 2.5 Data collection points consistent with equipment capabilities and data requirements are identified 2.6 Procedures to deal with non-conformance in relation to process and the final product are developed 2.7 Process control system is implemented and monitored
3. Diagnose, rectify and/or report problem arising from the preparation and manufacture of confectionery products	3.1 Sensory evaluation and product testing protocols are established to identify defects and maintain organoleptic quality of food 3.2 Identified adjustments to inputs, process & equipment are implemented 3.3 Problems are reported to designated person according to company policies and procedures
4. Review production processes	4.1 The critical control points (CCPs) and critical limits for product safety are reviewed 4.2 A sampling plan is developed and implemented 4.3 Sensory analysis is conducted and analysed 4.4 Food tests are undertaken and data generated for the product label 4.5 Operating procedures and the process control systems are reviewed for food safety and quality 4.6 Safe work systems for processing of confectionery products are reviewed 4.7 Environmental impacts and energy efficiencies are reviewed for processing of confectionery products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret market specifications for confectionery products
- plan the production processes related to confectionery products
- monitor the output of each of the processes used in the preparation and manufacture of confectionery products
- manage production systems for preparation and manufacture of confectionery products
- check product against market specifications for confectionery
- manage the processes used in the preparation and manufacture of confectionery products
- operate equipment and accessories used in the preparation and manufacture of confectionery products.

Required knowledge includes:

Knowledge of:

- the range of confectionery products including chocolate and compound chocolate confectionery, liquorice (both straps and all sorts), sugar confectionery types, "sugar free" confectionery types, gum based types and panned product types
- production systems used for the preparation, manufacture, forming and packaging of the range of confectionery products described above
- the production system for the preparation and manufacture of confectionery products including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials
- different formulations for confectionery products
- the role of the major ingredients found in confectionery products
- preparation and manufacture of extruded products including product preparation, cooking and processing, extrusion, packaging, and storage and distribution
- critical factors in the preparation and manufacture of confectionery products
- resource requirements for the preparation and manufacture of confectionery products
- the interrelationships between suppliers of products and internal/external customers
- identification of defects during production and of final products
- stages of production, CCPs and critical limits
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- safe systems of work.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check the chilled or frozen poultry product preparation and processing areas and equipment	<ul style="list-style-type: none">1.1 Procedures for pre-operational equipment checks are identified and checked for accordance with workplace policies and procedures, and manufacturer's instructions1.2 Regulatory requirements and safe work practices and safety equipment are checked1.3 Pre-operational checks and procedures are conducted or supervised and risks, contamination or variations reported in accordance with workplace policies and procedures, and regulatory requirements are monitored
2. Monitor the production of chilled or frozen poultry products	<ul style="list-style-type: none">2.1 Production processes from slaughter to product presentation for packaging are sourced from procedures2.2 Product quality and food safety hazards and procedures are implemented for the facility and for each stage of the production process2.3 Handling requirements for ingredients to prevent contamination and to ensure customer and production requirements, quality and safety are monitored2.4 Operating procedures for processing equipment are checked for consistency with manufacturer's specifications and regulatory and enterprise requirements2.5 Relevant processing area hygiene and sanitation requirements are monitored as specified in workplace procedures and regulatory requirements2.6 The details of cuts to meet customer requirements are confirmed2.7 Production system and equipment for the preparation and manufacture of chilled or frozen poultry products is monitored2.8 Cleaning regime is monitored to ensure hygiene and safe work area requirements are maintained
3. Implement packaging and chilling of poultry product	<ul style="list-style-type: none">3.1 The details of packaging to meet customer and regulatory requirements are confirmed3.2 Chilling requirements are monitored to meet food safety standards from processing to retailing3.3 Chilling processes for food preservation are applied and monitored3.4 Sampling and testing procedures for physical, biochemical and microbiological changes to frozen or chilled product are implemented and monitored
4. Diagnose, rectify and/or report problems arising from the	<ul style="list-style-type: none">4.1 Sampling and testing to identify defects in the preparation and manufacture of chilled or frozen poultry products are implemented

ELEMENT	PERFORMANCE CRITERIA
preparation and manufacture of chilled poultry products	4.2 Required adjustments to process/equipment are identified and implemented 4.3 Problems are reported to designated persons according to company policies and procedures
5. Review production processes	5.1 The critical control points (CCPs) and critical limits for product safety are reviewed 5.2 The sampling and food testing plans are reviewed 5.3 Operating procedures are reviewed for food safety and quality 5.4 Safe work systems for processing of chilled poultry products are reviewed 5.5 Environmental impacts and energy efficiencies are reviewed for processing of chilled poultry products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- document risk assessments for physical hazards for chilled or frozen poultry products
- document CCPs and critical limits in the manufacture of chilled or frozen poultry products
- explain the impact of critical limits in a HACCP program for chilled or frozen poultry products
- implement a HACCP plan for the production of chilled or frozen poultry products
- monitor production of chilled or frozen poultry products to ensure compliance with workplace and regulatory requirements
- recognise and respond to non compliant product
- propose and implement solutions to a range of production problems
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data.

Required knowledge includes:

Knowledge of:

- types of micro-organisms causing food poisoning and spoilage
- bacterial, chemical and physical food safety hazards
- the steps in the slaughter of poultry
- the range of chilled or frozen poultry products
- processes involved in manufacturing chilled or frozen poultry products
- hazards to the safe and hygienic processing of poultry
- microbiological criteria in raw poultry products production and microbiological limits, particularly the following significant microbial pathogens: enterohaemorrhagic *Escherichia coli*, *Salmonella*, enterotoxin of *Staphylococcus aureus* and *Listeria monocytogenes*, *Campylobacter sp*
- the significance of *Salmonella sofia* compared to *Salmonella typhimurium* as food safety hazards
- the techniques involved in chilling and freezing poultry meat
- HACCP principles and ensuring product is fit for human consumption and meets regulatory and quality requirements
- procedures for raw materials storage, handling and preparation
- safe food handling procedures
- chilling and freezing procedures
- storage requirements for processed product

- the impact of the raw material on product quality and food safety
- recall procedures including notification of appropriate authorities.
- OH&S, workplace and regulatory requirements and safe work procedures
- water and energy use and recycling in processing
- packaging technologies and procedures
- food sampling and testing including sensory analysis techniques
- environmental impacts of the food processing operation.
-

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to in terms of processing efficiency, quality of product, food safety, workplace safety and environmental impact.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to implement and review the manufacturing processes for chilled and frozen poultry product including: reviewing the CCPs and critical limits in the food safety plan; monitoring commercial processing techniques; diagnosing and reporting problems for manufacturing of chilled and frozen poultry products; and reviewing the production system for food safety and quality and environmental impact.
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Analysis of product and process under the candidate's supervision • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • A report on review of the production system
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labeling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.</p>
Policies and procedures	<p>Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.</p>
Safe work procedures	<p>Examples of specific task related procedures may include:</p> <ul style="list-style-type: none"> • handling of chemicals • use of PPE
Chilled poultry products	<p>These may include non cooked whole carcasses and any portions of chicken carcase or deboned product, including seasoned or marinated product. This unit does not cover the processing of cooked poultry products.</p>
Chilling techniques and equipment	<ul style="list-style-type: none"> • immersing in ambient running water • placing in cool rooms • showering with ambient water • use of intensive coolers • washing in water or brine.
OH&S requirements	<ul style="list-style-type: none"> • Enterprise OH&S policies, procedures and programs • OH&S legal requirements • Personal Protective Equipment (PPE) which may include: <ul style="list-style-type: none"> • coat and apron • ear plugs or muffs • eye and facial protection • head-wear • lifting assistance • mesh apron

RANGE STATEMENT	
	<ul style="list-style-type: none">• protective boot covers• protective hand and arm covering• protective head and hair covering• uniforms• waterproof clothing• work, safety or waterproof footwear

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check the cooked poultry product preparation and processing areas and equipment	<ul style="list-style-type: none">1.1 Procedures for pre-operational equipment checks are checked for accordance with workplace policies and procedures, and manufacturer's instructions1.2 Regulatory requirements and safe work practices and safety equipment are implemented1.3 Pre-operational checks and procedures are conducted or supervised and1.4 Risk of contamination or variations in product quality are reported in accordance with workplace policies and procedures1.5 Regulatory requirements for the operation are monitored1.6 Physical hazards which may affect cooked poultry products are recorded1.7 Optimum methods for physical hazard risk reduction are implemented
2. Monitor the preparation of ingredients, and processing equipment and areas	<ul style="list-style-type: none">2.1 Ingredients are sourced by type, quality and safety criteria, according to product specifications2.2 Types of chicken meat, by-product, stock, additive, binder and spices are sourced according to the formulation specifications and regulatory requirements2.3 Handling requirements for ingredients to prevent contamination and to ensure customer and production requirements, quality and safety are monitored2.4 Processing equipment is monitored and operating procedures explained to operators according to manufacturer's and workplace specifications2.5 Relevant processing area hygiene and sanitation requirements are monitored as specified in workplace procedures and regulatory requirements2.6 Production system and equipment for the preparation and manufacture of cooked poultry products are monitored2.7 Procedures for pre-operational equipment checks are applied in accordance with workplace policies and procedures, and manufacturer's instructions2.8 Cleaning regime is monitored to ensure hygiene and safe work area requirements are maintained
3. Monitor the production of cooked poultry and further processed products	<ul style="list-style-type: none">3.1 Relevant time, temperature and humidity requirements for cooking and packaging are monitored in accordance with product specifications, regulatory requirements and enterprise guidelines3.2 Relevant consistency, appearance, texture and monitoring

ELEMENT

PERFORMANCE CRITERIA

	requirements are monitored in accordance with product specifications and regulatory requirements
	3.3 Product sampling and testing and sensory analysis regime is monitored to ensure conformance with regulatory and enterprise requirements
	3.4 Procedures for rejection, reprocessing and/or recall for products which do not meet specifications or hygiene and sanitation requirements are implemented and reviewed against regulatory requirements and industry guidelines
	3.5 Relevant processing area hygiene and sanitation requirements are monitored as specified in workplace procedures and regulatory requirements
4. Overview the implementation of the HACCP plan for the production of cooked poultry products	4.1 Critical control points (CCPs) and control points for prevention and control of bacterial contamination (e.g. process controls and systems) are implemented
	4.2 Control methods to prevent microbiological contamination are explained to workers and implemented
	4.3 Monitoring processes are implemented for critical limits for CCPs
	4.4 Validation requirements for critical limits of HACCP programs are carried out
	4.5 Documented procedures are implemented which ensure any CCPs which are out of control are brought back into control and affected product is suitably handled
	4.6 Documented procedures are implemented to ensure the whole HACCP system is regularly audited and verified as working effectively
	4.7 All documents and records required for the system are kept available, up-to-date and in use
5. Review production processes	5.1 Product sampling and testing and sensory analysis are conducted and analysed
	5.2 Product formulations and operating procedures are reviewed
	5.3 Safe work systems for processing of cooked poultry products are reviewed
	5.4 Environmental impacts and energy efficiencies are reviewed for processing of cooked poultry products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- monitor production of cooked poultry products
- apply procedures to ensure the product is fit for human consumption and meets regulatory, food safety and quality requirements
- overview the implementation of the HACCP plan for the production of cooked poultry products
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- the steps in the cooking of poultry
- the range of types of chilled cooked poultry products and their processing stages
- types of micro-organisms and bacteria causing food poisoning
- food poisoning and food spoilage (shelf life) effects of bacterial contamination
- sources of bacterial contamination for both 'ready to heat' and 'ready to eat' chicken products
- microbial hazards for 'par cooked' further processed poultry products
- growth characteristics and requirements of relevant bacteria species
- microbiological criteria in cooked poultry products production and microbiological limits, particularly the following significant microbial pathogens: enterohaemorrhagic *Escherichia coli*, *Salmonella*, enterotoxin of *Staphylococcus aureus* and *Listeria monocytogenes*
- chemical hazards which may affect cooked poultry products
- effects or impact of physical hazards on cooked poultry products
- procedures for raw materials storage, handling and preparation
- safe food handling procedures
- the impact of the raw material on product quality and food safety
- physical food safety hazards
- safe work procedures
- sanitation and hygiene procedures

- HACCP principles and critical limits in a HACCP program for cooked poultry products
- identification of CCPs and critical limits
- water and energy use and recycling in processing
- packaging technologies and procedures
- sensory analysis
- food sampling and testing
- storage requirements for processed product
- regulatory requirements associated with the production of cooked poultry products
- environmental impacts of the food processing operation.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to review the manufacturing processes for cooked poultry product in terms of processing efficiency, quality of product, food safety, workplace safety and environmental impact.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to supervise cooked poultry manufacturing processes including: reviewing the CCPs and critical limits in the food safety plan for cooked poultry products; monitoring commercial processing techniques to produce cooked poultry products; diagnosing and reporting problems for manufacturing of cooked poultry products; carrying out sensory evaluation and product testing; and reviewing the production system for food safety and quality and environmental impact
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data, analysing data and compiling into a report • Laboratory facilities or reports to assess food microbiology and chemistry
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Analysis of product and process under the candidate's supervision • Report on a review of a manufacturing process for

EVIDENCE GUIDE	
	<p>cooked poultry products</p> <ul style="list-style-type: none"> • Observation of candidate collecting and analysing data • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation • Third party reports from experienced practitioner • Field Reports
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labeling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
Safe work procedures	<p>Examples of specific task related procedures may include:</p> <ul style="list-style-type: none"> • handling of chemicals • use of PPE
Physical hazards	These include any hard objects that can contaminate product including metal shavings, packaging, clothing or jewellery. Physical hazards also include safety hazards for operators and other staff such as steam, hot surfaces,

RANGE STATEMENT	
	working with fats and oils, noise, operating equipment and manual handling.
Cooked poultry products	These may be sold as 'ready to heat', 'ready to eat', and par cooked products. The products may include bone-in/ bone-out natural portions, formed products or filled products.
Retailing systems for poultry product	These may include retail, food service and quick service restaurants (QSRs).
Ingredients	May include sauces and fillings, spices, herbs, fruit or vegetables, water, milk product, noodles, pasta, nuts, mushrooms or breads
Micro-organisms	<ul style="list-style-type: none"> • bacteria • mould • virus • yeast.
Workplace requirements	<ul style="list-style-type: none"> • enterprise-specific requirements • OH&S requirements • Quality Assurance requirements • Standard Operating Procedures • the ability to perform the task to production requirements • work instructions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor the preparation of ingredients, and the processing equipment and areas	<ul style="list-style-type: none">1.1 Ingredients are identified by type, quality and safety according to product specifications1.2 Ingredients are sourced and prepared according to the formulation specifications and regulatory requirements1.3 Handling requirements for ingredients to prevent food safety hazards are monitored to ensure product quality and safety1.4 Relevant processing equipment is identified and operating procedures checked for consistency with manufacturer's specifications and regulatory and enterprise requirements1.5 Pre-operational checks and procedures are conducted or supervised and risks, contamination or variations reported in accordance with workplace policies and procedures, and regulatory requirements are monitored1.6 Cleaning regime is identified and monitored to ensure hygiene and safe work area requirements are maintained
2. Monitor the production of egg based food products to meet quality standards	<ul style="list-style-type: none">2.1 Critical factors in the preparation and production of egg based food products are identified2.2 Resource requirements for the preparations and production of egg based food products are established2.3 A production schedule to ensure all resources and requirements are available and meet company requirements is used2.4 The production system is set to the required operating specifications before and during production and verified2.5 The production system for egg based food products, including cooking or steaming, is monitored2.6 Pasteurisation of egg product is carried out according to procedures and Food Standards Code2.7 Chilling or freezing technologies are used to set and store product
3. Diagnose, rectify and/or report problems arising from the preparation and production of egg based food products	<ul style="list-style-type: none">3.1 Procedures are checked for coverage of potential problems arising from the preparation and production of egg based food products3.2 Methods used to identify defects are determined3.3 A system to identify defects in the preparation and production of egg based food products is selected and implemented, and adjustments applied to process/equipment as identified3.4 Problems are reported to designated person according to company policies and procedures
4. Review production processes	<ul style="list-style-type: none">4.1 The critical control points (CCPs) and critical limits for product safety are reviewed4.2 A sampling plan for egg based food products is developed and implemented

ELEMENT

PERFORMANCE CRITERIA

- 4.3 Sensory analysis of egg based food products is conducted and analysed
- 4.4 Food tests are undertaken to determine if food quality and safety critical limits are complied with
- 4.5 Operating procedures are reviewed for the safety and quality of egg based food products
- 4.6 Safe work systems for processing of egg based food products are reviewed
- 4.7 Environmental impacts and energy efficiencies are reviewed for processing of egg based food products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- test for quality and shelf life of an avian egg
- recognise common spoilage organisms associated with an avian egg
- construct a process chart for a selected egg production
- estimate and monitor output rate and quality of each of the processes used in the preparation and production of egg based food products
- carry out tests for product safety and quality for egg based products
- diagnose, rectify and/or report problems arising from the preparation and production of egg based food products

Required knowledge includes:

Knowledge of:

- processes used in the preparation and production of egg based food products
- relationship between the processes used in the processing of egg based food products
- operation of equipment and accessories used in the preparation and manufacturing processes of egg based food products
- recognition of spoilage organisms in eggs
- principles of handling and storing eggs
- anatomy and physiology of an avian egg
- pasteurisation processes
- production systems for the preparation and production of egg based food products
- manufacturing processes in regard to frozen and dried egg products
- formulation of egg based food products
- role of major ingredients found in egg based food products
- stages of production, CCPs and critical limits
- quality and continuous improvement processes
- sensory analysis techniques
- safe systems of work.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to identify and implement safety and quality procedures for egg based product manufacturing including monitoring commercial processing techniques, carrying out sensory evaluation and product testing, and reviewing the production system for food safety and quality and environmental impact.
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Analysis of product and process under the candidate's supervision • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • A report on review of the production system
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labeling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.</p>
Policies and procedures	<p>Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.</p>
Safe work procedures	<p>Examples of specific task related procedures may include:</p> <ul style="list-style-type: none"> • handling of chemicals • use of PPE
Egg based products	<p>Separated and pasteurised egg pulp and egg yolks and whites, omelette mixes, custards, powdered egg products, frozen egg products (omelettes, eggs cooked and peeled, scrambled egg portions, egg rolls or long eggs)</p>
Ingredients	<p>Sauces and fillings, spices, herbs, water, milk product, nuts, mushrooms or breads</p>
Micro-organisms	<ul style="list-style-type: none"> • bacteria • mould • virus • yeast.
Workplace requirements	<ul style="list-style-type: none"> • enterprise-specific requirements • OH&S requirements • Quality Assurance requirements • Standard Operating Procedures • the ability to perform the task to production requirements • work instructions.

RANGE STATEMENT	
OH&S	<ul style="list-style-type: none"> • enterprise OH&S policies, procedures and programs • OH&S legal requirements • Personal Protective equipment (PPE) which may include: <ul style="list-style-type: none"> • coat and apron • ear plugs or muffs • eye and facial protection • head-wear • lifting assistance • mesh apron • protective boot covers • protective hand and arm covering • protective head and hair covering • uniforms • waterproof clothing • work, safety or waterproof footwear • requirements set out in standards, codes of practice

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review preparation of fruits, vegetables, nuts, herbs and spices for processing	<ul style="list-style-type: none">1.1 Processes for preparing fruits, vegetables, herbs and spices are identified1.2 The blanching process for fruits, vegetables, nuts, herbs and spices is documented where required1.3 The process of carrying out pre-treatments for fruits, vegetables, nuts, herbs and spices is documented1.4 The steps involved in the manufacture of a range of fruit, vegetable, herbs and spices are identified
2. Monitor production of fruit, vegetables, nut, herb and spice product samples for testing	<ul style="list-style-type: none">2.1 Processing technique to produce required range of fruit, vegetable, herb and spice product samples are identified2.2 Permissible additives/preservatives used in the production of fruits, vegetables, nuts, herbs and spices are evaluated for suitability2.3 Processing stages and processes are monitored according to regulatory, customer and enterprise requirements2.4 Products are produced in a safe working environment using appropriate hygiene and sanitation techniques
3. Investigate the packaging alternatives for fruits, vegetables, nut, herb and spice products.	<ul style="list-style-type: none">3.1 Packaging requirements for fruits, vegetable, herb and spice products are identified and evaluated for suitability3.2 Packaging of a range of fruit, vegetable, nuts, herb and spice products is monitored according to regulatory, customer and enterprise requirements3.3 Adjustments to packaging procedures and design are made where required
4. Assess the quality and shelf life of fruit, vegetable, nuts, herb and spice products	<ul style="list-style-type: none">4.1 A range of testing techniques are performed to assess the safety and organoleptic qualities of fruit, vegetable, nuts, herb and spice products4.2 All common hazards at critical control points (CCPs) for the production of products are identified and assessed4.3 Critical limits are complied with for all steps of production including shelf life and storage
5. Review production processes	<ul style="list-style-type: none">5.1 The CCPs and critical limits for product safety are reviewed5.2 Operating procedures are reviewed for food safety and quality5.3 The production plan is reviewed for processing of food products5.4 Environmental impacts and associated costs are reviewed for processing of food products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- investigate the processing characteristics of fruits, vegetables, nuts, herbs and spices
- determine the seasonal availability and demand for fruits, vegetables, nuts, herbs and spices
- implement preparation and processing requirements for fruits, vegetables, nuts, herbs and spices
- implement quality and food safety procedures for processing of fruits, vegetables, nuts, herbs and spices
- arrange transportation of raw and processed fruits, vegetables, nuts, herbs and spices
- determine the procedures and costings for packaging a range of fruit, vegetable, herb and spice products
- implement packaging procedures for fruits, vegetable, nuts, herb and spice products.

Required knowledge includes:

Knowledge of:

- the physiology of fruits, vegetables, nuts, herbs and spices
- the range of available fruits, vegetables, nuts, herbs and spices used in the food industry
- the physiological changes that can occur to fruit, vegetables, nuts, herbs and spices during harvest and post-harvest treatment
- the various methods of storage which assist to prolong the shelf life of fruits, vegetables, herbs and spices
- the physiology of fruits, vegetables, nuts, herbs and spices
- methods of cleaning and storage of fruit, vegetable, nuts, herb and spice products for sale as fresh produce or for further processing
- manufacturing processes for pickled, canned, dried, and concentrated fruit, frozen and canned vegetables, herb and spice products
- processes and inputs for jam and sauce production
- testing procedures for raw materials through to manufactured product
- stages of production, CCPs and critical limits
- packaging procedures
- quality and continuous improvement processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to produce samples of fruit, vegetable, herb and spice products and provide information and data for reviewing the production system
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to use commercial processing techniques to produce samples of fruits, vegetables, herbs and spice products, and to review the production system for food safety and quality and environmental impact.
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies, and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • A report on review of the production system
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Occupational health and safety requirements	<ul style="list-style-type: none"> • OHS legislation, regulations and Codes of practice • Safety Data Sheets (SDSs) for hazardous substances • Enterprise specific OHS requirements.
Regulations	<ul style="list-style-type: none"> • Australian and international standards including: <ul style="list-style-type: none"> • professional association regulations • industry guidelines and codes of practice • industry regulations • Australian and New Zealand Food Standards Code • ISO Standards • Codex Alimentarius • export requirements • State food safety regulations • International, Australian and State environmental protocols and regulations regarding effluent.
Materials, equipment and systems	<p>Food preparation may include:</p> <ul style="list-style-type: none"> • peeling • slicing • dicing • coring • blanching • other pre-treatment processes. <p>Fruit, vegetable herb and spice production processes may include:</p> <ul style="list-style-type: none"> • pickling • puree • canning • drying • freezing • concentration • milling • grinding.

FDFST4051A Identify and implement product safety and quality processes for fish and seafood products

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to identify and implement product safety and quality processes for fish and seafood products.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to food science and technology personnel who have roles in product design, quality assurance and production management. The unit typically applies to staff who have responsibility for maintaining product safety, quality and efficiency of fish and seafood products.</p> <p>This unit includes using knowledge of food science and processes to determine the required food safety, quality and performance required from food production equipment. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify harvesting and storage practices for fish and seafood	1.1 Techniques used to harvest fish and seafood are identified 1.2 Appropriate storage procedures for fish and seafood products to prevent spoilage are selected 1.3 Spoilage organisms associated with fish and seafood are identified
2. Select the processing techniques and technology used to produce various fish and seafood products	2.1 Sensory evaluation of fish and/or seafood is performed 2.2 The suitability of the fish and/or seafood for use in the manufacturing process is assessed 2.3 The manufacturing process used to produce a pickled, cured, frozen, or canned fish and/or seafood is identified
3. Monitor commercial techniques to manufacture fish and/or seafood product samples	3.1 Appropriate manufacturing process to produce "value-added" fish and/or seafood products is established 3.2 A process chart is constructed for a selected fish or seafood product 3.3 The production system is set to the required operating specifications and production to specification verified 3.4 Testing techniques are carried out on product samples
4. Review production processes	4.1 The critical control points (CCPs) and critical limits for product safety are reviewed 4.2 Operating procedures are reviewed for food safety and quality 4.3 The OHS plan is reviewed for processing of food products 4.4 Environmental impacts and associated costs are reviewed for processing of food products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- classify fish and seafood classes according to their phylum/species
- select appropriate storage procedures for fish and seafood products to prevent spoilage
- perform sensory evaluation of fish and/or seafood
- assess the suitability of the fish and/or seafood for use in the manufacturing process
- establish the manufacturing processes used to produce "value-added" fish and/or seafood products
- manufacture a range of sample fish and/or seafood products
- construct a process chart for a selected fish or seafood product

Required knowledge includes:

Knowledge of:

- fish and seafood classes according to their phylum/species
- species of fish and seafood which are generally used in food industry/retail
- harvesting techniques
- storage procedure for fresh and cooked fish and seafood
- spoilage organisms associated with fish and seafood
- sensory evaluation of fish and/or seafood
- manufacturing processes used to produce pickled, cured, frozen and canned fish and/or seafood
- manufacturing processes used to produce "value-added" fish and/or seafood product such as fish/seafood nuggets, sushi and sushimi
- testing procedures for raw materials through to manufactured product
- stages of production, CCPs and critical limits
- packaging procedures
- quality and continuous improvement processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce samples of fish and seafood products, and to provide information and data for reviewing the production system</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to use commercial processing techniques to produce samples of fish and seafood products, to implement packaging and storage arrangements for fish and seafood products, and to review the production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Suitable fish and seafood and production facilities to produce product samples • Tests used to report relevant product/process information and recorded results
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Analysis of product and process carried out under the candidate's supervision • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • A report on review of the production system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<ul style="list-style-type: none"> • 1. Review preparation of plant and animal products for oil extraction and processing • 2. Monitor processing techniques and technologies to produce fat or oil product 	<ul style="list-style-type: none"> • 1.1 Processing stages used to prepare plant and animal fats and oils are identified • 1.2 The principles of pre-treatments for fat and oil processing are established • 1.3 Regulatory, quality and safety requirements are established • 2.1 Processing techniques and technologies used to produce fat or oil products are identified • 2.2 Steps involved in the manufacture of fat or oil product are identified • 2.3 Permissible additives used in the production of the fat or oil product are identified • 2.4 Appropriate hygiene and sanitation practices are used to produce product • 2.5 Data requirements appropriate for food safety, quality and production standards are identified • 2.6 Data collection points consistent with equipment capabilities and data requirements are established • 2.7 Procedures to deal with non-conformance in relation to process and the final product are developed • 2.8 Test runs of fat or oil manufacturing process is conducted and product is checked against requirements
<ul style="list-style-type: none"> • 3. Review packaging of fat and oil products 	<ul style="list-style-type: none"> • 3.1 Suitable packaging requirements for fats and oil products are identified and checked against regulatory, client and enterprise requirements • 3.2 Test packaging of fat and oil products is undertaken and checked for safety and conformance to client and enterprise requirements
<ul style="list-style-type: none"> • 4. Assess the quality, safety and shelf life of fats and oil products 	<ul style="list-style-type: none"> • 4.1 A range of testing techniques are performed to assess the safety of fat and oil products • 4.2 A range of testing techniques are performed to assess the quality of the fat and oil products • 4.3 A range of testing techniques are performed to determine the shelf life of fat and oil products • 4.4 Sensory analysis is conducted • 4.5 All common hazards and critical control points (CCPs) for the production of products are identified and assessed
<ul style="list-style-type: none"> • 5. Review production processes 	<ul style="list-style-type: none"> • 5.1 The CCPs and critical limits for product safety are monitored and reviewed according to regulatory and enterprise requirements • 5.2 Operating procedures are reviewed for food safety and quality

ELEMENT**PERFORMANCE CRITERIA**

- 5.3 The production plan is reviewed against enterprise and client schedules and quality requirements
- 5.4 Environmental impacts and associated costs are reviewed for processing of food products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- recognise the difference between fats and oils
- review the various methods of storage which assist to prolong the shelf life of fats and oils
- apply processing techniques, using commercial materials and equipment
- apply sensory evaluation techniques
- carry out product testing
- review production systems.

Required knowledge includes:

Knowledge of:

- widely available animal- and plant-based fats and oils and seasonal availability
- the physiological changes that can occur to plant-based products during harvest
- various methods of storage that assists in prolonging the shelf life of animal- and plant-based fats and oils
- principles of pre-treatments as applies to animal- and plant-based fats and oils
- processing techniques and technologies used to produce animal- and plant-based fats and oils
- testing techniques used to identify quality and safety parameters of animal- and plant-based fats and oils
- packaging requirements for animal- and plant-based fats and oils
- sensory analysis parameters for animal- and plant-based fats and oils
- common food spoilage and food poisoning organisms associated with animal- and plant-based fats and oils
- manufacturing of a range of animal- and plant-based fats and oils
- the physiology of animal- and plant-based fats and oils
- methods of storage for animal- and plant-based fats and oils

manufacturing process for animal and plant fats and oils.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce samples of edible fats and oils products, and to provide information and data for reviewing the production system</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the use of commercial processing techniques to produce samples of edible fats and oils, the documentation of packaging and storage arrangements for edible fats and oils, and a review of the production system for food safety and quality.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology and across a range of fat and oil products.. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results
<p>Method of assessment</p>	<p>Evidence may include third party report, portfolio, work documentation produced by the candidate, and written and/or oral questioning to assess knowledge and understanding of the performance criteria and critical aspects for assessment. Assessment should also include wherever possible observation of the candidate oversighting or conducting a range of fat and oil manufacturing processes and tests.</p>

EVIDENCE GUIDE	
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Occupational health and safety requirements	<p>Federal and state legislation, regulations, and codes of practice</p> <p>Enterprise requirements</p> <p>Safety Data Sheets (SDSs) for hazardous substances</p>
Regulations	<p>Australian and international standards including:</p> <ul style="list-style-type: none"> • industry guidelines and codes of practice • industry regulations • Australia New Zealand Food Standards Code • ISO Standards • Codex Alimentarius • Australian Quarantine Inspection Service (AQIS) requirements <p>State food safety regulations</p>
Materials, equipment and systems	<p>Fats and oils processing chemicals may include extraction solvents, catalysts, hydrogen.</p> <p>Fats and oils processing equipment may include boiling pans, washing equipment, crushers, extraction, distillation units.</p>
Edible fats and oils	<p>Include tallow, palm oil, oilseed, cooking oils, groundnut oils, mustard oil, safflower oil, sesame oil, soya oil,</p>

RANGE STATEMENT	
	sunflower oil, other vegetable oils
Testing procedures	Include emulsion testing, sensory (organoleptic) testing, extractive testing for free fatty acids, fatty acid profile, peroxide value, polyphenols, sterol composition, moisture and volatiles, unsaponifiable matter, insoluble impurities, flash point, trace metals, residual pesticides, halogenated hydrocarbons.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce a range of beverage product samples	<ul style="list-style-type: none">1.1 Equipment used to prepare beverage products is selected and prepared1.2 Pre-treatments for beverage production are implemented1.3 Appropriate processing techniques and technologies are used to produce a range of beverage product samples1.4 Permissible additives/preservatives used in the production of beverage products are identified and used according to specifications1.5 Data requirements appropriate for food safety, quality and production standards are identified1.6 Data collection points consistent with equipment capabilities and data requirements are established1.7 Procedures to deal with non-conformance in relation to process and the final product are developed1.8 Sample products are produced using appropriate hygiene and sanitation techniques
2. Review packaging of beverage products	<ul style="list-style-type: none">2.1 Packaging requirements for beverage products are identified consistent with regulatory, client and enterprise requirements2.2 Test packaging of beverage products is undertaken or supervised and checked for safety and conformance to client and enterprise requirements
3. Assess the quality, safety and shelf life of a range of beverage products	<ul style="list-style-type: none">3.1 A range of testing techniques including sensory analysis are performed to assess the safety of the beverage product3.2 A range of testing techniques including sensory analysis are performed to assess the quality of the beverage product3.3 A range of testing techniques are performed to determine the shelf life of the beverage product3.4 All common hazards and critical control points (CCPs) for the production of products are identified and assessed
4. Review production processes	<ul style="list-style-type: none">4.1 The CCPs and critical limits for product safety are reviewed4.2 Operating procedures are reviewed for food safety and quality4.3 The OHS plan is reviewed for processing of food products4.4 Environmental impacts and associated costs are reviewed for processing of food products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select and source raw materials for processing beverages
- prepare a detailed production flow chart for beverage production
- produce beverages based on documented procedures
- apply and interpret a range of quality tests used in the manufacture of beverages, including brix, acidity, alcohol content determination, sulphur dioxide determination, carbonisation level, sensory evaluation and packaging integrity
- organise the testing of a beverage product
- document and analyse test results
- review quality procedures based on product testing.

Required knowledge includes:

Knowledge of:

- the range of beverage products, including beers, wines spirits, fruit juice products, carbonated beverages, fortified non-alcoholic beverages, tea and coffee
- the different styles of beers generally manufactured
- the different styles of red, white, sparkling and fortified wines generally manufactured
- manufacturing processes used in the production of various styles of wines
- the different types of fruit juices products generally manufactured
- manufacturing process for the production of various types of fruit juices
- manufacturing processes for a variety of carbonated and non-carbonated beverages
- the variety of styles of teas and coffees generally available
- manufacturing processes for the production of various styles of tea and coffee
- common spoilage and food poisoning organisms associated with beverage production
- brewing processes used in the production of various styles of beverages
- fermentation processes in various styles of beverage production
- quality tests used in the manufacture of beverages, including brix, acidity, alcohol content determination, sulphur dioxide determination, carbonisation level, sensory evaluation and packaging integrity
- stages of production, CCPs and critical limits for production processes
- packaging procedures
- quality and continuous improvement processes.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce a range of beverage product samples, and to provide information and data for reviewing the production system</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to produce and bottle a range of beverage samples, to assess the quality of the beverage products based on product testing, and to review the production process used for food product safety and quality and for environmental impact.</p> <p>Competency includes the candidate's ability to review manufacturing processes for a range of products drawn from:</p> <ul style="list-style-type: none"> • mineral water products • bottled water products • flavoured water products • sports and energy drinks • standard styles of tea/coffee • decaffeinated tea/coffee • flavoured products • still, sparkling and fortified beverages/wine.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production

EVIDENCE GUIDE	
	environment <ul style="list-style-type: none"> • Tests used to report relevant product/process information and recorded results
Method of assessment	Evidence may include product samples, third party report, portfolio, work documentation produced by the candidate, and written and/or oral questioning to assess knowledge and understanding of the performance criteria and critical aspects for assessment. Assessment should also include wherever possible observation of the candidate oversighting or conducting a range of beverage manufacturing processes and tests.
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out preparation and pre-treatments for cereal based products processing	1.1 Processes for preparing cereal based products are documented 1.2 Ingredients are selected and prepared for processing 1.3 Materials and equipment used to prepare cereal based products are selected and prepared
2. Produce a range of cereal-based product samples	2.1 Permissible additives/preservatives used in the production of cereal based product samples are selected according to specifications 2.2 Data requirements appropriate for food safety, quality and production standards are identified 2.3 Data collection points consistent with equipment capabilities and data requirements are established 2.4 Procedures to deal with non-conformance in relation to process and the final product are developed 2.5 Correct processing techniques and technologies are used to produce cereal based products
3. Review packaging and procedures for cereal-based products	3.1 Suitable packaging requirements for cereal based products are identified consistent with regulatory, client and enterprise requirements 3.2 Test packaging of cereal products is undertaken or supervised and checked for safety and conformance to client and enterprise requirements 3.3 Adjustments to packaging procedures and design are made where required
4. Assess the quality and safety and shelf life of a range of cereal-based products	4.1 A range of testing techniques are performed to assess the quality and safety of cereal based products 4.2 A range of testing techniques are performed to determine the shelf life of cereal based products 4.3 All common hazards at critical control points (CCPs) for the production of products are identified and assessed
5. Review production processes	5.1 The CCPs and critical limits for product safety are reviewed 5.2 Operating procedures are reviewed for food safety and quality 5.3 The production plan is reviewed for processing of food products 5.4 Environmental impacts and associated costs are reviewed for processing of food products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select ingredients and prepare equipment for processing
- construct a process flow chart for a selected cereal product
- apply production equipment and processes
- manufacture cereal product using documented procedures
- conduct sensory evaluation and product testing
- collate and analyse the results of testing
- review production processes, HACCP-based food safety plans and product quality
- assess the environmental impacts for the production of a cereal-based product.

Required knowledge includes:

Knowledge of:

- the different varieties of cereal grains
- the processing techniques and technologies used to produce various cereal products
- the major constituents of a cereal grain
- the use of each constituent of a cereal grain
- the milling process generally used to produce flour
- gluten, and its role in a range of wheat flour based products
- bread, biscuit, cake and pastry production techniques
- the manufacturing processes used to produce pasta and noodle products
- the manufacturing processes used to produce breakfast cereal products.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce samples of cereal-based products, and to provide information and data for reviewing the production system</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to produce a range of cereal-based products, to assess their quality based on product testing, and to review the production process used for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results
<p>Method of assessment</p>	<p>Evidence may include product samples, third party report, portfolio, work documentation produced by the candidate, and written and/or oral questioning to assess knowledge and understanding of the performance criteria and critical aspects for assessment. Assessment should also include wherever possible observation of the candidate oversighting or conducting a range of beverage</p>

EVIDENCE GUIDE	
	manufacturing processes and tests.
Guidance information for assessment	<p>Evidence should be gathered over a period of time in a range of actual or simulated environments.</p> <p>Recommended technical information:</p> <p>The ICC Handbook of Cereals, Flour, Dough and Product Testing Methods and Applications edited by Stanley P. Cauvain and Linda S. Young (2009)</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Occupational health and safety requirements	<ul style="list-style-type: none"> • OHS legislation, regulations and Codes of practice • Safety Data Sheets (SDSs) for hazardous substances • Enterprise specific OHS requirements.
Regulations	<ul style="list-style-type: none"> • Australian and international standards including: • professional association regulations • industry guidelines and codes of practice • industry regulations • Australian and New Zealand Food Standards Code • ISO Standards • Codex Alimentarius • export requirements • State food safety regulations • International, Australian and State environmental protocols and regulations regarding effluent
Materials, equipment and systems	<p>Manufacturing processes may include but are not limited to:</p> <ul style="list-style-type: none"> • baking • extrusion • mixing

RANGE STATEMENT	
	<ul style="list-style-type: none">• blending• grinding• rolling• steaming• pressing• drying
Cereal products	Include pastas, breakfast cereals and bread products.
Testing techniques	Include sensory (organoleptic) testing, microbiological testing, tests for starches, sugars and carbohydrates, moisture testing.

FDFST5001A Monitor refrigeration and air conditioning systems in food processing

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to coordinate the monitoring of refrigeration and air conditioning systems in food processing and storage.

Application of the Unit

This unit applies to production, quality and technical staff in food processing who are required to monitor cold storage or a temperature controlled environment. The unit typically applies to staff who have responsibility for maintaining product safety and quality in food processing. The unit can apply to all sectors of food production including general food production, meat and seafood industries. The unit does not cover the design of equipment or undertaking engineering related analyses of refrigeration and air conditioning systems. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Coordinate a refrigeration system in the production of food products	<ul style="list-style-type: none">1.1 Refrigerants and their required properties are identified1.2 Performance of the refrigeration system in the production process is monitored1.3 Ways to improve the performance of the refrigeration system are appraised1.4 Performance of a refrigeration system is analysed1.5 Problems are reported to the designated person according to company policies and procedures
2. Coordinate an air conditioning system in the production of food products	<ul style="list-style-type: none">2.1 Common forms of air conditioning systems used in the production of food products are identified2.2 Air conditioning requirements for a given situation in the production process are assessed2.3 Variables on a psychrometric chart are identified2.4 Psychrometric charts for the analysis of air conditioning systems in the production process are applied2.5 The performance of the air conditioning system in the production process is monitored2.6 Energy efficiency is monitored to reduce costs and environmental impacts2.7 Problems are reported to the designated person according to company policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify characteristics of a refrigeration system in the production of food products
- interpret the function of key components in a refrigeration system
- appraise the performance of a refrigeration system
- identify refrigerants and their required properties
- monitor the performance of the refrigeration system in the production process
- report problems to the designated person according to company policies and procedures
- identify the common forms of air conditioning system used in the production of food products
- identify the variables on a psychrometric chart
- apply psychrometric charts for the analysis of air conditioning systems in the production process
- monitor the performance of the air conditioning system in the production process.

Required knowledge includes:

Knowledge of:

- refrigeration systems in the production of food products
- function of key components in a refrigeration system
- common forms of air conditioning systems used in the production of food products
- psychrometric charts
- energy efficiency and environmental impacts of refrigeration and air-conditioning systems.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to monitor the effectiveness and efficiency of refrigeration and air conditioning systems in food processing, and the impact on energy costs and environment.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to assess refrigeration and air conditioning system requirements, and monitor the performance of refrigeration and air conditioning and the potential impacts on food safety and quality.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Observation of candidate conducting a range of tests and procedures • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation • Third party reports from experienced practitioner • Case studies • Field Reports.

Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.
-------------------------------------	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Occupational health and safety requirements</p>	<ul style="list-style-type: none"> Codes of practice, regulations, safety data sheets (SDSs) Enterprise and process specific occupational health and safety requirements.
<p>Regulations</p>	<ul style="list-style-type: none"> Australian and international standards Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
<p>Air conditioning plant and equipment</p>	<p>Air conditioning systems, plant and/or equipment may include electrical supply switchboard(s) and transformers; air conditioner compressors; chillers and associated cooling plant; air fans; humidifiers; heaters and filters; electrical motors; valves, actuators and dampers (electric, hydraulic, pneumatic and manual); supervisory, alarm, protection and control equipment; and chemical dosing equipment.</p>
<p>Refrigeration plant and equipment</p>	<p>Refrigeration equipment may include air conditioning (refrigerated and evaporative), water coolers, packaged air conditioners and refrigerators.</p>
<p>System controls</p>	<p>Controls for both systems may be mechanical, pneumatic, electric, and electronic and may be sequenced/controlled by programmable controllers or computer systems.</p>
<p>Psychrometric variables</p>	<p>Psychrometric variables may include temperature, relative humidity, dew-point temperature, and wet-bulb temperature.</p>

FDFST5002A Identify and implement required process control for a food processing operation

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to identify and implement the required process control system for a food production process.

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and production management. The unit typically applies to staff who have responsibility for maintaining product safety, quality and efficiency in food production. The unit can apply to all sectors of food production including general food production, meat and seafood industries. The unit does not cover the design of equipment or undertaking engineering related analyses of mechanical, electrical, electronic or fluid power systems. However it includes using knowledge of food science and processes to determine the required food safety, quality and performance required from food production equipment. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the basic concepts of production processes	1.1 Processes used in the food production are identified 1.2 The characteristics used to define the operation of a process are established 1.3 The operating principles of the processes are identified 1.4 The operating standards, capabilities and maintenance requirements for equipment and accessories used in the specified production process are established 1.5 Product characteristics and common variations are recognised
2. Select the control mechanisms, modes of control and data collection points for a specified food production process	2.1 The operation of different types of control mechanisms is identified. 2.2 Modes of control, which can be used with the various control mechanisms, are identified 2.3 Data requirements and collection points appropriate for food safety, quality and production standards are documented 2.4 Procedures to deal with non-conformance in relation to process and the final product are developed
3. Implement process control systems appropriate for food process	3.1 Process control requirements for food process are communicated to appropriate operational, quality and maintenance personnel 3.2 Standard operational procedures are checked for accuracy and relevance 3.3 Test runs are conducted and checked against requirements 3.4 Statistical analysis is applied to verify the process and recommend and recommend any further system improvements 3.5 The on going collection and analysis of required data is arranged

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify the basic operating principles of equipment and accessories used in food production systems
- identify different types of processes used in food production systems
- use process control terminology
- identify the basic principles of operation of equipment and accessories used in a typical food production process
- recognise the process control methods used to achieve the food safety, quality and production standards
- develop procedures to deal with non-conformance in relation to process and the final product
- identify the operation of different types of process control mechanisms
- identify typical instrumentation for process control
- monitor data collection to ensure it is timely, relevant and accurate
- calculate relevant statistical measures
- apply statistical information to the analysis and verification of a process
- conduct a trend analysis of food processing data
- explain the verification process using statistical data
- prepare and use process control graphs
- use and explain relevant statistical measures
- prepare a report on the outcomes and recommendations/actions of the statistical analysis of process control data.

Required knowledge includes:

Knowledge of:

- the inter-relationships between food processing stages and the effect of variation in processing parameters on process outcome and on final product
- specific plant process operations
- emergency shutdown procedures
- instrumentation and control systems
- product specifications and tolerances
- systems operating parameters
- process control monitoring
- collection and recording of data
- statistical analysis of process control data
- reporting on conclusions from statistics-based process control monitoring and review.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to recognise and implement the process control system for a food processing operation in order to achieve required food product specification.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Competency must be demonstrated in the ability to monitor process control systems in a typical production process, collect and analyse process control data and recommend system improvements, and develop procedures to deal with non-conformance in relation to process and the final product.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Field reports • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation • Third party reports from experienced practitioner • Case studies.
<p>Guidance information for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food</p>

	<p>technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p>
--	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Occupational health and safety requirements	<ul style="list-style-type: none"> • Codes of practice, regulations, safety data sheets (SDSs) • Enterprise and process specific occupational health and safety requirements.
Regulations	<p>Includes Australian and international Acts, regulations and standards where export of food products is undertaken.</p> <p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation and legislation and regulations covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.</p>
Materials, equipment and systems	<p>Typical processing and related techniques include but are not limited to raw materials/ingredient dispensing, preparation, mixing and blending, conditioning, primary and further processing, wrapping, packing and storage.</p> <p>Typical process parameters include but are not limited to temperature, time, pressure, flow rate etc.</p>
Operating standards, capabilities and maintenance requirements for equipment and accessories	<p>For this unit operating standards, capabilities and maintenance requirements for equipment and accessories are the equipment features that impact on the design of a food production process and the setting of production</p>

	<p>requirements. Examples could be:</p> <ul style="list-style-type: none">• required down time for maintenance• holding capacity of bins, vessels, ovens etc• equipment in place cleaning programs and procedures• maximum and minimum conveyor speeds• oven temperature range• location of guards, access ports, loading and unloading doors, hatches etc.

FDFST5003A Construct a process control chart for a food processing operation

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit describes the skills and knowledge to construct a process control chart based on a sound knowledge of statistics and the ability to determine Process Capability for equipment.

Application of the Unit

This unit applies to food processing staff who have roles in product design, or quality and production management. The unit typically applies to staff who have responsibility for establishing and maintaining product safety, quality and efficiency in food processing. The unit can apply to all sectors of food production including general food production, meat and seafood industries. The unit does not cover applying statistics to analyse mechanical, electrical, electronic or fluid power systems. However it includes applying statistics to food processing equipment to determine process capability and to construct a process control chart for the food processing operation. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply tools and techniques to collect and present data	<p>1.1 The key characteristics and uses of attribute and variable data are identified</p> <p>1.2 The concepts of frequency and distribution are described</p> <p>1.3 The frequency and distribution of supplied data for various measurement levels are determined</p> <p>1.4 Data collection tools including check sheets, surveys and logs are described and used</p> <p>1.5 Appropriate charts and graphs using available data are constructed</p>
2. Interpret charting tools and techniques in process control	<p>2.1 The concept of process capability and its implications are discussed</p> <p>2.2 Probability distributions in analysing process capability are used</p> <p>2.3 Control Charts used to monitor processes are interpreted</p> <p>2.4 The application of charting methods to establishing process capability, evaluating process changes and interpreting simple experiments is identified</p>
3. Determine the Process Capability of a piece of equipment on a production line	<p>3.1 The scope and purpose of the process are identified</p> <p>3.2 A representative data sample is determined</p> <p>3.3 Data collection techniques are selected</p> <p>3.4 Data is collected to meet sampling requirements</p> <p>3.5 Appropriate statistical analysis techniques are selected and applied</p> <p>3.6 All relevant parameters for the determination of Process Capability are calculated statistically</p> <p>3.7 The Process Capability value for each piece of equipment is incorporated into process control for the whole operation</p>
4. Construct a process flow chart	<p>4.1 Scope and purpose of Average & Range charts in the food industry are identified</p> <p>4.2 All relevant parameters for use in preparing both Average and Range charts are statistically calculated</p> <p>4.3 Average and Range charts, showing all pre-calculated parameters, are prepared</p> <p>4.4 Trends and cyclic patterns of Average and Range charts are interpreted</p> <p>4.5 An action plan based on the results of Average and Range is designed</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify the types of causes of variation
- identify probability principles
- apply Poisson and binomial distributions to supplied attribute data
- identify the characteristics of the Normal distribution
- calculate and interpret indices of variability
- identify skewed distributions
- calculate and interpret indices of significance and variance
- calculate and interpret indices of probability
- identify and explain the role of Statistical Quality Control (SQC)
- discuss the concepts of process capability, acceptance levels and process improvement
- apply the uses of Average & Range charts in the food industry
- calculate statistically all relevant parameters for use in preparing both Average and Range chart
- prepare Average and Range charts showing all pre-calculated parameters
- interpret trends and cyclic patterns of Average and range charts
- prepare an action plan based on the results of Average and Range
- describe and calculate measure of central tendency
- identify the principles of process capability
- calculate all relevant parameters for the determination of process capability statistically
- interpret process capability value in relation to the overall process
- represent data in graphs, tables, averages and percentages
- prepare a report with recommendations regarding the outcomes of the process capability.

Required knowledge includes:

Knowledge of:

- the terms statistic and parameter
- the concept of statistical inference
- principles of variability and variance
- the relationship between probability and statistical inference
- the concept of variation within processes and recognition of its implications for process design and management
- the scope and purpose of Average & Range charts in the food industry
- all relevant parameters for use in preparing both Average and Range chart
- pre-calculations of parameters of Average and Range charts
- trends and cyclic patterns of Average and range charts
- the preparation of an action plan based on the results of Average and Range

- the definition of process capability
- process capability values.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to construct and interpret a process control chart based on the ability to determine Process Capability for equipment.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to:</p> <ul style="list-style-type: none"> • apply tools and techniques for analysing in specification or out of specification production processes • identify and explain patterns of variation exhibited by distributions • construct a process flow chart • interpret Control Charts • determine process capability for a food processing operation.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.

FDFST5004A Specify and monitor the nutritional value of processed food

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to provide nutritional information for processed food, and to implement procedures to optimise the nutritional value of a product.

Application of the Unit

This unit applies to production, and technical managers who are required to specify and monitor the nutritional value of foods through processing and to verify the accuracy of label information, and to product developers who are required to assess nutritional value and properties of a new product. This unit does not cover the analysis of food to determine nutritional composition. Where this skill is required the unit MSL975022A Perform food analyses should be selected.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure label information is accurate and complete	1.1 The dietary intakes and requirements for an identified consumer group for a food product are identified 1.2 Food storage and preparation information related to maintaining nutritional value and food safety are provided 1.3 Organisational and NHMRC Australian Dietary Guidelines for nutritional information on product labels are applied
2. Evaluate methods of preserving nutrients during food processing and storage	2.1 The effects of food processing and storage conditions on the stability of certain nutrients are analysed 2.2 The need for fortification of processed foods in the Australian diet is evaluated 2.3 Food processing and storage methods are evaluated for their impact on the nutritive value of product
3. Assess the benefits of food products developed or modified to meet the needs of a customer group	3.1 Common nutritional deficiencies and related diseases are evaluated 3.2 Appropriate diets for customers with specific requirements or health challenges are identified 3.3 Modified and functional foods are identified and categorised 3.4 The main benefits of food products developed or modified to meet the nutritional needs of special groups are assessed
4. Apply nutritional information and issues to product development, labelling and marketing of processed foods	4.1 Nutritional requirements to be considered, during product development, are evaluated and applied 4.2 The legal requirements for nutritional labelling food products are applied 4.3 Nutritional issues, in relation to the legal and ethical marketing of processed foods, are evaluated

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- recognise key macronutrients required for a healthy diet
- establish the processes of digestion and absorption
- establish the process of energy metabolism in the human body
- apply knowledge of nutrition to food processing
- identify, review and apply key and current nutritional information
- compare the nutritional needs of special population groups
- evaluate a food product for its nutritional properties
- evaluate nutritional issues in relation to product development, labelling and marketing of processed foods
- identified nutritional related risk factors and diseases
- establish public health and environmental hazards, in relation to nutrition.

Required knowledge includes:

Knowledge of:

- key macro and micro nutrients for a healthy diet
- the processes of digestion, absorption and energy metabolism in the human body
- human energy requirements
- dietary guidelines and legislative requirements related to processed foods
- the effects of processing and storage on nutrients, and the methods for overcoming these effects
- the role of proteins in nutrition
- the role of carbohydrates in nutrition
- the role of vitamins and minerals in nutrition
- the role of dietary fibre
- the role of lipids in nutrition
- the body's processes for storing and using water and its role in nutrition
- nutritional related risk factors and diseases
- food intolerances and allergies
- functional foods
- diseases caused by nutritional deficiencies
- modified and functional foods and nutraceuticals.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to provide nutritional information for processed food, and to implement procedures to optimise the nutritional value of a product.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to identify, review and apply nutritional information, compare the nutritional needs of special population groups, and evaluate nutritional issues in relation to product development, labelling and marketing of processed foods.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, food testing data and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation including labels for a product • Case studies.
<p>Guidance information for assessment</p>	<p>Evidence should be gathered over a period of time in a</p>

	range of actual or simulated environments.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Codes of practice, regulations, Safety Data Sheets (SDSs)</p> <p>Enterprise specific requirements.</p>
<p>Food processing Regulations/ Standards/ Guidelines</p>	<ul style="list-style-type: none"> • Australian and international standards • Codex Food Processing Standards • Acts of Parliament • National Health & Medical Research Council (NHMRC) Australian dietary guidelines • Food Standards Australia New Zealand (FSANZ) labelling regulations.
<p>Organisations</p>	<p>May include:</p> <ul style="list-style-type: none"> • National Health & Medical Research Council (NHMRC) • National Heart Foundation of Australia (NHFA) • Federation of Australian Nutrition Organisations (FANO) • Nutrition Australia • The Nutrition Society of Australia • Dietitians Association of Australia • The Australian Institute of Food Science & Technology • Australian Society of Clinical Immunology and Allergy.
<p>Functional foods</p>	<p>Any fresh or processed food claimed to have a health-promoting or disease-preventing property beyond the basic function of supplying nutrients. Fermented foods with live cultures are considered as functional foods with probiotic benefits.</p>
<p>Nutraceuticals</p>	<p>Includes functional foods that also aid in the prevention and/or treatment of disease(s) and/or disorder(s) (except anaemia).</p>
<p>Modified foods</p>	<p>Fresh or processed food which has had components added (e.g. Vitamin C enriched) or reduced (e.g. low fat milk).</p>

FDFST5005A Identify the biochemical properties of food

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to identify and apply a knowledge of biochemical substances and reactions to food product development and processing.

Application of the Unit

This unit applies to technical and management staff who have responsibility for maintaining product safety, quality and efficiency in food processing. The unit can apply to all sectors of food production including general food production, meat and seafood industries. The unit includes applying knowledge of food biochemistry to establish and monitor food safety, quality and processing performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use and apply terms and concepts relating to organic substances important in food processing	1.1 Biochemical terminology relating to food processing is used accurately 1.2 Relevant concepts are applied to explain the biochemistry in food processing
2. Identify biochemical compounds and explain biochemical reactions important in food processing	2.1 Biochemical compounds carbohydrates; amino acids, proteins and lipids are identified and classified 2.2 Molecular structures for important biochemical compounds are depicted 2.3 Chemical and physical behaviour associated with carbohydrates, amino acids, proteins and lipids is identified including the molecular processes taking place 2.4 Basic tests are performed to identify biochemical reactions and the associated physical and chemical changes in food processing
3. Assess the impact of food processing operations on the biochemistry of processed food products	3.1 Biochemical macro constituents and micro constituents of food are identified 3.2 Effect of processing on biochemistry and nutritional value of foodstuffs is assessed 3.3 Biochemical actions of food additives are identified 3.4 Biochemical principles relating to the spoilage and preservation of foods are explained
4. Extract samples of product or raw materials for biochemical testing and apply the results to food production processes	4.1 Properties of biochemical compounds and their extraction techniques are established for a food processing operation 4.2 Sampling is conducted according to the sampling plan and the tests to be conducted 4.3 Sample purity and integrity is maintained prior to testing 4.4 The results of biochemical testing are applied to ingredient selection and process control for a food processing operation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify the major chemical constituents found in foods
- interpret the biochemical principles relating to the preservation of foods
- apply sampling techniques to test for biochemical properties
- identify the biochemical action of important food additives
- carry out biochemical testing to determine the components of a food product
- apply the results of biochemical testing to maintain product quality and safety in food processing.

Required knowledge includes:

Knowledge of:

- terminology relating to biochemical substances
- the structure and properties of the biochemical compounds carbohydrates; amino acids, proteins and lipids
- the molecular structures for important biochemical compounds
- the chemical and physical behaviour associated with carbohydrates, amino acids, proteins and lipids in terms of molecular theory
- basic tests to identify biologically important biochemical materials including:
 - Benedict's test for glucose
 - Lugol's iodine test for starch
 - Biuret test for protein
 - Sudan III test for fats & oils
- sampling and testing techniques to determine the components and biochemical reactions for food products.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to design and manage food processing operations based on a knowledge of the biochemistry of food processing.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of a detailed understanding of biochemistry of food, including the ability to carry out basic chemical tests to identify biochemical compounds, use biochemical knowledge to predict the effects of processing, storage and additives in food processing, and produce or extract representative samples of biochemical compounds.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • laboratory and related equipment, manufacturers' advice and operating procedures • methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Observation of candidate conducting a range of tests and sampling procedures • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation • Case studies • Field Reports

	<ul style="list-style-type: none">• Third party support from experienced practitioner.
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures and legislation</p>	<ul style="list-style-type: none"> • Australian and international standards • Acts of Parliament • Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
<p>Australian and international standards</p>	<ul style="list-style-type: none"> • Australian and international standards <ul style="list-style-type: none"> • AS ISO/IEC 17025 General requirements for the competence of testing and calibration laboratories • Food Standards Code 2002 Australia New Zealand (FSANZ) and amendments • AQIS Export Control Orders • NATA accreditation procedures • AOAC standards • Dairy Food Safety standards • ISO 9000 series Quality management and quality assurance standards • AS 2243 Safety in laboratories • AS 2830 Good laboratory practice • AS 2134.1 Flame atomic absorption spectroscopy.
<p>Equipment and materials</p>	<ul style="list-style-type: none"> • General equipment may include hotplates, ovens, melting point and boiling point apparatus, steam baths, appropriate glassware and chemicals. • Analytical instruments may include spectrometric instruments such as: <ul style="list-style-type: none"> • ultraviolet/visible • infrared including Fourier transform infrared and near infrared • atomic absorption including flame and flameless.
<p>Biochemical testing</p>	<ul style="list-style-type: none"> • This may include any tests applicable to food products such as: <ul style="list-style-type: none"> • Benedict's test for glucose

	<ul style="list-style-type: none">• Lugol's iodine test for starch• Biuret test for protein• Sudan III test for fats & oils.
Biochemical reactions	<ul style="list-style-type: none">• These may include any reactions relevant to food processing operations including:<ul style="list-style-type: none">• oxidation• hydrolysis• enzymic reactions• lipid isomerisation• lipid polymerisation• polysaccharide synthesis• glycolysis• protein denaturing.

Pre-Requisites

FDFST4004 Perform microbiological procedures in the food
A industry

Employability Skills Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify food poisoning and spoilage bacteria, including methods of control	1.1 The major bacteria responsible for food poisoning and spoilage are identified 1.2 The types of processes used in the control of microbial growth in food products are evaluated 1.3 The effect of a standard food preserving technique over a range of pH, on the growth patterns of microbes is ascertained 1.4 The effectiveness of this food preserving technique in controlling food poisoning and spoilage microbes is evaluated 1.5 The usefulness of this technique, as part of process control of food poisoning and spoilage microbes is assessed 1.6 Compliance with Food Standards are assessed for food preservation techniques
2. Perform microbiological techniques for the identification of food borne disease	2.1 Standard microbiological techniques to identify and enumerate food poisoning and spoilage organisms, from a food sample, are used 2.2 The type of toxins, produced by the major food pathogens, are identified 2.3 Documented food borne disease outbreaks, from the past, are investigated 2.4 The ramifications of product contamination in terms of Public Health and product shelf-life quality are determined 2.5 Specimens and waste are handled in accordance with enterprise OHS guidelines
3. Apply the principles of microbiological quality control	3.1 The spoilage patterns of specific foods at different temperatures of storage are ascertained 3.2 The relationship between spoilage patterns and the growth cycle of the specific food spoilage/poisoning organisms is determined 3.3 A microbiological quality control program for a specific food is designed, implemented and evaluated in terms of the Food Standards 3.4 The importance of plant hygiene and how it can affect the finished product is determined 3.5 Specimens and waste are handled in accordance with enterprise OHS guidelines
4. Apply rapid microbiological techniques and other relevant technology for the identification of microbes related to	4.1 The principles of accelerated culture techniques are critically examined 4.2 The relevance of rapid microbiological technology, as related to control of plant hygiene, is identified 4.3 A series of tests to determine the adequacy of plant sanitation procedures, by rapid microbiological or other techniques, is

ELEMENT	PERFORMANCE CRITERIA
plant hygiene	performed
	4.4 Specimens and waste are handled in accordance with enterprise OHS guidelines
5. Perform techniques involving microbial fermentations	5.1 The types and characteristics of micro organisms used for fermentation within the food industry are identified
	5.2 Standard microbiological techniques to isolate and identify yeasts and bacteria in given food samples are used
	5.3 Sub-culturing and pure culture techniques for "scale up" to "starter" cultures are performed
	5.4 New culture strains after fermentation are maintained using standard techniques
6. Analyse test results and provide recommendations to process controllers or production managers	6.1 Results of microbiological tests are recorded and collated
	6.2 Microbiological data is analysed and compared with food safety and food processing critical control limits and other parameters
	6.3 Implications of test results are established and conclusions are drawn
	6.4 Test results, conclusions and recommendations are documented and presented to food processing management

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify the major bacteria responsible for food poisoning and spoilage
- evaluate processes used in the control of microbial growth in food
- ascertain the effect of a standard food preserving technique on the growth patterns of microbes
- use standard microbiological techniques to identify and enumerate food poisoning and spoilage organisms, from a food sample
- identify the type of toxins, produced by the major food pathogens
- investigate documented food borne disease outbreaks from the past
- determine the ramifications of product contamination in terms of Public Health and product shelf-life
- handle specimens and waste in accordance with enterprise OHS guidelines
- ascertain the spoilage patterns of specific foods at different temperatures of storage
- determine the relationship between spoilage patterns and the growth cycle of the specific food spoilage/poisoning organisms
- determine the importance of plant hygiene and how it can affect the finished product
- critically examine the principles of rapid microbiological techniques, including:
 - accelerated culture techniques
 - rapid biochemical tests
 - measurement of total bacteria metabolism
 - measurement of spoilage
 - non-traditional methods
 - automated and mechanised methods
- identify the relevance of rapid microbiological technology, as related to control of plant hygiene
- perform a series of tests to determine the adequacy of plant sanitation procedures, by rapid microbiological or other techniques, including:
 - rinse methods
 - swab methods
 - replica or contact methods
- identify the types and characteristics of micro organisms used for fermentation within the food industry, including: *Saccharomyces* spp., *Streptococcus* spp. and *Lactobacillus* spp.
- use standard microbiological techniques to isolate and identify yeasts and bacteria in given food samples
- perform sub-culturing and pure culture techniques for "scale up" to "starter" cultures
- maintain new culture strains after fermentation using standard techniques
- record, analyse and present data, with associated conclusions and recommendations.

Required knowledge**Knowledge of:**

- processes used in the control of microbial growth in food products
- major bacteria responsible for food poisoning and spoilage
- processes used in the control of microbial growth in food products
- Food Standards
- statistical methods for process control including Viable Count Methods
- standard microbiological techniques to identify food poisoning and spoilage organisms
- microbiological toxins as produced by major food pathogens
- spoilage patterns
- growth cycle of micro organisms in food
- microbiological quality control programs
- plant hygiene, including sanitation checks – rinse, swab, contact and rapid methods
- rapid microbiological techniques:
 - accelerated culture techniques
 - rapid biochemical tests
 - measurement of total bacteria metabolism
 - measurement of spoilage
 - non-traditional methods
 - automated and mechanised methods
- types and characteristics of fermentation micro-organisms, including:
 - *Saccharomyces* spp., *Streptococcus* spp. and *Lactobacillus* spp
- standard microbiological techniques to isolate and identify yeasts and bacteria in given food samples
- sub-culturing and pure culture techniques for "scale up" to "starter" cultures
- maintenance of new culture strains after fermentation
- critical control limits and microbiological processes and species in food production
- analysis of microbiological data by comparison with food safety and production standards
- effective data presentation and reporting.

-

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	To meet the requirements of this Unit, the candidate must demonstrate that they are able to undertake microbiological testing and analysis in a food processing environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Critical aspects of assessment must include evidence of the ability to use a range of microbiological techniques in food processing in compliance with quality and food safety system requirements, to apply rapid microbiological analysis techniques, and to perform techniques involving microbial fermentations.
Context of and specific resources for assessment	<ul style="list-style-type: none"> Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment. <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> Production process and related equipment, manufacturers' advice and operating procedures Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment Tests used to report relevant product/process information and recorded results

FDFST5007A Evaluate sampling plans in relation to food industry standards

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to interpret, apply and evaluate a sampling plan in relation to food industry standards.

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and production management. The unit typically applies to staff who have responsibility for maintaining product safety, quality and efficiency in food production through the sampling and testing of ingredients and product. The unit can apply to all sectors of food production including general food production, meat and seafood industries. The unit includes using knowledge of food science and processes to determine the required food safety and quality parameters, and the product sampling regime required for testing that parameters and standards have been met. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the concept of sampling	1.1 The basis of selection of an appropriate sample size is established 1.2 The Acceptable Quality Level (AQL) is identified, in reference to sampling 1.3 The Operating Characteristic (OC) Curve is identified, in reference to sampling 1.4 Single/double sampling and its uses in the food manufacturing industry are assessed 1.5 Sampling tables are interpreted.
2. Interpret, apply and evaluate a sampling plan	2.1 Appropriate sample size is identified. 2.2 Appropriate Acceptable Quality Limit (AQL) is identified 2.3 Relevant sampling table is selected 2.4 Results are interpreted

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- establish the basis of selection of an appropriate sample size
- identify the Acceptable Quality Level (AQL) and the Operating Characteristic (OC) Curve
- assess single and double sampling and their uses in the food manufacturing industry
- interpret, apply and evaluate a sampling plan.

Required knowledge includes:

Knowledge of:

- acceptable Quality Limits
- operating Characteristics Curve
- single, double, sequential and multiple sampling plans
- sampling tables.

FDFST5008A Develop a new food product

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to develop an innovative food, beverage or related product from a concept to a packaged and labelled finished product.

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and production management. The unit typically applies to staff who have responsibility for food product development. The unit can apply to all sectors of food production including general food production, meat and seafood industries. The unit does not cover developing process controls however ingredients, food processes and production parameters must be documented. Depending on the product developed, liaison may be required with production managers, engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop concept for the new product	1.1 Identify concept for new innovative product 1.2 Identify potential innovative new product 1.3 Determine market for new product 1.4 Determine viability of product concept
2. Identify product development parameters	2.1 Determine product parameters 2.2 Determine equipment required for producing new product 2.3 Determine analytical tests to be conducted to identify quality and safety parameters 2.4 Determine processing parameters 2.5 Determine ingredients required for producing new product
3. Trial new product	3.1 Conduct a series of trials of new product 3.2 Determine improvements and or changes required for each successive trial 3.3 Accurately record details of each trial
4. Analyse new product	4.1 Determine appropriate analytical tests to be conducted to verify product safety and quality 4.2 Conduct appropriate tests to determine quality and safety of product 4.3 Accurately record test results 4.4 Determine safety and quality of product using analytical results
5. Design label for product	5.1 Establish concept for product label 5.2 Identify requirements to ensure the product label is compliant 5.3 Develop a compliant label for the food product
6. Package product	6.1 Establish equipment required for packaging new food product 6.2 Establish suitable packaging materials required for packaging new product 6.3 Package final product
7. Document development process	7.1 Conceptual ideas are documented 7.2 Research relevant to new product is conducted and documented 7.3 Analysed results of new product quality and safety are verified and documented 7.4 Details and results of product trials are documented and changes to trials are explained and justified

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret food safety requirements
- interpret and conform to relevant standards and legislative requirements
- apply testing and sensory analysis techniques relevant to new product development
- interpret analytical results
- establish processing techniques and parameters relevant to new product under development
- record, document and verify information relating to product development.

Required knowledge includes:

Knowledge of:

- customer needs and market research
- food safety and food quality parameters
- food processing principles relevant to new product
- food testing and sensory analysis techniques
- food packaging requirements
- all legislative requirements associated with new product.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

FDFST5023A Implement and review the production of milk fat products

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to implement and review the standards and procedures for manufacture of milk fat products.

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and production management. The unit typically applies to staff who have responsibility for maintaining product safety, quality and efficiency in food production in the dairy processing sector. This unit includes using knowledge of food science and processes to determine the required food safety, quality and performance required from food production equipment. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manufacture milk fat products	<p>1.1 The specifications for the end product are interpreted</p> <p>1.2 Data requirements and collection points appropriate for food safety, quality and production standards are interpreted from procedures</p> <p>1.3 Procedures to deal with non-conformance in relation to process and the final product are interpreted or developed</p> <p>1.4 A safe working environment is provided for the manufacture of product samples</p> <p>1.5 A range of sample milk fat products are manufactured</p>
2. Monitor the manufacture of milk fat products to meet quality standards	<p>2.1 Appropriate production system is selected, and the preferred sequence of activity to prepare the system for operation is determined</p> <p>2.2 Resource requirements for the preparation and manufacture of milk fat products are verified and sourced</p> <p>2.3 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements</p> <p>2.4 Production system is set to operating specifications before and during production</p> <p>2.5 Process controls for the preparation and manufacture of milk fat products are implemented and supervised</p>
3. Diagnose, rectify and/or report problem arising from the preparation and manufacture of manufactured milk products	<p>3.1 Sensory evaluation and product testing used to identify defects is carried out</p> <p>3.2 System used to identify defects in the preparation and manufacture of milk fat products is applied</p> <p>3.3 Adjustments to process/equipment as identified are implemented</p> <p>3.4 Problems are reported to designated person according to company policies and procedures</p>
4. Review production processes	<p>4.1 The critical control points (CCPs) and critical limits for product safety are reviewed</p> <p>4.2 Operating procedures are reviewed for food safety and quality</p> <p>4.3 The OHS plan is reviewed for processing of manufactured milk products</p> <p>4.4 Environmental impacts and associated costs are reviewed for processing of manufactured milk products</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- document the steps in production for a range of manufactured milk fat products
- establish CCPs and critical limits for each step in production
- determine a production schedule for manufactured milk fat products
- carry out sensory evaluation and product testing
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- the impact of processing on milk
- compositional requirements for a range of milk fat products
- manufacturing processes, including materials and equipment, involved in producing cream, butter, condensed milk, milk powder and milk with amendments or additives
- purpose of each process, and relationship between the processes, used in the preparation and manufacture of milk fat products
- principles of operation of equipment and accessories used in the preparation and manufacture of milk fat products
- output of each of the processes used in the preparation and manufacture of milk fat products
- critical factors in the preparation and manufacture of milk fat products
- potential product defects and their causes which may arise in the preparation and manufacture of milk fat products
- the various components of milk
- the hazards associated with raw milk
- the various spoilage organisms associated with milk
- composition of milk based products
- chemical and physical hazards which may affect milk
- procedures for milk storage, handling and preparation
- safe work procedures

- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- identification of CCPs and critical limits
- water and energy use and recycling in processing
- regulatory requirements associated with the preparation of milk fat products
- environmental impacts of the food processing operation.
-

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to implement and review the standards and procedures for manufacture of milk fat products.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to implement and review the production of milk fat products including implementing process control procedures and data collection for milk fat products, carrying out sensory evaluation and product testing, diagnosing and reporting problems for manufacturing of milk fat product, and reviewing the production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • A report on a review of the production system.
<p>Guidance information for assessment</p>	<p>Evidence should be gathered over a period of time in a range of actual or simulated environments.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labeling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
OHS requirements	<ul style="list-style-type: none"> • Legislation, regulations and Codes of practice • safety data sheets (SDSs) • enterprise and process specific occupational health and safety requirements.
Milk fat products	These may include cream, butter, anhydrous milk fat, dairy blends, reconstituted butter, aerated butters, ghi, cultured butter and butter milk.
Dairy products equipment	Dairy products processing equipment may include fermenting vessels, butter and cream centrifuge, heat exchangers, homogenisers, aseptic fillers, mix tanks, autoclaves, vacuum evaporation and spray drying equipment.

Unit Sector(s)

Technical.

FDFST5024A Implement and review the production of fermented dairy products and dairy desserts

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to implement and review the standards and procedures for manufacture of fermented dairy products and dairy desserts.

Application of the Unit

This unit applies to food science and technology personnel who have roles in product design, quality assurance and production management. The unit typically applies to staff who have responsibility for maintaining product safety, quality and efficiency in food production in the dairy processing sector. This unit includes using knowledge of food science and processes to determine the required food safety, quality and performance required from food production equipment. Depending on the workplace application, liaison may be required with engineering and maintenance specialists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor the production of fermented dairy products and dairy desserts to meet quality standards	<ul style="list-style-type: none">1.1 Appropriate production system is selected and the preferred sequence of activity, to prepare the system for operation, is implemented1.2 Resource requirements for the preparation and manufacture of fermented dairy products and dairy desserts are documented and sourced1.3 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements1.4 Data requirements appropriate for food safety, quality and production standards are interpreted1.5 Data collection points consistent with equipment capabilities and data requirements are established1.6 Procedures to deal with non-conformance in relation to process and the final product are developed1.7 Production system is set to operating specifications before and during production1.8 Process controls for the manufacture of fermented dairy products and dairy desserts are monitored
2. Diagnose, rectify and/or report problem arising from the preparation and manufacture of fermented milk products and dairy desserts	<ul style="list-style-type: none">2.1 Sensory evaluation and product testing protocols used to identify defects and non compliant product are determined2.2 A system to identify defects in the preparation and manufacture of fermented dairy products and dairy desserts is implemented2.3 A sampling plan is developed and implemented2.4 Sensory analysis is conducted and analysed2.5 Food tests are undertaken2.6 Adjustments to process/equipment as identified are implemented in response to analysed results2.7 Problems are reported to designated person according to company policies and procedures
3. Review production processes for fermented milk products and dairy desserts	<ul style="list-style-type: none">3.1 The CCPs and critical limits for product safety are reviewed3.2 Operating procedures are reviewed for food safety and quality3.3 Safe work systems for processing of fermented dairy products and dairy desserts are reviewed3.4 Environmental impacts and energy efficiencies are reviewed for processing of fermented dairy products and dairy desserts

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select the formulation of fermented dairy products and dairy desserts
- interpret a production schedule to ensure all resources and requirements are available and meet company requirements
- set the production system to operating specifications before and during production
- implement and supervise the production system for the preparation and manufacture of fermented dairy products and dairy desserts
- identify the potential product defects and their causes which may arise in the preparation and manufacture of fermented dairy products and dairy desserts
- determine and implement a system used to identify defects in the preparation and manufacture of fermented dairy products
- implement adjustments to process/equipment in response to system review
- report problems to designated person according to company policies and procedures
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations.
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- types of fermented dairy products and dairy desserts
- statutory compositional requirements for the different types of fermented dairy and dairy desserts
- the role of major ingredients in fermented dairy milk products and dairy desserts
- the interrelationships between suppliers of products and internal/external customers
- domestic and export markets for fermented dairy products and dairy desserts
- processes used in the preparation and manufacture of fermented dairy products and dairy desserts
- sequence of processes used in the preparation and manufacture of fermented dairy products and dairy desserts
- the output of each of the processes used in the preparation and manufacture of fermented

dairy products and dairy desserts

- the production systems used for the preparation and manufacture of each fermented dairy and dairy dessert product, and the preferred sequence of activity to prepare the system for operation
- the critical factors in the preparation and manufacture of fermented dairy products and dairy desserts
- the resource requirements for the preparation and manufacture of fermented dairy products
- principles of operation of equipment and accessories used in the preparation and manufacture of fermented dairy products and dairy desserts
- potential product defects and their causes which may arise in the preparation and manufacture of fermented dairy products and dairy desserts
- the fermentation process as applied to dairy products
- formulation of fermented dairy products
- the potential product defects in fermented dairy products and dairy desserts and their causes
- testing procedures for raw materials through to manufactured product
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- chemical and physical hazards which may affect milk based products
- procedures for milk product storage, handling and preparation
- safe work procedures
- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- identification of Critical Control Points (CCPs) and critical limits
- water and energy use and recycling in processing
- regulatory requirements associated with fermented dairy products and dairy desserts
- environmental impacts of the food processing operation safe systems of work.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the manufacture of concentrated and/or dried milk and related products	1.1 The statutory compositional requirements for the different types of concentrated and/or dried milk and related products is established 1.2 The required formulation of concentrated and/or dried milk and related products is selected 1.3 The appropriate production system and the preferred sequence of activity to prepare the system for operation is selected 1.4 Equipment is prepared and safe operating procedures accessed for its operation
2. Monitor the manufacture of concentrated and/or dried milk and related products to ensure quality standards are met	2.1 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements 2.2 Production system is set to operating specifications before and during production 2.3 Data requirements appropriate for food safety, quality and production standards are interpreted 2.4 Data collection points consistent with equipment capabilities and data requirements are established 2.5 Procedures to deal with non-conformance in relation to process and the final product are interpreted or developed 2.6 Concentration and drying procedures are implemented and monitored 2.7 Process controls for the preparation and manufacture of concentrated and/or dried milk and related products are implemented and supervised
3. Diagnose, rectify and/or report problem arising from the preparation and manufacture of concentrated and/or dried milk and related products	3.1 Sensory evaluation and product testing protocols used to identify defects are established 3.2 A system used to identify defects in the preparation and manufacture of concentrated and/or dried milk and related products is applied 3.3 Adjustments to process and equipment, as identified, are implemented 3.4 Problems are reported to designated person according to company policies and procedures
4. Review production processes	4.1 The critical control points (CCPs) and critical limits for product safety are reviewed 4.2 A sampling plan is developed and implemented for concentrated and dried dairy products 4.3 Sensory analysis is conducted and analysed 4.4 Food tests are undertaken

ELEMENT

PERFORMANCE CRITERIA

- 4.5 Operating procedures are reviewed for food safety and quality
- 4.6 Safe work systems for processing of concentrated and dried dairy products are reviewed
- 4.7 Environmental impacts and energy efficiencies are reviewed for processing of concentrated and dried dairy products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select the formulation of concentrated and dried dairy products
- interpret a production schedule to ensure all resources and requirements are available and meet company requirements
- set the production system to operating specifications before and during production
- implement and supervise the production system for the preparation and manufacture of concentrated and dried dairy products
- identify the potential product defects and non conformances and their causes which may arise in the preparation and manufacture of concentrated and dried dairy products
- implement adjustments to process/equipment in response to system review
- report problems to designated person according to company policies and procedures
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- different types and formulation of concentrated and/or dried milk and related products
- production systems used for the preparation and manufacture of concentrated and/or dried milk and related products
- the output of each of the processes used in the preparation and manufacture of concentrated and/or dried milk and related products
- the major ingredients found in concentrated and/or dried milk and related products
- the interrelationships between suppliers of products and internal/external customers
- preparation and manufacture of concentrated and/or dried milk and related products including mix standardisation/ calculation, mixing /blending, homogenisation, heat treatment, packaging, and storage and distribution
- the production system for the preparation and manufacture of concentrated and/or dried milk and related products including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials

-
- critical factors in the preparation and manufacture of concentrated and/or dried milk and related products
 - potential product defects and their causes, which may arise in the preparation and manufacture of concentrated and/or dried milk and related dairy products
 - specific domestic and export market specifications for concentrated and/or dried milk and related products
 - quality and continuous improvement processes
 - sensory analysis techniques
 - chemical and physical hazards which may affect milk based products
 - sampling and testing techniques and analysis of data
 - procedures for milk product storage, handling and preparation
 - safe work procedures
 - sanitation and hygiene procedures
 - HACCP principles and critical limits in a HACCP program
 - identification of Critical Control Points (CCPs) and critical limits
 - water and energy use and recycling in processing
 - regulatory requirements associated with concentrated and dried dairy products
 - environmental impacts of the food processing operation
 - safe systems of work.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to implement and review production standards and procedures for concentrated and dried dairy products.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to implement manufacturing of concentrated and dairy products including:</p> <p>implementing process control procedures and data collection; diagnosing and reporting problems for manufacturing; carrying out sensory evaluation and product testing; and reviewing the concentrated and/or dried milk and related products production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the manufacture of ice creams and frozen dairy products	1.1 The statutory compositional requirements for the different types of ice creams and frozen dairy products is established 1.2 The required formulation of ice creams and frozen dairy products is selected 1.3 The appropriate production system and the preferred sequence of activity to prepare the system for operation are selected 1.4 Equipment is prepared and safe operating procedures accessed for its operation
2. Monitor the preparation and manufacture of ice creams and frozen dairy products to ensure quality standards are met	2.1 Resource requirements for the preparation and manufacture of ice creams and frozen dairy products are identified and sourced 2.2 A production schedule is implemented to ensure all resources and requirements are available and meet company requirements 2.3 Production system is set to operating specifications before and during production 2.4 Chilling and refrigeration procedures are tested 2.5 Data requirements appropriate for food safety, quality and production standards are determined 2.6 Data collection points consistent with equipment capabilities and data requirements are established 2.7 Procedures to deal with non-conformance in relation to process and the final product are developed 2.8 Process controls for the preparation and manufacture of ice creams and frozen dairy products are implemented and supervised
3. Diagnose, rectify and/or report problem arising from the preparation and manufacture of ice creams and frozen dairy products	3.1 Potential product defects and their causes, which may arise in the preparation and manufacture of ice creams and frozen dairy products, are identified 3.2 Sensory evaluation and product testing protocols used to identify defects are established 3.3 A system to identify defects in the preparation and manufacture of ice creams and frozen dairy products is implemented 3.4 A sampling plan is developed and implemented for ice creams and frozen dairy products 3.5 Sensory analysis is conducted and analysed 3.6 Food tests are undertaken 3.7 Adjustments to process & equipment, as identified, are made 3.8 Problems are recorded and reported to designated person according to company policies and procedures
4. Review production	4.1 The critical control points (CCPs) and critical limits for product

ELEMENT

PERFORMANCE CRITERIA

processes

safety are reviewed

4.2 Operating procedures are reviewed for food safety and quality

4.3 Safe work systems for processing of ice creams and frozen dairy products are reviewed

4.4 Environmental impacts and energy efficiencies are reviewed for processing of ice creams and frozen dairy products

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- incorporate confectionary, flavourings and fruits into ice creams and frozen dairy desserts
- identify defects in the preparation and manufacture of ice creams and frozen dairy desserts
- implement adjustments to process/equipment in response to system review
- report problems to designated person according to company policies and procedures
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge

Knowledge of:

- types of ice creams and frozen dairy products
- the role of the major ingredients found in ice creams and frozen dairy products
- the production system for the preparation and manufacture of ice creams and frozen dairy products including production instruction, quality assurance requirements and or/specifications, production specification and or/standards, production equipment, production procedures, cleaning procedures and materials and raw materials
- the output of each of the processes used in the preparation and manufacture of ice creams and frozen dairy products
- the principles of operation of equipment and accessories used in the preparation and manufacture of ice creams and frozen dairy products
- the interrelationships between suppliers of products and internal/external customers
- specific domestic and export market specifications for ice creams and frozen dairy products
- different types and formulation of ice creams and frozen dairy products
- pretreatment, cooking and incorporation of confectionary, flavourings and fruits
- critical factors in the preparation and manufacture of ice creams and frozen dairy products
- identification of defects during production and of final products
- testing procedures for raw materials through to manufactured product
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques

- chemical and physical hazards which may affect ice creams and frozen dairy products
- storage, handling and preparation procedures for ice creams and frozen dairy products
- safe work procedures
- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- identification of Critical Control Points (CCPs) and critical limits
- water and energy use and recycling in processing
- regulatory requirements associated with ice creams and frozen dairy products
- environmental impacts of the food processing operation
- safe systems of work.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to implement and review production standards and procedures for ice creams and frozen dairy products.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment must include evidence of the ability to implement manufacturing processes for ice creams and frozen dairy desserts including:</p> <p>implementing process control procedures and data collection; diagnosing and reporting problems in manufacturing; carrying out sensory evaluation and product testing of ice creams and frozen dairy products; and reviewing the production system for food safety and quality and environmental impact.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • A report detailing the review of manufacturing ice creams and frozen dairy products • Written and/or oral questioning to assess knowledge and understanding • Completing workplace documentation

	<ul style="list-style-type: none"> • Third party reports from experienced practitioner • Case studies • Field Reports.
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislation	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labeling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.
Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.
OHS requirements	<ul style="list-style-type: none"> • legislation, regulations, Codes of practice • safety data sheets (SDSs) • enterprise and process specific occupational health and safety requirements.
Materials and equipment	May include dairy/dairy product processing chemicals, dairy/dairy products processing equipment.
Ice creams and frozen dairy products	Include frozen milks, custards, yoghurts and gelatos.

Unit Sector(s)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor the manufacturing of milk and related products d by the membrane system, to meet quality standards	<ul style="list-style-type: none">1.1 Appropriate production systems are selected and the preferred sequence of activity to prepare the system for operation is determined1.2 Resource requirements for the preparations and production of milk and related products manufactured by the membrane system are established1.3 A production schedule to ensure all resources and requirements are available and meet company requirements is interpreted or developed1.4 The production system is set to the required operating specifications before and during production1.5 Data requirements appropriate for food safety, quality and production standards are documented1.6 Data collection points consistent with equipment capabilities and data requirements are established1.7 Procedures to deal with non-conformance in relation to process and the final product are applied or developed1.8 Process controls for the production of milk and related products manufactured by the membrane system are monitored
2. Diagnose, rectify and/or report problems arising from the manufacturing of milk and related products by the membrane system	<ul style="list-style-type: none">2.1 Methods used to identify defects are determined2.2 Systems used to identify defects in the production process are implemented2.3 A system to identify defects in the preparation and production of milk and related products manufactured by the membrane system is implemented, and adjustments applied to process/equipment as identified2.4 Problems are reported to designated person according to company policies and procedures
3. Review production processes	<ul style="list-style-type: none">3.1 The critical control points (CCPs) and critical limits for product safety are reviewed3.2 A sampling plan for products manufactured by the membrane system is developed and implemented3.3 Sensory analysis of products manufactured by the membrane system is conducted and analysed3.4 Food tests are undertaken3.5 Operating procedures are reviewed for the food safety and quality of products manufactured by the membrane system3.6 Safe work systems for processing of products manufactured by the membrane system are reviewed3.7 Environmental impacts and energy efficiencies are reviewed for

ELEMENT

PERFORMANCE CRITERIA

processing of products manufactured by the membrane system

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- determine the purpose of each process, and the principles of operation of equipment and accessories, for the preparation and production of each milk and related products manufactured by the membrane system
- determine the appropriate production system for the preparation and production of each milk and related products manufactured by the membrane system
- estimate the resource requirements for the preparation and production of milk and related products manufactured by the membrane system
- diagnose, rectify and/or report problems arising from the preparation and production of milk and related products manufactured by the membrane system
- implement adjustments to process/equipment in response to system review
- report problems to designated person according to company policies and procedures
- overview the implementation of the HACCP plan
- carry out product sampling and testing according to the HACCP plan and operational procedures
- provide relevant information to work colleagues to facilitate understanding of, and compliance with, the Australian Standards and associated regulations
- take action to improve own work practice as a result of self-evaluation, feedback from others, or changed work practices, regulations or technology
- use technology to access information, prepare reports, and to access and prepare relevant data
- implement workplace OH&S procedures.

Required knowledge includes:

Knowledge of:

- different types of milk and related products manufactured by the membrane system
- statutory compositional requirements for the different types of milk and related products manufactured by the membrane system
- specific domestic and export market requirements for milk and related products manufactured by the membrane system
- production systems used for the preparation and production of milk and related products manufactured by the membrane system
- operation of equipment and accessories used in the preparation and manufacturing processes of milk and related products manufactured by the membrane system
- output of each of the processes used in the preparation and production of milk and related products manufactured by the membrane system
- critical factors in the preparation and production of milk and related products manufactured by the membrane system

- potential problems and product defects arising from the preparation and production of milk and related products manufactured by the membrane system
- formulation of milk and related products manufactured by the membrane system
- role of major ingredients found in milk and related products manufactured by the membrane system
- testing procedures for raw materials through to manufactured product
- packaging procedures
- quality and continuous improvement processes
- sensory analysis techniques
- chemical and physical hazards which may affect milk and related products manufactured by the membrane system
- procedures for milk product storage, handling and preparation
- safe work procedures
- sanitation and hygiene procedures
- HACCP principles and critical limits in a HACCP program
- identification of Critical Control Points (CCPs) and critical limits
- water and energy use and recycling in processing
- regulatory requirements associated with milk and related products manufactured by the membrane system
- environmental impacts of the membrane system
- safe systems of work

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Critical aspects of assessment must include evidence of the ability to implement processing of milk and related products manufactured by the membrane system including: implementing process control procedures and data collection; diagnosing and reporting problems for manufacturing; carrying out sensory evaluation and product testing; and</p> <p>reviewing the production system for food safety and quality and environmental impact.</p>
Context of and specific resources for assessment	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • Tests used to report relevant product/process information and recorded results
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • Written and/or oral questioning to assess knowledge and understanding • Observation of candidate conducting a range of processes and tests • Analysis of samples produced by the candidate • A report on review of the production system
Guidance information for assessment	<p>Evidence should be gathered over a period of time in a range of actual or simulated environments.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity.</p> <p>International, Australian and State EPA protocols and regulations regarding effluent.</p>
Policies and procedures	<p>Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.</p>
OHS requirements	<ul style="list-style-type: none"> • legislation, regulations, Codes of practice • safety data sheets (SDSs) <p>enterprise and process specific occupational health and safety requirements</p>
Materials, equipment and systems	<p>Equipment may include centrifuges, heat exchangers, homogenisers, mixing vats, sanitary pumps, conveying belts, fillers and aseptic fillers, freezers and associated tanks, pipe work and valves.</p> <p>Membrane modules may be flat sheet (plate), spirally wound, hollow fibre, tubular and may have a symmetrical, asymmetric or composite asymmetric structure. Related equipment typically includes pipe work, valves and pumps, refrigeration equipment.</p>
Milk and related products	<p>Includes standardised milk, whole fresh milk, recombined milk, vitamised milk, irradiated milk, mineralised milk, reconstituted or rehydrated milk,</p>

RANGE STATEMENT	
	skimmed milk, heat treated or UHT milk, flavoured milks

Unit Sector(s)

Unit sector	Technical
--------------------	-----------

FDFST5030A Develop, manage and maintain quality systems for food processing

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

This unit covers the skills and knowledge required to develop, manage and maintain quality systems for food processing. It also covers the skills and knowledge needed to lead people, manage systems and build quality into all enterprise systems and operations. The development and management of quality systems affects the ability of the enterprise to operate in specific markets and influences customer and consumer confidence in enterprise products.

Application of the Unit

This unit applies to Quality Assurance (QA) managers and personnel, production managers and supervisors operating in a food processing context. At this level individuals exercise considerable responsibility and accountability within enterprise structures and are required to make primary contributions to the values, goals and operations of the enterprise. They will typically have responsibility for the establishment and review of systems for the site or department. They may work with the assistance of external experts to develop plans and strategies.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish requirements of the quality system	1.1 Policies expressing the organisation's commitment to the quality system and processes are developed 1.2 Legislative requirements for enterprise quality systems are identified 1.3 Scope and objectives of the quality system are determined, including links with all enterprise operations, customers, suppliers and contractors 1.4 Quality performance standards, including customer and supplier service standards, are established consistent with the direction and goals of the enterprise 1.5 Resource requirements are identified and included in financial, human resource and operational plans
2. Design and prepare for the quality system	2.1 Quality systems are selected and designed to meet enterprise, customer and regulatory requirements 2.2 Quality principles are applied to all enterprise operations to achieve business goals and performance standards 2.3 Responsibilities for development, implementation and operation of the system are clearly defined and communicated 2.4 Personnel from all levels and areas of the organisation are involved in the development and implementation of the quality system 2.5 System components, procedures and supporting documentation are developed and validated 2.6 Consultative and communication strategies are developed to link the quality system with all aspects of enterprise operations 2.7 Supplier or contractor service standards and audit requirements are determined and negotiated 2.8 The quality system is designed and prepared for 2.9 Performance measures and indicators are developed to measure performance against policies, goals and performance standards
3. Implement and monitor the quality system	3.1 Implementation plan is prepared and resourced 3.2 Training plans to provide personnel at all levels with quality concepts and skills are prepared and resourced 3.3 Quality system requirements and customer focus are addressed in the establishment, operation and evaluation of all enterprise systems 3.4 Control and preventative action measures are identified and validated 3.5 Corrective action procedures are developed and monitored 3.6 Procedures for reporting, recording and responding to

ELEMENT	PERFORMANCE CRITERIA
	<p>non-conformances and non-compliances are established</p> <p>3.7 Customer and supplier service standards are monitored and documented</p> <p>3.8 Quality data is collected and analysed, and implications reported</p> <p>3.9 Quality costs and performance are monitored</p> <p>3.10 Quality system is prepared for external review and approval by relevant authorities</p>
<p>4. Continuously improve the quality system</p>	<p>4.1 Impacts of the quality system on enterprise operations are monitored and reviewed</p> <p>4.2 Responses to customer complaints and requests are resolved and used to improve the system</p> <p>4.3 Procedures for the ongoing identification and resolution of issues are established</p> <p>4.4 Quality system is updated for changes in process, technical information, customer and regulatory requirements</p> <p>4.5 Stakeholders are included in decision making and continuous improvement processes and strategies</p> <p>4.6 Quality results, findings and conclusions are fed into improvement processes</p> <p>4.7 Costs and benefits of the quality system are analysed</p> <p>4.8 Quality goals and targets are continuously reviewed</p>
<p>5. Communicate quality outcomes</p>	<p>5.1 Certification of product and processes consistent with quality outcomes is completed according to customer and regulatory requirements</p> <p>5.2 Regulatory authorities and agencies are promptly notified of breaches and non-compliance incidents</p> <p>5.3 Quality outcomes are used to promote public confidence in enterprise products and services</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- analyse complex statistical data and prepare corrective responses to non-conformances and variations identified in the data, relevant to enterprise quality systems and operations
- apply quality concepts and tools to problem-solving and the development of quality data collection, data management systems and analysis strategies
- apply substantial product and process knowledge to the development of the quality system and the interpretation of quality data
- communicate quality goals, requirements and findings to stakeholders in formats and styles appropriate to the context and purpose
- consult, negotiate with and report to regulatory authorities openly and promptly, consistent with enterprise ethical standards. This includes the notification of breaches and the preparation of non-compliance reports
- develop consultative and feedback procedures and opportunities for identification and resolution of quality issues and problems
- develop continuous improvement processes and team building using the 'plan, do, check, act' cycle
- develop quality policies for the enterprise in consultation with senior management and other stakeholders
- develop workforce commitment, capability and responsibility for the quality system. This involves identifying, negotiating and scheduling training, inclusion of responsibilities and duties relating to quality system implementation and integration in all job descriptions and work instructions, clear communication of responsibilities and requirements, delegation of tasks and responsibilities and inclusion of the workforce in consultative and continuous improvement processes
- ensure the quality system meets legislative and regulatory requirements
- exercise judgement, pragmatism and quality knowledge in the management and resolution of quality issues and problems
- identify and apply relevant OH&S and workplace requirements
- identify and describe process capability
- identify appropriate monitoring systems and strategies to support the enterprise quality system
- identify the applicable quality standards, regulations, codes, and legislation and customer requirements for the quality system and explain the implications for the enterprise
- identify research and update sources of quality information and advice including technical and regulatory information to support enterprise quality system
- lead personnel (e.g. Hazard Analysis Critical Control Point (HACCP) team, management, quality team, meat inspection team, laboratory, maintenance teams, processors and operators) in the implementation and improvement of the quality system
- monitor and analyse the costs of the quality system, including prevention costs, appraisal

costs, total quality costs and failure costs

- monitor and certify processes and product to meet third party requirements (eg importing country, public health requirements, customers)
- oversee audit processes (internal and external), act on audit findings and provide feedback to personnel for improvement of the system
- oversee the preparation for third party certification (where appropriate)
- plan and resource the enterprise training strategy, consistent with regulatory requirements to assist personnel at all levels in the implementation of the quality system
- prepare and sign off quality policies, manuals and documentation for the enterprise, including the preparation and updating of preventative, corrective and responsive procedures and strategies, supplier criteria and specifications, supplier and contractor audit requirements
- prepare quality implementation plans, identifying goals, key personnel and areas, resources, strategies, timelines and milestones
- present reports according to legal and enterprise requirements
- resolve customer complaints promptly and provide corrective action responses
- use appropriate questioning, observation, listening and recording skills in the collection and monitoring of quality data
- where quality systems are based on HACCP principles or good manufacturing practice, explain these principles and the implications for the enterprise quality system
- apply relevant communication and mathematical skills.

Required knowledge includes:

Knowledge of:

- the key concepts, philosophies and tools of quality management
- the management and organisational structure of the enterprise and its impact on enterprise systems
- the role audits play in a quality system
- documentation requirements of the quality system (including levels) and their roles in the functioning of the system, including the requirement for effective and secure quality record-keeping systems
- enterprise goals and directions and their implications for the quality system
- the legal requirements for the establishment and maintenance of the enterprise QA system including responsibilities for reporting breaches to authorities and implementing audit findings
- the principles and functions of hazard analysis and control, validation (including auditing) and verification in quality systems.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to develop, manage and maintain quality systems for food processing.</p> <p>Evidence is also required in the ability to lead people, manage systems and build quality into all enterprise systems and operations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Competency must be demonstrated in the ability to perform consistently at the required standard. In particular, assessors should look to see evidence of the ability to: develop and document quality system procedures to enterprise and legislative requirements; to implement the quality systems in a typical food production process including establishing responsibilities, training requirements and reporting arrangements; to collect and analyse process control data and other data and recommend quality system improvements; and to develop procedures to deal with non-conformance in relation to quality system requirements.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance requirements in this unit should be undertaken within the context of food technology. Competency is demonstrated by performance of all stated criteria, including the critical aspects and knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statements applicable to the workplace environment.</p> <p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Production process and related equipment, manufacturers' advice and operating procedures • A food processing enterprise with documentation to support the implementation of a QA system • Methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • Tests used to report relevant product/process information and recorded results.

Method of assessment	The following assessment methods are suggested: <ul style="list-style-type: none">• Observation of candidate carrying out product development and conducting a range of tests and procedures• Written and/or oral questioning to assess knowledge and understanding• Completing workplace documentation• Third party reports from experienced practitioner• Case studies• Field Reports.
Guidance information for assessment	Evidence should be gathered over a period of time in a range of actual or simulated environments.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Quality systems</p>	<p>These may include:</p> <ul style="list-style-type: none"> • Australian and New Zealand Food Standards • Food and meat industry sector specific standards • International standards e.g. ISO 9000 series • Personal Qualities Assessment (PQA) • Enterprise specific requirements.
<p>Requirements of the quality system</p>	<p>These may include:</p> <ul style="list-style-type: none"> • Codes of practice, regulations, Safety Data Sheets (SDSs) • control of documents, data, quality records • coverage of contracts, purchasing, supply, processing • handling, storage, processing, packaging, preservation, storage and delivery of food products • definition of management responsibilities • design and process controls • inspecting and testing, control of non-conforming • product, preventative and corrective action, auditing • management of links and impacts on all systems within the enterprise • production identification and traceability • training.
<p>Systems components and procedures</p>	<p>These may include:</p> <ul style="list-style-type: none"> • correction e.g. disposition, corrective action, liability management, customer complaint resolution • prevention e.g. training, operator feedback, manuals, technology and equipment reliability and maintenance, statistical collection and information, supplier QA, Standard Operating Procedures (SOPs) and work instructions.
<p>Statistical data analysis</p>	<p>This may include:</p> <ul style="list-style-type: none"> • correlation and regression analysis, bi-variate and multivariate analysis • distribution theory • estimating and hypothesis testing

	<ul style="list-style-type: none"> • probability and statistical inference • process stability, capability and management • reliability planning • sampling • statistical process control requirements, charting applications • variations and variation monitoring.
Quality tools	These may include cause and effect and fish bone diagrams, control charts, data points, flow charts, histograms, prioritisation matrices, process improvement models, process capability, pareto charts and team structures.
Data management systems	These may be manual or computerised and cover data collection, data monitoring and data analysis and interpretation.
Data analysis and interpretation	<p>This may include:</p> <ul style="list-style-type: none"> • Acceptable Quality Level (AQLs) • Chemical Lean (CL) levels • microbiological analysis, eg Total Viable Counts (TVC), e-coli counts • process capability analysis • process variation analysis • product monitoring • statistical process control • temperature eg cooling and chilling rates.
Documentation for the QA process for food safety	<p>This may include:</p> <ul style="list-style-type: none"> • amendment registers • Critical Control Points (CCPs) monitoring forms and additional monitoring requirements and supporting programs • CCP work instructions • HACCP audit table • HACCP team register, product description and use • process flow charts, factory floor plan, hazard analysis table • schedules relating to hygiene, cleaning and sanitation • procedures, work instructions, approved chemicals • calibration, pest control, training, product identification and recall.
Legislation	<ul style="list-style-type: none"> • Australian and international standards • Acts of Federal and State Parliament

	<ul style="list-style-type: none"> • State and territories’ food regulations • International, Australian and State environmental protocols and regulations regarding effluent.
OHS requirements	<ul style="list-style-type: none"> • Codes of practice, regulations, safety data sheets (SDSs) • Enterprise and process specific OHS requirements.
Regulatory requirements	<p>These may include:</p> <ul style="list-style-type: none"> • animal welfare • commercial law including fair trading, trade practices • consumer law • corporate law, including registration, licensing, financial • reporting • environmental and waste management • equal opportunity, anti-discrimination and sexual harassment • Legislation • hygiene and sanitation requirements • industrial awards, agreements • relevant regulations • state regulations regarding food processing • taxation.
Process capability	<p>This includes:</p> <ul style="list-style-type: none"> • operational capability (resources, risks, opportunities, commitments) • technical capability (personnel, equipment, systems, suppliers).
Monitoring systems and strategies	<p>These may include:</p> <ul style="list-style-type: none"> • audits and reviews • feedback from stakeholders • inspection and testing procedures and regimes (including chemical and microbiological testing procedures) for validation and verification • statistical collection and analysis.
Third party certification	<p>This includes:</p> <ul style="list-style-type: none"> • regulatory agencies • accountabilities, inspection stamps/seals • customer requirements and specifications • importing country requirements • licensing or registration requirements

	<ul style="list-style-type: none">• national or international quality endorsement• product description and certification.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine requirements for hydro-cooling	1.1. Key steps in the process of hydro-cooling are identified 1.2. Impact of timing and temperature on the hydro-cooling process are identified 1.3. Produce for hydro-cooling is identified and specific cooling and transfer requirements confirmed 1.4. Consequences of incorrect hydro-cooling are identified 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements 1.7. Goods are located in correct storage areas to meet storage temperature, stores handling and stock rotation requirements 1.8. Stores information is recorded according to workplace requirements
2. Conduct hydro-cooling	2.1. Storage facility is checked for readiness and allocation of space for produce confirmed 2.2. Handling equipment is used to transfer produce in a manner that is safe and maintains produce quality 2.3. Operating parameters for hydro-cooling equipment are set as required to meet safety and cooling requirements 2.4. Hydro-cooling is applied to produce 2.5. Produce is transferred to storage 2.6. Process information is recorded according to workplace requirements 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines
3. Monitor hydro-cooling process	3.1. Process is monitored to ensure quality standards are achieved 3.2. Temperature is checked to ensure required levels are maintained 3.3. Non-compliances or problems are promptly identified and acted upon

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to determine cooling and storage requirements
- identify processing requirements, including temperature limits and timing requirements
- identify key stages of cooling process
- select, fit and use personal protective clothing and/or equipment
- use materials handling equipment as required to undertake work functions
- follow procedures to measure temperature of produce, such as using instrumentation as required to take core and surface temperatures
- read instrumentation, such as temperature gauges, to monitor temperatures
- identify and report out-of-specification temperatures in produce and storage facilities
- take corrective action in response to out-of-specification temperatures, including implementation of procedures to segregate damaged or potentially unsafe produce
- complete records of stock receipt and transfer as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- occupational health and safety (OHS) hazards and controls, including the purpose and limitations of protective clothing and equipment
- hydro-cooling facilities and capacities available in the work area
- temperature control requirements of produce handled in the work area, including acceptable temperature ranges, consequences of failing to meet these ranges, and requirements for gradual temperature change
- handling procedures for receiving and locating produce including procedures for identifying, segregating and disposing of damaged or potentially unsafe stock
- stock handling procedures for transferring cooled stock from a temperature controlled environment, including the maximum duration stock can be held outside a controlled environment
- food safety and quality consequences of stock temperature control requirements not being met

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• monitoring procedures and instrumentation, including the use of thermometers or other temperature measuring instrumentation• notification, recording and reporting requirements• operating procedures for goods handling equipment as required• housekeeping requirements for work area• recording requirements and procedures |

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify handling, hydro-cooling and storage requirements of produce • monitor temperature to ensure standards are maintained • handle and transfer produce to maintain required conditions • identify and act on non-conformances • complete workplace documentation • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • hydro-cooling specifications and facilities • produce requiring cooling • load shifting equipment as required • stock information recording system and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • TLIA1707C Apply product knowledge to complete work operations • TLID107C Shift materials safely using manual handling methods • TLID1007C Operate a forklift • TLIK107C Use infotechnology devices and computer applications in the workplace.

EVIDENCE GUIDE**Guidance information for assessment**

To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports

Co-requisite units

Co-requisite units		

FDFV3001A Conduct chemical wash for fresh produce

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to implement a wash process for fresh produce, where chemicals, such as chlorine, are used to achieve quality standards.
------------------------	---

Application of the Unit

Application of the unit	This unit has application in a food processing production environment. It typically targets the production worker responsible for setting and monitoring levels of cleaning chemicals, such as chlorine, while conducting wash operations. This unit typically applies for produce such as leafy greens and fruit where chemicals are used to ensure required cleaning outcomes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm required use of chemicals	1.1. Chemicals used for the washing of fresh produce are identified and required levels confirmed 1.2. Risks associated with using chemicals are identified and control measures implemented throughout operations 1.3. Implications of incorrect chemical levels on fresh produce are identified 1.4. Storage and handling requirements for chemicals are identified
2. Prepare for washing operation	2.1. Raw materials are confirmed and prepared for washing 2.2. Equipment is confirmed for operational readiness and components and related attachments fitted and adjusted as required 2.3. Pre-start checks are carried out as required by workplace requirements 2.4. Chemicals are measured and dose added according to specifications 2.5. Performance of chemical dosing equipment is checked to confirm accuracy 2.6. Water quality is checked and confirmed for use
3. Operate and monitor the washing process	3.1. The washing process is started and operated according to workplace procedures 3.2. Raw materials are inspected and washed to meet workplace specifications 3.3. Water is checked to confirm correct levels of chemicals 3.4. Washed materials are transferred for further processing or packaging 3.5. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 3.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 3.7. The work area is maintained according to housekeeping standards 3.8. Work is conducted in accordance with workplace environmental guidelines 3.9. Workplace records are maintained according to

ELEMENT	PERFORMANCE CRITERIA
	workplace recording requirements
4. Shut down the washing process	4.1. The appropriate shutdown procedure is implemented 4.2. Chemicals are handled, stored and disposed of according to workplace environmental standards 4.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

Required knowledge

Knowledge of:

- purpose and basic principles of the washing process, including the importance of water quality and the role of chemicals in the washing process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services (principally water) required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the washing, including the consequences of out-of-specification moisture levels on further processing and final product
- quality requirements of raw materials and effect of variation on process performance, including how variation in microbial load can affect the washing process
- operating requirements, parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the washing process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for washing • handle and apply chemicals according to specifications • start, operate, monitor and adjust process equipment to achieve required quality outcomes • conduct water and chemical checks • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications and inspection or control points • washing equipment and services, including water and chemicals • raw materials to be processed • sampling schedules and test procedures and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Washing equipment	<p>Washing equipment may include:</p> <ul style="list-style-type: none"> • wash baths • tanks • flumes • pumps • hoses
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

RANGE STATEMENT

Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • water • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm produce grading specifications	1.1. Features of the grading equipment and process are described 1.2. Characteristics of produce are examined and purpose for grading confirmed 1.3. Customer and packaging requirements are confirmed 1.4. Specifications for grading are determined
2. Program grading equipment	2.1. Specifications are entered into computer to set grading parameters 2.2. Computer program or equipment components are used effectively to enable a variety of grading outcomes to be achieved 2.3. Program or equipment operation is tested or monitored to ensure standards are achieved 2.4. Problems or inconsistencies in grading outcomes are investigated to determine cause and corrective action implemented 2.5. Documentation is completed and records of grading specifications for customer are recorded

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify characteristics of produce used to determine grading requirements
- use computer software or mechanical equipment to establish and set grading specifications
- identify and apply the quality assurance systems in place to ensure that grading meets customer requirements
- identify problems that occur in the grading process and investigate likely causes
- determine appropriate corrective action to prevent grading non-conformance
- describe the purpose of grading and processes implemented by grading equipment to achieve specific grading outcomes
- identify typical problems that occur in the grading process, and outline likely causes and appropriate response options within level of responsibility
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- grading equipment processes and technologies
- characteristics of produce used for grading and the process of identification
- factors that influence grading outcomes
- typical problems that occur in the grading process, and likely causes and appropriate response options

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the bleaching equipment and process for operation</p>	<p>1.1. Materials are confirmed and available to meet operating requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the bleaching process</p>	<p>2.1. The process is started and operated according to workplace procedures</p> <p>2.2. Equipment is monitored to identify variation in operating conditions</p> <p>2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.4. The process is monitored to confirm that bleached oil meets colour specifications</p> <p>2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.6. The work area is maintained according to housekeeping standards</p> <p>2.7. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.8. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the bleaching process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify bleaching process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming availability of tank space, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for bleaching process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust bleaching process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time/temperature
 - contact time and agitation
 - air contact
 - product quality
- monitor supply and flow of materials to and from the bleaching process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take bleaching process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the bleaching process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the bleaching process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the bleaching process
- quality requirements of materials and effect of variation in oil quality on bleaching process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the bleaching process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the bleaching process and the related procedures and recording requirements
- contamination/food safety risks associated with the bleaching process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the bleaching process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the bleaching process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with bleaching process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of flake for further processing
- conduct pre-start checks on complector and related equipment, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - temperatures
 - work input
 - rest times
 - tepid water temperatures
 - throughput
 - vacuum
 - packing speed
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- demonstrate batch/product changeovers
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures, such as organoleptic tests
- package finished pastry margarine according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- principles of preparing pastry margarine using a complector, including a basic understanding of crystallisation, the relationship between stages of crystal formation, work input and temperature; and the purpose and requirements of a holding stage
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the final pastry margarine (this will vary according to types of pastry margarine produced)
- quality requirements of flake used and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- product/process changeover procedures and responsibilities
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection, and handling procedures related to the process and procedures for containing spills
- basic operating principles of process control, where relevant, including the

<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for compecting • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • complector and related equipment and services • flake to be processed • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications/recipes • production schedules and instructions • manufacturers' advice • standard forms and reports
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • tanks and hoppers • complector and packing equipment
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"> • power • steam • vacuum • water • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the deodorising equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the deodorising process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that odour and flavour specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the deodorising process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify deodorising process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming availability of tank space, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for deodorising process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust deodorising process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time/temperature
 - vacuum pressure
 - steam flow/quantity
 - air contact
 - product quality
- monitor supply and flow of materials to and from the deodorising process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take deodorising process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the deodorising process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the deodorising process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the deodorising process
- quality requirements of materials and effect of variation in oil quality on deodorising process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the deodorising process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the deodorising process and the related procedures and recording requirements
- contamination/food safety risks associated with the deodorising process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the deodorising process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the deodorising process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with deodorising process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for deodorising
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- deodorising process and related equipment and services
- oil to be deodorised
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare oil and emulsion phases	1.1. Oil requirements are identified and oil is transferred to meet production requirements 1.2. Ingredients for addition are confirmed and available in required quantities 1.3. Ingredients are added to oil phase to meet recipe specifications 1.4. Oil stock is drawn to make emulsion 1.5. Ingredients are added to water phase to meet recipe specifications 1.6. Oil stock and emulsion meet specifications
2. Prepare the drum and flaking equipment for operation	2.1. Oil stock and water phase are available to meet operating requirements 2.2. Cleaning and maintenance requirements and status are identified and confirmed 2.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 2.4. Processing/operating parameters are entered as required to meet safety and production requirements 2.5. Equipment performance is checked and adjusted as required 2.6. Pre-start checks are carried out as required by workplace requirements
3. Operate and monitor the flaking process	3.1. The process is started and operated according to workplace procedures 3.2. Equipment is monitored to identify variation in operating conditions 3.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 3.4. The process is monitored to confirm that specifications are met 3.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 3.6. The work area is maintained according to housekeeping standards 3.7. Work is conducted in accordance with workplace environmental guidelines 3.8. Workplace records are maintained according to

ELEMENT	PERFORMANCE CRITERIA
	workplace recording requirements
4. Shut down the flaking process	4.1. The appropriate shutdown procedure is identified 4.2. The process is shut down according to workplace procedures 4.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify oil and emulsion phase preparation requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil type, ingredients for addition and services
- prepare oil and water phase according to procedures
- prepare emulsion according to procedures
- conduct pre-start checks on refrigeration and flaking process, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning valves and sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - operation of addition/dosing equipment
 - drum speed
 - emulsion temperature
 - ammonia suction temperature
 - flake thickness
 - flake temperature
 - moisture level
 - salt level
 - evenness of curtain fall
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- demonstrate batch/product changeovers
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards

REQUIRED SKILLS AND KNOWLEDGE

- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- principles of forming a water in oil emulsion, including an understanding of the types of emulsifiers used
- purpose and basic principles of the flaking process, including a basic understanding of stages of crystallisation of oil types used
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of flaking process and the effect of outputs on downstream processes
- quality characteristics to be achieved by each stage (oil phase, water phase and refrigeration/flaking process)
- quality requirements of oil and ingredients used and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures, including the risk of cross-contamination where tempered product mixes with untempered product
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the risks of working with ammonia and procedures to follow in the event of a leak
- product/process changeover procedures and responsibilities
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage

REQUIRED SKILLS AND KNOWLEDGE

- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process and procedures for containing spills
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify fractionation process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming availability of tank space, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for fractionation process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust fractionation process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time/temperature
 - flow rates
 - vacuum
 - product quality
- monitor supply and flow of materials to and from the fractionation process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take fractionation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the fractionation process, including a basic understanding of the chemical structure of oil and the effect of fractionation on this structure
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the fractionation process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the fractionation process
- quality requirements of oil for fractionation and effect of variation on fractionation process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the fractionation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the fractionation process and the related procedures and recording requirements
- contamination/food safety risks associated with the fractionation process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the fractionation process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the fractionation process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with fractionation process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for fractionation • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • fractionation process and related equipment and services • oil and chemicals required for the fractionation process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • cleaning procedures, materials and equipment as required
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Fractionation equipment	<p>Fractionation equipment may include:</p> <ul style="list-style-type: none"> • tanks • crystallisation/seeder vessel • separators • pumps • heat exchanger
Fractionation methods	<p>Fractionation methods may include:</p> <ul style="list-style-type: none"> • dry, solvent and detergent-based processes
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • crude tallow • detergent
Operation of equipment and	Operation of equipment and processes may

RANGE STATEMENT	
processes	require: <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> power steam vacuum water compressed and instrumentation air

FDFGPS2006A Operate a hydrogenation process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a hydrogenation process to improve the hardness, viscosity, flavour and shelf-life of oils.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit has application in an edible oils production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of a hydrogenation process. Processes may be batch or continuous, and apply to single or multiple product types.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the hydrogenation equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the hydrogenation process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that hydrogenated product meets melting point and fat profile specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the hydrogenation process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify hydrogenation process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming availability of tank space, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for hydrogenation process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust hydrogenation process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - oil temperature
 - vacuum pressure
 - hydrogenation quantity and agitation
 - reaction rates
 - flow rates/quantity
 - air contact
 - product quality
- monitor supply and flow of materials to and from the hydrogenation process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take hydrogenation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as

REQUIRED SKILLS AND KNOWLEDGE

specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce

Required knowledge***Knowledge of:***

- purpose and basic principles of the hydrogenation process, including a basic understanding of the chemical structure of oil and the effect of hydrogenation on this structure
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the hydrogenation process and the effect of outputs on downstream edible oils and fats processes
- quality characteristics to be achieved by the hydrogenation process
- quality requirements of oil, catalyst and filter aid as used and effect of variation on hydrogenation process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the hydrogenation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the hydrogenation process and the related procedures and recording requirements
- contamination/food safety risks associated with the hydrogenation process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including an understanding of the hazards associated with the use of hydrogen
- requirements of different shutdowns as appropriate to the hydrogenation process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- hydrogenation process changeover procedures and responsibilities
- environmental issues and controls relevant to the hydrogenation process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the interesterification equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the interesterification process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that product modification meets melting point and odour specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the interesterification process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

Required knowledge

Knowledge of:

- purpose and basic principles of the interesterification process, including a basic understanding of the chemical structure of oil and the effect of interesterification on this structure
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the interesterification process and the effect of outputs on downstream edible fats and oils processes
- quality characteristics to be achieved by the interesterification process
- quality requirements of materials and effect of variation on interesterification process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the interesterification process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the interesterification process and the related procedures and recording requirements
- contamination/food safety risks associated with the interesterification process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the interesterification process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the interesterification process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with the interesterification process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

<p>3. Shut down the neutralisation process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify neutralisation process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming availability of tank space, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for neutralisation process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust neutralisation process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - oil temperature
 - pressures
 - flow rates/quantity
 - chemical dosage rate
 - product quality
- monitor supply and flow of materials to and from the neutralisation process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take neutralisation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the neutralisation process, including the type of alkali used, and the degumming process to prepare oil for neutralisation
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the neutralisation process and the effect of outputs on downstream edible oils and fats processes
- quality characteristics to be achieved by the neutralisation process
- quality requirements of inputs and effect of variation in oil quality on neutralisation process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the neutralisation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the neutralisation process and the related procedures and recording requirements
- contamination/food safety risks associated with the neutralisation process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the neutralisation process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- neutralisation process changeover procedures and responsibilities
- environmental issues and controls relevant to the neutralisation process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with neutralisation process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for neutralisation
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- neutralisation process and related equipment and services
- oil required for the neutralisation process and acid and alkali materials as required by the process
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	Workplace information may include: <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Neutralisation equipment	Neutralisation equipment may include: <ul style="list-style-type: none"> • tanks • pumps • centrifugal separators • vacuum dryer • chemical addition system • heat exchanger
Materials	Materials used in neutralisation may include: <ul style="list-style-type: none"> • crude oil • hot water • phosphoric acid • sodium hydroxide

RANGE STATEMENT	
	<ul style="list-style-type: none"> • citric acid
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • steam • vacuum • water • compressed and instrumentation air

Co-requisite units

Co-requisite units	

FDFGPS2009A Operate a soap splitting process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a soap splitting process. This may also be referred to as an acid oil process. It covers the splitting of soap stock into an acid oil stream and an acid water stream.
------------------------	--

Application of the Unit

Application of the unit	This unit has application in an edible oils production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of a soap splitting process.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the equipment and soap splitting process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Machine components are adjusted to meet operating requirements 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the soap splitting process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm separation of acid oil and acid water streams 2.5. The work area is maintained according to housekeeping standards 2.6. Work is conducted in accordance with workplace environmental guidelines 2.7. Workplace records are maintained according to workplace recording requirements
3. Shut down the soap splitting process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify soap stock processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of soap stock, acid and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, correctly configured for processing requirements, cancelling isolation or lock outs as required, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm service supply
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - pH and temperature of reactors
 - pH and temperature of acid water
 - acid addition
 - tank levels
 - colour of acid oil
 - colour of acid water (minimum fatty matter in acid water stream)
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- prepare acid oil for loading and delivery
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment; pH rises and temperature drops
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of soap splitting, including an understanding of the process used to split soap stock and the end uses of each stream
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes, including the impact of acid water pH on the performance of the effluent plant and impact of allowing 'fatty' acid water to flow downstream
- requirements of acid oil and acid water streams to be achieved
- the effect of variation in soap stock on the soap splitting process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, including the purpose and methods used to conduct relevant tests (tests typically include pH, moisture and FFA)
- contamination risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including hazards associated with handling hazardous substances
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the winterisation equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the winterisation process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that winterised product meets cold test specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the winterisation process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify winterisation process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming availability of tank storage space, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for winterisation process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust winterisation process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - temperature
 - vacuum
 - flow rates
 - tank levels
 - filter aid addition
 - product quality
- monitor supply and flow of materials to and from the winterisation process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take winterisation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for

REQUIRED SKILLS AND KNOWLEDGE

clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the winterisation process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the winterisation process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the winterisation process
- quality requirements of oil to be winterised and effect of variation on winterisation process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the winterisation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the winterisation process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the winterisation process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the winterisation process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with winterisation process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for winterisation
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- winterisation process and related equipment and services
- deodorised oil and filter aid as required for winterisation
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> FDFOP2003A Clean equipment in place FDFOP2004A Clean and sanitise equipment FDFOP2011A Conduct routine maintenance FDFOP2013A Apply sampling procedures FDFOP2030A Operate a process control interface MSL973001A Perform basic tests.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the equipment and process for operation	1.1. Liquid and seed honey is confirmed and available to meet production requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are set to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the creamed honey manufacture process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the creamed honey manufacture process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services, including selecting appropriate seed honey (it may also require selection of more than one liquid honey to meet required product characteristics)
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters (temperature and agitation settings), cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- demonstrate batch/product changeovers according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- basic principles of crystallisation, including an understanding of crystal structure and where appropriate, methods used to reduce crystal size, the effects of temperature and agitation on crystal formation, appropriate ratio of seed to liquid honey and factors that influence the crystallisation process including moisture content and crystal size
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- quality and organoleptic characteristics of different types of honey processed
- quality characteristics to be achieved by the final product and related test methods used to confirm quality
- quality requirements of seed and liquid honey used and the effect of variation on the final product
- operating requirements, parameters and corrective action required where the process is outside specified operating parameters (typical operating parameters include ambient and processing temperatures, agitation speeds and holding times and temperatures)
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor each stage of the production process, such as inspecting, measuring and testing as required
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures (this relates specifically to air inclusion and moisture content and related methods of control)
- common causes of variation and corrective action required
- factors that affect the stability and shelf-life of the finished product and options to extend shelf-life, including storage conditions for packed product
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- product/process changeover procedures and responsibilities where relevant

Co-requisite units

Co-requisite units		

FDFGR2001A Operate a liquid, mash or block stockfeed process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down process equipment used to produce liquid, mash or block stockfeed.
------------------------	--

Application of the Unit

Application of the unit	This unit relates to the production of liquid, mash and block stockfeeds by a plant operator for a variety of animal species and animal production requirements. Stockfeeds can be standard products or to particular customer specification.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the liquid, mash or block feed process	2.1. The process is started and operated according to workplace procedures and occupational health and safety (OHS) requirements 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary feed, micronutrients and other additives, other required liquid ingredients and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate dies and/or roll settings where required, setting processing parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, such as monitoring control points and conducting inspections as required at each stage of the mash, liquid or block to confirm process remains within specification
- monitor supply of feed and liquid to and from the mash, liquid or block production process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- purpose and basic principles of each part of the process, such as volumetric metering, mixing, steam conditioning, pouring, pressing, cooling, adding and mixing in micronutrient and other additives to achieve specified proportions, sequencing of production to minimise transference and cross-contamination, and traceability procedures
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- the flow of the stockfeed production process and the effect of outputs on downstream processes
- quality characteristics and uses of finished stockfeed
- effect of variation in inputs and/or services on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- the effect on final product of variation in variables, such as:
 - oil and fat content
 - micronutrient and additive
 - consistency and appearance of mash, liquid or block feed
 - retention time and temperatures for steam conditioning, including consequences of temperatures that are too high and too low on chemical composition
 - retention time and temperature for liquid addition
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the mash, liquid or block feed process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation and corrective action required
- contamination risks and related controls
- OHS hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities associated with process monitoring and control
- routine maintenance procedures
- cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Evidence is required in the ability to operate a mash, liquid or block stockfeed production process according to OHS, quality and formulation requirements.</p> <p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify and interpret production and customer requirements for mash, liquid or block stockfeed • operate and monitor production equipment to ensure consistency and quality of output • add and mix ingredients, micronutrients and additives as required • liaise with nutritionist and other professional and technical staff on composition requirements of stockfeed • follow all OHS, quality and contamination avoidance procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to relevant resources. The candidate is to be assessed on knowledge and skills relevant to the mash, liquid or block stockfeed products and processes in the workplace.</p>
<p>Method of assessment</p>	<p>Evidence may include direct observation, third party report, portfolio, work documentation, response to questions, and so on that address the performance criteria and critical aspects for assessment.</p>
<p>Guidance information for assessment</p>	<p>Performance against this standard must be assessed in an industry context. For valid and reliable assessment the activity should closely replicate the work environment, circumstances and equipment likely to be encountered in a workplace.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:

- the Food Safety Code, including labelling, weights and measures legislation
- legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production schedules and instructions
- manufacturers' advice
- standard forms and reports

Equipment

Equipment covered by this unit may include:

- feed screws and related feed transfer equipment
- steam conditioners
- pumps and holding tanks
- mixers, augers, blocks, dies and moulds
- heating and cooling equipment
- labelling machines

Liquid feed

Liquid feed includes:

- solutions and suspensions

Specifications

Specifications may include:

- pH
- recipe
- volume
- consistency
- final bag, container or block size

RANGE STATEMENT	
Stockfeed mash production process	<p>A stockfeed mash production process typically includes:</p> <ul style="list-style-type: none"> • batching and blending of components, including any micronutrients and other additives • volumetric feeding • steam conditioning • quality checking • labelling • packing and despatch
Stockfeed liquid production process	<p>A stockfeed liquid production process typically includes:</p> <ul style="list-style-type: none"> • batching and blending of components, including any micronutrients and other additives • volumetric feeding • quality checking • labelling • packing and despatch
Stockfeed block production process typically	<p>A stockfeed block production process typically includes:</p> <ul style="list-style-type: none"> • batching and blending of components, including any micronutrients and other additives • volumetric feeding • steam conditioning • pouring of stockfeed into moulds • pressing • cooling • quality checking • labelling • packing and despatch

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate stockfeed mill departments, walkways, storage and assembly areas	1.1.Raw materials receival and storage areas are located 1.2.Control rooms and other main operator stations are located 1.3.Milling, batch and mixing, pelletising, liquid, mash and block stockfeed production areas are located 1.4.Additive storage is located 1.5.Support services, including maintenance, administration, laboratory and quality assurance, and information technology departments are located 1.6.Finished products storage and despatch areas are located 1.7.Walkways and emergency assembly areas are located
2. Describe flow of product through mill and purpose of each stage in the production process	2.1.Main raw materials and source are described 2.2.Receival processes, including weighing, volume and quality checks are described 2.3.Milling process are described 2.4.Batching and mixing processes, including recipe, micronutrients and additives are described 2.5.Post-mixing processes, including pelletising, mashing, pressing and setting are described 2.6.Labelling and packing operations are described
3. Describe range of stockfeeds, their purpose and target species	3.1.Differences in pellet, mash, liquid and block stockfeeds are identified 3.2.Identify target species and animals for stockfeed mill products are identified 3.3.Benefits of stockfeed are described to producers
4. Describe main risks to stockfeed milling operations	4.1.Explain importance of dust control and dust control procedures are explained 4.2.Additives requiring special safety and handling procedures are identified 4.3.Typical pests are described and pest control procedures explained 4.4.Main risks to quality, including contamination, incorrect recipe adherence, incorrect sequencing and product transference, incorrect labelling and packaging are described 4.5.Environmental procedures for mill operations are identified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- read diagrams and sketches
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each part of the stockfeed production process, such as volumetric metering, mixing, steam conditioning, pelletising pouring, pressing, cooling, adding and mixing in micronutrient and other additives, sequencing of production to minimise transference and cross-contamination, and traceability procedures
- range of raw materials and typical sourcing
- stockfeed product range and target species and animals
- basic operating principles of equipment and main equipment components
- basic operating principles of process control, including the relationship between control rooms and panels and the physical equipment
- the flow of the stockfeed production process
- quality characteristics and uses of finished stockfeed
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- methods used to monitor the stockfeed process, such as inspecting, measuring and testing as required by the process
- contamination risks and related controls
- OHS hazards and controls, including dust, contamination and materials requiring special handling procedures and emergency assembly areas

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	<p>Evidence is required in the ability to identify the overall process of stockfeed production, the different types of products and major departments in a stockfeed mill.</p> <p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify and locate departments, major walkways and assembly areas in the stockfeed mill • describe the major steps in the stockfeed production process • describe stockfeed products and purposes, including pellets, liquid, mash and block stockfeeds, basic role of additives, typical target species and animals • identify major risk factors including dust, pests, contamination and incorrect adherence to recipes.
Context of and specific resources for assessment	The candidate is to be assessed on knowledge and skill relevant to his or her stockfeed workplace.
Method of assessment	Evidence may include direct observation, third party report, portfolio, work documentation, response to questions, and so on that address the performance criteria and critical aspects for assessment.
Guidance information for assessment	Performance against this standard must be assessed in an industry context. For valid and reliable assessment the activity should closely replicate the work environment, circumstances and equipment likely to be encountered in a workplace.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stockfeed mill departments

Stockfeed mill departments may include:

- road and rail grain receipt, including weighbridges, general inwards goods receipt
- bulk and packaged raw materials storage
- milling, batch and mixing, pelletising, liquid, mash and block stockfeed production areas
- maintenance
- administration
- laboratory and quality assurance
- information technology
- bulk and packaged finished products storage
- road and rail despatch

Stockfeed products

Stockfeed products may include:

- pellets
- mash
- liquid
- block
- pre-mixes
- loose licks

Stockfeed production process

A stockfeed production process typically includes:

- batching and blending of components, including any micronutrients and other additives
- volumetric feeding
- steam conditioning
- pelletising
- pouring of stockfeed into moulds
- pressing
- cooling
- quality checking
- labelling

RANGE STATEMENT	
	<ul style="list-style-type: none"> • packing and despatch
Target species	Target species may include: <ul style="list-style-type: none"> • dairy cattle • beef cattle • poultry for egg production • poultry for meat • horses • pigs • sheep • fish (aquaculture)
Target animals	Target animals may include: <ul style="list-style-type: none"> • target species animals by age, gender, stage of growth or production • location and intended purposes and products
Typical pests	Typical pests include: <ul style="list-style-type: none"> • rodents • birds • insects

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the grain conditioning equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the grain conditioning process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that conditioned product meets grist moisture specifications 2.5. Conditioned product is stored according to food safety requirements 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the grain conditioning process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify conditioning process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm conditioning and lying times
- calculate water addition to suit machine and wheat type
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for grain conditioning process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust conditioning process equipment to achieve required outcomes, including monitoring control points and conducting tests as required, such as moisture tests to confirm process remains within specification
- monitor supply and flow of materials to and from the conditioning process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take conditioning process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- purpose and basic principles of the conditioning process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the conditioning process and the effect of outputs on downstream flour milling processes
- quality characteristics to be achieved by the conditioning process
- quality requirements of materials and effect of variation on conditioning process performance
- types of grain and their qualities
- microbiological considerations in conditioning grain
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the conditioning process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the conditioning process and the related procedures and recording requirements
- contamination/food safety risks associated with the conditioning process and related control measures, including potential risks associated with out-of-specification lying times of conditioned grain
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the conditioning process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the conditioning process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for grain conditioning
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- conditioning process and related equipment and services
- materials required for the conditioning process
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production schedules and instructions manufacturers' advice standard forms and reports
Grain conditioning equipment	<p>Grain conditioning equipment may include:</p> <ul style="list-style-type: none"> conditioning bins mechanical/pneumatic stock transfer equipment automatic water addition equipment
Grain conditioning	<p>Grain conditioning may be:</p> <ul style="list-style-type: none"> a two-part process
Stock	<p>Stock for the conditioning process may be:</p> <ul style="list-style-type: none"> clean grain direct from the silo cleaned wheat from the cleaning process
Operation of equipment and processes	Operation of equipment and processes may require:

RANGE STATEMENT	
	<ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> power vacuum compressed and instrumentation air

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the grain cleaning equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. The bin system is setup to meet production requirements 1.6. Equipment performance is checked and adjusted as required 1.7. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the grain cleaning process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that stock meets grist specifications 2.5. The process is monitored to confirm that impurity removal rate meets specifications 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the grain cleaning process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify grain cleaning process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that required screens are fitted and related equipment is clean and correctly configured for grain cleaning process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust grain cleaning process equipment to achieve required outcomes, including visual inspection and regular checking of collection points (filters and screens) and overtail bags
- carry out process adjustments to maintain efficient removal of impurities with minimal removal of product
- monitor supply and flow of materials to and from the grain cleaning process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take grain cleaning process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Knowledge of:

- purpose and basic principles of the grain cleaning process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the grain cleaning process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the grain cleaning process
- quality requirements of materials and effect of variation on grain cleaning process performance
- how and why various kinds of wheat are blended to make grist
- purpose of the break rolls
- how and why the separation of endosperm takes place
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the grain cleaning process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the grain cleaning process and the related procedures and recording requirements
- contamination/food safety risks associated with the grain cleaning process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the grain cleaning process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the grain cleaning process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery and equipment used for grain cleaning • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • grain cleaning process and related equipment and services • materials required for the grain cleaning process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity
Workplace information	Workplace information may include: <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Grain cleaning equipment	Grain cleaning equipment may include: <ul style="list-style-type: none"> • intake equipment • day bins • screens • separators • aspirators • extractors/destoners • scourers • scales • dampers • measurers/mixers • impact grinders • materials handling equipment

RANGE STATEMENT	
Raw materials	Raw materials for grain cleaning may include: <ul style="list-style-type: none"> grist previously cleaned or dirty wheat which has been accepted by the mill
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> power vacuum compressed and instrumentation air

Co-requisite units

Co-requisite units	

FDFGR2005A Operate a purification process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a separation and grading process to remove particles of bran, with or without endosperm or germ attached, from the stock flow.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a stockfeed production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of stockfeed purification equipment and processes.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the purification equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the purification process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that particle size and quantity of stock meets specifications 2.5. Fine bran is removed from the semolina and the bran product with endosperm attached is returned to the purification process or scratch rolls for further processing 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the purification process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify purification process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, fitting required screen sizes, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for purification processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust purification process equipment to achieve required outcomes, including monitoring control points, conducting inspections and making adjustments to stock flow, feed gates and screens as required to confirm purification process remains within specification, and checking efficiency to remove offal with minimal product removal
- monitor supply and flow of materials to and from the purification process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take purification process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE***Knowledge of:***

- purpose and basic principles of the purification process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the purification process and the effect of outputs on downstream flour milling processes
- quality characteristics to be achieved by the purification process
- quality requirements of materials and effect of variation on purification process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the purification process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the purification process and the related procedures and recording requirements
- contamination/food safety risks associated with the purification process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the purification process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information

- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery and equipment used for scalping and grading
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- scalping and grading process and related equipment and services
- stock required for the scalping and grading process
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify scratch and sizing process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for scratch and sizing process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust scratch and sizing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm that the process remains within specification, such as:
 - correct product type/quantity
 - roll releases
 - even spread of feed across rolls
 - mill balance
 - even grind/correct particle size
- monitor supply and flow of materials to and from the scratch and sizing process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take scratch and sizing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the scratch and sizing process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the scratch and sizing process and the effect of outputs on downstream flour milling processes
- quality characteristics to be achieved by the scratch and sizing process
- quality requirements of materials and effect of variation on scratch and sizing process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the scratch and sizing production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the scratch and sizing process and the related procedures and recording requirements
- contamination/food safety risks associated with the scratch and sizing process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the scratch and sizing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the scratch and sizing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for scratching and sizing • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • scratch and sizing process and related equipment and services • stock required for the scratch and sizing process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competence relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Equipment	<p>Equipment used in the scratch and sizing process may include:</p> <ul style="list-style-type: none"> • reduction rolls • plainsifters • purifiers • flake disruptors • detachers • mechanical/pneumatic stock transfer equipment
Stock	Stock for the scratch and sizing is supplied from the scalping and grading process
Operation of equipment and processes	<p>Operation of equipment and processes may require</p> <ul style="list-style-type: none"> • the use of process control panels and systems

RANGE STATEMENT	
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> • power • vacuum • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the break roll equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the break roll process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that bran separated from endosperm meets specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the break roll process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify break roll process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for break roll process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust reduction process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - correct product type/quantity
 - moisture content of incoming wheat
 - break roll releases
 - even spread of feed across rolls
 - mill balance
 - even grind/correct particle size
- monitor supply and flow of materials to and from the break roll process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take break roll process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the break roll process, including how and why the endosperm separation takes place
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the break roll process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the break roll process
- quality requirements of materials and effect of variation on break roll process performance, including the effect of moisture variation and related scope to adjust process throughput
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems, as well as an understanding of symptoms of chokes, blockages or breaches and action required to clear
- methods used to monitor the break roll process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the break roll process and the related procedures and recording requirements
- contamination/food safety risks associated with the break roll process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the break roll process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the break roll process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the pelleting equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the pelleting and pellet finishing process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary feed, liquid ingredients and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate dies and/or roll settings where required, setting processing parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required at each stage of the pelleting and pellet finishing process to confirm process remains within specification
- monitor supply of feed to and from the pellet forming process
- monitor supply of liquid ingredients to post-mixing process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each part of the process, such as volumetric

REQUIRED SKILLS AND KNOWLEDGE

metering, steam conditioning, pellet formation, cooling, crumbling and sieving and post-pelleting liquid addition

- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- the flow of the pelleting process and the effect of outputs on downstream processes
- quality characteristics and uses of finished pellets
- effect of variation in inputs and/or services on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- the effect on final product of variation in variables, such as:
 - pellet diameter to length ratios
 - oil and fat content
 - retention time and temperatures for steam conditioning, including consequences of temperatures that are too high and too low on chemical composition
 - retention time and temperature for liquid addition
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the pelleting process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation and corrective action required
- contamination risks related to the pelleting and pellet finishing process and related controls
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace pelleting requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for pelleting
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- pelleting, pellet finishing and related equipment and services
- feed/mass to be pelleted
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Sample grain for testing	1.1. Representative samples of grain are taken for testing according to regulatory requirements 1.2. Samples are prepared for despatch, including labelling and packaging according to enterprise requirements
2. Move grain into and out of storage	2.1. Grain for handling and storage is correctly identified 2.2. Appropriate silo types and handling equipment are selected for various grains in relation to their storage characteristics and flow properties 2.3. Grain is segregated according to type, variety and quality characteristics according to enterprise requirements and appropriate records kept 2.4. Measures are taken to minimise pest infestation 2.5. Grain is moved into and out of storage according to occupational health and safety (OHS) requirements 2.6. Grain is regularly checked during movement for contamination 2.7. Storage and handling equipment are thoroughly cleaned after emptying 2.8. Temporary storages are dismantled according to enterprise requirements and storage characteristics 2.9. Suitable measures are implemented to minimise the effect of desiccant dusts on the flow properties of grain

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify grain storage requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- start, operate, monitor and adjust equipment used to move and store grain to achieve required outcomes
- monitor supply and flow of materials to and from the grain cleaning process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take grain cleaning process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- conduct pre-operational checks, start up, and safely and effectively operate and shut down equipment, including emergency shutdown procedures
- coordinate with others on site
- position initial load for even grain distribution
- safe and correct use of mobile and other equipment
- dismantling of temporary storage of the type used by enterprise
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- grain hygiene and sealing requirements
- grain varieties and types
- segregation requirements to maintain integrity and quality of grain
- flow of grain in storage area from receipt to despatch

REQUIRED SKILLS AND KNOWLEDGE

- typical storage equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- contamination/food safety risks associated with the grain storage process and related control measures
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the grain storage process and workplace requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- environmental issues and controls relevant to the grain storage process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations where the unit is applied for grains intended for human consumption.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- take required samples
- conduct pre-start checks on machinery and equipment used for grain storage and transfers
- start, operate, monitor and adjust process equipment
- recognise different grain types and varieties
- check grain for pest and other contamination
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices where grain is intended for human consumption.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- storage and transfer instructions
- grain storage and transfer equipment and services
- materials required for the grain storage process
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and

EVIDENCE GUIDE	
	procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	All work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Grains	Grains are those stored by the enterprise and may include: <ul style="list-style-type: none"> • cereals • legumes • pulse crops • oilseeds • pasture seeds
Grain movements	Grain movements may be for the purposes of: <ul style="list-style-type: none"> • receipt • despatch • aeration • treatment and/or blending of grain grades
Storage facility	Storage facility covers: <ul style="list-style-type: none"> • all types of temporary and permanent storage
Sampling and analysis equipment	Sampling and analysis equipment includes: <ul style="list-style-type: none"> • all testing apparatus • sampling, measuring and sieving equipment • operational charts • calibration and identification samples • enterprise/client instructions
Samples for testing	Samples may be for different tests, including: <ul style="list-style-type: none"> • moisture • insects (live and dead) • weed and other commodity seeds • other foreign matter

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cracked grain • weather affected grain • grain size and weight • disease identification • germination
Handling equipment	<p>Handling equipment used includes:</p> <ul style="list-style-type: none"> • silo conveyors • elevators • chutes • augers
Other equipment	<p>Other equipment used may include:</p> <ul style="list-style-type: none"> • computing equipment used by enterprise • two way radio/telephone • tractors • front end loaders • wall charts and other visual recording methods • warning devices • ventilation/aeration equipment
Equipment checks	<p>Equipment checks may include:</p> <ul style="list-style-type: none"> • mechanical units integral to grain handling equipment, such as gear boxes, bearings and oil levels
Other personnel	<p>Other personnel involved may include:</p> <ul style="list-style-type: none"> • other operators at storage site • truck drivers • silo operators • weighbridge operators • associated office personnel
Documentation	<p>Documentation may cover:</p> <ul style="list-style-type: none"> • quantities and grades stored • grain movements and cartage documentation • weigh tally sheets • equipment and operations log sheets • stock checks
Potential emergency situations	<p>Potential emergency situations may include:</p> <ul style="list-style-type: none"> • inclement weather during operations

RANGE STATEMENT

	<ul style="list-style-type: none"> • machinery breakdowns • power outages • storm damage to equipment and site

Co-requisite units

Co-requisite units		

FDFGR2011A Receive grain for malting

Modification History

New Unit.

Unit Descriptor

This unit covers the specific skills and knowledge required for on-site receipt of grain intended for malting from road, rail or sea transport including checking of documentation, weighing, conduct of pest, contamination and other initial checks, and placement of grain into storage.

Application of the Unit

This unit applies to operators in commercial malting plants who are responsible for receiving grain from farmers or agents for malting. The grain received in most cases will be barley but may also be wheat. The unit covers the grain receipt process where operators determine or work with others to determine if delivered grain should be accepted including checking of documentation, sampling and testing, screening and storage.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFGR2010A Handle grain in a storage area

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Receive grain from transport	<ul style="list-style-type: none">1.1 Delivery documentation is checked1.2 Required tests for delivered grain is determined from standard operating procedures, supervisor instruction or other source1.3 Samples of grain are tested for the required parameters to determine if the delivery is within specifications1.4 Procedures for rejected grain are followed according to enterprise procedures
2 Weigh and screen accepted grain	<ul style="list-style-type: none">2.1 Grain is off loaded from transport and routed to screens2.2 Intake grain is passed through screens2.3 Size of grain corn is monitored2.4 Dust control procedures are followed2.5 Grain is passed through metal removal equipment2.6 Grain is weighed
3 Store intake grain	<ul style="list-style-type: none">3.1 Moisture and protein content of grain is determined3.2 Screened grain is routed to batch bins or other containers

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- undertake standard tests on received grain for insects, taint, other contaminants and foreign objects as well as any required specific scientific tests e.g. near infra-red(NIR)
- interpret and apply enterprise procedures and specifications for receiving grain
- set up, use and monitor grain, receiving, weighing, metal detection and drying equipment including using process control interfaces where required
- apply dust control procedures to grain receiving and storage work areas
- monitor control points
- identify OHS hazards and controls
- comply with procedures and responsibilities for reporting problems
- comply with environmental procedures and controls
- follow waste handling requirements and procedures
- record required quality and production data
- undertake routine maintenance procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- grain delivery arrangements and transport modes relevant to the enterprise
- location and types of storage available for received grain relevant to the enterprise
- enterprise procedures for rejected grain
- identification, avoidance and safe handling of accidentally residues of insect treatment from ex-site storages (e.g. phosphin bags)
- other contamination avoidance and removal procedures including
 - jewellery and loose objects in work area
 - security and access procedures to work areas
 - pest control procedures
 - metal and other foreign objects detection and removal
- dust control procedures
- cleaning requirements associated with changeovers and types of shutdowns
- procedures for reporting problems

- relevant sampling and testing procedures
- cleaning and sanitation procedures relevant to the enterprise

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>

<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety and environmental requirements • material data safety sheets where appropriate • information on specifications, control points and grain handling procedures
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place

	<ul style="list-style-type: none">• FDFOP2004A Clean and sanitise equipment• FDFOP2011A Conduct routine maintenance• FDFOP2013A Apply sampling procedures• FDFOP2030A Operate a process control interface• MSL973001A Perform basic tests.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Malt	The term malt includes malt intended for use in beer production, distilling malts, specialty malts such as crystal and roasted malts, and malt for food production.
Grain	Grain can be barley or wheat
Transport	<p>Grain may be received from any or all of the following modes of transport:</p> <ul style="list-style-type: none"> • road • rail • sea • conveyor from off site storage e.g. a grain elevator
Sampling and testing procedures	<p>Sampling and testing procedures may vary according to amount and mode of grain delivery and source of delivered grain. Possible tests include tests for:</p> <ul style="list-style-type: none"> • grain size and weight • protein • moisture • nitrogen • pests • taint • weather damage e.g., sprouting, black-tip • metal and other foreign objects
Procedures for rejected grain	<p>Rejected grain procedures may include:</p> <ul style="list-style-type: none"> • isolation of rejected grain • directing transport operator to remove grain off site • fumigation or other treatment of grain before isolation or off site transport • completion of appropriate documentation
Services	Services include power, gas, water, steam and compressed air.
Control points	Refers to the key points in a work process which must be monitored and controlled. This includes food safety, (critical), quality, and regulatory control points as well as

	inspection points. Monitoring may involve the use of production data such as performance control charts Process operation and monitoring functions may be manual or involve the use of a process control system
Equipment is monitored	Equipment monitoring includes ensuring that hygiene and sanitation standards are met, all safety guards are in place, and that equipment is operational and performing to specification.
Workplace information may include:	Standard Operating Procedures (SOPs); specifications and production schedules Information systems may be print or screen based.

Unit Sector(s)

Grain processing

FDFGR2012A Prepare malted grain

Modification History

New Unit.

Unit Descriptor

This unit covers the skills and knowledge required for operating commercial equipment associated with preparing malted barley or wheat. It covers operating and monitoring steeping, germinating, and kilning equipment.

Application of the Unit

This unit applies to operators in commercial malting plants who are responsible for converting stored grain into malted barley or wheat. These operators are often known as maltsters. The unit covers the skills used in the malting process from after the grain is received and stored up to the malted barley or wheat being ready for blending, transport or storage. The skills covered by this unit are applied in accordance with enterprise procedures and to specifications determined by senior scientific or production management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFGR2010A Handle grain in a storage area

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Steep grain	1.1 Grain is transferred from storage into steeping equipment 1.2 Hoses or other wetting equipment are placed correctly to ensure uniform hydration and to avoid damage to grain 1.3 Grain is immersed, drained and rested for the specified number of cycles 1.4 Moisture content of grain is monitored during air resting to determine when it is ready for transfer to germination vessels 1.5 Waste water is discharged to treatment or holding or other facilities according to enterprise and regulatory environmental guidelines
2 Germinate grain	2.1 Grain is fed into germination vessel or floor 2.2 Turning and air blowing equipment is set up, operated and monitored 2.3 Green grain is monitored for humidity, temperature, moisture, chitting/acrospires, and general condition 2.4 Rate of turning, humidity and temperature is adjusted as required to maintain green grain to specifications 2.5 Modified green grain is transferred to kiln according to specifications for malt type and results of laboratory testing
3 Operate kiln to produce malt	3.1 First drying of modified grain is conducted 3.2 Stopping of germination is confirmed 3.3 Modified grain is cured through correct combination of air flow and heat for malt product specification, in consultation with the production manager 3.4 Colour, moisture content and other required specifications are confirmed 3.5 Malt is cleaned 3.6 Separated culm is transferred to storage 3.7 Malt is transferred to storage

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify batch and recipe specifications and seeks assistance and relevant approvals when required
- achieve specified moisture content in grain through correct combinations of water/air/water steeping cycles
- germinate barley to different specifications through correct use of air, humidity and turning equipment
- avoid clumping of barley during germination through correct turning
- conduct acrospires evaluation and moisture testing
- correctly adjust kiln heat settings for drying or curing and for different types and grades of barley and malt
- follow specified shutdown processes and equipment and implement cleaning requirements associated with changeovers
- monitor control points
- undertake corrective action required in the event of variation to specifications and operating parameters
- identify OHS hazards and controls
- comply with enterprise procedures and responsibilities for reporting problems
- comply with enterprise environmental procedures and controls
- follow waste handling requirements and procedures
- record required production data
- undertake routine maintenance procedures
- follow dust control procedures
- clean and sanitise equipment according to enterprise procedures
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- changes to grain from the steeping process
- changes in grain during germination
- role of humidity and temperature in initiating and controlling germination of grain
- common variations in grain quality and type
- common customer malt "recipes" used in the enterprise and implications for malt production
- standard transfer times between stages e.g. receiving to steeping, steeping to germination,

germination to kilning

- procedures for dealing with contingencies, breakdowns and other non standard events
- contamination avoidance procedures including
- jewellery and loose objects in work area
- security and access procedures to work areas
- pest control procedures
- appearance of grains before and after cleaning (deculming)
- cleaning requirements associated with changeovers and types of shutdowns
- purpose of moisture and acrospires testing within the malting process
- equipment cleaning and sanitation procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit requires that the learner be assessed against at least two different batches of barley or wheat with different specifications for steeping, germination and kilning.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information and consult with relevant personnel to identify batch requirements for steeping, germination, kilning and malt cleaning processes • select, fit and use personal protective clothing and equipment • confirm equipment status and condition • set up, start and monitor grain transfer equipment • control absorption of water by grain during steeping to achieve specified water content • supply fresh air, heating, cooling and ventilation to specification during germination • safely start and operate kilns to different heat requirements • undertake sampling and testing during steeping, germination and cleaning to determine if grain and malt is within specifications • monitor critical control points in work area • apply dust control procedures in work area • maintain workplace records.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety and environmental requirements • material data safety sheets where appropriate • steeping, germination, kilning and deculming equipment and control points. The steeping, germination, kilning equipment may be separate or

	<p>combined</p> <ul style="list-style-type: none"> • Steeping, germination and kilning specifications and procedures for at least two different malts • malted grain cleaning equipment.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
<p>Guidance information for assessment</p>	<p>To ensure consistency of performance, competency should be demonstrated on at least two occasions to different steeping, germinating and kilning specifications.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Malt	The term malt includes malt intended for use in beer production, distilling malts, specialty malts such as crystal and roasted malts, and malt for food production.
Services	Services include power, gas, water, steam and compressed air.
Equipment	<p>Includes equipment used for:</p> <ul style="list-style-type: none"> • storage e.g. bins, hoppers or silos • on site grain transport such as conveyors, blowers, chutes • weighing • metal detection • steeping vessels or towers • pumps, hoses and other wetting equipment • aeration and CO² extraction • germination vessels including circular or rectangular vessels or boxes • mechanical turning • kilning including tower and flat plant kilns • combined steeping, germination and kiln vessels • cleaning of malt (deculming).
Control points	<p>Refers to the key points in the malting process which must be monitored and controlled. This includes food safety, (critical), quality, and regulatory control points as well as inspection points. Monitoring may involve the use of production data such as performance control charts.</p> <p>Process operation and monitoring functions may be manual or involve the use of a process control system.</p>
Equipment is monitored	Equipment monitoring includes ensuring that hygiene and sanitation standards are met, all safety guards are in place, and that equipment is operational and performing to specification. It may also include the calculation of raw materials.
Workplace information may	Standard Operating Procedures (SOPs); specifications

include:	and production schedules. Information systems may be print or screen based.

FDFGR2013A Blend and dispatch malt

Modification History

New Unit.

Unit Descriptor

This unit covers the skills and knowledge required for operating commercial equipment associated with blending malted barley or wheat to specifications and dispatching wheat to customers.

Application of the Unit

This unit applies to operators in commercial malting plants who are responsible for blending malted barley or wheat and then dispatching the malt to customers. These operators are often known as maltsters. The skills covered by this unit are applied in accordance with enterprise procedures and to specifications determined by senior scientific or production management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Blend malt to specification	<ul style="list-style-type: none">1.1 Blend specification is obtained from management or other source1.2 Availability of source malts and storage locations are confirmed1.3 Blending equipment controls are set to achieve desired ratio and volume1.4 Blended malt is transferred to storage
2 Dispatch malt	<ul style="list-style-type: none">2.1 Customer order or other dispatch authority is obtained2.2 Availability of order volume and blend of malt is confirmed2.3 Availability of conveyor or dispatch transport is confirmed and positioned if required2.4 Pre-delivery sampling and tests are conducted according to specifications2.5 Malt for dispatch is screened and dispatched to transport2.6 Record of dispatch is made according to procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify blend specifications and seeks assistance and relevant approvals when required
- adjust blending equipment settings to achieve a variety of blend ratios and volumes
- operation of conveyors, loaders and other equipment in a manner suitable to mode of dispatch
- monitor control points
- identify OHS hazards and controls
- undertake required corrective actions specified in enterprise procedures in the event of variation to blend specifications and operating parameters
- comply with procedures and responsibilities for reporting problems
- comply with environmental procedures and controls
- follow waste handling requirements and procedures
- record required blend and dispatch data
- undertake routine maintenance procedures
- collect samples and conduct tests according to enterprise procedures
- maintain work area to meet housekeeping standards
- follow dust control procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- common terms for malt types and blends
- malts used in the enterprise and their relationship to blends required by customers
- loading techniques for modes of dispatch used in the enterprise
- cleaning requirements associated with changeovers and types of shutdowns
- procedures for dealing with contingencies, breakdowns and other non standard events
- contamination avoidance procedures including
 - jewellery and loose objects in work area
 - security and access procedures to work areas
 - pest control procedures
- sampling and testing procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify finish feed requirement	1.1. Product to be manufactured from production schedule, customer order or standard operating procedure (SOP) is identified 1.2. Micronutrient or additive requirements is identified from screen, recipe, standard operating procedure or supervisor
2. Obtain correct micronutrient or other additive	2.1. Storage location for micronutrient or additive is identified 2.2. Micronutrient or additive is obtained according to SOP 2.3. Micronutrient or additive label is read to determine any special mixing, handling or occupational health and safety (OHS) requirements
3. Add micronutrient or additive to product	3.1. Micronutrient or additive is matched to product 3.2. Appropriate volume, measurement or proportion of micronutrient or additive is determined 3.3. Pre-mixing or other micronutrient or additive preparation procedures are undertaken 3.4. Micronutrient or additive to product is added to stockfeed at appropriate location and stage of production process 3.5. Appropriate contamination, quality and sequencing procedures are followed 3.6. Stockfeed samples are taken according to procedures 3.7. Work is conducted in accordance with workplace environmental guidelines
4. Record use of micronutrient or additive	4.1. Type and amount of micronutrient or additive used is recorded according to enterprise and statutory requirements if applicable 4.2. Correct product labels are generated and added to product

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify scheduled additives (S4)
- store and handle micronutrients and additives
- follow mixing and addition procedures for micronutrients and additives
- read labels to identify:
 - target and non-target species
 - dose /addition level
 - withholding period
 - expiry dates
 - storage and handling requirements
 - manufacturer's name
 - product and active ingredient name
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- contamination avoidance, quality and sequencing procedures
- risk factors for cross transference
- withholding periods
- OHS procedures for micronutrients and additives

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Evidence is required in manufacturing stockfeeds containing micronutrients and additives to required specification and quality including correct identification of risk factors and risk mitigation procedures.</p> <p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify and interpret micronutrients and additives requirements from stockfeed recipes and production schedules • relate micronutrients and additives to correct stockfeed • follow correct contamination, quality and sequencing procedures • liaise with nutritionist and other professional and technical staff on micronutrients and additives requirements of stockfeed.
<p>Context of and specific resources for assessment</p>	<p>The candidate is to be assessed on micronutrients and additives relevant to the stockfeed products and processes in the workplace.</p>
<p>Method of assessment</p>	<p>Evidence may include direct observation, third party report, portfolio, work documentation, response to questions, and so on that address the performance criteria and critical aspects for assessment.</p>
<p>Guidance information for assessment</p>	<p>Performance against this standard must be assessed in an industry context. For valid and reliable assessment the activity should closely replicate the work environment, circumstances and equipment likely to be encountered in a workplace.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Micronutrients and additives	<p>Micronutrients and additives may range from common proprietary products to specific micronutrients and additives prescribed by veterinarians or covered by legislative requirements</p>
Hazards and risks	<p>The range of hazards and risks associated with micronutrients and additives use includes:</p> <ul style="list-style-type: none"> • Cross-contamination of micronutrients and additives for different feeds and recipes • wrong formula and other errors especially failure to read formula correctly • incorrect volume/measurement/proportion
Stockfeed	<p>Stockfeed includes feed commercially produced and branded by enterprises as well as customer provided formulations.</p> <p>The range of stockfeed can include:</p> <ul style="list-style-type: none"> • pellets • liquids • mashes • blocks
Target species	<p>Target species may include:</p> <ul style="list-style-type: none"> • land and marine animals raised commercially for meat, skin products and milk

Co-requisite units

Co-requisite units		

FDFGR3002A Demonstrate knowledge of animal nutrition principles

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the animal nutrition knowledge required by stockfeed milling operators who are required to liaise with nutritionists, other technical and professional staff and customers.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to stockfeed operators who are required to have knowledge of animal nutrition principles and the effect of stockfeed on animal performance. This knowledge would be applied in liaison with professional and technical staff on customer requirements and in liaison directly with customers.
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify nutrition purpose of stockfeed product	<p>1.1. Target species, animal type and phase of animal growth supported by stockfeed product are identified</p> <p>1.2. Production purpose of animal raising and range of desired products are identified</p> <p>1.3. Particle size, pellet quality and other factors affecting palatability for target animals are identified</p> <p>1.4. Impact of stockfeed on animal performance is identified</p>
2. Identify key quality factors affecting stockfeed performance	<p>2.1. Feed safety requirements for target species and phase of animal production are identified</p> <p>2.2. Type and proportion of raw materials in stockfeed and their effect on animal performance are identified</p> <p>2.3. The purpose of additives on animal performance and stockfeed quality are identified</p> <p>2.4. Effects of processing on stockfeed nutrition quality and animal performance are identified</p> <p>2.5. Substitution guidelines, including the effect of substitution on stockfeed performance, are understood</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and interpret workplace information, including standard operating procedures (SOPs), labels, recipes, customer supplied information and material data safety sheets (MSDS)
- use and application of workplace terminology
- sequence information against production processes
- assess quality standards
- identify resources in the enterprise for further information, including nutritionists, other technical and professional specialist and reference materials

Required knowledge

Knowledge of:

- typical nutrition requirements of animals supported by stockfeed, including horses, beef cattle, dairy cattle, pigs, sheep, poultry (both meat and egg production) and marine animals (aquaculture). Knowledge would be restricted to standard daily requirements of main food groups (proteins, carbohydrates etc), typical daily volume of feed required and type of feed (e.g. solid, liquid, plant or animal based)
- how nutritional needs of target animal may vary according to species, gender, health, pregnancy, lactation, age, season, geography, production purpose and form of production and feeding, e.g. feedlot, free range, use of stock feed for supplementary or full feeding
- factors affecting animal acceptance of stockfeed, including palatability and presentation
- range of raw materials typically used in stockfeed, including grains, molasses/liquids, proteins (vegetables and animal), additives (vitamins, minerals and medications) and fibre
- impact of operator controlled factors on stockfeed quality, including temperatures, moisture, sizing, sieving and liquid additions
- impacts of stockfeed on animal performance, including positive effects on animal performance and effects of incorrect feed on animal safety, animal performance and export contamination

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Evidence is required of animal nutrition and performance requirements that are affected by stockfeed related factors, such as ingredients, recipe, processing and presentation.</p> <p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify and interpret customer requirements from stockfeed • relate stockfeed type to animal nutrition and production requirements • liaise with nutritionist and other professional and technical staff on animal nutrition requirements of stockfeed.
<p>Context of and specific resources for assessment</p>	<p>The candidate is to be assessed on animal nutrition and production knowledge relevant to the stockfeed products and processes in the workplace.</p>
<p>Method of assessment</p>	<p>Evidence may include third party report, portfolio, work documentation, response to questions, and so on, that address the performance criteria and critical aspects for assessment.</p>
<p>Guidance information for assessment</p>	<p>Performance against this standard must be assessed in an industry context. For valid and reliable assessment the activity should closely replicate the work environment, circumstances and equipment likely to be encountered in a workplace.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Stockfeed production	<p>Stockfeeds commercially produced by enterprises as well as customer provided formulations.</p> <p>The range of stockfeed can include:</p> <ul style="list-style-type: none"> • pellets • liquids • mashes • blocks
Target species	<p>Target species may include:</p> <ul style="list-style-type: none"> • land and marine animals raised commercially for meat, skin products and milk

Co-requisite units

Co-requisite units	

FDFGR3003A Lead flour milling shift operations

Modification History

Not applicable.

Unit Descriptor

This Unit covers the skills and knowledge required by a miller in the flour milling industry to lead milling operations during a shift including acting as a technical resource to other mill employees.

Application of the Unit

This Unit applies to a miller who is responsible for the flour mill operations during a shift. The Unit provides skills to integrate knowledge of milling materials, equipment, processes, and common milling risks to achieve milling product and performance specifications. The job titles applicable to the Unit may be shift miller or just miller. The Unit applies to the milling of all grains for flour and other milling processed food and non-food products. The Unit covers implementing the mill settings to meet production requirements, supervising of conditioning and grist formulation, and ensuring that quality, Hazard Analysis Critical Control Points (HACCP), dust control, occupational health and safety (OHS) and other risk management procedures are followed by employees during the shift.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil.

Employability Skills Information

This Unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish shift operating environment	1.1 Identify products and quantities to be produced by mill during shift. 1.2 Identify from authorised suppliers the supplier of grain used during shift and the varieties supplied. 1.3 Apply required costing and control procedures to achieve set key performance indicators (KPIs). 1.4 Establish range of available equipment and any unique design or operating factors. 1.5 Identify staffing and work organisation for shift. 1.6 Identify any budget and/or budget operating procedures relevant for shift operations.
2. Monitor quality during shift	2.1 Identify specifications for flour to be produced during shift. 2.2 Identify performance indicators and production targets for mill and mill departments during shift. 2.3 Supervise testing regime for mill during shift. 2.4 Monitor performance against targets and indicators. 2.5 Report non-conformances and take appropriate corrective actions.
3. Set and supervise grain supply and intake procedures	3.1 Supervise grain receipt operations including compliance with instructions for rejected deliveries. 3.2 Set screening criteria and procedures for re-use of screenings. 3.3 Set blending criteria for holding bins/silos.
4. Set and supervise grain conditioning process and specifications	4.1 Specify and communicate grain cleaning requirements to operators. 4.2 Set water volume for each grain batch. 4.3 Set conditioning time per batch. 4.4 Determine any blending and treatment criteria. 4.5 Monitor tests and specifications for conditioned grain. 4.6 Supervise transfer to storage or mill.
5. Supervise production	5.1 Identify shift production targets. 5.2 Obtain or determine recipes. 5.3 Formulate and supervise preparation of grist. 5.4 Supervise milling of individual grains. 5.5 Set blending requirements including any use of additions and adjuncts. 5.6 Allocate production specifications for shift to departments. 5.7 Ensure production records are kept.

- 5.8 Monitor production against targets.
- 6. Integrate maintenance schedule with shift operations
 - 6.1 Identify shift preventative maintenance requirements from maintenance department and/or equipment suppliers.
 - 6.2 Supervise equipment monitoring and maintenance responsibilities for operators, maintenance department and other staff.
 - 6.3 Identify and approve timing for any regular maintenance activities that will disrupt production.
 - 6.4 Supervise breakdown notification and repair procedures.
- 7. Implement risk management procedures
 - 7.1 Supervise implementation of OHS and dust control procedures.
 - 7.2 Monitor HACCP procedures during shift.
 - 7.3 Monitor compliance with environmental and sustainability regulations and targets.
 - 7.4 Monitor operations against any required regulatory compliance including required reporting procedures.
- 8. Provide guidance to other mill employees
 - 8.1 Monitor and maintain standard operating procedures.
 - 8.2 Supervise any required training for employees during shift operations.
 - 8.3 Ensure availability of reference materials.
 - 8.4 Implement communication and feedback mechanisms to and from employees.

Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

Required skills include:

Ability to:

- identify typical flours including semolina, and other mill products
- identify grain types and main grain varieties
- liaise with other departments on flour product requirements
- calculate:
 - water required to achieve target moisture content
 - extraction rate on:
 - dirty wheat basis
 - clean wheat basis
 - total production basis
 - protein loss for each grist
 - milling gains/losses
- integrate OHS, HACCP and dust control procedures with mill operations
- communicate production requirements and technical information to other employees.

Required knowledge includes:

Knowledge of:

- differences in types of milling processes including differences in milling of different grains, varieties and milling for flour or for semolina
- process and purpose of flour milling including:
 - opening of grain to enable removal of endosperm
 - separation of bran
 - grinding of endosperm to flour
 - sifting of ground stock to:
 - remove oversize endosperm particles
 - remove flour
 - remove any bran and endosperm that has not been ground
 - kibbling
 - middlings and semolina process
- methods used to establish the most economic grist for a particular flour, i.e. the balancing of flour specification, grain availability, cost of grain available etc.
- financial impacts of mill performance/settings
- principles of preventative maintenance including failure mode effects analysis (FMEA)
- food safety, food labelling and other regulations affecting flour mills
- grain varieties and specifications

- flour types and specifications
- food labelling regulations relevant to flour products
- HACCP principles and procedures
- dust control procedures
- OHS standards and requirements
- environmental regulations.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this Unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • interpret production requirements and grain tests for desirable mill settings • assist employees with conduct and interpretation of grain and flour tests • match grain receipt, screening and storage processes to production requirements during shift • prepare or supervise production of grists according to recipes • set and manage milling and blending operations • supervise dust control, HACCP and OHS procedures during shift operations.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • equipment manuals including operating parameters • specifications, control points and processing parameters • break and reduction roll process and related equipment and services • conditioned grain suitable for the break and reduction roll process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.

Method of assessment	<p>This Unit should be assessed together with core Units and other Units of Competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none">• FDFOP3001A Control contaminants and allergens in the workplace• FDFGR3004A Control mill processes and performance• FDFOP3003A Operate inter related processes in a production system.
Guidance information for assessment	<p>To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Mill	The term mill is used to refer to the whole mill site including the actual milling equipment, equipment used for associated processes, and transport, warehouse, maintenance, testing and administration facilities.
Grain	Grain refers to all edible grains that can be milled for flour, semolina and other grain based food and non-food products. Examples of grains covered by this Unit include wheat, rye, spelt, triticale, oats, corn and barley.
Grist	Grist is a blend that may be made from a single wheat (or other grain) or be produced from a combination of wheats (or other grains).
Mill testing regime	<p>The mill testing regime refers to the determination of:</p> <ul style="list-style-type: none"> • range of tests required per product • test locations e.g. operator tests, on site laboratory tests and externally conducted tests • test frequency/sampling rate • criteria for acceptance/rejection/re-test • reporting requirements • training required by employees to conduct tests.
Mill performance	<p>Mill performance is the production of the maximum amount of flour to required specifications in the most efficient and profitable way. Indicators of mill performance may include:</p> <ul style="list-style-type: none"> • mill gain or loss • extraction rate • flour production per shift and other selected periods.
HACCP Plan	The detailed establishment and implementation of a mill HACCP plan is not included in this Unit. However establishing and supervising compliance with the HACCP plan is included.

Production records will usually include:	<ul style="list-style-type: none">• capacity per hour or per 24 hours to first break• output per hour of final flour• extraction rate• moisture content of flour/grain• water absorption of flour• protein content of flour• colour grade.
--	--

Unit Sector(s)

Grain processing

FDFGR3004A Control mill processes and performance

Modification History

Not applicable.

Unit Descriptor

This Unit covers the skills required by a shift miller to control flour and byproduct production in a flour mill. The Unit also includes equipment setting as well as setting equipment and process requirements that must be implemented by other employees. The Unit includes the setting of all break, scratch, sizing, reduction and other milling related processes as well as the supervision of wheat conditioning.

Application of the Unit

This Unit applies to a shift miller who is required to set equipment in a flour mill to control the processes and performance across the mill to achieve maximum extraction and recipe compliance. The Unit applies to all industrial flour mills including semolina mills and including mills without purifiers. It covers the setting of the mill for a variety of grists and finished flour. The miller must also take into account the capability of equipment and the need to avoid imbalances, product build ups and chokes.

Licensing/Regulatory Information

There is no occupational licensing relevant to this Unit.

Pre-Requisites

Nil.

Employability Skills Information

This Unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare or interpret mill flow sheet	1.1 Identify all breaking, reduction and dressing stages in mill. 1.2 Destinations for all stock separations are shown. 1.3 Identify all optional and ancillary equipment. 1.4 Identify all bins, silos, chutes, conveyors and exhausts. 1.5 Maintain diagram showing all equipment and stock flow.
2. Prepare for flour and byproduct production	2.1 Establish customer requirements for shift or production period. 2.2 Follow recipe required to meet desired production quality and quantity targets. 2.3 Check availability of required wheat stock. 2.4 Determine if any changes to grist stock will be required and plan for changes to settings.
3. Determine break system settings	3.1 Adjust break rolls for desired percentage release. 3.2 Conduct visual inspection and test sieving where required to monitor release percentage. 3.3 Monitor break roll passages to avoid saturation of later stages. 3.4 Set bran finishers. 3.5 Set plansifters for desired grading including adjusting spaces between plansifters for varying grains and moisture levels. 3.6 Monitor performance of break system to ensure system is free from semolina.
4. Determine settings for purifiers where fitted	4.1 Maintain and monitor sieve covers. 4.2 Monitor feed rate to purifiers. 4.3 Monitor horizontal and vertical movement of sieve covers. 4.4 Set and monitor air pressure for each aspiration section. 4.5 Select destinations for throughs and lifted bran and other particles. 4.6 Ensure purifier stock is free from flour.
5. Determine settings for scratch or sizing system	5.1 Set scratch equipment or sizing rolls. 5.2 Monitor performance of scratch and sizing rolls.
6. Determine settings for reduction passages	6.1 Set each set of reduction rolls for desired flour and capacity of succeeding reduction passages. 6.2 Monitor covers on sifters for effective dressing from each reduction roll. 6.3 Monitor flake disrupters and impact detachers where fitted. 6.4 Set and monitor reduction settings to achieve required starch

- damage.
- 6.5 Specify collection conveyors and bins for each flour stream.
7. Determine settings for final production stages
- 7.1 Specify use of flour dividers for blends.
- 7.2 Monitor redressing equipment.
- 7.3 Monitor weighing, infestation destroying and metal removal equipment.
- 7.4 Send finished flour to packing or storage.
8. Monitor mill equipment
- 8.1 Check flutes and rolls for wear and defects.
- 8.2 Monitor temperature of reduction rolls and performance of water cooling if used.
- 8.3 Check automatic roll adjustment and protection mechanisms are working correctly.
- 8.4 Adjust mill settings when required for effect of breakdowns and urgent maintenance.
9. Monitor mill performance
- 9.1 Ensure all grain and flour tests are carried out to required schedule and procedures.
- 9.2 Adjust settings where required for variation in grain, grist and atmospheric conditions.
- 9.3 Monitor milling and invisible loss per production period.

Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

Required skills include:

Ability to:

- interpret mill flow diagrams
- perform contingency planning for equipment breakdown including failure mode effects analysis
- balance dressing surfaces across break and reduction stages
- adjust break rolls to take into account:
 - number of break stages
 - grist composition
 - specification of finished product
- estimate break roll percentages through visual examination, hand stratification and test sieving.

Required knowledge includes:

Knowledge of:

- alternative and historical milling techniques including:
 - stone grinding
 - "low" or one pass through grinding
 - use of small manual or electric milling machines
 - semolina process vs traditional flour milling process
- conventions and techniques in drawing mill flow diagrams
- characteristics of different grists and their milling requirements
- purpose design and steps in the break process including:
 - overall aim of removing bran from endosperm in large pieces while minimising bran powder and flour
 - roller design
 - flute design
 - roller speed
 - number of passages
 - destinations of product from each break roll
- purpose, design and principles of the purification process including:
 - sieve design
 - role of sifting, shaking, gravity and aspiration (upward air)

- screening decks
- exhaust ports and chambers
- collection of throughs
- overtails
- relationship of purification to later reduction stages
- scratch equipment and process to remove small pieces of bran and germ from endosperm after sizing or purification
- relationship of particle size to reduction roller efficiency
- reduction which grinds flour into required fineness while controlling damage to starch granules and minimising abrasion to any bran and germ particles present
- features and performance characteristics of milling equipment as specified in manufacturers reference material
- relationship between total dressing surface ratio to mill capacity
- calculation of break roll percentages
- mill balance requirements and techniques including:
 - ensuring that stock does not return to immediate preceding passage or equipment
 - feed to first break at a constant rate
 - evenness of feed into rolls
 - maintenance of conveyor and air settings to achieve constant feed
- calculation of mill performance including:
 - invisible loss rate
 - theoretical and actual milling loss rate.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this Unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • interpret mill flow diagrams and production requirements • set and monitor break and reduction system equipment • achieve flour recipes through correct use of grists and mill settings • adjust mill settings for breakdowns and other contingencies.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • equipment manuals including operating parameters • specifications, control points and processing parameters • break and reduction roll process and related equipment and services • conditioned grain suitable for the break and reduction roll process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This Unit should be assessed together with core Units and other Units of Competency relevant to the function or work role.</p>

Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
-------------------------------------	---

Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Mill	The term mill is used to refer to the whole mill site including the actual milling equipment, equipment used for associated processes, and transport, warehouse, maintenance, testing and administration facilities.
Mill flow diagram	A mill flow diagram is a representation of the flow of products through the mill process.
Mill balance	Mill balance refers to achieving settings where each passage in the grain breaking and reduction process ensures that other passages and equipment operate on optimum quantity and quality of stock. It also refers to ensuring that the overall surface area (available contact area for product) is appropriate for that stage or passage and the mill as a whole.
Grain acceptance specifications may include:	<ul style="list-style-type: none"> • weight • protein • moisture • odour • foreign object criteria • pests and pest treatment residues.
Grinding can refer to:	<ul style="list-style-type: none"> • the break system which is the process of opening up the grain and scraping away the endosperm • the reduction system which is the process of reducing the endosperm until it can be classified as flour.
Extraction rate	The extraction rate is the number of parts by weight of flour obtained from a hundred parts of grain.
Optional equipment	<p>Optional equipment is milling equipment not found in every mill. Examples include:</p> <ul style="list-style-type: none"> • bran finishers/brushes • germ production machines • bran rolls • bran grinding rolls

	<ul style="list-style-type: none"> • micro-detachers.
Throughs	Stock which falls through apertures at each sifting or purifying stage.
Overtails	<p>Stock left after throughs are collected and which depending on the stage may be:</p> <ul style="list-style-type: none"> • endosperm particles with adhering bran • mainly bran • bran and endosperm requiring further treatment.
Wheatfeed	By product of the milling process including bran of varying sizes and varying amounts of attached endosperm.
Scalping	Scalping is the separation of coarse overtails after grinding
Roll adjustment	Adjustment of roll gaps may be done manually or through computerised.

Unit Sector(s)

Grain Processing

FDFGR4001A Control power and automation for milling processes

Modification History

Not applicable.

Unit Descriptor

This Unit covers the matching of milling requirements to available services and equipment including electricity, gas and other fuels, steam generation, hydraulics and pneumatics. It also includes use of computerised and other control equipment to achieve desired milling outcomes.

Application of the Unit

This Unit applies to millers who are required to set and control milling equipment in industrial flour mills including semolina mills and mills without purifiers. It also covers development of strategies for effective use of power and automation and directing programmed and other maintenance in order to ensure that milling performance is maintained. The Unit requires work to be undertaken in accordance with all regulatory and OHS requirements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil.

Employability Skills Information

This Unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify range of utilities and services used by mill	1.1 Establish distributed services used in mill. 1.2 Ensure schematics showing location and distribution of services are available and understood by key personnel. 1.3 Categorise services as critical to mill operation or ancillary. 1.4 Develop contingency strategies in the event of failure of a critical service for the mill.
2. Review mill electric power system for start-up and power demand management	2.1 Identify mains supply terminal, input voltage and electricity supplier. 2.2 Identify mill transformers and distribution to sub-mains. 2.3 Identify back-up generation and supply system including automatic and manual operation conditions. 2.4 Identify location of mill equipment and areas supplied by each sub-main and switchboard. 2.5 Identify key features and requirements of installed electrical safety systems including lock off and isolation switches. 2.6 Obtain maximum demand and diversity factor (power factor correction) and identify implications for mill operations. 2.7 Establish motor control and start up procedures according to manufacturer, engineer and supply authority procedures.
3. Review scope of hydrocarbon fuel use by mill	3.1 Identify capacity and fuel use of any on-site boilers. 3.2 Identify emergency generators and their fuel source. 3.3 Identify other fuel powered equipment and processes. 3.4 Identify location of fuel reservoirs/tanks and review against mill strategy for the prevention of dust explosions.
4. Identify type and location of mill controls	4.1 Identify mill operations and equipment controlled automatically. 4.2 Identify mill operations and equipment controlled through central process control stations/ terminals. 4.3 Identify mill operations and equipment controlled manually. 4.4 Establish back up strategies for mill control in the event of failure of control equipment.
5. Control pneumatic conveying system	5.1 Determine processes where negative or positive pressure is required. 5.2 Monitor air speed and volume requirements for conveying tasks. 5.3 Select air speed and volume appropriate for exhausts. 5.4 Balance negative pressure systems. 5.5 Monitor for abnormal increases in blowline pressure.

- 5.6 Determine cleaning intervals for dust collectors.
- 6. Control wheat damping and conditioning
 - 6.1 Monitor adequacy of water supply.
 - 6.2 Determine if feedforward or feedback system is used.
 - 6.3 Supervise moisture testing of wheat.
 - 6.4 Set damping system controls for desired moisture level taking into account feed rate and lying in time.
- 7. Establish strategies and practices for efficient use of power and automation
 - 7.1 Maximise throughput to mill capacity where possible.
 - 7.2 Ensure manufacturers' maintenance and lubrication schedules are followed.
 - 7.3 Ensure standard operating procedures for controls and workstations are developed and up to date.

Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

Required skills include:

Ability to:

- integrate equipment maintenance and lubrication strategies with production requirements
- interpret manuals, other technical information, diagrams and drawings
- identify maximum power demand for mill
- identify typical range of power demand for mill taking into account scope of equipment and average production requirements.

Required knowledge includes:

Knowledge of:

- types of electric motors and their advantages and disadvantages
- motor control and motor protection strategies
- mechanical power transmission types and principles including:
 - direct drives
 - belt drives
 - chain drives
 - gears
- factors influencing the velocity of particles in free air and in positive and negative air streams
- design principles used in exhaust systems for fans, ductwork and dust collectors
- advantages and disadvantages of axial flow, propeller and centrifugal fans
- advantages and disadvantages of forward, backward and radial bladed rotors
- purpose and function of instrumentation including:
 - proximity switches
 - position sensors
 - transducers
 - tachometers
 - flow meters
 - weighers
 - load cells
 - bin level indicators
 - pressure switches
 - PLCs, SCADA (System Control And Data Acquisition systems) and other programmable instrumentation and systems.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this Unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify mill equipment and its location and function • determine control equipment and control options for mill • establish risk management and contingency strategies for mill power and automation.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • equipment manuals including operating parameters • specifications, control points and processing parameters. • break and reduction roll process and related equipment and services • conditioned grain suitable for the break and reduction roll process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This Unit should be assessed together with core Units and other Units of Competency relevant to the function or work role.</p>
<p>Guidance information for</p>	<p>To ensure consistency of performance, competency should be demonstrated on more than one occasion</p>

assessment	over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
------------	---

Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Mill	The term mill is used to refer to the whole mill site including the actual milling equipment, equipment used for associated processes, and transport, warehouse, maintenance, testing and administration facilities.
Fuel	Fuel refers to hydrocarbon energy sources consumed on site including coal, gas (LNG/LPG), diesel, petrol, fuel oil etc.
Equipment may include:	<ul style="list-style-type: none"> • rollers • purifiers • sifters • gravity feeds • pneumatic feeds • pumps • transformers, switchboards, motors and circuit protection.
Balancing negative pressure air systems	Balancing of negative air pressure systems may be done manually or through setting and monitoring of automatic air control valves.

Unit Sector(s)

Grain Processing

FDFGR4002A Supervise testing processes for wheat and flour

Modification History

Not applicable.

Unit Descriptor

This Unit covers the establishment and supervision of specific quality and testing processes for wheat and flour in a flour mill. The Unit covers the setting of tests to be undertaken, the establishment of acceptable limits and maintaining of accuracy in the mill testing regime.

Application of the Unit

This Unit applies to a flour mill supervisor who is responsible for establishing and supervising the quality regime operating in the mill including compliance with regulatory and commercial requirements. This Unit covers the specific skill and knowledge required for an effective testing regime in a flour mill. The Unit applies to all industrial flour mills including semolina mills and mills without purifiers. It includes ensuring testing and monitoring processes are established and followed and implementation of procedures to be followed in the event of a failure to achieve required performance. The emphasis in this Unit is on the grain and flour specific quality and testing processes used in flour milling. The Unit provides specific industry skill and knowledge and complements other more general quality and compliance Units including Units relating to Hazard Analysis And Critical Control Points (HACCP), and lean manufacturing.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil.

Employability Skills Information

This Unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify desired flour specification and other relevant factors for mill products and performance	1.1 Identify customer specification. 1.2 Review range and availability of suitable grain. 1.3 Set target range for grain and flour tests to achieve customer specification, consistency and maximum yield. 1.4 Identify mill critical control points. 1.5 Identify regulatory requirements relevant to mill and mill products.
2. Establish sampling procedures and tests for grain	2.1 Determine tests and sampling for received grain. 2.2 Determine tests and sampling for grists. 2.3 Determine tests and sampling for grain conditioning.
3. Establish sampling procedures and tests for flour	3.1 Determine flour tests to be undertaken at each reduction stage. 3.2 Determine number of samples to be taken to ensure representative results are achieved. 3.3 Determine reference tests required for milling. 3.4 Establish procedures for storage and labelling of samples.
4. Establish statistical process control procedures for mill	4.1 Establish procedures for recording of test results and monitoring period. 4.2 Establish normal distribution standard deviation targets for each test. 4.3 Monitor standard deviations for out of control results. 4.4 Review results against reference tests. 4.5 Determine root cause of out of control results.
5. Establish procedures for test equipment maintenance and accuracy	5.1 Establish maintenance schedules for test equipment in conjunction with suppliers and maintenance staff. 5.2 Identify schedule and staff for calibration of test equipment. 5.3 Ensure written procedures for each test identify actions to be followed in the event of actual or suspected equipment malfunction. 5.4 Arrange for testing of control samples at commencement of each shift or run. 5.5 Record test results and establish monitoring procedures to identify operator or equipment test result variations not related to variation in wheat or flour. 5.6 Arrange for operator training or equipment variation as appropriate.

Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

Required skills includes:

Ability to:

- supervise wheat and flour related tests including tests for:
 - moisture
 - contamination/purity
 - protein level
 - protein quality
 - ash content
 - colour
 - starch proportion
 - gluten elasticity and extensibility
- apply basic statistical skills sufficient to calculate averages, means and population and sample standard deviations from given data
- determine tests appropriate to HACCP system critical control points
- determine maintenance schedule and procedures for test equipment
- determine calibration procedures and schedule for test equipment.

Required knowledge includes:

Knowledge of:

- effect of reduction and break stages on flour characteristics including:
 - protein level
 - protein quality
 - ash content
 - colour
 - starch proportion
 - dough rheology
- test and test procedures appropriate to grain including:
 - sample appearance and smell
 - sieving for sample purity
 - near infrared test (NIR) and other tests for moisture, protein content, colour and grain hardness
 - difference between "as is" and "dry weight" and moisture corrected moisture results and conversion of other parameters
 - gluten washing test for protein quality
 - Hagberg Falling Number test including conversion of results to Perten Liquefaction

Numbers

- Kern chondrometer test and other specific weight tests
- tests and test procedures related to flour including:
 - NIR tests for flour moisture, protein content, colour, water absorption, ash content
 - Colour testing using Kent-Jones and Martin flour colour grader
 - Pekar test
 - Laboratory sieve tests
 - Brabender Extensograph and Farinograph test for dough stretching
 - viscosity tests
 - starch damage tests (Farrand method etc.)
 - Chittick test for carbon dioxide release
 - baking tests
- reference tests used for calibration including:
 - oven test for moisture
 - Zeleny test for protein quality
 - Single Kernel Characterisation System (SKCS) test
 - Stenvert test for hardness
 - Electrophoresis test for variety
 - Image analysis for particle size and colour
 - muffle furnace test for ash content
 - fibre tests
- expected extraction rate for different stages of the milling process
- Australian grain characteristics relevant to milling including:
 - variety
 - wheat segregations including soft, Australian Premium White (APW), Hard, Prime Hard (PH)
 - other Australian grain segregations
- typical composition of bread, biscuit and cake making flours including moisture, sugar, starch, protein, fibre, and mineral matter
- flour characteristics giving rise to faults in bread, pasta or other flour based products including:
 - incorrect flour strength
 - incorrect *alpha*-amylase activity
 - incorrect amount of damaged starch
 - bran contamination
 - incorrect improver dosage
 - heat damaged wheat
 - tainted flour
- microbiology tests for grain and flour
- tests used in manufacture of byproducts.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this Unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • determine tests appropriate to grain used in, and products made by a mill • determine sampling rates for tests • integrate testing regime with HACCP system • maintain integrity of mill testing regime through use of control and reference tests and appropriate calibration and maintenance of test equipment.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • equipment manuals including operating parameters • specifications, control points and processing parameters • break and reduction roll process and related equipment and services • conditioned grain suitable for the break and reduction roll process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This Unit should be assessed together with core Units and other Units of Competency relevant to the function or work role.</p>
<p>Guidance information for</p>	<p>To ensure consistency of performance, competency</p>

assessment	should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
------------	--

Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Mill	The term mill is used to refer to the whole mill site including the actual milling equipment, equipment used for associated processes, and transport, warehouse, maintenance, testing and administration facilities.
Stages of the flour milling process are:	<ul style="list-style-type: none"> • wheat intake • conditioning • feed to first break • flour coming off each mill i.e. from break and reduction rollers • blending and processing • packing and/or dispatch.
Reference tests	Reference tests are tests which can be used for calibration of other test equipment and procedures. Reference tests can also refer to time consuming or non-standard tests used for specific flours or for investigating unusual results in other tests.
Alpha-amylase	Alpha-amylase is one of the enzymes which break down starch in germinating grain.
Improvers	Improvers are substances which improve the baking quality of flour.

Unit Sector(s)

Grain Processing

FDFGR4003A Manage mill logistics and support services

Modification History

Not applicable.

Unit Descriptor

This Unit covers the management of support and logistics services to ensure safe and efficient operation of a flour mill. The Unit covers establishing and supervising the handling, storage, despatch and distribution of materials including grain, flour and byproducts. It also covers supervision of hygiene, OHS, pest control and security procedures.

Application of the Unit

This Unit applies to a flour mill manager and other senior staff who are responsible for determining and supervising logistics and support services for a flour mill to ensure efficient operation of the mill and compliance with regulatory and commercial requirements. The Unit applies to industrial milling of all types of grain. Logistics and services covered by the Unit include stock control, transport and storage, blending, packing and despatch, security, and pest control. Supervision of dust control procedures is also covered in the Unit.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil.

Employability Skills Information

This Unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review mill plan and flow diagram to ensure all logistics and support services are correctly identified	1.1 Ensure incorporation of grain and other materials receiving locations. 1.2 Ensure incorporation of all grain, flour and by-product storage facilities. 1.3 Review mill flow diagram for inclusion of all break and reduction system equipment and intermediate storage facilities. 1.4 Ensure incorporation of all administration, maintenance, utilities and storage areas. 1.5 Identify directly milled and blended flour products in product flow diagrams and relate to storage and despatch facilities.
2. Support product flow through mill	2.1 Review facilities and set operating procedures for grain receipt. 2.2 Ensure operators have required training and test materials for testing grain. 2.3 Ensure storage availability for received grain including any divisions. 2.4 Determine intermediate storage requirements based on forward production schedule. 2.5 Establish product handling, storage and despatch procedures for just-in-time customers. 2.6 Establish product handling, storage and despatch procedures for daily, weekly or other regular deliveries. 2.7 Identify any non-standard storage and despatch requirements. 2.8 Establish and supervise inspection and cleaning regime for bins and silos. 2.9 Establish and supervise temperature and moisture testing for storage bins and silos.
3. Establish mill stock control system	3.1 Integrate warehouse control and information requirements with mill management and control system. 3.2 Ensure customer orders are passed as soon as possible after receipt to production, storage, and transport departments. 3.3 Establish bin stock measuring frequency and method. 3.4 Set and monitor weighbridge operation and recording procedures for all bulk inward and outward grain and mill products. 3.5 Identify locations for automatic and manual recording of internal product transfers.

- 3.6 Establish authorisation and access procedures for use of additives and adjuncts.
- 4. Supervise blending of flours to meet orders
 - 4.1 Supervise internal transfer of flour to holding bins.
 - 4.2 Determine if volumetric, on-line or batch blending is to be used.
 - 4.3 Determine formula for required blend including any required additives and adjuncts.
 - 4.4 Specify flours to be used to most economically achieve required formula.
 - 4.5 Supervise blending operation including data entry into batch or process control computer.
 - 4.6 Supervise transfer of blended flour to packing, despatch or storage.
- 5. Supervise product despatch
 - 5.1 Set and monitor "give away" margin above minimum weight in packed flour.
 - 5.2 Supervise operation of bag and sack packing, closing equipment.
 - 5.3 Determine where required if enterprise or contract vehicles are to be used.
 - 5.4 Supervise bag, sack and bulk flour despatch as appropriate.
 - 5.5 Supervise packing and despatch of by-products including palletisation of wheatfeed where required.
- 6. Manage OHS, mill safety, security and regulatory procedures for mill or area of responsibility
 - 6.1 Establish or review perimeter security.
 - 6.2 Establish site access control point for all vehicle and pedestrian traffic.
 - 6.3 Review adequacy of truck holding and turnaround facilities.
 - 6.4 Establish or review site OHS plan and procedures.
 - 6.5 Ensure personal protective equipment (PPE), pedestrian walkways, and other pedestrian safety procedures are known and followed.
 - 6.6 Review fire protection plan and fire protection facilities including location and type of extinguishers, suppression systems and alarms.
 - 6.7 Review visitor reception, registration and escort protocols for visitor access to non-administration areas.
 - 6.8 Establish compliance procedures for environmental, food safety and other regulatory requirements.
- 7. Review mill dust control procedures
 - 7.1 Review equipment and storage cleaning schedule and procedures for dust control effectiveness.
 - 7.2 Arrange regular inspections for potential ignition sources.
 - 7.3 Review current dust control and dust explosion relief equipment and arrange for any required maintenance or

- additional dust control/dust explosion relief equipment.
- 7.4 Establish training in dust control procedures for all employees and contractors.
8. Manage pest control procedures
- 8.1 Review site pest control plan.
- 8.2 Ensure all employees are trained to identify signs of insect, rodent and bird infestation.
- 8.3 Establish inspection, sampling and testing regime for all equipment, storage areas and all inward and outward goods.
- 8.4 Determine cause and type of infestations.
- 8.5 Specify appropriate control measures for insect.
- 8.6 Supervise protection of employees, community and product during treatments.
- 8.7 Ensure compliance with regulations and environmental guidelines.
- 8.8 Establish pest reporting and treatment recording procedures.
9. Manage contractors for mill or area of responsibility
- 9.1 Establish schedule of contractors and their capabilities for services not performed in-house.
- 9.2 Establish procedures and delegations for engaging contractors.
- 9.3 Establish site access register for contractors.
- 9.4 Ensure contractors are briefed on all mill regulatory and commercial requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

Required skills include:

Ability to:

- interpret drawings and schematics
- calculate grain holding capacity including in terms of days of production
- specify grain divisions on receipt to suit later blending requirements
- schedule flour blending to suit customer requirements and transport logistics
- identify pests
- assess equipment and storage areas for dust control risks.

Required knowledge includes:

Knowledge of:

- methods of storing grain, flour, bran and byproducts
- temperature and moisture testing techniques for grain storage bins and silos
- dust control techniques
- dust explosion relief systems and equipment
- fire warning and control techniques
- flour blending techniques and equipment
- flour milling process including purpose of the break and reduction systems
- advantages and disadvantages of volumetric, batch and on-line flour blending techniques
- equipment used in flour blending including:
 - weighers
 - mixers and homogenisers
 - pneumatic and mechanical feeders and conveyors
 - magnets, sifters and exhausts
- identification characteristics for pest insects, rodents and birds
- signs of insect and rodent infestation
- strategies to eliminate or reduce pests
- optimum treatments for insect, rodent and bird infestations
- safe procedures for handling, using and storing pesticides and dangerous goods, identifying identification of information provided on labels, and where required, handling of gas cylinders
- typical risk management and contingency planning techniques for a flour mill.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this Unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • relate rate of production to storage capacity • identify requirements of mill customers and determine if orders are to be directly filled or met out of storage • interpret customer flour requirements and determine best blend recipe • manage pest and dust control techniques in a mill • access and use mill control system.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • equipment manuals including operating parameters • specifications, control points and processing parameters • break and reduction roll process and related equipment and services • conditioned grain suitable for the break and reduction roll process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This Unit should be assessed together with core Units and other Units of Competency relevant to the function or work role.</p>

Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
-------------------------------------	---

Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Mill	<p>The term mill is used to refer to the whole mill site including the actual milling equipment, equipment used for associated processes, and transport, warehouse, maintenance, testing and administration facilities.</p>
Mill management and control system	<p>Most flour mills will use a software program and associated hardware to control and manage all or part of a mill. These mill management and control systems can be known by a variety of generic and proprietary names including:</p> <ul style="list-style-type: none"> • Systems Control and Data Acquisition (SCADA) software • Enterprise Resource Planning (ERP) systems • Materials Resource Planning (MRP) systems • various proprietary names.
Non-standard storage and despatch requirements	<p>Non-standard storage and despatch requirements include:</p> <ul style="list-style-type: none"> • storage location and time for any products that need ageing before despatch • buffer product requirements for market fluctuations, irregular orders, shutdowns and other non-production periods • contingency product storage requirements.
Site OHS plan and procedures include:	<ul style="list-style-type: none"> • employee training • tagging and lock-out procedures • PPE distribution and use requirements • marking of pedestrian walkways • confined space procedures • visitor registration and allowed/restricted access areas • incident procedures • evacuation assembly areas • first-aid facilities • notification protocols to emergency services

	<ul style="list-style-type: none"> • training and registration of fire and first aid wardens.
Pest control methods may include:	<ul style="list-style-type: none"> • fumigation • application of insecticides, dusts, gas and/or baits (using registered controlled and generally available substances). <p>Where use of pesticides include work conditions covered by SafeWork Australia and/or State and Territory health and safety authorities, the assessment criteria and methods prescribed by these authorities must also be met.</p>
Fire protection plan and fire protection facilities include:	<ul style="list-style-type: none"> • location and type of extinguishers • suppression systems • alarms • appointment of wardens • evacuation areas and procedures • notification and liaison procedures for emergency services.
Contractors	<p>Contractors used will vary according to each mill and may include contractors for:</p> <ul style="list-style-type: none"> • maintenance • transport • testing and accreditation services • labour supply • security.

Unit Sector(s)

Grain Processing

FDFGR4004A Establish and supervise dust control procedures in a grain processing enterprise

Modification History

Not applicable.

Unit Descriptor

This Unit applies to the establishment and supervision of dust control procedures in a grain milling enterprise. It includes procedures for the identification of risk factors, establishment of preventative and hygiene measures, use of explosion relief and fire suppression systems and arranging training for employees.

Application of the Unit

This Unit applies to managers and supervisors in grain related enterprises including flour and stock feed mills and grain storage facilities, who have responsibility for the development and detailed implementation of dust control and dust explosion prevention strategies in a grain related enterprise. For milling enterprises, this Unit goes beyond the overview level included in the Unit FDFGR4005A Manage mill logistics and support services.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Nil.

Employability Skills Information

This Unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor dust explosion risk factors	<ul style="list-style-type: none">1.1 Establish and monitor procedures for detecting potential explosive atmosphere.1.2 Set procedures for reporting visible dust leaks.1.3 Establish and enforce no smoking policy.1.4 Establish and monitor reporting regime for potential ignition sources.1.5 Establish and supervise manual and automatic temperature, smoke and moisture monitoring for all grain, flour, feed and other byproduct storage.1.6 Establish systems to minimise fungal and insect infestation caused temperature increases.
2. Establish dust control procedures	<ul style="list-style-type: none">2.1 Install and monitor dust aspiration or suction ventilation systems.2.2 Establish dust checking procedures for all confined spaces.2.3 Establish monitoring procedures for dust collector performance and output.2.4 Establish procedures for resealing of all dust leaks.2.5 Undertake random and periodical checks on performance of dust control procedures.2.6 Assess and approve any variation in cleaning and hygiene procedures.2.7 Minimise storage of combustible materials in mill.2.8 Establish minimum dust levels for mandatory use of personal protective equipment.2.9 Establish procedures for monitoring and control of environmental dust release.
3. Integrate equipment use, monitoring and maintenance with dust control procedures	<ul style="list-style-type: none">3.1 Establish regular cleaning schedule for all surfaces in contact with graining or flour.3.2 Establish mill equipment condition monitoring schedule with maintenance department.3.3 Establish regular lubrication schedules for bearings, pulleys, shafts and other moving and friction surfaces.3.4 Use anti-static materials where possible.3.5 Establish approval, tagging and monitoring procedures for use of all portable tools and equipment in mill.
4. Establish fire and dust explosion suppression systems	<ul style="list-style-type: none">4.1 Review adequacy of current dust control and dust explosion relief equipment and arrange for any required maintenance.4.2 Arrange for any required additional dust control/dust explosion relief equipment in existing protected areas.

-
- 4.3 Investigate potential for use of fire and explosion suppression systems in areas not currently protected.
 - 4.4 Locate and establish inspection regime for all explosion relief panels.
 - 4.5 Set test and maintenance procedures for all existing fire and explosion suppression systems.
5. Supervise dust and fire control training
- 5.1 Identify fire and dust wardens for mill areas.
 - 5.2 Establish emergency procedures.
 - 5.3 Identify dust and fire control content for use in induction training.
 - 5.4 Identify training needs of existing employees.
 - 5.5 Establish dust and fire control training arrangements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

Required skills include:

Ability to:

- analyse areas and equipment in grain enterprises for dust and fire risk
- schedule housekeeping, training, and maintenance procedures to achieve objectives while minimising impact on production including:
 - scheduling maintenance for dust suppression systems and equipment and explosion relief panels
 - bin/silo inspections and cleaning
- control potential ignition sources
- assess automatic and manual monitoring techniques against enterprise needs.

Required knowledge includes:

Knowledge of:

- technologies and techniques for controlling grain dust in grain milling, handling and storage facilities including:
 - pneumatic dust collection
 - housekeeping
 - enclosing of equipment
 - use of liquid additives
 - misting and fogging (where permitted)
- advantages and disadvantages of mechanical and pneumatic product conveying
- types of bin/silo and exhaust designs and implications for dust generation and control
- requirements for a grain dust explosion to occur including typical sources in a grain enterprise of:
 - oxygen
 - ignition
 - fuel
 - contained space
- effects of fungal and pest infestation on grain and flour temperature
- minimum explosive concentrations (MEC) for grain dust in the milling or storage operation (will vary according to the type of grain and particle size)
- location of bin explosion relief panels
- explosion suppression systems
- confined space procedures and regulations.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this Unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • assess equipment and processes for dust explosion and fire risk • into dust and fire control procedures into standard operating procedures for all employees • identify dust and fire control training requirements • consult with internal department heads and external organisations on dust control procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • equipment manuals including operating parameters • specifications, control points and processing parameters • break and reduction roll process and related equipment and services • conditioned grain suitable for the break and reduction roll process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This Unit should be assessed together with core Units and other Units of Competency relevant to the function or work role.</p>
<p>Guidance information for</p>	<p>To ensure consistency of performance, competency</p>

assessment	should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
------------	--

Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Mill</p>	<p>The term mill is used to refer to the whole mill site including the actual milling equipment, equipment used for associated processes, and transport, warehouse, maintenance, testing and administration facilities.</p>
<p>Dust</p>	<p>Dust refers to grain, flour and other combustible particles found in a grain enterprise that are capable of suspension in air.</p>
<p>Potential ignition sources</p>	<p>Potential ignition sources are any sources that may generate sparks or sufficient heat to start combustion and include:</p> <ul style="list-style-type: none"> • naked flames • welding • equipment sparking • hot equipment (motors etc.) • smoking • hot spots in grain and flour storage • static electricity.
<p>Dust and fire control training arrangements may include:</p>	<ul style="list-style-type: none"> • appointment of internal trainers • training delivered by equipment suppliers • appointment of an external training provider • setting an allocation for dust and fire control training in the training budget • rostering of employees for training • establishing training records • conduct of drills and exercises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for testing	<ul style="list-style-type: none">1.1 Samples are registered and prepared for testing1.2 Materials are prepared to meet requirements1.3 Services are confirmed as available and ready for use1.4 Equipment is selected, prepared and checked to confirm readiness for use1.5 Defects in samples, test materials and equipment are identified, rectified and/or reported
2. Perform testing	<ul style="list-style-type: none">2.1 Test method is carried out according to workplace procedures2.2 Equipment and materials are used according to workplace procedures2.3 Results are read and interpreted2.4 Out-of-standard results are identified and appropriate action taken
3. Complete testing	<ul style="list-style-type: none">3.1 Waste generated by the testing is monitored and cleared according to workplace procedures3.2 Equipment is prepared for cleaning3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	<ul style="list-style-type: none">4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify testing requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas. This may include other laboratory personnel, cellar, winemaker and production personnel
- confirm supply of necessary materials, equipment and services
- prepare samples for testing
- prepare materials as required
- confirm equipment status and condition. This may include:
 - confirmation that test equipment is operating accurately
 - recognising and rejecting contaminated or faulty glassware and/or equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- monitor the process and test equipment to identify out-of-standard results or non-compliance
- report and/or record corrective action according to workplace procedures
- follow procedures to repeat or validate results
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- identify, rectify or report environmental non-compliance
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- principles of the test method

- purpose of the test
- relevant standards and specifications and basic legislative requirements (e.g. quality, health, safety, labelling and equipment) and their implications
- procedures and operating parameters
- affect of process stages on results
- start-up and set-up procedures as required
- common causes and knock-on effects of inaccuracies or contamination, and preventive or corrective action required
- normal range of results for products tested
- recording requirements and procedures
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- recording requirements and procedures
- routine maintenance procedures.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare equipment and materials for conducting tests • conduct basic tests according to workplace requirements • identify out-of-standard results • conduct housekeeping and dispose of waste according to workplace standards • complete documentation.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to perform microbiological procedures	1.1 Materials are confirmed and available for use 1.2 Materials are prepared to meet requirements 1.3 Services are confirmed as available and ready for use 1.4 Equipment is selected, prepared and checked to confirm readiness for use
2. Perform microbiological procedures	2.1 Equipment is operated according to instructions 2.2 Procedures are carried out according to instructions 2.3 Equipment is monitored to confirm operating condition 2.4 Out-of-standard process, equipment performance or results and anomalies are identified, rectified and/or reported
3. Complete microbiological procedures	3.1 Waste generated by the procedure is disposed of according to workplace procedures 3.2 Equipment is prepared for cleaning 3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm equipment status and condition
- carry out tests according to workplace procedures
- read and interpret results as required
- record results as required and complete workplace information
- monitor the process and equipment to identify out-of-specification results or non-compliance
- take corrective action in response to out-of-specification results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- follow procedures to repeat or validate results as required
- differentiate between wine yeast and bacterial cells under a microscope as required
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards. This will include maintenance of aseptic environment
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- clean and sanitise equipment according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- perform oil emersion and phase contrast techniques according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- principles of the procedure
- purpose of the procedure
- relevant standards and specifications and basic legislative requirements (e.g. quality, health,

- safety, labelling and equipment) and their implications
- procedure specification and operating parameters
 - affect of process stages on results
 - start-up and set-up procedures required
 - how to read, interpret and record results as required
 - normal range of results for procedures performed
 - Occupational health and safety (OHS) hazards and controls
 - procedures and responsibility for reporting problems
 - environmental issues and controls
 - procedures and responsibility for reporting problems
 - cleaning and sanitising requirements of equipment and work area
 - aseptic requirements and techniques
 - growth characteristics of yeast/bacteria
 - lock-out and tag-out procedures as required
 - emergency and troubleshooting procedures for a range of operational problems
 - services required
 - common causes and knock-on effects of inaccuracies or contamination, and preventive or corrective action required
 - shutdown sequence as required
 - environmental issues and controls
 - recording requirements and procedures
 - cleaning and sanitising procedures where relevant
 - routine maintenance procedures where relevant
 - oil emersion and phase contrast techniques where relevant
 - relationship with other standards where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements for packaging testing	<p>1.1 Key packaging equipment is identified and its function and operating principles explained</p> <p>1.2 Enterprise packaging line quality assurance policy and procedures are interpreted and applied to the work place</p>
2. Prepare for testing	<p>2.1 Samples are registered and prepared for testing</p> <p>2.2 Services are confirmed and available and ready for use</p> <p>2.3 Appropriate equipment is selected, prepared and checked in readiness for use</p> <p>2.4 Defects in samples, materials and test equipment are identified, rectified and/or reported</p>
3. Perform on-line packaging tests	<p>3.1 Test method is carried out according to workplace procedures</p> <p>3.2 Equipment and materials are used according to workplace procedures</p> <p>3.3 Results are read and interpreted accurately</p> <p>3.4 Out-of-standard results are identified and appropriate action taken</p>
4. Complete on-line packaging tests	<p>4.1 Waste generated by the procedure is disposed of according to workplace procedures</p> <p>4.2 Equipment is cleaned, stored and maintained according to workplace procedures</p> <p>4.3 Work is conducted in accordance with workplace environmental guidelines</p>
5. Record information	<p>5.1 Workplace information is recorded in the appropriate format</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify testing requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm supply of necessary materials, equipment and services
- liaise with other work areas. This may include:
 - laboratory personnel
 - bottling and packaging
 - marketing
 - maintenance
 - warehouse
- prepare samples for testing
- confirm test equipment status and condition. This may include:
 - confirming that test equipment is operating accurately
 - recognising and rejecting contaminated or faulty glassware and equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- operate test equipment according to workplace procedures and manufacturer instructions
- carry out routine tests
- read and interpret results as required
- record results as required and complete workplace information
- monitor the process and test equipment to identify out-of-specification results or non-compliance
- take corrective action in response to out-of-specification results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- follow procedures to repeat or validate results as required
- shut down test equipment in response to an emergency situation
- shut down test equipment in response to routine shutdown requirements
- sort, collect, treat, recycle or dispose of waste
- maintain work area to meet housekeeping standards.
- clean and store equipment
- dismantle test equipment in preparation for cleaning according to enterprise procedures
- take samples according to enterprise procedures

- carry out routine maintenance according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- utilise aseptic techniques according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- common bottling and packaging techniques
- enterprise policy and procedure with regard to:
 - packaging line quality assurance testing
 - occupational health and safety (OHS)
- purpose and principles of the test
- relevant standards and specifications, and basic legislative requirements (e.g. quality, health, safety, labelling and equipment) and their implications
- procedure specification and operating parameters
- affect of sampling and testing stages on results or outcomes
- start-up and set-up procedures required
- services required
- common causes and knock-on effects of inaccuracies and preventive or corrective action required
- how to read, interpret and record results as required
- normal range of results on products or packaging items tested
- emergency procedures for a range of operational problems
- procedures and responsibility for reporting problems
- recording requirements and procedures
- OHS hazards and controls
- lock-out and tag-out procedures as required
- shutdown sequence as required
- cleaning and sanitising requirements of equipment and work area
- environmental issues and controls
- sampling plan and procedures where relevant
- cleaning and sanitising procedures where relevant
- routine maintenance procedures where relevant
- aseptic techniques where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials and equipment	1.1 Materials are confirmed and available for use 1.2 Materials are prepared to meet requirements 1.3 Services are confirmed as available and ready for use 1.4 Equipment is selected, prepared and checked to confirm readiness for use
2. Prepare solutions and stains	2.1 Equipment is monitored to confirm operating condition 2.2 Out-of-specification process, equipment performance, or results and anomalies are identified, rectified and/or reported 2.3 Solutions and stains meet specification 2.4 Waste generated by the process is monitored and cleared according to workplace procedures 2.5 Work is conducted in accordance with workplace environmental guidelines
3. Record information	3.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify solution and stain requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm supply of necessary materials, equipment and services. This may include:
 - selecting the appropriate equipment, quality of water and concentration of reagents
 - checking the shelf life of materials
- liaise with other work areas
- prepare materials as required
- confirm equipment status and condition. This may include:
 - recognising and rejecting contaminated or faulty glassware and equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- set up and/or start up equipment as required
- operate basic laboratory equipment according to workplace procedures
- deliver accurate measurements of materials
- monitor the process and equipment operation to identify out-of-specification results or non-compliance. This may include:
 - the handling and combining of reagents
 - measures to prevent cross-contamination
- meet solution and stain specifications. This may include:
 - concentration
 - contents
 - homogenous mix
- take corrective action and/or report out-of-specification results, anomalies or non-compliance
- report and/or record corrective action as instructed
- complete workplace information, which may include labelling
- store solutions and stains according to workplace procedures. This may include consideration of light, temperature, contamination and shelf-life
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements. This may include removing consumables
- record workplace information

- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- clean and sanitise equipment according to enterprise procedures
- carry out routine maintenance according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- utilise aseptic techniques according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and features of basic laboratory materials
- purpose and features of a range of basic laboratory solutions and stains
- affect of inappropriate storage on solution and stain quality and performance
- emergency and troubleshooting procedures for a range of operational problems
- affect of process stages on results and outcomes
- process specifications, procedures and operating parameters
- start-up and set-up procedures as required
- services required
- common causes and knock-on effects of inaccuracies or contamination, and preventive or corrective action required
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- cleaning and sanitising requirements of equipment and work area
- recording requirements and procedures
- cleaning and sanitation procedures where relevant
- routine maintenance procedures where relevant
- environmental management procedures where relevant
- aseptic techniques where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • prepare equipment and materials • prepare solutions and stains according to workplace requirements • identify out-of-standard results • conduct housekeeping and dispose of waste according to workplace standards • complete documentation.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over

EVIDENCE GUIDE	
	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from laboratory manager, supervisor, or senior operator
Equipment	Equipment may vary and should include that listed in the SOPs
Materials	<p>Materials include:</p> <ul style="list-style-type: none"> • reagents • purified water
Solutions and stains	<p>Solutions and stains include:</p> <ul style="list-style-type: none"> • those required for standard analytical and microbiological procedures and other tests determined by the scope and classification of the laboratory

RANGE STATEMENT	
Confirming equipment status	Confirming equipment status involves: <ul style="list-style-type: none"> • checking that hygiene and sanitation standards, safety standards, pre-start requirements are met and that equipment is operational • checking the operation and/or calibration of measuring instrumentation
Services	Services may include: <ul style="list-style-type: none"> • power • water • gases
Information systems	Information systems may be: <ul style="list-style-type: none"> • print or screen based

FDFLAB2005A Prepare and pour culture media

Modification History

This unit supersedes and is equivalent to FDFLABPCMA Prepare and pour culture media.
 September 2012: clarified pre-requisite information.
 April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to prepare and dispense culture media for microbiological tests in a winery laboratory. Work is usually done under routine supervision.
------------------------	--

Application of the Unit

Application of the unit	This unit has application in a wine operations laboratory environment. It typically targets the worker responsible for conducting microbiological tests.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFLAB2012A	Maintain aseptic environment* <i>FDFLAB2011A Use basic laboratory equipment</i>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials and equipment	1.1 Appropriate materials are selected and confirmed as available for use 1.2 Materials are prepared to meet requirements 1.3 Work area is prepared to meet requirements 1.4 Services are confirmed as available and ready for use 1.5 Equipment is selected, prepared and checked to confirm readiness for use
2. Prepare culture media	2.1 Media and solvent are mixed thoroughly according to workplace procedures and manufacturer instructions 2.2 Media is placed in appropriate vessels for sterilisation 2.3 Steriliser is loaded and operated to achieve optimum sterilising conditions for culture media 2.4 Sterilisation cycle is monitored to confirm equipment operating condition 2.5 Appropriate personal protective equipment is used when removing media from steriliser 2.6 Culture media is cooled as required 2.7 Out-of-specification process and equipment performance is identified, rectified and/or reported
3. Complete preparation of culture media	3.1 Heat labile additions are made using aseptic technique as required 3.2 Media is dispensed aseptically as specified 3.3 Culture media is stored and labelled according to instructions 3.4 Media is monitored to confirm quality specifications are maintained 3.5 Equipment and work area are cleaned and/or disinfected after use 3.6 Waste generated by the process is monitored and cleared according to workplace procedures 3.7 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify culture media requirements
- select, fit and use appropriate personal protection clothing and/or equipment
- confirm equipment status and condition. This may include recognising and rejecting contaminated or faulty glassware and equipment
- confirm supply of necessary materials, equipment and services. This may include recognising and rejecting out-of-specification materials
- liaise with other work areas
- set up and start up equipment as required
- operate equipment according to workplace procedures
- monitor the process and equipment operation to identify out-of-specification results or non-compliance. This may include:
 - the handling and combining of materials
 - the utilisation of aseptic techniques
- make culture media to specification
- take corrective action and/or report out-of-specification results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- complete workplace information, which may include labelling
- store dry and prepared culture media according to workplace procedures. This may include consideration of:
 - light
 - temperature
 - shelf-life
 - contamination
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements. This may include removing consumables
- maintain work area to meet housekeeping standards. This will include maintenance of aseptic environment
- record workplace information
- clean and store equipment
- clean and sanitise equipment according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation,

including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and features of culture media
- affect of inappropriate storage on culture media quality and performance
- emergency and troubleshooting procedures for a range of operational problems
- affect of process stages on results and/or outcomes
- process specifications, procedures and operating parameters
- services required
- common causes of inaccuracies or contamination, and preventive or corrective action required
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- cleaning and sanitising requirements of equipment and work area
- recording requirements and procedures
- aseptic requirements and techniques
- cleaning and sanitising procedures where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Record and store laboratory data	<ul style="list-style-type: none">1.1 Laboratory data is coded and/or transcribed according to workplace procedures1.2 Data is recorded according to document quality assurance requirements1.3 Data is entered into laboratory information system or record sheets1.4 Errors in data are rectified using enterprise procedures1.5 Data is stored and retrieved using appropriate files and/or application software
2. Interpret laboratory data	<ul style="list-style-type: none">2.1 The appropriate source for information is identified and data retrieved2.2 Information in tables, charts and graphs is interpreted and applied as required2.3 Deviations in performance are identified and anomalies in data are reported to supervisor
3. Maintain accurate records	<ul style="list-style-type: none">3.1 Information is transcribed in an accurate and timely manner3.2 The accuracy of records is verified according to workplace procedures3.3 Workplace records are filed and stored according to workplace procedures3.4 Reference documents are filed in a logical manner, kept up to date and secured where necessary3.5 Workplace confidentiality standards are maintained

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- identify and access information management system to interpret and verify laboratory data
- code, record and check the documentation of data
- use a simple spreadsheet or database program to store and retrieve data
- calculate results using whole numbers, simple fractions and decimals
- calculate percentages, ratios and proportions
- verify calculations by using estimation techniques and rectify mistakes
- record results in the required format. This may include:
 - scientific notation
 - unit conversions
 - multiples and submultiples
 - significant figures
 - rounding off
- read and apply information from simple graphs, charts and tables
- identify deviations in performance. This may involve checking data against specifications, standards and previous test results
- maintain the confidentiality of data according to workplace procedures
- keep records up to date
- secure records as required
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and principles of workplace information management system, including:
 - document control
 - verification
 - confidentiality
- workplace policy and procedures with regard to:
 - coding laboratory data (e.g. tank location, batch, analysis details, vintage, variety, stage

- of production and symbols, such as + or –)
- entering laboratory data
 - storing laboratory data
 - retrieving laboratory data
 - communicating laboratory data
 - verifying laboratory data
 - correcting mistakes
 - mathematical symbols and diagrams
 - mathematical processes
 - estimation processes
 - purpose of graphs, charts and tables
 - common expressions of concentration, including:
 - weight per volume of solution (w/v)
 - percentage weight per volume (% (w/v))
 - parts per million (ppm)
 - milligrams per litre (mgL⁻¹)
 - weight per weight of solution (w/w)
 - volume per volume of solution (v/v)
 - percentage volume of solution (% (v/v))
 - molarity (M)
 - normality (N)
 - presentation of laboratory data in the information management system
 - procedures and responsibility for reporting problems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to standardise solution	1.1 Materials are confirmed and available for use 1.2 Materials are prepared to meet requirements 1.3 Services are confirmed as available and ready for use 1.4 Equipment is selected, prepared and checked to confirm readiness for use
2. Standardise the solution	2.1 Equipment is monitored to confirm operating condition 2.2 Out-of-specification process, equipment performance, or results and anomalies are identified, rectified and/or reported 2.3 Calculations are completed accurately following workplace procedures 2.4 Standardised solution meets specification
3. Complete standardisation of solution	3.1 Standardised solution is stored according to instructions 3.2 Equipment is disassembled and prepared for cleaning 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm supply of necessary materials, equipment and services. This may include:
 - selecting the appropriate equipment, quality of water, purity and concentration of reagents and indicators
 - checking shelf-life dates
- liaise with other work areas
- prepare materials as required
- confirm equipment status and condition. This may include:
 - recognising and rejecting contaminated or faulty glassware and equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- set up and start up equipment as required
- operate laboratory equipment according to workplace procedures
- standardise solution to meet specification
- determine concentration of solution accurately, using a calculator and example calculations
- monitor the process and equipment to identify out-of-specification results or non-compliance. This may include:
 - handling and combining of reagents
 - measures to prevent cross-contamination
- take corrective action in response to out-of-specification results, anomalies or non-compliance
- report and/or record corrective action as instructed
- complete workplace information. This may include labelling
- store solution according to workplace procedures. This may include consideration of:
 - light
 - temperature
 - contamination
 - shelf-life
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation as required
- shut down equipment in response to routine shutdown requirements as required. This may

- include removing consumables
- record workplace information
- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- clean and sanitise equipment according to enterprise procedures
- carry out routine maintenance according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- basic chemical principles behind the process
- purpose and features of basic laboratory materials
- purpose and features of a range of basic laboratory solutions
- affect of inappropriate storage on solution quality and performance
- emergency and troubleshooting procedures for a range of operational problems
- affect of process stages on results and outcomes
- process specifications, procedures and operating parameters
- start-up, set-up procedures as required
- services required
- common causes and knock-on effects of inaccuracies or contamination, and preventive or corrective action required
- process of accurately following example calculations
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- cleaning and sanitising requirements of equipment and work area
- recording requirements and procedures
- cleaning and sanitising procedures where relevant
- routine maintenance procedures where relevant.

Evidence Guide

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • conduct calculations to analyse scientific data • document and record analytical data according to workplace standards • identify trends, anomalies and variations • identify causes for variations.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

EVIDENCE GUIDE	
	possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • laboratory data • Standard Operating Procedures (SOPs) • specifications • standards • certificates of compliance • quality assurance records • scientific articles or publications • reference texts • product information and purchase details (e.g. supplier catalogues and handbooks) • calibration records • maintenance or service records • production schedules • instructions • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions
Data	<p>Laboratory data may include:</p> <ul style="list-style-type: none"> • the results of inspections, tests, quality or safety audits, trials, product or process non-compliance, materials compliance validation, calibration or maintenance schedules

RANGE STATEMENT	
	<p>Data may be presented in the form of:</p> <ul style="list-style-type: none"> graphs, histograms, bar charts, pie charts, control charts and tables <p>Data may be recorded:</p> <ul style="list-style-type: none"> manually on worksheets through the use of computer-based systems and entered into spreadsheets or databases
Calculations	<p>Calculations may be performed:</p> <ul style="list-style-type: none"> manually or with a calculator or computer software
Arithmetic processes	<p>Arithmetic processes may include:</p> <ul style="list-style-type: none"> calculations involving percentages, ratios, proportion, factors, tolerances, areas, volumes, weights, concentrations, cell counts and process variables
Record verification	<p>Verification of records may be achieved by:</p> <ul style="list-style-type: none"> consulting standards, specifications, analytical tolerances, document version control, signatories and dates
Reports	<p>Reports will involve:</p> <ul style="list-style-type: none"> verification of inspection and test data against specifications before presenting results to supervisor using standard laboratory forms, worksheets, spreadsheets and databases
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> print or screen based

Unit Sector(s)

Unit sector	Wine operations
--------------------	-----------------

Custom Content Section

Not applicable.

FDFLAB2009A Perform packaging quality control procedures

Modification History

This unit supersedes and is equivalent to FDFLABPQCA Perform packaging quality control procedures.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to carry out laboratory tests and inspections on incoming packaging materials and outgoing products. It also covers the underpinning knowledge required to participate in bottling and packaging process improvement activities.
------------------------	---

Application of the Unit

Application of the unit	This unit has application in a wine operations laboratory environment. It typically targets the worker responsible for ensuring packaging procedures meet quality standards.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFLAB2011A	Use basic laboratory equipment

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements for packaging testing	1.1 Key features of packaging materials are identified and their quality characteristics explained 1.2 Enterprise packaging line quality assurance policy and procedures are interpreted and applied to the work place
2. Prepare for testing	2.1 Samples are registered and prepared for testing 2.2 Services are confirmed and available and ready for use 2.3 Appropriate equipment is selected, prepared and checked in readiness for use 2.4 Defects in samples, test materials and equipment are identified, rectified and/or reported
3. Perform packaging tests	3.1 Test method is carried out according to workplace procedures 3.2 Equipment and materials are used according to workplace procedures 3.3 Results are read and interpreted accurately 3.4 Out-of-standard results are identified and appropriate action taken
4. Complete packaging tests	4.1 Waste generated by the procedure is disposed of according to workplace procedures 4.2 Equipment is cleaned stored and maintained 4.3 Work is conducted in accordance with workplace environmental guidelines
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify testing requirements
- interpret enterprise policy and procedures and apply them in the enterprise. These may cover occupational health and safety (OHS) and quality assurance
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm supply of necessary materials, equipment and services
- liaise with other work areas. This may include:
 - laboratory personnel
 - bottling and packaging
 - marketing
 - suppliers
- prepare samples for testing. This may include:
 - verification procedures
 - specific production specifications
 - data logging
- confirm equipment status and condition. This may include:
 - confirming that test equipment is operating accurately
 - recognising and rejecting contaminated or faulty glassware and equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- operate equipment according to workplace procedures and manufacturer instructions
- carry out routine and specialised tests
- read and interpret results as required
- record results as required and complete workplace information
- monitor the process and test equipment to identify out-of-specification results or non-compliance
- identify key features of packaging materials and recognise faults or out-of-specification standards
- take corrective action in response to out-of-specification results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- follow procedures to repeat or validate results as required
- sort, collect, treat, recycle or dispose of waste

- shut down test equipment in response to an emergency situation
- shut down test equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards.
- clean, store and maintain equipment
- dismantle equipment in preparation for cleaning according to enterprise procedures
- take samples according to enterprise procedures
- carry out routine maintenance according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- manufacture and design of packaging items, which may include:
 - corks and closures
 - cartons
 - labels
 - capsules
 - softpack components
 - other packaging items
- operating principles of common bottling and packaging equipment
- quality standards and specifications of packaging items
- common causes of faults or below standard packaging processes and items, and preventive or corrective action required
- enterprise policy and procedures with regard to:
 - packaging line quality assurance testing
 - OHS
- purpose and principles of test
- relevant standards and specifications and basic legislative requirements (e.g. quality, health, safety, labelling and equipment) and their implications
- procedure specification and operating parameters
- affect of sampling and testing stages on results and/or outcomes
- start-up and set-up procedures required
- services required
- common causes and knock-on effects of inaccuracies and preventive or corrective action required
- how to read, interpret and record results as required
- normal range of results on products and/or packaging items tested

- recording requirements and procedures
- OHS hazards and controls
- lock-out and tag-out procedures as required
- emergency and troubleshooting procedures for a range of operational problems
- procedures and responsibility for reporting problems
- shutdown sequence as required
- cleaning and sanitising requirements of equipment and work area
- environmental issues and controls
- sampling plan and procedures where relevant
- cleaning and sanitising procedures where relevant
- routine maintenance procedures where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify quality requirements for packaging • prepare equipment and materials for conducting packaging tests and inspections • conduct tests according to workplace requirements • identify out-of-standard results • conduct housekeeping and dispose of waste according to workplace standards • complete documentation.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up to prepare sample	1.1 Product and materials are confirmed and available to meet sample requirements 1.2 Equipment is checked to confirm readiness for use 1.3 Services are confirmed as available and ready for operation
2. Prepare sample for bottling	2.1 Product is blended as required to meet sample specifications 2.2 Sample is treated and processed for bottling according to workplace procedures and specific instructions 2.3 Equipment is set up and operated to meet sample specifications according to workplace procedures 2.4 Control points and equipment are monitored to confirm performance is maintained within specification 2.5 Prepared sample meets specifications 2.6 Out-of-specification sample, process or equipment performance is identified, rectified and/or reported
3. Bottle and package sample	3.1 Bottling equipment is set up, operated and monitored according to workplace procedures 3.2 Prepared sample is bottled and labelled according to workplace procedures and sample specifications 3.3 Samples are packaged and prepared for dispatch according to workplace procedures and sample specifications
4. Complete sample preparation activities	4.1 Equipment is shut down according to workplace procedures 4.2 Equipment is prepared for cleaning according to workplace procedures 4.3 Waste is collected, treated and disposed of or recycled according to workplace procedures 4.4 Work is conducted in accordance with workplace environmental guidelines 4.5 Samples awaiting dispatch are stored according to sample specifications
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify sample preparation requirements and specifications
- liaise with clients. These may include:
 - cellar
 - bottling hall
 - marketing
 - winemaker
 - show society representatives
 - trade representatives
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary product, materials and services
- confirm equipment status and condition. This may include checking hygiene and sanitation processes are complete
- set up, start up and operate equipment to prepare sample to specification requirements
- prepare product and materials in correct quantity and sequence. This may include:
 - sanitising bottles
 - tasting or checking quality of product sample to be processed
 - preparing trade labels
- blend products to meet sample specifications. This may include:
 - ensuring a homogenous mix
 - activities to minimise oxidation and contamination
 - interpreting and calculating ratios
 - sensory evaluation of samples
- treat or process sample ready for bottling. This may include:
 - preparing and making additions and finings
 - operating filtration and separation equipment
 - activities to minimise oxidation and contamination
 - cold stabilisation
- set up, start up and operate sample processing equipment to meet sample specifications. This may include appropriate selection of:
 - centrifuge speed
 - filler size
 - stabilisation temperatures

- inert gases
- monitor control points and equipment operation. This may include monitoring:
 - additions
 - sensory evaluation
 - clarity
- prepare a sample to meet specifications.
- recognise and identify non-conformance (e.g. wine faults and out of condition product) and out-of-specification results
- take corrective action for out-of-specification results and non-conformance
- report and/or record corrective action required
- bottle and label product samples. This may include:
 - operating manual or automatic bottling equipment
 - flushing with inert gas
 - meeting desired fill height
 - avoiding contamination
 - sealing bottle
 - providing accurate, legible and relevant information on label
 - ensuring effective adhesion of label
- pack samples for dispatch. This may include:
 - inserting in bottle capsules or post packs
 - packing in boxes
 - minimising risk of breakage or damage
 - including relevant documentation
 - providing handling and delivery instructions on outside of package
 - arranging dispatch and transport of samples
- store prepared samples appropriately. This may involve consideration of:
 - temperature
 - leakage or seal maintenance
 - occupational health and safety (OHS)
 - specific instructions
 - vibrations
 - ultraviolet (UV) light
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation and routine shutdown requirements
- maintain workplace records
- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may involve draining and/or dismantling equipment, and removing waste either manually or by rinsing prior to cleaning and sanitising
- clean and sanitise equipment
- conduct routine preventive maintenance according to enterprise procedures

- take samples according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and principles of providing product samples
- workplace policy and procedures, with regard to:
 - providing samples
 - preparing samples
 - packaging samples
 - labelling samples
 - dispatching and transporting samples
- quality characteristics of products and materials used and affect on sample outcome
- equipment and instrumentation components, purpose and operating parameters
- services used
- significance and method of monitoring control points within the process
- common causes of variation or inaccuracies and corrective action required
- OHS hazards and controls
- procedures and responsibility for reporting problems
- cleaning and sanitising requirements
- routine maintenance requirements of equipment
- waste handling requirements and procedures
- blending processes and procedures
- effect of oxidation on product sample quality and techniques to minimise oxidation
- routine maintenance procedures where relevant
- sampling techniques where relevant
- wine sensory evaluation techniques where relevant
- analytical test procedures where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare basic laboratory equipment for use	1.1 Materials are confirmed and available for use 1.2 Materials are prepared to meet requirements 1.3 Services are confirmed as available and ready for use 1.4 Equipment is selected, prepared and checked to confirm readiness for use
2. Use basic laboratory equipment and techniques	2.1 Equipment is set up and operated according to workplace procedures 2.2 Accurate measurements are delivered 2.3 Out-of-specification process and equipment performance is identified, rectified and/or reported
3. Complete equipment operation	3.1 Equipment is prepared for cleaning 3.2 Work is conducted in accordance with workplace environmental guidelines 3.3 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm supply of necessary materials, equipment and services
- prepare materials as required
- select equipment appropriate for the task
- liaise with other work areas
- confirm equipment status and condition. This may include:
 - recognising and rejecting contaminated or faulty glassware and equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- follow operating procedures and deliver accurate amounts. This can involve:
 - weighing
 - centrifuging
 - separating
 - pipetting
 - measuring
 - titrating
- monitor the process and equipment operation to identify out-of-specification results or non-compliance. What should be monitored will vary between equipment (e.g. with calibrated glassware, the meniscus position)
- take corrective action and/or report out-of-specification results, anomalies or non-compliance
- report and/or record corrective action as instructed
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements. This may include removing samples or consumables
- record workplace information
- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- lean and sanitise equipment according to enterprise procedures
- carry out routine maintenance according to enterprise procedures

- identify, rectify and/or report environmental non-compliance according to enterprise procedures
- use aseptic techniques according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose, principles and use of a range of basic laboratory equipment
- identity, features and operating techniques of basic laboratory equipment
- equipment and instrumentation components, purpose and operation
- process specifications, procedures and operating parameters
- affect of process stages on results and/or outcomes
- emergency procedures for a range of operational problems
- services required
- significance and method of monitoring equipment operation
- common causes and knock-on effects of inaccuracies or cross-contamination, and preventive or corrective action required
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- cleaning and sanitising requirements of equipment and work area
- recording requirements and procedures
- cleaning and sanitation procedures where relevant
- routine maintenance procedures where relevant
- aseptic techniques where relevant.

	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements

Workplace information

Workplace information may include:

- Standard Operating Procedures (SOPs)
- specifications
- production schedules
- instructions
- work notes
- Material Safety Data Sheets (MSDS)
- manufacturer instructions
- verbal direction from manager, supervisor, or senior operator

Equipment and glassware

Equipment and glassware may include:

- balances, autoclaves, laminar flow cabinets, fume cupboard, centrifuge and other separating equipment
- general and volumetric glassware, pipettes, burettes, incubators, ovens, filtration apparatus, thermometers, hydrometers, transfer and inoculation tools

It does not include any specialist equipment required under other units

Materials

Materials may include:

- filters
- chemical reagents

RANGE STATEMENT	
	<ul style="list-style-type: none"> • samples
Equipment status	Confirming equipment status involves: <ul style="list-style-type: none"> • checking that hygiene and sanitation standards, safety standards and pre-start requirements are met and that equipment is operational • checking the operation and/or calibration of measuring instrumentation
Services	Services may include: <ul style="list-style-type: none"> • power • water • gases
Information systems	Information systems may be: <ul style="list-style-type: none"> • print or screen based

Unit Sector(s)

--------------------	-----------------

FDFLAB2012A Maintain aseptic environment

Modification History

This unit supersedes and is equivalent to FDFLABMAEA Maintain aseptic environment.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to operate in an aseptic laboratory environment. Work is usually done under routine supervision.
------------------------	---

Application of the Unit

Application of the unit	This unit has application in a wine operations environment. It typically targets the worker responsible for preparing and maintaining an area to aseptic standards.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFLAB2011A	Use basic laboratory equipment

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare aseptic environment	1.1 Hygiene and sanitation procedures for operator are completed according to safe laboratory guidelines 1.2 Work surfaces are cleaned and disinfected 1.3 Materials and services are prepared for use 1.4 Equipment is prepared for sterilising 1.5 Equipment is sterilised to meet requirements 1.6 Sterilising waste is deposited in collection area or disposed of according to workplace procedures
2. Operate in an aseptic environment	2.1 Equipment and materials are selected which are appropriate for the task 2.2 Appropriate sterilising techniques are selected and used 2.3 Aseptic transfers are conducted using techniques which minimise the risk of contamination 2.4 Aseptic environment is maintained during work procedures
3. Maintain aseptic environment	3.1 Work area is cleaned and disinfected after use 3.2 Equipment is cleaned in preparation for sterilising or placed into relevant disposal or disinfection receptacles 3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas
- confirm supply of necessary materials equipment and services. This may include selecting the appropriate sterilising techniques
- handle sterilising agents safely and correctly
- prepare sterilisers as required
- prepare materials and equipment for sterilising. This includes rendering equipment safe to sterilise. It may also involve removing faulty equipment from service (e.g. chipped glass), correctly wrapping, labelling, loading and sealing
- use appropriate sterilising techniques. This may include activities to prevent cross-contamination
- set up, start up and operate sterilising equipment according to workplace procedures
- return equipment to operating order after sterilisation
- maintain and store sterilisers and related equipment according to workplace procedures
- carry out relevant checks and inspections. This may include:
 - checking pressure equipment calibration status
 - performing safety checks
 - use of autoclave tape, chemical indicators and spore strips
 - sterility control plates
- record sterilisation data in required format
- use appropriate sample handling and transfer techniques to maintain aseptic environment. This may include:
 - streaking
 - swabbing
 - pouring
 - pipetting
- maintain appropriate personal hygiene standards according to workplace procedures
- maintain work area to meet housekeeping standards and hygiene requirements
- record workplace information
- take samples according to enterprise procedures
- identify, rectify and/or report environmental non-compliance according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation,

including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and principles of sterilisation
- safe handling and storage of sterilising agents used
- functions and features of sterilising equipment and agents
- sterilising requirements of work area and equipment
- procedures for preparing sterilising agents
- procedures for applying and using sterilising agents
- correct operating procedures of any equipment used
- affect of process stages on outcomes
- purpose of personal protective clothing and equipment
- personal hygiene requirements of operator
- Occupational health and safety (OHS) hazards and controls
- methods used to render equipment safe to sterilise
- equipment settings required for sterilisation
- regulatory requirements as they affect immediate responsibilities for sterilising
- types of waste generated by the sterilising process and related collection, treatment and disposal requirements
- environmental consequences of incorrect waste disposal procedures
- procedures and responsibility for reporting problems
- reporting and recording requirements and procedures
- sampling plan and procedures where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • prepare environment according to aseptic workplace standards • conduct work in a manner that meets aseptic standards • use sterilising techniques • clean and sterilise equipment after use • maintain workplace documentation.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over

EVIDENCE GUIDE	
	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access equipment	1.1 Appropriate equipment required for information management is identified 1.2 Software is accessed from a personal computer or network terminal
2. Use application software	2.1 Laboratory information is entered into the computing system according to specified procedure 2.2 Searches for information output are conducted 2.3 Application features are used for calculations 2.4 Data sets and databases are constructed for numerical and graphical analysis 2.5 Data is obtained from diverse applications and integrated
3. Analyse data and document reports	3.1 Data is analysed using software package applications 3.2 Correct options are selected for constructing data reports 3.3 Results of data analysis are documented using appropriate document format and design 3.4 Data sources are referenced according to the style requirements of the workplace 3.5 Report is printed using software package functions
4. Complete software applications	4.1 Data is backed up and/or archived according to workplace procedures 4.2 Hard copies are filed and/or distributed according to workplace procedures 4.3 Anti-virus software is used as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- select the appropriate software package for the data processing operation
- use routine commands and instruction of the software package to complete the required operation
- use software package to analyse data. This may involve simple statistical and/or graphical analysis of quality assurance data
- present accurate results in the required format. This may include:
 - graphs
 - tables
 - graphics
 - spreadsheets
- identify deviations in performance and take appropriate action
- back up electronic files
- follow procedures to troubleshoot basic software problems
- use virus scanning software
- maintain the confidentiality of data according to workplace procedures
- generate reports in a timely manner in the required format
- secure records as required
- analyse simple statistical and/or graphical data according to enterprise procedures
- interpret hardware and/or software technical manuals according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- how the software package can be applied to wine laboratory information management
- functions and commands associated with the software package
- relationship between the package instructions and the data processing performed
- types of database models available
- relationship between procedures for data input and file storage

- file and record maintenance
- basic statistical concepts where relevant
- methods of comparing quantitative data where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for testing	<ul style="list-style-type: none">1.1 Samples are registered and prepared for testing1.2 Materials are prepared to meet requirements1.3 Services are confirmed as available and ready for use1.4 Equipment is selected, prepared and checked to confirm readiness for use1.5 Defects in samples, test materials and equipment are identified, rectified and/or reported
2. Perform testing	<ul style="list-style-type: none">2.1 Test method is carried out according to procedure2.2 Equipment and materials are used according to workplace procedures2.3 Results are read and interpreted2.4 Method or procedure is validated2.5 Out-of-standard results are identified and appropriate action taken
3. Complete testing	<ul style="list-style-type: none">3.1 Waste generated by the testing is monitored and cleared according to workplace procedures3.2 Equipment is prepared for cleaning3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	<ul style="list-style-type: none">4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access and interpret information to identify testing requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas. This may include:
 - laboratory
 - winemaking
 - production
 - marketing
 - supply
- confirm supply of necessary materials, equipment and services
- prepare samples for testing
- prepare materials as required
- confirm equipment status and condition. This may include:
 - confirmation that test equipment is operating accurately
 - recognising and rejecting contaminated or faulty glassware and equipment
 - safety checks
 - replacing consumables
 - instrument setting and calibration
- operate equipment according to test procedure
- carry out tests
- read and interpret results
- record results and complete workplace information
- monitor the process and test equipment to identify out-of-standard results or non-compliance
- take corrective action in response to out-of-standards results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- follow procedures to repeat or confirm results
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- take samples according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures

- carry out routine maintenance according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- principles of the test method
- purpose of the test
- relevant standards, specifications and basic legislative requirements (e.g. quality, health, safety, labelling and equipment) and their implications
- procedures and operating parameters
- affect of process stages on results
- start-up and set-up procedures as required
- services required
- common causes and knock-on effects of inaccuracies or contamination, and preventive or corrective action required
- how to read and interpret results
- recording requirements and procedures
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- procedures and responsibility for reporting problems
- cleaning and sanitising requirements of equipment and work area
- recording requirements and procedures
- sampling plan and procedures where relevant
- cleaning and sanitising procedures where relevant
- routine maintenance procedures where relevant.

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify out-of-standard test equipment and/or process performance	1.1 Equipment and/or process is inspected to confirm it is operating according to specification 1.2 Equipment and/or process outputs are inspected to confirm they are consistent with product and/or process specifications 1.3 Signs of equipment wear and potential malfunction are recognised 1.4 Parameters for out-of-standard performance are recognised and/or identified
2. Identify causes of out-of-standard performance	2.1 Out-of-standard performance is investigated using standard troubleshooting steps according to workplace procedures 2.2 Service and/or calibration records are reviewed 2.3 Procedure is reviewed to ensure correct materials, equipment and protocol were followed 2.4 Appropriate validation or performance checks are conducted as required 2.5 Equipment and/or process variables are analysed and a list of possible causes prepared 2.6 Most probable causes are identified using appropriate elimination techniques
3. Initiate corrective action	3.1 Corrective action is trialled based on outcome of investigation 3.2 Equipment and/or process is monitored to ensure outputs are within specification 3.3 Trial results are reviewed and corrective action validated
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access, interpret and apply workplace information to identify equipment and process specifications and operating parameters
- liaise with other work areas (e.g. cellar, production line, maintenance and winemaker)
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary product, materials and services
- recognise and identify anomalous equipment and/or process outcomes
- identify causes of out-of-standard performance
- take corrective action to rectify out-of-standard performance. This may involve adjusting, rectifying or modifying test equipment or process, which may include:
 - calibrating or standardising
 - checking reagents
 - dismantling equipment
 - replacing components
 - performing routine maintenance, cleaning or sanitising procedures
 - adjusting parameters
 - modifying procedures
 - manipulating data
- monitor results of corrective action
- verify success of corrective action
- report and/or record corrective action required
- sort, collect, treat, recycle or dispose of waste
- maintain workplace records
- maintain work area to meet housekeeping standards
- Clean and sanitise equipment according to enterprise procedures
- conduct routine preventive maintenance according to enterprise procedures
- take samples according to enterprise procedures.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and principles of troubleshooting procedures
- principles and procedures relating to test equipment operation

- equipment and instrumentation components, purpose and operating parameters
- normal range of results for test procedures
- how to read, calculate and evaluate results
- relevant standards and specifications and basic legislative requirements (e.g. quality, health, safety, labelling and equipment) and their implications
- workplace policy and/or procedures with regard to:
 - reporting out-of-standard performance or non-compliance
 - calibration and service requirements of test equipment
 - troubleshooting protocol
 - problem-solving protocol
 - making changes to Standard Operating Procedures (SOPs)
- services used
- significance and method of monitoring control points within a process
- causes of variation or inaccuracies and corrective action required
- Occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- waste handling requirements and procedures
- cleaning and sanitising requirements where relevant
- routine maintenance requirements of equipment where relevant
- sampling techniques where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify and address non-conformances or problems with laboratory equipment • identify and address non-conformances or problems with laboratory processes • identify causes and address problem cause • complete workplace documentation.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of

EVIDENCE GUIDE	
	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • SOPs • specifications • production schedules • instructions • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor, or senior operator
Troubleshooting	<p>Troubleshooting will involve:</p> <ul style="list-style-type: none"> • the use of technical knowledge and skills to investigate out-of-standard performance of routine test equipment, analysis results or processes
Test equipment	<p>Test equipment should include that which is required to perform routine analysis in the laboratory, production line, cellar or plant. This may include equipment used for:</p> <ul style="list-style-type: none"> • chemical, microbiological and physical tests on product, materials production processes, or environmental management

RANGE STATEMENT	
Materials	Materials may vary and should include those listed in the enterprise SOPs
Workplace records	Workplace records may include: <ul style="list-style-type: none"> • calibration logs • non-conformance reports • corrective action reports • service records • maintenance records • trial results and reports
Services	Services may include: <ul style="list-style-type: none"> • power • water • gases
Information systems	Information systems may be: <ul style="list-style-type: none"> • print or screen based
Work hazards	Work may involve exposure to: <ul style="list-style-type: none"> • chemical, dangerous or hazardous substances

--------------------	-----------------

FDFLAB3004A Check and maintain readiness of wine testing equipment

Modification History

September 2012: clarified pre-requisite information.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to perform set-up and pre-use checks on wine testing equipment and assist with maintenance.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit of competency has been developed for the laboratory stream of the wine sector. It applies to equipment used in laboratories, cellar and field testing for the wine industry. Maintenance tasks include identification of faults, minor repairs and maintenance and notification of requirements for major repairs, according to enterprise procedures.</p> <p>All operations must comply with relevant standards, appropriate procedures and/or enterprise requirements.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	
	FDFLAB2006A Record laboratory data, and
	FDFLAB2001A Perform basic analytical tests*, or <i>FDFLAB2011A Use basic laboratory equipment</i>

	FDFLAB2002A	Perform basic microbiological tests*, or <i>FDFLAB2012 Maintain aseptic environment</i> <i>FDFLAB2011A Use basic laboratory equipment</i>
	FDFLAB2009A	Perform packaging quality control procedures* <i>FDFLAB2011A Use basic laboratory equipment</i>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform pre-use checks of wine testing equipment	<ul style="list-style-type: none">1.1 Wine testing equipment pre-use checks are performed in accordance with enterprise procedures1.2 Safety checks are performed in accordance with relevant enterprise and instrumental procedures1.3 Faulty or unsafe components and equipment are identified and reported to appropriate personnel1.4 Instrument log books are completed to enterprise requirements
2. Perform set-up checks	<ul style="list-style-type: none">2.1 Equipment is started up according to operating procedures2.2 Equipment performance is checked for accuracy according to operating procedures2.3 Results of pre-start checks are recorded according to operating procedures2.4 Out-of-specification equipment is quarantined
3. Assist with equipment maintenance	<ul style="list-style-type: none">3.1 All equipment work areas are cleaned during and after equipment use3.2 Work is conducted in accordance with workplace environmental guidelines3.3 Basic maintenance is performed in accordance with enterprise procedures3.4 Equipment is cleaned and stored according to enterprise and/or manufacturer specifications or procedures3.5 Damaged or worn equipment is identified and replaced, repaired or disposed of as appropriate
4. Maintain records	<ul style="list-style-type: none">4.1 Equipment logs are maintained in accordance with enterprise procedures4.2 Information on unsafe or faulty equipment is recorded and reported as per enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access and interpret technical information
- select, fit and use appropriate personal protective clothing and/or equipment
- confirm availability of necessary materials, equipment and services
- confirm equipment status and condition. This may include:
 - confirm that test equipment is operating accurately
 - recognise and rejecting contaminated or faulty glassware and equipment
 - perform safety checks
 - replace consumables
 - perform instrument setting
- monitor test equipment to identify out-of-standard results or non-compliance
- take corrective action in response to out-of-standard results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- sort, collect, treat, recycle or dispose of waste
- shut down equipment
- maintain work area to meet housekeeping standards
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- operational principles and methods for equipment use
- basic sources of error in equipment operation and their control
- role and importance of correct equipment checking and testing
- basic equipment maintenance procedures
- correct occupational health and safety (OHS) procedures
- enterprise communication and reporting procedures
- function of key components of the instrument
- effects of environmental conditions and controls on testing
- procedures and responsibility for reporting problems

- recording requirements and procedures.

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare wine sample	<p>1.1 Wine to be tested is identified and appropriate standard method and safety requirements selected</p> <p>1.2 Personal protective equipment and safety procedures are applied as specified for test method</p> <p>1.3 Wine sample description is recorded, compared with specification and discrepancies reported</p> <p>1.4 Wine sample is prepared in accordance with testing requirements</p>
2. Test wine sample	<p>2.1 Wine sample is measured</p> <p>2.2 Equipment and materials are set up and used according to workplace procedures</p> <p>2.3 Calibration status of equipment is checked</p> <p>2.4 Test method is carried out according to procedure</p> <p>2.5 Results are read and interpreted</p> <p>2.6 Out-of-standard results are identified and appropriate action taken</p> <p>2.7 Equipment is shut down in accordance with operating procedures</p>
3. Process data	<p>3.1 Test data is recorded noting atypical observations</p> <p>3.2 Calculated quantities are checked to ensure they are consistent with estimations</p> <p>3.3 Results are recorded and reported in accordance with enterprise procedures</p> <p>3.4 Trends in data and/or results are interpreted and out-of-specification or atypical results promptly reported to appropriate personnel</p> <p>3.5 Basic procedure or equipment problems which have led to atypical data or results are identified and addressed</p>
4. Maintain a safe work environment	<p>4.1 Established work practices are applied to ensure personal safety and that of other laboratory personnel</p> <p>4.2 Generation of waste is minimised and environmental standards applied including the safe disposal of laboratory wastes</p> <p>4.3 Equipment and reagents are cleaned, cared for and stored as required</p>
5. Maintain laboratory records	<p>5.1 Approved data is recorded into enterprise system</p> <p>5.2 Confidentiality of enterprise information and laboratory data is maintained</p> <p>5.3 Security of enterprise information and laboratory data is ensured</p> <p>5.4 Equipment logs are maintained in accordance with enterprise procedures</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access and interpret information to identify testing requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas. This may include:
 - laboratory
 - winemaking
 - production
 - marketing
 - supply
- confirm supply of necessary materials, equipment and services
- prepare samples for testing
- prepare materials as required
- confirm equipment status and condition. This may include:
 - confirm that test equipment is operating accurately
 - recognise and reject contaminated or faulty glassware and equipment
 - perform safety checks
 - replace consumables
 - perform instrument setting and calibration
- operate equipment according to test procedure
- carry out tests
- read and interpret results
- record results and complete workplace information
- monitor the process and test equipment to identify out-of-standard results or non-compliance
- take corrective action in response to out-of-standards results, anomalies or non-compliance
- report and/or record corrective action according to workplace procedures
- follow procedures to repeat or confirm results
- sort, collect, treat, recycle or dispose of waste
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards
- prepare equipment for cleaning. This may include dismantling equipment or rinsing in preparation for sanitation
- take samples according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures

- carry out routine maintenance according to enterprise procedures
- identify, rectify or report environmental non-compliance according to enterprise procedures.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- principles of the test method
- purpose of the test
- relevant standards, specifications and basic legislative requirements (e.g. quality, health, safety, labelling and equipment) and their implications
- principles and concepts related to instrumentation operation and testing
- modes of separation and the concepts related to instrument operation and testing, where relevant
- function of key components of the instrument
- effects of modifying instrumental variables on output
- procedure for optimising equipment through changing operation parameters
- sample preparation procedures
- equipment and testing method troubleshooting procedures
- use of instrumentation for qualitative and/or quantitative analysis
- use of calibration charts
- calculation steps to give results in appropriate units
- effect of process stages on results
- start-up and set-up procedures as required
- services required
- common causes and knock-on effects of inaccuracies or contamination, and preventive or corrective action required
- how to read and interpret results
- recording requirements and procedures
- occupational health and safety (OHS) hazards and controls
- lock-out and tag-out procedures as required
- procedures and responsibility for reporting problems
- shutdown sequence as required
- environmental issues and controls
- procedures and responsibility for reporting problems
- cleaning and sanitising requirements of equipment and work area
- recording requirements and procedures.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • start up, set up and shut down equipment • check calibration status of equipment and calibrate if required • prepare and test samples using procedures appropriate to the nature of sample • optimise and use equipment and spectrometers to enterprise standards • prepare calibration graphs and calculate results in appropriate units • apply basic theoretical knowledge to interpret data and make relevant conclusions • identify atypical results as out of normal range of an artefact • trace and source the cause of an artefact • communicate problems to either supervisor or outside service technician • record and communicates results according to enterprise procedures • maintain security, integrity, traceability and identity of samples, sub-samples and documentation • follow OHS procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • standard laboratory equipped with appropriate spectrometers

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> laboratory reagents and equipment standard operating procedures and testing methods documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> Standard Operating Procedures (SOPs) specifications production schedules instructions work notes Material Safety Data Sheets (MSDS) manufacturer instructions verbal direction from laboratory manager, supervisor or senior operator
Tests	<p>Tests will vary but may involve:</p> <ul style="list-style-type: none"> testing new materials or products

RANGE STATEMENT

- investigating complaints
- improving laboratory efficiency
- adjusting methods to conform to regulatory requirements (e.g. food safety and Hazard Analysis Critical Control Points (HACCP))
- meeting client expectations
- controlling starting materials
- in-process materials and finished products
- basic troubleshooting of enterprise processes
- environmental monitoring
- discrete pathology tests

Tests may be:

- titrimetric and qualitative tests
- spectrometric, for example:
 - ultraviolet/visible (UV/Vis), fluorimetric, infrared (IR), flame atomic absorption spectrometry (AA)
- chromatographic, for example:
 - column and thin layer analytical and preparative chromatography
 - paper, gas, liquid chromatography and high performance (pressure) liquid chromatography (HPLC)
 - gel filtration chromatography (purification of proteins)
 - affinity chromatography (purification of immunoglobulins)
- electrochemical, for example:
 - pH, ion-selective electrodes and polarography
- electrophoretic, for example:
 - DNA patterns and determination of protein purity
- physical and destructive tests
- microbiological methods, such as isolating and maintaining culture collections, yeast and bacteria propagation and maintenance, and rapid yeast detection (epi-fluorescence)

The tint and depth of colour in wines can be measured in terms of the amount of light in the visible range that is absorbed by a wine sample using a UV/Vis spectrophotometer. Accuracy of wine colour analysis is important as an incorrect result may result in over-fining

RANGE STATEMENT	
	of wines or the preparation of blends that do not meet winemaking specifications.
Equipment	Equipment may vary and should include that listed in test procedure or directions for conducting analyses
Materials	Materials may vary and should include those listed in test procedure or directions for conducting analyses
Confirming equipment status	<p>Confirming equipment status involves:</p> <ul style="list-style-type: none"> • checking that hygiene and sanitation standards, safety standards and pre-start requirements are met, and that equipment is operational • checking the operation and/or calibration of measuring instrumentation
Potential problems	<p>Potential problems may occur if the technician fails to:</p> <ul style="list-style-type: none"> • set the wavelength correctly • use the correct size/type of cuvette • place the cuvettes correctly in the spectrophotometer • rezero the spectrophotometer when changing from one wavelength to another, or when changing to different cell sizes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify OHS legislative requirements	1.1. Applicable OHS legislative requirements relevant to own work, role and responsibilities are identified 1.2. Duty of care requirements are identified and explained 1.3. Own responsibilities to comply with safe working practices are identified and explained
2. Identify workplace hazards and control measures	2.1. Basic principles of risk management are identified 2.2. Common workplace hazards are identified and discussed 2.3. Measures for controlling risks are identified 2.4. Requirements for the selection and use of relevant personal protective equipment are identified and explained 2.5. Safety signs and symbols are identified and explained 2.6. Procedures for reporting hazards and risks are identified and discussed
3. Identify OHS communication and reporting	3.1. Participative arrangements for OHS, including communication processes, information and documentation are identified and discussed 3.2. Designated OHS roles and relevant authorities for raising OHS concerns, including concerns relating to the right to refuse unsafe work are identified and explained
4. Identify OHS incident and emergency response procedures	4.1. General procedures for responding to incidents, injuries and emergencies are identified and explained 4.2. Procedures for first aid are identified and discussed 4.3. Fire safety equipment and emergency evacuation are identified and discussed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- apply comprehension skills to:
 - explain the basic OHS legislative requirements which will be applicable to own work
 - explain the meaning of safety signs and symbols
 - identify workplace hazards
 - discuss the basic principles of risk management
 - report workplace incidents, injuries
- apply communication/interpersonal skills to:
 - clarify OHS legislative requirements
 - verbally report workplace hazards and risks
 - ask effective questions
 - relay information to others
 - discuss OHS issues and information
-

Required knowledge

Essential knowledge:

- applicable commonwealth, state or territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- basic principles of risk management and assessment relating to work role
- common workplace hazards
- common workplace safety signage and their meanings
- general workplace emergency response and evacuation procedures
- work activities which require licences, tickets or certificates of competency
- general first aid response requirements
- general procedures for raising OHS issues
- general procedures for reporting OHS hazards, accidents, incidents, emergencies, injuries, near misses and dangerous occurrences
- general procedures for responding to hazards, incidents and injuries
- general workers compensation and injury management requirements
- OHS hierarchy of controls
- OHS responsibilities and rights of duty holders (including persons in control of work/projects, employers and self employed persons, supervisors, designers,

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <p>manufacturers and suppliers, workers and inspectors)</p> <ul style="list-style-type: none">• own responsibilities to comply with safe working practices (relating to identification of hazards, preventing bullying or harassment, use of amenities, smoking, use of drugs and alcohol and housekeeping)• role of OHS committees and representatives• types of common personal protective equipment and fire safety equipment• types of OHS information and documentation |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence must confirm personal awareness of the following:</p> <ul style="list-style-type: none"> • applicable OHS legislative and safety requirements for work role, including duty of care • the range of common workplace hazards and procedures for the assessment of risk and application of the hierarchy of control • OHS communication processes, information and documentation, including the role of OHS committees and representatives, the meaning of common safety signs and symbols, and procedures for reporting hazards, incidents and injuries • general procedures for responding to incidents and emergencies, including evacuation, first aid, fire safety equipment and personal protective equipment • following safe work procedures to perform tasks.
<p>Context of and specific resources for assessment</p>	<p>Resources must be available to support the assessment, including participant materials and other information or equipment related to the skills and knowledge covered.</p> <p>It is recommended that the assessment tool designed specifically to support this unit of competency would provide consistency in assessment outcomes.</p> <p>A range of other assessment tools and resources should be used to suit the learning preferences or special learning needs of individual participants.</p>
<p>Method of assessment</p>	<p>Assessment methods must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge.</p>

EVIDENCE GUIDE**Guidance information for assessment**

To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS legislative requirements

OHS legislative requirements are to be in accordance with applicable OHS legislation. Requirements should relate to:

- OHS and welfare Acts and regulations
- National Code of Practice for Induction Training for Construction Work
- safety codes of practice
- national safety standards
- OHS standards and guidelines
- licences, tickets or certificates of competency
- duty of care
- Australian standards
- health and safety representatives, committees and supervisors

Duty of care requirements

Duty of care requirements relate to:

- the legal responsibility under 'duty of care' to do everything reasonably practicable to protect others from harm
- relevant state and territory OHS requirements and may include employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, sub-contractors and inspectors
- own responsibilities to comply with safe working practices, including activities which require licences, tickets or certificates of competency

Safe working practices

Safe working practices may include:

- smoking in designated areas
- housekeeping to ensure a clean, tidy and therefore safer work area
- general requirements for use of personal

RANGE STATEMENT	
	<p>protective equipment and clothing</p> <ul style="list-style-type: none"> • general requirements for safe use of plant and equipment • storage and removal of debris • drugs and alcohol at work • preventing bullying and harassment • access to site amenities such as drinking water and toilets
Risks	<p>Risks relate to:</p> <ul style="list-style-type: none"> • the likelihood of a hazard causing injury or harm
Principles of risk management	<p>Principles of risk management include:</p> <ul style="list-style-type: none"> • identify hazards • assess the risks involved • consult and report ensuring the involvement of relevant workers • control the hazard • review to identify change or improvement
Hazards	<p>Hazards relate to:</p> <ul style="list-style-type: none"> • a source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these
Common hazards	<p>Common hazards may include:</p> <ul style="list-style-type: none"> • manual handling • hazardous substances and dangerous goods • noise • plant and equipment including access to moving parts • UV radiation • electrical safety • traffic and mobile plant • working at heights • falling objects • excavations (including trenches) • confined spaces • unplanned collapse • hot and cold working environments • HIV and other infectious diseases

RANGE STATEMENT	
Measures for controlling risk eliminate or minimise hazards in accordance with the hierarchy of control	<p>Measures for controlling risk eliminate or minimise hazards in accordance with the hierarchy of control include:</p> <ul style="list-style-type: none"> • elimination (e.g. controlling the hazard at the source) • substitution (e.g. replacing one substance or activity at the source) • engineering control (e.g. installing guards on machinery) • administration control (e.g. policies and procedures for safe work practices) • personal protective equipment (e.g. respirators and ear plugs)
OHS communication processes	<p>OHS communication processes may include:</p> <ul style="list-style-type: none"> • processes for raising OHS issues • OHS participative arrangements • OHS meetings • toolbox talks • discussions with OHS representatives • workplace consultation relating to OHS issues and changes • OHS notices, newsletters, bulletins and correspondence
OHS information and documentation	<p>OHS information and documentation may include:</p> <ul style="list-style-type: none"> • workplace documentation and plans • safe work method statements • material safety data sheets (MSDS) • job safety analyses • accident and incident reports • reports of near misses and dangerous occurrences • risk assessments • labels • safety meeting minutes • proformas for reporting hazards, incidents and injuries • Acts • regulations • codes of practice

RANGE STATEMENT	
	<ul style="list-style-type: none"> • guidance notes • evacuation plans • emergency information contact • Australian standards • workplace safety inspection reports
Designated OHS personnel	<p>Designated OHS personnel may include:</p> <ul style="list-style-type: none"> • supervisors • OHS representatives • OHS committee members • first aid officers • OHS managers
Safety signs and symbols	<p>Safety signs and symbols may include:</p> <ul style="list-style-type: none"> • regulatory signs (e.g. prohibition, mandatory and limitation or restriction) • hazard signs (danger and warning) • emergency information signs (e.g. exits, equipment, first aid) • fire signs (e.g. location of fire alarms and fire fighting equipment) • safety tags and lockout (e.g. danger tags, out of service tags) • caution signs
Relevant authorities	<p>Relevant authorities may include:</p> <ul style="list-style-type: none"> • emergency services (e.g. police, ambulance, fire brigade, emergency rescue) • OHS regulatory authority • supervisor • manager
Incidents	<p>Incidents may include:</p> <ul style="list-style-type: none"> • accidents resulting in personal injury or damage to property • near misses or dangerous occurrences which do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
General procedures for responding to incidents and	<p>General procedures for responding to incidents and emergencies may include:</p>

RANGE STATEMENT	
emergencies	<ul style="list-style-type: none"> • basic emergency response (keep calm, raise alarm, obtain help) • evacuation • referring to workplace emergency plans and documentation • notification of designated OHS personnel and authorities • notification of emergency services (e.g. when and how)
Emergencies	<p>Emergencies may include:</p> <ul style="list-style-type: none"> • fire • toxic and/or flammable vapours emission • vehicle/mobile plant accident • structural collapse • chemical spill • injury to personnel • explosions • gas leak
Personal protective equipment	<p>Personal protective equipment may include:</p> <ul style="list-style-type: none"> • protective, well fitting clothing • arm guards • aprons • high visibility retro reflective vests • safety footwear • hard hat • eye protection • hearing protection • gloves • respiratory protection • UV protective clothing and sunscreen
Fire safety equipment	<p>Fire safety equipment may include:</p> <ul style="list-style-type: none"> • fire fighting equipment • fire blankets • breathing apparatus

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare to work safely	1.1. Hazards in the work area are identified and action taken to control risks for those hazards the employee can correct 1.2. Hazards and inadequacies in control measures the employee cannot correct are reported in accordance with organisation procedures 1.3. Pre-start checks are carried out as required according to work procedures
2. Conduct work safely	2.1. Personal protective equipment is used correctly and maintained when required 2.2. Work procedures and workplace instructions for ensuring safety are followed when planning and conducting work 2.3. Incidents and injuries to are reported to designated personnel 2.4. OHS housekeeping is undertaken in work area
3. Participate in OHS consultative activities	3.1. Knowledge of roles and responsibilities of OHS representatives and OHS committees is applied 3.2. Constructive contribution to workplace meetings, workplace inspections or other OHS consultative activities is made 3.3. OHS issues are raised with designated personnel according to organisation procedures 3.4. Input to improve workplace OHS systems and processes is provided to eliminate hazards or reduce risk according to organisation procedures,
4. Follow emergency response procedures	4.1. Emergency situations are identified and reported 4.2. Organisation procedures for responding to emergencies are followed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- follow clear, logical verbal or clear, logical Plain English written instructions
- interpret selected pictorial/graphical and written signs/instructions
- clarify meaning with peers and supervisors
- give accurate verbal or written descriptions of incidents or hazards
- participate in OHS activities, including inspections, meetings and risk assessments

Required knowledge

Essential knowledge:

- applicable commonwealth, state or territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- safety signs and their meanings, including signs for:
 - personal protective equipment
 - emergency equipment
 - dangerous goods class signs
 - specific hazards, such as sharps and radiation
- legal rights and responsibilities of the workplace parties
- the difference between hazard and risk
- nature of common workplace hazards, such as chemicals, bodily fluids, sharps, noise, manual handling, work postures, underfoot hazards and moving parts of machinery
- standard emergency signals, alarms and required responses
- the elements within the hierarchy of control
- safety measures related to common workplace hazards
- sources of OHS information in the workplace
- the roles and responsibilities of employees, supervisors and managers in the workplace
- roles and responsibilities of OHS representatives, OHS committees and employers
- workplace specific information, including:
 - hazards of the particular work environment
 - potential emergencies relevant to the workplace
 - designated person for raising OHS issues
 - organisation and work procedures particularly those related to performance of own work, specific hazards and risk control, reporting of hazards, incidents and

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • To demonstrate competence in this unit, a candidate must be able to provide evidence of the application of their knowledge of OHS: <ul style="list-style-type: none"> • in an actual or simulated workplace context involving relevant work processes • to their own health and safety within their work area • to that of others who may be affected by their actions • A candidate must also be able to provide evidence of participating in workplace OHS processes • Evidence gathered by an assessor to determine competence will include practical demonstration of competence, including: <ul style="list-style-type: none"> • workplace demonstration, simulation exercise, scenario or role play • indirect evidence from workplace supervisor reports and workplace documentation
<p>Context of and specific resources for assessment</p>	<p>Products that could be used as evidence include:</p> <ul style="list-style-type: none"> • verbal and written responses to verbal, pictorial, or physical scenarios • demonstrated action to scenarios, simulations, role plays • completed hazard or incident reports, completed workplace inspection checklists • reports from work group members, supervisor <p>Processes that could be used as evidence include:</p> <ul style="list-style-type: none"> • how contributions were made to consultative processes • how hazard inspections were carried out

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • how incident investigations reports were completed <p>Access and equity considerations:</p> <ul style="list-style-type: none"> • All assessment should be applied with respect to relevant work related access and equity issues • Competence should reflect an ability to work in a culturally diverse environment • Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Hazards	<p>Hazards are:</p> <ul style="list-style-type: none"> a source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these
Specific hazards	<p>Specific hazards may include, but are not limited to:</p> <ul style="list-style-type: none"> chemicals bodily fluids sharps noise manual handling work posture underfoot hazards moving parts of machinery cytotoxic medicines and waste
Other workplace hazards	<p>Other workplace hazards may include:</p> <ul style="list-style-type: none"> occupational violence stress fatigue bullying
Risks	<p>Risks, in relation to any hazard, means:</p> <ul style="list-style-type: none"> the probability and consequences of injury, illness or damage resulting from exposure to a hazard
Residual risk	<p>Residential risk is:</p> <ul style="list-style-type: none"> the risk which remains after controls have been implemented
Personal protective equipment	<p>Personal protective equipment refers to:</p> <ul style="list-style-type: none"> equipment worn by a person to provide

RANGE STATEMENT	
	<p>protection from hazards, by providing a physical barrier between the person and the hazard and may include:</p> <ul style="list-style-type: none"> • head protection • face and eye protection • respiratory protection • hearing protection • hand protection • clothing and footwear
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • any event that has caused, or has the potential for, injury, ill-health or damage
Designated personnel	<p>Designated personnel may include:</p> <ul style="list-style-type: none"> • team leaders • supervisors • OHS representatives • OHS committee members • managers • organisation OHS personnel • other persons designated by the organisation • employers in office based practice
OHS housekeeping	<p>OHS housekeeping includes:</p> <ul style="list-style-type: none"> • workplace and personal routines designed to improve health and safety, for example, cleaning up spills, keeping walkways, exits and traffic areas clear
Emergency situations	<p>Emergency situations may include:</p> <ul style="list-style-type: none"> • any abnormal or sudden event that requires immediate action, such as: <ul style="list-style-type: none"> • serious injury events • events requiring evacuation • fires and explosions • hazardous substance and chemical spills • explosion and bomb alerts • security emergencies, such as armed robberies, intruders and disturbed persons • internal emergencies, such as loss of power or water supply and structural collapse

RANGE STATEMENT	
	<ul style="list-style-type: none"> external emergencies and natural disasters, such as flood, storm and traffic accident impacting on the organisation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and conduct work safely	1.1. Work is planned in accordance with relevant provisions of OHS legislation, standards, codes of practice/compliance codes, guidance material and workplace safe working procedures 1.2. Hazards are identified as part of work planning and work process 1.3. Identified hazards are addressed prior to starting work using judgement within defined scope of responsibilities 1.4. Inadequacies in control measures are reported according to organisation procedures 1.5. Incidents and injuries are reported in line with organisation policies and procedures 1.6. OHS housekeeping is undertaken in work area
2. Support safe work practices in work area	2.1. Information on safe work practices and safety issues in the workplace is shared with members of the work group 2.2. The OHS practices of less experienced members of the workgroup are checked and support provided as required to ensure safe work practices are followed 2.3. Members of the workgroup are supported to accurately record incidents and complete associated workplace documentation according to organisation procedures
3. Contribute to OHS participative processes	3.1. OHS issues are raised in accordance with organisation procedures 3.2. Workplace meetings, workplace inspections or other consultative activities are contributed to in a constructive manner to improve safety 3.3. Knowledge of roles and responsibilities of OHS representatives and OHS committees is applied
4. Contribute to hazard identification, OHS risk assessment and risk control activities	4.1. Identified hazards and inadequacies in risk controls are reported 4.2. The workplace is checked for hazards using itemised checklists in accordance with work procedures 4.3. Risk assessments are contributed to 4.4. Input to development and implementation of control measures is provided, with reference to the hierarchy of control
5. Participate in the	5.1. Emergency signals and alarms are identified and

ELEMENT	PERFORMANCE CRITERIA
control of emergency situations	responded to appropriately 5.2. Initial action to control/confine emergency is taken according to organisation procedures, and taking account of the nature and scope of the emergency 5.3. Emergency response procedures are implemented within scope of training and competence

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- check the workplace for hazards and risks using an itemised checklist
- provide advice and feedback in a constructive and supportive manner
- communicate with others
- identify emergency situations
- work with others

Required knowledge

Knowledge of:

- applicable commonwealth, state or territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- safety signs and their meanings, including signs for:
 - personal protective equipment
 - emergency equipment
 - dangerous goods class signs
 - specific hazards such as sharps, radiation
- the difference between hazard and risk
- sources of OHS information within the workplace with knowledge of external sources of OHS information
- nature of common workplace hazards, such as chemicals, bodily fluids, noise, manual handling, work postures, underfoot hazards and moving parts of machinery
- basic hazard identification procedures, such as workplace inspections and review of workplace data
- standard emergency signals, alarms and required responses
- principles of basic risk assessment
- hierarchy of control and its application
- personal protective equipment requirements, including use, storage and maintenance
- roles and responsibilities of employees, supervisors and managers in the workplace
- roles and responsibilities of OHS representatives and OHS committees
- workplace specific information, including:
 - hazards of the particular work environment
 - hazard identification procedures relevant to the hazards in their workplace
 - designated person for raising OHS issues

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• organisation and work procedures particularly those related to performance of own work, specific hazards and risk control, reporting of hazards, incidents and injuries and OHS issue resolution, consultation, use of personal protective equipment and emergency response• potential emergency situations, alarms and signals and required response• the legal rights and responsibilities of the workplace parties |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- To demonstrate competence in this unit, a candidate must be able to provide evidence of contribution to OHS processes in the workplace. This includes:
 - addressing their own health and safety
 - addressing that of others who may be affected by their actions
 - supporting members of the workgroup who may be less experienced in the workplace in regard to OHS matters
 - taking some initiative to address hazards and manage risks at a systemic level
- Evidence gathered by an assessor to determine competence will include practical demonstration of competence, including:
 - workplace demonstration, simulation exercise, scenario or role play
 - indirect evidence from workplace supervisor reports, workplace documentation, and written responses to problems, scenarios and case studies
- Evidence of workplace performance over time must be obtained to inform a judgement of competence.

Context of and specific resources for assessment

Products that could be used as evidence include:

- verbal and written responses to verbal, pictorial or physical scenarios
- demonstrated response to scenarios, simulations, role plays
- completed hazard or incident reports, completed workplace inspection checklists
- reports from workgroup members, supervisors

Processes that could be used as evidence include:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • how workplace checks/inspections are carried out • how hazards are addressed • how mentoring of fellow workgroup members is undertaken • how incident investigations reports were completed <p>Access and equity considerations:</p> <ul style="list-style-type: none"> • all assessment should be applied with respect to relevant work related access and equity issues • competence should reflect an ability to work in a culturally diverse environment • assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazard identification

Hazard identification is

- the process of identifying sources of harm, and may be required:
 - before new forms of work and organisation of work are implemented
 - before changes are made to workplace, equipment, work processes or work arrangements
 - as part of planning major tasks or activities, such as equipment shutdowns
 - following an incident report
 - when new knowledge becomes available
 - at regular intervals during normal operations
 - prior to disposal of equipment, or materials

Hazards

Hazards refer to:

- a source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these

Specific hazards

Specific hazards may include, but are not limited to:

- chemicals
- bodily fluids
- sharps
- noise
- manual handling
- work posture
- underfoot hazards
- moving parts of machinery
- cytotoxic medicines and waste

RANGE STATEMENT	
Other workplace hazards	<p>Other workplace hazards may include:</p> <ul style="list-style-type: none"> • occupational violence • stress • fatigue • bullying
Risks	<p>Risks, in relation to any hazard, means:</p> <ul style="list-style-type: none"> • the probability and consequences of injury, illness or damage resulting from exposure to a hazard
Residual risk	<p>Residual risk is:</p> <ul style="list-style-type: none"> • the risk which remains after controls have been implemented
Organisation procedures	<p>Organisation procedures include:</p> <ul style="list-style-type: none"> • policies and procedures underpinning the management of OHS, including: <ul style="list-style-type: none"> • hazard, incident and injury reporting • hazard identification, risk assessment and control • consultation and participation • quality system documentation
OHS housekeeping	<p>OHS housekeeping includes:</p> <ul style="list-style-type: none"> • workplace and personal routines designed to improve health and safety, for example, cleaning up spills, keeping walkways, exits and traffic areas clear
Information	<p>Information includes:</p> <ul style="list-style-type: none"> • hazard, incident and investigation reports • workplace inspection reports • incident investigation reports • minutes of meetings • job safety analyses and risk assessments • material safety data sheets (MSDS) and registers • employees handbooks • manufacturers' manuals and specifications • information from OHS representatives • reports from OHS committee

RANGE STATEMENT	
	<ul style="list-style-type: none"> information from external sources on hazards and risk relevant to the work group
Work procedures	<p>Work procedures include:</p> <ul style="list-style-type: none"> standard operating procedures batch specifications operator or manufacturer manuals procedures for selecting, fitting, using and maintaining personal protective equipment
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> any event that has caused or has the potential for injury, ill-health or damage
Other workplace documentation	<p>Other workplace documentation may include:</p> <ul style="list-style-type: none"> job checklists and schedules workplace inspection checklists
Risk controls	<p>Risk controls include:</p> <ul style="list-style-type: none"> the devices and methods to, where practicable, eliminate the hazard or, where this is not practicable, minimise the risk associated with the hazard
Designated persons	<p>Designated persons may include:</p> <ul style="list-style-type: none"> team leaders supervisors OHS representatives OHS committee members managers organisation OHS personnel other persons designated by the organisation
Hierarchy of control	<p>Hierarchy of control is the preferred order of control measures for OHS risks:</p> <ul style="list-style-type: none"> elimination (e.g. controlling the hazard at the source) substitution (e.g. replacing one substance or activity at the source) engineering control (e.g. installing guards on machinery) administration control (e.g. policies and procedures for safe work practices) personal protective equipment (e.g. respirators)

RANGE STATEMENT	
	and ear plugs)
Emergency signals and alarms	Emergency signals and alarms may include: <ul style="list-style-type: none"> • machinery malfunction alarms • fire alarms • evacuation alarms or announcements • reversing beepers on mobile plant
Emergencies	Emergency may include any abnormal or sudden event that requires immediate action, such as: <ul style="list-style-type: none"> • serious injury events • events requiring evacuation • fires and explosions • hazardous substance and chemical spills • explosion and bomb alerts • security emergencies, such as armed robberies, intruders and disturbed persons • internal emergencies, such as loss of power or water supply and structural collapse • external emergencies and natural disasters, such as flood, storm and traffic accident impacting on the organisation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hazards and assess risk associated with a product or system of work	1.1. The production processes of the product or system of work is mapped 1.2. Hazards at each stage of the production processes are identified 1.3. Hazards are systematically analysed to identify risk of injury, illness or damage arising from the hazard 1.4. Identify factors contributing to the risk are identified 1.5. The product or system of work are assessed and evaluated against requirements of relevant ohs legislation, standards, codes of practice/compliance codes or guidance material 1.6. Potential users of the product or system of work are consulted
2. Control the risk of a product or system of work	2.1. Risk controls are developed based on the hierarchy of control 2.2. Where there is a high consequence OHS risk, fail-to-safe action is designed into the product or system of work to minimise the impact of possible failure or defect 2.3. Product or work system development is monitored as it evolves to identify new hazards and to manage any developing risk 2.4. A risk register is used to document residual risk and recommended actions to minimise risk 2.5. Personal professional limitations are recognised and expert advice sought as required 2.6. The risk management process and resultant risk register is communicated to those who may use or interact with the product or system of work 2.7. Hazard identification, risk assessment and risk control processes are documented and made available to those who may be affected
3. Identify hazards and assess risks in own work	3.1. Sources of OHS information are identified and accessed 3.2. Hazards are identified and eliminated, and residual risk reported according to organisation procedures 3.3. A risk register is used to document residual risk and actions to minimise risk based on the hierarchy of control
4. Control risk in own	4.1. Work practices are confirmed as following

ELEMENT	PERFORMANCE CRITERIA
work	documented work procedures 4.2. Work planning and conduct is confirmed as taking account of residual risk register 4.3. Deficiencies in risk controls are identified, addressed and/or reported according to organisation procedures 4.4. OHS records are maintained as required 4.5. Personal professional limitations are recognised and expert advice sought as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- use technical skills to access OHS information
- use language and literacy skills to comprehend and interpret OHS legislation, guidance material and benchmarks
- communicate with potential users of the product or system of work, other technicians/specialists, managers and experts advisers
- postulate scenarios and analyse the scenarios to identify hazards and analyse risk
- assimilate information from a range of sources
- relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Required knowledge

Knowledge of:

- the difference between hazard and risk
- sources of OHS information both internal and external to the organisation
- nature of common workplace hazards, such as chemicals, noise, manual handling work postures, underfoot hazards and moving parts of equipment
- regulatory requirements relevant to the particular industry/type of work site
- requirements for hazard identification and hazard identification processes
- principles of risk management including risk analysis
- examples of safety benchmarks
- the hierarchy of control and its application
- principles of 'safe design' processes
- legislative requirements for record keeping and reporting
- hierarchy of control and its application
- personal protective equipment requirements, including selection, use, storage and maintenance
- workplace specific information, including:
 - in depth knowledge of hazards of the particular work environment and how they cause harm
 - hazard identification procedures relevant to the hazards in their workplace
 - work procedures
- organisation procedures related to OHS, including:
 - hazard, incident and injury reporting
 - hazard identification, risk assessment and control

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- To demonstrate competence in this unit, a candidate must be able to provide evidence of:
 - addressing the OHS risks specific to their technical or specialist workplace role, both in relation to their own health and safety, and to the health and safety of others who may be affected by their work
- Evidence gathered by an assessor to determine competence will include:
 - written or verbal responses to scenarios and case studies
 - provision of workplace examples
 - evidence from workplace supervisor reports
 - portfolio of workplace documentation
- Evidence of workplace performance over time must be obtained to inform a judgement of competence.

Context of and specific resources for assessment

Products that could be used as evidence include:

- responses to case studies, scenarios
- completed reports, plans, risk registers, products
- written directions, emails, memos and other information
- reports from team leaders, senior managers, users, specialist advisors

Processes that could be used as evidence include:

- how risk was assessed
- how risk was controlled

Access and equity considerations:

- all assessment should be applied with respect to relevant work related access and equity issues
- competence should reflect an ability to work in a

EVIDENCE GUIDE	
	<p>culturally diverse environment</p> <ul style="list-style-type: none"> assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Production processes	<p>Production processes may include:</p> <ul style="list-style-type: none"> • manufacture, construction and assembly processes • storage • transport • use and operation of equipment • maintenance, servicing, cleaning, adjustment, inspection, repair and modification processes • disposal
System of work	<p>System of work is:</p> <ul style="list-style-type: none"> • work process • work practice or procedure • the way work is organised, such as: <ul style="list-style-type: none"> • team and supervision structure • reporting lines • roster • geographical location
Map	<p>Map includes:</p> <ul style="list-style-type: none"> • people who may use or interface with the product or system of work • the range of uses of the product or system of work, both intended and unintended • movement or flow of production
Hazards	<p>Hazards refer to:</p> <ul style="list-style-type: none"> • a source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these
Specific safety related hazards	<p>Specific safety related hazards may include but are not limited to:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"> • chemicals • bodily fluids • sharps • noise • manual handling • work posture • underfoot hazards • moving parts of machinery • waste
Other workplace hazards	<p>Other workplace hazards may include:</p> <ul style="list-style-type: none"> • occupational violence • stress • fatigue • bullying
Analysis	<p>Analysis involves analysing a hazard to identify:</p> <ul style="list-style-type: none"> • factors influencing the risk and the range of potential consequences • effectiveness of existing controls • likelihood of each consequence considering exposure and hazard level
Risk	<p>Risks, in relation to any hazard, means:</p> <ul style="list-style-type: none"> • the probability and consequences of injury, illness or damage resulting from exposure to a hazard
OHS legislation	<p>OHS legislation includes:</p> <ul style="list-style-type: none"> • Commonwealth, state and territory OHS Acts and regulations
Standards	<p>Standards include:</p> <ul style="list-style-type: none"> • documents produced by national bodies, OHS regulators or industry bodies, that prescribe preventative action to avert occupational deaths, injuries and diseases • standards are of an advisory nature only, except where a law adopts the standard and thus makes it mandatory • standards may be called up as evidence in court or other enforcement action
Codes of practice/compliance	<p>Codes of practice/compliance codes are</p>

RANGE STATEMENT	
	<p>documents generally prepared to provide advice to employers and workers, of an acceptable way of achieving standards.</p> <p>Codes of practice/compliance codes may:</p> <ul style="list-style-type: none"> • be incorporated into regulations • not relate to a standard • be called up as evidence in court or other enforcement action
Guidance material	<p>Guidance material:</p> <ul style="list-style-type: none"> • is an advisory technical document, providing detailed information for use by unions, employers, management, health and safety committee members and representatives, safety officers and others requiring guidance • advises on 'what to do' and 'how to do it' • has no legal standing
Risk controls	<p>Risk controls include:</p> <ul style="list-style-type: none"> • The devices and methods to: <ul style="list-style-type: none"> • where practicable, eliminate the hazard • where this is not practicable, minimise the risk associated with the hazard
Hierarchy of control	<p>Hierarchy of control is the preferred order of control measures for OHS risks:</p> <ul style="list-style-type: none"> • elimination (e.g. controlling the hazard at the source) • substitution (e.g. replacing one substance or activity at the source) • engineering control (e.g. installing guards on machinery) • administration control (e.g. policies and procedures for safe work practices) • personal protective equipment (e.g. respirators and ear plugs)
High consequence OHS risk	<p>High consequence OHS risk includes:</p> <ul style="list-style-type: none"> • high impact events that usually occur rarely, such as explosions, fires and building collapses but may result in very serious injury, death or multiple death situations

RANGE STATEMENT	
Fail-to-safe	<p>Fail-to-safe includes:</p> <ul style="list-style-type: none"> design features of equipment that ensure a failure or defect, or another factor, such as loss of power, resulting in the equipment being left in a safe condition
Risk register	<p>Risk register is a document detailing:</p> <ul style="list-style-type: none"> a list of hazards, their location and people exposed a range of possible scenarios or circumstances under which these hazards may cause injury or damage nature of injury or damage caused the results of the risk assessment <p>And may also include:</p> <ul style="list-style-type: none"> possible control measures and dates for implementation
Residual risk	<p>Residual risk is:</p> <ul style="list-style-type: none"> the risk which remains after controls have been implemented
Expert advice	<p>Expert advice may be sought from:</p> <ul style="list-style-type: none"> Persons either internal or external to the organisation including: <ul style="list-style-type: none"> safety professionals ergonomists occupational hygienists audiologists safety engineers toxicologists occupational health professionals other persons providing specific technical knowledge or expertise in areas related to OHS including: <ul style="list-style-type: none"> risk managers health professionals injury management advisors regulatory bodies legal practitioners with experience in OHS engineers (such as design, acoustic,

RANGE STATEMENT	
	<p>mechanical and civil)</p> <ul style="list-style-type: none"> • security and emergency response personnel • workplace trainers and assessors • maintenance and tradespersons
Sources of OHS information	<p>Sources of OHS information include persons, organisations and references where knowledge about OHS may be obtained. These sources may be:</p> <ul style="list-style-type: none"> • internal, including: <ul style="list-style-type: none"> • hazard, incident and investigation reports • workplace inspections • incident investigations • minutes of meetings • job safety analyses and risk assessments • organisation data such as insurance records, enforcement notices and actions, workers compensation data, OHS performance data • reports and audits • material safety data sheets (MSDS) and registers • employees handbooks • employees including questionnaire results • OHS advisors • manufacturers' manuals and specifications • external, including: <ul style="list-style-type: none"> • regulatory bodies and OHS Acts regulations, codes and guidance material • other relevant legislation • Office of the Australian Safety and Compensation Council (ASCC) and the former National Occupational Health and Safety Commission (NOHSC) documents • Databases, such as national and state injury data • OHS specialists and consultants • newspapers and journals, trade/industry publications • internet sites

RANGE STATEMENT	
	<ul style="list-style-type: none"> • industry networks and associations, including unions and employer groups • OHS professional bodies • specialist advisors • research information
Organisation policies and procedures	<p>Organisation policies and procedures include:</p> <ul style="list-style-type: none"> • policies and procedures underpinning the management of OHS including: <ul style="list-style-type: none"> • hazard, incident and injury reporting • hazard identification, risk assessment and control • consultation and participation • incident investigation • quality system documentation
Work procedures include:	<p>Work procedures include:</p> <ul style="list-style-type: none"> • standard operating procedures • batch specifications, recipes • operator or manufacturer manuals • procedures for selecting, fitting, using and maintaining personal protective equipment
OHS records may include:	<p>OHS records may include:</p> <ul style="list-style-type: none"> • hazard, incident and investigation reports • workplace inspection reports • first aid records • minutes of meetings • job safety analyses, safe work method statements and risk assessments • MSDS and registers • employees handbooks • plant and equipment operation records including those relevant to registered plant • maintenance and testing reports • training records • environmental monitoring records • health surveillance records

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide information to the work group	<p>1.1. Relevant requirements of OHS legislation, standards, codes of practice/compliance codes, guidance material and safe working procedures and practices are clearly and accurately explained to the work group</p> <p>1.2. Information on organisation policies and procedures is provided in a readily accessible manner and clearly explained to the work group</p> <p>1.3. Roles and responsibilities of workplace OHS representatives and OHS committees, supervisors and managers are clearly explained</p> <p>1.4. Information on hazards, the outcomes of risk assessments, and required risk controls is provided to the work group, in an accessible and understandable format</p>
2. Ensure others are able to implement safe work practices	<p>2.1. Personal protective equipment appropriate to the work is available and functional</p> <p>2.2. Processes are implemented to confirm that others in the work group can identify hazards, assess risks and required risk controls and are following safe work practices, and organisation policies and procedures</p> <p>2.3. OHS training needs are identified and either addressed or reported to those with control</p>
3. Implement OHS participative processes	<p>3.1. Work group is consulted and advice in relation to OHS matters provided relevant to their work</p> <p>3.2. OHS issues raised are dealt with promptly, and in accordance with organisation procedures and legislative requirements, or referred to appropriate personnel</p> <p>3.3. Outcomes of consultation regarding OHS are recorded and promptly communicated to the work group</p>
4. Monitor compliance with work procedures	<p>4.1. Work procedures are checked for availability, clarity and completeness, and any deficiencies addressed or reported to appropriate persons</p> <p>4.2. Any deviations from procedures are identified and addressed or reported to appropriate persons</p> <p>4.3. Hazard identification and reporting processes are evaluated for effectiveness and any deficiencies addressed or reported to appropriate persons</p> <p>4.4. OHS housekeeping practices are monitored to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>that workplace standards are maintained, and action taken to address any deficiencies</p> <p>4.5. Behaviour is consistent with organisation safe working procedures and practices</p>
<p>5. Implement hazard identification, risk assessment and risk control procedures</p>	<p>5.1. Hazards are identified, assessed and eliminated with residual risk reported according to organisation procedures</p> <p>5.2. Risk assessments are conducted</p> <p>5.3. Develop control measures are developed taking account of the hierarchy of control</p> <p>5.4. Outcomes of risk assessments and identified risk controls are implemented and supported</p> <p>5.5. Deficiencies in ohs risk controls are identified, addressed and/or reported according to organisation procedures</p> <p>5.6. Personal professional limitations are identified and expert advice sought as required</p>
<p>6. Implement organisation procedures for maintaining OHS records</p>	<p>6.1. Feedback is obtained to ensure that workgroup is aware of organisation reporting requirements</p> <p>6.2. OHS records are reviewed to confirm that they are completed in an accurate, thorough and timely manner in accordance with legislative and organisation requirements</p> <p>6.3. Aggregate information and data from records is used to identify hazards and monitor risk controls</p>
<p>7. Implement emergency procedures</p>	<p>7.1. Feedback is obtained to ensure that emergency procedures are available and known by the work group</p> <p>7.2. Processes are implemented to ensure that emergency equipment is available and routinely checked for functionality</p> <p>7.3. Processes are implemented to ensure that others in the workgroup are able to respond appropriately to emergencies</p> <p>7.4. Investigations are conducted or contributed to in order to identify causes of emergencies</p> <p>7.5. Control measures are identified, implemented or supported to prevent recurrence and minimise risk of emergencies</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- use technical skills to access OHS information
- use language and literacy skills to interpret OHS documentation
- communicate with personnel in the work team, other work teams, managers and experts advisers
- supervise and direct staff
- conduct team meetings
- relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Required knowledge

Knowledge of:

- the difference between hazard and risk
- sources of OHS information both internal and external to the workplace
- general duty requirements of OHS legislation and also regulatory requirements relevant to the particular industry/type of work site
- the roles and responsibilities of employees, supervisors and managers in the workplace
- nature of common workplace hazards, such as chemicals, noise, manual handling, work postures, underfoot hazards and moving parts of machinery
- guidance material, including codes of practice/compliance codes relevant to the particular industry/type of work site
- hazard identification procedures, such as workplace inspections and review of workplace data
- principles of risk management including the hierarchy of control and its application
- personal protective equipment requirements, including use, storage and maintenance
- legislative requirements for record keeping and reporting
- standards and guidelines related to emergency procedures
- roles and responsibilities of OHS representatives and OHS committees
- workplace specific information, including:
 - hazards of the particular work environment
 - hazard identification procedures relevant to the hazards in their work place
 - risk controls for specific hazards
 - designated person for raising OHS issues

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• organisation procedures related to OHS, including hazard, incident and injury reporting, hazard identification, risk assessment and control, consultation and participation, incident investigation and record keeping• work procedures related to the work of the team/work group including use of personal protective equipment and emergency response• potential emergency situations, alarms and signals and required response |
|--|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • To demonstrate competence in this unit, a candidate must be able to provide evidence of: <ul style="list-style-type: none"> • maintaining OHS processes in the workplace particularly in relation to the supervision of a small workgroup • Evidence gathered by an assessor to determine competence will include: <ul style="list-style-type: none"> • written or verbal responses to scenarios and case studies • provision of workplace examples • evidence from workplace supervisor reports • portfolio of workplace documentation • Evidence of workplace performance over time must be obtained to inform a judgement of competence.

Hazards	<p>Hazards refer to:</p> <ul style="list-style-type: none"> • a source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these
Specific safety related hazards	<p>Specific safety related hazards may include but are not limited to:</p> <ul style="list-style-type: none"> • chemicals • bodily fluids • sharps • noise • manual handling • work posture • underfoot hazards • moving parts of machinery • cytotoxic medicines and waste
Other workplace hazards	<p>Other workplace hazards may include:</p> <ul style="list-style-type: none"> • occupational violence • stress • fatigue • bullying
Risks	<p>Risks, in relation to any hazard, means:</p> <ul style="list-style-type: none"> • the probability and consequences of injury, illness or damage resulting from exposure to a hazard
Risk assessments	<p>Risk assessments involve analysing a hazard to:</p> <ul style="list-style-type: none"> • identify factors influencing the risk and the range of potential consequences, such as: • effectiveness of existing controls • likelihood of each consequence considering

RANGE STATEMENT	
	exposure and hazard level
Risk controls	<p>Risk controls include:</p> <p>The devices and methods to, where practicable, eliminate the hazard or, where this is not practicable, minimise the risk associated with the hazard</p>
Personal protective equipment	<p>Personal protective equipment includes:</p> <ul style="list-style-type: none"> • equipment worn by a person to provide protection from hazards, by providing a physical barrier between the person and the hazard and may include: <ul style="list-style-type: none"> • head protection • face and eye protection • respiratory protection • hearing protection • hand protection • clothing and footwear
Work procedures	<p>Work procedures include:</p> <ul style="list-style-type: none"> • standard operating procedures • batch specifications • operator or manufacturer manuals • procedures for selecting, fitting, using and maintaining personal protective equipment
Hazard identification	<p>Hazard identification is:</p> <ul style="list-style-type: none"> • the process of identifying sources of harm and may be required: <ul style="list-style-type: none"> • at design or pre purchase of equipment and materials • at commissioning or pre-implementation of new processes or practices • before new forms of work and organisation of work are implemented • before changes are made to workplace, equipment, work processes or work arrangements • as part of planning major tasks or activities, such as equipment shutdowns • following an incident report

RANGE STATEMENT	
	<ul style="list-style-type: none"> • when new knowledge becomes available • at regular intervals during normal operations • prior to disposal of equipment, buildings or materials
Reporting processes	<p>Reporting processes include:</p> <ul style="list-style-type: none"> • hazards reports • maintenance requests and reports • reports on completion of inspections • incident reports • reports of non-compliance with work procedures • reporting on progress of action plans
OHS housekeeping practices	<p>OHS housekeeping practices address items, such as:</p> <ul style="list-style-type: none"> • workplace cleanliness and tidiness • unobstructed walkways and emergency exits • underfoot conditions • work space around equipment and machinery • functioning services, such as lighting, air flow and ventilation, and emergency lighting • storage areas including manual handling issues, storage, personal protective equipment • signage
Residual risk	<p>Residual risk is:</p> <ul style="list-style-type: none"> • the risk which remains after controls have been implemented
Hierarchy of control	<p>Hierarchy of control is the preferred order of control measures for OHS risks:</p> <ul style="list-style-type: none"> • elimination (e.g. controlling the hazard at the source) • substitution (e.g. replacing one substance or activity at the source) • engineering control (e.g. installing guards on machinery) • administration control (e.g. policies and procedures for safe work practices) • personal protective equipment (e.g. respirators and ear plugs)

RANGE STATEMENT**Expert advice**

Expert advice can be obtained from:

- persons either internal or external to the organisation including:
 - safety professionals
 - ergonomists
 - occupational hygienists
 - audiologists
 - safety engineers
 - toxicologists
 - occupational health professionals
 - OHS representatives
 - OHS committees
- other persons providing specific technical knowledge or expertise in areas related to OHS, including:
 - risk managers
 - health professionals
 - injury management advisors
 - regulatory bodies
 - legal practitioners with experience in OHS
 - engineers (e.g. design, acoustic, mechanical and civil)
 - security and emergency response personnel
 - workplace trainers and assessors
 - maintenance and trade persons

OHS records

OHS records may include:

- hazard, incident and investigation reports
- workplace inspection reports
- first aid records
- minutes of meetings
- job safety analyses, safe work method statements and risk assessments
- material safety data sheets (MSDS) and registers
- employees handbooks
- plant and equipment operation records, including those relevant to registered plant
- maintenance and testing reports

RANGE STATEMENT	
	<ul style="list-style-type: none"> • training records • environmental monitoring records • health surveillance records
Legislative requirements for record keeping	<p>Legislative requirements for record keeping include those specified under:</p> <ul style="list-style-type: none"> • OHS legislation for: <ul style="list-style-type: none"> • serious incident and injury reporting • registered plant • hazardous substances and dangerous goods • environmental monitoring • health surveillance • Privacy legislation
Emergencies	<p>Emergencies may include any abnormal or sudden event that requires immediate action, such as:</p> <ul style="list-style-type: none"> • serious injury events • events requiring evacuation • fires and explosions • hazardous substance and chemical spills • explosion and bomb alerts • security emergencies, such as armed robberies, intruders and disturbed persons • internal emergencies, such as loss of power or water supply and structural collapse • external emergencies and natural disasters, such as flood, storm and traffic accident impacting on the organisation
Emergency equipment	<p>Emergency equipment is equipment required as part of the emergency response by the organisation and includes:</p> <ul style="list-style-type: none"> • first aid equipment • eye wash shower or portable eye washes • fire extinguishers and equipment • communication equipment • evacuation alarms • evacuation equipment, especially that for disabled persons • torches • items of clothing, such as coloured hats and vests

RANGE STATEMENT**Incidents**

Incidents include:

- any event that has caused or has the potential for injury, ill-health or damage

FDFOHS5001A Manage OHS processes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency specifies the workplace performance required by an individual responsible for ongoing management of occupational health and safety (OHS) within an area of management responsibility, where the OHS management processes have been set up by other persons, either internal or external to the organisation.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit is intended for application by a manager of small organisation or several work groups or a larger group within an organisation.</p> <p>Work is likely to have a focus on maintaining already established processes and the unit assumes that OHS advice and expertise would be available.</p> <p>Application of this unit should be contextualised to reflect any specific workplace risks, hazards and associated safety practices.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Prerequisite units		

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage OHS information and records	<p>1.1. Relevant OHS legislation, standards, codes of practice/compliance codes, guidance material and other sources of OHS information are identified and accessed and their relevance to the specific work context is evaluated</p> <p>1.2. Information on OHS requirements, trends and risk controls is collected, collated and provided to others</p> <p>1.3. Records and record keeping processes are reviewed to ensure that legal requirements for OHS record keeping are identified and addressed</p> <p>1.4. Processes for ensuring that OHS records are accurately completed, collected and stored are implemented and monitored in accordance with legal requirements and workplace procedures</p>
2. Manage OHS participative processes	<p>2.1. Participative processes are monitored to ensure compliance with legislative requirements and organisation procedures</p> <p>2.2. Information provided to employees is evaluated to ensure it is in a readily accessible and understandable format</p> <p>2.3. Processes for ensuring that workgroup members have an opportunity, either directly or through their representative, to contribute to decisions that may affect their health and safety are implemented and monitored</p> <p>2.4. Processes for addressing OHS issues are evaluated to ensure issues raised through consultation are resolved promptly and in line with organisation procedures and legislative requirements</p> <p>2.5. Information about the outcomes of consultation is provided promptly in a format and medium that is readily accessible to employees</p>
3. Manage OHS risk management processes	<p>3.1. Hazard, incident, and injury reporting and investigation processes are in place, to meet legislative requirements and to inform future prevention strategies</p> <p>3.2. Processes are in place so that hazard identification and risk assessments occur according to organisation procedures</p> <p>3.3. Risk controls and hazard specific procedures are consistent with the hierarchy of control and are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>monitored to support compliance with legislative and regulatory requirements</p> <p>3.4. Processes are in place to identify and address any OHS implications of either proposed or implemented changes to the workplace, work processes or organisation of work</p> <p>3.5. Limits of own professional expertise are recognised and expert advisors consulted as required</p>
4. Manage OHS training program	<p>4.1. OHS training needs assessment is undertaken for workgroup members, that takes account of legislative and regulatory requirements, internal policies and procedures, existing skills of work group members and risk control requirements</p> <p>4.2. Training programs are implemented and monitored to ensure identified OHS training requirements are addressed</p> <p>4.3. Processes to ensure that all new employees receive ohs induction are implemented and monitored</p> <p>4.4. Relevant OHS and training specialists are accessed and consulted as required in the development and implementation of the OHS training program</p>
5. Manage OHS continuous improvement process	<p>5.1. Input from individuals and workgroup is considered in identifying and implementing OHS improvement</p> <p>5.2. OHS priorities are determined in consultation with appropriate managers and stakeholders</p> <p>5.3. OHS action plans are developed taking account of priorities and training needs</p> <p>5.4. Achievements against the OHS plans are monitored and updated accordingly</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- use technical skills to access OHS information
- use language, literacy and conceptual skills to analyse and evaluate OHS information
- communicate with supervisors, other managers, staff, OHS inspectors and expert advisers in a range of contexts, and using a range of media and formats
- conduct effective meetings
- develop solutions to complex OHS problems, utilising information from a range of sources
- apply an action planning process
- assimilate information from a range of sources to evaluate effectiveness of processes
- relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Required knowledge

Essential knowledge:

- the difference between hazard and risk
- sources of OHS information both internal and external to the workplace
- understanding of OHS legislation and regulatory requirements relevant to the particular industry/type of work site
- the roles and responsibilities of employees, supervisors and managers in the workplace
- legislative requirements for consultation
- legal and practical requirements for OHS training
- legal requirements for OHS record keeping and reporting
- knowledge and understanding of guidance material, including codes of practice/compliance codes relevant to the particular industry/type of work site
- risk assessment process, including:
 - hazard identification procedures
 - principles of risk assessment
 - the hierarchy of control and its application
- legislative requirements for record keeping and reporting
- systems for identifying skill needs, such as:
 - performance reviews

REQUIRED SKILLS AND KNOWLEDGE

- training needs analysis
- identifying additional training needs of learners
- workplace specific information, including:
 - hazards of the particular work environment and how they cause harm
 - hazard identification procedures relevant to the hazards in their workplace
 - designated person for raising OHS issues
 - organisation procedures related to OHS, including hazard, incident and injury reporting, hazard identification, risk assessment and control, consultation and participation, incident investigation and record keeping
 - awards and enterprise agreements that impact on the particular workplace
 - the characteristics and composition of the workforce and how they may impact on the management of OHS

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • To demonstrate competence in this unit, a candidate must be able to provide evidence of: <ul style="list-style-type: none"> • managing OHS processes for a small organisation or a group(s) of persons undertaking a range of work • Evidence gathered by an assessor to determine competence will include: <ul style="list-style-type: none"> • written or verbal responses to scenarios and case studies • reports from persons who have been involved in the management processes • portfolio of workplace documents • Evidence of workplace performance over time must be obtained to inform a judgement of competence.
<p>Context of and specific resources for assessment</p>	<p>Products that could be used as evidence include:</p> <ul style="list-style-type: none"> • verbal and written responses to verbal, pictorial or physical scenarios • demonstrated action to scenarios, simulations and role plays • completed reports to senior managers • written directions, emails, memos and other information provided to supervisors in area of responsibility • reports from team leaders, senior managers, other managers, specialist advisors <p>Processes that could be used as evidence include:</p> <ul style="list-style-type: none"> • how training needs were identified and addressed • how action plans are developed, monitored and updated • how hazard identification and risk assessment occur

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • how incident investigation occurs <p>Access and equity considerations:</p> <ul style="list-style-type: none"> • all assessment should be applied with respect to relevant work related access and equity issues • competence should reflect an ability to work in a culturally diverse environment • assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS legislation	<p>OHS legislation includes:</p> <ul style="list-style-type: none"> • commonwealth, state and territory OHS acts and regulations
Standards	<p>Standards include:</p> <ul style="list-style-type: none"> • documents produced by national bodies, OHS regulators or industry bodies, that prescribe preventative action to avert occupational deaths, injuries and diseases • standards are of an advisory nature only, except where a law adopts the standard and thus makes it mandatory • they may be called up as evidence in court or other enforcement action
Codes of practice/compliance codes	<p>Codes of practice/compliance codes are:</p> <ul style="list-style-type: none"> • documents generally prepared to provide advice to employers and workers, of an acceptable way of achieving standards • codes of practice/compliance codes may: <ul style="list-style-type: none"> • be incorporated into regulations • not relate to a standard • be called up as evidence in court or other enforcement action
Guidance material	<p>Guidance material:</p> <ul style="list-style-type: none"> • is an advisory technical document, providing detailed information for use by unions, employers, management, health and safety committee members and representatives, safety officers and others requiring guidance • advises on 'what to do' and 'how to do it' • has no legal standing
Other sources of OHS	<p>Other sources of OHS information include persons, organisations and references where</p>

RANGE STATEMENT**information**

knowledge about OHS may be obtained. These sources may be:

- internal, including:
 - hazard, incident and investigation reports
 - workplace inspections
 - incident investigations
 - minutes of meetings
 - job safety analyses and risk assessments
 - organisation data such as insurance records, enforcement notices and actions, workers compensation data, OHS performance data
 - reports and audits
 - material safety data sheets (MSDS) and registers
 - employees handbooks
 - employees including questionnaire results
 - OHS advisors
 - manufacturers' manuals and specifications
- external, including:
 - regulatory bodies and OHS Acts regulations, codes and guidance material
 - other relevant legislation
 - Office of the Australian Safety and Compensation Council (ASCC) and the former National Occupational Health and Safety Commission (NOHSC) documents
 - Databases, such as national and state injury data
 - OHS specialists and consultants
 - newspapers and journals, trade/industry publications
 - internet sites
 - industry networks and associations, including unions and employer groups
 - OHS professional bodies
 - specialist advisors
 - research information

OHS information

OHS information includes:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • requirements under OHS legislation, regulations, standards, codes of practice/compliance codes and guidelines • rights and responsibilities • information on hazards including MSDS • collated information on hazard incidents and injuries • investigation and audit reports • outcomes of hazard identifications and workplace inspections • risk assessments • risk controls • workplace OHS policies and procedures • work procedures • training records
Risk controls	<p>Risk controls include:</p> <p>The devices and methods to, where practicable, eliminate the hazard or, where this is not practicable, minimise the risk associated with the hazard</p>
Legal requirements for record keeping	<p>Legal requirements for record keeping include:</p> <ul style="list-style-type: none"> • those specified under OHS legislation and regulations for: <ul style="list-style-type: none"> • serious incident and injury reporting • registered plant • hazardous substances and dangerous goods • environmental monitoring • health surveillance • Privacy legislation
OHS records	<p>OHS records may include:</p> <ul style="list-style-type: none"> • hazard, incident and investigation reports • workplace inspection reports • incident investigation reports • first aid records • minutes of meetings • job safety analyses and risk assessments • MSDS and registers • plant and equipment operation records including those relevant to registered plant

RANGE STATEMENT	
	<ul style="list-style-type: none"> • maintenance and testing reports • training records • environmental monitoring records • health surveillance records
Participative processes	<p>Participative processes include:</p> <ul style="list-style-type: none"> • processes that: <ul style="list-style-type: none"> • inform employees and other stakeholders of OHS matters • seek their input • offer opportunity for stakeholders to participate in decisions that may impact on their health and safety • participative processes may also be referred to as 'consultative processes', however 'participation' implies a higher level of involvement
Organisation policies and procedures	<p>Organisation policies and procedures include:</p> <ul style="list-style-type: none"> • policies and procedures underpinning the management of OHS, including: <ul style="list-style-type: none"> • hazard, incident and injury reporting • hazard identification, risk assessment and control • consultation and participation • incident investigation • quality system documentation
Consultation	<p>Consultation includes processes for:</p> <ul style="list-style-type: none"> • seeking information or the opinions from one or more people prior to decision-making • consultation should particularly include those who may affect the outcomes or be affected by the decisions made but may also include specialist sources
A hazard	<p>Hazards refer to:</p> <ul style="list-style-type: none"> • a source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these
Specific safety related hazards	<p>Specific safety related hazards may include but</p>

RANGE STATEMENT	
	<p>are not limited to:</p> <ul style="list-style-type: none"> • chemicals, • bodily fluids • sharps • noise • manual handling • work posture • underfoot hazards • moving parts of machinery • cytotoxic medicines and waste
Other workplace hazards	<p>Other workplace hazards may include:</p> <ul style="list-style-type: none"> • occupational violence • stress • fatigue • bullying
Incident	<p>Incident includes:</p> <ul style="list-style-type: none"> • any event that has caused or has the potential for injury, ill health or damage
Hazard identification	<p>Hazard identification is:</p> <ul style="list-style-type: none"> • the process of identifying sources of harm and may be required: <ul style="list-style-type: none"> • at design or pre purchase of equipment and materials • at commissioning or pre-implementation of new processes or practices • before new forms of work and organisation of work are implemented • before changes are made to workplace, equipment, work processes or work arrangements • as part of planning major tasks or activities, such as equipment shutdowns • following an incident report • when new knowledge becomes available • at regular intervals during normal operations • prior to disposal of equipment, buildings or materials

RANGE STATEMENT	
Risks	<p>Risks, in relation to any hazard, means:</p> <ul style="list-style-type: none"> the probability and consequences of injury, illness or damage resulting from exposure to a hazard
Risk assessments	<p>Risk assessments involve analysing a hazard to:</p> <ul style="list-style-type: none"> identify factors influencing the risk and the range of potential consequences effectiveness of existing controls likelihood of each consequence considering exposure and hazard level and combining these in some way to obtain a level of risk
Hierarchy of control	<p>Hierarchy of control is the preferred order of control measures for OHS risks:</p> <ul style="list-style-type: none"> elimination (e.g. controlling the hazard at the source) substitution (e.g. replacing one substance or activity at the source) engineering control (e.g. installing guards on machinery) administration control (e.g. policies and procedures for safe work practices) personal protective equipment (e.g. respirators and ear plugs)
Expert advisors	<p>Expert advisors include:</p> <ul style="list-style-type: none"> persons either internal or external to the organisation including: <ul style="list-style-type: none"> safety professionals ergonomists occupational hygienists audiologists safety engineers toxicologists occupational health professionals other persons providing specific technical knowledge or expertise in areas related to OHS, including: <ul style="list-style-type: none"> risk managers health professionals

RANGE STATEMENT	
	<ul style="list-style-type: none"> • injury management advisors • legal practitioners with experience in OHS • engineers (e.g. design, acoustic, mechanical and civil) • security and emergency response personnel • workplace trainers and assessors • maintenance and trade persons
OHS induction	<p>OHS induction includes:</p> <ul style="list-style-type: none"> • the processes by which new employees are introduced to, and acquainted with their job and the new workplace, including familiarisation with: <ul style="list-style-type: none"> • hazards and risks associated with the work, • risk control measures, • welfare facilities and • emergency response procedures
Stakeholders	<p>Stakeholders are those people or organisations who may be affected by, or perceive themselves to be affected by an activity or decision, including:</p> <ul style="list-style-type: none"> • managers • supervisors • health and safety and other employee representatives • OHS committees • employees and contractors • the community
OHS action plans	<p>OHS action plans include:</p> <ul style="list-style-type: none"> • documented plans developed within the workplace to implement a systematic approach to OHS management and contain: <ul style="list-style-type: none"> • actions that support an integrated strategy to address deficiencies, meet obligations or provide for improved outcomes • allocated responsibilities • timeframes

Co-requisite units

Co-requisite units		

FDFOP1001A Pack or unpack product manually

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to pack or unpack product manually. Packing may be into or from primary or secondary (inner or outer) packaging.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit has application in a food processing packing environment. It typically targets the worker responsible for manual packing which may include product presentation and placement in packaging.</p> <p>Product feed may be mobile (conveyors) or stationary. Related equipment may include materials transfer equipment, plastic wrapping, shrink wrappers, taping, banding and strapping equipment, and date coders. These basic items of equipment can be covered by FDFOP1005A Operate basic equipment.</p> <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply and reference to food safety is replaced by GMP.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to pack or unpack product	1.1. Packaging requirements are identified 1.2. Packaging consumables are checked against product type
2. Manually pack or unpack product	2.1. Product is packed or unpacked to meet customer and order specifications 2.2. Unacceptable packaging consumables, product and/or packed products are identified, removed and corrected or reported 2.3. The work area is maintained according to housekeeping standards 2.4. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information on product and packaging requirements and procedures
- select, fit and use personal protective clothing and/or equipment
- confirm supply of packaging components and consumables appropriate for product type, which may require confirming stock numbers and codes
- confirm that product is in correct condition, which may require confirming product and date codes and product characteristics, such as weight and appearance
- pace work to meet production requirements
- pack or unpack product to meet specifications, including checking positioning of product within packaging, inspecting appearance and confirming that the packaged product meets customer and quality requirements
- correct and/or report product and/or packaging that is out-of-specification within level of responsibility
- maintain work area to meet housekeeping standards
- operate basic packaging equipment related to manual packing function, such as materials handling/conveyor equipment, shrink wrappers, and banding and strapping equipment according to enterprise procedures
- stack or place product as required, including following stacking configurations according to enterprise procedures
- clean and sanitise equipment and surfaces according to enterprise procedures
- complete workplace records as required according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and function of packaging
- quality requirements of packaging components and consumables, the packing process, and the effect of outputs on both the further stages of packaging and storage, and on the final consumer
- packaging components and consumables used for each product type
- packaging, unpacking and/or wrapping and/or placement procedures for each product type

REQUIRED SKILLS AND KNOWLEDGE

- consequences of incorrect procedures or configuration
- specifications for packing/packaging product and related equipment, components and consumables as required, including identifying any special packing/packaging requirements of particular customers
- storage and handling requirements of product
- contamination/food safety risks associated with manual packing and related control measures
- common causes of variation in both product presented for packing and packing components and consumables and corrective action required
- occupational health and safety (OHS) hazards and controls, including appropriate materials handling techniques related to the role
- environmental issues and controls relevant to packing, including waste/rework collection and handling procedures related to the process
- basic operating principles of equipment used, where relevant, such as main equipment components, status and purpose of guards, emergency stop, isolation and lockout controls, equipment operating capacities and applications
- services required and action to take if services are not available
- pallet identification and management system where relevant
- recording procedures and responsibilities where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • ensure product and required packing materials are ready and prepared for packing or unpacking • pack or unpack to required standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • production schedule and batch instructions • packaging specifications • relevant materials, packaging components and consumables, and related equipment • workplace records as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP1005A Operate basic equipment • FDFOP2004A Clean and sanitise equipment.

EVIDENCE GUIDE**Guidance information for assessment**

To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare washing equipment for operation	1.1. Items to be washed are identified and loaded 1.2. Equipment is checked to confirm readiness for use 1.3. Services are confirmed as available and ready for use 1.4. Wash cycle settings are selected to meet safety and wash requirements
2. Operate and monitor the equipment	2.1. Equipment is operated and monitored according to company procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Equipment is shut down according to workplace procedure 2.5. Washed items are unloaded and positioned in required location 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- select, fit and use appropriate personal protection clothing and/or equipment
- check that equipment, chemical supply and services are ready for operation
- identify washing requirements and select appropriate equipment settings
- load items to be washed
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings, cancelling isolation or lockouts as required, confirming that equipment is clean and all safety guards are in place and operational
- initiate and monitor the process and equipment operation according to procedure
- monitor the output of equipment operation against requirements
- take corrective action as required, such as clearing jams or blockages (depending on equipment this may involve confirming equipment is safe to work on, removing panels and components to access blockage, clearing blockage and returning equipment to operating condition)
- remove and position items as required
- handle washed items to meet hygiene and sanitation requirements
- locate emergency stop functions on equipment
- demonstrate shutdown and cleaning procedures as required
- maintain work area to meet housekeeping standards
- use basic process control screens and panels according to enterprise procedures
- complete workplace records according to enterprise procedures
- clean equipment as required, such as cleaning, flushing, sanitising and checking operational lines according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose of equipment, such as the capacity of container washing equipment, status and purpose of guards, range of containers/parts and other items that can be washed, and container washing functions (e.g. washing, sanitising and drying)
- operating cycles and application to washing requirements
- required output and quality of cleaning/sanitising to be met by the washing process

REQUIRED SKILLS AND KNOWLEDGE

- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of faults or unacceptable performance of the container washing process and related troubleshooting procedures within level of responsibility
- occupational health and safety (OHS) hazards and controls
- shutdown and cleaning procedures, including isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting problems
- environmental issues and controls relevant to equipment operation, including waste collection and handling procedures related to the container washing process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- recording procedures and responsibilities where relevant
- cleaning and sanitation requirements where relevant

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Participate in processes to identify and assess manual handling	1.1. Manual handling components of a work function are identified 1.2. Manual handling risks are identified and reported in accordance with hazard and incident reporting procedures 1.3. Risks to self and others of manual handling are assessed within level of responsibility
2. Contribute to manual handling risk minimisation	2.1. Equipment is available and in a fit state for use 2.2. Clothing and footwear, including personal protective clothing, does not contribute to manual handling risk
3. Plan and conduct manual handling	3.1. Sources of risk are identified 3.2. Workplace layout and environment is modified within area of control to minimise manual handling risk 3.3. Work tasks are modified within area of control to minimise the risk of injury 3.4. Manual handling aids are used according to workplace instructions 3.5. Movement and postures used minimise the risk of injury within the limits of the work environment and the demands of the task

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information relating to use of equipment and other task requirements
- identify any manual handling requirements of the work function and specifically any manual handling risks
- report manual handling risks using appropriate hazard and incident reporting procedures
- identify manual handling risks, including:
 - risks to self and others
 - any existing arrangements to control risks
- identify scope of responsibility to eliminate or control level of risk (for hazards outside scope of responsibility, identify and use the appropriate reporting and consultation arrangements to address hazards)
- participate in consultative processes to evaluate options for removing or controlling manual handling risks, including applying hierarchy of control
- select appropriate equipment and techniques to suit manual handling task within workplace procedures
- inspect manual handling-related equipment/aids/tools to confirm fitness for use, including identifying and correcting and/or reporting signs of wear and tear
- follow procedures to complete manual handling tasks to maintain safety of self and others
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- different types of manual handling activities, including lifting, reaching, pushing, pulling, holding, restraining, throwing and carrying
- types of injuries that can result from manual handling
- aspects of manual handling that may be risks (hazard identification), such as:
 - repetitive or sustained application of force
 - repetitive or sustained awkward posture
 - repetitive or sustained movement
 - application of high force

REQUIRED SKILLS AND KNOWLEDGE

- manual handling of live animals (related to handling of poultry)
- manual handling of unstable or unbalanced loads, such as liquids
- workplace procedures and responsibilities for identifying and reporting manual handling hazards
- factors to be considered when assessing manual handling risks relevant to work role (refer to workplace risk assessment sheets and code of practice advice where available), including:
 - postures
 - movements
 - force required
 - duration and frequency of manual handling activity
 - environmental conditions, such as hot and cold work environments
- procedures and responsibilities for conducting risk assessments of manual handling tasks
- typical options for eliminating or controlling manual handling risks associated with work functions, including principles of hierarchy of control and the advantages and disadvantages of different options
- types of equipment and/or techniques used to eliminate or reduce manual handling risks in the workplace, including when and how to use each type of technique/equipment relevant to manual handling tasks in work role
- level of authority to address OHS issues related to manual handling and related workplace arrangements for managing safety issues
- sources of advice on manual handling relevant to work function
- equipment available to assist manual handling, related inspections required to identify faulty equipment and related reporting procedures
- movement and postures that increase the risk of injury, and movements and postures to minimise the force in the body as applied to specific tasks in the workplace

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify manual handling tasks required for work activity and associated risks • eliminate risk through movement, posture and effectively using equipment provided • modify work to eliminate or minimise risk • apply safe work procedures.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • work procedures, including advice on manual handling requirements and safe work practices • workplace documentation and related advice, such as codes of practice to support OHS arrangements for hazard identification, risks assessment and control • materials and related equipment as appropriate for manual handling • information on equipment capacity and operating procedures where relevant • reporting and monitoring systems.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, legislation, regulations and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • OHS procedures • equipment manufacturers' advice • material safety data sheets (MSDS) • codes of practice and related advice
Equipment	<p>Equipment may include but is not limited to:</p> <ul style="list-style-type: none"> • trolleys • pallet jacks • conveyors, • vacuum lifters • other mechanical handling and lifting aids and equipment
Task-specific training	Task specific training is provided as appropriate
Contributions to manual handling risk minimisation	<p>Contributions to manual handling risk minimisation includes:</p> <ul style="list-style-type: none"> • reporting equipment requiring maintenance, especially wheeled equipment or other equipment where friction may increase force requirements
Changes to workplace layout and environment	<p>Changes to workplace layout and environment within area of control may include but not be limited to:</p> <ul style="list-style-type: none"> • changes in location of load, such as use of bench to not lift from floor • arrangement of items to eliminate above shoulder handling

RANGE STATEMENT	
	<ul style="list-style-type: none"> • placement of trolley • using sit stand stools • using task lighting • using a footrest
Task modifications within area of control	<p>Task modifications within area of control may include but are not limited to:</p> <ul style="list-style-type: none"> • changes to frequency, duration, number of objects handled • route selected • seeking assistance as appropriate • housekeeping to minimise obstacles
Assessment of risks and evaluation of control options according to the hierarchy of control	<p>Assessment of risks and evaluation of control options according to the hierarchy of control is carried out in consultation with others as required by workplace arrangements and regulatory requirements for risk assessment and control</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for mixing/blending	1.1. Materials are confirmed and available to meet production requirements 1.2. Cleaning requirements and status are identified and confirmed 1.3. Processing/operating parameters for mixing/blending are entered as required to meet production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the mixing/blending process	2.1. Ingredients are delivered to the mixer in the required quantities to meet recipe specifications 2.2. The mixing/blending process is started and operated according to workplace procedures 2.3. Equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The mixing process is monitored to confirm that specifications are met 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines
3. Shut down the mixing/blending process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify mixing/blending requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, and confirming that equipment is clean, correctly configured for processing requirements and that all safety guards are in place and operational
- add/load materials in correct quantities and sequence (this typically involves manual addition)
- start and monitor the batching/mixing process to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification
- monitor supply and flow of ingredients to and from the batching/mixing process, such as visually inspecting quality of ingredients
- pace mixing/blending to meet production requirements
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow procedures to shut down and clean equipment within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use simple process control screens according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic operating principles of equipment used, such as main equipment components, status and purpose of guards, emergency stop, isolation and lockout controls,; equipment operating capacities and applications
- services required and action to take if services are not available
- the flow of the mixing process and the effect of mix preparation on downstream

REQUIRED SKILLS AND KNOWLEDGE

- processes
- ingredient handling requirements and shelf-life/coding
- quality characteristics required of ingredients used
- required attributes of the mixed/blended output, such as visual appearance of the mix
- the effect of the mixing/blending parameters, such as length of mix time on mixing outcome
- contamination/food safety risks associated with the process and related control measures, including product compatibility and cross-contamination risks, and associated cleaning requirements
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, such as reporting to appropriate personnel
- procedures and responsibility for reporting production and performance information
- occupational health and safety (OHS) hazards and controls
- shutdown and cleaning procedures, including isolation, lock out and tag out procedures and responsibilities
- environmental issues and controls, including waste/rework collection and handling procedures related to the process
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare and apply ingredients according to mixing procedures • conduct pre-start checks on equipment used for mixing • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch/recipe instructions • specifications, control points and processing parameters • mixing/blending process equipment, services and related storage facilities as required • ingredients and additives required for the mixing/blending process • sampling schedules and test procedures and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • cleaning procedures, materials and equipment as required • items of equipment to be operated and relevant materials, consumables and services • workplace records as required • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • Specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Mixing/blending equipment	<p>Mixing/blending equipment may include:</p> <ul style="list-style-type: none"> • measuring and weighing equipment, such as scales, load cells, dosing equipment, mixers, pumps, and agitators <p>Common mixer types include:</p> <ul style="list-style-type: none"> • ribbon and vertical screw mixers/conveyors
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • bulk and non-bulk ingredients and additives
Ingredient addition	Ingredient addition is typically manual
Operation of equipment and processes	Operation of equipment and processes may require:

RANGE STATEMENT	
	<ul style="list-style-type: none"> the use of simple process control panels
Services	<p>Services are appropriate to the process to be operated. Typical examples include:</p> <ul style="list-style-type: none"> power compressed and instrumentation air
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Follow workplace procedures to operate equipment	<p>1.1. Checks are conducted to confirm equipment is ready and safe to operate</p> <p>1.2. Operating procedures are followed to start and operate equipment to achieve required outcome</p>
2. Monitor and complete equipment operation	<p>2.1. Equipment is monitored to identify variation in operating conditions</p> <p>2.2. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.3. Equipment is shut down according to workplace procedure</p> <p>2.4. The work area is maintained according to housekeeping standards</p> <p>2.5. Work is conducted in accordance with workplace environmental guidelines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information on equipment operating requirements and procedures
- select, fit and use personal protective clothing and/or equipment
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, and confirming that equipment is clean and that all safety guards are in place and operational
- start and operate equipment according to procedure
- monitor the output of equipment operation against requirements
- take corrective action in response to out-of-specification results
- shut down and clean equipment as required
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- maintain work area to meet housekeeping standards
- use basic process control screens and panels according to enterprise procedures
- complete workplace records according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic operating principles of equipment used, such as main equipment components, status and purpose of guards, emergency stop, isolation and lockout controls, equipment operating capacities and applications
- services required and action to take if services are not available
- quality requirements of materials/consumables used and the effect of variation on outputs
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- contamination/food safety risks associated with equipment operation and related control measures
- common causes of variation and corrective action required

REQUIRED SKILLS AND KNOWLEDGE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor equipment operation	1.1. Equipment is inspected and monitored to confirm safety and operating condition 1.2. The process is monitored to confirm performance is maintained within specification 1.3. Materials and consumable levels are maintained as required 1.4. Workplace records are maintained in accordance with workplace requirements 1.5. Work is conducted in accordance with workplace environmental guidelines 1.6. The work area is maintained according to housekeeping standards
2. Identify and respond to non-conformance	2.1. Out-of-specification product, process and equipment performance is identified rectified and/or reported according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- select, fit and use appropriate personal protection clothing and/or equipment
- monitor the process and equipment operation to maintain the process within the required parameters, such as conducting visual inspections and basic tests
- monitor supply and flow of materials and/or consumables to and from the process, such as replenishing material inputs and removing processed materials or product
- identify and take action to correct out-of-specification results within level of responsibility (where corrective action is outside level of responsibility, report to appropriate personnel)
- maintain work area to meet housekeeping standards
- sort, collect, treat, recycle or dispose of waste according to enterprise procedures
- demonstrate shutdown and cleaning sequence according to enterprise procedures
- record workplace information according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose of equipment
- required output and quality requirements to be met by the process
- basic operating principles of equipment used, such as main equipment components, status and purpose of guards, and emergency stop, isolation and lockout controls, and where required, the operating features of the control panel and the relationship between control panel functions and the physical equipment
- common causes of faults or unacceptable performance and action required within level of responsibility
- procedures and responsibility for reporting problems
- occupational health and safety (OHS) hazards and controls
- waste handling requirements and procedures related to process operation
- shutdown and cleaning procedure where relevant
- recording system and responsibilities where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out responsibilities in accordance with workplace policies and procedures	1.1. Information on conditions of employment, company policies and procedures is identified 1.2. Policies and procedures are applied when carrying out work role 1.3. Work is conducted in accordance with workplace environmental guidelines
2. Identify and locate company product and processes	2.1. Company product range is identified 2.2. Production/packaging stages and processes carried out on site are identified and located

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and access information on conditions of employment and workplace policies and procedures (information may be provided in print, audio-visual and/or verbal formats)
- locate workplace amenities and facilities relevant to work responsibilities
- identify and locate materials/storage areas in the workplace, relevant to work role, such as locating tank farms and other bulk storage locations and identifying special storage conditions (e.g. hazardous goods and temperature controlled stores areas)
- identify and locate production and packing processes/main work areas in the workplace
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- workplace structure and key personnel
- rights and responsibilities of employees as defined in employment conditions
- company policies and procedures relating to work responsibilities, including areas covered by legislation and related responsibilities
- appropriate personal conduct in a work area, including minimum clothing and personal hygiene standards when entering and moving around a food processing area in order to protect both employees and product safety, and behaving appropriately towards others in the work area
- industrial representation arrangements
- site security arrangements, including responsibility to report when coming on and off site
- site layout, including main facilities, such as canteens, parking areas, storage areas, processing and packing areas and location of emergency exits and assembly areas
- the main products/product range produced in the workplace
- stages and processes used to manufacture and package products
- personal reporting roles and responsibilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify expectations and responsibilities of the work role • identify organisational products and processes • identify location of operations.
Context of and specific resources for assessment	Assessment must occur in a real workplace where the assessee has access to: <ul style="list-style-type: none"> • advice on work roles and responsibilities • advice on workplace policies, codes of practice, procedures, structure and personnel • advice on conditions of employment and entitlements • site maps • workplace access.
Method of assessment	This unit should be assessed together with other units of competency relevant to the work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out in accordance with company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements. When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply and reference to food safety is replaced by GMP</p>
Company policies and procedures	<p>Company policies and procedures referred to are additional to those covered by OHS, quality, food safety and environmental competency standards. They include:</p> <ul style="list-style-type: none"> • codes of practice and general employment policies and procedures in areas, such as sexual harassment • equal employment opportunity (EEO)/affirmative action • anti-discrimination • racial vilification • workplace bullying
Conditions of employment	<p>Conditions of employment typically include:</p> <ul style="list-style-type: none"> • pay and conditions • leave arrangements • reporting and timekeeping responsibilities • terms of employment, including permanent, casual and probationary periods • disciplinary procedures • staff facilities and amenities
Key personnel	<p>Key personnel may include but are not limited to:</p> <ul style="list-style-type: none"> • human resource personnel responsible for recruitment, training, pay and conditions issues • relevant site and operations managers • supervisors/team leaders

RANGE STATEMENT	
	<ul style="list-style-type: none"> • industrial/work area representatives

Co-requisite units		

FDFOP1008A Take and record basic measurements

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to use basic measuring equipment and devices, read and record results.
------------------------	---

Application of the Unit

Application of the unit	This unit is appropriate where simple tests involve automated measuring devices.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify measurement requirements	1.1. Purpose of measuring is identified 1.2. Measuring requirements, including frequency and accuracy range, are identified 1.3. Measuring equipment is available and fit for purpose
2. Take measurements	2.1. Measurements are performed to requirements and according to workplace procedures 2.2. Measurement results are checked for accuracy 2.3. Non-standard or out-of-range results are identified and reported to appropriate personnel 2.4. Results of measurements are recorded in the required format

Required Skills and Knowledge

Required skills

Ability to:

- access workplace information on measurement requirements and procedures relating to own work, including information about the types of measurements to be carried out, the equipment/devices to be used, frequency of measurement and related recording requirements
- locate measuring equipment/device and confirm that it is suitable for use (this will vary depending on the nature of the equipment/device), such as taring scales, and confirming calibration of devices (e.g. pH meters)
- locate materials/items to be measured
- follow procedures to conduct measurements
- determine and interpret measurement results, including checking measurement accuracy, and where results are out of the required range, reporting to appropriate personnel and following instructions on corrective action
- record results as required in the appropriate format, such as completing log sheets
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose of measuring as applied to work responsibilities, and related measuring equipment and units of measurement, including the required accuracy of the measurement and the capability/accuracy level of equipment used
- measuring equipment/device preparation requirements and purpose, including calibration requirements and responsibilities for maintaining accurate measuring equipment/devices (at this level, responsibility may involve confirming calibration by following defined check methods)
- occupational health and safety (OHS) hazards associated with using the measuring equipment/device and related safe operating procedures
- typical/required range for measurement results
- common factors and conditions that could affect the measurement result
- procedures to follow where measurements are out of range, such as involves repeating the measurement one or more times
- consequences of measurements that are out of range
- responsibilities to report measurement information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify purpose of measuring • use a variety of basic measuring equipment • identify and report inconsistencies • record measurement as required • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures and instructions relating to measuring requirements • measuring equipment/devices • materials/items to be measured • recording and reporting system.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2061A Use numerical applications in the workplace.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, regulatory and licensing requirements, legislative requirements, site licences and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules • standard forms • written or verbal instructions
Basic measuring equipment	<p>Basic measuring equipment includes but is not limited to:</p> <ul style="list-style-type: none"> • scales • gauges and meters <p>Examples of typical measuring devices include:</p> <ul style="list-style-type: none"> • refractometers (hand-held) • temperature probes/thermometers • pH probes/meters

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor quality of work outcome	1.1. Quality requirements are identified 1.2. Inputs are inspected to confirm capability to meet quality requirements 1.3. Work is conducted according to work procedures 1.4. Work is conducted in accordance with workplace environmental guidelines
2. Identify and report unacceptable inputs and/or outputs	2.1. Work area, materials, processes and product are routinely checked to ensure compliance with quality requirements 2.2. Unacceptable quality is identified and corrective action is taken within the level of responsibility to maintain quality standards 2.3. Quality variation is reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and apply workplace information on quality requirements for own work
- identify control points or inspection points for own work and related methods used to monitor quality
- carry out relevant checks and inspections as required, such as checks and inspections on equipment, materials, product, packaging consumables and processing conditions relevant to own work
- identify and respond to out-of-specification or unacceptable inputs and/or outputs, such as making adjustments within level of responsibility and/or reporting
- maintain quality of own work
- conduct tests related to work responsibilities according to enterprise procedures
- record quality data in required format according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- quality policy, procedures and responsibilities
- quality personnel and their respective responsibilities, such as internal personnel and external auditors
- requirements of internal and external customers
- sources of advice on quality requirements for own work
- control points for own work, including the purpose of the control point, the risk if not controlled and the method of control where relevant
- monitoring, inspection and checking procedures relating to process control requirements
- evidence of out-of-specification or unacceptable performance
- procedures for responding to out-of-specification or unacceptable performance/outcomes
- responsibilities for reporting and recording quality information
- sampling and test procedures where relevant
- recording requirements and responsibilities where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify quality requirements • conduct work according to quality standards • monitor quality and identify and act on non-compliances.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • quality policy, system and procedures, including company codes of practice/ GMP • work tasks and responsibilities • workplace information relating to work tasks, such as specifications, work instruction and other advice on quality requirements and procedures • systems for recording quality information as required • reporting system and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with other units of competency relevant to the work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFFS1001A Follow work procedures to maintain food safety.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing and regulatory requirements, legislative requirements and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • quality specifications • food safety and/or Good Manufacturing Practice (GMP) codes • log sheets • basic data • standard forms • written or verbal instruction
Responsibility for monitoring quality	<p>Responsibility for monitoring quality relates to immediate work responsibilities and may require:</p> <ul style="list-style-type: none"> • visual inspections and checks, including using basic counting skills
Monitoring	Monitoring typically involves visual inspection or checks at control points. Control points refer to those key points in a work process which must be monitored and controlled. This includes food safety (critical) control points
Out-of-specification or unacceptable outcomes	At this level, responding to out-of-specification or unacceptable outcomes typically involves exercising judgment within clearly defined parameters and reporting/referring to others

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Exchange verbal information	1.1. Information requirements are identified 1.2. Questions are asked to seek or clarify information 1.3. Interactive skills are used to communicate effectively with others 1.4. Information is provided in a timely and appropriate form
2. Locate and use workplace information	2.1. Sources of workplace information are located 2.2. Information is used to carry out work responsibilities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and access information to undertake work responsibilities
- seek information from people in the workplace to support work roles and responsibilities
- ascertain or clarify information requirements by asking questions
- structure and present information in a clear, logical sequence to meet work requirements
- demonstrate interactive communication processes
- respond to information requests in a timely manner
- use appropriate information technology as required in the workplace
- interact with others to achieve agreed outcomes
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- communication channels and forums including consultative arrangements established in the workplace
- common colloquial and technical terms relating to work function
- sources of information and advice relating to own job
- methods used to access information, which may involve basic keyboard/control panel skills
- interactive techniques, including active listening, questioning, seeking and responding to feedback, and interacting effectively with others
- recognition of different personal communication styles
- personal reporting roles and responsibilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • exchange work-related information • ask questions to inform work practice • apply work information to work practice.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • advice on work roles and responsibilities • information technology as appropriate to the workplace • opportunities to interact with others using typical workplace communication processes • typical workplace information and systems.
Method of assessment	This unit should be assessed together with other units of competency relevant to the work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Overview the food processing industry	1.1. Sectors of the food processing industry are identified 1.2. Key sector representatives and their roles are identified 1.3. Relevant legislation and guidelines common to employment in the sector are identified 1.4. Types of employment in the food industries are identified and key responsibilities described
2. Identify key production processes and supply chains	2.1. Raw materials used in the workplace and their source are identified 2.2. Range of products produced in the workplace are identified 2.3. Workplace production processes for converting materials into products are identified 2.4. Supply chains for products are identified
3. Carry out work responsibilities according to policies and procedures	3.1. Information on conditions of employment, company policies and procedures is identified 3.2. Policies and procedures are applied when carrying out work role 3.3. Rights, responsibilities and legal obligations are identified 3.4. Key personnel and their roles are identified. 3.5. Employability skills required for working effectively are identified and applied 3.6. Consequences of not following workplace environmental and safety policies and practices are identified
4. Take responsibility for own skill development	4.1. Skills required for work role are identified and own ability assessed to determine learning needs 4.2. Opportunities for skill development are identified and participated in 4.3. Responsibility is taken for own work tasks and role 4.4. Own work is monitored against workplace standards and areas for improvement identified and acted upon 4.5. Problem solving strategies are used to address problems, inconsistencies or concerns when fulfilling work role

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and access information on conditions of employment and workplace policies and procedures (information may be provided in print, audio-visual and/or verbal formats)
- identify and locate materials/storage areas in the work place, relevant to work role, such as locating tank farms and other bulk storage locations and identifying special storage conditions (e.g. hazardous goods and temperature controlled stores areas)
- identify and locate production and packing processes/main work areas in the workplace
- model appropriate behaviour when interacting with others and moving around the workplace
- explain employee's responsibilities
- explain the dispute resolution procedures in the workplace
- explain the flow of product from receipt to sale in own workplace
- explain the nature and role of work instructions and standard operating procedures (SOPs)
- explain the principles of equal employment opportunity (EEO) and policies to prevent sexual harassment
- follow relevant workplace policies
- identify and explain the relevance of occupational health and safety (OHS) and regulatory requirements for food industry employees
- identify and explain workplace employment conditions
- identify relevant workplace requirements, policies and procedures and explain their implications for trainees
- list the markets where the company's products are distributed
- name the products produced in own workplace
- outline enterprise ethical standards and requirements for interacting with other employees and staff
- relate to others in an effective and non-discriminatory way showing mutual respect
- apply environmental practices
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Knowledge of:

- workplace structure and key personnel
- rights and responsibilities of employees as defined in employment conditions
- company policies and procedures relating to work responsibilities, including areas covered by legislation and related responsibilities
- appropriate personal conduct in a work area, including minimum clothing and personal hygiene standards when entering and moving around a food processing area in order to protect both employees and product safety, and behaving appropriately towards others in the work area
- industrial representation arrangements
- site security arrangements, including responsibility to report when coming on and off site
- site layout, including main facilities, such as canteens, parking areas, storage areas, processing and packing areas and location of emergency exits and assembly areas
- the main products/product range produced in the workplace
- stages and processes used to manufacture and package products
- personal reporting roles and responsibilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • recognise key industry sectors • identify workplace practices and processes • describe concepts of supply chains • identify relevant legislation Identify expectations and responsibilities of the work role • identify organisational products and processes • identify location of operations.
Context of and specific resources for assessment	Assessment must occur in a real workplace where the assessee has access to: <ul style="list-style-type: none"> • advice on work roles and responsibilities • advice on workplace policies, codes of practice, procedures, structure and personnel • advice on conditions of employment and entitlements • site maps • workplace access.
Method of assessment	This unit should be assessed together with other units of competency relevant to the work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out in accordance with company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements.</p>
Company policies and procedures	<p>Company policies and procedures referred to are additional to those covered by OHS, quality, food safety and environmental competency standards. They include:</p> <ul style="list-style-type: none"> • codes of practice and general employment policies and procedures in areas, such as sexual harassment • EEO/affirmative action • anti-discrimination • racial vilification • workplace bullying
Conditions of employment	<p>Conditions of employment typically include:</p> <ul style="list-style-type: none"> • pay and conditions • leave arrangements • reporting and timekeeping responsibilities • terms of employment, including permanent, casual and probationary periods • disciplinary procedures • staff facilities and amenities
Key personnel	<p>Key personnel may include but are not limited to:</p> <ul style="list-style-type: none"> • human resource personnel responsible for recruitment, training, pay and conditions issues • relevant site and operations managers • supervisors/team leaders • industrial/work area representatives
Employability skills	<p>Employability skills include:</p> <ul style="list-style-type: none"> • ability to work in teams

RANGE STATEMENT	
	<ul style="list-style-type: none"> • ability to solve problems • ability to communicate in the workplace • using initiative and enterprise • using technology • ability to plan and organise • ability to manage self • ability to learn work-related skills and knowledge
Supply chains	<p>Supply chains refer to:</p> <ul style="list-style-type: none"> • concept of product flow from raw materials to production, distribution, marketing and sales • customers and suppliers
Problem solving strategies	<p>Problem solving strategies include:</p> <ul style="list-style-type: none"> • asking questions • reporting or referring to appropriate personnel • asking for help or support • referring to standard operating procedures • consideration of options • accessing information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect materials to confirm fitness for use	<p>1.1.Type and quality requirements of materials are confirmed</p> <p>1.2.Materials are conveyed or transferred to required locations</p>
2. Sort materials	<p>2.1.Materials are inspected to confirm quality requirements are met</p> <p>2.2.Materials are sorted as required to meet production requirements</p> <p>2.3.Unacceptable quality is identified and reported according to workplace reporting requirements</p> <p>2.4.The work area is maintained according to housekeeping standards</p> <p>2.5.Work is conducted in accordance with workplace environmental guidelines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information on materials specification/quality requirements
- select, fit and use personal protective clothing and/or equipment
- inspect quality of materials to confirm compliance with quality specifications, such as:
 - product type and quantity
 - product condition, such as identifying any bruising, discolouration or other damage, confirming product is clean, and checking size and weight
- identify out-of-specification or non-conforming product and follow procedures to separate unacceptable product
- respond to and/or report equipment failure within level of responsibility
- maintain work area to meet housekeeping standards
- complete workplace records as required according to enterprise procedures
- demonstrate procedures for operating materials transfer equipment as required according to enterprise procedures
- wash/clean raw materials or product according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and standards to be met by the inspection and sorting process, including criteria and specifications as they apply to inspection and sorting requirements
- the relationship between visual inspection and sorting and other inspection procedures, such as those that may be conducted by a laboratory or at subsequent processing stages
- typical causes of unacceptable or out-of-specification product, including causes of product damage that can occur prior to arrival at the plant and as part of the handling process
- the stages that occur in the inspection and sorting process and their effect on product, such as in-line cleaning or conditioning and product or materials transfer stages
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems

REQUIRED SKILLS AND KNOWLEDGE

- contamination/food safety risks associated with the sorting process and related control measures
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to equipment operation, including waste collection and handling procedures related to the process
- basic operating principles of equipment used, where relevant, including main equipment components, status and purpose of guards, emergency stop, isolation and lockout controls, equipment operating capacities and applications
- services required and action to take if services are not available
- recording procedures and responsibilities where relevant
- washing/cleaning requirements and standards where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • recognise and act on materials or product that does not comply with quality standards • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures (SOPs) • specifications • production schedules • labels and codes • safety signs and symbols • photos or other visual representations of acceptable quality • standard forms • verbal messages • requests or instructions
Materials transfer equipment	<p>Materials transfer equipment may be mechanical or pneumatic, and may include:</p> <ul style="list-style-type: none"> • conveyors • flumes pumped systems
Product inspection and sorting	<p>Product inspection and sorting may include:</p> <ul style="list-style-type: none"> • sizing • quality inspection • sorting/grading <p>Aspects of these processes may be:</p> <ul style="list-style-type: none"> • automated or done using equipment, such as sieves <p>Related processes may include:</p> <ul style="list-style-type: none"> • trimming or removal of unacceptable product

RANGE STATEMENT	
Related processes	Related processes may include: <ul style="list-style-type: none"> washing/cleaning product

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cleaning	1.1. Chemical stocks are available to meet cleaning and sanitation requirements 1.2. Services are confirmed as available and ready for operation 1.3. Equipment shutdown is planned and equipment is taken off-line for cleaning 1.4. Equipment and related valves and pipework are configured to confirm readiness for cleaning 1.5. The plant is set for the cleaning cycle
2. Operate and monitor the cleaning process	2.1. The cleaning cycle is undertaken according to company policies and procedures 2.2. The cleaning process is monitored to confirm cleaning meets company requirements 2.3. Cleaning data is recorded according to workplace reporting requirements 2.4. Out-of-specification process and equipment performance is identified, rectified and/or reported
3. Dispose of waste and return plant to operating condition	3.1. Cleaning chemicals are flushed from plant and disposed of according to company policies and procedures 3.2. Work is conducted according to environmental requirements 3.3. Plant is set up to meet operational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information, such as the cleaning schedule to identify cleaning requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- handle and prepare cleaning and sanitation agents safely, including following correct handling and preparation procedures and use of appropriate protective clothing and equipment as required
- schedule cleaning and/or liaise with related work areas to take equipment and area off-line with minimal disruption to production
- prepare equipment and area for cleaning, such as rendering equipment safe to clean, removing obstacles and unnecessary equipment, correctly positioning equipment (e.g. valves, pipes, vents and taps), selecting appropriate cleaning cycle, removing waste and/or dismantling equipment
- clean equipment according to cleaning process cycle and procedures, such as starting up and operating the CIP process in both automatic and manual modes
- monitor the process and equipment operation to maintain the cleaning process within the required parameters
- locate emergency stop functions on equipment
- return plant to operating order
- return area to working order
- take corrective action in response to out-of-specification results
- advise affected work areas of cleaning schedule and progress
- maintain and store chemicals and related equipment as required
- carry out relevant checks and inspections to confirm effectiveness of cleaning
- sort, collect, treat, recycle or dispose of waste
- record cleaning information
- maintain work area to meet housekeeping standards
- conduct routine maintenance according to enterprise procedures
- take samples and conduct tests according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE***Knowledge of:***

- purpose and basic principles of CIP, including the use and functions of caustic and acid solutions, and cleaning sequence and stages as required in the workplace
- purpose and use of cleaning equipment and chemicals used
- terminology relating to the chemical solutions used
- safe work procedures, including appropriate signage of cleaning activities and safe handling and storage of cleaners and sanitisers used
- purpose and limitations of protective clothing and equipment
- cleaning and sanitation requirements, including different levels of cleaning requirements depending on the reason for cleaning
- characteristics of cleaning and sanitising chemicals used, including basic composition as well as compatibility of chemicals with types of equipment
- methods used to render equipment safe to clean, including the status and purpose of equipment guards, relevant lock out/tagout and isolation procedures
- equipment settings required for cleaning and for operating respectively
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- inspection points for cleaning and sanitation
- consequences of contamination of process flows by cleaning solutions and related safeguards
- types of waste generated by both the production and the cleaning process and related collection, treatment and disposal requirements
- environmental consequences of incorrect cleaning waste disposal procedures
- requirements to liaise/advise related work areas
- reporting and recording systems
- routine maintenance procedures where relevant
- sampling methods and test procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- shut down equipment and prepare for cleaning
- prepare and use chemicals according to safe work requirements
- clean equipment to meet work standards
- monitor cleaning and report or address any non-compliances
- flush equipment and dispose of waste according to environmental guidelines
- complete required documentation
- apply safe work practices and identify OHS hazards and controls
- apply food safety procedures.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- cleaning procedures and related advice on equipment operation, including advice on safe work practices and environmental requirements
- personal protective clothing and equipment
- equipment to be cleaned, and related CIP system
- chemicals and/or automated chemical addition system
- services as required
- MSDS where appropriate
- cleaning schedule or advice and related standard operating procedures
- housekeeping standards and procedures
- advice on environmental management issues relevant to work responsibilities
- workplace information recording systems,

EVIDENCE GUIDE	
	<p>requirements and procedures</p> <ul style="list-style-type: none"> • sampling and testing schedules and procedures as relevant to cleaning requirements in the workplace.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out in accordance with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements. When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply and reference to food safety is replaced by GMP
Workplace information	Workplace information may include: <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production cleaning schedules and instructions • signs and symbols • materials safety data sheets (MSDS) • manufacturers' advice • standard forms and reports
Dosing of cleaning chemicals	Dosing of cleaning chemicals may be: <ul style="list-style-type: none"> • automatically controlled or manually dosed
Services	Services may include: <ul style="list-style-type: none"> • power • water • Steam • compressed and instrumentation air
Testing	Where tests are conducted as part of operation, a typical requirement is measurement of pH
Monitoring the process	Monitoring the process is dependent on the nature of equipment. Examples of monitoring include: <ul style="list-style-type: none"> • chemical strength • cycle time • temperatures • time

RANGE STATEMENT	
	<ul style="list-style-type: none"> • storage tank levels • condensate quality
Operation and monitoring of equipment and processes	Operation and monitoring of equipment and processes typically requires the use of control panels and systems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cleaning	1.1.Cleaning/sanitising agents and services are available and ready for use 1.2.Equipment is cleared of product and/or packaging consumables in preparation for cleaning 1.3.Equipment is rendered safe to clean
2. Clean and sanitise equipment to meet workplace requirements	2.1.Equipment is cleaned and sanitised according to workplace procedure and requirements 2.2.Equipment is inspected to confirm operating condition and cleanliness 2.3.Unacceptable equipment condition is identified and reported according to workplace procedures 2.4.Cleaning equipment and chemicals are stored according to workplace procedure 2.5.Waste from cleaning process is disposed of according to workplace procedures 2.6.Work is conducted in accordance with workplace environmental guidelines 2.7.Equipment is restored to operating order

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information, such as the cleaning schedule to identify cleaning requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary cleaning and sanitising equipment and services
- select and prepare cleaners and sanitisers as required according to workplace procedures
- prepare equipment for cleaning, such as rendering equipment safe to clean, clearing product and waste materials, covering motors and instrumentation where steam or water hoses are used, and simple dismantling of equipment parts
- advise any affected work areas/operators of cleaning progress to coordinate timely completion with minimal disruption to production
- clean and sanitise equipment as required according to workplace procedures and cleaning schedule
- return equipment to operating order (this may involve basic assembly of equipment parts)
- inspect equipment to identify equipment condition and cleanliness
- locate emergency stop functions on equipment
- report and/or correct unacceptable equipment condition
- maintain housekeeping standards
- prepare cleaners and sanitisers as required
- store cleaners, sanitisers and related equipment as required
- carry out relevant checks and inspections
- maintain work area to meet housekeeping standards
- conduct routine maintenance according to enterprise procedures
- take samples and conduct tests according to enterprise procedures
- record cleaning and sanitation information according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the purpose of cleaning and sanitation and importance in maintaining food safety
- functions of cleaners, sanitisers and related equipment

REQUIRED SKILLS AND KNOWLEDGE

- safe work procedures, including appropriate signage of cleaning activities, safe handling and storage of cleaners and sanitisers used, safety when using cleaning methods, such as hot water and steam hoses, and status and purpose of safety guards
- purpose and limitations of protective clothing and equipment
- cleaning and sanitation requirements relating to work responsibilities, including the need for different levels of cleaning where relevant
- procedures for preparing cleaners and sanitizers as required
- cleaning method/s to be followed relating to work responsibilities
- other work areas/operators who need to be consulted/advised on timing of cleaning
- methods used to render equipment safe to clean, including understanding the status and purpose of equipment guards, relevant lock out/tagout and isolation procedures and related equipment settings for both cleaning and operating as required
- procedures for conducting cleaning and sanitising
- types of waste generated by the cleaning process and related collection, treatment and disposal requirements
- potential environmental impact of incorrect waste handling
- inspection, cleaning and storage requirements of cleaning equipment used
- inspection points and methods for confirming the effectiveness of cleaning and sanitation, including visual inspection, and where required, recording of cleaning conducted
- inspection requirements to confirm equipment condition, including acceptable equipment condition, ability to identify faulty or unacceptable equipment and take required corrective action
- recording requirements and responsibilities
- routine maintenance procedures where relevant
- sampling methods and test procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- prepare equipment for cleaning
- prepare and use chemicals according to safe work requirements
- clean and sanitise equipment to meet work standards
- monitor cleaning and report or address any non-compliances
- dispose of waste according to environmental guidelines
- complete required documentation
- apply safe work practices and identify OHS hazards and controls
- apply food safety procedures.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- cleaning procedures and related advice on equipment operation, including advice on safe work practices and environmental requirements
- personal protective clothing and equipment
- cleaning schedule and related procedures, including OHS advice
- equipment/items to be cleaned
- chemicals, cleaning equipment and services as required
- MSDS where appropriate
- housekeeping standards and procedures
- cleaning/sanitising information recording system and procedures
- advice on environmental management issues relevant to work responsibilities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate with people from diverse backgrounds	1.1. People from all cultural groups are valued and treated with respect and sensitivity 1.2. Verbal and non-verbal communication takes account of cultural differences 1.3. Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other persons' language 1.4. Assistance from colleagues, specialist resources or outside organisations is obtained when required
2. Respond to cross-cultural misunderstandings	2.1. Issues which may cause conflict or misunderstanding in the workplace are identified 2.2. Difficulties are addressed with the appropriate people in the workplace 2.3. When difficulties or misunderstandings occur, possible cultural differences are considered 2.4. Efforts are made to resolve the misunderstanding, taking account of cultural considerations 2.5. Issues and problems that cannot be resolved are referred as required for follow up

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and recognise cultural differences in the workplace
- apply understanding of cultural difference to communicate effectively to achieve work requirements, including selecting appropriate communication style to suit audience
- identify and respond to cross-cultural misunderstandings
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

Required knowledge

Knowledge of:

- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to company and employee rights and responsibilities in the workplace
- recognition of the different cultural groups in the workplace
- understanding of the basis of cultural difference, including behaviour or practices that can cause offence, and related strategies for interacting in ways that are culturally sensitive
- communication strategies and styles appropriate to diverse audiences related to the workplace

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify responsibilities according to the principles of anti-discrimination legislation • treat people from other cultures with respect and sensitivity • make efforts to communicate and understand others using verbal and non-verbal techniques • seek assistance when required to facilitate understanding • treat cross-cultural misunderstandings with sensitivity and act to resolve the matter with respect.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • advice on legal rights and responsibilities relating to anti-discrimination and EEO • related company policies and procedures • opportunities to interact with others using typical workplace communication processes.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare bulk materials transfer equipment and process for operation	1.1. Bulk storage locations, ingredient/materials holdings and capacities are identified 1.2. Actual to recorded holding levels are confirmed 1.3. The transfer system equipment is checked to confirm readiness for use 1.4. Transfer equipment settings and operating parameters are selected to meet safety and transfer requirements 1.5. Checks, tests or other materials/product clearance procedures are followed prior to transfer as required by workplace 1.6. Priorities for materials transfer are established to match intakes/transfers to storage capacity and production requirements
2. Transfer bulk materials	2.1. The transfer process is started and operated according to workplace procedures 2.2. The transfer process is monitored to confirm correct location selection, quantities and equipment settings 2.3. Bulk dry materials/product is transferred to the required location/storage facility 2.4. Workplace housekeeping standards are maintained 2.5. Work is conducted in accordance with workplace environmental guidelines 2.6. Workplace records are maintained according to workplace recording requirements
3. Complete transfer operations	3.1. Equipment settings are selected to complete transfer operation 3.2. In-flight product is purged from lines 3.3. Equipment is cleaned and prepared for further transfer 3.4. Information on the transfer operation is recorded according to workplace reporting requirements 3.5. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information relating to materials transfer requirements and priorities
- select, fit and use personal protective clothing and/or equipment
- use workplace records and systems to confirm storage facilities and capacities and determine appropriate routing of materials received (this typically involves use of computer-based systems), and where required, verifying by physically inspecting storage facilities
- plan and sequence transfer process to meet storage capacity and production requirements
- prepare equipment for materials transfer, such as confirming that equipment is clean, lines are purged, isolation or lockouts are cancelled as required, any scheduled maintenance has been completed and safety guards/equipment are correctly positioned
- carry out procedures to confirm bulk materials meet quality requirements as required by transfer process, such as conducting tests or getting clearance documentation from laboratory/quality personnel
- operate and monitor transfer process to confirm that correct quantities are transferred at the required times, to the required locations
- locate emergency stop functions on equipment
- respond to and/or report equipment failure within level of responsibility
- respond to and/or report evidence that bulk materials do not meet quality requirements
- complete the transfer operations, such as purging lines and selecting appropriate equipment/system settings
- complete records of product/materials transfer as required
- maintain work area to meet housekeeping standards
- use process control and scheduling systems, screens and panels according to enterprise procedures
- take and record product/materials samples and conduct tests according to enterprise procedures
- clean transfer equipment (this may require entry to confined spaces and where this is the case, appropriate certification requirements must also be met)
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm transfer requirements • conduct pre-start checks on equipment used for transfer • start, operate, monitor and adjust process to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on storage locations, capacities and bulk receipt equipment capacity and operating parameters • bulk transfer system, equipment and services • bulk materials (dry) • receipt schedules and sequencing systems • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and</p>

EVIDENCE GUIDE	
	<p>other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements</p>
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity. <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply and reference to food safety is replaced by GMP</p>
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • delivery bills and dockets • standard forms and reports
Confined spaces	<p>Where cleaning tanks or silos requires entry to confined spaces, the relevant National Occupational Health and Safety Commission (NOHSC) and/or state or territory health and safety authorities assessment criteria and methods prescribed must also be met</p>
Operation of bulk transfer systems	<p>Operation of bulk transfer systems typically involves:</p> <ul style="list-style-type: none"> • the use of process control screens and systems

RANGE STATEMENT	
Bulk materials transfer equipment	Bulk materials transfer equipment may include: <ul style="list-style-type: none"> • screw elevators • bucket elevators and other mechanical/pneumatic stock transfer equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to enter a freezer storage environment	1.1. Appropriate clothing and footwear are identified and available 1.2. Clothing and footwear are correctly fitted prior to entering a freezer 1.3. Checks and inspections are conducted according to workplace procedures
2. Identify and monitor equipment operation in a freezer storage environment	2.1. Effects of freezing temperatures on equipment used are identified 2.2. Equipment is monitored to ensure it is in operational order when in use in a freezer
3. Handle frozen product safely	3.1. Handling requirements for frozen product are identified 3.2. Frozen product is handled safely 3.3. Work is conducted in accordance with workplace environmental guidelines
4. Respond to emergencies	4.1. Signs and symptoms of exposure are identified 4.2. Appropriate action is taken to minimise effects of exposure of self and others

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- locate and fit appropriate protective clothing, footwear and equipment
- follow procedures to enter and work in a freezer environment to ensure safety of self and others, including carrying out relevant checks and inspections prior to entry as required by workplace procedures
- follow procedures to handle product to avoid product damage
- monitor operating performance of equipment used in the freezer and identify signs of unsafe or unfit operation
- conduct work in a manner appropriate to minimising risk of contamination
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and conditions required in a freezer storage environment, including how temperature parameters are maintained in the freezer/cold room
- safety requirements and hazards associated with entering and working in a freezer storage/cold room area, including required protective clothing and equipment, limitations of protective clothing and equipment, and maximum work duration
- symptoms associated with hypothermia and action to take if these occur
- the effects of freezer/cold room temperatures and frozen condensation on equipment used in a freezer/cold room but designed for room temperature operation, including symptoms that equipment is unsafe or unfit for use
- effects of room temperatures on equipment using hydraulic oils designed for freezer/cold room temperatures
- typical freezing rates for product handled, such as products stacked on pallets
- handling requirements for moving pallets of frozen product and how this differs from moving pallets of fresh product
- the differences in product stability of pallets loaded with fresh compared with frozen product and related wrapping requirements
- the effect of freezing on product packaging and related handling requirements
- housekeeping requirements for work area

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare bulk liquid transfer equipment and process for operation	1.1. Tank locations, product/materials holdings and capacities are identified 1.2. Actual to recorded holding levels are confirmed 1.3. Condition of tank farm and related equipment is inspected and maintenance requirements are identified and reported according to workplace reporting requirements 1.4. Transfer equipment settings and operating parameters are selected to meet safety and transfer requirements 1.5. Checks, tests or other materials/product clearance procedures are followed prior to transfer as required by workplace 1.6. Priorities for materials transfer are established to match intakes/transfers to storage capacity and production requirements
2. Transfer bulk liquid materials	2.1. The transfer process is started and operated according to workplace procedures 2.2. The transfer process is monitored to confirm correct location selection, quantities and equipment settings 2.3. Bulk liquid materials/product is transferred to the required location/storage facility 2.4. Workplace housekeeping standards are maintained 2.5. Work is conducted in accordance with workplace environmental guidelines 2.6. Workplace records are maintained according to workplace recording requirements
3. Complete transfer operations	3.1. Valves and related equipment settings are correctly positioned to complete transfer operation 3.2. Product/materials are purged from lines 3.3. Equipment is cleaned and prepared for further transfer 3.4. Information on the transfer operation is recorded according to workplace reporting requirements 3.5. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- Access workplace information relating to materials transfer requirements
- Select, fit and use personal protective clothing and/or equipment
- Inspect equipment for signs of wear. Examples of typical sensory inspections include visual inspections to detect leaks, listening for unusual noises and or vibrations in pumps and checking gauges and meters
- Use workplace records and systems to confirm tank holdings and capacities and determine appropriate source/destination holding facilities. This typically involves use of computer-based systems. It may also involve verifying by physically inspecting storage facilities and checking materials/product compatibility
- Plan and sequence transfer process to meet storage capacity and production requirements
- Prepare equipment for materials transfer. This may involve confirming that equipment is clean, lines are purged, isolation or lockouts are cancelled as required, any scheduled maintenance has been completed and safety guards/equipment are correctly positioned
- Carry out procedures to confirm liquid bulk product/materials meet quality requirements. This may involve conducting tests or getting clearance documentation from laboratory/quality personnel
- Operate and monitor transfer process to confirm that correct quantities are transferred at the required times, to the required locations. This may include monitoring pump loads and flow rates and filter/strainer condition
- Respond to and/or report equipment failure within level of responsibility
- Locate emergency stop functions on equipment
- Complete transfer operations. This may include purging lines and selecting appropriate equipment/system settings
- Complete records of product/materials transfer as required
- Maintain work area to meet housekeeping standards
- Use process control and scheduling systems, screens and panels according to enterprise procedures
- Take and record product/materials samples and conduct tests according to enterprise procedures
- Conduct routine maintenance according to enterprise procedures
- Clean transfer equipment. This may require entry to confined spaces. Where this is the case, appropriate certification requirements must also be met
- Use oral communication skills / language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

REQUIRED SKILLS AND KNOWLEDGE

clarification and seeking advice from supervisor

- Work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- Bulk liquid materials storage facilities layout and related management systems
- Basic operating principles of the system and equipment used. This includes an understanding of the features of the bulk liquid handling system such as whether it is based on gravity and/or pressurised feed, and related performance aspects. It also includes an understanding of the equipment used which typically includes sensors, valves, pumps, pipework and other related equipment that controls the flow and transfer of bulk liquid materials, equipment operating capacity and the status and purpose of guards
- Planning and scheduling systems and responsibilities to prioritise materials transfer processes. This includes an understanding of the characteristics of materials received and related storage requirements, production requirements and storage capacities
- Signs and symptoms of faulty equipment and early warning signs of potential problems
- Operating parameters and corrective action required where operation is outside specified operating parameters
- OHS hazards and controls. This includes emergency procedures to respond to hazardous situations such as spills
- Product inspection procedures within level of responsibility
- Clearance procedures. This may include relevant test methods and action required if results are not within specification or clearance is not provided
- Contamination risks and controls. This includes an understanding of cross-contamination risks, product compatibility and storage requirements
- Isolation, lock out and tag out procedures and responsibilities
- Environmental issues associated with bulk liquid materials transfer. This includes consequences of spills and appropriate control/containment procedures
- Recording requirements and procedures
- Basic operating principles of process control where relevant. This includes the relationship between control panels and systems and the physical equipment
- Sampling and test procedures where relevant
- Routine maintenance procedures where relevant
- Cleaning procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare transport tankers for loading	1.1. The loading schedule is checked to confirm loading requirements 1.2. Tankers are fit for purpose and meet cleaning requirements 1.3. Transfer equipment is fit for purpose and in operational condition 1.4. Transfer equipment settings and operating parameters are selected to meet safety and loading requirements 1.5. Bulk materials are located to confirm type, quantity available and clearance for loading 1.6. Priorities for loading are established to meet delivery requirements
2. Prepare to unload transport tankers	2.1. Receipts documentation is checked to confirm material type and quantities 2.2. Materials are cleared for unloading 2.3. Bulk storage locations, holdings and capacities are identified 2.4. Actual to recorded holding levels are confirmed 2.5. Transfer equipment is fit for purpose and in operational condition 2.6. Priorities for unloading are established to meet delivery requirements
3. Operate and monitor the tanker loading/unloading process	3.1. The tanker loading process is started and operated according to workplace procedures 3.2. Equipment is monitored to confirm load transfer to correct tanker in correct quantities 3.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 3.4. The workplace meets housekeeping standards 3.5. Work is conducted in accordance with workplace environmental guidelines 3.6. Workplace records are maintained according to workplace recording requirements
4. Complete loading operations	4.1. Equipment settings are selected to complete loading operation 4.2. In-flight product is purged from lines 4.3. Equipment is cleaned and prepared for further

ELEMENT	PERFORMANCE CRITERIA
	loading 4.4. Information on the loading operation is recorded according to workplace reporting requirements 4.5. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information relating to loading/unloading requirements
- select, fit and use personal protective clothing and/or equipment
- inspect loading/unloading equipment for signs of wear, such as visual inspections to detect leaks, listening for unusual noises and/or vibrations in pumps, and checking gauges and meters
- confirm that tankers are in a suitable condition for loading, such as checking cleaning records and confirming that any scheduled maintenance has been carried out (where product is temperature controlled, it includes confirming capacity of vehicle to meet temperature control requirements)
- check receipts/despatch documentation to confirm material types, quantities and transfer requirements
- confirm that bulk product/materials meet quality requirements for loading/unloading, such as conducting tests or getting clearance documentation from laboratory/quality personnel
- use workplace records and systems to:
 - confirm storage holdings and capacities
 - determine appropriate source/destination for loads (this typically involves use of computer-based systems), and where required, verifying by physically inspecting storage facilities and checking materials/product compatibility
- plan and sequence loading/unloading to meet delivery, requirements/storage capacity and production requirements as appropriate
- liaise with drivers to confirm loading requirements
- prepare transfer equipment for use, such as confirming that equipment is clean, lines are purged, isolation or lockouts are cancelled as required, any scheduled maintenance has been completed
- operate and monitor the loading/unloading process to confirm that correct quantities are transferred at the required times, to the required locations, such as monitoring pump loads, flow rates and filter/strainer condition
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- complete transfer operations, such as purging lines and selecting appropriate equipment/system settings
- complete records of product/materials transfer as required
- maintain work area to meet housekeeping standards
- use process control and scheduling systems, screens and panels according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- take and record product/materials samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean transfer equipment (this may require entry to confined spaces, and where this is the case, appropriate certification requirements must also be met)
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- bulk storage facilities layout and related management systems
- basic operating principles of the system and equipment used, including the features of the tanker loading/unloading and materials transfer systems
- equipment used, such as sensors, valves, pumps, pipework and other related equipment that controls the flow and transfer of bulk materials, equipment operating capacity and the status and purpose of guards
- tanker types and capacities
- planning and scheduling systems and responsibilities to prioritise loading and unloading processes, including the characteristics of materials received and related storage requirements, production requirements and storage capacities
- signs and symptoms of faulty equipment and early warning signs of potential problems
- operating parameters and corrective action required where operation is outside specified operating parameters
- product inspection and procedures within level of responsibility
- clearance procedures, such as relevant test methods and action required if results are not within specification or clearance is not provided
- occupational health and safety (OHS) hazards and controls, including emergency procedures to respond to hazardous situations, such as spills
- contamination risks and controls, including cross-contamination risks, product compatibility and storage requirements
- isolation, lock out and tag out procedures and responsibilities
- environmental issues associated with bulk liquid materials transfer, including consequences of spills and appropriate control/containment procedures
- recording requirements and procedures, such as related receivals and despatch documentation
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and test procedures
- routine maintenance procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Store stock to meet temperature control requirements	1.1. Goods requiring temperature control are identified 1.2. Goods are located in correct storage areas to meet storage temperature, stores handling and stock rotation requirements 1.3. Stores information is recorded according to workplace requirements
2. Monitor and maintain temperature of stock within specifications	2.1. Stock temperature is monitored to confirm temperature is within specified limits 2.2. Storage areas are monitored to confirm temperature is within storage zone limits 2.3. Residence time in temperature controlled stores is monitored to meet stock control requirements 2.4. Out-of-specification storage temperatures are identified and corrective action is taken
3. Transfer temperature controlled stock	3.1. Goods are handled and transferred to maintain temperature control and meet stock rotation requirements 3.2. Stores transfer information is recorded according to workplace reporting requirements 3.3. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to determine product handling and storage requirements
- identify storage requirements including temperature limits, minimum duration at given temperatures, and segregation and co-storage requirements
- identify temperature controlled storage facilities and temperature zones available
- select, fit and use personal protective clothing and/or equipment
- use materials handling equipment in a temperature controlled environment as required to undertake work functions
- follow procedures to measure temperature of product, such as use of instrumentation as required to take core and surface temperatures
- read instrumentation, such as temperature gauges, to monitor stores and zone temperatures
- identify and report out-of-specification temperatures in product and storage facilities
- take corrective action in response to out-of-specification temperatures including implementation of procedures to segregate damaged or potentially unsafe product
- complete records of stock receipt and transfer as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- occupational health and safety (OHS) hazards and controls, including the purpose and limitations of protective clothing and equipment
- temperature controlled storage facilities and capacities available in the work area, such as temperature zones within a single store and concepts (e.g. the Cold Chain compliance) as relevant to work requirements
- temperature control requirements of stock handled in the work area, including acceptable temperature ranges and consequences of failing to meet these ranges, and where required requirements for gradual temperature change
- stock handling procedures for receiving and locating stock within a store, including stock rotation and procedures for identifying, segregating, and disposing of damaged or potentially unsafe stock

REQUIRED SKILLS AND KNOWLEDGE

- stock handling procedures for transferring temperature controlled stock from a temperature controlled environment, including maximum duration stock can be held outside a controlled environment
- food safety and quality consequences of stock temperature control requirements not being met
- monitoring procedures and instrumentation, including use of thermometers or other temperature measuring instrumentation
- notification, recording and reporting requirements
- operating procedures for goods handling equipment as required
- housekeeping requirements for work area
- recording requirements and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify storage requirements of temperature controlled stock • monitor temperature of storage area and stock to ensure standards are maintained • handle and transfer stock to maintain required conditions • identify and act on non-conformances • complete workplace documentation • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • temperature storage specifications • stock handling and rotation systems • controlled temperature storage facilities • stock requiring storage • load shifting equipment as required • stock information recording system and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2007A Work in a freezer storage area • TLIA1407C Use product knowledge to complete work operations • TLID1007C Operate a forklift • TLIK107C Use infotechnology devices and computer

EVIDENCE GUIDE	
	applications in the workplace <ul style="list-style-type: none">• TLID207C Shift a load using manually-operated equipment.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production schedules and instructions manufacturers' advice standard forms and reports
Temperature controlled stock	<p>Temperature controlled stock may include:</p> <ul style="list-style-type: none"> stock to be stored at a constant temperature and at different temperatures for given durations
Temperature controlled storage facilities	<p>Temperature controlled storage facilities include:</p> <ul style="list-style-type: none"> any controlled temperature environment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct routine inspection of plant and equipment	1.1. Equipment is inspected to identify signs of wear 1.2. Nature of maintenance requirement is assessed
2. Prepare to conduct routine maintenance	2.1. Maintenance task is assessed to determine tools and services required 2.2. Equipment is prepared for maintenance 2.3. Hand tools are selected according to task requirements 2.4. Tools are checked before use and unsafe and/or faulty items are reported within standard procedures 2.5. Maintenance is planned and scheduled in consultation with affected work areas to minimise disruption to production
3. Carry out routine maintenance	3.1. Routine maintenance on equipment is carried out according to workplace procedures 3.2. Maintenance activities are reported according to workplace reporting requirements
4. Complete maintenance tasks	4.1. Equipment is returned to operating order 4.2. Tools and materials are stored according to workplace procedure 4.3. Relevant personnel are notified of maintenance completion 4.4. Housekeeping standards are maintained 4.5. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information such as the equipment history, faults or difficulties
- select, fit and use personal protective clothing and/or equipment
- inspect equipment for signs of wear, such as visual inspections to detect leaks, listening for unusual noises and/or vibrations
- identify and describe maintenance requirements, including the ability to assess the urgency of the maintenance issue, recognise common types of maintenance requirements and run basic checks according to workplace procedures to confirm the need for and type of maintenance support required
- take action to address maintenance requirements, such as carrying out routine maintenance within level of skill and responsibility and/or reporting outstanding maintenance to appropriate personnel using the required forms or request system
- plan and schedule maintenance within level of responsibility, such as consulting affected personnel and/or work areas on timing and notifying of maintenance progress
- prepare equipment and work area for routine maintenance, including cleaning equipment prior to carrying out maintenance and confirming that equipment is safe to work on, and simple isolation or tag out of equipment as required by workplace procedure
- select and use hand tools as required to carry out maintenance task
- select relevant parts and materials as required to carry out maintenance task
- carry out routine maintenance tasks according to workplace procedures
- on completion of maintenance tasks, return equipment to operational order, including confirming that all equipment parts, nuts and bolts are accounted for and correctly tightened, and where required, cleaning and sanitising equipment
- store tools in designated location, including basic tool maintenance, such as oiling
- complete records of maintenance as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- system in place to manage maintenance of plant and equipment in the workplace, including programs, such as responsive, preventative and proactive maintenance as

REQUIRED SKILLS AND KNOWLEDGE

- appropriate
- responsibilities for participating in the maintenance program, including scope of operator responsibilities, roles of others involved in plant and equipment maintenance and procedures for raising maintenance orders where requirements are outside operator role
- basic operating principles of equipment to be maintained
- signs and symptoms of faulty equipment and early warning signs of potential problems
- basic checks used to confirm the nature of maintenance requirements, including distinguishing between mechanical and electrical faults and identifying probable causes or conditions that may increase maintenance requirements of equipment used
- procedures for issuing, maintaining and storing tools used
- safe use of hand tools and measuring instrumentation relevant to maintenance responsibilities
- lubrication requirements, including requirements to use food grade lubricants as required and consequences of using incorrect type or amount of lubricants
- safe work procedures, including appropriate signage of maintenance activities as required, use of appropriate personal protective clothing and equipment, and awareness of safety hazards and controls relating to maintenance tasks
- methods used to render equipment safe to work on or clean including lock out/tag out and isolation procedures (in some cases this may involve liaising with other maintenance operators)
- procedures and inspections to be carried out to confirm that equipment is in operating order and all parts are accounted for
- food safety risks arising from poor personal hygiene, cleaning and housekeeping practices and procedures associated with routine maintenance
- maintenance planning, scheduling and recording procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify routine maintenance tasks for machine or equipment • monitor operation and identify need for maintenance tasks • schedule maintenance tasks and communicate requirements with affected personnel • select and use appropriate hand tools to undertake routine maintenance • assess readiness for returning machine or equipment to operation or referring for further attention • complete maintenance documentation • apply safe work practices and identify OHS hazards and controls.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • tools, equipment and supplies used in minor routine preventative maintenance • routine maintenance and lubrication schedules and procedures • equipment to be maintained • housekeeping standards and procedures • maintenance information recording system and procedures.

assessment	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
-------------------	--

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Routine maintenance

Routine maintenance is carried out according to company policies and procedures, licensing requirements, legislative requirements and industrial awards and agreements

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production log books
- routine maintenance schedules
- manufacturers' advice
- condition monitoring information

Typical routine maintenance tasks

Typical routine maintenance tasks will depend on the workplace and may include:

- replacement of consumable components, such as O-rings, hoses, filters and other 'bolt-on/bolt-off' equipment parts
- lubrication of equipment and maintenance of fluid levels
- simple adjustment, alignment or attachment of equipment components, parts, guides and sensors
- clearing blocked nozzles, such as glue nozzles
- positioning/attaching equipment components
- carrying out basic maintenance on video inkjet machines

Tools and materials

Tools and materials depend on the maintenance function and may include:

- a limited range of hand tools, such as spanners and screwdrivers, grease guns, Allen keys and measuring and alignment equipment

Materials may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> lubricants and consumables for video inkjet printers
Inspections of equipment	Inspections of equipment may be carried out: <ul style="list-style-type: none"> informally or as part of a structured program associated with proactive maintenance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to transport food	<p>1.1. Food storage vehicles and containers/receptacles are appropriate for use</p> <p>1.2. Food storage vehicles and containers/receptacles are prepared for use</p> <p>1.3. Food is loaded and secured as required to meet transportation and temperature control requirements</p> <p>1.4. Hand washing and disinfecting procedures are followed to meet workplace requirements</p> <p>1.5. Work is conducted in accordance with workplace environmental guidelines</p>
2. Load, unload and transport food safely	<p>2.1. Food safety control measures are monitored to ensure that food safety is maintained during transport</p> <p>2.2. Where food safety control requirements are not met, the incident is promptly reported and corrective action is taken</p> <p>2.3. Food is unloaded as required according to transportation and temperature control requirements</p> <p>2.4. Food safety information is recorded to meet workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to determine food handling and transport requirements
- select, fit and use personal protective clothing and/or equipment
- confirm that the vehicle and associated equipment are appropriate and ready for use, including confirming that vehicle type is capable of maintaining the required temperature range for product
- prepare transport containers (this will vary depending on the type of food and transport method), such as checking cleaning records, and where required, confirming product compatibility to ascertain that appropriate level of cleaning has occurred
- prepare the storage/holding environment as required, including confirming that temperature parameters for the loading and unloading areas are met
- follow procedures to load/unload food to ensure that materials/product is loaded/unloaded in correct sequence and configuration and that food cannot become contaminated by being located in proximity to other food or non-food items that can cause contamination (osmosis)
- monitor temperature parameters and related food safety control points before, during and after transporting food and record information in the required format
- take appropriate corrective action in response to failure to meet temperature parameters or other food safety requirements as required by workplace procedures
- clean and sanitise food containers according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- food safety control points in the loading/unloading and transportation of food materials and product and related methods of control
- characteristics of food transported and related transport environment requirements
- micro-biological, physical and chemical hazards that can occur when loading, transporting and unloading food, appropriate to nature and method of food transported, including the types of hazards likely to occur, the conditions under which they occur, and possible consequences
- methods and procedures used to control food safety hazards (this depends on the

REQUIRED SKILLS AND KNOWLEDGE

type of controls and equipment used), including the purpose and operation of equipment, procedures in place to maintain food safety and workplace records, such as temperature control charts and cleaning and sanitation records

- procedures used to confirm that transportation and related food safety equipment is appropriate for use and operational, such as equipment capacity to maintain a given temperature environment appropriate to the food product
- cleaning and sanitation requirements for food containers where relevant
- where contamination by osmosis is a possibility, the potential for cross-contamination resulting from location in proximity to other food or non-food items that are transported

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • ensure readiness of transport in accordance with product requirements • identify risks associated with transporting food products • identify and apply control measures for ensuring safety of food • load and unload goods according to requirements • identify and act on non-compliances • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • loading/unloading and transport advice/schedules • food safety information (this may be included in a food safety plan and/or integrated into work procedures) • work procedures relevant to loading/unloading and transportation, including advice on required temperature parameters to be maintained • workplace information, such as temperature charts and cleaning records as appropriate • food materials and product to be loaded/unloaded and transported • documentation and recording requirements and procedures .
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or</p>

EVIDENCE GUIDE	
	work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company policies and procedures, licensing requirements, legislative requirements and industrial awards and agreements. When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply and reference to food safety is replaced by GMP</p>
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • food safety program • product handling specifications • transport schedules and instructions • transport vehicle manufacturers' advice • standard forms and reports
Transport vehicles	<p>Transport vehicles are appropriate for the transportation of food and capable of maintaining the required environment for the food type transported</p>
Food safety controls	<p>Food safety controls refer to the methods used to control food safety hazards. Control methods, requirements and record keeping are specified in workplace food safety procedures which typically form part of a workplace food safety program</p>
Safe food transport parameters	<p>Safe food transport parameters depend on the type of food transported. Industry guidelines and codes, such as Cold Chain guidelines should be used as a basis for setting these parameters where available</p>
Confirming readiness for use of food transport vehicle	<p>Confirming readiness for use of food transport vehicle and containers/receptacles can include:</p> <ul style="list-style-type: none"> • confirming that the vehicle is in good operating order and that containers/receptacles used to

RANGE STATEMENT	
	<p>store food meet the relevant cleaning and sanitation requirements</p> <p>It may also include:</p> <ul style="list-style-type: none"> bringing the food handling area and storage container/receptacle to within the required temperature range before loading/unloading and confirming that equipment required to maintain temperature is operational
Food safety incidents	A food safety incident is a situation where the safe limits or parameters identified by the food safety program are not met

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sampling	<p>1.1. Sampling requirements are identified in accordance with the sampling plan</p> <p>1.2. Sampling equipment, containers and labels are prepared</p>
2. Collect samples	<p>2.1. Samples are collected according to sampling procedures and the requirements of the sampling plan</p> <p>2.2. Samples are handled and prepared to preserve sample and source integrity</p> <p>2.3. Defects or abnormalities in source material and/or sample are identified and reported</p> <p>2.4. Sample information is recorded according to workplace sample recording requirements</p> <p>2.5. The work area is maintained according to housekeeping standards</p> <p>2.6. Work is conducted in accordance with workplace environmental guidelines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and interpret sampling plan to identify sampling requirements
- select, fit and use personal protective clothing and/or equipment
- prepare for sampling to ensure required tools, containers and labels are available
- follow sampling procedures and the sampling plan to collect samples from the points, in the quantities and at the times specified
- identify atypical source materials and/or samples and take corrective action, such as reporting abnormalities, repeating sample collection and/or following intensive sampling schedules as required
- complete sample records according to workplace requirements, such as labelling samples as required
- transfer samples for testing
- maintain work area to meet housekeeping standards
- prepare samples according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic sampling principles, including the importance of following the sampling plan to obtain representative sampling reflecting characteristics of source material, the sample characteristics and related preservation, handling and storage requirements, and the labelling system purpose and requirements
- tests to be conducted on samples and related handling and preparation requirements and responsibilities
- characteristics of materials sampled and common contaminants and related conditions under which contamination is likely to occur
- sampling techniques relevant to samples collected, such as sterilisation methods and procedures
- the relationship between sampling, testing and production processes, including different sampling regimes that may apply in response to non-standard conditions or after corrective action is taken to adjust production outputs
- procedures and responsibility for reporting and recording sampling information, such as legislative requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to conduct sensory analysis	1.1. Personal conduct and the test environment are appropriate to conducting sensory analysis 1.2. Criteria for assessment is available and appropriate to analysis requirements 1.3. Method of analysis is appropriate 1.4. Samples are available for analysis 1.5. Defects or abnormalities in sample are identified and reported
2. Conduct sensory analysis	2.1. Samples are analysed according to workplace procedure and analysis criteria 2.2. Results are recorded according to workplace recording requirements 2.3. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and interpret sensory analysis schedule and analysis criteria to identify requirements
- ensure that personal conduct does not jeopardise analytical ability
- confirm that samples are available and in an appropriate condition for analysis
- follow procedures to analyse samples provided
- record and/or report results of analysis
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- principles of sensory analysis, including attributes that can be detected by taste and smell, such as sour, sweet, salty and bitter, and how these different tastes are detected (where on the tongue tastes are discerned, and the interaction between taste and smell, it also includes an understanding of attributes detected by mouth feel and appearance)
- sensory analysis system and procedures, such as the collection and use of reference samples, the role of the individual in the analysis process and how the system validates analysis results
- specific criteria used to evaluate material/product samples and the associated descriptions
- sample preparation requirements (this is dependent on materials/products to be analysed), including the effect of sample temperature on sensory analysis
- the effect of personal conduct on analytical ability, including stimuli and conditions that can dull sensitivity
- requirements of the environment appropriate to conducting sensory analyses
- the components of material/product sampled that contribute to flavour, aroma, appearance and texture
- the likely causes of variation in results, including typical variation that can occur in the material/product and how these occur, as well as how the method of analysis, environment and state of individual participants that can affect the outcome
- procedures and responsibility for recording and reporting sensory analysis information

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • conduct a sensory analysis of food and food ingredients using texture, taste, smell and appearance • interpret results of sensory analysis against assessment criteria • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • samples for analysis • sensory analysis environment, procedures, criteria and reporting documentation.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role. Example could be: <ul style="list-style-type: none"> • FDFOP2013A Apply sampling procedures.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Workplace information	Workplace information may include: <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • sampling plans • sensory analysis criteria • reporting documentation
Sensory analysis	Sensory analysis may be conducted by individuals and/or panels and applied to materials/ingredients and/or final products
Attributes to be analysed	Attributes to be analysed may include: <ul style="list-style-type: none"> • flavour • appearance • aroma • texture

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect statistical information	1.1.Data requirements are identified 1.2.Data is collected to meet requirements
2. Analyse and interpret data	2.1.Data is analysed to identify variation 2.2.Trends in data are identified 2.3.Corrective action requirements are determined based on data

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and collect required data
- retrieve/access data, which may require use of computer programs to access and analyse data, and the ability to locate the relevant information or screens to collect and analyse the data
- apply basic statistical analysis techniques to meet work requirements, such as plotting data on charts (e.g. run or control charts) and identify variation according to given limits
- interpret data to identify trends (manually or using a computer program)
- determine when corrective action is required, such as identifying upper and lower control limits (and warning limits where relevant)

Required knowledge

Knowledge of:

- data sampling method, including the nature of the sample on which data is based and the reasons for different sampling requirements that may apply in a given situation
- concept of variation, including the difference between common and special causes of variation and consequent options for reducing variation and remaining within a given range
- the purpose and process of establishing targets and limits
- concept of standard distribution/standard deviation
- methods used to analyse statistical data, including methods to determine the average, median and mean, and what these measures indicate

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify data for collection and requirements for ensuring accuracy • interpret data • document data on charts, graphs or required workplace format • identify need for corrective action.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • statistical process control data • related data collection and analysis systems • calculator.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>

FDFOP2016A Work in a food handling area for non-food handlers

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to conduct work in a food handling area where the work does not involve direct food contact.
------------------------	---

Application of the Unit

Application of the unit	<p>Typical applications for this unit include stores/warehousing, cleaning and maintenance workers. This unit is not appropriate for a person who has direct contact with food and/or raw materials or ingredients. Where this is a requirement, refer to relevant core food safety units.</p> <p>This unit is based on and equivalent to the guideline food safety unit GFSWFHAA Carry out work in a food handling area.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain food safety while working in a food handling area	<p>1.1. Food safety requirements related to work tasks are identified and followed</p> <p>1.2. Work responsibilities are carried out so that the safety of food is maintained</p> <p>1.3. Procedures or practices which are not consistent with workplace food safety program are identified and reported</p>
2. Maintain food handling area in clean and orderly state	<p>2.1. Equipment and the food handling area meet the cleaning and sanitation requirements of workplace food safety program</p> <p>2.2. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.3. Waste is collected and disposed of according to workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and apply workplace information on food safety policies and procedures relating to own work
- fit and use appropriate personal protective clothing and equipment as required by work tasks to meet food business requirements
- maintain personal conduct consistent with workplace requirements
- check own work area to identify food safety hazards
- carry out work responsibilities to ensure that food safety is not compromised
- take necessary precautions when moving between or around the workplace and/or from one task to another to minimise the risk of contamination
- recognise and report situations or procedures that could compromise food safety according to workplace procedure, including following procedures in own work and related work area to report to the appropriate personnel, in required detail and in a timely manner
- take corrective or preventative action within level of responsibility
- report health conditions and illness as required by workplace food safety procedures
- sort and dispose of waste as required by work responsibility according to workplace procedure
- maintain housekeeping standards in work area
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- food safety requirements related to own work as determined by the workplace
- sources of advice on food safety issues and responsibilities in the workplace
- personal hygiene practices and clothing and footwear requirements associated with working in and moving in and between food handling areas and moving between food handling and non food-handling areas
- suitable standard for materials and equipment used in the food handling area, including materials that are unsuitable for use, such as breakable or dirty equipment/materials
- methods and procedures to be followed when carrying out work responsibilities in a food handling area to ensure that food safety is not compromised (this will

REQUIRED SKILLS AND KNOWLEDGE

depend on the nature of work responsibilities and food safety requirements as specified by the workplace)

- the types of contamination that can occur as a result of work activities, and procedures used to prevent these types of contamination from occurring
- cleaning and sanitation requirements and responsibilities, including cleaning methods appropriate to a food handling environment and those used in the specific food handling area
- waste collection, recycling and handling procedures
- housekeeping standards to be maintained in the work area

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify food handling procedures and food safety issues for work • apply food safety procedures when handling food products • identify and act on non-conformances • ensure cleaning standards are met • follow environmental and waste management procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • food safety policies and procedures relevant to work function • work procedures, including procedures for entering and exiting food handling areas • work process and related services/resources • work area and related equipment to undertake work function • waste collection, treatment, recycling and/or disposal methods • monitoring and reporting system.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, regulatory and licensing requirements, legislative requirements, site licences and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • advice on food safety requirements related to work function • standard forms • written or verbal instructions
Food handling area	Food handling area can refer to any work area where receiving, handling and inspecting, preparing, processing, packaging, storing and/or despatching occur
Examples of contamination that can result from work activities	<p>Examples of contamination that can result from work activities include:</p> <ul style="list-style-type: none"> • chemical contamination which could be caused by lubricants, resins and cleaning and sanitation chemicals • physical contamination which could be caused by metal, glass, plastic and cloths
Personal hygiene, clothing and footwear and requirements	Personal hygiene, clothing and footwear and requirements to report health conditions or illness must meet workplace requirements and procedures. At a minimum such procedures must ensure that any person in a food premises does not contaminate food, does not have unnecessary contact with ready-to-eat food and does not spit, smoke or use tobacco or similar in a food handling area. Refer to Food Safety Standard 3.2.2, Clause 17:3 and relevant state and territory regulations/legislation

FDFO2017A Operate a blending, sieving and bagging process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a blending, sieving and bagging process.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to the process of blending and bagging of dry goods as bulk blends or for use in food service. This process is typically used for the blending and packaging of low moisture products, such as dry flavours and marinades, donut mix, cake mix, bakery ingredients, batters, cheese powders, spice mixes and herb blends. Bag weights typically range from 5 kg to 25 kg.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried, FDFO2011A Conduct routine maintenance, should be considered.</p> <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the blend, sieve and bagging equipment and process for operation</p>	<p>1.1. Materials are confirmed and available to meet operating requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are fitted and adjusted to meet safety and operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet production requirements</p> <p>1.5. Materials, ingredients, product and/or consumables are loaded or positioned as required to meet production requirements</p> <p>1.6. Equipment performance is checked and adjusted as required</p> <p>1.7. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the blend, sieve and bagging process</p>	<p>2.1. Ingredients are delivered to the blender in the required quantities and sequence to meet recipe specifications</p> <p>2.2. The process is started and operated according to workplace procedures</p> <p>2.3. Equipment is monitored to identify variation in operating conditions</p> <p>2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.5. The process is monitored to confirm that ingredients are blended, sieved and bagged to meet specifications</p> <p>2.6. Out-of-specification product or process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.7. The work area is maintained according to housekeeping standards</p> <p>2.8. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.9. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the blend, sieve and bagging process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary packaging components/consumables, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that related equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, any ensuring scheduled maintenance has been completed and all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - characteristics of blend
 - flow to sieves
 - sieve/screen condition
 - supply of packaging components/consumables
 - integrity of finished seals (stitching or thermal)
- monitor and regulate the supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the process, including the method and sequence of ingredient addition required to achieve required blend characteristics
- the purpose of packaging and properties required of packaging materials used, coding requirements and related legal requirements, including product weight
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics required of process outputs, such as packaging quality and seal integrity as required
- effect of variation in inputs, such as ingredient quality/condition, packaging components/consumables and/or services, on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems, such as sieve or screen damage
- methods used to monitor the process, such as monitoring blend characteristics and weights
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures, including product compatibility, cross-contamination risks and associated cleaning requirements
- common causes of variation and corrective action required, including procedures to manage the reprocessing (return to blend) of the first part of the blend to minimise non-conforming output
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production/packaging requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/batch changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <p>relationship between control panels and systems and the physical equipment</p> <ul style="list-style-type: none">• sampling and testing associated with process monitoring and control where relevant• cleaning and sanitation procedures where relevant |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the case packing equipment and process for operation	1.1. Packaged product and packaging components/consumables are confirmed and available to meet production requirements 1.2. Pre-start checks are carried out on process and related equipment to confirm readiness for use 1.3. Packaging components/consumables are loaded/positioned to meet requirements 1.4. Parameters are set to meet safety and packaging requirements
2. Operate and monitor the case packing process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Packaging quality and packaging appearance are monitored to confirm that specifications are met 2.5. Out-of-specification process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the case packing process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify casepacking requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary packaging components/consumables, including boxes/cartons and related consumables
- inspect the quality of packaging components/consumables to confirm that standards are met
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters to suit product type, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for packaging requirements, loading packaging components/consumables, positioning electronic eyes and sensors correctly, ensuring all safety guards are in place and operational, and confirming coders are correctly set for date and product requirements
- start, operate, monitor and adjust pick and place equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - box formation
 - alignment, placement and quantity of units packed
 - operation of suction cups
 - operation of related equipment (e.g. box closers and sealers)
 - operation of ink jet coders to confirm correct code and clarity/legibility
- demonstrate procedure to reference or align equipment against setup parameters
- demonstrate product/packaging changeovers
- monitor flow of product to the process and packaged goods from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take casepacking process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare equipment for cleaning
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of secondary packaging, including the requirements of packaging materials used and coding requirements
- basic operating principles of casepacking equipment, including main equipment components, status and purpose of guards, purpose and location of electronic eyes and sensors, equipment operating capacities and applications, and services required for operation of casepackers used in the workplace
- the flow of product to this stage in the packing process and the effect of outputs on downstream processes
- quality characteristics and requirements of outer packaging materials and of the packaged product, including board quality and finished packaged product specifications
- methods used to monitor the process, such as visual inspection of the process and of the quality of the packaged product
- inspection or test points (control points) in the process and the related procedures and recording requirements, and testing gluing or sealing of packages where required
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required, including the effect of variation in packaging components/consumables on performance
- contamination/food safety hazards and risks associated with this stage in the packaging process and related control measures
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/packaging changeover procedures
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the packaging process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for case packing • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems and production/packaging schedules • information on equipment capacity and operating parameters • specifications, control points and operating parameters • automated case packers and related equipment and services • product to be packaged and board and related consumables • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.

EVIDENCE GUIDE	
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none">• FDFOP2004A Clean and sanitise equipment• FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements

Legislative requirements

Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:

- the Food Standards Code, including labelling, weights and measures legislation
- legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity

When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production schedules and instructions
- manufacturers' advice
- standard forms and reports

Case packing process and related equipment

Case packing process and related equipment may include:

- product assembly and indexing systems
- conveyors
- carton/box erectors
- automated product placement equipment
- bundlers
- labellers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • heat/shrink wrappers • box closers • ink jet coders
Packing configuration	Packing configuration may require: <ul style="list-style-type: none"> • single or multi-layered indexing
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the filling and closing process for operation	1.1. Materials and packaging components/consumables are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the filling process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that filled and closed containers meet specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Monitor closure and seaming stage	3.1. The closing stage is monitored to confirm that closures and seams meet specifications 3.2. Out-of-specification process outcomes are identified, rectified and/or reported to maintain the process within specification 3.3. The workplace meets housekeeping standards 3.4. Workplace records are maintained according to workplace recording requirements

ELEMENT	PERFORMANCE CRITERIA
4. Shut down the filling and closing process	4.1. The appropriate shutdown procedure is identified 4.2. The process is shut down according to workplace procedures 4.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare/condition product for filling as required
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters to suit filling requirements, cancelling isolation or lockouts as required, confirming that equipment is clean, correctly configured for filling and seaming requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been completed, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the filling process and equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - fill temperatures
 - headspace
 - vacuum
 - visual appearance of the product
 - line speed/throughput
- monitor supply and flow of materials to and from the process
- start, monitor and adjust the closer to confirm alignment and formation of the seam
- monitor control points and conduct inspections related to the seaming/closing process, including confirming that coding is correct
- take corrective action in response to out-of-specification results
- conduct product/batch changeovers
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- demonstrate shift handover procedure
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- inspect seams according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of filling and closing, including the properties and requirements of packaging materials used, hermetic sealing and properties of containers used for this purpose, coding requirements and related legal requirements, such as product weight
- the flow of this process and the effect of the filling and seaming process on downstream processes
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- quality characteristics of the filled and closed container, including seam components and integrity requirements within level of responsibility for inspection
- effect of raw material characteristics on filling and seaming
- quality parameters for cans and ends
- methods used to prepare product for filling
- effect of process variables, such as headspace, fill temperature and vacuum on the process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the production/packing process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety issues associated with filling and seaming and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing procedures, where relevant, such as seam inspection procedures
- cleaning and sanitation procedures where relevant

Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the forming, filling and sealing process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary packaging components/consumables and product
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for packaging requirements, loading packaging components/consumables, positioning sensors and controls correctly, ensuring any scheduled maintenance has been completed, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the forming, filling and sealing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - formation of container/packaging
 - flow rates
 - product weights and volumes
 - fill levels
 - temperature, including product and sealing temperatures
 - supply of packaging components/consumables
 - packaging quality and seal integrity, such as testing packaging integrity
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take forming, filling and sealing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare forming, filling and sealing equipment for cleaning
- demonstrate product/process changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- demonstrate aseptic container preparation/forming, filling and sealing according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of forming, filling and sealing, including the purpose and characteristics required of packaging materials used, and the methods used to form packaging, fill and seal product (where methods involve vacuum or map packaging, it includes an understanding of the effect of modified atmosphere on product shelf-life)
- product and packaging coding requirements and related legal requirements, including product weight
- basic operating principles of forming, filling and sealing equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and services required for operation of form, fill and seal equipment used in the workplace
- the flow of processes supplying the forming, filling and sealing process and the effect of process output on downstream processes
- quality characteristics and requirements of forming, filling and sealing, such as quality requirements of product and packaging components/consumables, requirements of packaging forming stage, filling, including fill levels and weights, and requirements of seal formation and integrity, and integrity testing procedures, where required
- methods used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required, including the effect of variation in both product characteristics and packaging components/consumables on forming, filling and sealing performance
- food safety hazards and risks associated with forming, filling and sealing and related control measures
- occupational health and safety (OHS) hazards and controls

REQUIRED SKILLS AND KNOWLEDGE

- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/packaging changeover procedures
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the forming, filling and sealing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- aseptic container preparation/forming, filling and sealing requirements where relevant
- sampling and testing procedures where relevant
- cleaning and sanitation procedures where relevant

Required skills

Ability to:

- access workplace information to identify filling and packaging requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary packaging components/consumables, product and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for packaging requirements, loading packaging components/consumables, positioning sensors and controls correctly, ensuring any scheduled maintenance has been completed, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the filling and sealing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - flow rates
 - product weights and volumes
 - fill levels
 - times and temperatures, including product and sealing temperatures
 - supply of packaging components/consumables
 - packaging quality and seal integrity, such as testing seal integrity
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take filling and sealing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare filling and sealing equipment for cleaning
- demonstrate product/process changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- demonstrate aseptic filling and sealing according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as

REQUIRED SKILLS AND KNOWLEDGE

specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of filling and sealing, including the purpose and characteristics required of packaging materials used and the method used to fill and seal product (where methods involve vacuum or map packaging, it includes an understanding of the effect of modified atmosphere on product shelf-life)
- product and packaging coding requirements and related legal requirements including product weight
- basic operating principles of filling and sealing equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and services required for operation of filling equipment used in the workplace
- the flow of processes supplying the filling and sealing process and the effect of outputs on downstream processes
- quality characteristics and requirements of filling and sealing, such as quality requirements of product and packaging components/consumables, requirements of filling including fill levels and weights, requirements of seal formation and integrity, and integrity testing procedures, where required
- methods used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including procedures to clear a breach and restart following a crash or jam up as appropriate
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required, including the effect of variation in both product and packaging components/consumables on filling and sealing performance, such as the effect of temperature variation on the filling process
- food safety hazards and risks associated with filling and sealing and related control measures
- occupational health and safety (OHS) hazards and controls
- requirements of, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/packaging changeover procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for filling and sealing
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems and production/packaging schedules
- information on equipment capacity and operating parameters
- specifications, control points and operating parameters
- filling and sealing process and related equipment and services
- materials and packaging components/consumables to be formed and filled
- product
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and

EVIDENCE GUIDE	
	<p>procedures</p> <ul style="list-style-type: none"> • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements</p>
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP</p>
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Filling and sealing equipment	<p>Filling and sealing equipment may include:</p> <ul style="list-style-type: none"> • pumps • fillers, including aseptic bottle fillers • hermetic sealers • bag fillers • aseptic packaging • seamers • level detection equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> conveyors <p>Related processes depend on product requirements and may include:</p> <ul style="list-style-type: none"> product preparation equipment, such as mixers, blenders, carbonators, heat exchangers, chillers and crystallisers
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> the use of process control panels and systems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the wrapping equipment and process for operation	1.1. Materials and packaging components/consumables are confirmed and available to meet production requirements 1.2. Pre-start checks are carried out on process and related equipment to confirm readiness for use 1.3. Packaging components/consumables are loaded/positioned to meet requirements 1.4. Parameters are set to meet safety and packaging requirements
2. Operate and monitor the wrapping process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Packaging quality and seal integrity is monitored to confirm that specifications are met 2.5. Out-of-specification process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the wrapping process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify wrapping requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary packaging materials/film/cello and product, such as inspecting the quality of both product and wrapping material to confirm that standards are met
- conduct pre-start checks, such as inspecting equipment and conveyor belt condition to identify any signs of wear, selecting appropriate settings and/or related parameters to suit product type, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for packaging requirements, loading/threading packaging components/consumables, positioning electronic eyes and sensors correctly, ensuring all safety guards are in place and operational, and confirming coders are correctly set for date and product requirements
- start, operate, monitor and adjust wrapping equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - product alignment
 - product weights
 - packaging quality
 - packaging and product alignment
 - seal integrity, such as testing packaging integrity
 - codes-correct content and clarity/legibility
- monitor flow of product to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take high speed wrapping process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare wrapping equipment and conveyors for cleaning
- demonstrate product/packaging changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of wrapping, including the properties and requirements of packaging materials used, coding requirements and related legal requirements (e.g. product weight)
- basic operating principles of wrapping equipment, such as main equipment components (e.g. conveyors and related guides and alignment adjustments), purpose and location of electronic eyes and sensors, status and purpose of guards, equipment operating capacities and applications, and services required for operation of wrapping equipment used in the workplace
- the flow of product to the wrapping process and the effect of outputs on downstream processes
- quality characteristics and requirements of product to be wrapped, wrapping materials and the final wrapped product
- methods used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required, including the effect of variation in both product and packaging components/consumables on performance
- contamination/food safety hazards and risks associated with the wrapping process and related control measures
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/packaging changeover procedures
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the filling and wrapping process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements

Legislative requirements

Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:

- the Food Standards Code, including labelling, weights and measures legislation
- legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity

When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production schedules and instructions
- manufacturers' advice
- standard forms and reports

High speed wrapping processes and related equipment

A high speed wrapping process and related equipment may include:

- conveyor systems transferring product to and from wrappers
- wrapper
- check weighers
- metal detectors
- ink jet coders

RANGE STATEMENT	
	Related processes typically involve: <ul style="list-style-type: none"> secondary packing into boxes, bags or other containers
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> the use of process control panels and systems

The work area is maintained according to housekeeping standards</p> <p>2.7. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.8. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the cooling, slicing and wrapping process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down and cleaned according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary product, packaging consumables and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm settings in the cooler, such as:
 - conveyor speed/track position
 - humidity
 - air flow/fan settings
 - product layout/spacing
 - settings in the slicing/bagging equipment:
 - knife condition
 - machine speed
 - height/width settings
 - air pressure
 - bag/tag type and coding
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification
- monitor supply and flow of product and packaging consumables to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the cooling, slicing and wrapping process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the cooling, slicing and wrapping process and the effect of outputs on downstream processes and final product
- quality characteristics to be achieved by the process
- quality requirements of packaging materials and effect of variation on process performance and product shelf-life
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the cooling, slicing and bagging process, such as inspecting and measuring as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• routine maintenance procedures where relevant• cleaning and sanitation procedures where relevant |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for cooling, slicing and wrapping
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- cooling, slicing, bagging and related equipment and services
- product and packaging consumables
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as required.

EVIDENCE GUIDE	
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none">• FDFOP2004A Clean and sanitise equipment• FDFOP2011A Conduct routine maintenance• FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • materials transfer equipment, such as conveyors and trolleys • cooler • slicer • bagging and bag closing equipment • metal detector • scales
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples

RANGE STATEMENT

	include: <ul style="list-style-type: none"> • power • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the extrusion, toasting and breaking process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the extrusion, toasting and breaking process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that biscuit product meets specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the extrusion, toasting and breaking process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify extrusion, toasting and breaking process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services, including ensuring a continuous supply of ingredients to the process
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm extruder settings, such as:
 - water pump is operating
 - bin discharge speed
 - temperature and heater
 - motor speed
 - screw feed
- start, operate, monitor and adjust process equipment to achieve required outcomes., including monitoring control points and conducting inspections as required to confirm the process remains within specification, such as:
 - temperatures
 - biscuit size (width, length and thickness)
 - biscuit texture, colour and weight
 - biscuit moisture level
 - clean, even break/cut
- monitor supply and flow of materials to and from the extrusion, toasting and breaking process
- take corrective action in response to out-of-specification results
- conduct batch/product changeovers
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- shut down equipment in response to an emergency situation
- follow isolation and lock out/tag out procedures as required to take extrusion, toasting and breaking process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility

REQUIRED SKILLS AND KNOWLEDGE

- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- take samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each stage of the biscuit manufacturing process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the process and the effect of outputs on downstream processes
- changes which occur in product during processing
- quality characteristics to be achieved by the process
- quality requirements of materials and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify biscuit forming process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply and condition of necessary materials and services, such as transferring and loading dough into hoppers
- confirm condition of dough, such as:
 - dough type matches product specification
 - dough temperature, consistency/texture, moisture level, weight and colour
 - dough standing time
 - dough supply/quantities
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm setting selection, such as:
 - setting parameters for process type
 - setting equipment speeds
 - adjusting roller and web settings (as required)
 - adjusting depositing/extrusion settings (as required)
- start, operate, monitor and adjust process equipment to achieve required outcomes, including control points and conducting inspections as required to confirm process remains within specification, such as:
 - biscuit size, shape and thickness
 - biscuit weight
 - dough temperature
- form product to specification, such as conducting a trial run in preparation for production run
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- conduct product/batch changeovers
- locate emergency stop functions on equipment
- shut down equipment in response to an emergency situation

REQUIRED SKILLS AND KNOWLEDGE

- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- take samples and conduct tests according to enterprise procedures
- carry out routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of biscuit forming
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the biscuit forming process and the effect of outputs on downstream processes
- effect of dough quality on process outcomes
- quality characteristics to be achieved by the process
- quality requirements of materials and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including procedures for incorporating rework dough and procedures for mending webs as required
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage

REQUIRED SKILLS AND KNOWLEDGE

- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitation procedures where relevant
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to dispense ingredients	1.1. Materials are inspected to confirm type, quality clearance, quantities and identify any obvious contamination or non-compliance 1.2. Measuring and weighing equipment is selected appropriate to dispensing requirements and checked to confirm readiness for use 1.3. Containers, bags and labels are available as required 1.4. Pre-start checks are carried out as required by workplace requirements
2. Measure and/or weigh ingredients	2.1. Non-bulk ingredients and additives are weighed or measured to meet production requirements 2.2. Dispensed ingredients are labelled according to workplace procedure 2.3. Accuracy of measuring and dispensing equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The work area is maintained according to housekeeping standards 2.6. Work is conducted in accordance with workplace environmental guidelines
3. Complete the dispensing process	3.1. Dispensing equipment is cleaned according to workplace procedure 3.2. Unacceptable equipment and utensil condition is identified and reported 3.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify dispensing requirements
- select, fit and use personal protective clothing and/or equipment, such as use of breathing apparatus and fume cabinets as required
- confirm supply of necessary raw materials, such as checking ingredient type, grade, quantity, use-by codes and quality clearance
- carry out visual inspections and tests as required to confirm that raw materials are appropriate for use
- conduct pre-start checks on equipment, such as inspecting the condition and cleanliness of equipment and utensils, taring scales and carrying out any related procedures to confirm that equipment is accurately calibrated and fit for use, and confirming that any scheduled maintenance has been carried out
- identify out-of-specification or unacceptable ingredient condition and take appropriate corrective action
- measure materials and additives within specified accuracy range
- take corrective action in response to out-of-specification results
- pace dispensing to meet production requirements
- pack and label dispensed materials as required
- follow labelling procedures, such as identifying batch numbers, dates of preparation, contents and use-by information
- reconcile and record materials dispensed against materials released and return unused materials to storage as required
- clean dispensing equipment and utensils according to workplace procedures
- respond to and/or report equipment failure within level of responsibility
- complete dispensing records as required by workplace recording system
- maintain work area to meet housekeeping standards
- use basic equipment to support the dispensing process according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- quality characteristics and related handling requirements of raw materials/ingredients and additives used, such as best-by/use-by codes, ingredient compatibility and common allergens used
- storage requirements and shelf-life of ingredients and additives, including ingredients with special storage and handling requirements, such as hygroscopic ingredients
- relevant legislative responsibilities and workplace systems for recording and tracing the use of ingredients and additives and related workplace labelling requirements and purpose
- the relationship between the dispensing process and related operations, including accuracy and tolerance and consequence of error
- purpose, measuring and accuracy capacity of instrumentation and related equipment calibration responsibilities and procedures
- control points in the dispensing process
- contamination and food safety issues associated with dispensing and related control measures
- procedures for requisitioning, receiving and returning ingredients from stores
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- cleaning, care and storage of equipment and instrumentation used
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the dispensing process, including waste collection and handling procedures related to the process
- sampling and testing where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on ingredients and equipment used for dispensing
- accurately weigh or measure ingredients to ensure specifications are met
- take corrective action in response to inconsistencies
- correctly label ingredients
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- apply food safety procedures.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems, production schedules, batch and recipe instructions
- information on equipment and instrumentation capacity and operating parameters
- dispensing schedule or batch instructions
- dispensing instrumentation and equipment
- containers, bags, labelling and storage facilities
- raw materials, ingredients and additives to be dispensed
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning and sanitation procedures, materials and

EVIDENCE GUIDE	
	equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP1005A Operate basic equipment • FDFOP2004A Clean and sanitise equipment • FDFOP2013A Apply sampling procedures • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	Workplace information may include: <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production/dispensing schedules and instructions batch/recipe instructions manufacturers' advice standard forms and reports
Dispensing equipment	Dispensing equipment may include: <ul style="list-style-type: none"> scales pipettes calibrated measuring containers fume cabinets labels/printers and related dispensary instrumentation
Materials dispensed	Materials dispensed may include: <ul style="list-style-type: none"> non-bulk ingredients and additives <p>Non-bulk additives may be highly concentrated</p>

RANGE STATEMENT

	materials, such as:
	<ul style="list-style-type: none"> • colours • flavours • buffered acids • preservatives

Co-requisite units

Co-requisite units		

FDFO2028A Operate a mixing or blending process

Modification History

Not applicable.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit of competency covers the skills and knowledge required to combine ingredients and additives in the correct quantities and sequence and to operate and shut down mixing and blending equipment to achieve the required mix characteristics.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>This unit has application in a production environment within the food processing industry. Mixes may include concentrated pre-mixes or bulk blends. The output of this process may be a product requiring further processing or for external use.</p> <p>This unit is appropriate to select where the mixing or blending process is a stand-alone process and involves an understanding of addition method and sequence. Where mixing is an in-line component of a larger process, this unit is not appropriate. Where the mixing process does not require a detailed understanding of sequencing or ingredient characteristics, FDFO1004A Prepare basic mixes, may be more appropriate.</p> <p>When operators are required to perform batch or product changeover procedures as part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFO2011A Conduct routine maintenance, should be selected.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the mixing or blending equipment and process for operation</p>	<p>1.1. Materials are confirmed and available to meet production requirements</p> <p>1.2. Pre-mixes are prepared as required</p> <p>1.3. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.4. Machine components and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.5. Processing or operating parameters are entered as required to meet production requirements</p> <p>1.6. Equipment performance is checked and adjusted as required</p> <p>1.7. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the mixing or blending process</p>	<p>2.1. Ingredients and additives are delivered to the mixer in the required quantities and sequence to meet recipe specifications</p> <p>2.2. The mixing or blending process is started and operated according to workplace procedures</p> <p>2.3. Equipment is monitored to identify variation in operating conditions</p> <p>2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.5. The mixing process is monitored to confirm that specifications are met</p> <p>2.6. Out-of-specification product or process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.7. Mix is transferred to required production or storage location</p> <p>2.8. The work area is maintained according to housekeeping standards</p> <p>2.9. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.10. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the mixing or blending process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify mixing/blending requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- add/load materials in correct quantities and sequence, such as monitoring automatic ingredient addition and/or manual addition
- start, monitor and adjust mixing or blending process equipment to achieve required outcomes, including monitoring flow rates/quantity, time or temperature and mix/blending settings
- monitor/control points and conduct inspections as required to confirm process remains within specification
- monitor supply and flow of ingredients and additives to and from the mixing or blending process
- pace mixing/blending to meet production requirements
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out or tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- demonstrate batch or product changeovers
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- label and store pre-mixes and/or mixes according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of preparing mixes and blends, including the characteristics and basic function of ingredients and additives used, method and sequence of ingredient addition required to achieve required blend characteristics, and where relevant, the purpose of conditioning, maturation or holding stages required prior to further processing of the mix
- basic understanding of specific gravity and bulk density as appropriate for ingredients used
- basic operating principles of mixing/blending equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and awareness of calibration schedules for scales and related weighing/measuring equipment
- services required and action to take if services are not available
- the flow of the mixing process and the effect of mix preparation on downstream processes
- procedures for requisitioning, receiving and returning ingredients from stores
- ingredient handling requirements and shelf-life or coding
- quality characteristics required of ingredients and additives and their effect on mixing process performance, including methods used to condition or prepare ingredients prior to addition
- methods used to monitor the blending or mixing process, including inspecting, measuring, and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements, such as:
 - flow rates
 - ingredient/additive addition sequence
 - times/temperatures and agitator speeds
 - required characteristics of blend, such as viscosity, appearance and temperature
- required attributes of the mixed or blended output, such as chemical, texture and flavour profiles as required
- the effect of the mixing or blending parameters, such as temperature and length of mix time on mixing outcome
- contamination and food safety risks associated with the process and related control measures, including product compatibility and cross contamination risks and associated cleaning requirements, as well as common allergens used in mixes prepared
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters

REQUIRED SKILLS AND KNOWLEDGE

- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the blending or mixing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product or process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the mixing or blending process, including waste or rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- characteristics of solutions, suspensions and emulsions where relevant
- sampling and testing associated with process monitoring and control where relevant
- product labelling and storage requirements where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the baking equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Materials are prepared to meet production requirements 1.3. Services are confirmed as available and ready for operation 1.4. Equipment performance and pans are checked and adjusted as required 1.5. The process is set to meet safety and production requirements
2. Operate and monitor the baking process	2.1. The baking process is started and operated according to workplace procedures 2.2. Product is loaded into oven and baked to specification 2.3. Equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The process is monitored to confirm that specifications are met 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the baking process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify baking process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm condition and quality of ingredients
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational, and rework bins are positioned
- confirm settings and parameters, including:
 - correct oven settings are selected for baking time, oven zone temperatures, conveyor speed, loaders and dischargers, circulation and exhaust fans, water seals, burner controls and steam as required
 - heights, guides and air blowers, and pre-blast conveyor are correctly set
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - baking output, including quantities and product appearance (colour and sheen, uniformity of shape, weight and size and moisture)
 - confirming product is cleanly removed from the pan (depanning stage) and/or belt/band as required
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- sort, collect, treat, recycle or dispose of waste, including clearing dust extractors
- complete workplace records as required
- maintain work area to meet housekeeping standards
- set up, start up and monitor the proofer, such as time and temperature, humidity, and position of the loading arm
- monitor the proving process according to enterprise procedures, including dough

REQUIRED SKILLS AND KNOWLEDGE

condition/surface and dough size and height

- set up and operate finishing equipment according to enterprise procedures, including setting topping application equipment, water sprays and splitters (monitoring typically involves checking appearance to confirm even coverage and/or finish as required by product specification)
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each stage of the baking process, including the stages of the baking process and changes that occur in the product, such as starch gelatinisation, the effect of variables (e.g. time, temperature and humidity), and oven zones as appropriate to oven type
- basic operating principles of equipment, including the difference between convection and impingement ovens, main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the baking process and the effect of outputs on customer satisfaction and downstream processes, such as packaging
- quality requirements of materials and effect of variation on baking process performance
- quality characteristics to be achieved by the baked product
- process specifications, procedures and operating parameters for different baked pastry products
- operating requirements, parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the baking process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the baking process and the related procedures and recording requirements, such as the ability to conduct dew point and/or wet bulb tests as required
- contamination/food safety risks associated with the baking process and related

REQUIRED SKILLS AND KNOWLEDGE

control measures

- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including risks of spontaneous combustion and limitations of protective clothing and equipment used
- requirements of different shutdowns as appropriate to the baking process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- baking process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the baking process, including waste/rework collection and handling procedures related to the process
- purpose and operating procedures for related processes, such as in-line proving and finishing equipment where relevant
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Navigate the process control interface	1.1. The readiness of the control interface and related components for operation are confirmed 1.2. Hardware provided is used to operate the interface 1.3. Page links are used to move between screens 1.4. Messages and alarms are acknowledged 1.5. Required information is accessed from screen displays 1.6. Interface system malfunctions are recorded and reported in accordance with workplace procedures
2. Use interface system to operate and maintain a process within required parameters	2.1. Individual items of equipment and/or processes are started, monitored and shutdown using the control interface 2.2. Equipment is selected, status altered and settings entered to meet operating requirements 2.3. Sequences are activated to initiate process operation 2.4. Equipment giving a bad signal or bad measurements is recognised and responsive action taken
3. Analyse data to predict and control performance	3.1. Trends are selected and analysed to identify performance patterns 3.2. Causes of abnormal or unacceptable performance are identified and corrective action taken 3.3. Information is recorded as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- use all hardware components to operate the control interface
- navigate the system to locate and use information required, including moving between screens and locating relevant performance data
- operate the control system using the interface, including start up and shut down equipment components and change set points as required
- locate sensors and instrumentation providing input signals to the control system and confirm operating order within level of responsibility
- recognise and respond to error messages and alarms as required
- access relevant performance data using the control system, including locating and interpreting performance trend information
- record log information using the interface system according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- processes and equipment being controlled, including required processing sequences
- operating principles of process control and interface system, including the relationship between control panels, systems and the physical equipment, and where relevant understanding of the operating conditions required for accurate information input from sensors and related instrumentation
- action required to respond to error messages and alarms
- typical faults that can occur when operating a process control interface and corrective action required
- performance data collected by the control interface system and its application to troubleshoot performance, including the ability to identify and investigate related trend data to track cause and effect
- recording requirements and responsibilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • operate and navigate interface to access, retrieve, enter and store work data • start, operate, monitor and shut down process equipment • control and adjust equipment using control interface to achieve production requirements • recognise faults and inconsistencies and take corrective action • complete workplace records as required • apply safe work practices and identify OHS hazards and controls.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • process control interface hardware and software • work station or equipment to be controlled • operating procedures and related advice on equipment operation • process to be controlled • communication systems and equipment • workplace information recording systems, requirements and procedures.
Method of assessment	This unit should be assessed together with other core units or other units of competency relevant to the work role. This includes the relevant operational units for the process being controlled.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

EVIDENCE GUIDE

possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, manufacturers' recommendations, legislative requirements, codes of practice and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • manufacturers' specifications
Information accessed	<p>Information accessed may include:</p> <ul style="list-style-type: none"> • graphics, trends • parameter settings • alarms • individual plant item status
Computer-based interface	<p>A computer-based interface may consist of:</p> <ul style="list-style-type: none"> • computer processor • monitor • keyboards • track ball • mouse • storage devices • printers <p>(It is linked to the process control system)</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the coating process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the coating process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the coating process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare coating materials as required
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust coating equipment to achieve required outcomes (this will depend on the nature of coating materials), such as:
 - condition of coating materials, such as checking grist/particle shape and size, checking for dough balls or lumps in flour-based breaders
 - viscosity and temperature of batter-type breaders and glazes
 - condition of product to be coated (this may include shape and temperature)
 - product orientation/indexing
 - conveyor positions and speeds
 - drum speed
 - compression roller settings (drum applicator)
 - dip pond levels
 - air blow off settings
 - spread/evenness of coating
- monitor supply and flow of materials to and from the coating process
- take corrective action in response to out-of-specification results
- conduct product/batch changeovers
- report and/or record corrective action as required
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare equipment for cleaning
- respond to and/or report equipment failure within level of responsibility
- complete workplace records as required

REQUIRED SKILLS AND KNOWLEDGE

- maintain work area to meet housekeeping standards
- prepare breaders and glazes according to enterprise procedures
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of coating, including coating process, process design and operation to achieve the coating requirements, related requirements of product and coating condition and equipment settings
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- quality characteristics to be achieved by the coating process
- the flow of the coating process and the effect of product output on downstream processes
- quality requirements of coating materials and product to be coated and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the coating process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance

REQUIRED SKILLS AND KNOWLEDGE

information

- environmental issues and controls relevant to the coating process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on equipment used for product coating • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule, batch/recipe instructions • coating process and related equipment and services • coating materials and product • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with other units of</p>

EVIDENCE GUIDE	
	<p>competency relevant to the work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP1004A Prepare basic mixes • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • FDFOP2049A Operate a reduction process • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production schedules and instructions manufacturers' advice standard forms and reports
Coating processes	<p>Coating processes include:</p> <ul style="list-style-type: none"> pre-dusting batter and breading application of marinades and glazes <p>These may be configured in sequence and/or involve multiple passes according to coating requirements Related processes may include:</p> <ul style="list-style-type: none"> batter preparation and crumb preparation <p>Refer to FDFOP1004A Prepare basic mixes, for batter preparation, and FDFOP2049A Operate a reduction process, for crumb preparation</p>
Coating materials	Coating materials include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • pre-dusts (usually finely ground) • grain-based material or dry batter • standard batters • tempura batter • wash batter • breaders, including flour, cracker meal, crumb, and marinades and glazes
Coating application equipment	<p>Coating application equipment may include:</p> <ul style="list-style-type: none"> • dip-type batter applicators, • top curtain/underflow applicators (enrobers) • standard breaders (belt-based with compression roller), including single belt (non-flip) and flip applicators, • drum breaders
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <p>Cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)</p>
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • steam • water • vacuum • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to enter a clean room environment	1.1. Appropriate clothing and footwear are identified and available 1.2. Clothing and footwear are correctly fitted and inspected prior to entering a clean room 1.3. Hand washing and disinfecting procedures are followed according to workplace procedure
2. Work in a clean room environment	2.1. Workplace procedures are followed to enter a clean room environment 2.2. Work activities are conducted so as to minimise risk of contamination
3. Exit a clean room environment and de-gown	3.1. Workplace procedures are followed to exit a clean room environment 3.2. Protective clothing and footwear is removed according to workplace procedure 3.3. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to determine clean room work requirements
- confirm that protective clothing and footwear are appropriate for use
- follow procedures to fit and inspect protective clothing and footwear
- follow procedures to enter a clean room environment, including following appropriate hand washing, disinfecting procedures and fitting gloves as required
- conduct work in a manner appropriate to minimising risk of contamination, including following procedures for sterilising and disinfecting equipment and surfaces as required
- exit the clean room environment according to workplace procedures
- remove protective clothing and footwear in correct sequence and deposit for laundering according to workplace procedures
- complete records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and conditions required in a clean room environment, including how the clean room maintains a clean environment and related airflow systems
- preparation and handling requirements for garments and footwear worn in a clean room environment, including garment features appropriate to a clean room environment and inspection procedure to confirm clothing and footwear are fit for use prior to fitting
- inspection points to confirm that clothing and footwear are correctly fitted according to workplace procedures
- procedures to follow if garments are not fit for use
- clean room control measures and related monitoring requirements, such as pressure differences between the clean room and change room and knowledge of location of pressure gauges, and checking operating conditions of ventilation systems where required
- entry procedures
- requirements for conducting work in a clean room and consequences of not complying with these requirements (typically work is conducted slowly to

REQUIRED SKILLS AND KNOWLEDGE

- minimise disturbance of particulates)
- procedures to follow to minimise risk of contamination including cleaning, sanitation, sterilisation and disinfecting of equipment and surfaces
- conditions which can cause contamination, and control measures to avoid this occurring
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- procedures for exiting and de-gowning
- laundering requirements and procedures
- housekeeping requirements for work area
- recording requirements and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare to work in a clean room environment through the correct application of required clothing and footwear • conduct work according to clean room work standards • follow hand washing procedures • exit room according to clean room standards • apply safe work practices and identify OHS hazards and controls.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • protective clothing, footwear and equipment appropriate to a clean room • work procedures relevant to working in a clean room environment, including those specific to entering and exiting the clean room and to carrying out the relevant work function • a clean room environment • documentation and recording requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the depositing equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements 1.7. Materials are transferred to depositing equipment
2. Operate and monitor the depositing process	2.1. The depositing process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The depositing process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the depositing process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- Access workplace information to identify depositing processing requirements
- Select, fit and use personal protective clothing and/or equipment
- Confirm supply of necessary materials and services as required for production. This may include confirming condition of materials including temperature, texture, appearance and holding times prior to use
- Conduct pre-start checks. This may involve inspecting equipment condition to identify any signs of wear; selecting appropriate settings and/or related parameters. This may include setting up depositor manifold and controls to meet production requirements and cancelling isolation or lockouts as required. Confirm that related equipment is clean; correctly configured for processing requirements; sensors and controls are correctly positioned; any scheduled maintenance has been carried out, and that all safety guards are in place and operational
- Start, operate, monitor and adjust depositing process equipment to achieve required outcomes. This may include monitoring control points and conducting inspections as required to confirm the process remains within specification. Monitoring may include:
 - maintaining supply of materials to hopper
 - controlling weights
 - checking dimensions and positioning of deposited material
 - visual inspections to identify faults such as unacceptable placement
 - checking pump stroke settings
 - checking line speed
- Monitor supply and flow of materials to and from the depositing process to confirm process remains within specification.
- Demonstrate product changeover procedures
- Take corrective action in response to out-of-specification results
- Respond to and/or report equipment failure within level of responsibility
- Locate emergency stop functions on equipment
- Follow isolation and lock out/tag out procedures as required to take depositing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- Complete workplace records as required
- Maintain work area to meet housekeeping standards
- Use process control systems according to enterprise procedures
- Collect samples and conduct tests according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- Conduct routine maintenance according to enterprise procedures
- Clean and sanitize equipment according to enterprise procedures
- Use oral communication skills / language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- Work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- Purpose and basic principles of the depositing process. This may include product preparation and conditioning requirements and product depositing
- Basic operating principles of equipment. This may include an operational understanding of main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation. It also includes knowledge of services required and action to take if services are not available
- The flow of the depositing process and the effect of outputs on downstream processes
- Quality requirements of materials for depositing and effect of variation on depositing process performance and outputs
- Quality characteristics required of process outputs
- Operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- Scope to adjust for weight variation within workplace quality parameters
- Typical equipment faults and related causes. This includes recognition of signs and symptoms of faulty equipment and early warning signs of potential problems
- Methods used to monitor the depositing process. This may include inspecting, measuring and testing as required by the process. It requires awareness of inspection or test points (control points) in the process and the related procedures and recording requirements
- Contamination/food safety risks associated with the depositing process and related control measures
- Common causes of variation and corrective action required
- OHS hazards and controls
- Requirements of different shutdowns as appropriate to the depositing process and workplace production requirements. This includes emergency and routine shutdowns and procedures to follow in the event of a power outage
- Isolation, lock out and tag out procedures and responsibilities
- Product/process changeover procedures and responsibilities
- Procedures and responsibility for reporting production and performance information
- Environmental issues and controls relevant to the depositing process. This includes

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <p>waste/rework collection and handling procedures related to the process</p> <ul style="list-style-type: none">• Basic operating principles of process control where relevant. This includes the relationship between control panels and systems and the physical equipment• Sampling and testing associated with process monitoring and control where relevant• Routine maintenance procedures where relevant• Cleaning and sanitizing procedures where relevant |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for depositing
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OH&S hazards and controls
- safely shut down equipment
- apply food safety procedures

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- recipe/batch instructions
- specifications, control points and processing parameters
- depositing and related equipment
- ingredients/mix to be deposited
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required
Method of assessment	<p>This unit should be assessed together with core units and other units of competence relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2030A Operate a process control interface • FDFOP2013A Apply sampling procedures • PMLTEST300B Perform basic tests • FDFOP2014A Participate in sensory analyses • FDFOP2011A Conduct routine maintenance • FDFOP2004A Clean and sanitise equipment
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity. When applied to the pharmaceutical industry, relevant GMP codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP
Workplace information	Workplace information may include Standard Operating Procedures (SOPs), specifications, production schedules and instructions, manufacturers' advice, standard forms and reports
Typical equipment	Typical equipment includes depositing hopper, nozzles and manifolds, tins/pans, belts, and lubricant applicators. Related processes may include cooling, further processing, and cutting equipment
Materials deposited	Materials deposited may include batter, cream, jam and fillings as appropriate to product
Operation of equipment and processes	Operation of equipment and processes may require the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include cleaning. In some cases cleaning may be carried out by a

RANGE STATEMENT	
	dedicated cleaning crew
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include power, steam, water, vacuum, and compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the evaporation process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the evaporation process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to workplace environmental standards 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the evaporation process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare materials as required
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust evaporation equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - temperatures
 - vacuum
 - motor amperage
 - condensate flow
 - steam flow and pressure
 - throughput
 - time/speed
 - evaporated product characteristics
- monitor supply and flow of materials to and from the evaporation process
- take corrective action in response to out-of-specification results
- conduct product/batch changeovers
- report and/or record corrective action as required
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare equipment for cleaning
- respond to and/or report equipment failure within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of evaporation, including an understanding of the principles of steam, the relationship between boiling point and pressure as applied to evaporation, and the changes that occur to product as it moves through the evaporation process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- quality characteristics to be achieved by the evaporation process
- the flow of the evaporation process and the effect of product output on downstream processes
- quality requirements of materials and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the evaporation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupation health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the evaporation process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control where relevant, including the

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the enrobing equipment and process for operation	1.1. Tempered chocolate is confirmed and available for enrobing and centres/bars are conditioned as required to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the enrobing process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the enrobing process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify enrobing process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of tempered chocolate and the relevant centres/biscuits are available at the correct temperature
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust enrobing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - supply of chocolate to the enrobing reservoir
 - temperatures of chocolate and pipelines
 - chocolate temper
 - chocolate supply pump speed
 - curtain flow
 - blower and vibrator settings
 - temperature profile of cooling tunnel
 - chocolate coverage
 - backing off and tailing
 - product weight
 - appearance
 - cooling temperatures
- monitor supply and flow of materials to and from the enrobing process and equipment operation to confirm process remains within specification
- demonstrate product/batch changeovers
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take enrobing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required

REQUIRED SKILLS AND KNOWLEDGE

- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- carry out routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the enrobing process, such as the effect of chocolate viscosity on enrobing and types of chocolate suitable/used for coverage and backing off
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation.
- services required and action to take if services are not available
- the flow of the enrobing process and the effect of outputs on downstream processes
- conditioning requirements for centres/bars/biscuits and chocolate, such as understanding of temper test procedures
- quality characteristics of centres/bars/biscuits and chocolate for use in the enrobing process and the effect of variation on process performance and outputs
- quality characteristics to be achieved by the process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the enrobing process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the enrobing process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the enrobing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the enrobing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitising procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the extrusion equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Machine components and related attachments are selected and fitted to meet operating requirements 1.3. Processing and operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the extrusion process	2.1. Ingredients and additives are delivered to the extrusion process in the required quantities and sequence 2.2. Preparation of the mass is monitored to confirm that specifications are met and mass is suitable for extrusion 2.3. The extrusion process is operated according to workplace procedures 2.4. Equipment is monitored to identify variation in operating conditions 2.5. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.6. The extruded product is monitored to confirm that specifications are met 2.7. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.8. The work area is maintained according to housekeeping standards 2.9. Work is conducted in accordance with workplace environmental guidelines 2.10. Workplace records are maintained according to workplace recording requirements
3. Shut down the extrusion process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials/ingredients and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting and fitting appropriate attachments where required, setting processing parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required at each stage of the extrusion process to confirm process remains within specification, such as:
 - parameters such as throughput
 - load/work input as measured by rpm (revs per minute)
 - kilowatts
 - amps and/or Hz (hertz) at each stage of the process
- monitor supply of materials to and from the extrusion process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of each part of the process, including the purpose and methods used to achieve each stage of the extrusion process
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the extrusion process and the effect of outputs on downstream processes
- quality characteristics of extruded output, including required characteristics of mass or blend to be extruded, such as:
 - gelatinisation and viscosity
 - dimensions, texture and hardness of extruded product
 - moisture content
- effect of variation in inputs and/or services on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including the effect of variation in key variables, such as:
 - throughput and work input at each stage of the process
 - effect of time and temperature
 - barrel pressures and temperatures at each zone
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems, such as:
 - screw and barrel assembly wear
 - die plate wear
 - wear of conditioner paddles
 - extruder knife condition
- methods used to monitor the extrusion process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation and corrective action required
- contamination risks related to the extrusion process and related control measures
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the extrusion process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for extrusion • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • extrusion and related equipment and services • ingredients/blend/mass to be extruded • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests .
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements

Legislative requirements

Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to the industry includes:

- the Food Standards Code including labelling, weights and measures legislation
- legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity

When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production schedules and instructions
- manufacturers' advice
- standard forms and reports

Extrusion process

The extrusion process typically includes:

- feeding/dosing
- conditioning/cooking
- mixing
- extruding
- drying and cooling

It may also involve screening/sieving, a final additive addition stage and further processing,

RANGE STATEMENT	
	such as sheeting or aeration according to product type
Extrusion equipment	<p>Extrusion equipment may include:</p> <ul style="list-style-type: none"> • ingredients handling and addition equipment • mixers • conditioners • cookers • dryers and coolers <p>Some systems may also include:</p> <ul style="list-style-type: none"> • expanders • oil coating systems • screens and sieves • sheeting • cutting/stamping equipment • tray feeders/take off • stackers
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • steam • water • vacuum • compressed and instrumentation air

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down filtration equipment used to separate coarse particles from solutions.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a food processing production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of a filtration process and associated equipment.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p> <p>When separation of fine particle sizes is required, the following units should be considered:</p> <ul style="list-style-type: none"> • FDFOP2050A Operate a separation process, and • FDFOP2057A Operate a membrane process.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the filtration equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the filtration process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Separation of solids from solution meets specifications 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The process is monitored to confirm that specifications are met 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the filtration process	3.1. The appropriate shut down procedure is identified 3.2. The process is shutdown according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify filtration processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting and fitting appropriate screens and equipment components, selecting settings and/or related parameters, cancelling isolation or lockouts as required, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust filtration process and equipment to achieve required outcomes, including:
 - flow rates
 - residence time
 - solids for in-feeds and out-feeds (this is typically done by conducting a spin test)
- monitor supply and flow of materials to and from the filtration process
- take corrective action in response to out-of-specification results, such as identifying and responding to sieve or screen blockages or tears
- identify and correct or report equipment faults, such as confirming condition screens and sieves and replacing damaged components within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take filtration and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- clean and sanitise filtration equipment
- conduct product/batch changeover
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Knowledge of:

- purpose and basic principles of filtration, including stages and changes that occur during filtration
- basic operating principles of filtration equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, including relevant screens and sieves as required by filtration equipment, and the purpose and location of sensors and related feedback instrumentation
- services required for operation of filtration equipment used in the workplace
- the flow of the filtration process and the effect of product output on downstream processes
- effect of raw material characteristics on filtration performance
- quality characteristics required of filtration process output
- test methods used to monitor solids in in-feed and out-feed streams
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems such as screen or sieve damage
- common causes of variation and corrective action required
- spoilage and other food safety risks associated with filtration
- occupation health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the filtration process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- cleaning procedures appropriate for the range of filtration components used
- isolation, lock out and tag out procedures and responsibilities
- product/batch changeover procedures
- cleaning and sanitising methods and procedures
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to filtration, including handling of effluent
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

3. Shut down the grinding process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services to the grinding process
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- operate stockfeed control panel to transfer and grind product
- monitor and adjust the grinding process and equipment operation to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, and running adjustments to hammer mills and roller mills
- monitor supply and flow of materials to and from the grinding process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- demonstrate batch/product changeovers
- sort, collect, treat, recycle or dispose of waste
- maintain work area to meet housekeeping standards
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- purpose and basic principles of the grinding process, including the characteristics of materials, which can be reduced to a suitable form for product such as stockfeed
- basic operating principles of equipment, such as main equipment components, bulk materials transfer systems and equipment, dust collection equipment, grinding equipment operating capacities and applications, and the purpose and location of magnets, sensors and related feedback instrumentation
- services required and action to take if services are not available
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- the flow of the grinding process and the effect of product output on downstream processes
- quality characteristics and uses of grinding process outputs
- effect of the grinding process on the end product
- effect of raw material characteristics on grinding process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the grinding process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls, including the risk of dust explosion and an understanding of the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the frying process for operation	1.1. Frying oil and product are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the frying process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the frying process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify frying requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary oil type to meet product frying requirement, product to be processed and services
- prepare materials as required prior to frying
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and valves are correctly positioned for oil transfer and processing stages, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the frying process and equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - product throughput/belt speeds
 - oil levels/temperatures
 - operation of oil filtration process
 - visual appearance of product, such as breaking open to inspect
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- conduct product/batch changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of frying, including optimal frying conditions and the role of oil filtration
- basic operating principles of equipment, such as main equipment components, the configuration of valves, pumps and pipework, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the frying process and the effect of product output on downstream processes
- quality characteristics to be achieved by the frying process
- effect of product and oil quality characteristics on the frying process, final product and shelf-life
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the frying process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls, including the fire suppression system and procedures to follow if temperatures exceed the specified range
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the frying process, including procedures for recycling oil and for disposing of spent oil and the consequences of incorrect disposal
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for frying
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- in-line frying equipment and related equipment and services
- frying oil suited to product type and product to be fried
- sampling schedules and test procedures and equipment as required
- cleaning procedures, materials and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> documentation and recording requirements and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> FDFOP2004A Clean and sanitise equipment FDFOP2011A Conduct routine maintenance FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Frying equipment	<p>Frying equipment may include:</p> <ul style="list-style-type: none"> • holding tanks • oil filter unit • frying line (typically gas fired) • fire suppression system • pumps • heat exchangers (indirectly heated process) <p>Related equipment may include:</p> <ul style="list-style-type: none"> • product preparation processes; such as blanching equipment, crumbing or coating application units • further cooking process (low fat applications)
Operation of equipment and	Operation of equipment and processes may

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a heat treatment process.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit has application in a food processing production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of a heat treatment process and associated equipment.</p> <p>Heat treatment can include hot fill, aseptic processing, pasteurisation, ultra-high temperature (UHT) and high temperature short time (HTST) processing.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p> <p>Note that this unit overlaps with FDFOP2041A Operate a mixing or blending and cooking process. For further information refer to advice on unit duplication in the section on qualification arrangements.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the heat treatment process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the heat treatment process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that temperature specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the heat treatment process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify heat treatment requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare materials as required
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the heat treatment process and equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time and temperature
 - pressure
 - flow rates
 - flow diversion
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate procedure to clean and sanitise equipment
- complete workplace records as required
- maintain work area to meet housekeeping standards
- control related holding and cooling stages according to enterprise procedures
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- conduct product/batch changeovers according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of heat treatment, including the effect of heat treatment on product and on microbiological characteristics
- the relationship between time, temperature and pressure in the heat treatment process, such as associated holding and cooling profiles according to product requirements
- basic operating principles of equipment, such as main equipment components, types and characteristics of heating mediums used, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the heat treatment process and the effect of product output on downstream processes
- quality characteristics required of the heat treated product
- effect of raw material characteristics on the heat treatment process, such as variation in viscosity/texture, microbial load and acidity
- heat treatment requirements for food to be treated, such as low and/or high acid foods
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the heat treatment process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- cleaning and sanitation procedures
- environmental issues and controls relevant to the heat treatment process, including waste/rework collection and handling procedures related to the process

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for heat treatment
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- heat treatment process and related equipment and services
- materials to be heat treated
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

<p>3. Shut down the mixing/blending and cooking process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that related equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- sequence ingredient addition to meet recipe specifications, such as manual addition and/or operating bulk materials transfer and automatic addition equipment
- start, monitor and adjust processing equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time and temperature
 - agitation settings
 - weights
 - flow rates
 - flow diversion
 - characteristics of the mix (e.g. colour, viscosity, density and consistency)
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- conduct product/batch changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- cool and pack off cooked product according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as

REQUIRED SKILLS AND KNOWLEDGE

specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce

Required knowledge***Knowledge of:***

- purpose and basic principles of heat sterilisation and effect on physical, chemical, microbiological and organoleptic characteristics of the cooked product
- the flow of the mixing or blending and cooking process and the effect of product output on downstream processes
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and calibration schedules for scales and related weighing/measuring equipment
- services required and action to take if services are not available
- quality characteristics and conditioning required of ingredients used and their role in the product, such as reconstituting dry ingredients and bringing ingredients to a required temperature
- effect of ingredient quality/condition on the process, including variables such as temperature, viscosity/texture, microbial load and acidity quality
- heat treatment requirements for low and/or high acid foods as appropriate to production requirements
- stages and changes which occur during the blending and heat treatment stages
- quality requirements of the cooked product, such as chemical, textural and flavour profiles as required
- relationship between time and temperature in the cooking process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- procedures for requisitioning, receiving and returning ingredients from stores
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required
- contamination/food safety issues associated with mixing and blending and related control measures
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information

REQUIRED SKILLS AND KNOWLEDGE

- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- food safety requirements when preparing products containing meat where relevant
- packaging requirements and procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the drying process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing and operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the drying process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the drying process	3.1. The appropriate shut down procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare materials as required
- conduct pre-start checks, such as inspecting equipment condition (e.g. checking belts, chains, screens, seals and valves, and filters) to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - temperatures
 - moisture content
 - air flow
 - throughput
 - time/speed
 - pressure/vacuum
 - product characteristics
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results or non-compliance
- respond to and/or report equipment failure within level of responsibility
- report and/or record corrective action as required
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- prepare equipment for cleaning
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- demonstrate product/batch changeovers (may not apply to some continuous operations) according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the drying process, including the stages that occur during the drying process and the effect on product structure of each stage
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- quality characteristics to be achieved by the process
- materials preparation requirements and effect of variation on the process
- the flow of the drying process and the effect of outputs on downstream processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the drying process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation, such as air temperature, air velocity, humidity and pressure, and corrective actions required if these are out-of-specification
- operational health and safety (OHS) hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the drying process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control where relevant, including the

<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for drying • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule, batch instructions • specifications, control points and processing parameters • drying process and related equipment and services • product to be dried • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	Workplace information may include: <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production schedules and instructions manufacturers' advice standard forms and reports
Drying equipment	Drying equipment may include: <ul style="list-style-type: none"> drying chambers atomisers heaters coolers air filters fans recovery cyclones conveyors
Materials	Materials may include product to be dried and additives or drying agents as required, consistent with the provisions of the Australian Food Safety Code

RANGE STATEMENT	
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning, (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> power fuel steam water compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare homogenising process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the homogenising process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down homogenising equipment	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, and confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm the homogenising process remains within specification, such as:
 - temperature
 - pressure
 - throughput
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE***Knowledge of:***

- purpose and basic principles of homogenising
- basic operating principles of equipment, including main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- effect of raw materials on homogenisation, such as variables, including solids (brix), acidity, temperature, consistency and colour on process outcomes
- quality requirements to be achieved by the homogenisation process
- the flow of the homogenising process and the effect of product output on downstream processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the homogenising process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the homogenising process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the retort equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the retort process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the retort process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services, including confirming container coding, and treating or confirming availability of treated cooling water
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the cooking and cooling process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time
 - temperature
 - pressure at each stage
- cool, clean and handle post-treated containers to meet requirements
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- demonstrate batch changeovers
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of heat treatment and retort process, including the relationship between time and temperature in the retort process, and the changes and requirements of each stage, such as cooking, cooling and post-treatment container handling
- the purpose and requirements of container coding
- basic operating principles of equipment, such as main equipment components (e.g. thermometers, chart recorder, temperature control system, clock and pressure gauges), status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the retort process and the effect of product output on downstream processes
- quality characteristics required of the retorted product
- effect of raw material characteristics on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the retort process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures, including both the risks of contamination related to processing and to post-processing handling of containers
- common causes of variation and corrective action required, including the effects of variables, such as container size, product particulates, pH, water activity, time/temperature and pressure on process outcomes
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare pumps for operation	1.1. Pre-start checks on pumps and related equipment are carried out 1.2. Appropriate settings are selected to meet safety and production requirements 1.3. Condition of pumps and related equipment is monitored and maintenance requirements are identified and reported according to workplace reporting requirements
2. Monitor pump operation	2.1. Pumps and related equipment are started and monitored to identify variation in operating conditions 2.2. Corrective action is taken as required to maintain pump operation within equipment capacity and operating parameters
3. Complete pump operations	3.1. Pumps are prepared for cleaning and/or maintenance 3.2. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify pumping requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of materials to be pumped and necessary services
- conduct pre-start checks, such as inspecting pump flanges, gaskets and seals to identify any signs of wear, checking related valve assemblies to identify any signs of leaks, cancelling isolation or lockouts as required (where pumps have variable settings, this involves selecting appropriate settings and confirming that related pipework is correctly configured for pumping requirements)
- monitor and adjust pump operation as required, such as identifying variation in amperage and adjusting pump speeds/flow rates to meet pumping requirements
- monitor supply and flow of materials to and from the pump
- follow isolation and lock out/tag out procedures as required to take pumps and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility (preparation of equipment may include flushing or pigging related lines and pipework, and removal of faceplate)
- respond to and/or report pump equipment failure within level of responsibility
- locate stop and reset functions on pumps
- maintain work area to meet housekeeping standards
- operate pumps using process control systems according to enterprise procedures
- conduct routine pump maintenance according to enterprise procedures
- clean pumps and related equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic operating principles of pumps and related equipment, including main pump components, status and purpose of guards, pump system configuration, including valves, taps and pipework
- the effect of pumping system design on operating performance, including flow resistance, pressure and head
- operating capacities of pumps used in the work area, including different pump types as required to perform pumping operations where relevant

REQUIRED SKILLS AND KNOWLEDGE

- effect of raw material characteristics on pump performance, including variables such as soluble solids, temperature and viscosity
- effect of pump operating parameters on product/materials pumped
- corrective action required where pump operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- services required
- isolation, lock out and tag out procedures and responsibilities
- operational health and safety (OHS) hazards and controls
- procedures and responsibility for reporting problems
- environmental issues and controls, including action required in the event of significant leaks or spills
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- routine pump maintenance requirements and procedures where relevant
- cleaning procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on pumps • start, operate, monitor and adjust pumps to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • pumps, related equipment and services • materials to be pumped • routine preventative maintenance schedule as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2008A Operate a bulk liquid transfer process

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• FDFOP2011A Conduct routine maintenance• FDFOP2030A Operate a process control interface.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Pumps	<p>Pumps may include but are not limited to:</p> <ul style="list-style-type: none"> • centrifugal pumps • reciprocating or positive displacement pumps • diaphragm pumps • helical screw pumps • electrical submersible pumps
Related equipment	<p>Related equipment may include:</p> <ul style="list-style-type: none"> • valves • gauges • flow meters • pipework • screens • filters
Pump operation	<p>Pump operation may require:</p> <ul style="list-style-type: none"> • the use of process control screens and systems

FDFOP2046A Operate a production process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, monitor, and adjust a production process or sub-system.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit is generic and should be customised for a given process. It must only be selected where no process-specific unit is available.</p> <p>This unit has application in a food processing environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of a production process and associated equipment.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- demonstrate batch/product changeovers according to enterprise procedures (may not apply to some continuous operations)
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the process

REQUIRED SKILLS AND KNOWLEDGE

- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the process
- quality requirements of materials and effect of variation on process performance
- operating requirements, parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including recognition of signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- product/process changeover procedures and responsibilities where relevant
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for production process • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • process and related equipment and services • materials to be processed • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP</p>
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Production process or sub-system	<p>A production process or sub-system may require:</p> <ul style="list-style-type: none"> • operation of a series of related items of equipment to achieve the process outcome
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> power steam water vacuum compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare portion saw for operation	1.1. Safety guards and covers are in place 1.2. Pre-start checks are carried out as required by workplace requirements
2. Operate the portion saw to achieve required outcome	2.1. Portions to be cut are positioned 2.2. The portion is passed over the blade and cut to meet specifications 2.3. Equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. Quality and accuracy of cuts is monitored to confirm that specifications are met 2.6. Equipment is inspected and cleaned according to workplace procedures 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. The work area is maintained according to housekeeping standards 2.9. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify portion requirements
- select, fit and use personal protective clothing and/or equipment, including use of mesh gloves or similar protective clothing
- confirm supply of necessary poultry pieces, including inspecting and removing pieces of unacceptable quality
- conduct pre-start checks, such as inspecting condition of the portion saw to identify blade sharpness and other signs of wear, cancelling isolation or lock outs as required, confirming that equipment is clean and all safety guards are in place and operational, and ensuring that lighting, guarding and signage around the saw are in position
- collect portions to be cut
- position portions to allow the blade to pass cleanly through
- achieve cut accuracy to meet specifications and workplace standards with minimal waste
- identify faulty equipment operation and/or blunt blades and take corrective action
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take the portion saw and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- inspect and clean portion saw and report maintenance issues as required
- maintain work area to meet housekeeping standards
- conduct routine maintenance, such as blade replacement according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- quality specifications and characteristics required of portioned product
- portion saw operating procedures, including correct positioning of guards, lighting and safe work practices when working with the saw

REQUIRED SKILLS AND KNOWLEDGE

- operational health and safety (OHS) hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- contamination/food safety risks associated with the automated cutting process and related control measures, including hygiene and sanitation requirements when handling product
- grading/downgrading specifications for portioned product
- the effect of outputs on downstream processes
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- procedures for cleaning and for reporting maintenance requirements
- waste handling requirements and procedures
- routine maintenance procedures where relevant

- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of pre-processing used

REQUIRED SKILLS AND KNOWLEDGE

- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the process and the effect of product output on downstream processes
- quality characteristics to be achieved at the pre-processing stage
- effect of raw material characteristics on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with pre-processing and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the reduction equipment and process for operation</p>	<p>1.1. Materials are confirmed and available to meet operating requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the reduction process</p>	<p>2.1. The process is started and operated according to workplace procedures</p> <p>2.2. Equipment is monitored to identify variation in operating conditions</p> <p>2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.4. The process is monitored to confirm that particle size and flour extraction rates meet production specifications</p> <p>2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.6. By-product generated from the reduction process is segregated and transferred to designated storage area according to food safety requirements</p> <p>2.7. The work area is maintained according to housekeeping standards</p> <p>2.8. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.9. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the reduction process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify reduction process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that related equipment is clean and correctly configured for reduction process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust reduction process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - correct product type/quantity
 - roll releases
 - even spread of feed across rolls
 - mill balance
 - even grind/correct particle size
- monitor supply and flow of materials to and from the reduction process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take reduction process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the reduction process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the reduction process and the effect of outputs on downstream flour milling processes
- quality characteristics to be achieved by the reduction process
- quality requirements of materials and effect of variation on reduction process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the reduction process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the reduction process and the related procedures and recording requirements
- contamination/food safety risks associated with the reduction process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the reduction process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the reduction process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for reduction • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • reduction process and related equipment and services • stock to be processed • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSI973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Reduction equipment	<p>Reduction equipment may include:</p> <ul style="list-style-type: none"> • reduction rolls • plainsifters • impactors • entoleters (flake disruptors and detachers)
Stock for the reduction in a flour milling process	Stock for the reduction in a flour milling process is supplied from either the scalping and grading or scratch and sizing or purification processes
By-products (co-products) for flour milling	<p>By-products (co-products) for flour milling may include:</p> <ul style="list-style-type: none"> • semolina • sharps

RANGE STATEMENT	
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> power vacuum compressed and instrumentation air

FDFOP2050A Operate a separation process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a separation process.
------------------------	---

Application of the Unit

Application of the unit	<p>When applied to the dairy sector, this unit covers the skills and knowledge required to set up, operate, adjust and shut down a separation process to wash and concentrate fat and sediment from milk and dairy products.</p> <p>In other applications it is used to separate liquids using centrifugal separation methods.</p> <p>When operators are required to perform batch or product changeover procedures as part of this work process, the procedures should be the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be selected.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the separation process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the separation process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The separation process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to environmental standards 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the separation process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify separation processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming that the correct bowl is fitted, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust separation process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - separation speed
 - solids in in-feed and out-feed streams (this is typically done by in-line refractometers, Baume tests and spin tests)
 - flow rates
 - time/temperatures
 - pressures
 - air/water/oil levels
 - condition of seals and valves
 - discharge/desludging
- monitor supply and flow of materials to and from the separation process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- shut down separation process equipment in response to emergency situation
- follow isolation and lock out/tag out procedures as required to take separation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- clean and sanitise equipment
- demonstrate product/process changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the separation process, including stages and changes that occur during the separation process
- basic operating principles of equipment, including safety hazards associated with separation equipment and the implications of interchanging parts/incorrect bowl balance
- main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and services required for operation of separation equipment used in the workplace
- the flow of the separation process and the effect of product output on downstream processes
- impact of in-feed quality and concentration levels on the separation process
- quality characteristics and uses of separation process outputs
- methods used to monitor the separation process, such as inspecting, measuring and testing in-feed and out-feed solids, and other tests as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- common causes of variation and corrective action required, including how variation in temperature and solids affects the process
- spoilage and other food safety risks associated with separation, and related control measures
- operational health and safety (OHS) hazards and controls, including limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- cleaning and sanitation procedures
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the spreads equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the spreads process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the spreads process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that related equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - temperature
 - work input
 - throughput
 - pressures
 - crystal formation
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- demonstrate batch/product changeovers
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of spreads preparation, including crystallisation, the relationship between stages of crystal formation, work input and temperature, and the stages involved in the process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the spreads production process and the effect of outputs on downstream processes
- quality characteristics required of the finished product
- quality requirements of oil or emulsion for processing and the effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the spreads production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the tempering equipment and process for operation	1.1. Chocolate for tempering is confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the tempering process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that tempering specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the tempering process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify tempering process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust tempering process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - setting pump speeds
 - checking temperature/zone settings
 - checking chocolate temperatures
- monitor supply and flow of materials to and from the tempering process and equipment operation to confirm process remains within specification
- demonstrate product/batch changeovers
- conduct temper test, interpret results and determine adjustments as required
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take tempering process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Knowledge of:

- purpose and basic principles of the tempering process, including:
 - basic understanding of the crystallisation behaviour of cocoa fat
 - relationship between crystal forms and melting points/temperatures
 - process stages, such as heating, cooling, agitating, reheating and effect of each of these on outcomes
- basic operating principles of equipment, including main equipment components, temperature zones, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the tempering process and the effect of outputs on downstream processes
- quality characteristics required of chocolate for tempering and the effect of variation on tempering process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the tempering process, including temper test procedures and the significance of results for tempering process adjustments
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the tempering process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the tempering process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the tempering process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for chocolate tempering • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • recipe/batch instructions • specifications, control points and processing parameters • process and related equipment and services • chocolate to be tempered • tempermeter • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> FDFOP2004A Clean and sanitise equipment FDFOP2011A Conduct routine maintenance FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production schedules and instructions manufacturers' advice standard forms and reports
Typical equipment for an automated process	<p>Typical equipment for an automated process includes:</p> <ul style="list-style-type: none"> pumps storage/holding/melt tanks tempering equipment
Operation	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend

RANGE STATEMENT

	<p>on the nature of the process. Services for an automated process may include:</p> <ul style="list-style-type: none"> • power • fuel • water • steam • compressed and instrumentation air

FDFOP2053A Operate a washing and drying process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a washing and drying process.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit has application in a food processing production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of a washing and drying process and associated equipment typically used for raw products, such as fruit and vegetables.</p> <p>When operators are required to perform batch or product changeover procedures as part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be selected.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the equipment and process for operation	1.1. Raw materials are confirmed and available to meet production requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the washing and drying process	2.1. The process is started and operated according to workplace procedures 2.2. Raw materials are inspected and washed to meet workplace specifications 2.3. Washed materials are transferred to drying stage 2.4. Materials are dried to specification 2.5. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The work area is maintained according to housekeeping standards 2.8. Work is conducted in accordance with workplace environmental guidelines 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the washing and drying process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary raw materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust washing and drying equipment to achieve required outcomes, including monitoring control points and conducting inspections to confirm process remains within specification, such as:
 - operation of dosing equipment
 - tank/bath or flume water levels
 - related equipment operation (such as pumps/conveyors)
 - immersion of raw materials
 - temperatures
 - water quality
 - flow rates
 - drying times
 - weight (before and after drying)
- monitor supply and flow of raw materials to the wash process and from the drying process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the washing and drying process, including water quality, the role of sanitisers in the washing process, and of drying technology, such as the use of centrifugal force in a drying process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services (principally water) required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by both the washing and drying stages, including consequence of out-of-specification moisture levels on further processing and final product
- quality requirements of raw materials and effect of variation on process performance, including how variation in microbial load can affect the washing and drying process
- operating requirements, parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the washing and drying process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework

Workplace and/or batch documentation is completed</p> <p>3.4. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify water purification process requirements
- select, fit and use personal protective clothing and/or equipment
- respond appropriately to hazards, including chemical spills
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for water purification process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust water purification process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - flow rates
 - pressure
 - operation of dosing equipment (where relevant)
 - alarms
- monitor supply and flow of materials to and from the water purification process
- take corrective action in response to out-of-specification results
- maintain a purification system free of physical, chemical and biological contaminants
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take water purification process and related equipment off-line in preparation for cleaning/back flushing and/or maintenance within level of responsibility
- carry out cleaning, sanitising, regenerating and back-flushing as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the water purification process, including methods used to purify water appropriate to workplace requirements
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the water purification process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the water purification process
- quality requirements of inputs to the purification process and the effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including following troubleshooting and problem solving guidelines, and recognising signs and symptoms of faulty equipment and early warning signs of potential problems
- basic operating principles of process control as appropriate, including the relationship between control panels and systems and the physical equipment
- methods used to monitor the water purification process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the water purification process and the related procedures and recording requirements
- Good Manufacturing Practice (GMP)/food safety requirements (as appropriate) associated with the purification process and related control measures
- common causes of variation and corrective action required
- operational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the water purification process and workplace production requirements, including emergency and routine shutdowns
- isolation, lock out and tag out procedures and responsibilities
- cleaning and sanitation procedures
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the water purification process
- sampling and testing associated with water purification process monitoring and control where relevant
- routine maintenance procedures where relevant

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements

Legislative requirements

Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:

- the Food Standards Code, including labelling, weights and measures legislation
- legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity

When applied to the pharmaceutical industry, relevant GMP codes apply in place of the Australian Food Standards Code and reference to food safety is replaced by GMP

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production schedules and instructions
- manufacturers' advice
- standard forms and reports

Water purification equipment

Water purification equipment may include:

- dosing equipment
- storage tanks
- pumps
- valves
- distillation systems
- reverse osmosis systems
- UV light
- deionisation plants

RANGE STATEMENT	
	<ul style="list-style-type: none"> softeners carbon tanks filters
Water produced	Water produced may include, but is not limited to: <ul style="list-style-type: none"> purified water deionised water reverse osmosis (RO) distilled water water for injection (WFI)
Purification processes	Purification processes are typically continuous processes
Operation of equipment and processes	Operation of equipment and processes typically requires: <ul style="list-style-type: none"> the use of process control panels and systems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to freeze dough	1.1. Dough freezing requirements are identified 1.2. Freezers are set to meet parameters for snap freezing and for storage 1.3. Frozen dough meets freezing specifications
2. Store frozen dough	2.1. Storage conditions retain quality characteristics of frozen dough 2.2. The freezing processes are monitored to ensure that product meets food safety and quality requirements
3. Thaw frozen dough	3.1. Thawed dough meets food safety and quality requirements 3.2. Unacceptable dough is identified, rectified and/or removed 3.3. Waste is disposed of according to workplace procedure 3.4. Work is conducted in accordance with workplace environmental guidelines 3.5. Housekeeping standards are maintained in the workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access freezing requirements for dough type
- set equipment to meet the parameters for snap freezing and for storing dough
- transfer dough to snap freezer (transfer method must ensure minimal damage to dough structure, which is particularly critical where frozen dough is already proofed)
- monitor equipment to confirm that freezing parameters are met
- package snap frozen dough for freezer storage as required to prevent moisture loss
- transfer snap frozen, packaged dough to frozen storage
- thaw dough as required for use
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills / language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of freezing dough, including what occurs to dough during snap freezing and storage stages
- freezing equipment used, freezing capacity and the effect of freezing method on product
- different handling requirements of made up and proofed doughs to preserve the dough structure
- purpose and characteristics of packaging liners used to pack frozen dough
- procedures for maintaining temperature parameters of freezing equipment, including procedures to be followed when loading and removing dough to preserve temperature conditions
- storage patterns to make efficient use of space, allow for product rotation and minimise temperature fluctuations
- food safety issues that can result from temperature abuse
- the significance of timeliness when both freezing and thawing dough
- optimal storage times
- the significance of variables, such as dough type and size, on freezing and thawing processes

REQUIRED SKILLS AND KNOWLEDGE

- procedures for efficiently thawing frozen product and the consequences of slow thawing
- the effect of freezing/thawing on the quality of the final product
- inspections/control points used to confirm that product meets quality requirements and related monitoring requirements
- causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning requirements and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • freeze and store frozen dough to maintain quality standards • identify the implications of the freezing process on dough products • assess outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant freezing, storing and thawing requirements, safe work practices, food safety, quality and environmental requirements • product specifications and related inspection/control points • freezing equipment • packaging materials and liners as required • dough • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for</p>	<p>To ensure consistency in one's performance, competency</p>

EVIDENCE GUIDE

assessment

should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • verbal or written instructions • standard operating procedures (SOPs) • specifications • production schedules • recipe instructions
Freezing equipment	<p>Freezing equipment includes:</p> <ul style="list-style-type: none"> • snap freezing equipment, such as blast freezers and storage freezers
Dough	Dough that is frozen may be either made up or proved dough. Frozen dough that has not been proved requires an additional step of conditioning before baking. This does not apply to proved dough

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the freezing process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the freezing process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the freezing process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare materials as required
- conduct pre-start checks, such as involve inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the freezing process and equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - tunnel and product temperatures
 - throughput
 - removal of frozen waste product from equipment
 - visually inspecting product
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- demonstrate procedure to defrost tunnels as required
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct product/batch changeovers according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of freezing, including the changes which occur to product during freezing
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, basic principles and operation of refrigeration system, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the freezing process and the effect of product output on downstream processes
- quality characteristics to be achieved by the freezing process
- effect of raw material characteristics on the freezing process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- product/process changeover procedures and responsibilities where relevant
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on freezing machinery and equipment • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • production schedule and batch instructions • specifications, control points and processing parameters • information on equipment capacity and operating parameters • freezing process and related equipment and services • materials to be frozen • sampling schedules and test procedures and equipment as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the membrane equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the membrane process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the membrane process	3.1. The appropriate shutdown and cleaning procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- Access workplace information to identify membrane processing requirements
- Select, fit and use personal protective clothing and/or equipment
- Confirm supply of necessary materials and services
- Conduct pre-start checks. This may involve inspecting equipment/membrane condition to identify any signs of wear; selecting appropriate settings and/or related parameters; cancelling isolation or lockouts as required; confirming that equipment such as pumps, valves and pipework are clean and correctly configured for membrane processing requirements; sensors and controls are correctly positioned; any scheduled maintenance has been carried out, and that all safety guards are in place and operational
- Start, operate, monitor and adjust membrane processing equipment to achieve required outcomes. This may include monitoring control points and conducting inspections as required to confirm process remains within specification. This may include monitoring:
 - temperatures
 - flow rates
 - total solids
 - pressure/vacuum
- Monitor supply and flow of materials to and from the membrane process
- Conduct run/batch changeovers
- Take corrective action in response to out-of-specification results
- Respond to and/or report equipment failure within level of responsibility
- Locate emergency stop functions on equipment
- Follow isolation and lock out/tag out procedures as required to take membrane processing and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- Follow procedures to clean membranes
- Complete workplace records as required
- Maintain work area to meet housekeeping standards
- Use process control systems according to enterprise procedures
- Conduct routine maintenance according to enterprise procedures
- Collect samples and conduct tests according to enterprise procedures
- Use oral communication skills / language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- Work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- Purpose and basic principles of membrane processing. This includes an understanding of the components of milk, particle size of each component and the effect on these components of membrane processing. It also includes an understanding of the methods used to achieve this outcome
- Basic operating principles of equipment. This may include an operational understanding of main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation. It also includes an awareness of the material composition of membranes used in the workplace and related operating, cleaning and storage requirements
- The flow of the membrane process including the different processing streams and the effect of the membrane process outputs on downstream processes
- Quality characteristics required of the membrane processing outputs
- The effect of variation in raw material characteristics on membrane processing performance
- Operating requirements and parameters and corrective action required where operation is outside specified operating parameters. This includes an understanding of the effect of variation in processing parameters such as temperature, pressure, total solids and flow rates on membrane process performance
- Typical equipment faults and related causes. This includes recognition of signs and symptoms of faulty equipment and early warning signs of potential problems
- Techniques used to monitor membrane processing. This may include inspecting, measuring and testing as required by the process. It requires awareness of inspection or test points (control points) in the process and the related procedures and recording requirements
- Contamination/food safety risks associated with the process and related control measures
- Common causes of variation and corrective action required
- OHS hazards and controls. This includes awareness of the limitations of protective clothing and equipment relevant to the work process
- Requirements of different shutdowns as appropriate to membrane processing and workplace production requirements. This includes emergency and routine shutdowns and procedures to follow in the event of a power outage and shutdown
- Cleaning and sanitation requirements associated with changeovers
- Isolation, lock out and tag out procedures and responsibilities
- Procedures and responsibility for reporting production and performance information
- Environmental issues and controls relevant to membrane processing. This includes waste collection and handling procedures related to the process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify requirements for the holding and storage process
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services for the holding and storage process
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust holding and storage process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - time/temperature
 - flow rates
 - agitation speed
 - equipment condition and performance
- monitor supply and flow of materials to and from the holding and storage process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take holding and storage process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the holding/storage process including the importance of stock rotation
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the holding and storage process and the effect of product output on downstream processes
- contamination/food safety risks associated with the process and related control measures
- quality characteristics to be achieved by the holding and storage process, such as organoleptic characteristics of the product
- effect of raw material characteristics on the holding and storage process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- techniques used to monitor the holding and storage process, such as inspecting, measuring and testing as required by the process
- or test points (control points) in the process and the related procedures and recording requirements
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the holding and storage process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the freezing equipment and process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Monitor the freezing process operation	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the freezing process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - flow rates
 - churn speed
 - time/temperature
 - ingredient addition systems
 - pressures
 - equipment condition and performance
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- demonstrate batch/product changeovers according to enterprise procedures (may not apply to some continuous operations)
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for

REQUIRED SKILLS AND KNOWLEDGE

clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the process, including the stages that occur during the churning and freezing process and the required physical and microstructure of the product
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the freezing process and the effect of outputs on downstream processes
- additives and ingredients used and their role in the product
- quality characteristics to be achieved by the freezing process
- quality requirements of materials/ingredients and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the production process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- product/process changeover procedures and responsibilities where relevant
- sampling and testing associated with process monitoring and control where

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for continuous freezing • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedules and batch instructions • specifications, control points and processing parameters • freezing process and related equipment and services • materials/ingredients to be processed • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	Workplace information may include: <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Freezing and related equipment	Freezing and related equipment may include: <ul style="list-style-type: none"> • in-line extruders • dashers • churns • pumps • fruit feeder, • hardening rooms/tunnels/machines
Materials	Materials used in freezing may include: <ul style="list-style-type: none"> • fat • milk solids not fat • sugars • emulsifiers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • stabilisers • water • flavours • colours • bulking agents
Operation processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • steam • water • vacuum • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the automated cutting equipment and process for operation	1.1. Carcasses/pieces are confirmed and available 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet safety, type/size and cutting requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the automated cutting process	2.1. Carcasses/pieces are inspected to confirm that quality requirements are met 2.2. Carcasses/pieces are hung to meet production pace 2.3. Equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. Quality and accuracy of cuts is monitored to confirm that specifications are met 2.6. Out-of-specification outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. The work area is maintained according to housekeeping standards 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the automated cutting process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify cutting requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary carcasses/pieces and services, including inspecting and removing carcasses/pieces of unacceptable quality
- conduct pre-start checks, such as inspecting equipment condition to identify blade sharpness and other signs of wear, selecting appropriate settings and/or related parameters according to bird size/type, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for cutting process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, confirming that all safety guards are in place and operational and running, and trialing cut to confirm accuracy/positioning where required
- start, operate, monitor and adjust automated cutting process equipment to achieve required outcomes, including hanging carcasses/pieces to meet production pace, such as monitoring control points and conducting inspections as required to confirm cut accuracy within specification
- monitor supply and flow of carcasses/pieces to and from the automated cutting process
- take corrective action in response to out-of-specification results, including adjusting blades/knives within level of responsibility
- respond to and/or report equipment failure within level of responsibility
- demonstrate procedure to adjust equipment for bird/portion type/size
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take automated cutting process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance such as blade replacement according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the automated cutting process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the flow of the automated cutting process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the automated cutting process, including quality specifications and ability to assess cut quality and determine any required adjustments
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the automated cutting process, including inspecting the quality of cuts
- inspection or test points (control points) in the automated cutting process and the related procedures and recording requirements, such as recording information (e.g. temperatures and product codes)
- contamination/food safety risks associated with the automated cutting process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the automated cutting process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the automated cutting process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for cutting
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- automated cutting process and related equipment and services
- carcasses/pieces to be processed
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as required.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply basic mathematical concepts to calculate workplace information	1.1. Calculation requirements are identified and appropriate method is selected 1.2. Data is obtained from relevant sources and interpreted correctly. 1.3. Calculations are undertaken using addition, subtraction, multiplication and division to support work role
2. Apply basic mathematical concepts to estimate workplace information	2.1. Estimation requirements are identified and appropriate estimation method is selected 2.2. Data is obtained from relevant sources and interpreted correctly. 2.3. Estimations are made to meet work requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify whether a calculation or estimation is required to meet workplace requirements
- carry out calculations involving basic addition, subtraction, division and multiplication to support work role (this may involve use of a calculator and conversion tables where required)
- use estimation techniques to check quantities, ratios, speed and other required data estimates
- use estimation techniques to check calculated results and workplace data
- record calculations and measurement information accurately according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- mathematical processes, including addition, subtraction, multiplication and division
- application of calculation and estimation techniques to meet work requirements
- units of measurement used in the workplace, including whole numbers, fractions and decimals (to one decimal point) (this may include use of conversion charts)
- representation of numerical information relevant to work requirements, such as charts, graphs and tables
- recording requirements and responsibilities where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify calculation or estimation requirements • carry out calculations involving basic addition, subtraction, division and multiplication • where estimations are used, estimated amounts must be consistent with process or product specification and demonstrate knowledge of measurement units used in the workplace • use estimation techniques to check calculated results and workplace data.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work tasks requiring simple estimation and calculation • conversion tables, calculators and measuring instruments where required • workplace forms/documents used for recording data where required.
<p>Method of assessment</p>	<p>This unit should be assessed together with other units of competency relevant to the function or work role. Example could be:</p> <ul style="list-style-type: none"> • FDFOP2015A Apply principles of statistical process control.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Calculations

Calculations may include:

- the use of whole numbers, decimals, fractions and percentages

Calculations may be made:

- manually or using calculators and other measuring instruments as appropriate to the task

Estimations

Estimations can be used where the workplace tasks require only an approximate judgment of an amount, ratio, speed, and so on. Estimations can be made from:

- observations of other amounts or measurements
- supplied data, such as volume or weight information on packaging of raw materials

Conversion charts

Conversion charts are those in common use in the workplace

Results

Results may or may not be recorded depending on workplace requirements

Numerical information

Numerical information may be presented in forms, including:

- simple run charts
- graphs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify materials and specifications for work process	1.1. Materials required for work processes are identified 1.2. Specifications and tests required to determine suitability of materials for work processes are identified 1.3. Materials are inspected or tested according to operating procedures 1.4. Work is conducted in accordance with workplace environmental guidelines 1.5. Out-of-specification materials are rejected and reported according to operating procedures
2. Handle materials and products safely	2.1. Handling requirements for input materials and products of work station or process are identified 2.2. Handling of materials and product is carried out according to the occupational health and safety (OHS) requirements of the enterprise 2.3. The workplace is maintained in a clean and tidy order to meet workplace standards and avoid contamination
3. Maintain integrity of product during processing	3.1. Materials and products are protected from contamination and exposure to pests 3.2. Product changeover procedures are followed to avoid cross contamination of products 3.3. Processes and conditions that are not consistent with specifications and safety procedures are identified and corrective action is taken within the level of responsibility 3.4. Access to work area is restricted and monitored during processing according to enterprise procedures
4. Maintain integrity of product post processing	4.1. Visual, metal scanning, and other contamination checks are conducted prior to packing and despatch 4.2. Packing materials are checked for cleanliness and integrity before use 4.3. Product is sealed, packed or despatched from work area according to product and process requirements
5. Comply with personal hygiene standards	5.1. Personal hygiene requirements appropriate to the process, product and workplace are followed 5.2. Clothing and personal protective equipment appropriate to the process, product and workplace are used

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and interpret workplace information on materials and equipment used in production process
- examine production specifications
- identify and inspect materials and equipment
- handle, clean and store equipment, containers, packaging materials and similar items according to the requirements of the work role
- wear and maintain appropriate clothing/footwear as required by work tasks and consistent with production, safety and product integrity requirements
- maintain the work area in a clean and tidy state
- identify and report signs of pest infestation
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- requirements to maintain integrity of materials and finished products including weight, consistency, sterility where applicable, and conformance to specifications
- potential sources of bacterial, chemical and physical contamination in own workplace
- sources of further advice and assistance in the workplace
- actions required in the event of events that actually or potentially compromise the integrity of products or materials
- storage and handling requirements for ingredients, materials and product used related to work role
- housekeeping requirements and responsibilities relating to own work, including use and storage of housekeeping/cleaning equipment where relevant
- procedures to follow in the event of pest sighting or discovery of infestation

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify the materials used to manufacture products • identify main contamination risks • undertake any specified tests • identify common problems with raw materials in the production process and determine required action • follow correct procedures in the event of risk or non-conformance to specification of materials or products • access and interpret workplace information on raw materials.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • materials required for production • specifications, control points and processing parameters • process and related equipment and services, • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and</p>

EVIDENCE GUIDE	
	other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements if any are typically reflected in procedures and specifications. Relevant legislation may include:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering feed safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor quality of work outcome	1.1. Quality requirements are identified 1.2. Inputs are inspected to confirm capability to meet quality requirements 1.3. Work is conducted to produce required outcomes 1.4. Work processes are monitored to confirm quality of output and/or service 1.5. Processes are adjusted to maintain outputs within specification
2. Participate in maintaining and improving quality at work	2.1. Work area, materials, processes and product are routinely monitored to ensure compliance with quality requirements 2.2. Work is conducted in accordance with workplace environmental guidelines 2.3. Non-conformance in inputs, process, product and/or service is identified and reported according to workplace reporting requirements 2.4. Corrective action is taken within level of responsibility, to maintain quality standards 2.5. Quality issues are raised with designated personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and apply workplace information on quality requirements for own work
- identify control points or inspection points for own work and related methods used to monitor quality
- maintain quality of own work, including relevant checks and inspections where required in order to monitor control points and check and inspect equipment, materials, product, packaging consumables, processing conditions and service standards relevant to own work
- identify and correct variation within boundaries of work role, and use quality data where required
- determine when and how to make adjustments to maintain output within specified parameters
- identify and respond to out-of-specification or unacceptable inputs and/or outputs
- record quality data in required format
- conduct tests related to work responsibilities according to enterprise procedures
- collect samples as required by sampling regime according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- quality policy, procedures and responsibilities
- quality system used in the workplace, including the relationship between the quality system and food safety program, sources of information on quality requirements, the role of internal and external auditors, as appropriate, and performance improvement processes
- basic concepts of quality assurance including hazards, risk assessment and control methods
- requirements of internal and external customers
- control points for own work, including the purpose of the control point, the risk if not controlled and the method of control used
- monitoring, testing and inspection procedures relating to process control requirements
- scope to correct/control variation within equipment and process capacity

REQUIRED SKILLS AND KNOWLEDGE

parameters

- evidence of out-of-specification or unacceptable performance
- procedures for responding to out-of-specification or unacceptable performance/outcomes, including procedures for identifying or isolating materials or product of unacceptable quality
- systems used to trace product ingredients as relevant to own work
- requirements to report and record quality information
- sampling and test methods and procedures where relevant

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide and apply information to suit workplace and audience requirements	1.1. Information requirements for work operations are identified 1.2. Information is collected and assessed 1.3. Information is selected and structured in a logical way to convey meaning to others 1.4. Appropriate methods are used to communicate effectively with others
2. Respond to information requests	2.1. Information requests are processed promptly and courteously 2.2. Effective listening and verbal communication skills are applied to obtain information 2.3. The nature of requests is clarified 2.4. Appropriate information is provided in response to requests 2.5. Information is provided in a form appropriate to the enquirer 2.6. Requests are referred to the appropriate personnel where they fall outside area of responsibility
3. Use and maintain workplace information	3.1. A range of information sources is accessed to support work requirements 3.2. Information is recorded in appropriate formats according to workplace reporting requirements 3.3. Work is conducted in accordance with workplace environmental guidelines 3.4. Information is analysed to meet work requirements 3.5. Effective listening and verbal communication skills are applied to exchange information

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and access information to undertake work responsibilities
- seek information from people in the workplace to support work roles and responsibilities
- ascertain or clarify information requirements by asking questions
- prepare simple written or verbal presentations that structure and present information in a logical sequence
- present information appropriate to audience and information purpose, such as use of graphs and/or diagrams as appropriate (the audience may include people from diverse cultural backgrounds and with people with limited ability to speak or understand English)
- participate with others to achieve work outcomes using interactive communication processes
- participate in group discussions and processes as required, including demonstrating active listening skills and participating constructively in discussions
- respect and, where appropriate, represent the views of others
- record information in required format/s
- apply effective listening, questioning and verbal skills
- apply reading and writing skills to the level required by work operations
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- communication channels, including consultative arrangements established in the workplace
- common colloquial and technical terms relating to work function
- sources of information and advice relating to work responsibilities
- methods and technologies used to access, record and store workplace information, including print, and screen-based systems as relevant to the workplace
- presentation techniques to convey information on a range of typical workplace subjects appropriate to the audience
- recognition of different personal communication styles and appropriate communication options
- recognition of cultural diversity as appropriate in the workplace
- reporting roles and responsibilities
- interpersonal skills including active listening, questioning, seeking and responding

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • use, interpret and apply work-related information presented in a variety of forms • select and apply communication methods to present information to others • respond to information requests • record and maintain information in required work formats.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • advice on work roles and responsibilities • opportunities to interact with others using typical workplace communication processes • typical group forums, such as work groups and committees • typical workplace information • information systems and procedures • standard forms and equipment (as required) for recording workplace information.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role. Examples could be: <ul style="list-style-type: none"> • FDFOP1007A Participate effectively in a workplace environment • FDFOP2005A Work in a socially diverse environment • TLIK107C Use infotechnology devices and computer applications in the workplace.
Guidance information for	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over

EVIDENCE GUIDE	
assessment	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Workplace information

Workplace information may include:

- standard operating procedures (SOPs)
- specifications
- production schedules and instructions
- signs and symbols
- materials safety data sheets (MSDS)
- manufacturers' advice
- standard forms and reports

Information to be accessed/conveyed

Information to be accessed/conveyed may be verbal, written and/or screen based and may include:

- symbols
- charts
- signs
- data
- instructions
- pictures and diagrams as relevant to own work

Typical subjects for communication

Typical subjects for communication include:

- work functions
- shift handovers
- company policies and codes of practice
- rights and responsibilities
- procedures
- employment conditions and entitlements

Interactive communication processes

Interactive communication processes include:

- active listening
- turn taking
- questioning and tolerating the views of others
- seeking and providing constructive feedback

RANGE STATEMENT**Recording and/or accessing information electronically**

Recording and/or accessing information electronically does not require an understanding of the programs used and the function involves limited interaction, such as simple keyboard operations.

FDFOP2065A Work in confined spaces in the food and beverage industries

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the competency required to work in a confined space (enclosed or partially enclosed) for the purpose of carrying out work in food and beverage industries. This unit includes entry and exit procedures, assessment of associated risks and how to operate safely in a confined space which is at atmospheric pressure during occupancy.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit is appropriate for those working in confined space (enclosed or partially enclosed) for the purpose of carrying out work or inspections at food and beverage related worksites. It is also appropriate for those performing sentry or stand-by person roles.</p> <p>Working in confined spaces in the food and beverage industries may include accessing vessels used to store, transport or process raw materials, in process product, and finished food and beverages. Confined space work will include normal access and exit skills as required by regulation and also skills to maintain or restore the suitability and hygiene of the confined space. Some applications of the unit may also include accessing spaces partially filled with product e.g. grain silos.</p> <p>Examples of industry sectors where this unit may apply include brewing, wine, dairy processing, fruit and vegetable packing and processing, grain processing, poultry processing etc.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	FDFOHS2001A Participate in OHS processes
---------------------------	--

Employability Skills Information

Employability skills	The required outcomes described in this Unit of Competency contain applicable facets of employability skills. The Employability Skills Qualification Summary for the qualification in which this Unit of Competency is packaged will assist in identifying employability skill requirements.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
2) Plan and prepare for entering and working in confined spaces	<ol style="list-style-type: none"> 1. Compliance documentation relevant to entering and working in confined spaces is accessed, interpreted and applied 2. Work instructions relevant to the allotted task are obtained, confirmed and applied 3. Safety requirements relevant to the allotted task are obtained, confirmed and applied 4. Authorisation (entry permit) is obtained to enter the confined space in accordance with regulatory requirements 5. Emergency response procedure is confirmed with the stand-by person 6. Signage and barrier requirements are identified, obtained and implemented as required by task and regulations 7. Tools and equipment are selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and faults rectified or reported 8. Environmental protection requirements are identified, confirmed and applied as appropriate to task and enterprise environmental management plan 9. Rescue equipment is positioned as required by the entry permit close to the point of entry
3) Enter and work in the confined space	<ol style="list-style-type: none"> 1. Access to the confined space is gained 2. The atmosphere is tested and monitored for harmful elements in accordance with procedures 3. Tagging and lock-out procedures are applied as required 4. Confined space is entered in accordance with required procedure 5. Communication is maintained with the stand-by person 6. Entry permit requirements are complied with while carrying out designated work in confined space 7. Allocated entry time is monitored and adhered to 8.
4) 3. Exit confined space	<ol style="list-style-type: none"> 1. Confined space is exited according to agreed procedure 2. Tools, equipment and materials are recovered from the confined space 3. Inspection of the confined space is conducted to ensure it is left safe and fit for purpose 4. Access is secured according to site procedures 5. Tagging and lock-out is removed according to site procedures 6. Confined space entry log is completed

ELEMENT	PERFORMANCE CRITERIA
5) 4. Clean up	<ol style="list-style-type: none">1. Work area is cleared and materials disposed of or recycled in accordance with project environmental management plan2. Tools and equipment are cleaned, checked, maintained and stored in accordance with recommendations and standard work practices3. Barriers and signs are removed, cleaned and stored

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to enter and work in confined spaces:

- apply legislative, organisation and site requirements and procedures
- apply operational, maintenance and basic diagnostic procedures to ensure safety of self and others
- apply operational, maintenance and basic diagnostic procedures to ensure hygiene and integrity of product to be subsequently stored or processed in bins, vessels, tanks, etc
- apply materials handling methods
- use atmospheric monitoring devices
- interpret Job Safety Analysis/Safe work method statements
- use oral communication skills / language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to enter and work in confined spaces:

- site and equipment safety requirements
- confined space entry and exit procedures, risks and regulations
- air contaminants and toxic gases
- breathing apparatus limitations
- equipment types, characteristics, technical capabilities and limitations
- site isolation and site control responsibilities and authorities
- materials safety data sheets (MSDS)
- project quality requirements
- industry terminology
- state and territory interpretations of a confined space

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with confined space regulations and any other relevant standards and procedures</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for entering and working in confined spaces • implementation of requirements, procedures and techniques for the safe, effective and efficient completion for entering and working in confined spaces • working with others to undertake and complete the entering and working in confined spaces that meet all of the required outcomes • consistent timely completion of entering and working in confined spaces that safely, effectively and efficiently meets the required outcomes
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required <ul style="list-style-type: none">documentation and recording requirements and procedures
Method of assessment	This unit should be assessed together with other units of competence relevant to the function or work role relating to the confined space working requirement.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation

May include:

- legislative, organisation and site requirements and procedures including any hygiene, food safety or product integrity requirements
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice

Work instructions

May include:

- plans
- specifications
- quality requirements
- food safety requirements
- personal hygiene requirements
- product integrity requirements
- operational details

RANGE STATEMENT	
Safety requirements	<p>May be included in:</p> <ul style="list-style-type: none"> • site safety plans • organisational policies and procedures • statutory/regulatory authorities which may include: • Federal, State and local authorities • verbal or written and graphical instructions • signage • work schedules/plans/specifications • work bulletins • charts and hand drawings • memos • maps • materials safety data sheets (MSDS) • diagrams or sketches • safe work procedures or equivalent related to working in confined spaces • regulatory/legislative requirements pertaining to working in confined spaces • manufacturers' specifications and instructions • organisation's work specifications and requirements • instructions issued by authorised organisational or external personnel • relevant Australian Standards
Safety requirements	<p>May include</p> <ul style="list-style-type: none"> • OHS requirements • Personal protective clothing and equipment as prescribed under legislation, regulation and workplace policies and practices • use of tools and equipment • workplace environment and safety • handling of materials • use of fire fighting equipment • use of First Aid equipment • hazard control and hazardous materials and substances • safe operating procedures including recognising and preventing hazards associated with working in confined spaces, working in proximity to others, worksite visitors and the public • hazards and risks may include but not be limited to

RANGE STATEMENT	
	<p>fires, underground services, excavations, fall risks, traffic, hazardous materials, pathogens, contaminated atmosphere and toxic gases</p> <ul style="list-style-type: none"> risks associated with confined spaces may include but not be limited to restricted means of entry and exit, atmosphere which contains potentially harmful levels of contaminants, unsafe oxygen levels or engulfment, hot or extremely cold equipment, surfaces which may be wet, slippery or uneven respiratory protection devices are to include but not be limited to air purifying respirators and may include self contained compressed air breathing apparatus, supplied airline breathing apparatus and escape breathing apparatus and atmospheric monitoring devices
Confined space entry permit, or work permits	<p>May include:</p> <ul style="list-style-type: none"> location of work duration of work size of work crew atmospheric testing requirements personal protective equipment hot work stand-by personnel rescue arrangements other precautions (signs, barriers) authorisation
Confined spaces	<p>May include:</p> <ul style="list-style-type: none"> storage tanks and bins, road and rail tankers and wagons, process vessels, stills, boilers, pressure vessels, silos and other tank-like compartments open-topped spaces such as pits or degreasers pipes, drains, shafts, ducts and similar structures
Signage	<p>May include:</p> <ul style="list-style-type: none"> site safety signage temporary signage for the benefit of visitors temporary signage and barricades where confined space work is in close proximity to motorists and pedestrians
Gain access	<p>May include:</p> <ul style="list-style-type: none"> removing access cover

RANGE STATEMENT	
	<ul style="list-style-type: none"> • venting, cooling, use of PPE, and other pre-entry procedures to protect self and/or product • confirmation of isolation of services e.g. power, steam etc. • installing and securing ladder

Custom Content Section

Not applicable.

FDFOP2066A Operate a wort production process

Modification History

New Unit.

Unit Descriptor

This unit covers the milling and mashing of malted grain, wort separation, wort treatment and the addition of adjuncts in beer production.

Application of the Unit

This unit applies to operators and other personnel responsible for wort production in a brewery. It applies to wort production in both large and small enterprises. Work is undertaken to specifications and requirements developed by brewers, supervisors or other qualified personnel. The unit includes complying with quality and standard operating procedures and conducting of routine changeovers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFOP2071A Identify key stages and beer production equipment in a brewery

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the wort production process for operation	1.1 Production requirements are checked 1.2 Availability of required materials is confirmed 1.3 Availability of services is confirmed 1.4 Pre-operational checks of equipment are conducted 1.5 The wort production process is set to meet production requirements
2 Operate and monitor the wort production system	2.1 The wort production system is started up according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Required tests are undertaken 2.4 System and sub-system outputs meet specification 2.5 Equipment is monitored to confirm operating condition 2.6 Out-of-specification wort, process and equipment performance is identified, rectified and/or reported 2.7 Production and other workplace information is recorded in the appropriate format
3 Shut down the wort production system	3.1 The wort production system is shut down according to company procedures 3.2 Equipment is cleaned and maintained to meet cleaning schedules and procedural requirements 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
4 Contribute to continuous improvement of the wort production system	4.1 Quality or process outputs are assessed against specifications 4.2 Opportunities for improvement are identified and investigated 4.3 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- set up and start the milling process
- set up and start the mashing and lautering process
- set up and start the wort separation process
- set up and start the wort boiling and cooling process
- add raw materials e.g. hops, malt
- operate a heat exchange procedure
- operate a cool wort aeration procedure
- transfer fluids and materials between vessels
- handle dangerous goods
- operate and monitor equipment associated with wort production
- monitor control points
- identify OHS hazards and controls
- select, fit and use personal protective clothing and equipment
- undertake shutdowns and changeovers
- comply with procedures and responsibilities for reporting problems
- comply with environmental procedures and controls
- follow waste handling requirements and procedures
- record required production data
- undertake routine maintenance procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and principles of the wort production process
- relationship between the wort production process and the fermentation process
- stages and changes which occur during wort production
- requirements of wort production
- purpose of malt, hops, water, adjuncts and the preparation procedure
- correct procedures for handling dangerous goods
- dust explosion hazards and control procedures

- quality characteristics to be achieved
- wort process specifications, procedures and operating parameters
- the importance of temperature, temperature control systems and temperature intervals during wort production
- Purpose of equipment and instrumentation components
- significance and methods of monitoring control points within the wort production process
- common causes of variation and corrective action required
- cleaning requirements associated with changeovers and types of shutdowns
- procedures for reporting problems
- sampling and testing procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify production requirements for the wort production process • interpret the schedules and specifications • confirm the supply of necessary materials and services to the wort production process • confirm equipment status and condition • set up and start specified equipment including any process control systems • monitor the wort production process and equipment operation to identify out-of-specification results • monitor supply and flow of materials to and from the process • take corrective action in response to out-of-specification results or non-compliance • conduct product/beer type changeovers • maintain workplace records.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety and environmental requirements • production schedule, batch instructions • material data safety sheets where appropriate • information on specifications, control points and production parameters • wort production equipment • wort production raw materials/ingredients • services as required • stock required for the wort production process • stock flow system

	<ul style="list-style-type: none"> • related work areas and communication system • routine preventative maintenance schedule as required • cleaning schedule as required • sampling and testing schedules as required • documentation and recording requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Wort production process</p>	<p>The wort production process may include:</p> <ul style="list-style-type: none"> • receiving raw ingredients • measuring raw ingredients • milling malted grain to produce grist • whirlpool (wort calcification) • mashing conversion to create fermentable wort • wort separation • boiling • cooling process • wort oxygenation • production quality checks • transferring to fermentation vessels.
<p>Materials and ingredients</p>	<p>Materials and ingredients used in wort production may include:</p> <ul style="list-style-type: none"> • malted cereals • hops • water • liquid and solid adjuncts such as sugars • process aids • oxygen.
<p>Services</p>	<p>May include:</p> <ul style="list-style-type: none"> • power • gas • water • steam • compressed air • refrigeration.
<p>Required tests</p>	<p>Required tests may include:</p> <ul style="list-style-type: none"> • starch testing (mash tun) • gravity (cool wort) • acidity (cool wort) • colour spectrometer (cool wort) • bitterness (cool wort).

Wort production equipment	<p>Wort production equipment may include:</p> <ul style="list-style-type: none"> • brew house mill • malt batch weighers • storage systems (silos etc.) • whirlpools • mash tuns • mash conversion vessels and mash cookers • lauter tuns • automated hops addition systems • heat exchangers • aeration equipment • filters • coppers and kettles • valves • pumps • water treatment systems • tanks • mixing, blending and cleaning equipment • spent grain handling equipment • equipment accessories • monitoring instruments (starch, gravity, acidity, colour and bitterness) • transfer systems and equipment.
Control points	<p>Refers to the key points in a work process which must be monitored and controlled. This includes food safety, (critical), quality, and regulatory control points as well as inspection points. Monitoring may involve the use of production data such as performance control charts.</p> <p>Process operation and monitoring functions may be manual or involve the use of a process control system.</p>
Equipment is monitored	<p>Equipment monitoring includes ensuring that hygiene and sanitation standards are met, all safety guards are in place, and that equipment is operational. It may also include the calculation of raw materials.</p>
Workplace information may include:	<p>Standard Operating Procedures (SOPs); specifications and production schedules.</p> <p>Information systems may be print or screen based.</p>

Unit Sector(s)

Operations.

FDFOP2067A Operate a brewery fermentation process

Modification History

New Unit.

Unit Descriptor

This unit covers the preparation for and operation of processes used to ferment wort into beer. This includes pitching, fermentation control, yeast propagation and storage, and beer recovery.

Application of the Unit

This unit applies to operators and other personnel responsible for operating the fermentation process in a brewery. The unit applies to fermentation processes in both large and small breweries. Work is undertaken to specifications and requirements developed by brewers, supervisors or other qualified personnel. The unit includes complying with quality and standard operating procedures and conducting of routine changeovers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFOP2071A Identify key stages and beer production equipment in a brewery

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the fermentation process for operation	1.1 Production requirements are checked 1.2 Availability of required materials is confirmed 1.3 Availability of services is confirmed 1.4 Pre-operational checks of equipment are conducted including checking that hygiene and sanitation standards are met and all safety guards are in place 1.5 The fermentation process is set to meet production requirements
2 Operate and monitor the system	2.1 The system is started up according to specified procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 System and sub-system outputs meet specification 2.4 Equipment is monitored to confirm operating condition 2.5 Temperature is monitored and controlled to confirm operating condition 2.6 Pressure is monitored and controlled in order to ensure operating condition 2.7 Analysis is undertaken to ensure yeast effectiveness and freedom from bacterial contamination
3 Recover beer if required	3.1 Yeast slurry is put through a beer recovery process in order to minimise beer wastage 3.2 Recovered beer is routed to appropriate tank or vessel
4 Shut down the system	4.1 The system is shut down according to company procedures 4.2 Equipment is cleaned and maintained to meet the cleaning schedule and procedural requirements 4.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
5 Contribute to continuous improvement of the system	5.1 Quality or process outputs are assessed against specifications 5.2 Opportunities for improvement are identified and investigated 5.3 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures
6 Record information	6.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- pitch and crop yeast
- operate vessel transfer equipment
- handle dangerous goods according to procedures
- methods of monitoring control points within the fermentation process
- undertake corrective action required in the event of variation to specifications and operating parameters
- identify OHS hazards and implement appropriate action
- shutdown process and equipment and implement cleaning requirements associated with changeovers
- handle waste according to requirements and procedures
- clean and sanitise equipment according to enterprise procedures
- select, fit and use personal protective clothing and equipment
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and principles of the fermentation process
- relationship between the fermentation process, the wort production process and the maturation process
- stages and changes which occur during fermentation
- requirements of fermentation
- quality characteristics to be achieved
- process specifications, procedures and operating parameters
- significance of control points within the fermentation process
- equipment and instrumentation components, purpose and operation
- vessel cooling systems
- common causes of variation and corrective action required
- OHS hazards and controls
- procedures and responsibilities for reporting problems
- environmental issues and controls
- shutdown and cleaning requirements associated with changeovers and types of shutdowns
- waste handling requirements and procedures

- recording requirements and procedures
- cleaning and sanitation procedures
- sampling and testing procedures
- routine maintenance procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify production requirements and schedules including type of beer being produced • confirm the supply of necessary materials and services to the fermentation process • confirm equipment status and condition • set up and start the process • propagate yeast (laboratory staff will usually undertake initial propagation) <ul style="list-style-type: none"> • adding oxygen based upon instruction • monitoring temperature • crop yeast for addition to wort • monitor supply and flow of materials to and from the process • add adjuncts as required • take corrective action in response to out-of-specification results or non-compliance and report and/or record corrective action as required • aerate wort/beer to encourage fermentation • conduct product/beer-type changeovers • prepare equipment for cleaning • conduct routine maintenance • operate a beer recovery procedure.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • standard operating procedures and related advice on specific safe work practices, company policies and codes of practice relating to OHS • advice on relevant legislation and codes of practice relating to OHS • personal protective clothing and equipment as

	<p>required</p> <ul style="list-style-type: none"> • relevant hazard control equipment • manual handling equipment as required • fermentation process equipment • fermentation raw material and other ingredients • information systems and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the maturation process for production	1.1 Maturation requirements are confirmed 1.2 Clarification requirements are confirmed including specifications for any additions and agents 1.3 Materials are confirmed and available to meet production requirements 1.4 Services are confirmed as being ready for operation 1.5 Equipment is checked to confirm readiness for use 1.6 The maturation process is set to meet production requirements
2 Operate and monitor beer maturation equipment	2.1 Equipment is started up according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 System and sub-system outputs meet specification 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification product, process, equipment performance is identified, rectified and/or reported 2.6 Size and product changeovers are completed in accordance with batch instructions and standard operating procedures 2.7 Workplace information for the beer maturation process is recorded in the appropriate format
3 Shut down the system	3.1 The system is shut down according to company procedures 3.2 Equipment is cleaned and maintained to meet the cleaning schedule and procedural requirements 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
4 Contribute to continuous improvement of the system	4.1 Quality or process outputs are assessed against specifications 4.2 Opportunities for improvement are identified and investigated 4.3 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures
5 Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- handle dangerous goods according to required procedures
- monitor control points within the maturation process
- confirming equipment status including checking that hygiene and sanitation standards are met and that all safety guards are in place and equipment is operational
- operate equipment and controls to achieve specifications including:
 - required temperature
 - required concentration of finings and other additions
 - transfers
 - disposal of sediment and other waste
- undertake corrective action in the event of variation to specification
- identify OHS hazards and implement appropriate action
- select, fit and use personal protective clothing and equipment
- procedures and responsibilities for reporting and solving problems
- environmental issues and controls
- shutdown process and equipment and implement cleaning requirements associated with changeovers
- waste handling requirements and procedures
- record production and other data according to procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and principles of the maturation process
- relationship between the maturation process, fermentation process and the filtration process
- stages and changes which occur during maturation
- requirements of maturation
- purpose of temperature control and cold storage in the maturation process
- purpose of protein absorbing agents
- purpose of oxygen scavenging agents
- purpose of tannin absorbing agents
- procedures for vessel transfer

- quality characteristics to be achieved
- process specifications, procedures and operating parameters
- significance and methods of monitoring control points within the maturation process
- equipment and instrumentation components, purpose and operation
- common causes of variation and corrective action required
- OHS hazards and controls
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures
- cleaning and sanitation procedures
- purpose of finings
- cask maturation
- sampling and testing procedures
- routine maintenance procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify production requirements and beer type for beer maturation process • confirm the supply of necessary materials and services to the maturation process • confirm equipment status and condition • set up and start the maturation process • receive green beer from the fermentation process or complete the maturation process in the fermentation tank • add additions and agents • monitor the maturation process and equipment operation to identify out-of-specification results or non-compliance • take corrective action in response to out-of-specification results or non-compliance • monitor supply and flow of materials to and from the process • report and/or record corrective action as required • conduct product/beer-type changeovers • dispose of waste sediment.
<p>Context of and specific resources for assessment</p>	<p>Assessment of this unit must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures including advice on OHS policy, system and procedures including relevant legislation and codes of practice, safe work practices, food safety and environmental requirements • standard operating procedures and related advice • personal protective clothing and equipment as required • relevant hazard control equipment and storage areas for hazardous goods as required

	<ul style="list-style-type: none"> • emergency and/or evacuation procedures for the potential range of hazards • manual handling equipment as required • maturation process equipment • maturation production ingredients including green beer supply, additions and agents • cleaning schedule as required • sampling and testing schedules as required • documentation and recording requirements and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Maturation process</p>	<p>The maturation process may include:</p> <ul style="list-style-type: none"> • Receiving fermented ‘green beer’ from the fermentation process • storing ‘green beer’ • adding agents and additives • monitoring temperature • clarification • conditioning • stabilisation • filtration • production quality checks • transferring matured beer to bright beer tanks.
<p>Indicators of out of specification beer during maturation</p>	<p>During monitoring of beer maturation, out of specification results may be indicated by:</p> <ul style="list-style-type: none"> • haze • colour • bitterness • incorrect levels of <ul style="list-style-type: none"> • carbon dioxide • oxygen • proteins • tannins.
<p>Materials used include:</p>	<p>Materials used includes green beer (fermented wort) and any of the following:</p> <ul style="list-style-type: none"> • clarifying agents • finings • sugar • colouring/caramel • hop extracts • head stabilising agents • carbon dioxide (CO₂).
<p>Services:</p>	<p>May include:</p> <ul style="list-style-type: none"> • power

	<ul style="list-style-type: none"> • gas • water • steam • compressed air • refrigeration.
Maturation equipment	<p>Maturation equipment may include:</p> <ul style="list-style-type: none"> • filters • valves • pumps • tanks • mixing and blending equipment • dosers • cellars • heat exchangers/chillers • cleaning equipment • equipment accessories • monitoring and chemical analysis instruments (oxygen, carbon dioxide, starch, gravity, acidity, colour and bitterness) • transfer systems. <p>Process equipment and operation and monitoring functions may be manual or involve the use of a process control system.</p>
Maturation system controls	<p>The maturation control system for operation and monitoring may be manual or involve the use of a process control system include and may also involve the use of production data such as performance control charts.</p>
Control points	<p>Control points to those key points in a work process which much be monitored and controlled. This includes food safety (critical) quality and regulatory control points as well as inspection points.</p>
Workplace information	<p>Workplace information may includes Standard Operating Procedures (SOPs), product and equipment manuals and specifications and production schedules. The information may be print or screen based.</p>

Unit Sector(s)

Operations.

FDFOP2069A Operate a beer filtration process

Modification History

New Unit.

Unit Descriptor

This unit covers the filtration of beer obtained from the maturation process into bright beer ready for transfer into bright beer tanks. It includes working within quality requirements and standard operating procedures.

Application of the Unit

This unit applies to operators and other personnel responsible for filtration of beer. It applies to filtration processes in both large and small breweries and includes monitoring of control points and specifications and complying with OHS and environmental procedures. Where changeovers require maintenance related skills, the unit FDFOP2011A Conduct routine maintenance should be considered.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFOP2071A Identify key stages and beer production equipment in a brewery

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
1 Prepare the filtration process for operation	1.1 Availability of required materials is confirmed 1.2 Availability of services is confirmed 1.3 Pre-operational checks of equipment are conducted including checking that hygiene and sanitation standards are met 1.4 The filtration process is set to meet production requirements
2 Operate and monitor the beer filtration system	2.1 The system is started up according to specified procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Blending of beer is undertaken if required as part of filtration process 2.4 System and sub-system outputs meet specifications 2.5 Equipment is monitored to confirm operating condition 2.6 Out-of-specification beer, process and equipment performance is identified, rectified and/or reported 2.7 Production and other workplace information is recorded in the appropriate format
3 Shut down the filtration system	3.1 The system is shut down according to company procedures 3.2 Equipment is cleaned and maintained to meet the cleaning schedule and procedural requirements 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
4 Contribute to continuous improvement of the system	4.1 Beer quality and other process outputs are assessed against specifications 4.2 Opportunities for improvement are identified and reported 4.3 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures
5 Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify stages and changes during filtration
- identify correct filter aids, filtration beds and filters in the beer production process
- undertake vessel transfers according to specifications
- handle dangerous goods according to procedures
- confirming equipment status including checking that hygiene and sanitation standards are met and that all safety guards are in place and equipment is operational
- operate filtration equipment according to specifications, procedures and operating parameters
- monitor control points within the filtration process
- undertake required corrective action in the event of variations to specification and procedures
- identify OHS hazards and implement appropriate action
- select, fit and use personal protective clothing and equipment
- maintain work area to meet housekeeping standards
- shutdown filtration process and equipment and implement cleaning requirements associated with changeovers
- apply waste handling requirements and procedures
- record information requirements and procedures
- apply routine maintenance procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and principles of the filtration process
- relationship between the wort production process, fermentation process, maturation process, bright beer tanks and the fermentation process
- stages and changes which occur during filtration
- requirements of filtration
- purpose of filter aids, filtration beds and filters in the beer production process
- quality characteristics to be achieved
- process specifications, procedures and operating parameters
- significance and methods of monitoring control points within the filtration process
- equipment and instrumentation components, purpose and operation

- common causes of variation and corrective action required
- OHS hazards and controls
- procedures and responsibilities for reporting problems
- environmental issues and controls
- shutdown and cleaning requirements associated with changeovers and types of shutdowns
- waste handling requirements and procedures
- recording requirements and procedures
- cleaning and sanitation procedures
- sampling and testing procedures
- routine maintenance procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify filtration requirements and schedules including type of beer being filtered • confirm the supply of necessary materials and services to the filtration process • confirm equipment status and condition • set up, start, operate and shut down the filtration process • pre-coat a filter mesh or cloth with filter aid • dose pre-filtered beer with filter aid • monitor the filtration process and equipment operation to identify out-of-specification results or non-compliance • take corrective action in response to out-of-specification results or non-compliance • conduct product/beer-type changeovers.
<p>Context of and specific resources for assessment</p>	<p>Assessment of this unit must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures including advice on OHS policy, system and procedures including relevant legislation and codes of practice, safe work practices, food safety and environmental requirements • standard operating procedures and related advice • personal protective clothing and equipment as required • relevant hazard control equipment and storage areas for hazardous goods as required • emergency and/or evacuation procedures for the potential range of hazards • Filtration equipment • Filter aids (such as lucilite, perlite and kieselguhr) and stabilising agents)

	<ul style="list-style-type: none"> • Workplace information systems and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Filtration process</p>	<p>The filtration process includes:</p> <ul style="list-style-type: none"> • receiving beer obtained from the maturation process • rough filtering of beer to remove yeast, protein, and other solids • stabilising and polishing filtration • transferring the filtered beer to bright beer tanks. <p>Depending on the enterprise and type of beer blending may also be done as part of the filtration process.</p>
<p>Materials used may include:</p>	<p>Filter aids (such as lucilite, perlite and kieselguhr), stabilising agents CO₂, deaerated water.</p>
<p>Services</p>	<p>May include:</p> <ul style="list-style-type: none"> • power • gas • water • steam • compressed air • refrigeration.
<p>Filtration equipment</p>	<p>Filtration equipment may include:</p> <ul style="list-style-type: none"> • powder hoppers • plant protection devices (such as explosion dampeners) • filter cloths • mesh • sieves • valves • pumps • tanks • cleaning equipment • equipment accessories • monitoring instruments • candle filters • plate and frame filters • horizontal tank, vertical leaf filters

	<ul style="list-style-type: none"> • horizontal pressure leaf filters • buffer tanks • filter aid and dosing tanks • trim chillers • trap filters • blending manifolds • valves (auto and control) • pumps • spent aid handling systems • transfer systems.
Filtration system controls	The filtration control system for operation and monitoring may be manual or involve the use of a process control system include and may also involve the use of production data such as performance control charts.
Control points refer to:	those key points in a work process, which much be monitored and controlled. This includes food safety (critical) quality and regulatory control points as well as inspection points.
Workplace information can include:	<ul style="list-style-type: none"> • Standard Operating Procedures (SOPs); specifications and production schedules • Information systems may be print or screen based.

Unit Sector(s)

Operations.

FDFOP2070A Operate a bright beer tank process

Modification History

New Unit.

Unit Descriptor

This unit covers the preparation and operation of bright beer tanks that receive the beer after filtration and before the beer is packaged.

Application of the Unit

This unit applies to operators and other personnel responsible for operating and monitoring bright beer tanks including transfers in and out, settling processes and removal of waste. The unit applies to large and small breweries and to a range of job roles in the brewing environment. It includes complying with quality and standard operating procedures. Where changeovers require maintenance related skills, the unit FDFOP2011A Conduct routine maintenance should be considered.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFOP2071A Identify key stages and beer production equipment in a brewery.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare bright beer tank process for operation	1.1 Beer availability is confirmed and available to meet production requirements 1.2 Availability of services is confirmed 1.3 Equipment is checked to confirm readiness for use
2 Operate and monitor bright beer tanks and equipment	2.1 The bright beer system is started up according to company procedures 2.2 Receive beer from filtration process 2.3 Control points are monitored to confirm performance is maintained within specification 2.4 System and sub-system outputs meet specification 2.5 Equipment is monitored to confirm operating condition 2.6 Temperature, pressure and carbon dioxide is monitored and controlled to confirm operating condition 2.7 Testing is undertaken to ensure yeast effectiveness and freedom from bacterial contamination 2.8 Transfer bright beer to filling and packaging stations 2.9 Production and other workplace information is recorded in the appropriate format
3 Shut down the system	3.1 The bright beer system is shut down according to company procedures 3.2 Equipment is cleaned and maintained to meet the cleaning schedule and procedural requirements 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
4 Contribute to continuous improvement of the system	4.1 Quality or process outputs are assessed against specifications 4.2 Opportunities for improvement are identified and investigated 4.3 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures
5 Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify turbulence and undertake appropriate corrective action
- confirming equipment status including checking that hygiene and sanitation standards are met and that all safety guards are in place and equipment is operational
- monitor for bacteria and quality
- monitor oxygen and its affect upon quality
- monitor temperature and its affect upon quality
- use fobbing equipment correctly to control oxygen and beer quality
- operate vessel transfer equipment
- handle dangerous goods according to procedures
- monitor control points within the bright beer process
- operate bright beer related equipment
- identify common causes of variation and undertake corrective action required
- identify OHS hazards and implement appropriate action
- select, fit and use personal protective clothing and equipment
- shutdown filtration process and equipment and implement cleaning requirements associated with changeovers
- record production and other data according to procedures
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and principles of bright beer procedures
- consequences of turbulence and the procedures to avoid it
- effect of bacteria, oxygen and temperature on quality
- fobbing and its affect upon quality
- procedures for handling dangerous goods
- quality characteristics to be achieved
- process specifications, procedures and operating parameters
- significance and methods of monitoring control points within the bright beer process
- equipment and instrumentation components, purpose and operation

- common causes of variation and corrective action required
- OHS hazards and controls
- procedures and responsibilities for reporting problems
- environmental issues and controls
- shutdown and cleaning requirements associated with changeovers and types of shutdowns
- waste handling requirements and procedures
- recording requirements and procedures
- cleaning and sanitation procedures
- sampling and testing procedures
- routine maintenance procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify production requirements and schedules including type of beer being produced • confirm the supply of necessary materials and services to the bright beer tank process • confirm equipment status and condition • set up, start, operate and shut down the bright beer tank process • taking samples of beer and note equipment operation to identify out-of-specification results or non-compliance • monitor supply and flow of materials to and from the bright beer tank process • take corrective action in response to out-of-specification results or non-compliance • conduct product/beer-type changeovers • conducting routine maintenance.
<p>Context of and specific resources for assessment</p>	<p>Assessment of this unit must occur in a real or simulated workplace. Such an environment must provide an opportunity for the assessee to apply OHS principles and procedures when carrying out work given:</p> <ul style="list-style-type: none"> • OHS policy, system and procedures • standard operating procedures and related advice on specific safe work practices company policies and codes of practice relating to OHS • advice on relevant legislation and codes of practice relating to OHS • work area or process in which OHS procedures are to be implemented • personal protective clothing and equipment as required • relevant hazard control equipment

	<ul style="list-style-type: none"> • emergency and/or evacuation procedures for the potential range of hazards • consultative forums relating to OHS • storage areas for hazardous goods as required • manual handling equipment as required. <p>Other resources required for assessment include:</p> <ul style="list-style-type: none"> • Equipment used in the bright beer process • Information systems and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Services</p>	<p>May include:</p> <ul style="list-style-type: none"> • power • gas • water • steam • compressed air • refrigeration.
<p>Equipment used in the bright beer process may include:</p>	<p>Equipment used includes:</p> <ul style="list-style-type: none"> • pumps • fermentation vessels • recovery vessels • cleaning equipment • equipment accessories • valves • transfer systems • finished beer tanks (could include tanks for either filtered or unfiltered beer).
<p>Materials</p>	<p>Materials used include CO₂, yeast and nitrogen.</p>
<p>Bright beer tank system controls</p>	<p>The control system for operation and monitoring the bright beer tanks may be manual or involve the use of a process control system and may also involve the use of production data such as performance control charts.</p>
<p>Control points refer to:</p>	<p>those key points in a work process that much be monitored and controlled. This includes food safety (critical) quality and regulatory control points as well as inspection points.</p>
<p>Out of specification results or noncompliance</p>	<p>Out of specification results or noncompliance may include:</p> <ul style="list-style-type: none"> • oxygen • carbon dioxide • acidity • colour

	<ul style="list-style-type: none">• bacteria• chemicals• temperature.
Workplace information can include:	<ul style="list-style-type: none">• Standard Operating Procedures (SOPs); specifications and production schedules• Information systems may be print or screen based.

Unit Sector(s)

Operations.

FDFOP2071A Identify key stages and beer production equipment in a brewery

Modification History

New Unit.

Unit Descriptor

This unit covers the ability to identify beer production equipment and stages with a view to understanding the quality and production implications of any one work station on the whole brewing process.

Application of the Unit

This unit will typically apply to an employee in a larger brewery working at a single stage of the brewing process and who needs to understand their role in the wider brewing process. It can also be used as an induction unit in both large and small breweries.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisites for this competency unit.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify locations and equipment in the brewery for each stage of the brewing process workplace	1.1 Location for each beer production stage is identified 1.2 Major equipment and equipment function for each beer production stage is identified
2 Key information for each beer production stage is identified	2.1 Location or means of access to workplace information for each production stage is identified 2.2 Occupational health and safety policy and procedures appropriate for the enterprise and each production stage is identified 2.3 Supervisor or key resource person for each location is identified
3 Identify enterprise wide objectives, products and procedures	3.1 Enterprise objectives are explained 3.2 Products produced and other services provided by the enterprise are described 3.3 Key support functions are located and their contribution to product range and quality explained 3.4 Key responsibilities of own section or function are described 3.5 Work team roles and responsibilities are identified

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- Explain the stages in the brewing process and to match these to locations within the brewery or company
- Locate and explain key functions of the work site. This should include:
 - locating and accessing key people
 - locating specific work areas and outlining their functions, e.g. toilets, first aid rooms, stores, maintenance workshops, quality assurance laboratory
 - identifying how functions relate to each other
- Describing how each function or process contributes to enterprise objectives and product quality
- Identify and apply personal hygiene policies and procedures with regards to:
 - cleanliness
 - hair tying and nets
 - work clothes, uniforms – cleanliness and repairs
 - sickness
 - cuts and open wounds
 - eating and drinking in the workplace
- Identify own workplace, key equipment and site layout, roles and responsibilities
- Identify workplace information sources, updating and access requirements and procedures
- Apply recording requirements and procedures

Required knowledge includes:

Knowledge of:

- Enterprise objectives as they relate to beer production
- Workplace product and services range
- Key production sites including:
 - listing key sites by name
 - locating sites on a map or stating location
 - outlining their role and input to enterprise activities
 - naming key personnel and contact points
 - identifying means of sourcing contact details
- Key functions and processes within the enterprise
- How each function or process contributes to product and services quality
- Own workplace and site layout, roles and responsibilities
- Location of work areas and key equipment
- Identity, features and purpose of key equipment and work areas

- Key people's roles and responsibilities
- Reporting procedures and processes
- Workplace information sources, updating and access requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify work requirements • identify enterprise objectives and product range including: <ul style="list-style-type: none"> • identify beer products • recognise enterprise labels and logos • identify parent or associated enterprises • list services offered • identify brewing enterprise key production sites • locate and explain key functions of the work site • identify the role and responsibilities of own workplace • identify and apply personal hygiene policies and procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Personal protective clothing and equipment as required • Work procedures including advice on company practices, safe work practices, food safety, quality and environmental requirements • Instructions, information, specifications and schedules as required • Equipment, services and corresponding information as required • Products and materials as required • Internal and external customers and suppliers as required • Cleaning procedures, materials and equipment as required • Documentation and recording requirements and

	procedures.
Method of assessment	<p>The assessment of this unit may include observation of workplace practice supported by personal interviews within the workplace or in a simulated workplace environment. Assessment may also be supported by a range of alternative assessment methods which might include the following:</p> <ul style="list-style-type: none">• Written and/or oral questioning to assess knowledge and understanding• Project work• Completing workplace documentation• Written reports supported by practical assignments or tasks for individual assessment• Practical exercises including simulation, demonstrations and presentation.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement
