<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Beer production stages</p>	<p>Includes:</p> <ul style="list-style-type: none"> • wort production • fermentation • maturation • filtration and clarification • bright beer production • beer filling • beer packaging <p>and may include if conducted on site:</p> <ul style="list-style-type: none"> • malting • hop extract • yeast propagation.
<p>Workplace information can include:</p>	<ul style="list-style-type: none"> • Notice boards, public address or paging systems, Standard Operating Procedures (SOPs) manuals, work notes, signs and notices (permanent and temporary) , telephone or contact details, emergency exits, routes and collection points, websites and email systems, workplace policies and procedures.
<p>Occupational health and safety</p>	<ul style="list-style-type: none"> • Organisational occupational health and safety • Legislative requirements of OH&S.
<p>Enterprise objectives may include:</p>	<ul style="list-style-type: none"> • Mission statements, goals, business, brands and brand objectives.
<p>Products may include:</p>	<ul style="list-style-type: none"> • Beer and beer related products, e.g. ale, stout, porter, light, carbohydrate modified and organic beer • Materials used in the brew house operations, e.g. barley, hops, yeast, water • Packaging raw materials, e.g. bottles, kegs, cans and stainless steel casks.
<p>Services</p>	<p>May include:</p> <ul style="list-style-type: none"> • gas • water • steam • compressed air • electricity

	<ul style="list-style-type: none"> hydraulics refrigeration.
Production sites may include:	<ul style="list-style-type: none"> Head office functions, production or processing plants, supplier facilities and consultancy services.
Key functions may include:	<ul style="list-style-type: none"> Brewing processes, bottling, packaging, warehouse and distribution, marketing, human resources (personnel, training and employee relations).
Roles and Responsibilities	<ul style="list-style-type: none"> Organisational requirements for own work Role within work team Role of work team participants.
Workplace policies, procedures and systems may include:	<ul style="list-style-type: none"> Those relating to safety, quality assurance, equal opportunities, sexual harassment, customer services, awards, pay.
Equipment and materials may vary from:	<ul style="list-style-type: none"> Those used in the brew house operations which includes wort production, fermentation, maturation, filtration and bright beer tank processes.

Unit Sector(s)

Operations.

FDFOP2072A Operate a beer filling process

Modification History

New Unit.

Unit Descriptor

This unit covers the preparing, operating, monitoring and shutting down of a beer filling process for kegs, bottles and cans. It includes working within quality requirements and standard operating procedures.

Application of the Unit

This unit applies to operators and other personnel responsible for the filling of kegs, bottles and cans with beer products in both large and small breweries. It includes complying with quality and standard operating procedures and conducting of routine changeovers. Where changeovers require maintenance related skills, the unit FDFOP2011A Conduct routine maintenance should be considered.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisites for this competency unit.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the filler process for operation	1.1 Filling requirements are checked 1.2 Availability of required materials is confirmed 1.3 Availability of services is confirmed 1.4 Pre-operational checks of equipment are conducted including checking that hygiene and sanitation standards are met and all safety guards are in place 1.5 The beer filling process is set to meet production requirements
2 Operate and monitor the beverage filling process	2.1 The filler process is started up according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Beer containers (cans, kegs, bottles) are checked against production order and container specifications 2.4 Equipment is monitored to confirm operating condition 2.5 Stock flow to and from filler process is maintained within production requirements 2.6 Out-of-specification product, process, equipment performance is identified, rectified and/or reported 2.7 Size and product changeovers are completed in accordance with batch instructions and standard operating procedures
3 Shut down filler	3.1 Filler process is shut down according to company procedures 3.2 Equipment is cleaned and maintained to meet cleaning schedules and procedural requirements 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
4 Contribute to continuous improvement of the system	4.1 Quality or process outputs are assessed against specifications 4.2 Opportunities for improvement are identified and investigated 4.3 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures
5 Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements for the beverage filling process
- select, fit and use personal protective clothing and equipment
- identify keg, can and bottle sizes relevant to beer filling operation
- identify types of beer products relevant to beer filling operation
- interpret the production schedule
- confirm supply of necessary materials and services to the filler
- confirm equipment status and condition
- monitor the beverage filling process and equipment operation to identify out-of-specification results or non-compliance. This may include:
 - flow rates/quantity
 - broken bottles
 - faulty kegs or cans
 - contaminated product
 - materials faults
 - equipment faults
 - services faults
- monitor supply and flow of materials to and from the filler
- safely access, isolate and clear jams in filling machine
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action as required
- replenish the filling process with raw materials, ingredients and packaging consumables
- verify that output meets specifications
- implement size and product changeovers
- sort, collect, treat, recycle or dispose of waste
- shut down beverage filling equipment in response to emergency situation
- shut down beverage filling equipment in response to routine shutdown requirements
- prepare beverage filling equipment for cleaning
- maintain work area to meet housekeeping standards
- record workplace information
- collect samples and conduct tests according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and basic principles of the beverage filling process
- relationship between the filling process, bright beer and other brew house operations as well as other packaging operations
- stages which occur during filling and packaging
- requirements of the filling process
- types of fillers
- aseptic requirements for preparing containers
- microbiological considerations in filling and packaging beer
- effect of filling on the end product
- quality characteristics to be achieved
- set up and start up the process. This can involve the use of process control systems, adjusting the filler to product specifications
- process specifications, procedures and operating parameters
- significance and methods of monitoring control points within the beverage filling process
- equipment and instrumentation components, purpose and operation
- services used in the filling process
- common causes of variation and corrective action required
- OHS hazards and controls
- procedures and responsibility for reporting problems
- shutdown and cleaning requirements associated with changeovers and types of shutdowns
- waste handling requirements and procedures
- recording requirements and procedures including down time
- environmental issues and controls relevant to the filling and sealing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- aseptic filling and sealing requirements where relevant
- sampling and testing procedures where relevant
- cleaning and sanitation procedures where relevant
- maintain work area to meet housekeeping standards

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify requirements for the beer filling process • interpret the production schedule to determine the type of container required • confirm the supply of necessary materials and services and confirm equipment status and condition • set up and start up the process. • monitor the beer filling process and equipment operation and take corrective action in response to out-of-specification results or non-compliance • conduct changeovers for different product or containers • prepare equipment for cleaning • maintain workplace records • conduct routine maintenance • calculate materials required
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety and environmental requirements • production schedule, batch instructions • material data safety sheets where appropriate • specifications, control points and filling parameters • beer filling equipment • services as required • stock required for the beer filling process • stock flow system • related work areas and communication system • routine preventative maintenance schedule as

	<p>required</p> <ul style="list-style-type: none"> • cleaning schedule as required • sampling and testing schedules as required • documentation and recording requirements and procedures
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Beer	Refers to all styles of brewed alcoholic beverages.
Materials used may include:	Bottles, cans, ends (for cans), crowns, carbon dioxide and kegs.
Services may include:	Power, gas, water, steam, hydraulics and air.
Beverage filling equipment may include:	<p>Filling equipment may include:</p> <ul style="list-style-type: none"> • fillers • pumps • valves • container cleaners • conveyors • handlers and feeding systems for crown seals and can ends • seamers • level detection devices • crowners • cleaners/rinsers • empty container inspectors • coders • clean in place (CIP) equipment. <p>Filling equipment and operation and monitoring functions may be directly controlled or involve the use of a process control system</p>
Control points	<ul style="list-style-type: none"> • Refer to those key points in a work process which must be monitored and controlled. This includes food safety (critical) quality and regulatory control points as well as inspection points • Monitoring the process may involve the use of production data such as performance control charts • Process operation and monitoring functions may be manual or involve the use of a process control system.
Equipment is monitored	To confirm equipment status involves ensuring that hygiene and sanitation standards are met, all safety

	guards are in place and that equipment is operational.
Workplace information may include:	<ul style="list-style-type: none">• Standard Operating Procedures (SOPs); specifications and production schedules• Information systems may be print or screen based.

Unit Sector(s)

Operations.

FDFOP2073A Operate a beer packaging process

Modification History

New Unit.

Unit Descriptor

This is a specialist unit that has been developed for the brewing sector. It involves preparing, operating, monitoring and shutting down a packing process including packing processes for cartons, boxes, pallets and wrap-around and shrink wrap packers.

Application of the Unit

This unit applies to operators and other personnel responsible for the packing beer into cartons, boxes and pallets in both large and small breweries. It includes complying with quality and standard operating procedures and conducting of routine changeovers. The unit also applies to the use of non air tight wrap-around and shrink wrap packing. Where sealed, airtight film/cello packing is required the unit FDFOP2022A Operate a high speed wrapping process should be selected. Where changeovers require maintenance related skills, the unit FDFOP2011A Conduct routine maintenance should be considered.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the filler process for operation	1.1 Packing requirements are checked 1.2 Availability of required materials is confirmed 1.3 Availability of services is confirmed 1.4 Pre-operational checks of packing equipment are conducted including checking that hygiene and sanitation standards are met and all safety guards are in place 1.5 The packaging process is set to meet production requirements
2 Operate and monitor the packaging process	2.1 The packing process is started up according to company specifications 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Packages meet specifications 2.4 Equipment is monitored to confirm operating condition 2.5 Stock flow to and from packer process is maintained within production requirements 2.6 Out-of-specification product, process, equipment performance is identified, rectified and/or reported 2.7 Size/product changeover is completed in accordance with batch instructions and standard operating procedures
3 Shut down packaging process	3.1 Packer process is shut down according to company procedures 3.2 Equipment is cleaned and maintained to meet cleaning schedules and procedural requirements 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of or recycled according to company procedures
4 Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- access workplace information to identify production requirements for the packer process
- select, fit and use personal protective clothing and equipment
- interpret the production schedule
- confirm supply of necessary materials and services to the packer
- confirm packing equipment status and condition
- monitor the packing process and equipment operation to identify out-of-specification results or noncompliance
- This may include:
 - glue seals on cartons
 - incorrect shape
 - materials faults (eg. Printing)
 - incomplete shrink wrapping (eg. Too loose/printing unaligned)
 - equipment faults
 - services faults
- monitor supply and flow of materials to and from the packer
- take corrective action in response to out-of-specification results or non-compliance
- safely access, isolate and clear jams in packaging equipment
- report and/or record corrective action as required
- replenish the packing process with raw materials, ingredients and packaging consumables
- verify that output meets specifications
- implement size/product changeovers
- sort, collect, treat, recycle or dispose of waste
- shut down packing equipment in response to emergency situation
- shut down packing equipment in response to routine shutdown requirements
- prepare packing equipment for cleaning
- maintain work area to meet housekeeping standards
- record workplace information
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Knowledge of:

- purpose and basic principles of the packing process
- relationship between the packing process, fillers, labellers, other packaging equipment and palletisers including stages which occur during filling and packaging
- stages which occur during filling and packaging
- requirements of the packaging process
- types of packers
- microbiological considerations in filling and packaging beer
- effect of packaging on the end product
- quality characteristics to be achieved
- set up and start up the process. This can involve the use of process control systems, adjusting
- the packers to product specifications
- process specifications, procedures and operating parameters
- significance and methods of monitoring control points within the packaging process
- equipment and instrumentation components, purpose and operation
- services used in the packing process
- common causes of variation and corrective action required
- OHS hazards and controls
- procedures and responsibility for reporting problems
- shutdown and cleaning requirements associated with changeovers and types of shutdowns
- waste handling requirements and procedures
- recording requirements and procedures including down time
- sampling and testing procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify requirements for the packing process • interpret the production schedule to determine the type of packing required • confirm the supply of necessary materials and services to the packing process • confirm equipment status and condition • set up and start up the process • monitor the packing process and equipment operation and take corrective action in response to out-of-specification results or non-compliance • reporting and/or recording corrective action as required • conducting changeovers for different product, product size or packing • shut down equipment • conduct routine maintenance • calculate materials required.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety and environmental requirements • production schedule, batch instructions • material data safety sheets where appropriate • specifications, control points and filling parameters • beer packaging equipment • services as required • stock required for the beer packaging process • stock flow system

	<ul style="list-style-type: none"> • related work areas and communication system • relevant OHS clothing and equipment • routine preventative maintenance schedule as required • cleaning schedule as required • sampling and testing schedules as required • documentation and recording requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Beer	Refers to all styles of brewed alcoholic beverages.
Services may include:	Power, gas, water, steam, hydraulics and air.
Packing equipment may include	<p>Packing equipment may vary according to type of container and product and may include:</p> <ul style="list-style-type: none"> • wrap-around packer machine • basket packer machinery • shrink wrap machinery • glue guns • conveyors. <p>Packing equipment and operation and monitoring functions may be directly controlled or involve the use of a process control system.</p>
Control points	<ul style="list-style-type: none"> • Refer to those key points in a work process which must be monitored and controlled. This includes food safety (critical) quality and regulatory control points as well as inspection points • Monitoring the process may involve the use of production data such as performance control charts • Process operation and monitoring functions may be manual or involve the use of a process control system.
Equipment is monitored	To confirm equipment status involves ensuring that hygiene and sanitation standards are met, all safety guards are in place and that equipment is operational.
Workplace information may include:	<ul style="list-style-type: none"> • Standard Operating Procedures (SOPs); specifications and production schedules • Information systems may be print or screen based.

Unit Sector(s)

Operations.

FDFOP2074A Prepare and monitor beer yeast propagation processes

Modification History

New Unit

Unit Descriptor

This specialist unit has been developed for the brewing industry. It covers the skills and knowledge required to prepare and monitor yeast cultures with respect to yeast propagation production processes.

Application of the Unit

This unit applies to staff of brewery enterprises who propagate yeast cultures used in beer production.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for propagation	1.1 Propagation requirements are identified and confirmed 1.2 Yeast cultures are prepared for use 1.3 Product and materials are confirmed and available to meet propagation requirements 1.4 Product is prepared to meet specified propagation requirements 1.5 Services are confirmed as available and ready for operation
2 Prepare equipment for culture preparation	2.1 Cleaning and sterilising equipment is checked to confirm readiness for use 2.2 Propagation equipment is selected, cleaned and sterilised according to workplace procedures 2.3 Transfer equipment is selected, cleaned and sterilised as required
3 Maintain and monitor the propagation process	3.1 Transfer operations are conducted to meet propagation requirements 3.2 The culture propagation process is conducted according to workplace procedures 3.3 Scale-up additions are made according to workplace procedures 3.4 Control points are monitored to confirm performance is maintained within specification 3.5 Equipment is monitored to confirm operating condition 3.6 Out-of-specification product, process and equipment performance is identified, rectified and/or reported
4 Complete propagation activities	4.1 The propagation process is completed according to workplace procedures 4.2 Equipment is dismantled and prepared for cleaning 4.2 Waste generated by both the process and cleaning procedures is collected, treated and disposed of, or recycled according to workplace procedures 4.3 Work is conducted in accordance with workplace environmental guidelines
5 Record information	5.1 Workplace information recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular workplace.

Ability to:

- Access workplace information to identify culture propagation requirements
- Select, fit and use personal protective clothing and/or equipment
- Confirm supply of necessary product, materials and services
- Liaise with other work areas
- Prepare product and materials as required. This may include:
 - culture yeast slopes
 - oxygenated wort
 - yeast nutrients
 - oxygen supply and sterilisation
 - wort heating
 - wort sterilisation
- Confirm equipment status and condition. This may include checking:
 - cleaning and/or sterilisation requirements have been met
 - position and alignment of valves
 - integrity of door seals and small vessel tubing and condition of gas (oxy) filters
- Start up the process
- Monitor the process and equipment operation to identify out-of-specification results or non-compliance. This may involve sampling and checking:
 - temperature (wort)
 - wort gravity
 - wort oxygenation levels
 - yeast cell counts
 - yeast viability
- Monitor supply and flow of product and materials to and from the process
- Take corrective action in response to out-of-specification results or non-compliance
- Report and/or record corrective action as required
- Conduct product and batch changeovers
- Follow confined space entry policies and procedures when required
- Sort, collect, treat, recycle or dispose of waste
- Shut down equipment in response to an emergency situation
- Shut down equipment in response to routine shutdown requirements
- Record workplace information
- Maintain work area to meet housekeeping standards

- Prepare equipment for cleaning. This may involve draining and/or dismantling equipment, and removing waste either manually or by rinsing, in preparation for sanitation
- Identify, rectify and/or report environmental non-compliance
- Carry out routine maintenance
- Use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- Work cooperatively within a culturally diverse workforce

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular workplace.

Knowledge of:

- Purpose and principles of propagating yeast cultures
- Relationship of propagation to alcoholic fermentation
- Stages and changes which occur during culture propagation
- Effect of process stages on end product
- Quality characteristics and uses of yeast cultures
- Product and materials preparation requirements and effect of variation on the process
- Main methods used in propagating yeast for beer production
- The fermentation reaction for yeast cultures
- Techniques that may be used to manipulate the propagation process and end product characteristics, including:
 - temperature
 - yeast strain
 - wort stream
 - wort gravity
 - additions (nutrients)
 - oxygen
- Process specifications, procedures and operating parameters
- Equipment and instrumentation components, purpose and operation
- Basic operating principles of process control systems where relevant
- Services used
- Significance and method of monitoring control points within the process
- Common causes of variation and corrective action required
- Occupational health and safety (OHS) hazards and controls, specifically confined space entry
- Lock-out and tag-out procedures
- Procedures and responsibility for reporting problems
- Environmental issues and controls
- Shutdown and cleaning requirements associated with changeovers and types of shutdowns
- Waste handling requirements and procedures
- Recording requirements and procedures

- Routine maintenance procedures
- Aseptic techniques

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective equipment and follow other specified OHS procedures • check and prepare product and any additions, including check of quality of yeast cultures before use • check and confirm readiness of equipment before operation • start propagation process correctly • monitor propagation process control points for performance against specifications • take appropriate corrective action for out-of-specification process and equipment performance • collect waste and store, treat or dispose of appropriately • record information appropriately.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required

	<ul style="list-style-type: none">documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules and instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator.
<p>Equipment</p>	<p>Equipment may include:</p> <ul style="list-style-type: none"> • propagation vessels • storage vessels • sterile filtration equipment for gases • hoses and fittings and tubing • pumps • dosing equipment • mixers/shakers • testing equipment (e.g. microscope with cell counter, density meter).
<p>Product and materials</p>	<p>Product and materials may include:</p> <ul style="list-style-type: none"> • culture yeast slopes • oxygenated wort • yeast nutrients • oxygen supply • sterilisation materials.
<p>Services</p>	<p>Services may include:</p> <ul style="list-style-type: none"> • electricity • water • steam

	<ul style="list-style-type: none"> • compressed air • oxygen.
Confirming equipment status	<p>Confirming equipment status involves:</p> <ul style="list-style-type: none"> • checking that hygiene and sanitation standards, safety standards and pre-start requirements are met and that equipment is operational • checking the calibration status of measuring instrumentation.
Monitoring the process	<p>Monitoring the process may involve:</p> <ul style="list-style-type: none"> • the use of production data • sampling • checking temperature, gravity, cell counts, viability, oxygen levels • visual inspection.
Process set up, operation and monitoring functions	<p>Process set up, operation and monitoring functions may be manual or involve the use of a process control system.</p>
Control points	<p>Control points refer to those key points in a work process that must be monitored and controlled. This includes:</p> <ul style="list-style-type: none"> • food safety (critical) • quality and regulatory control points • inspection points.
Information systems	<p>Information systems may be print or screen based.</p>
Work hazards	<p>Work may involve exposure to chemical, dangerous or hazardous substances.</p>

Unit Sector(s)

Operations.

FDFOP3001A Control contaminants and allergens in the workplace

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to examine the risk of contaminants and allergens in a food production workplace and assess and implement control measures designed to manage risks.
------------------------	---

Application of the Unit

Application of the unit	This unit has application in a food production or packaging workplace. This unit is appropriate where the operator or supervisor requires a detailed understanding of contaminants and allergens in the workplace and the effect they have on product safety and quality in order to ensure work practices comply with safety and operational work standards. This unit is especially appropriate where work is conducted in an environment where contaminants or allergens present a significant risk to the quality of product and the safety of workers or consumers.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess risk of physical contamination	1.1.Types and sources of physical contamination in the workplace are identified 1.2.Risks to operations, product and consumer are identified 1.3.Control measures to eliminate or reduce risks of physical contamination are identified 1.4.Workplace procedures and practices are assessed to determine level of risk for physical contaminants and opportunities for improvement identified
2. Assess risk of chemical contamination	2.1.Types and sources of chemical contamination in the workplace are identified 2.2.Risks to operations, product and consumer are identified 2.3.Control measures to eliminate or reduce risks of chemical contamination are identified 2.4.Workplace procedures and practices are assessed to determine level of risk for chemical contaminants and opportunities for improvement identified
3. Assess risk of microbiological contamination	3.1.Types and sources of microbiological contamination in the workplace are identified 3.2.Risks to operations, product and consumer are identified 3.3.Control measures to eliminate or reduce risks of microbiological contamination are identified 3.4.Workplace procedures and practices are assessed to determine level of risk for microbiological contaminants and opportunities for improvement identified
4. Assess risk of allergens in the workplace	4.1.Types and sources of allergens are identified 4.2.Risks to operations, product and consumer are identified 4.3.Control measures to eliminate or reduce risks of allergens are identified 4.4.Workplace procedures and practices are assessed to determine level of risk for allergens and opportunities for improvement identified
5. Implement control measures to manage contaminants and allergens	5.1.Control measures are implemented as part of work operations 5.2.Emergency procedures and conditions for

ELEMENT	PERFORMANCE CRITERIA
	implementation are identified 5.3. Reporting and documentation associated with controls is identified and undertaken as required 5.4. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify the types of physical, chemical and microbiological contaminants and allergens that present a risk in the workplace
- identify sources of risks
- examine control measures
- describe the appropriate monitoring requirements for each risk, including the method or procedure to be followed, the frequency and timing, the person responsible, and the information to be recorded (procedures to be followed would typically be specified in the form of a standard operating procedure (SOP) or work instruction)
- describe corrective action requirements in the event that acceptable limits or requirements of controls are not met
- develop or review documentation relating to the food safety program, such as process flow diagrams, hazard analysis charts and tables, support program requirements, data analysis reports, corrective action reports and verification reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- communicate food safety responsibilities within level of responsibility
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the purpose and intent of food safety legislation and control measures
- roles and responsibilities for development and maintenance of the control measures
- food processing methods used in the workplace or work area and the risks of contamination
- sources of technical expertise on contaminants and allergens
- the role of control measures in the food safety program
- documentation and recording requirements to support communication and monitoring of the food safety program, including procedures for maintaining and updating relevant documents, such as operating procedures
- main types of food safety contamination likely to occur given the type of product and processing methods used
- acceptable control methods for the hazards identified and required corrective action when control requirements are not met

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify potential physical, chemical and microbiological contaminants in the workplace and their likely sources • identify risks associated with these contaminants and the control measures to manage risks • describe allergens and control measures that relate to workplace • identify workplace procedures to control risks and assess effectiveness in practice • implement workplace control measures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • workplace food safety program documentation • advice on quality and food safety legislation • procedures for implementing control measures and other advice on food safety requirements • other recording requirements.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Physical contaminants

Physical contaminants include all foreign objects that are caused by or come from:

- the raw material source
- processing systems
- processing equipment
- housekeeping standards

Sources of contamination include:

- employees (e.g. hair, bandaids, glasses, jewellery and coins or other contaminants, such as dirt, pests, food and raw materials)
- maintenance and cleaning procedures (e.g. metal shavings, grease from equipment, nuts and bolts, dirty equipment from previous products and glass breakages)
- packaging materials (e.g. ink, dye, staples, paper, cardboard and plastic)
- pests (e.g. evidence of rodents gnawing on packages, rodent hair, droppings and debris)
- incorrectly labelled or packaged raw materials
- industrial sabotage (e.g. tampering anywhere through the production process)
- accumulation of dusts from unclean environments

Control measures for physical contaminants

Control measures to reduce contamination may include:

- use of personal protective equipment
- clothing standards (e.g. enclosed hair and no jewellery)
- metal detectors
- rulings against glass in production or packaging areas
- covering of raw materials and equipment
- maintenance, cleaning and housekeeping

RANGE STATEMENT	
	<p>programs</p> <ul style="list-style-type: none"> • inspection schedules • reporting requirements and procedures • emergency procedures
Chemical contaminants	<p>Chemical contamination includes the introduction of unwanted substances or an unplanned reaction between different products.</p> <p>Sources of chemical contamination include:</p> <ul style="list-style-type: none"> • unwanted chemicals remaining on food preparation surfaces (e.g. cleaning chemicals) • chemicals remaining in food material after processing • too much or the wrong chemical added during manufacture • insecticide, pesticides, herbicides and antibiotics that build up during the growth cycle of the food source
Control measures for chemical contaminants	<p>Control measures for chemical contaminants include safe handling of chemical contaminants, such as:</p> <ul style="list-style-type: none"> • storing chemicals away from food production areas • using correct containers for storing and dispensing chemicals • correctly labelling chemicals in containers • calculating and applying correct quantities • ensuring chemical record sheets are filled in correctly
Microbiological contaminants	<p>Microbiological contaminants include micro-organisms that in food that poison or spoil it.</p> <p>Types of micro-organisms associated with microbiological risks include:</p> <ul style="list-style-type: none"> • fungi • yeasts • moulds • viruses • bacteria
Control measures for biological	Control measures for biological contaminants

RANGE STATEMENT	
contaminants	include: <ul style="list-style-type: none"> • temperature and climate controls • personal hygiene standards • storage and processing conditions • chemical controls • housekeeping standards • pest controls
Allergens	Allergens include: <ul style="list-style-type: none"> • food substances, such as nuts, milk products • pollen and grain

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for line setup	1.1. Materials are confirmed and available to meet production requirements 1.2. Equipment and related accessories are confirmed, available and fit for use to meet production requirements 1.3. Tools and equipment required for line setup are available, operational and fit for use 1.4. Processing parameters and settings are identified to meet production or packaging requirements
2. Set up the line for operation	2.1. Cleaning and maintenance requirements and status are identified and confirmed 2.2. Equipment is inspected to confirm condition 2.3. Machine settings are selected or adjusted as required to meet safety and production requirements 2.4. Processing or packaging parameters are entered as required to meet production requirements 2.5. Equipment performance is checked and adjusted as required 2.6. Pre-start checks are carried out as required by workplace requirements 2.7. Line setup is completed to match production or packaging schedule and operating requirements 2.8. The line is ready and safe to operate and any maintenance requirements are reported according to workplace reporting requirements 2.9. Work is conducted in accordance with workplace environmental guidelines 2.10. Relevant personnel are notified of setup completion

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access production/packing schedule and related information to identify line setup/changeover requirements, such as checking product sequencing and compatibility, confirming that the required cleaning and/or sanitation has occurred and required packaging components and consumables are available as appropriate
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary equipment and related attachments, materials and services for production
- confirm supply of necessary equipment and services to carry out setup operations
- set and/or adjust equipment to meet production/packaging requirements, including selecting the required parameters or equipment settings, and changing processing set points as required
- position safety guards and cancel isolation/lockouts ready for operation
- confirm that sensors and related feedback instruments are correctly positioned and operational
- operate equipment to confirm equipment setup and make final adjustments as required
- time setup activities to meet production requirements
- advise affected work areas/personnel of completion of setup
- maintain work area to meet housekeeping standards
- load and/or position materials/ingredients/product and/or packaging consumables according to enterprise procedures
- use the control panel/system to set and adjust equipment components according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic operating principles of equipment and related accessories, including equipment adjustment points, range and location/alignment requirements of sensors and related feedback instruments, and status and purpose of guards
- operating capacities of equipment used in the work area, such as different types of

REQUIRED SKILLS AND KNOWLEDGE

- equipment and/or components as required by processing operations
- nature of setup/changeover requirements, such as product compatibility and related cleaning requirements, impact of variation in materials or product on setup requirements, equipment and/or attachment changeovers related to given products
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- pre-start checks required by setup/changeover
- related processes and personnel dependent on line setup, and communication responsibilities
- isolation, lock out and tag out procedures and responsibilities
- occupational health and safety (OHS) hazards and controls
- procedures and responsibility for reporting equipment performance information
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance requirements and procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for production to determine cleaning, maintenance and operation readiness • determine production parameters and requirements • set up line according to production requirements • take corrective action in response to typical faults and inconsistencies • complete workplace records and communicate line status with other personnel as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • production/packaging schedule and related advice on setup/changeover requirements • cleaning records/clearance as required • information on equipment capacity and operating parameters • process/packaging equipment and related accessories and services • materials/consumables required by the process • hand tools as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2011A Conduct routine maintenance

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• FDFOP2030A Operate a process control interface.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Food Standards Code and reference to food safety is replaced by GMP</p>
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • standard forms and reports
Equipment adjustment	<p>Equipment adjustment may include:</p> <ul style="list-style-type: none"> • limited use of hand tools, such as Allen keys and screwdrivers, within level of responsibility
Confirming cleaning requirements and status	<p>Confirming cleaning requirements and status may involve:</p> <ul style="list-style-type: none"> • accessing cleaning records

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the production system for operation	1.1. Equipment, materials and services are confirmed and available to meet production requirements 1.2. Cleaning requirements and equipment status are identified and confirmed 1.3. Machine settings are selected or adjusted as required to meet safety and production requirements 1.4. Processing/operating parameters are entered as required to meet production requirements 1.5. Materials, ingredients and/or product are loaded or positioned as required to meet production requirements 1.6. Pre-start checks are carried out as required by workplace requirements 1.7. Equipment performance is checked and adjusted as required 1.8. Equipment is ready and safe to operate
2. Operate and monitor the production system	2.1. The system is started up and operated according to company procedures 2.2. System equipment components are monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The production system is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines
3. Hand over production system operation	3.1. Workplace records are maintained according to workplace recording requirements 3.2. Handover is carried out according to workplace procedures 3.3. Process operators are aware of system and related equipment status at completion of handover
4. Shut down the	4.1. The appropriate shutdown procedure is identified

ELEMENT	PERFORMANCE CRITERIA
production system	4.2.The system is shut down according to workplace procedures 4.3.Maintenance requirements are identified and reported
5. Contribute to continuous improvement of the production system	5.1.System performance is reviewed against output plan/targets 5.2.Opportunities for system improvement are identified and investigated 5.3.Proposals for improvement are developed and implemented within company planning arrangements, authority levels and according to company procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access production schedule and related information to identify system output and operating requirements, such as planning daily production schedules and/or modifying plans to respond to operating conditions and customer requirements
- liaise with relevant work areas to confirm and/or secure necessary materials, services, equipment and labour to meet production requirements
- confirm supply of necessary equipment and related attachments, materials and services
- select, fit and use personal protective clothing and/or equipment
- set and/or adjust equipment to meet process output requirements, including inspecting equipment condition to identify any signs of wear, confirming selection of appropriate settings and/or related parameters, ensuring that isolation or lock outs are cancelled as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational (checks may be done by the system operator or involve observing/supporting others setting and adjusting equipment and conducting pre-start checks)
- load and/or position materials, ingredients and/or product as required
- operate and monitor the production system, such as use of a process control system and/or observing/supporting others to follow correct operating procedures
- monitor materials flow and work-in-progress through the system
- confirm that the system operates within specified parameters and inspection/control points are monitored
- determine responses to out-of-specification results or non-conformance within level of responsibility
- monitor operating efficiencies of the system, including recognition of signs and symptoms of faulty equipment and early warning signs of other potential problems
- investigate, resolve and/or report problems and faults
- plan scheduled events to minimise disruption to production
- conduct/coordinate product or batch changeovers
- conduct/coordinate shift handovers
- review and maintain procedures to support system improvements
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the production system, including the system process flow, the interrelationships of each process to identify the impact of variation on related processes, and optimisation options
- basic operating principles of equipment and related accessories used by the system, including equipment adjustment points, status and purpose of guards, and range and location/alignment requirements of sensors and related feedback instruments
- operating capacities of equipment used in the system, such as different types of equipment and/or components as required by processing/packaging operations
- related systems and responsibilities for interaction, such as related production systems, services supply, packaging/warehousing, maintenance, laboratory/quality assurance and planning and scheduling
- product characteristics and common types of variation in materials and/or ingredients used, including the effect of variation on each stage of the system and scope to adjust or correct
- typical production related problems, including equipment faults, common causes and warning signs, incorrect or poor supply of materials, incorrect settings and poor operator control
- relevant procedures, specifications and operating parameters for the system and the individual processes
- isolation, lock out and tag out procedures and responsibilities
- hazards, risks, controls and methods for monitoring processes within the system, including occupational health and safety (OHS), food safety, quality and environmental hazards and risks
- workplace system and approach to equipment maintenance
- process improvement procedures and related consultative arrangements
- troubleshooting procedures and problem solving techniques
- communication responsibilities to inform related work areas/support functions and other shifts of operational status and production issues
- procedures and responsibility for reporting production and performance information

Evidence Guide

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the packaging system for operation	1.1. Equipment, materials and services are confirmed and available to meet packaging requirements 1.2. Cleaning requirements and equipment status is identified and confirmed 1.3. Machine settings are selected or adjusted as required to meet safety and production requirements 1.4. Operating parameters are entered as required to meet production requirements 1.5. Product and/or packaging components and consumables are loaded or positioned as required to meet packaging requirements 1.6. Pre-start checks are carried out as required by workplace requirements 1.7. Equipment performance is checked and adjusted as required 1.8. Equipment is ready and safe to operate
2. Operate and monitor the packaging system	2.1. The system is started up and operated according to company procedures 2.2. System equipment components are monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The system is monitored to confirm that packaging specifications are met 2.5. Out-of-specification product/packaging outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines
3. Hand over packaging system operation	3.1. Workplace records are maintained according to workplace recording requirements 3.2. Handover is carried out according to workplace procedures 3.3. Process operators are aware of system and related equipment status at completion of handover
4. Shut down the	4.1. The appropriate shutdown procedure is identified

ELEMENT	PERFORMANCE CRITERIA
packaging system	4.2. The system is shut down according to workplace procedures 4.3. Maintenance requirements are identified and reported
5. Contribute to continuous improvement of the system	5.1. System performance is reviewed against output plan/targets 5.2. Opportunities for system improvement are identified and investigated 5.3. Proposals for improvement are developed and implemented within company planning arrangements, authority levels and according to company procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access production/packaging schedule and related information to identify packaging output and operating requirements, such as establishing daily packaging priorities and/or modifying plans to respond to customer requirements
- liaise with relevant work areas to confirm and/or secure necessary materials, services, equipment and labour to meet production requirements
- confirm supply of necessary equipment and related attachments, materials and services
- select, fit and use personal protective clothing and/or equipment
- set and/or adjust equipment to meet packaging requirements, such as inspecting equipment condition to identify any signs of wear, confirming selection of appropriate settings and/or related parameters, ensuring that isolation or lock outs are cancelled as required, confirming that equipment is clean and correctly configured for packaging requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational (checks may be done by the system operator or involve observing/supporting others setting and adjusting equipment and conducting pre-start checks)
- load and/or position product, packaging components and consumables as required
- operate and monitor the packaging system, such as use of a process control system and/or observing/supporting others to follow correct operating procedures
- monitor materials flow and work-in-progress to and from the packaging system
- confirm that the packaging system operates within specified parameters and inspection/control points are monitored
- determine responses to out-of-specification packaging or non-conformance within level of responsibility
- monitor operating efficiencies of the system, including recognition of signs and symptoms of faulty equipment and early warning signs of other potential problems
- investigate, resolve and/or report problems and faults
- plan scheduled events to minimise disruption to production
- conduct/coordinate product/packaging changeovers
- conduct/coordinate shift handovers
- review and maintain procedures to support system improvements
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the packaging system, including the process flow and the interrelationships of each previous processes that can affect packaging outcomes, packaging technology, and packaging equipment components
- basic operating principles of equipment and related accessories used by the system, including equipment adjustment points, status and purpose of guards, and range and location/alignment requirements of sensors and related feedback instruments
- operating capacities of equipment used in the system, such as different types of equipment and/or components as required by processing/packaging operations
- related systems and responsibilities for interaction, such as related production and further packaging/storage stages, services supply, maintenance, laboratory/quality assurance and planning and scheduling
- technical knowledge of product/packaging characteristics and the main factors that impact on shelf-life
- typical packaging related problems, including equipment faults, common causes and warning signs, incorrect or poor supply of materials and finished product, incorrect settings and poor operator control
- relevant procedures, specifications and operating parameters for the system and the individual processes
- isolation, lock out and tag out procedures and responsibilities
- hazards, risks, controls and methods for monitoring processes within the system, including occupational health and safety (OHS), food safety, quality and environmental hazards and risks
- workplace system and approach to equipment maintenance
- process improvement procedures and related consultative arrangements
- troubleshooting procedures and problem solving techniques
- communication responsibilities to inform related work areas/support functions and other shifts of operational status and production issues
- procedures and responsibility for reporting production and performance information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on packaging system components • confirm machine set up is ready to achieve packing requirements • correctly use required personal protective equipment • start, operate, monitor and adjust process equipment throughout the system to achieve required quality outcomes • identify system problems and take corrective action • conduct operational handovers • shut down system • identify and investigate opportunities for operational improvements within areas of responsibility • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • production schedule and related advice on system requirements • information on equipment capacity and operating parameters • packaging system equipment and related accessories and services • product, packaging components and consumables as required by the process

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> communication and recording systems and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> FDFOP2030A Operate a process control interface FDFPPL3003A Support and mentor individuals and groups.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements</p>
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Food Standards Code and reference to food safety is replaced by GMP</p>
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • performance records and reports
System operation	<p>A system typically involves a series of interrelated processes that must be coordinated and concurrently operated to produce the required outcome. System operation may involve:</p> <ul style="list-style-type: none"> • coordination of operators of system components
Handovers	<p>Handovers may be done:</p> <ul style="list-style-type: none"> • in person or via recording/communication systems according to workplace arrangements
Operation and monitoring of	<p>Operation and monitoring of equipment and</p>

RANGE STATEMENT	
equipment and system processes	system processes typically requires: <ul style="list-style-type: none"> the use of control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

FDFOP3005A Prepare food products using basic cooking methods

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to prepare food products using basic cooking methods.
------------------------	--

Application of the Unit

Application of the unit	This unit has application in a food production environment, including retail outlets for bread, cakes and other baked products, and enterprises where food production processes involve cooking of products. Operators requiring this competency would typically be required to follow specific recipes to value-add to food products.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFFS2001A	Implement the food safety program and procedures

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and handle cooking tools and equipment	1.1. Work area is prepared for operations and hygiene standards confirmed 1.2. Cooking utensils required for work are identified, handled and stored safely and according to workplace procedures 1.3. Equipment and machinery required for cooking operation is identified and prepared 1.4. Maintenance requirements for knives and other utensils are identified and implemented 1.5. Food safety requirements are implemented at all times when handling and using cooking utensils and equipment
2. Prepare ingredients	2.1. Major food group classifications are identified 2.2. Range of ingredients typically used in the workplace are identified, and their characteristics and effect on food quality and taste described 2.3. Recipe is examined and required ingredients identified 2.4. Sequence for preparation is determined 2.5. Ingredients are selected and quantity and quality confirmed using measuring or weighing devices or sensory analysis techniques 2.6. Ingredients are prepared and assembled according to recipe requirements 2.7. Ingredients are stored according to workplace procedures
3. Use basic cooking methods	3.1. Range of basic cooking methods are identified and their effect on quality, taste and nutritional value described 3.2. Cooking methods required by recipe are identified and sequence determined 3.3. Cooking method is applied to achieve quality standards for food item 3.4. Typical problems are identified and addressed 3.5. Cooking utensils and equipment is used according to manufacturer's instructions 3.6. Waste minimisation and environmental considerations are applied during cooking process 3.7. Cooking area, utensils and equipment are cleaned and stored according to workplace standards

ELEMENT	PERFORMANCE CRITERIA
4. Finish product	4.1. Cooked ingredients are transferred for further processing 4.2. Final product is assembled and presented or packed according to recipe or operating requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and access ingredients
- identify the major food group classifications
- read and interpret recipe requirements
- safely and correctly use work utensils and equipment
- interpret numerical information on quantities and conduct measurements
- apply safe work and food safety standards
- select, fit and use personal protective clothing and/or equipment
- plan operations
- identify cooking problems and take corrective action, such as reporting abnormalities or problems, repeating processes and/or making required adjustments
- maintain work area to meet housekeeping standards

Required knowledge

Knowledge of:

- uses and characteristics of basic food ingredients
- major food groups and classifications
- principles of basic cookery
- food safety standards in the workplace
- common terminology used in cooking

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • prepare and use utensils and equipment safely and according to work procedures • identify major food groups and uses and effects of ingredients used in food products • prepare food products using basic cookery methods on more than one occasion • identify and address common cooking problems • apply safe work practices and food safety procedures • maintain cooking area according to workplace standards.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • recipes and work instructions • ingredients, utensils and equipment • cooking area facility.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice, • recipes
Food products	<p>Food products may incorporate a range of ingredients, such as:</p> <ul style="list-style-type: none"> • meat • dairy • grains • herbs and spices • flavourings
Utensils and equipment	<p>Utensils and equipment may include:</p> <ul style="list-style-type: none"> • ovens, microwaves and stoves • grills and griddles • deep-fryers and steamers • food processors • blenders, mixers and slicers • pans, pots and trays • knives • hand-held utensils
Basic cookery methods	<p>Basic cookery methods must include:</p> <ul style="list-style-type: none"> • boiling • poaching • steaming

RANGE STATEMENT	
	<ul style="list-style-type: none"> • stewing • braising • roasting • baking • grilling • shallow frying • deep-frying • stir-frying • pan-frying
Common cooking problems	<p>Common cooking problems may relate to:</p> <ul style="list-style-type: none"> • temperature • ingredient accuracy, quality and quantity • proportions and measurements • sequence of operations • timing

FDFOP3006A Identify cultural, religious and dietary considerations for food production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to identify cultural, religious and dietary considerations when preparing food products or determining the suitability of food products to meet specific customer needs.
------------------------	---

Application of the Unit

Application of the unit	This unit has application in a food production environment where the specific cultural, religious or dietary needs of customers have to be taken into account. The unit may apply to food production directly undertaken by the employee or to the determination of the suitability of food prepared by others for customers with specific cultural, religious or dietary needs. Specific needs include products required for cultural and religious events and festivals, production processes to comply with religious prescriptions, such as Halal and Kosher, and dietary requirements, such as low fat, gluten free, diabetic safe food, and so on.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify cultural and religious requirements of customers</p>	<p>1.1. Cultural and religious practices and events that influence food production requirements are identified</p> <p>1.2. Food production methods and food products that cater for cultural and religious practices and events are identified</p> <p>1.3. The suitability of current food production methods and current food products against cultural and religious requirements are assessed</p> <p>1.4. If required, alternative processes and products are identified</p>
<p>2. Identify dietary requirements of customers</p>	<p>2.1. A range of specific dietary requirements and their impact on food production are identified</p> <p>2.2. Food products that cater for dietary requirements are identified</p> <p>2.3. The suitability of current food production methods and current food products are assessed against dietary requirements</p> <p>2.4. If required alternative processes and products are identified</p>
<p>3. Identify common food-related allergies</p>	<p>3.1. Common food-related allergies are identified</p> <p>3.2. Risk assessment is made of current products and processes against common food-related allergies</p> <p>3.3. Procedures to avoid contamination with allergens are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- use communication skills to interpret customer requests and suggest appropriate products that meet customer requirements
- access information on cultural, religious and dietary needs
- apply product knowledge to determine appropriate food products and processes to comply with cultural, religious or dietary considerations

Required knowledge

Knowledge of:

- ingredients of available products
- food production processes

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify the food products commonly associated cultural, religious and dietary requirements • identify food processes commonly associated cultural religious and dietary requirements • identify common food allergens and contamination risks in the production process.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipes and customer specifications • production equipment appropriate to product type • materials/ingredients to meet recipe requirements • ingredient pricing information • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

FDFPB3001A Operate a dough mixing process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down the process used to make up dough.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a plant baking environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of machines and equipment used to mix dough. This includes selecting and mixing dough ingredients.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p> <p>Note that this unit duplicates the outcomes of FDFTEC3003A Apply raw materials, ingredient and process knowledge to production problems. Only one of these units can be counted towards a qualification outcome. For further information refer to advice on unit duplication in the section on qualification arrangements</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the dough making equipment and process for operation</p>	<p>1.1. Ingredients are weighed or measured to meet recipe requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Materials handling, mixing/blending equipment and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the dough mixing process</p>	<p>2.1. The process is started and operated according to workplace procedures</p> <p>2.2. Ingredients are introduced to the mixing process in correct sequence and quantity</p> <p>2.3. Equipment is monitored to identify variation in operating conditions</p> <p>2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.5. The process is monitored to confirm that dough meets specifications</p> <p>2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.7. The finished dough is transferred to required location</p> <p>2.8. The work area is maintained according to housekeeping standards</p> <p>2.9. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.10. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down and cleaned according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe and batch requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply and condition of necessary ingredients, such as flour and supply of services
- load materials in correct quantities and sequence according to company procedures
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for dough making requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm settings, such as:
 - mixing rate
 - mixing time/work input
 - ice/water requirements
 - water temperature
 - speed
 - flour temperature
 - cooling
 - vacuum delay and level
 - slurry addition
- start, operate, monitor and adjust dough making equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - dough consistency
 - temperature
 - development
 - timeliness
- adjust yeast levels to allow for rework addition and ambient temperature
- monitor supply and flow of materials to and from the dough making process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- demonstrate batch/product changeovers

REQUIRED SKILLS AND KNOWLEDGE

- follow isolation and lock out/tag out procedures as required to take dough making process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- clean and sanitise equipment
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the dough making process, including the components of wheat, flour types and grades relevant to products produced, yeast activity and dough development
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the dough making process, including the stages and changes which occur during baking, and the effect of outputs on downstream processes
- ingredient characteristics, and condition requirements and purpose in the dough and the finished product
- significance of factors, such as dough temperature, development, water addition/temperature, yeast activity and consistency of dough
- required characteristics of dough and effect of dough characteristics/variation on the final product
- quality requirements of materials and effect of variation in ingredient quality on the dough, including the impact of variation in flour quality
- stock management procedures, including stock rotation and use-by codes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the dough making process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the dough making process and the related procedures and recording requirements

REQUIRED SKILLS AND KNOWLEDGE

- ingredient/materials handling and storage requirements
- contamination/food safety risks associated with the dough making process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the dough making process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- cleaning and sanitation procedures
- environmental issues and controls relevant to the dough making process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for mixing dough • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • dough mixing process and related equipment and services • ingredients to be processed • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

FDFPB3002A Operate a final prove and baking process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down the process used to carry out the final proving and baking of dough.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a plant baking environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of machines and equipment used to final prove and bake bread. This includes depanning the baked product.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p>
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the final proving and baking equipment and process for operation</p>	<p>1.1. Dough is supplied to the final prover to meet production/batch requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the final proving and baking process</p>	<p>2.1. The process is started and operated according to workplace procedures</p> <p>2.2. Equipment is monitored to identify variation in operating conditions</p> <p>2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.4. The process is monitored to confirm that baked product meets specifications</p> <p>2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.6. The work area is maintained according to housekeeping standards</p> <p>2.7. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.8. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the final proving and baking process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down and cleaned according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify final prove and baking processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming that related equipment is clean and correctly configured for final prove and baking process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- specific settings may include:
 - final prover time, temperature, humidity and loading arm position
 - topping application equipment, water sprays and splitters for finishing equipment
 - oven time, temperature, lid positions, conveyors, loaders and dischargers, circulation and exhaust fans, burner controls and steam settings
 - depanning equipment heights, tin guides and air blowers and pre-blast conveyor settings
- start, operate, monitor and adjust final prove and baking process equipment to achieve required outcomes, such as monitoring control points and conducting inspections as required to confirm process remains within specification:
 - for final prove, including dough condition/surface and dough size/height
 - for finishing/topping, including coverage/distribution of topping and visual inspection of appearance
 - for baking, including crust colour, sheen, uniformity of shape, weight and size
 - for the depanning unit, including removing bread cleanly from the pan
- monitor supply and flow of materials to and from the final prove and baking process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take final prove and baking process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers

REQUIRED SKILLS AND KNOWLEDGE

- clean and sanitise equipment
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each stage of the final prove and baking process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the final prove and baking process and the effect of outputs on downstream processes
- changes that occur in dough during baking, including starch gelatinisation, gluten coagulation and enzyme activity, and their effect on the final product
- the effect of process variables, such as time, temperature and humidity on process stages
- the effect of yeast activity on the end product
- quality characteristics to be achieved by the final prove and baking process, including factors influencing crust formation and colour
- quality requirements of materials and effect of variation on final prove and baking process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the final prove and baking process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the final prove and baking process and the related procedures and recording requirements
- contamination/food safety risks associated with the final prove and baking process and related control measures
- batch/product changeover requirements
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the

REQUIRED SKILLS AND KNOWLEDGE

- limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the final prove and baking process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- product/process changeover procedures and responsibilities
- cleaning and sanitation procedures
- environmental issues and controls relevant to the final prove and baking process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for final proving and baking • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • final proving, baking and depanning process and related equipment and services • panned dough • dough transfer equipment • sampling schedules and test procedures and equipment as required • documentation and recording requirements and

EVIDENCE GUIDE	
	<p>procedures</p> <ul style="list-style-type: none"> • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • final provers and industrial ovens
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • steam • water • gas

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the divider, rounder, moulder and panning equipment and process for operation</p>	<p>1.1. Dough is confirmed and available to meet operating requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the dough make up process</p>	<p>2.1. The process is started and operated according to workplace procedures</p> <p>2.2. Equipment is monitored to identify variation in operating conditions</p> <p>2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.4. The process is monitored to confirm that dough pieces meet specifications</p> <p>2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.6. The work area is maintained according to housekeeping standards</p> <p>2.7. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.8. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the dough make up process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down and cleaned according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify dough make up processing requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that related equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm/set pre-start check, such as:
 - divider speed, weight setting and oil supply
 - air flow from fans in rounder
 - intermediate proving process airflow and dusting as required
 - moulding process settings, including sheeting, sealing board height and width, four piecing and roller adjustments
 - panning process settings, including side guides, sealing board, knives, folders and side belts
 - confirming supply of pans, oiling pans as required and setting pan stops and guides for panning unit
- start, operate, monitor and adjust process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - dough height in hopper
 - dough weight
 - oil flow to divider
 - size and shape of dough piece
 - skin formation during intermediate proof
 - presence of 'doubles'
 - process variables such as time, temperature and humidity
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- demonstrate batch/product changeovers

REQUIRED SKILLS AND KNOWLEDGE

- follow isolation and lock out/tag out procedures as required to take process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- clean and sanitise equipment
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each stage of the dough make up process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the dough make up process and the effect of outputs on downstream processes
- the effect of process variables, such as time, temperature and humidity on process stages
- the effect of process stages, such as moulding on dough structure
- quality characteristics to be achieved by the dough make up process
- quality requirements of materials and effect of variation on the dough make up process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, including procedures for rework addition
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the dough make up process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the dough make up process and the related procedures and recording requirements
- contamination/food safety risks associated with the dough make up process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls

REQUIRED SKILLS AND KNOWLEDGE

- requirements of different shutdowns as appropriate to the dough make up process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- cleaning methods and procedures
- isolation, lock out and tag out procedures and responsibilities
- cleaning and sanitation procedures
- product/process changeover procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the dough make up process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for making up dough
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- dough make up process and related equipment and services
- dough transfer equipment
- dough to be processed
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements of GMP related to own work	1.1. Sources of information on GMP requirements are located 1.2. GMP requirements and responsibilities related to own work are identified
2. Observe personal hygiene and conduct to meet GMP requirements	2.1. Personal hygiene meets GMP requirements 2.2. Clothing is prepared, used, stored and disposed of according to GMP and workplace procedures 2.3. Personal movement around the workplace complies with area entry and exit procedures
3. Follow GMP requirements when carrying out work activities	3.1. GMP requirements are identified 3.2. Work area, materials, equipment and product are routinely monitored to ensure compliance with GMP requirements 3.3. Raw materials, product and packaging components are handled according to GMP and workplace procedures 3.4. Contamination is identified and appropriate control measures are followed relating to work responsibilities and according to GMP requirements 3.5. Processes, practices or conditions which are not consistent with GMP are identified and reported according to workplace reporting procedure 3.6. The workplace is maintained in a clean and tidy order to meet GMP housekeeping standards 3.7. Work is conducted in accordance with workplace environmental guidelines
4. Complete workplace documentation to support GMP	4.1. Documentation and recording requirements are identified 4.2. Information is recorded according to workplace reporting procedures to meet GMP requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- locate and follow workplace information relating to GMP responsibilities
- maintain personal hygiene consistent with GMP
- follow workplace procedures when moving around the workplace and/or from one task to another to maintain GMP
- use, store and dispose of appropriate clothing/footwear as required by work tasks and consistent with GMP
- carry out relevant checks and inspections as required, such as visual checks and inspections on equipment and/or raw materials, product, packaging components and processing conditions relevant to own work
- identify and respond to out-of-specification or unacceptable conditions or performance, such as making adjustments within level of responsibility and/or reporting
- follow GMP when carrying out work functions
- identify and report situations that do or could compromise GMP
- handle and/or dispose of out-of-specification or contaminated materials, packaging components/consumables and product, waste and recyclable material according to GMP as required by work responsibilities
- maintain the work area in a clean and tidy state
- identify and report signs of pest infestation
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the role of GMP in preventing contamination, its relationship to legislative responsibilities and potential implications of non-compliance
- the relationship between the Code of GMP and workplace procedures, systems and processes
- GMP personnel and their respective responsibilities
- personal role, responsibility and accountability for implementing GMP
- sources of advice on GMP requirements for own work
- personal clothing and footwear requirements for working in and/or moving between work areas

REQUIRED SKILLS AND KNOWLEDGE

- personal clothing use, storage and disposal requirements
- common types and sources of contamination that occur in the work area
- control methods and procedures used in the work area to maintain GMP, including an understanding of the purpose of control, the consequence if not controlled and the method of control where relevant
- monitoring, inspection and checking procedures relating to process control requirements
- standards for materials, equipment and utensils used in the work area
- evidence of out-of-standard or unacceptable performance
- action required in the event of non-compliance
- storage and handling requirements for raw materials, packaging components and product relevant to work role
- housekeeping requirements and responsibilities relating to own work, where relevant this includes use and storage of housekeeping/cleaning equipment
- waste collection, recycling and handling procedures relevant to own work responsibilities
- responsibilities for reporting and recording quality information

The workplace is maintained in a clean and tidy order to meet GMP housekeeping standards 3.6. Work is conducted in accordance with workplace environmental guidelines 3.7. Out-of-specification or contaminated materials, packaging components/consumables and product, waste and recyclable materials are handled and disposed of according to GMP requirements and workplace procedures 3.8. Signs of unacceptable plant or equipment condition are identified and reported
4. Participate in improving GMP	4.1. Processes, practices or conditions which could result in non-compliance with GMP are identified and reported according to workplace reporting requirements 4.2. Corrective action is implemented within level of responsibility 4.3. GMP issues are raised with designated personnel
5. Complete workplace documentation to	5.1. Documentation and recording requirements are identified

ELEMENT	PERFORMANCE CRITERIA
support GMP	5.2. Information is recorded according to workplace reporting procedures to meet GMP requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- locate and follow workplace information relating to GMP responsibilities
- identify and report situations that do or could compromise GMP
- participate in procedures to support GMP within level of responsibility
- identify and respond to out-of-specification or unacceptable raw materials, packaging components, final or part processed product within level of responsibility
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the role of GMP in preventing contamination, its relationship to legal requirements of pharmaceutical manufacturers and potential implications of non-compliance
- GMP arrangements in the workplace, including relevant GMP codes of practice and related workplace policies and procedures to implement these responsibilities
- the relationship between GMP and the quality system, personnel responsible for designing and managing GMP, personal role to maintain GMP, and the role of internal and external auditors as appropriate
- procedures followed to investigate contamination events and performance improvement processes
- personal clothing and footwear requirements for working in and/or moving between work areas
- personal clothing use, storage and disposal requirements
- awareness of common micro-biological, physical and chemical contaminants relevant to the work process, including the types of contamination likely to occur, such as cross-contamination, the conditions under which they occur, possible consequences and control methods to prevent occurrence
- basic concepts of quality assurance, including quality specifications, operating parameters, validation procedures and control methods, and related documentation, including standard operating procedures (SOPs) and/or batch instructions
- control methods and procedures used in the work area to maintain GMP, including an understanding of the purpose of control, the consequence if not controlled and the method of control where relevant, as well as an understanding of the methods used to monitor process control

REQUIRED SKILLS AND KNOWLEDGE

- basic understanding of the properties, handling and storage requirements of raw materials, packaging components and final product handled and used
- standards for materials, equipment and utensils used in the work area
- procedures for responding to out-of-specification or unacceptable performance/outcomes
- purpose of keeping records and the recording requirements of GMP, including product and materials traceability procedures
- housekeeping requirements and responsibilities relating to own work, and use and storage of housekeeping/cleaning equipment where relevant
- waste collection, recycling and handling procedures relevant to own work responsibilities
- responsibilities for reporting and recording quality information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment may occur in a real or simulated pharmaceutical or complementary medicine manufacturing workplace where the assessment environment provides access to workplace documentation related to GMP together with a range of commercial production/packaging equipment and activities typical of commercial manufacturing businesses and that meet the requirements of the Therapeutic Goods Act.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>GMP is an ongoing and routine aspect of work responsibilities. Assessors should collect sufficient evidence to ensure that the skills and knowledge of this unit are routinely applied to the work environment.</p> <p>Assessment must require the candidate to identify and demonstrate responsibilities for implementation of GMP in the workplace.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessment of this unit would typically involve questioning and workplace observation. It may involve additional collection of evidence from a range of sources, such as third party reports, workplace documentation relating to GMP and real or simulated workplace contexts.</p>
<p>Method of assessment</p>	<p>This unit is a core requirement for all pharmaceutical operators at AQF 2 and could be assessed concurrently with other operational units.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work activities are carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Unacceptable plant or equipment condition	<p>Unacceptable plant or equipment condition can include:</p> <ul style="list-style-type: none"> • damage to plant or equipment • failure of cleaning regime • signs of pest infestation
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • relevant GMP codes • the Therapeutic Goods Act • other legislation and codes relevant to product and market • legislation relating to environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the concentration equipment and process for operation	1.1. Materials and services are confirmed to meet production requirements 1.2. Workplace documentation relevant to work area activities is identified and followed 1.3. The required facilities, storage, equipment and personnel are available 1.4. Line clearance procedures have been carried out 1.5. Procedures to eliminate or control the risk of cross-contamination are followed 1.6. The concentration process is set up and started up in accordance with workplace practices
2. Operate and monitor the concentration process	2.1. The concentration process is monitored to confirm that specifications are met 2.2. Out-of-specification product/process is identified, rectified and/or reported to maintain the process within specification 2.3. The work area is maintained according to housekeeping standards 2.4. Work is conducted according to environmental standards 2.5. Workplace documentation is maintained according to workplace reporting requirements
3. Shut down the concentration process	3.1. The process is shut down according to workplace procedures and practices 3.2. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- select, fit and use personal protective clothing and/or equipment
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and turning on oil pumps to the evaporator, and pre-running equipment in line with operating temperature requirements where required
- start, operate, monitor and adjust process to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - product and machine temperature
 - vacuum
 - distillate colour
 - viscosity of concentrate
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- demonstrate batch/product changeovers including line clearance procedures
- clean and sanitise equipment as required
- sort, collect, treat, recycle or dispose of waste
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and principles of each stage of the concentration process, including the effect of heat and vacuum on distillate volume
- basic operating principles of the equipment, such as main equipment components and equipment operating capacities and applications
- services required and action to take if services are not available
- quality requirements of materials and the effect of variation on the concentration process

REQUIRED SKILLS AND KNOWLEDGE

- process specifications, procedures and operating parameters for different products/materials
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the concentration process, such as inspecting, measuring and testing as required by the process, and the ability to calculate yields and determine the number of passes required to ensure concentration is within specification
- contamination/food safety risks associated with the concentration process
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the risks involved with the use of solvents such as ethanol, and the limitations of protective clothing and equipment used
- concentration process shut down procedures and responsibilities
- line clearance procedures, including procedures for cleaning feed lines
- environmental issues and controls relevant to the concentration process, including waste collection and handling procedures related to the process
- cleaning and sanitation procedures
- workplace documentation and authorisation procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment may occur in a real or simulated workplace. Where a simulated environment is used, it should provide access to workplace documentation, plus liquid extracts to be concentrated, concentration equipment and services.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare the concentration process for operation, including following line clearance procedures • start up, operate and monitor equipment to produce concentrate within specifications • maintain all necessary records.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • workplace documentation relating to concentration process and procedures.
<p>Method of assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessment of this unit would typically involve observation of the operator preparing, operating and shutting down the concentration process to meet production requirements. Observation should be sufficient to confirm consistent performance.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work activities are carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Workplace documentation	Workplace documentation relevant to work area activities include: <ul style="list-style-type: none"> • specifications • manufacturing formulae • processing instructions • batch production records • standard operating procedures (SOPs) • OHS information including material safety data sheets (MSDS)
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> • legislative and licensing requirements • Therapeutic Goods Act • weights and measures legislation • legislation relating to OHS, environmental management, equal opportunity and affirmative action, industrial awards and agreements
Materials	Materials include: <ul style="list-style-type: none"> • feed liquor/liquids products • ethanol • distillate • water
Equipment	Equipment may include: <ul style="list-style-type: none"> • centrifugal evaporator and collecting vessels (the evaporator may or may not be in line with

RANGE STATEMENT	
	heat exchanger) Service equipment also includes: <ul style="list-style-type: none"> • boilers and cooling towers
Cleaning and sanitation	Cleaning and sanitation procedures may include: <ul style="list-style-type: none"> • cleaning in place procedures for cleaning equipment, involving cleaning with remaining distillate, rinsing with water, caustic cleaning and rinsing with water till machine is neutralised

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the extraction equipment and process for operation	1.1. Materials are confirmed, blended and prepared to meet production requirements 1.2. Workplace documentation relevant to work area activities is identified and followed 1.3. The required facilities, storage, equipment and personnel are available 1.4. Line clearance procedures have been carried out 1.5. Procedures to eliminate or control the risk of cross-contamination are followed 1.6. Material is loaded into percolator and solvents are added to specification
2. Operate and monitor the extraction process	2.1. The extraction process is monitored to confirm that specifications are met 2.2. Out-of-specification product/process is identified, rectified and/or reported to maintain the process within specification 2.3. The work area is maintained according to housekeeping standards 2.4. Work is conducted according to environmental standards 2.5. Workplace documentation is maintained according to workplace reporting requirements
3. Shut down the extraction process	3.1. The process is shut down according to workplace procedures and work practices 3.2. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- select, fit and use personal protective clothing and/or equipment
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and placing sand filters/scourers in base of percolators where required
- start, operate, monitor and adjust process to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - density of herbs in percolator, including re-packing of percolator as required
 - rate/amount of solvent addition
 - extract collection and yield
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- demonstrate batch/product changeovers including line clearance procedures
- sort, collect, treat, recycle or dispose of waste
- clean and sanitise equipment as required as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and principles of each stage of the extraction process, including the effect of herb density on filtration and packing process required for different types of herbs
- basic operating principles of equipment, including main equipment components and equipment operating capacities and applications
- quality requirements of materials and the effect of variation on the extraction process
- process specifications, procedures and operating parameters for different products/materials

REQUIRED SKILLS AND KNOWLEDGE

- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the extraction process, such as inspecting, measuring and testing as required by the process, and the ability to calculate yields
- contamination/food safety risks associated with the extraction process
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the risks involved with the use of solvents, such as ethanol, and the limitations of protective clothing and equipment used
- extraction process shutdown and changeover procedures and responsibilities
- environmental issues and controls relevant to the extraction process, including waste collection and handling procedures related to the process
- cleaning and sanitation procedures
- workplace documentation and authorisation procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the chromatography equipment for operation	1.1. Workplace documentation relevant to work area activities is identified and followed 1.2. Equipment is cleaned, assembled and adjusted to meet operational requirements 1.3. Equipment components and related instrumentation are set to meet production requirements 1.4. Column status is checked and ready for operation 1.5. Pre-start checks are carried out as required by work practices 1.6. Equipment status reports are completed as required by workplace system
2. Prepare the samples and load product	2.1. Pre-sampling tests are conducted according to test method to confirm column operation 2.2. Tests results are interpreted 2.3. Out-of-specification results are identified, investigated to identify cause and reported according to workplace procedures 2.4. Product is loaded into columns
3. Operate and monitor the column operation	3.1. The process is started and operated according to work practices 3.2. Equipment is monitored to confirm that process cycles occur in the correct sequence 3.3. Variation in equipment operation and process outcomes is identified and promptly reported according to workplace reporting procedures 3.4. Separation of solution meets specifications 3.5. Workplace documentation is maintained according to workplace reporting requirements 3.6. Work is conducted in accordance with workplace environmental guidelines
4. Shut down the column process	4.1. The process is shut down according to workplace procedures 4.2. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- select, fit and use personal protective clothing and/or equipment, including gowning up, following required work area entry and exit procedures and moving around the work area to minimise risk of contamination
- prepare equipment for operation, such as inspecting equipment condition to identify any signs of wear, disinfecting and sterilising equipment and surfaces, assembling columns, confirming that connections and valves are correctly positioned, ensuring column lines have been purged and all safety guards are in place and operational, selecting instrumentation settings, cancelling isolation or lock outs as required, and conducting pre-start checks to check equipment readiness
- carry out sample testing to confirm integrity of columns (this is typically done by conducting a Height Equivalent to Theoretical Plate (HETP) test)
- demonstrate procedure for loading/packing product into columns
- start, operate, and monitor the process to achieve required outcomes, including monitoring:
 - chromatography cycles
 - correct collection of fractions as required
 - appropriate product segregation
 - pump operation
- take corrective action in response to out-of-specification results
- maintain security, integrity and traceability of samples, sub-samples and documentation
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process and related equipment off line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate product/process changeovers, including demonstrating column storage procedures
- follow end of batch procedures including line clearance and cleaning, yield calculation, materials reconciliation and product labelling
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and principles of chromatography, including process, purpose and methods used for analysis and preparation
- basic operating principles of chromatography equipment, such as main equipment components, consequences of incorrect equipment preparation (i.e. incorrectly positioned non-return valve, supply pump failure and air in the column)
- quality characteristics and legal requirements to be achieved by the separation process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- sample test methods and action required if results are out-of-specification (i.e. action required if the HETP fails)
- procedures to collect fractions as appropriate to columns and process requirements
- procedures to identify traces as required and corrective action where traces are not within specification
- typical profile for a product cycle and the events to be monitored during the cycle
- procedures used to ensure product segregation
- analysis and interpretation of relevant test results and implications for action required
- GMP/Good Laboratory Practice (GLP) requirements associated with chromatography process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment used
- procedures and requirements of different shutdowns, including an understanding of the requirements for column storage, emergency and routine shutdowns and procedures to follow in the event of power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibilities for reporting production and performance information

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • perform sample testing to confirm integrity of columns • start up, operate and monitor chromatography process to ensure separation of solutions to meet specifications • maintain all necessary records.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • workplace documentation relating to separation process and procedures • chromatography equipment • typical range of samples to be tested • personal protective clothing and equipment • work procedures including advice on safe work practices, food safety, quality and environmental requirements.
Method of assessment	Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment. Assessment of this unit would typically involve observation of the operator preparing, operating and shutting down the separation process to meet production requirements. Observation should be sufficient to confirm consistent performance.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of

EVIDENCE GUIDE	
	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work activities are carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements

Legislative requirements

Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:

- legislative and licensing requirements
- Therapeutic Goods Act
- weights and measures legislation
- legislation relating to OHS, environmental management, equal opportunity and affirmative action, industrial awards and agreements

Workplace documentation

Workplace documentation relevant to work area activities include:

- specifications
- manufacturing formulae
- processing instructions
- batch production records
- standard operating procedures (SOPs)
- OHS information including material safety data sheets (MSDS)

Equipment

Chromatography equipment includes:

- columns
- flow meters
- UV meters
- filters and air sensors

Methods may include:

- ion exchange
- gel filtration

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the filling and sealing equipment and process for operation	1.1. Materials and packaging components/consumables are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the filling and sealing process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Packaging quality and seal integrity are monitored to confirm that specifications are met 2.5. Out-of-specification process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Spillages are reported and removed according to standard operating procedures 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the filling and sealing process	3.1. End-of-batch procedures are completed in accordance with batch instructions and standard operating procedures (SOPs) 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment, including gowning up, following required work area entry and exit procedures and moving around the work area to minimise risk of contamination
- confirm supply of necessary packaging components/consumables and product
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, disinfecting and sterilising equipment and surfaces, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for packaging requirements, ensuring packaging components/consumables are loaded, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the filling and sealing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - flow rates
 - weights and volumes
 - fill levels
 - temperature, including materials and sealing temperatures
 - supply of packaging components/consumables
 - packaging quality and seal integrity, and where required, testing packaging integrity
- take corrective action in response to out-of-specification results
- monitor supply and flow of materials to and from the process
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take filling and sealing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate product/process changeovers
- follow end of batch procedures including line clearance and cleaning, yield calculation, materials reconciliation and product labelling
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- collect samples and conduct tests according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of filling and sealing, including properties of packaging materials used, the principles of heat sterilisation and its effect on microbiological characteristics of the product and packaging materials, and the filling process (methods may require exclusion of air using inert gas, such as nitrogen and filling under vacuum)
- aseptic container preparation, handling and loading
- basic operating principles of aseptic filling and sealing equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and services required for operation of filling equipment used in the workplace
- quality characteristics and legal requirements to be achieved by the filling and sealing process, such as quality requirements of packaging components/consumables, sterilisation requirements and procedures, filling (fill levels and weights), requirements of seal formation and integrity, and where relevant, understanding integrity testing procedures
- the flow of processes supplying the filling and sealing process and the effect of outputs on downstream processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- Good Manufacturing Practice (GMP) requirements associated with the liquid manufacturing process and related control measures
- common causes of variation and corrective action required, including the effect of variation in both product and packaging components/consumables on filling and sealing performance, e.g. it may include an understanding of the effect of temperature variation on the filling process
- product/packaging changeover procedures
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process

REQUIRED SKILLS AND KNOWLEDGE

- end-of-batch procedures, including procedures for calculating yield, materials reconciliation and action required if yield/reconciliation is not within prescribed limits, and product labelling responsibilities and procedures
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the filling and sealing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing procedures where relevant
- routine maintenance procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on equipment used for filling and sealing • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply GMP principles and procedures to work practices • maintain standards of a clean room work environment.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, GMP, quality and environmental requirements, stock flow systems and production/packaging schedules • information on equipment capacity and operating parameters • specifications, control points and operating parameters • aseptic filling and sealing process and related equipment and services • materials and packaging components and consumables • product

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • relevant Good Manufacturing Practice (GMP) codes • the Therapeutic Goods Act and/or other relevant legislation • legislation covering environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • SOPs • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Filling and sealing equipment	<p>Filling and sealing equipment may include:</p> <ul style="list-style-type: none"> • pumps • aseptic fillers • hermetic sealers • aseptic packaging
Sterilisation methods	<p>Sterilisation methods used may include:</p> <ul style="list-style-type: none"> • use of heat (dry and steam) • chemicals (gases and liquids) • gamma irradiation • filtration

RANGE STATEMENT	
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services are appropriate to the process to be operated. Typical examples include: <ul style="list-style-type: none"> power steam water vacuum compressed and instrumentation air

Co-requisite units

Co-requisite units	

FDFPH2006A Operate an aseptic form, fill and seal process

Modification History

September 2012: clarified pre-requisite information.

Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down an aseptic form, fill and seal process. This is a primary packaging process to package product into appropriate packaging.</p> <p>This unit is based on and equivalent to FDFOP2020A Operate a form, fill and seal process.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in an aseptic packaging process within a graded clean room environment.</p> <p>Where bottles are formed as part of this process, also refer to PMBPROD211A Operate blow moulding equipment, and PMBPROD270A Operate injection blow moulding equipment.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out, FDFOP2011A Conduct routine maintenance, should be considered.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFOP2032 A	Work in a clean room environment* <i>FDFFS2001A Implement the food safety program and procedures</i> <i>FDFPH2001A Apply Good Manufacturing Practice procedures</i>

Employability Skills Information

Employability skills	This unit contains employability skills.

The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment, including gowning up, following required work area entry and exit procedures and moving around the work area to minimise risk of contamination
- confirm supply of necessary packaging components/consumables and product
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, disinfecting and sterilising equipment and surfaces, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for packaging requirements, packaging components/consumables are loaded, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the forming, filling and sealing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - container formation
 - flow rates
 - weights and volumes
 - fill levels
 - temperature, including materials and sealing temperatures
 - supply of packaging components/consumables
 - packaging quality and seal integrity, and where required, testing packaging integrity
- take corrective action in response to out-of-specification results
- monitor supply and flow of materials to and from the process
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take forming, filling and sealing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate product/process changeovers
- follow end-of-batch procedures, including line clearance and cleaning, yield calculation, materials reconciliation and product labelling
- complete workplace records as required

REQUIRED SKILLS AND KNOWLEDGE

- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of forming, filling and sealing, including the properties of packaging materials used, the forming process, and principles of heat sterilisation and its effect on microbiological characteristics of the product and packaging materials
- aseptic container preparation/forming, filling and sealing requirements
- basic operating principles of aseptic forming, filling and sealing equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and services required for operation of form, fill and seal equipment used in the workplace
- quality characteristics and legal requirements to be achieved by the forming, filling and sealing process, such as understanding quality requirements of packaging components/consumables, sterilisation requirements and procedures, container formation, filling (fill levels and weights), requirements of seal formation and integrity, and where relevant, integrity testing procedures
- the flow of processes supplying the forming, filling and sealing process and the effect of process output on downstream processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- Good Manufacturing Practice (GMP) requirements associated with the liquid manufacturing process and related control measures
- common causes of variation and corrective action required, including an understanding of the effect of variation in both product and packaging components/consumables on filling and sealing performance, e.g. it may include an understanding of the effect of temperature variation on the filling process
- product/packaging changeover procedures
- occupational health and safety (OHS) hazards and controls, including the

REQUIRED SKILLS AND KNOWLEDGE

- limitations of protective clothing and equipment relevant to the work process
- end-of-batch procedures, including procedures for calculating yield, materials reconciliation and action required if yield/reconciliation is not within prescribed limits, and product labelling responsibilities and procedures
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the forming, filling and sealing process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing procedures where relevant
- routine maintenance procedures where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive labels	1.1. Label details are identified and verified 1.2. The quantity of labels received is counted and reconciled against receipts documentation 1.3. Discrepancies are identified, investigated and reported
2. Issue and reconcile labels	2.1. Labels are located/created to meet batch requirements 2.2. Labels are issued in correct quantities to meet batch requirements 2.3. Labels returned to store are received, reconciled and recorded according to verification and reconciliation procedures 2.4. Records are maintained to meet workplace and legislative requirements 2.5. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- follow receivals procedures to receive, count and store labels
- access production schedule to identify label requirements
- carry out procedures to test accuracy of label counting machines and record results
- verify that label information meets batch type, including setting up and using label counting equipment
- demonstrate the procedure for removing and accounting for damaged or other non-conforming labels
- select and issue labels to meet batch requirements and documentation
- demonstrate procedures to receive labels issued and returned from production
- conduct reconciliations of labels received and issued and conduct backup verification as required
- maintain security of label store
- maintain work area to meet housekeeping standards
- operate label coding and printing equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- system of label control, including the purpose and procedures for receiving, issuing, reconciling and verifying label management
- legislative responsibilities relating to label management
- purpose and requirements of security procedures and responsibilities
- types of labels received and issued and significance of codes
- consequences of issuing incorrect labels
- procedures for setting up, testing and operating label store equipment, including label counting equipment
- corrective action required if a discrepancy is identified
- occupational health and safety (OHS) hazards associated with the work role
- procedures and responsibility for recording and reporting information
- operating procedures for label coding and printing equipment where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the compressing process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the compressing process	2.1. The compressing process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that tablet product meets specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to environmental standards 2.8. Spillages are reported and removed according to standard operating procedures 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the compressing process	3.1. End-of-batch procedures are completed in accordance with batch instructions and standard operating procedures (SOPs) 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

Required knowledge

Knowledge of:

- purpose and basic principles of the compressing process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- purpose and characteristics of ingredients/raw materials used and their role in the tablet
- types of raw materials used in the encapsulation process and related handling/segregation requirements, including handling hazardous goods
- stages and changes which occur during compression
- quality characteristics and legal requirements to be achieved by the compressed tablet
- the flow of the compressing process and the effect of outputs on downstream pharmaceutical processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the compressing process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- Good Manufacturing Practice (GMP) requirements associated with the compressing process and related control measures
- common causes of variation and corrective action required
- product/process changeover procedures and responsibilities
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- end-of-batch procedures, including procedures for calculating yield, materials reconciliation and action required if yield/reconciliation are not within prescribed limits, and product labelling responsibilities and procedures
- requirements of different shutdowns as appropriate to the compressing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the compressing process, including waste collection and handling procedures related to the process

Required knowledge

- | |
|--|
| <ul style="list-style-type: none">• basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment• sampling and testing associated with process monitoring and control where relevant• routine maintenance procedures where relevant |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on equipment used for compressing
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, GMP, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- compressing process and related equipment and services
- materials required for the compressing process
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures, including labels
- cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • relevant Good Manufacturing Practice (GMP) codes, • the Therapeutic Goods Act and/or other relevant legislation, and • legislation covering environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • SOPs • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Compressing equipment and accessories	<p>Compressing equipment and accessories may include:</p> <ul style="list-style-type: none"> • single punch compressors • rotary compressors • punches • dies
Stock	Stock for the process is supplied from the granulation process and the dispensing process
Raw materials/ingredients	Raw materials/ingredients which are added to the granulated product may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • diluents • adhesives/binders • disintegrants • glidants • lubricants • fillers • colourants • flavouring agents
In-process tests	<p>In-process tests may include:</p> <ul style="list-style-type: none"> • appearance • hardness • friability • disintegration • weight • dimensions
Work	<p>Work may involve:</p> <ul style="list-style-type: none"> • exposure to dangerous and hazardous substances
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • steam • water • vacuum • gases • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to dispense raw materials	1.1. Materials are inspected to confirm type, quality clearance, quantities and identify any obvious contamination or non-compliance 1.2. Measuring and weighing equipment is selected appropriate to dispensing requirements and checked to confirm readiness for use 1.3. Containers/bags and labels are available as required 1.4. Pre-start checks are carried out as required by workplace requirements
2. Measure and/or weigh raw materials	2.1. Non-bulk ingredients and additives are weighed/measured to meet production requirements 2.2. Dispensed ingredients are labelled according to workplace procedure 2.3. Accuracy of measuring/dispensing equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The work area is maintained according to housekeeping standards 2.6. Work is conducted in accordance with workplace environmental guidelines
3. Shut down the dispensing process	3.1. Dispensing equipment is cleaned according to workplace procedure 3.2. Unacceptable equipment/utensil condition is identified and reported 3.3. Dispensed materials are recorded and reconciled 3.4. Maintenance requirements are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify dispensing requirements
- select, fit and use personal protective clothing and/or equipment, such as breathing apparatus and fume cabinets as required
- confirm supply of necessary raw materials, such as checking raw material labels and codes, quantity and quality clearance
- conduct pre-start checks on equipment, such as inspecting the condition and cleanliness of equipment and utensils, taring scales and carrying out any related procedures to confirm that equipment is accurately calibrated and fit for use
- measure materials and additives within specified accuracy range to meet batch requirements
- calculate assay/potency adjustment
- verify accuracy of raw materials dispensed with raw materials records
- take corrective action in response to out-of-specification results
- pace dispensing to meet production requirements
- pack and label dispensed materials as required
- follow labelling procedures
- reconcile and record materials dispensed against materials released and return unused materials to storage as required
- stack dispensed materials for transfer to designated location ensuring required material segregation
- handle containers according to workplace procedures to maintain integrity of materials
- clean dispensing equipment and utensils according to workplace procedures
- respond to and/or report equipment failure within level of responsibility
- complete dispensing records as required by workplace recording system
- maintain work area to meet housekeeping standards
- collect samples and conduct test according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the dispensing process, including the characteristics

REQUIRED SKILLS AND KNOWLEDGE

- of raw materials and related handling requirements
- dangerous goods handling requirements and procedures
- relevant legislative responsibilities and workplace systems for recording information on dispensed pharmaceutical materials and related workplace coding and labelling systems and purpose
- the relationship between the dispensing process and related operations, including an understanding of accuracy/tolerance and consequence of error
- purpose, measuring/accuracy capacity of instrumentation and related equipment calibration responsibilities and procedures
- control points in the dispensing process
- procedures for calculating assay and adjusting potency
- raw materials reconciliation purpose and procedures, such as reconciliation of S8 materials
- GMP requirements associated with the dispensing process and related control measures
- procedures for requisitioning, receiving and returning ingredients from stores
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- cleaning, care and storage of equipment and instrumentation used
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the dispensing process, including waste/rework collection and handling procedures related to the process
- sampling and testing associated with process monitoring and control where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the encapsulation process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the encapsulation process	2.1. The encapsulation process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that capsules meet specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to environmental standards 2.8. Spillages are reported and removed according to standard operating procedures 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the encapsulation process	3.1. End-of-batch procedures are completed in accordance with batch instructions and standard operating procedures (SOPs) 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify production requirements for the encapsulation process
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services to the encapsulation process
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming line clearance and cleaning status and that equipment is correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- verify raw materials with batch instructions
- start, operate, monitor and adjust encapsulation process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - flow rates/quantity
 - product quality
- take corrective action in response to out-of-specification results, such as adjusting the flow rates
- monitor supply and flow of materials to and from the encapsulation process
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take encapsulation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- follow end-of-batch procedures, including line clearance and cleaning, yield calculation, materials reconciliation and product labelling
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the encapsulation process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- types of raw materials used in the encapsulation process and related handling/segregation requirements, such as handling hazardous goods
- stages and changes which occur during encapsulation
- quality characteristics and legal requirements to be achieved by the encapsulation process
- the flow of the encapsulation process and the effect of outputs on downstream pharmaceutical processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the encapsulation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the encapsulation process and the related procedures and recording requirements
- GMP requirements associated with the encapsulation process and related control measures
- common causes of variation and corrective action required
- product/process changeover procedures and responsibilities
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- end-of-batch procedures including procedures for calculating yield, materials reconciliation and action required if yield/reconciliation is not within prescribed limits, and product labelling responsibilities and procedures
- requirements of different shutdowns as appropriate to the encapsulation process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the encapsulation process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the granulation process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the granulation process	2.1. The granulation process is started up and operated according to workplace specifications 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that granulated product meets specifications 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to environmental standards 2.8. Spillages are reported and removed according to standard operating procedures (SOPs) 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the granulation process	3.1. End-of-batch procedures are completed in accordance with batch instructions and SOPs 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify production requirements for the granulation process
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming line clearance and cleaning status, ensuring equipment is correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- verify raw materials with batch instructions
- start, operate, monitor and adjust granulation process equipment to achieve required outcomes, including interpreting and implementing batch instructions, labelling product, calculating yield, monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - granule size
 - moisture content
- take corrective action in response to out-of-specification results
- monitor supply and flow of materials to and from the granulation process
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take granulation process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- follow end-of-batch procedures including line clearance and cleaning, yield calculation, materials reconciliation and product labelling
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the granulation process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- types of raw materials used in the granulation process and related handling/segregation requirements, such as handling hazardous goods
- stages and changes which occur during granulation
- quality characteristics and legal requirements to be achieved by the granulation process
- the flow of the granulation process and the effect of outputs on downstream pharmaceutical processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the granulation process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the granulation process and the related procedures and recording requirements
- Good Manufacturing Practice (GMP) requirements associated with the granulation process and related control measures
- common causes of variation and corrective action required
- product/process changeover procedures and responsibilities
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- end-of-batch procedures, including procedures for calculating yield, materials reconciliation and action required if yield/reconciliation is not within prescribed limits, and product labelling responsibilities and procedures
- requirements of different shutdowns as appropriate to the granulation process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the granulation process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the

<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on equipment used for granulation • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, GMP, SOPs and environmental requirements • information on equipment capacity and operating parameters • production schedule, batch instructions • specifications, control points and processing parameters • granulation process and related equipment and services • materials required for the granulation process • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> • relevant Good Manufacturing Practice (GMP) codes • the Therapeutic Goods Act and/or other relevant legislation • legislation covering environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	Workplace information may include: <ul style="list-style-type: none"> • SOPs • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Granulation	Granulation may be: <ul style="list-style-type: none"> • a dry or wet process or a combination
Granulation equipment	Granulation equipment may include: <ul style="list-style-type: none"> • granulators • mixers • blenders • dryers • oscillators • mills • sieves

RANGE STATEMENT	
Stock	Stock for the granulation process is supplied from the dispensing process and from bulk containers
Service	Services may include: <ul style="list-style-type: none"> • deionised/purified water
Work	Work may include: <ul style="list-style-type: none"> • exposure to dangerous and hazardous substances
Operation of equipment and processes	Operation of equipment and processes may require: <ul style="list-style-type: none"> • the use of process control panels and systems
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> • power • steam • water • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the liquid manufacturing process for operation	1.1. Materials are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements 1.4. Processing/operating parameters are entered as required to meet safety and production requirements 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the liquid manufacturing process	2.1. Raw materials are delivered to the process in the required quantities and sequence to meet recipe specifications 2.2. The process is started and operated according to workplace procedures 2.3. Equipment is monitored to identify variation in operating conditions 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The process is monitored to confirm that specifications are met 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. The liquid mix is transferred to the required production or storage location 2.8. Spillages are reported and removed according to standard operating procedures 2.9. The work area is maintained according to housekeeping and environmental standards 2.10. Workplace records are maintained according to workplace recording requirements
3. Shut down the liquid manufacturing process	3.1. End-of-batch procedures are completed in accordance with batch instructions and standard operating procedures (SOPs) 3.2. The process is shut down according to workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	3.3.Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify liquid manufacturing process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services to the liquid manufacturing process
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lockouts as required, confirming line clearance and cleaning status, ensuring equipment is correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- add/load materials in correct quantities and sequence, such as monitoring automatic ingredient addition and/or manual addition
- start, operate, monitor and adjust liquid manufacturing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification
- take corrective action in response to out-of-specification results
- monitor supply and flow of materials to and from the liquid manufacturing process
- pace the liquid manufacturing process to meet production requirements
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take liquid manufacturing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- follow end-of-batch procedures, including line clearance and cleaning, yield calculation, materials reconciliation and product labelling
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the liquid manufacturing process, including the characteristics and basic function of raw materials used, and method and sequence of addition required to achieve required mix characteristics, and where required, the characteristics of solutions, suspensions and emulsions
- basic understanding of specific gravity and bulk density as appropriate for ingredients used
- basic operating principles of liquid manufacturing equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, the purpose and location of sensors and related feedback instrumentation, and awareness of calibration schedules for scales and related weighing/measuring equipment
- services required and action to take if services are not available
- stages and changes which occur during liquid manufacturing
- quality characteristics and legal requirements to be achieved by the liquid manufacturing process
- the flow of the liquid manufacturing process and the effect of outputs on downstream pharmaceutical processes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the liquid manufacturing process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the liquid manufacturing process and the related procedures and recording requirements, including monitoring:
 - flow rates
 - materials addition sequence
 - times/temperatures and agitator speeds
 - required characteristics of manufactured liquid
- GMP requirements associated with the liquid manufacturing process and related control measures
- common causes of variation and corrective action required
- product/process changeover procedures and responsibilities
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- end-of-batch procedures, including procedures for calculating yield, materials reconciliation and action required if yield/reconciliation is not within prescribed limits, and product labelling responsibilities and procedures
- requirements of different shutdowns as appropriate to the liquid manufacturing

REQUIRED SKILLS AND KNOWLEDGE

- process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- line clearance, cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the liquid manufacturing process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with process monitoring and control where relevant
- routine maintenance procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on equipment used for liquid manufacturing process
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, GMP, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- liquid manufacturing process and related equipment and services
- materials required for the liquid manufacturing process
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures

3. Shut down the tablet coating process	3.1. End-of-batch procedures are completed in accordance with batch instructions and SOPs 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify tablet coating process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary tablets, coating materials and services to the tablet coating process
- prepare coating materials according to specification
- conduct pre-start checks on coating application equipment, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming line clearance and cleaning status, ensuring equipment is correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust the tablet coating process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - pan preparation/coating
 - coating addition rate
 - addition/dosing of materials
 - drying air temperature and flow
 - addition of polishing agent/gum as required
- take corrective action in response to out-of-specification results
- monitor supply and flow of materials to and from the tablet coating process
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take the tablet coating process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the equipment and process for operation	1.1. Items to be sterilised are confirmed and prepared 1.2. The autoclave is prepared for operation 1.3. Operating parameters are selected as required to meet safety and terminal sterilisation requirements 1.4. Pre-start checks are carried out as required by workplace requirements 1.5. Items are loaded according to load pattern
2. Operate the autoclave to terminally sterilise items	2.1. The autoclave is started and operated according to workplace procedures 2.2. Time and temperature parameters are monitored to confirm requirements are met 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Workplace records are maintained according to workplace recording requirements 2.5. Work is conducted in accordance with workplace environmental guidelines
3. Remove items and follow shut down procedures	3.1. Items are removed from the autoclave according to workplace procedures 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify sterilisation requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare items by wrapping and marking with temperature-sensitive tape/material and ensure clothing is folded correctly
- load items according to loading pattern
- conduct pre-start checks on the autoclave, such as inspecting equipment condition to confirm that all water has been drained, pulling a vacuum to remove as much air as possible from the autoclave, selecting appropriate settings to meet sterilisation requirements, cancelling isolation or lock outs as required, confirming that equipment is clean and operational, positioning sensors and controls correctly, and ensuring all safety guards/signs are in place and operational
- start, operate and monitor the autoclave to confirm that the required outcomes are achieved, such as monitoring time, temperature and pressure gauges
- identify out-of-specification results and take appropriate corrective action within level of responsibility
- follow procedures to open autoclave and remove items from the autoclave to maintain sterility and personal safety
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take process off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of terminal sterilisation, including principles of heat

REQUIRED SKILLS AND KNOWLEDGE

- transfer, properties of saturated steam, and the relationship between time, temperature and pressure as they affect the kill rate
- the nature of items to be sterilised using an autoclave and related preparation requirements, such as handling/preparation requirements for porous and non-porous loads
 - the nature of wrapping materials suitable for use, the methods used to wrap items, methods used to monitor that time/temperature parameters are met - typically heat-sensitive tape or markers and the significance of loading patterns in achieving effective sterilisation
 - basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation, and where relevant, the calibration schedule and procedures to confirm that instruments are within calibration
 - services required and action to take if services are not available
 - time/temperature parameters required to achieve terminal sterilisation and corrective action required where operation is outside specified operating parameters
 - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
 - methods used to monitor the sterilisation process, such as inspecting, measuring and testing as required
 - inspection or test points (control points) and the related procedures and recording requirements
 - possible causes of variation in outcome and corrective action required
 - occupational health and safety (OHS) hazards related to autoclave operation and associated control measures, such as working with superheated steam and around hot surfaces, manual handling and steam leaks
 - purpose and limitations of protective clothing and equipment
 - emergency and routine shutdown procedures and procedures to follow in the event of a power outage
 - isolation, lock out and tag out procedures and responsibilities
 - procedures and responsibility for recording and reporting information on autoclave performance
 - environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
 - basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
 - sampling and testing associated with process monitoring and control where relevant
 - routine maintenance procedures where relevant
 - cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on autoclave and materials to be sterilised • start, operate, monitor and adjust autoclave to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment and remove items • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, GMP, quality and environmental requirements • information on equipment capacity and operating parameters • sterilisation schedule/instructions • specifications, control points and processing parameters • autoclave equipment and services • wrapping materials and tape/heat sensitive markers as required • items to be sterilised • materials handling equipment as required • sampling schedules and test procedures and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • relevant Good Manufacturing Practice (GMP) codes • the Therapeutic Goods Act and/or other relevant legislation • legislation covering environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Materials	<p>Materials include:</p> <ul style="list-style-type: none"> • wrapping material • printed paper rolls • temperature-sensitive tape or other indicator
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of simple control panels
Services	<p>Services may need to be confirmed. Typical examples include:</p> <ul style="list-style-type: none"> • power

RANGE STATEMENT

	<ul style="list-style-type: none"> • steam • water • vacuum and compressed air

Co-requisite units

Co-requisite units		

FDFPH3001A Monitor and maintain Good Manufacturing Practice procedures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to provide a leadership role in supporting day-to-day implementation of Good Manufacturing Practices (GMP) in a work area. It also involves supporting others to implement the requirements of GMP.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to those with formal responsibility for others and to those required to model workplace policies and procedures but who have no formal management role.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure others in the work area are able to meet GMP requirements	1.1. Relevant clothing and equipment appropriate to work requirements is available, functional and correctly fitted 1.2. Advice on GMP responsibilities and procedures is accessible and clearly explained 1.3. GMP control measures used in the work area can be identified by those in the work area 1.4. Mentoring and coaching support is available to support individuals/groups to implement GMP and related procedures 1.5. Training needs are identified and addressed within level of responsibility
2. Monitor personal hygiene and conduct of team members in the work area	2.1. Personal hygiene of work team meets GMP requirements 2.2. Clothing is prepared, used, stored and disposed of according to GMP and workplace procedures 2.3. Personal movement around the workplace complies with area entry and exit procedures
3. Monitor implementation of GMP requirements in the work area	3.1. GMP procedures in the work area are clearly defined, documented and followed 3.2. Non-compliance from identified procedures is reported and addressed within level of responsibility 3.3. Signs of unacceptable plant or equipment condition are identified and reported 3.4. Personal behaviour provides a role model to others to support implementation of GMP workplace policies and procedures 3.5. Workplace procedures to control resource allocation are followed to meet GMP requirements 3.6. GMP non-conformance is identified and reported according to workplace procedure 3.7. GMP information is recorded to meet workplace reporting requirements 3.8. The workplace is maintained in a clean and tidy order to meet GMP housekeeping standards
4. Participate in validation processes	4.1. Validation procedures are followed to GMP requirements 4.2. Issues arising from validation are raised with designated personnel 4.3. Validation procedures are documented to meet GMP

ELEMENT	PERFORMANCE CRITERIA
	requirements
5. Take corrective action in response to GMP non-compliance	<p>5.1. Processes, practices or conditions which could result in non-compliance with GMP are identified and reported according to workplace reporting requirements</p> <p>5.2. Corrective action is taken in accordance within level of responsibility</p> <p>5.3. GMP issues are raised with designated personnel</p>
6. Maintain and improve GMP in the work area	<p>6.1. Processes or conditions which could result in non-conformance with GMP are identified, reported and corrected within level of responsibility</p> <p>6.2. Matters raised relating to GMP are promptly resolved and/or referred to appropriate personnel</p> <p>6.3. Effectiveness of control measures are monitored within level of responsibility</p> <p>6.4. Others in the work area are advised of GMP matters relevant to work role</p> <p>6.5. Workplace records and documents are maintained in accordance with workplace procedures and GMP requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- communicate information on GMP requirements to others in the work area, including demonstration of two-way communication, such as active listening and constructive response to feedback
- access and use document management systems
- model personal conduct and work activities to meet requirements of GMP
- monitor that data is recorded to meet GMP recording requirements within level of responsibility
- provide guidance and support to others in the work area to implement GMP responsibilities within level of responsibility
- determine action required to respond to GMP non-compliance within level of responsibility
- participate in improvement processes, such as investigating actual and potential GMP non-compliance
- participate in and/or review practices and procedures to prevent or minimise the likelihood of unacceptable performance
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the role of GMP in preventing contamination, its relationship to legal requirements of pharmaceutical manufacturers and potential implications of non-compliance
- GMP arrangements in the workplace, including relevant GMP codes of practice and related workplace policies and procedures to implement these responsibilities
- role of effective communication and consultation processes
- workplace training and development system and responsibilities
- role of quality assurance and related system components and activities in GMP
- procedures followed to investigate contamination events and performance improvement processes
- personal clothing and footwear requirements for working in and/or moving between work areas
- personal clothing use, storage and disposal requirements
- current technical and process knowledge required to monitor GMP and participate in investigating GMP non-compliance within level of responsibility, including common microbiological, physical and chemical contaminants, conditions under which types of contamination, e.g. cross-contamination, are likely to occur, related

REQUIRED SKILLS AND KNOWLEDGE

- control methods and validation procedures and responsibilities
- control methods and procedures used in the work area to maintain GMP, including the purpose of control, the consequences if not controlled and the method of control where relevant
- methods used to monitor process control, purpose and requirements of validation procedures and purpose of equipment calibration
- recall and traceability procedures relevant to work area
- line clearance procedures and responsibilities
- properties, handling and storage requirements of raw materials, packaging components and final product handled and used in the work area
- standards for materials, equipment and utensils used in the work area
- procedures for responding to out-of-specification or unacceptable performance/outcomes, including procedures for identifying and isolating or quarantining materials or product of unacceptable quality within level of responsibility
- documentation system and procedures, including record keeping to meet both company and legal requirements, procedures for developing and/or reviewing workplace procedures and document control systems used in the workplace and responsibilities for reporting and recording information
- housekeeping requirements and responsibilities relating to own work, and where relevant, use and storage of housekeeping/cleaning equipment
- waste collection, recycling, handling and disposal, including handling/disposal requirements for different types of waste, such as hazardous waste where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment may occur in a real or simulated workplace context. A simulated environment must provide access to a typical range of production equipment, procedures and related documentation, records and related resources to meet the requirements of the Therapeutic Goods Act.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>GMP is an ongoing and routine aspect of work responsibilities. Assessors should collect sufficient evidence that the skills and knowledge of this unit are routinely applied to the work environment.</p> <p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify the components of GMP and related roles and responsibilities as they relate to work role • provide a role model to others in the workplace to support implementation of GMP • participate in GMP processes within level of responsibility. Examples of these processes include validation, line clearance, equipment calibration, change management, maintenance of documentation. This would typically be undertaken in a team context.
<p>Context of and specific resources for assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessment of this unit would typically involve questioning and workplace observation. It may involve additional collection of evidence from a range of sources, such as third party reports, workplace documentation relating to GMP, and real or simulated workplace contexts.</p>
<p>Method of assessment</p>	<p>This unit is a core requirement for all pharmaceutical operators at AQF 3 and could be assessed concurrently with other units relating to process improvement and supporting others, such as:</p> <ul style="list-style-type: none"> • FDFPPL3001A Participate in improvement processes • FDFPPL3003A Support and mentor individuals and

EVIDENCE GUIDE	
	<p>groups</p> <ul style="list-style-type: none">• FDFPPL3005A Participate in an audit process• FDFTEC3001A Participate in a HACCP team.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Work activities	Work activities are carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Unacceptable plant or equipment condition	<p>Unacceptable plant or equipment condition can include:</p> <ul style="list-style-type: none"> • damage to plant or equipment • failure of cleaning regime • equipment requiring calibration • signs of pest infestation
Validation	Typically validation is the responsibility of the quality department. A person at this level would be expected to understand the purpose and responsibilities for validation and may be required to participate in validation processes as part of a team
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • relevant, Good Manufacturing Practice (GMP) codes • the Therapeutic Goods Act and other legislation and codes relevant to product and market • legislation relating to environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity
Quality assurance and related system components and activities	<p>Quality assurance and related system components and activities can include but is not limited to:</p> <ul style="list-style-type: none"> • process control • deviation investigation and analysis

RANGE STATEMENT

	<ul style="list-style-type: none"> • corrective and preventative action systems • sampling plans • change control • validation procedures • line clearance • system documentation requirements • audit processes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and/or review workplace documentation to meet GMP requirements	1.1. Policies and master plans are identified to determine work area requirements 1.2. Workplace documentation is identified and reviewed to confirm GMP requirements are met 1.3. Procedures and records are developed and/or reviewed to confirm GMP requirements are met 1.4. Improvements to workplace documentation are identified and reported 1.5. Procedures to alter workplace documents are followed
2. Facilitate development and communication of workplace documentation	2.1. Workplace documentation is developed in consultation with relevant stakeholders to support GMP 2.2. Documentation is made available and clearly explained to relevant stakeholders 2.3. Training requirements are identified and addressed within level of responsibility

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- use workplace documentation, recording and reporting formats and software
- prepare workplace documentation in plain English and suited to purpose and audience
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- documentation requirements (as outlined in Chapter 4 of the Australian Code of Good Manufacturing Practice for Medicinal Products)
- document authorisation requirements and procedures and legal responsibilities of signatory
- document types to support workplace systems and related development and control systems, roles and responsibilities, including an understanding of system security and access levels
- procedures and responsibilities for altering documents and managing version control
- systems, methods and procedures for recording and storing data and authorised levels of access (to electronic systems)
- use of documentation including an understanding of the documents that can be used as evidence in audit processes
- recording and reporting requirements
- training and assessment arrangements and responsibilities

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment may occur in a real or simulated pharmaceutical or complementary medicine manufacturing workplace where the assessment environment provides access to workplace documentation and related document control and management systems that are typical of commercial manufacturing businesses and meet the requirements of the Therapeutic Goods Act. It will also provide a range of commercial manufacturing packaging equipment and activities typically used in a commercial manufacturing environment.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • review workplace documentation to confirm that it meets GMP requirements. Documentation may relate to a specific work area (rather than the whole plant). The candidate is required to document their findings • develop, design or amend documentation to support GMP. For example, this could require the development of operating procedures. It may include reviewing and updating existing documentation or developing new documentation within required formats. The candidate must demonstrate application of document control procedures to submit or amend documents. They must also demonstrate that appropriate consultation was undertaken in the development process and the document changes are effectively communicated. This includes demonstrating an awareness of the link to related documents. Where training needs arise from the change, these must be identified together with recommendations for how they can be addressed • review completed GMP-related documents and records to ensure that GMP requirements are met.
<p>Context of and specific resources for assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.</p>

EVIDENCE GUIDE	
	<p>Assessment of this unit would typically involve responding to 'what if' scenarios, answering questions and conducting workplace projects.</p> <p>Resources for assessment include:</p> <ul style="list-style-type: none"> • Australian Code of Good Manufacturing Practice for Medicinal Products • workplace documentation and related document control and management system • workplace personnel • real or simulated workplace context.
Method of assessment	<p>This unit is a core requirement for all pharmaceutical operators at AQF 4 and 5. This unit could be assessed concurrently with other units relating to problem solving and process improvement. Examples could be:</p> <ul style="list-style-type: none"> • FDFPH4002A Facilitate and monitor Good Manufacturing Practice • FDFPH4004A Participate in change control procedures • FDFPH4005A Participate in validation processes.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Workplace documentation

Workplace documentation may include but is not limited to:

- policies and master plans
- quality manual
- specifications
- certificates
- manufacturing formula
- processing and packaging instructions
- procedures
- records
- protocols (validation)
- reports

Documentation typically includes:

- written descriptions
- graphic display of information, including diagrams and photos
- flow charts

Information is typically stored and accessed electronically

Procedures and records

Information covered by procedures includes but is not limited to:

- receipt of starting and packaging material
- sampling
- testing
- release and rejection procedures
- validation
- equipment assembly and calibration
- maintenance, cleaning and sanitation
- personnel matters, including training and personal hygiene
- environmental monitoring

RANGE STATEMENT	
	<ul style="list-style-type: none"> • pest control • complaints • recalls • returns • equipment operation <p>Records should include but are not limited to:</p> <ul style="list-style-type: none"> • batch records • equipment recording (as appropriate) • validations • calibrations • maintenance • cleaning or repair work, including details of when/who • operating log sheets • complaints
Stakeholders	<p>Stakeholders refer to process and technical experts and may include but are not limited to:</p> <ul style="list-style-type: none"> • operators • engineering department • quality assurance • area managers • related functions/personnel
Version control	<p>Version control includes:</p> <ul style="list-style-type: none"> • the maintenance of workplace documents to meet company and regulatory requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to meet GMP requirements in the work area	1.1. Regulations, codes and guides relevant to the work area are identified 1.2. Workplace documentation relevant to work area activities is identified and reviewed to confirm that GMP requirements are met 1.3. The required facilities, materials, storage, equipment and personnel are confirmed and available 1.4. Operators who have the required competence to perform production/packaging activities to company and GMP standards are identified 1.5. Line clearance procedures are carried out 1.6. Critical processes are validated according to validation requirements 1.7. Procedures to eliminate or control the risk of cross-contamination are followed
2. Monitor the observance of GMP in the work area	2.1. Work practices conform to GMP requirements 2.2. In-process and environmental monitoring is carried out and recorded as required by GMP 2.3. Personal hygiene and conduct of personnel in the work area meets GMP requirements 2.4. Personnel movement between work areas complies with entry and exit procedures 2.5. GMP-related data is recorded to meet workplace reporting requirements
3. Respond to failures or non-conformances	3.1. The scope of failures or non-conformances are defined 3.2. Procedures to follow in the event of a failure are documented 3.3. Failures are investigated to determine root causes 3.4. Risk assessment is conducted 3.5. Findings are reported to meet GMP requirements 3.6. Procedures are followed to implement and monitor corrective and preventative action
4. Complete work to meet GMP requirements	4.1. Processes are reviewed to ensure all procedures are complete 4.2. Line logs are reviewed to ensure documentation is complete 4.3. End-of-batch procedures are followed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- locate regulations, codes, guides and internal company documentation relevant to GMP and products/processes used in the work area
- use communication and document management systems to access and review relevant documents
- ensure that operators have the
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- legislative framework and structure, including the role of regulations, codes and guides
- corporate and personal responsibility and liability for maintaining GMP in the workplace
- the Pharmaceutical Inspection Co-operation Scheme (PICS) and related cross-recognition agreements
- the content covered by the Therapeutic Goods Act, relevant codes and guides
- sources of technical advice on test methods and critical limits
- regulatory mechanisms including audit processes
- the principles of quality management, quality assurance and quality control and the role of these activities in supporting GMP
- principles of risk management and related procedures
- system for raising and managing corrective and preventative actions
- specific requirements to be met by manufacturing and/or packaging activities in the work area to meet GMP requirements
- calibration programs and responsibilities
- procedures for reconciling materials and consumables and investigating discrepancies
- training system, including assessment methods and documentation
- purpose, procedure and responsibility for specific systems, programs and procedures to support GMP
- root cause analysis techniques
- workplace documentation and authorisation procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment may occur in a real or simulated pharmaceutical or complementary medicine manufacturing workplace where the assessment environment provides access to workplace documentation and document management systems related to GMP that are typical of commercial manufacturing businesses and meet the requirements of the Therapeutic Goods Act. It will also provide a range of commercial production/packaging equipment and activities typically used in a commercial manufacturing environment.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of participation in a project team to develop or review systems and procedures to support GMP in a work area. This includes providing evidence that the candidate:</p> <ul style="list-style-type: none"> • provides documented evidence through use of workplace documentation and records to show that the work preparation, processing and completion meet GMP requirements • leads response to a failure or non-conformance in the work area. This must include conducting risk assessment, analysing root cause analysis, identifying corrective and preventive action and monitoring implementation. This aspect of assessment may be undertaken as part of a team.
<p>Context of and specific resources for assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessment of this unit would typically involve responding to 'what if' scenarios, answering questions and conducting workplace projects.</p>
<p>Method of assessment</p>	<p>This unit is a core requirement for all pharmaceutical operators at AQF 4 and 5. It could be assessed concurrently with other units relating to problem solving</p>

EVIDENCE GUIDE	
	<p>and process improvement. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2015A Apply principles of statistical process control • FDFPH4001A Prepare and review workplace documentation to support Good Manufacturing Practice • FDFPH4003A Facilitate contamination control • FDFPH4004A Participate in change control procedures • FDFPH4005A Participate in validation processes • MSACMT450A Undertake process capability improvements.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Regulations, codes and guides

Relevant regulations, codes and guides include:

- Therapeutic Goods Act
- Therapeutic Goods Regulations
- Australian Code of Good Manufacturing Practice for Medicinal Products
- Therapeutic Goods Act guides to interpretation of legal requirements
- regulations, codes and guides related to other relevant international legislation (appropriate to product and market)
- company policies and guidelines

Workplace documentation

Workplace documentation relevant to work area activities includes:

- company policies and guidelines
- specifications
- manufacturing formulae
- processing and packaging instructions
- batch production and packaging records
- standard operating procedures (SOPs)
- occupational health and safety (OHS) information, including material safety data sheets (MSDS)

Work practices

Work is carried out according to:

- company policies and procedures
- legislative and licensing requirements, including therapeutic goods legislation, weights and measures and legislation relating to OHS, environmental management, equal opportunity and affirmative action, industrial awards and agreements

Sources of technical advice

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contamination risks and related control measures are identified and implemented to meet GMP requirements	1.1. Hazards that could present a contamination risk are identified by type, origin and product association 1.2. Hazards and related control measures, critical limits, monitoring and recording requirements are reviewed and meet GMP requirements 1.3. Control measures are verified or validated
2. Review systems and procedures used to control risk of cross contamination	2.1. Effective barriers and control systems to minimise risk of cross contamination are identified and meet GMP requirements 2.2. In-process and environmental monitoring occurs and is recorded as required by GMP 2.3. Cleaning procedures are validated according to validation procedures, roles and responsibilities 2.4. Line clearance checklists and procedures are followed in the work area 2.5. Personal hygiene and conduct of personnel in the work area meets GMP requirements 2.6. Operators have the required skills and knowledge required to support cleaning and sanitation and personal hygiene policies and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- interpret and apply relevant legislation, codes, guidelines and technical standards
- use management systems to ensure that procedures are understood and implemented
- monitor that data is recorded to meet GMP recording requirements
- read and interpret equipment drawings, piping and instrumentation diagrams (P&IDs) and process flow charting
- read and interpret typical test results for in-process and environmental monitoring
- use communication and document management systems to access and review relevant documents
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- principles of workflow design to minimise risk of contamination
- facility and segregation requirements relevant to products produced

Basic microbiology

- microbiological limits, monitoring methods and reporting and recording formats and requirements

Sources of technical advice

- ventilation system requirements
- personal hygiene and clothing requirements including decontamination and laundering
- cleaning records and logs
- line clearance procedures, roles and responsibilities
- equipment status labelling
- cleaning requirements and levels related to dedicated production, campaign processing and multiple product processing

Storage requirements

- storage requirements of raw materials prior to use in manufacture, time limits and conditions of storage of finished product prior to packaging, and other

REQUIRED SKILLS AND KNOWLEDGE

requirements relevant to product range

Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Barriers and control systems

Barriers and control systems include but are not limited to:

- ventilation systems
- appropriate clothing
- area access restrictions and procedures
- cleaning and sanitation procedures
- environmental monitoring
- line clearance checklists
- personal hygiene and conduct
- pest prevention

Refer to the Australian Code of Good Manufacturing Practice for Medicinal Products

Codes, guidelines and technical standards

Codes, guidelines and technical standards includes:

- the Australian Code of Good Manufacturing Practice for Medicinal Products, Chapter 3 which outlines minimum requirements for design of pharmaceutical production facilities and equipment

Basic microbiology

Basic microbiology covers the ability to source information on:

- likely microbiological contaminants given product/packaging used
- origins
- growth rates
- transmission routes
- likely carriers
- control limits
- control methods

Sources of technical advice

Sources of technical advice include but are not limited to:

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Participate in planning change	1.1. Regulations, codes and guides relevant to the work area are identified 1.2. Procedures, roles and responsibilities for managing change are identified 1.3. Risk assessment is conducted 1.4. Planning of change management is undertaken within level of responsibility 1.5. Workplace documentation affected by the change is identified and responsibilities for review are allocated within level of responsibility 1.6. Any training needs arising from change are identified and delivery method/s and responsibilities are determined 1.7. Validation and/or other relevant authorisation requirements and procedures are identified and followed
2. Participate in implementing change	2.1. Change is implemented according to the change management plan and occupational health and safety (OHS) procedures 2.2. Advice on change is communicated to all affected personnel 2.3. Relevant training is sourced 2.4. Workplace documentation is revised to reflect change requirements 2.5. Change is monitored and evaluated against established evaluation criteria 2.6. Any further adjustments or modifications are identified and implemented or reported according to change control procedure 2.7. Outcomes are documented and reported to meet change control requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- locate regulations, codes, guides and internal company documentation relevant to GMP and products/processes used in the work area
- participate in change control procedures
- apply communication and consultation skills to engage and consult with work areas and personnel affected by change
- ensure that related skills and knowledge requirements are addressed by the training system
- apply negotiation/issue resolution skills
- prepare workplace documentation in plain English and suited to purpose and audience
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- types of change that come within the scope of change control procedures
- change classification procedures and responsibilities
- principles of risk management and related procedures
- documentary evidence required to support change request
- change control procedures, roles and responsibilities
- workplace documentation including procedures for review, authorisation and control of documents
- training system including assessment methods and documentation
- validation system, procedures and responsibilities

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment may occur in a real or simulated pharmaceutical or complementary medicine manufacturing workplace where the assessment environment provides access to workplace documentation and document management systems related to change control that are typical of commercial manufacturing businesses and meet the requirements of the Therapeutic Goods Act. It will also provide a range of commercial manufacturing packaging equipment and activities typically used in a commercial manufacturing environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of participation in a project team to control change in a work area. This includes providing evidence that the candidate:

- identifies situations requiring change control for a given set of change scenarios
- participates in developing a change management plan
- develops a documented implementation plan to introduce change into a work area. This may be a sub-set of a larger change management plan
- leads the implementation of change in a work area. This includes reviewing relevant workplace documentation, ensuring that required training occurs, consulting with parties affected by change and negotiating any issues raised, monitoring and reporting on change and liaising with relevant departments/ personnel to ensure that authorisation and validation processes occur as required.

Context of and specific resources for assessment

Resources for assessment

- change request
- workplace documentation including procedures relating to change control
- real or simulated workplace context.

Method of assessment

This unit could be assessed concurrently with other units relating to problem solving and process improvement. Examples could be:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • FDFOP2015A Apply principles of statistical process control • FDFPH4001A Prepare and review workplace documentation to support Good Manufacturing Practice • FDFPH4002A Facilitate and monitor Good Manufacturing Practice • FDFPH4003A Facilitate contamination control • FDFPH4005A Participate in validation processes • MSACMT450A Undertake process capability improvements.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Regulations, codes and guides	<p>Relevant regulations, codes and guides include:</p> <ul style="list-style-type: none"> • Therapeutic Goods Act • Therapeutic Goods Regulations • Australian Code of Good Manufacturing Practice for Medicinal Products • Therapeutic Goods Act guides to interpretation of legal requirements • regulations, codes and guides related to other relevant international legislation (appropriate to product and market) • company policies and guidelines
Change	<p>Change that must be controlled refers to any change that may affect product quality or reproducibility of the process. This may include but is not limited to change in:</p> <ul style="list-style-type: none"> • formulation • product component • method of production or testing • process environment (or site) • batch size • equipment
Change management	<p>Change management procedures and data requirements must meet the requirements of Change Management as outlined in Annex 15 of the Australian Code of Good Manufacturing Practice for Medicinal Products</p>
Workplace documentation	<p>Workplace documentation relevant to work area activities includes:</p> <ul style="list-style-type: none"> • company policies and procedures • specifications • manufacturing formulae • processing and packaging instructions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • scaling batch size up or down • batch production and packaging records • standard operating procedures (SOPs) • operating manuals • OHS information, including material safety data sheets (MSDS)
Authorisation requirements	Authorisation requirements reflect regulatory requirements and internal authorisation processes
Change management plan	<p>A change management plan includes steps or activities required to approve and implement the proposed change. Typically these steps will be described in a change control SOP. Depending on the significance/level of the change, this could include:</p> <ul style="list-style-type: none"> • process capability assessment • test methods • validation • liaison with regulator <p>It also includes:</p> <ul style="list-style-type: none"> • timelines • responsibilities, including sign-off/approval • verification of the effectiveness of change • OHS implications

<p>2. Participate in validation processes for new or modified facilities, systems or equipment</p>	<p>2.1. Validation requirements in the work area are identified</p> <p>2.2. The validation protocol is followed to support validation activities in the work area</p> <p>2.3. Data is collected, analysed and reported to meet GMP requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- apply principles of risk management to identify critical facilities, systems and equipment
- identify and interpret validation documentation relating to qualification and validation requirements for a work area
- participate in qualification and validation procedures within level of responsibility
- identify and manage the impact of qualification and validation procedures on related processes or work areas/personnel within level of responsibility
- liaise with other relevant departments/functions to coordinate and schedule validation processes
- develop documentation to support qualification and validation according to required formats and within level of responsibility
- ensure that operators in the work area have the
- prepare workplace documentation in plain English and suited to purpose and audience
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- principles and purpose of qualification and related procedures and responsibilities
- principles and purpose of validation and related procedures and responsibilities
- purpose and application of prospective, concurrent and retrospective validation
- data collection, analysis and reporting requirements
- scope, application and timing of validation including any relevant circumstances that could trigger the need to validate or re-validate or justify not carrying out a validation process prior to production starting
- relationship between validation and change control
- equipment design drawings and process flow charting
- relevant investigation methods including process capability and root cause analysis
- recording and reporting requirements
- training and assessment arrangements and responsibilities
- workplace documentation and authorisation procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment may occur in a real or simulated pharmaceutical or complementary medicine manufacturing workplace where the assessment environment provides access to workplace documentation relating to qualification and validation processes that are typical of commercial manufacturing businesses and meet the requirements of the Therapeutic Goods Act. It will also provide a range of commercial production/packaging equipment and activities typically used in a commercial manufacturing environment. Qualification processes may be simulated to allow a walk through of the process.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of participation in a team responsible for validation processes. This includes providing evidence developed by the candidate to:

- review the qualification and validation protocols to assess implications for a work area and related departments/functions
- participate in qualification procedures - design qualification, installation qualification, operational qualification, and/or performance qualification

For example, this could include conducting trials in the work area as part of performance qualification in a work area. The assessment activity requires use and/or development of checklists and tools in required formats to carry out qualification as part of a project team. It also includes monitoring and reporting on outcomes.

Context of and specific resources for assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.

Assessment of this unit would typically involve responding to 'what if' scenarios, answering questions and conducting workplace projects

Resources for assessment:

Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design qualification

Design requirements of facilities and equipment must meet those outlined in Australian Code of Good Manufacturing Practice for Medicinal Products, Chapter 3

Installation qualification

Installation qualification includes but is not limited to:

- checking of equipment, piping, instrumentation and services installation checked against current engineering drawings and specifications
- piping and instrumentation diagrams (P&IDs), operating manuals and other supplier information relating to operation and maintenance
- calibration requirements
- cleaning and sanitation inspection requirements
- safety issues
- environmental issues

Operational qualification

Operational qualification includes but is not limited to:

- tests of processes, systems and equipment to confirm that functioning meets agreed criteria within operating conditions
- calibration plans
- preventative maintenance plans
- operating, cleaning and sanitation operating procedures
- training programs and schedules
- recording requirements

Performance qualification

Performance qualification may include but is not limited to:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • tests, using production materials, qualified substitutes or simulated product, that have been developed from knowledge of the process, facilities, systems or equipment • tests to include a condition or set of conditions encompassing upper and lower operating limits
Validation requirements	<p>Validation requirements include but are not limited to:</p> <ul style="list-style-type: none"> • process validation • packaging validation • cleaning validation • calibration validation • test method validation • validation of computerised systems • re-validation of in-use processes
Validation protocol	<p>A validation protocol includes but is not limited to:</p> <ul style="list-style-type: none"> • a short description of the process • summary of the critical step/s being investigated • list of equipment/facilities to be used (including measuring/monitoring equipment) together with its calibration status • finished product specifications for release • list of analytical methods, as appropriate • proposed in-process controls with acceptance criteria • additional testing to be carried out, with acceptance criteria and analytical validation, as appropriate • sampling plan • methods for recording and evaluating results • roles and responsibilities • proposed timetable
Validation documentation	<p>Documentation may include but is not limited to:</p> <ul style="list-style-type: none"> • validation master plan • protocols • reports • operating procedures and work instructions

FDFPH4006A Respond to non-conformance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to respond to non-conformance within level of authority and consistent with legal requirements within the pharmaceutical sector.
------------------------	---

Application of the Unit

Application of the unit	This unit can apply to people working in a supervisory or line management production role. They would typically work as part of a team responsible for investigating causes and controls to prevent recurrence of non-conformance. Typical applications of this unit would include responding to deviation and incident reporting results and may include participation in responding to customer complaints, product recalls and audit findings. Responding to non-conformance is typically within the parameters of established policies, plans and procedures.
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify non-conformance	<p>1.1. Workplace systems, reports and operating parameters are monitored to identify non-conformance</p> <p>1.2. Nature of non-conformance is identified and described</p> <p>1.3. Corrective and preventative action and reporting procedures appropriate to nature of non-conformance are followed</p>
2. Identify causes of non-conformance	<p>2.1. Workplace systems are used to investigate possible causes of non-conformance</p> <p>2.2. Risk assessment is conducted</p>
3. Review processes to minimise the risk of recurrence	<p>3.1. Solutions are identified and assessed to eliminate or minimise the risk of recurrence</p> <p>3.2. An implementation plan is developed</p> <p>3.3. Workplace documentation is developed or reviewed to support implementation</p> <p>3.4. Consultative mechanisms are established and/or reviewed to support continuous improvement and communicate information</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify systems under which non-conformance may be raised, including the provisions of the Therapeutic Goods Act as it relates to systems (e.g. customer complaints, product recalls and auditing)
- identify relevant company policies and procedures relating to responding to non-conformance and confirm level of authority and responsibility for participating in these procedures
- identify the components of the management system, including information recording systems (such as those to support traceability), identification of personnel responsible for assessing information and determining appropriate action, procedures to be followed in the event of a non-conformance, change management requirements and definitions of roles and levels of responsibility
- participate in the investigation of causes and review of arrangements and procedures in response to a non-conformance, such as reviewing responses to previous incidents to assess effectiveness and/or developing recommendations on appropriate procedures
- identify and/or develop the appropriate communication systems and channels for consulting with people affected by any proposed changes
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- legal requirements relating to management of non-conformance
- systems and responsibilities for identifying, investigating and responding to non-conformance
- consultation and communication methods required to investigate possible causes and communicate changed practices and procedures
- change management procedures and responsibilities, including the role of corrective and preventative actions
- procedures for reviewing, amending and validation
- information systems, technologies and software to access and analyse information
- problem solving methods

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment may occur in a real or simulated pharmaceutical or complementary medicine manufacturing workplace where the assessment environment provides access to workplace documentation including production records and data management systems related to managing non-conformance that are typical of commercial manufacturing businesses and meet the requirements of the Therapeutic Goods Act. It will also provide access to workplace policies and procedures to support the management of non-conformance to meet the requirements of the Therapeutic Goods Act.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of participation in a team responsible for responding to deviation and non-conformance. This includes providing evidence developed by the candidate to:

- identify deviation
- identify and determine the nature of non-conformance
- implement required corrective action and reporting
- investigate the causes of a non-conformance
- identify changes to company systems and procedures required to minimise the risk of recurrence
- follow procedures to participate in proposing changes
- develop and implement required preventative action.

Context of and specific resources for assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, including all elements, performance criteria, and required skills and knowledge. A holistic approach should be taken to the assessment.

Assessment of this unit would typically involve responding to 'what if' scenarios, answering questions and conducting workplace projects.

Resources for assessment

- copies of the relevant Act, regulations, codes and guides

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down product dicing, stripping or mincing process.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit has application in a poultry production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of dicing, stripping or mincing equipment and processes.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out unit FDFOP2011A Conduct routine maintenance should be considered.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the dicing/stripping and mincing equipment and process for operation</p>	<p>1.1. Materials are confirmed and available to meet operating requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are fitted and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the dicing/stripping and mincing process</p>	<p>2.1. The process is started and operated according to workplace procedures</p> <p>2.2. Equipment is monitored to identify variation in operating conditions</p> <p>2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.4. The process is monitored to confirm that diced/stripped or minced product meets specification</p> <p>2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.6. The work area is maintained according to housekeeping standards</p> <p>2.7. Work is conducted in accordance with workplace environmental guidelines</p> <p>2.8. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the dicing/stripping and mincing process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify dicing/stripping and mincing process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for dicing/stripping and mincing process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust dicing/stripping process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - product flow rate
 - collection bins, and removing as required
 - equipment performance
- start, operate, monitor and adjust mincing process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - product flow rate
 - sequence of product and ingredient addition is to production specifications
 - cutting/mixing times
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take dicing/stripping and mincing process and related equipment off line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate batch/product changeovers
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as

REQUIRED SKILLS AND KNOWLEDGE

specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce

Required knowledge***Knowledge of:***

- purpose and basic principles of the dicing/stripping and mincing process, including temperature generated by the process and effect on product
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of the dicing, stripping and mincing process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the dicing, stripping and mincing process
- quality requirements of materials suitable for processing and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the dicing/stripping and mincing process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the dicing/stripping and mincing process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- product/process changeover procedures and responsibilities
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the dicing/stripping and mincing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures where relevant

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• cleaning and sanitation procedures where relevant |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for dicing, stripping or mincing
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- dicing/stripping and mincing process and related equipment and services
- materials to be diced/stripped and minced
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> standard operating procedures (SOPs) specifications production schedules and instructions manufacturers' advice standard forms and reports
Production equipment	<p>Production equipment may include:</p> <ul style="list-style-type: none"> dicing/stripping or mincing equipment and tubs
Materials	<p>Materials typically include:</p> <ul style="list-style-type: none"> raw product free of bones or skin and may include additives/seasonings
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> the use of process control panels and systems
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

RANGE STATEMENT

Services	<p>Services may need to be confirmed. These depend on the nature of the process. Typical examples include:</p> <ul style="list-style-type: none"> • power • compressed and instrumentation air

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the evisceration equipment and process for operation	1.1. Carcasses are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Evisceration equipment is adjusted to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Monitor evisceration process operation	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Viscera is removed to specification 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the evisceration process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for process requirements, ensuring spray jets are operating and positioned correctly, positioning waste product bins as required, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- start, operate, monitor and adjust evisceration process equipment to achieve required outcomes, including conducting inspections as required to confirm viscera is removed to specification and adjusting equipment as required, as well as ensuring:
 - clean removal of parts, such as neck flaps and feet as required
 - vent/cloacae is opened and removed minimising faecal contamination
 - intestinal package is removed with lungs and liver undamaged and visible
 - neck is broken and/or removed at required length
 - cavity is empty at final inspection point
 - carcass is washed and clean ready for chilling
- monitor carcass quality, such as inspecting for:
 - faecal contamination/stains
 - broken bones
 - flesh damage/dicolouration/red spotting/marks
 - size
- monitor supply and flow of carcasses to and from the evisceration process
- pace evisceration to complete timely processing of birds from kill area
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take evisceration process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate procedures to alter process for bird size/type
- complete workplace records as required

REQUIRED SKILLS AND KNOWLEDGE

- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the evisceration process, such as the internal organs of birds, package removal requirements and consequences of poor removal processes
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the effect of each stage of the evisceration process on the quality of the end product
- quality characteristics to be achieved by each stage of the evisceration process
- the effect of variation in carcass condition/age on evisceration process and outcomes
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the evisceration process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the evisceration process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the use of protective clothing, such as armguards and mesh gloves, and the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the evisceration process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- adjustments required to take account of different bird size/type
- procedures and responsibility for reporting production and performance information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the grading process for operation	1.1. Washed and chilled carcasses are confirmed and available to meet operating requirements
2. Inspect and grade carcasses	2.1. Carcasses are inspected and graded to workplace quality specifications 2.2. Out-of-specification product is identified, rectified and/or reported 2.3. The work area is maintained according to housekeeping standards 2.4. Work is conducted according to workplace environmental guidelines 2.5. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify grading process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- inspect and grade birds, including checking:
 - neck trim
 - bruised/damaged birds
 - torn skin/muscle
 - presence of feathers
 - size
 - broken bones
 - discolouration
 - bile/faecal stains
 - moisture retention levels
- monitor supply and flow of carcasses to and from the grading process
- take corrective action in response to out-of-specification results
- locate emergency stop functions on equipment as required
- follow isolation and lock out/tag out procedures as required to take grading process off-line in preparation for cleaning and/or maintenance, within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose of the grading and weighing process, including grading criteria and specifications at each level and the uses of product at each grade
- common types of damage or out-of-specification conditions and likely causes, including damage likely to be caused by poor handling of the carcass
- the flow of the grading process and the effect of outputs on downstream processes
- methods used to grade carcasses, including visual inspection and other methods

REQUIRED SKILLS AND KNOWLEDGE

- further tests to support the grading process
- contamination/food safety risks associated with the grading process and related control measures
- occupational health and safety (OHS) hazards and controls
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the grading process, including waste collection and handling procedures related to the process

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the harvesting equipment and process for operation	1.1. Product is transferred and available to meet production requirements 1.2. Equipment is checked and ready for use 1.3. Pre-start checks are carried out as required by workplace requirements
2. Harvest and sort edible offal	2.1. Edible offal is identified 2.2. Offal is separated, sorted and collected to meet production requirements 2.3. Offal of unacceptable quality is identified and set aside 2.4. The work area is maintained according to housekeeping standards 2.5. Work is conducted according to workplace environmental guidelines
3. Shut down the process	3.1. Edible offal and waste is collected and handled/removed as required 3.2. Process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify harvesting and cleaning process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition (e.g. conveyor belts) to identify any signs of wear, selecting appropriate settings, cancelling isolation or lockouts as required, confirming that work surfaces and related equipment are clean, and identifying when blades need to be changed in the giblet machine
- start, operate, monitor and adjust harvesting and cleaning process equipment to achieve required outcomes, such as monitoring control points and conducting inspections as required to confirm process remains within specification
- inspect quality of edible offal, such as inspecting for:
 - giblet colour and fat levels
 - presence of diseased or damaged organs
 - bile stain
- identify and remove unacceptable product according to workplace quality standards
- monitor supply and flow of materials to and from the harvesting and cleaning process
- sort, collect, recycle or dispose of inedible offal and waste according to workplace procedure
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take harvesting and cleaning process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose and basic principles of the harvesting and cleaning process, including the structure and internal organs of poultry to identify, separate and remove edible offal
- contamination that can occur when offal is not correctly removed
- basic operating principles of equipment, such as main equipment components, their purpose and operating capacities, and the status and purpose of guards
- the flow of the harvesting process and the effect of outputs on downstream processes
- quality standards for types of edible offal collected
- procedures for handling/recycling and/or disposing of downgraded product
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the harvesting process, such as inspecting, measuring and testing as required by the process
- inspection points (control points) in the harvesting and cleaning process and the related procedures and recording requirements
- contamination/food safety risks associated with the harvesting process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the harvesting and cleaning process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the harvesting process, including waste/rework collection and handling procedures related to the process
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for harvesting edible offal • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • edible offal specifications, control points and processing parameters • quality parameters for grading/downgrading product • offal harvesting, cleaning and washing equipment, accessories and services • offal to be harvested • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as

EVIDENCE GUIDE	
	required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements</p>
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Production equipment	<p>Production equipment may include:</p> <ul style="list-style-type: none"> • offal harvesting and cleaning equipment • bins • augers • conveyors
Sorting process	<p>The sorting process may be carried out:</p> <ul style="list-style-type: none"> • manually and/or using manual backup of automated processes
Edible offal	<p>Edible offal may include:</p> <ul style="list-style-type: none"> • giblets • livers • hearts

RANGE STATEMENT	
	<ul style="list-style-type: none"> • feet and necks as required
Inspection/monitoring	Inspection/monitoring is: <ul style="list-style-type: none"> • typically visual to confirm appearance of product
Shutdown procedures	Shutdown procedures may include: <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare the marinade injection equipment and process for operation</p>	<p>1.1. Carcasses and marinade are confirmed and available to meet operating requirements</p> <p>1.2. Cleaning and maintenance requirements and status are identified and confirmed</p> <p>1.3. Machine components and related attachments are inspected and adjusted to meet operating requirements</p> <p>1.4. Processing/operating parameters are entered as required to meet safety and production requirements</p> <p>1.5. Equipment performance is checked and adjusted as required</p> <p>1.6. Pre-start checks are carried out as required by workplace requirements</p>
<p>2. Operate and monitor the marinade injection process</p>	<p>2.1. Marinade is prepared and loaded to meet production requirements</p> <p>2.2. The process is started and operated according to workplace procedures</p> <p>2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements</p> <p>2.4. The process is monitored to confirm that specifications are met</p> <p>2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification</p> <p>2.6. The work area is maintained according to housekeeping standards</p> <p>2.7. Work is conducted according to workplace environmental guidelines</p> <p>2.8. Workplace records are maintained according to workplace recording requirements</p>
<p>3. Shut down the marinade injection process</p>	<p>3.1. The appropriate shutdown procedure is identified</p> <p>3.2. The process is shut down according to workplace procedures</p> <p>3.3. Maintenance requirements are identified and reported according to workplace reporting requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify marinade injection process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary marinade ingredients, whole birds, materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify that needles are all in place and not broken or bent, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for marinade injection process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational.
- start, operate, monitor and adjust marinade injection process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - pump operating parameters (speed/pressure on variable speed pumps)
 - conveyor speed
 - marinade level and temperature
 - needle position
- monitor supply and flow of marinade and birds to and from the marinade injection process
- take corrective action in response to out-of-specification results, including flushing of needles to clear blockages, within level of responsibility
- demonstrate procedures to adjust process equipment for bird size/type
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take marinade injection process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

REQUIRED SKILLS AND KNOWLEDGE

- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the marinade injection process
- basic operating principles of equipment, such as main equipment components, including pumps and needle bed, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- the effect of marinade injection process on the quality of end product
- the flow of the marinade injection process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the marinade injection process
- quality requirements of marinade and bird carcasses and effect of variation on process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the marinade injection process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the marinade injection process and the related procedures and recording requirements
- contamination/food safety risks associated with the marinade injection process and related control measures, including equipment checks required and traceability procedures to be followed where a broken or damaged needle is identified
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- adjustment/changeover procedures to take account of different bird size/type
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the marinade injection process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the chilling equipment and process for operation	1.1. Carcasses are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Processing/operating parameters are entered as required to meet safety and production requirements 1.4. Equipment performance is checked and adjusted as required 1.5. Pre-start checks are carried out as required by workplace requirements
2. Operate and monitor the chilling process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that specifications are met 2.5. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted according to workplace environmental guidelines 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the chilling process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify chilling process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for chilling process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- confirm:
 - water tank levels
 - operation of ice conveyor
 - operation of pumps and chlorine dosing equipment
- start, operate, monitor and adjust chilling process equipment to achieve required outcomes, including monitoring control points and conducting inspections as required to confirm process remains within specification, such as:
 - water overflow rates
 - chlorine level
 - chiller/water temperature
 - air temperature (air chillers)
 - washer agitation
 - carcass immersion time
 - deep muscle temperature
 - and ensuring carcasses are shackled securely as they come out of the spin chiller
- monitor supply and flow of product and services to and from the chilling process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required to take chilling process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- demonstrate changeover procedures to adjust for bird size
- complete workplace records as required

REQUIRED SKILLS AND KNOWLEDGE

- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- collect samples and conduct tests according to enterprise procedures
- conduct routine maintenance according to enterprise procedures

clean and sanitise equipment according to enterprise procedures

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of the chilling process, including the purpose of both washing and chilling as it affects bacterial load
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the effect of each stage on the quality of end product, including the relationship between immersion time, water temperature, and agitation on the amount of water absorbed by the carcass and on washing efficiency
- the flow of the chilling process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the chilling process
- quality requirements of carcasses and materials and effect of variation on chilling process performance
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters, such as specifications for temperature range of washers and chillers
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the chilling process, such as inspecting, measuring and testing as required by the process
- inspection or test points (control points) in the chilling process and the related procedures and recording requirements, including procedures for measuring deep muscle temperature
- changeover procedures
- contamination/food safety risks associated with the chilling process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the chilling process and

REQUIRED SKILLS AND KNOWLEDGE

- workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the chilling process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- sampling and testing associated with chilling process monitoring and control where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for washing and chilling
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in a real or simulated workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule/batch instructions
- specifications, control points and processing parameters
- washing and chilling and conveying process, related equipment and services
- carcasses to be washed and chilled
- sampling schedules and test procedures and equipment as required
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the receiving and hanging equipment and process for operation	1.1. Live birds are confirmed and available to meet operating requirements 1.2. Equipment is adjusted to meet safety and operating requirements 1.3. Pre-start checks are carried out as required by workplace requirements
2. Receive and hang birds	2.1. Birds are inspected and confirmed against load documentation 2.2. Conveyors and related equipment are operated to meet unloading requirements 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. Bird condition is inspected and unacceptable birds are removed 2.5. Birds are hung according to workplace procedures 2.6. Work is conducted according to workplace environmental guidelines 2.7. Workplace records are maintained according to workplace recording requirements
3. Shut down the receiving and hanging process	3.1. The receipt conveyors and related equipment are shut down according to workplace procedures 3.2. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify receipt and hanging process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary birds and services
- conduct pre-start checks, such as inspecting condition of conveyors and shackles to identify any signs of wear, selecting appropriate settings, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for receipt, and hanging process requirement
- conduct checks to confirm and maintain the receipt environment, such as:
 - checking airflow in receipt area
 - checking operation of related equipment, such as dust extractors
 - checking humidity gauges/ambient temperature
 - confirming that birds are under minimal stress
- unload birds and confirm condition, including removing any dead or poorly conditioned birds
- retrieve escaped birds, causing minimal stress
- hang birds according to workplace procedure
- demonstrate procedures for adjusting equipment for different bird sizes/types as appropriate
- sequence receipt and hanging activities to minimise time between receipt and processing
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- check and confirm weighbridge documentation against order according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- basic principles of bird handling, including humane treatment of birds, conditions that stress birds and environmental design features to minimise stress, such as airflow, humidity and temperature controls
- RSPCA standards relating to bird handling
- basic operating principles of equipment, such as conveyor systems and related load shifting equipment and other equipment used, including dust extractors, and the purpose and location of sensors and related feedback instrumentation
- acceptable time from bird receipt to bird processing and consequences of delays in processing on product quality
- the flow of the receipt and hanging process on further processing or packing stages to produce a final product
- changeover requirements to adjust for bird size/type
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the receipt and hanging process, such as monitoring that the receipt process is paced to deliver birds to processing and/or packing areas without delay, bird condition is acceptable, the receipt environment is appropriate and birds are shackled correctly
- consequences of poor receipt and hanging on product quality
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the receipt, and hanging process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the receipt, and hanging process, including procedures for disposing of dead or unfit birds
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- receipt documentation and related load identification procedures where relevant
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for receiving and hanging birds • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures to work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule/batch instructions • specifications, control points and processing parameters • receipt, and hanging process and related equipment and services • birds • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.

EVIDENCE GUIDE	
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples may be:</p> <ul style="list-style-type: none"> • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, RSPCA standards, regulatory and licensing requirements, legislative requirements; and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • delivery documentation • production schedules • manufacturers' advice • standard forms and reports
Production equipment	<p>Production equipment may include:</p> <ul style="list-style-type: none"> • bird holding/storage facilities • unloading equipment • conveyors • dust extractors • bird shackling systems
Birds	<p>Birds may be received in:</p> <ul style="list-style-type: none"> • multi-layered modules or crates
Operation of equipment and processes	<p>Operation of equipment and processes may require:</p> <ul style="list-style-type: none"> • the use of process control panels and systems

RANGE STATEMENT	
Shutdown procedures	Shutdown procedures may include <ul style="list-style-type: none"> • cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)
Services	Services may need to be confirmed. These depend on the nature of the process. Typical examples include: <ul style="list-style-type: none"> • power • water

Co-requisite units		

FDFO2008A Operate a stunning, killing and defeathering process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to set up, operate, adjust and shut down a process to stun, kill and defeather birds.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a poultry production environment. It typically targets the production worker responsible for applying basic operating principles to the operation and monitoring of stunning, killing and defeathering equipment and processes.</p> <p>When batch or product changeover procedures are part of this work process, the procedures should be used to customise the application of this unit. Where more detailed changeovers are carried out unit FDFOP2011A Conduct routine maintenance should be considered.</p> <p>Where an operator is involved in backing up automated stunning, killing and defeathering processes but is not required to set up or adjust equipment, use FDFOP1006A Monitor process operation</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the stun, kill and defeather equipment and process for operation	1.1. Birds are confirmed and available to meet operating requirements 1.2. Cleaning and maintenance requirements and status are identified and confirmed 1.3. Machine components and related attachments are fitted and adjusted to meet safety and operating requirements 1.4. Operating parameters are entered as required to meet bird size and type 1.5. Equipment performance is checked and adjusted as required 1.6. Pre-start checks are carried out as required by workplace requirements
2. Monitor each stage of the stun, kill and defeather process	2.1. The process is started and operated according to workplace procedures 2.2. Equipment is monitored to identify variation in operating conditions 2.3. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.4. The process is monitored to confirm that birds are stunned, killed and bled to specification 2.5. Feathers and heads are removed to specification 2.6. Out-of-specification product/process outcomes are identified, rectified and/or reported to maintain the process within specification 2.7. Work is conducted according to workplace environmental guidelines 2.8. The work area is maintained according to housekeeping standards 2.9. Workplace records are maintained according to workplace recording requirements
3. Shut down the stun, kill and defeather process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify stun, kill and defeather process requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings according to bird size/type, cancelling isolation or lockouts as required, confirming that equipment is clean and correctly configured for process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational.
- conduct inspections, such as confirming:
 - comfort bar and guides are correctly positioned
 - blades are sharp, rotating and correctly positioned for bird size
 - scald tank temperatures are within range
 - condition of fingers on defeatherer/plucker
 - defeatherer/plucker and head removal equipment are adjusted for bird size/type
- start, operate, monitor and adjust the stun, kill and defeather process equipment to achieve required outcomes, such as monitoring control points and conducting inspections as required to confirm process remains within specification, as well as monitoring:
 - bleeding time
 - scald water temperature and immersion time
 - line speed
 - feather removal
 - angle and height head removal
- monitor supply and flow of materials to and from the stun, kill and defeather process to the evisceration process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- purpose and basic principles of each part of the stun, kill and defeather process
- basic operating principles of equipment, such as main equipment components, status and purpose of guards, equipment operating capacities and applications, and the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the effect of each stage on the quality of end product, including the relationship between the bleeding stage and final product quality and between scald temperature/immersion time on the defeathering stage
- the stun, kill and defeather process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the stun, kill and defeather process
- operating requirements and parameters and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the stun, kill and defeather process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the stun, kill and defeather process and related control measures
- common causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- requirements of different shutdowns as appropriate to the stun, kill and defeather process and workplace production requirements, including emergency and routine shutdowns and procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the stun, kill and defeather process, such as systems in place to collect, treat and dispose of waste and by-products (e.g. blood, water, feathers and bird parts)
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- conduct pre-start checks on machinery used for stunning, killing and defeathering
- start, operate, monitor and adjust process equipment to achieve required quality outcomes
- take corrective action in response to typical faults and inconsistencies
- complete workplace records as required
- apply safe work practices and identify OHS hazards and controls
- safely shut down equipment
- apply food safety procedures to work practices.

Context of and specific resources for assessment

Assessment must occur in the workplace where the assessee has access to:

- personal protective clothing and equipment
- work procedures, including advice on safe work practices, food safety, quality and environmental requirements
- information on equipment capacity and operating parameters
- production schedule
- specifications, control points and processing parameters
- stunning, killing and defeathering equipment and related conveying process and services
- birds to be processed
- documentation and recording requirements and procedures
- cleaning procedures, materials and equipment as required.

FDFPO2009A Work in an egg grading floor

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge to work in an egg grading floor in either an operating or quality role. It covers basic egg characteristics, purpose of grading floor, and quality principles in egg production and packing.
------------------------	--

Application of the Unit

Application of the unit	The unit is an introductory unit that provides the basic knowledge and skills for working in egg grading and packing facilities and is intended to support induction programs for operators and other staff.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify key features of the egg grading operation	1.1. Key work locations and egg grading and packaging equipment on egg grading floor are identified 1.2. Grades of eggs packed by the enterprise are identified 1.3. Trays and packaging used for all orders and location of best before dates on trays and cartons are identified 1.4. Storage locations for packed orders prior to despatch are identified 1.5. Key workplace information sources are identified
2. Recognise key characteristics of eggs	2.1. Recognise egg components are recognised 2.2. Identify differences between egg grades are identified
3. Recognise common egg faults	3.1. Gross, hairline, star cracks, black rot, dirt and other faults in eggs are recognised 3.2. Candling process and defects identified through candling are explained
4. Understand role of egg grading floor	4.1. Importance of early grading and packing on freshness is explained 4.2. Method and purpose of egg cleaning is explained 4.3. Key risks to food safety on egg grading floor are identified, including Hazard Analysis and Critical Control Point (HACCP) plan egg grading floor critical control points 4.4. Workplace environmental guidelines and implications for egg grading floor operations are identified 4.5. Common grades of fresh eggs are recognised 4.6. Steps and locations for detecting eggs with gross defects are explained 4.7. Quality system is explained, including sampling program and tests conducted both on and off the grading floor 4.8. Key steps of packaging process are identified, including process for printing best before date 4.9. Temperature and humidity requirements for storing eggs are identified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify grading floor layout, including conveyors, washing drying, weighing and checking equipment, lanes, denestor side, backpack side, lane boards and other instruction boards, store rooms and cool rooms
- identify grades of eggs by weight, size and shell colour characteristics
- identify packaging types used within the enterprise including those for all customers
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- functions of key work areas including washing equipment, weighing and automatic fault
- detection equipment, lanes, denestors, backpack side, quality room and cool rooms
- egg components and purpose, including shell, shell membranes, yolk, albumen and air cell
- key egg faults, including types of cracks, faulty colouring, faulty shapes and blood and other inclusions
- temperature and humidity requirements for storing eggs and effects of variation from these requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work being performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify egg receiving, denestor, backpack, pulping and storage equipment and work stations • identify type and grades of eggs packed within the enterprise • ability to recognise types of faults in eggs and methods used to detect each fault • identify food safety risks on egg grading floor and critical control points • identify order control system and trays and cartons used for orders • identify temperature, humidity and other storage requirements for eggs.
Context of and specific resources for assessment	<p>Assessment must occur in the workplace where there the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • egg washing, grading and packing equipment • documentation and recording requirements and procedures • eggs of different grades and condition including eggs demonstrating most common faults.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
Guidance information for assessment	<p>When used for induction purposes, assessment of competency should be demonstrated on more than one occasion over a period of time in order to ensure</p>

EVIDENCE GUIDE	
	consistency and equity and in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • floor layout diagrams • manufacturers' advice • standard enterprise forms and reports
Key egg components	<p>Key egg components include:</p> <ul style="list-style-type: none"> • shell • albumen • yolk • shell membranes • air cell
Egg grading and packaging equipment	<p>Equipment may be:</p> <ul style="list-style-type: none"> • manual or automatic with central controls or operator set controls, including controls for printing best before dates
Best before dates	<p>Best before dates are printed on packaging to advise consumers of the best period for consumption of the packed eggs. The date period may vary by:</p> <ul style="list-style-type: none"> • species • type of egg • region
Haugh score	<p>Haugh score is:</p> <ul style="list-style-type: none"> • a comparison of the height of the albumen

RANGE STATEMENT	
	midway between the yolk and the edge of the albumen with the weight of the egg
HACCP plan	<p>The principles of HACCP are:</p> <ul style="list-style-type: none"> • hazard analysis • identifying critical control points • establishing critical limits • monitoring • taking corrective action • keeping record • verifying results <p>The HACCP plan for egg production enterprise will identify the critical control points on the egg grading floor.</p>
Factors affecting egg quality	<p>Factors affecting egg quality may include:</p> <ul style="list-style-type: none"> • age and health of the hen • time between laying and consumption • storage at low temperatures and required humidity as soon as possible after laying • strain of chicken • texture, colour, shape, soundness and cleanliness of shell
Candling process	<p>The candling process may be automatic or manual and is used to detect shell cracks and defects not normally visible and internal defects, including:</p> <ul style="list-style-type: none"> • blood spots • meat spots • mottled and glassy shells • rotten eggs • stale eggs (large air cells) • cracks • misshapen shells

Co-requisite units

Co-requisite units		

FDFPO2010A Operate egg grading and packing floor equipment

Modification History

November 2011: minor typographical error corrected.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to operate and monitor specialist egg washing, grading and packaging equipment.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to operators working in an egg grading and packing floor who are operating and monitoring equipment directly in contact with eggs. These positions will generally be washing station, denestor and backpack work stations. Work stations and positions, such as those dealing with movement and placement of empty trays or filled outer packaging, are covered by more generic units such as:</p> <ul style="list-style-type: none"> • FDFOP2022A Operate a high speed wrapping process • FDFOP2023A Operate a packaging process • TLID207C Shift a load using manually-operated equipment. <p>Where liquid egg products are manufactured from damaged and faulty eggs the following units may be required depending on the type of liquid egg products being produced:</p> <ul style="list-style-type: none"> • FDFOP2008A Operate a bulk liquid transfer process • FDFOP2034A Operate an evaporation process • FDFOP2040A Operate a heat treatment process (for pasteurisation).
--------------------------------	--

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Operate and monitor egg receiving equipment</p>	<p>1.1. Production schedules are checked for egg type requirements, for example, cage, barn laid, free range and organic</p> <p>1.2. Eggs requiring manual loading are placed onto conveyor</p> <p>1.3. Conveyor, finger sorter and other egg receiving equipment are checked for jams and faults</p> <p>1.4. Primary and secondary wash and rinse machines and dryers are checked for correct operation</p> <p>1.5. Passage of eggs through crack and leak detectors, weighing stations is checked to make sure that faulty eggs are being identified and dropped out</p> <p>1.6. Sorting of eggs into different size lots is monitored for conformance to enterprise and job specification</p>
<p>2. Operate and monitor denestor side egg packing lanes</p>	<p>2.1. Correctly printed packaging is loaded onto lane take off holders according to production instructions or orders</p> <p>2.2. The correct number of size and grade of egg pallets and packs according to customer order are supplied to each lane</p> <p>2.3. Packing order requirements, including number of eggs per carton or tray, and number of cartons or trays per order type are entered into each lane through key pad terminal</p> <p>2.4. Mechanical setting of the lane machinery for different size trays is undertaken where required</p> <p>2.5. Setting of best before date printer is undertaken or checked</p> <p>2.6. Lanes are monitored to ensure that lanes do not run out of egg trays</p>
<p>3. Operate and monitor backpack side egg packing lanes</p>	<p>3.1. Number of cartons per order are determined from lane boards or other job instructions</p> <p>3.2. Packing lanes are monitored to ensure trays are being packed into correct outer packaging</p> <p>3.3. Trays not requiring packing are stacked into outer containers</p> <p>3.4. Quality checks are undertaken according to standard operating procedures, including checks on outer quality, date printing on all, eggs weights, cleanliness, Haugh unit reading, and misshapen and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>cracked eggs in cartons</p> <p>3.5. Work is conducted in accordance with workplace environmental guidelines</p>
<p>4. Process damaged and faulty eggs</p>	<p>4.1. Containers of faulty eggs from washers and damaged eggs from packing machines are collected and transported to liquid egg processing station</p> <p>4.2. Eggs are sorted into edible and inedible waste product</p> <p>4.3. Edible waste product are weighed and recorded within specified time intervals</p> <p>4.4. Faulty and damaged edible eggs are fed to egg breaking or egg pulping machine</p> <p>4.5. Egg pulping machine is started according to standard operating procedure</p> <p>4.6. Temperature of egg pulping machines are monitored and any over-temperatures reported</p> <p>4.7. Speed of pumps are monitored and adjusted to suit pulping and container filling operations</p> <p>4.8. Inedible egg waste product is weighed, recorded and disposed of according to procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify processing requirements
- select, fit and use personal protective clothing and/or equipment
- conduct pre-start checks, such as inspecting equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, cancelling isolation or lock outs as required, confirming that equipment is clean and correctly configured for processing requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- correctly start and stop egg washing, packing and grading machines
- monitor supply and flow of eggs through washing and packing equipment
- identify visually faulty eggs, including dirty eggs after washing, cracked eggs, leaking eggs and misshaped eggs
- use yolk colour test card
- conduct Haugh unit checking
- fix simple jams and blockages
- locate emergency stop functions on equipment
- monitor machine performance for above average egg damage, incompletely filled trays and outer packaging, obvious misses of faulty and damaged eggs, and over temperature equipment
- detect abnormal noise or vibration
- match orders to inner and outer packaging materials
- conduct changeovers to different capacity cartons and catering trays including mechanical adjustments using claw or other specialised tool
- prepare equipment for cleaning
- respond to and/or report equipment failure within level of responsibility
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- grading floor layout, including conveyors, washing drying, weighing and checking

REQUIRED SKILLS AND KNOWLEDGE

- equipment, lanes, denestor side, backpack side, lane boards and other instruction boards, store rooms and cool rooms
- method used for communicating daily orders (e.g. lane boards)
- purpose of best before dates
- method of setting best before date printer
- understanding type and implication of cracks
- location and contents of all material safety data sheets (MSDS) for chemicals used in washing and cleaning processes
- types of trays, outer packaging, buckets and other containers used on grading floor and system used to identify containers used for first grade, seconds and useless eggs
- determining first grade, seconds and useless eggs
- maximum collection times for seconds and useless eggs from grading floor collection points

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for egg receipt, washing, packing and grading • start, operate, monitor and adjust equipment to achieve required orders and quality outcomes • take corrective action in response to jams, other typical faults and inconsistencies in washing, weighing faulty egg identification and packing • correctly change denester side operation between different size packs • correctly identify and match trays to outer packaging for orders • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in the workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • information on equipment capacity and operating parameters • production schedule, batch/recipe instructions • egg washing, grading and packing equipment • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.

EVIDENCE GUIDE	
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFOP2003A Clean equipment in place • FDFOP2004A Clean and sanitise equipment • FDFOP2011A Conduct routine maintenance • FDFOP2013A Apply sampling procedures • FDFOP2030A Operate a process control interface • MSL973001A Perform basic tests.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • standard forms and reports
Egg receiving equipment	<p>Egg receiving equipment may include:</p> <ul style="list-style-type: none"> • conveyors bringing eggs directly from laying sheds or barns • conveyors requiring manual loading of eggs from trays delivered to grading floor by trucks
Carton and tray size	<p>Carton and tray size can vary from between enterprises and may include:</p> <ul style="list-style-type: none"> • six, twelve, fifteen and eighteen egg cartons • twenty and thirty egg trays
Faulty eggs	<p>Faulty eggs include:</p> <ul style="list-style-type: none"> • eggs rejected either automatically or manually because they are out of size, shape or weight

RANGE STATEMENT	
	specification
Damaged eggs	<p>Damaged eggs include:</p> <ul style="list-style-type: none"> eggs rejected either automatically or manually because of cracks or leaks or are eggs damaged during the washing and packing process
Denestor side	<p>Denestor side work stations are:</p> <ul style="list-style-type: none"> those positions working on the side of the egg packing machine lanes where eggs are received from the washing equipment and where empty trays are loaded into each lane for filling
Backpack side	<p>Backpack side work stations are:</p> <ul style="list-style-type: none"> those positions working on the side of the egg packing machine lanes where filled egg trays are either packed into outer containers or taken off as individual filled trays
Egg storage rooms	<p>Storage of packed eggs prior to despatch may be:</p> <ul style="list-style-type: none"> undertaken in temperature and humidity controlled storage rooms
Shutdown procedures	<p>Shutdown procedures may include:</p> <ul style="list-style-type: none"> cleaning (in some cases cleaning may be carried out by a dedicated cleaning crew)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the chickway system for operation	1.1. Computer program is selected and loaded to suit product 1.2. Line start up is controlled 1.3. Bird drop requirements are identified 1.4. System is set to meet production requirements
2. Monitor system operation	2.1. New orders are entered and system parameters set to meet requirements through the day 2.2. Priorities are adjusted to meet production and customer requirements 2.3. Weight ranges are monitored and system settings adjusted to meet customer orders 2.4. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.5. The system is monitored to confirm that specifications are met 2.6. Out-of-specification process outcomes are identified, rectified and/or reported to maintain the process within specification
3. Handover system operation	3.1. Workplace records are maintained according to workplace recording requirements 3.2. Handover is carried out according to workplace procedures 3.3. Process operators are aware of system and related equipment status at completion of handover
4. Shut down the system	4.1. The appropriate shutdown procedure is identified 4.2. The system is shut down according to workplace procedures 4.3. Maintenance requirements are identified and reported 4.4. Work is conducted according to workplace environmental guidelines
5. Contribute to continuous improvement of the system	5.1. System performance is reviewed against output plan/targets 5.2. Opportunities for system improvement are identified and investigated 5.3. Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access kill plan, customer orders and related information to plan order priorities
- select and load required program
- apply basic standard deviation to analyse weight distribution of flock
- operate control system to start conveyors
- confirm that birds available match production order requirements
- select system settings to deliver birds of required weight, type, grade and number to required production areas at the time required
- modify system parameters to respond to operating conditions and bird supply
- monitor system operation, such as monitoring:
 - timely flow and delivery of birds to meet production requirements
 - pace of delivery to production area to match work flow
 - system alarms
 - weight ranges to confirm match with delivery requirements
- liaise with relevant departments to respond to customer requirements
- identify out-of-specification performance and take corrective action, such as responding to out-of-specification weight, drop position and sensor errors
- demonstrate system shutdown procedure
- monitor operating efficiencies of the system and investigate, resolve and/or report problems
- report on system performance as required by workplace reporting arrangements
- conduct computer system maintenance as required to clear computer for new start
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- system configuration, including system flow, layout and drop points
- customer ordering procedures, including common terms used to describe product and order requirements, and criteria to apply to prioritise customer orders
- basic operating principles of equipment and programs used to deliver the required birds to the correct locations within constraints of birds available and to generate system reports

REQUIRED SKILLS AND KNOWLEDGE

- the main alarms and corrective action required
- location/alignment requirements of sensors and related feedback instruments located in the system hardware
- limits and ranges to adjust for weight distribution
- related systems/activities and responsibilities for interaction, such as related planning and scheduling, sales/customer service, bird receipt, kill and evisceration, and packing
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- isolation, lock out and tag out procedures and responsibilities
- hazards, risks, controls and methods for monitoring processes within the system, including occupational health and safety (OHS), food safety, quality and environmental hazards and risks
- workplace system and approach to equipment maintenance
- process improvement procedures and related consultative arrangements (e.g. an understanding of options to minimise giveaway)
- troubleshooting procedures and problem solving techniques
- procedures and responsibility for reporting production and performance information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on chickway system • set computer settings to meet production requirements • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • conduct production handover • safely shut down equipment • apply food safety procedures to work practices • contribute to workplace improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in the workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • kill schedules, customer orders and related advice on system requirements • information on equipment capacity and operating parameters • system equipment, software and related accessories and services • birds and packing hall • communication and recording systems and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p>

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• FDFOP2015A Apply principles of statistical process control• FDFOP2030A Operate a process control interface.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the deboning/filleting equipment and process for operation	1.1. Washed and chilled carcasses or pieces are available to meet production requirements 1.2. Equipment components are clean and set to meet operating requirements 1.3. Equipment performance is checked and adjusted as required 1.4. Pre-start checks are carried out as required by workplace requirements
2. Monitor deboning/filleting process operation	2.1. Carcasses or pieces are delivered to the boning area 2.2. Carcasses or pieces are inspected to confirm quality specifications are met 2.3. Bones are removed and fillets prepared to meet specification 2.4. Equipment is monitored to identify variation in operating conditions 2.5. Variation in equipment operation is identified and maintenance requirements are reported according to workplace reporting requirements 2.6. Work is conducted in accordance with workplace environmental guidelines 2.7. Workplace is maintained according to housekeeping standards 2.8. Workplace records are maintained according to workplace recording requirements
3. Shut down the deboning/filleting process	3.1. The appropriate shutdown procedure is identified 3.2. The process is shut down according to workplace procedures 3.3. Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify deboning/filleting process requirements
- select, fit and use personal protective clothing and/or equipment, including wearing of mesh gloves or similar protective clothing
- confirm supply of necessary carcasses or pieces and related equipment, such as tubs, crates and/or bins
- conduct pre-start checks, such as inspecting knife and related equipment condition to identify any signs of wear, selecting appropriate settings and/or related parameters, confirming that equipment is clean and correctly configured for deboning/filleting process requirements, positioning sensors and controls correctly, ensuring any scheduled maintenance has been carried out, and confirming that all safety guards are in place and operational
- debone and fillet product to meet specifications, including demonstration of a range of cuts to required quality, time and yield
- monitor boning and filleting process, such as:
 - product quality
 - clean removal of skin and bones as required
 - removal of fat, gristle, spots or bruised flesh
 - no bone fragments remain in product
 - yield
 - knife sharpness
- monitor supply and flow of carcasses/pieces to the process
- take corrective action in response to out-of-specification results
- respond to and/or report equipment failure within level of responsibility
- locate emergency stop functions on equipment
- follow isolation and lock out/tag out procedures as required
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use process control systems according to enterprise procedures
- conduct routine maintenance according to enterprise procedures
- clean and sanitise equipment according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- purpose of the deboning/filleting process, including the skeletal structure of poultry products and the effect of this process on portion control and yield
- quality characteristics to be achieved for the different types of cuts required, including the consequences of failing to remove bones and prepare fillets to specification
- quality requirements of carcasses/pieces suitable for processing and effect of variation on process performance
- basic operating principles of equipment used, including knife techniques, as well as related equipment components, such as conveyors
- knife handling, sharpening, cleaning and storage procedures
- the flow of the deboning/filleting process and the effect of outputs on downstream processes
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- contamination/food safety risks associated with the deboning/filleting process and related control measures
- occupational health and safety (OHS) hazards and controls, including safety related to use of knives
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the deboning and filleting process, including waste collection and handling procedures related to the process
- basic operating principles of process control, where relevant, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures where relevant
- cleaning and sanitation procedures where relevant

Evidence Guide

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify team objectives	<p>1.1. Team tasks, responsibilities and performance measures are identified and agreed</p> <p>1.2. Tasks required to achieve goals and performance standards are discussed and agreed</p>
2. Participate in planning work activity	<p>2.1. Personal work tasks and roles are negotiated to ensure team goals and performance standards are met</p> <p>2.2. Information is provided to contribute to planning work group activities</p> <p>2.3. Personal skills are assessed to identify match with team skill needs</p> <p>2.4. Personal workload is planned to meet team goals and performance standards</p>
3. Complete work tasks and roles to meet team requirements	<p>3.1. Work is undertaken to achieve team goals and performance standards</p> <p>3.2. Communication between team members and with other work areas is appropriate and timely</p> <p>3.3. Timely requests are made for assistance as required to meet team goals and performance standards</p> <p>3.4. Assistance is provided to other team members to achieve team goals and performance standards</p> <p>3.5. Work is conducted in accordance with workplace environmental guidelines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify team objectives, responsibilities and performance standards
- confirm and agree on work roles and responsibilities within the team
- complete work responsibilities within agreed timelines
- assess time and other resource requirements related to achieving own work responsibilities
- identify problems and request assistance in a timely manner to achieve personal and team goals
- use communication techniques appropriate to the audience
- exchange constructive feedback with team members
- participate effectively in team processes, including working with own team members and with other teams and work areas
- support other team members to achieve team goals
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- procedures for establishing team goals and performance standards
- methods used to measure achievement of personal and team goals
- team goals and personal role in achieving work outcomes
- group processes, including basic facilitation, negotiation and conflict resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify team goals and expectations and personal role within the team • plan work to maximise outcomes for team • apply communication skills to engage with other participants • participate in and support the achievement of team goals.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • opportunities to participate in team processes • workplace arrangements for establishing company, workplace and team goals • methods used to measure and report on performance against targets or standards • resources required to achieve personal work requirements.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunities for improvement	1.1. Barriers to good practice or optimal performance are identified 1.2. Scope of issue or problem to be addressed is clearly defined
2. Identify information requirements	2.1. Data required to investigate improvement opportunity is identified 2.2. Appropriate data collection methods are selected 2.3. Additional resources available to support investigation are identified
3. Analyse the issue or problem	3.1. Techniques required to investigate nature of issue or problem are selected and applied 3.2. A detailed description of the issue or problem is developed 3.3. Possible causes are identified and tested 3.4. Options for improvement are identified and assessed
4. Recommend options for improvement	4.1. Preferred options are identified and described 4.2. Recommendations are presented in formats appropriate to the issue and the audience 4.3. Recommendations are consistent with data collected and analysed
5. Participate in implementing improvement proposals	5.1. Improvement trials are supported 5.2. Improvement proposals are evaluated and refined 5.3. Operating procedures are updated and communicated to reflect implementation of improved practices 5.4. Improvement in performance is monitored

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify nature and scope of improvement opportunity
- consult others to confirm improvement opportunity definition
- determine data collection requirements and appropriate collection methods
- identify resources requirements to support investigation, such as negotiating access to resources as required, and where required, identifying expertise or improvement team members
- collect data, such as collecting samples and taking measurements
- determine and apply appropriate data analysis techniques
- draw conclusions based on the data collected and analysed
- communicate findings in forms appropriate to the nature of the issue and the audience
- receive and take account of feedback
- participate in related trials and/or changes to work practices arising from improvement proposals
- monitor and document results of trials/implementation and participate in modifying change to support ongoing improvement
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- objectives to be addressed by improvement proposals, such as quality, occupational health and safety (OHS), environmental management, cost, efficiency and job satisfaction
- the context in which improvement occurs, including capital expenditure and labour budgets, equipment capacity and production targets
- workplace approach to structuring improvement processes
- resources available to the workplace to support improvement processes, including both internal and external resources
- data collection and analysis techniques appropriate to the nature of the improvement opportunity and the workplace
- communication techniques to support data collection, consultation and teamwork required to participate in improvement processes

REQUIRED SKILLS AND KNOWLEDGE

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Process improvement	Process improvement is typically investigated and developed in consultation with others
Data analysis	Data analysis typically involves: <ul style="list-style-type: none"> • use of computer programs but may also be carried out manually
Problem solving tools	Problem solving tools can include but are not limited to: <ul style="list-style-type: none"> • fishbone diagrams/cause and effect diagrams • workflow analysis • Pareto diagrams • SWOT analysis

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify recording and reporting requirements	<p>1.1. The purpose of recording performance-related information is identified</p> <p>1.2. Recording and reporting responsibilities are identified</p> <p>1.3. Recording and reporting systems and formats are identified</p>
2. Maintain workplace information	<p>2.1. Records are complete, timely and accurate</p> <p>2.2. Performance information is recorded in required format to meet workplace reporting requirements</p> <p>2.3. Errors or discrepancies in recording are identified and corrected or notified to appropriate personnel</p> <p>2.4. Variances are identified, investigated and reported according to workplace procedure</p> <p>2.5. Requests for information are assessed, prioritised and addressed to meet required timelines</p>
3. Maintain security of workplace information	<p>3.1. Access levels and authorities are identified</p> <p>3.2. Security of workplace records and reports is maintained</p> <p>3.3. Security breaches are identified and reported to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and use recording/reporting formats and systems
- identify information security requirements and procedures for responding to/reporting a security breach
- collect and collate information to be recorded as required
- assess information to confirm that it is complete and accurate and follow up inaccurate recording with relevant personnel
- identify significant performance variation, investigate and report cause/s
- prepare reports in required format to meet reporting timelines
- respond to information requests on a timely basis
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the purpose and responsibilities for the information records and reports to be maintained or produced, including accuracy levels and timeliness of recording and reporting
- techniques used to collate and assess information, including typical recording outcomes to identify unusual or incorrectly recorded information
- likely causes of variation and related reporting responsibilities
- information system access levels and codes, such as levels within software
- communication skills relevant to reporting role

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • describe the reporting and recording systems and procedures for work area • record information on work performance in accordance with reporting procedures • report variances and inconsistencies • maintain security of work documentation.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • advice on workplace policies, codes of practice and procedures • workplace information/records • recording/reporting formats and systems.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Support others in the work area	1.1. Individuals are mentored to meet work requirements 1.2. Performance that is inappropriate is identified and corrective action taken 1.3. Feedback on performance is provided
2. Facilitate group processes	2.1. Purpose of group process is identified 2.2. Meeting procedures required to achieve an agreed outcome are determined and applied 2.3. Group members are engaged in the process 2.4. Clear outcomes are reached in a timely manner

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- model behaviour consistent with company policies and procedures
- identify behaviour or performance that is unacceptable
- structure interventions and feedback to clearly convey required standard of performance
- apply appropriate explanation, demonstration, questioning and active listening techniques when interacting with others
- provide feedback appropriate to the audience requirements
- recognise and respond appropriately to difference and diversity in the workplace
- provide and/or arrange opportunities to develop/practice appropriate skills
- plan group processes, including clearly identifying the purpose of the discussion or meeting, confirming the appropriate people are available and planning a basic outline of the approach and/or agenda
- facilitate meetings, including confirming with group members the purpose of the discussion or meeting, engaging people in discussion and assisting the group to reach an agreed outcome within the allotted timeframe
- record meeting outcomes
- follow up group processes, including identifying actions required to follow up outcomes of a discussion or meeting
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- company policies and procedures as they apply to the work area, including areas covered by legislation, such as sexual harassment, equal employment opportunity (EEO)/affirmative action, anti-discrimination, racial vilification and workplace bullying, occupational health and safety (OHS), food safety and environmental management
- industry awards and enterprise agreements to develop an awareness of the main issues covered as they affect day-to-day work arrangements
- systems and programs in the workplace to support development and mentoring of others
- relevant resources to support mentoring role and responsibilities
- techniques for structuring and explaining work-related information to meet the

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Negotiate and communicate team objectives	<p>1.1. Team goals, tasks and responsibilities are communicated and agreed with team members</p> <p>1.2. Team performance standards and measures are communicated and agreed with team members</p>
2. Plan the work activity	<p>2.1. Individual roles and responsibilities of team members are assigned in consultation with others</p> <p>2.2. Work roles are allocated to take account of team goal and the skills and expertise of each team member</p> <p>2.3. Resources required to achieve work outcomes are identified and secured</p> <p>2.4. Development needs of team members are identified and addressed</p>
3. Manage team work to achieve required outcomes	<p>3.1. Work progress is monitored against timelines and performance measures</p> <p>3.2. Team members are kept informed of progress towards achieving team performance indicators</p> <p>3.3. Potential barriers to achieving team goals are identified and corrective action taken</p> <p>3.4. Team performance variances are identified, investigated and reported according to workplace reporting requirements</p> <p>3.5. Team members are encouraged to actively contribute to team growth and development</p> <p>3.6. Workplace information systems and procedures are followed to record and report on team performance</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- communicate and agree on team goals, performance standards and performance measures within the context of workplace arrangements for team or group work
- establish and secure resources, such as labour (crew levels and competency profiles) and other resources as required
- develop plans and schedules to achieve team goals, including the ability to assess impact of planning decisions on related issues, such as impact on other work areas, resource utilisation and costs
- facilitate group processes, including mediating and resolving different interests, personal and work styles as required and encouraging/providing opportunities for active participation of team members
- allocate and negotiate work roles and responsibilities in consultation with team members to match work requirements and skills and abilities of team members
- identify and address learning needs of team members
- provide a mentoring role to team members
- monitor team outputs against objectives and make adjustments as required to achieve plan
- monitor resource utilisation against plan
- provide feedback on team and individual performance according to workplace feedback procedures
- represent and advocate on behalf of the team in other workplace forums as required
- use communication techniques appropriate to the audience, such as communicating with people from diverse cultural backgrounds and with people with limited ability to speak or understand English
- record information on team performance as required
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- facilitation techniques and communication skills to support the active engagement and participation of team members in team processes
- work procedures relevant to team tasks and related occupational health and safety (OHS), food safety, quality and environmental management issues, hazards and control measures

REQUIRED SKILLS AND KNOWLEDGE

- workplace planning and performance measurement systems and processes
- methods used to measure achievement of personal and team goals
- resource allocation systems used in the workplace as appropriate to secure relevant resources required by the team or group
- work capacity, skills and knowledge of team or work group members in order to allocate roles appropriate to skill level and plan development opportunities
- competency requirements of work functions, including any special work conditions that may be covered by additional licensing or certification requirements
- duty of care when allocating work roles and responsibilities
- competency identification and training arrangements in the workplace
- communication skills required to represent and advocate on behalf of the team or work group
- stages of team development
- recording and reporting system and responsibilities

Co-requisite units

Co-requisite units		

FDFPPL3005A Participate in an audit process

Modification History

November 2011: update to imported unit.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to participate in an internal audit process and is appropriate where internal audit processes are conducted to support externally audited programs.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application where auditing occurs in an area that the person is not directly responsible for and where they are required to follow a formal, structured process. It is designed to support participation in auditing a range of programs designed to identify hazards, assess risk and implement control measures. These may include but are not limited to occupational health and safety (OHS), quality and environmental management. At this level, the person would typically work under direction and may be required to operate within established audit procedures, such as those outlined in ISO 10011.</p> <p>Participation implies that the person can participate in all stages of an audit but is not responsible for negotiating audit scope, allocating audit tasks to others or reporting on audit outcomes.</p> <p>When applied to the pharmaceutical industry, FDFPH2001A Apply Good Manufacturing Practice procedures should be selected to support the application of this unit. FDFPH2001A incorporates content covered in FDFOP2063A Apply quality systems and procedures, and can be used as an alternative to this prerequisite unit for this sector.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFOHS2001A	Participate in OHS processes
	FDFOP2063A	Apply quality systems and procedures
	MSAENV272B	Participate in environmentally sustainable work practices

Employability Skills Information

Employability skills	
	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Participate in planning an audit	1.1. Roles and responsibilities for participating in the audit are identified 1.2. The purpose and scope of the audit is identified 1.3. Information and resources required to conduct the audit are identified and located
2. Participate in conducting an audit	2.1. Information is collected that is adequate, representative and meets audit requirements 2.2. Information is analysed to assess adequacy of performance against program 2.3. Records are reviewed to confirm compliance with the program 2.4. Compliance with the program is observed in the workplace 2.5. Areas requiring corrective action are identified
3. Report and follow up audit outcomes	3.1. Situations presenting an imminent and serious risk to the program objectives are identified and reported immediately in accordance with reporting requirements 3.2. Audit reports are prepared to address audit scope requirements 3.3. The results of the audit are communicated according to audit purpose and requirements 3.4. A corrective action plan is developed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify personal roles and responsibilities for participating in the audit process
- identify audit purpose, scope, steps and timelines
- identify and locate information required to conduct the audit
- review workplace documentation to confirm that required information is available
- prepare tools as required to collect information, such as checklists and interview schedules
- identify any changes that have occurred in the workplace since initiating the program or since the last program audit that could affect program outcomes
- apply appropriate questioning, observation and related communication skills to support information collection
- review records, conduct interviews, observe workplace practice and collect other relevant information as required to assess compliance with program requirements
- take immediate action to report non-conformities that present an imminent and serious risk to the program objectives within level of responsibility
- identify, investigate and record evidence of non-conformance and judge significance
- assess the adequacy of the program by analysing the information collected against the program objectives
- form conclusions on audit outcomes based on an objective assessment of evidence collected
- report the findings of the audit in appropriate format
- communicate audit outcomes within level of responsibility using techniques and presentation styles appropriate to the audience
- where findings indicate either a failure to comply with the program or inadequacy of the program, participate in investigation of causes of failure and identification of corrective action options
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the purpose and intent of the program being audited
- personal roles and responsibilities in the audit process and related responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- of other members of the audit team
- the purpose and stages involved in the audit process
- workplace information and related information management systems
- techniques for collecting information, including options, relevance and strengths and weaknesses of each method to ensure data is adequate and representative
- data analysis methods relevant to the audit process
- communication skills and techniques appropriate to the workplace
- technical knowledge relevant to the program being audited in order to verify compliance and assess adequacy of existing control measures, including relevant industry standards
- purpose and responsibilities for maintaining records

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify compliance requirements	<p>1.1. Existing operating procedures and specifications are reviewed to identify compliance requirements</p> <p>1.2. Enquires are made to supervisors and specialist staff within the workplace to identify compliance requirements</p> <p>1.3. Information from external organisations and regulatory authorities is accessed to determine compliance requirements</p> <p>1.4. The purpose and scope of compliance requirement are identified</p>
2. Establish compliance arrangements in work area	<p>2.1. Compliance requirement is confirmed and communicated to other staff in work area</p> <p>2.2. Briefings, training and other support are sought from internal and external support staff</p> <p>2.3. Procedures for achieving and monitoring compliance in work area are identified in operating procedures</p> <p>2.4. Procedures to follow for non-compliance event are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- review operating procedures, specifications and other workplace data
- identify internal and external support personnel
- identify and locate required information to identify compliance requirements of own work area
- identify procedures to follow for non-compliance events
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the purpose and intent of compliance
- compliance policies and requirements relevant to own work area
- workplace information and related information management systems
- data assessment methods relevant to monitoring compliance of own work area
- purpose and responsibilities for maintaining records

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify compliance requirements and procedures for own work area • identify the purpose compliance and consequences of non-compliance • identify and act issues which may affect establishing an effective compliance framework in work area • document compliance outcomes.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • workplace program documentation • compliance procedures and standards as applied in the workplace • advice on related legislation, industry standards and codes of practice • information systems and data collection technology • reporting formats/requirements • workplace/personnel access as required to collect data/observe compliance.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Compliance	<p>Compliance may relate to:</p> <ul style="list-style-type: none"> • requirements of OHS • food safety • feed safety • environmental management
Information collection methods	<p>Information collection methods include:</p> <ul style="list-style-type: none"> • observation • production data • review of workplace records • accessing relevant technical information

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to manage people performance issues.
------------------------	---

Application of the Unit

Application of the unit	This unit is appropriate for those with managerial responsibility for other people in a work area. It includes an understanding of different levels of response to performance issues, including formal disciplinary procedures.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	
	FDFPPL3003A Support and mentor individuals and groups

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide information on performance expectations	<p>1.1. Workplace policies and procedures are current, accessible and in formats appropriate to the audience</p> <p>1.2. Performance-related information is current, accessible and in formats appropriate to the audience</p>
2. Provide coaching and support	<p>2.1. Role models are provided to demonstrate appropriate work behaviours and procedures</p> <p>2.2. Skill development needs are identified and addressed</p>
3. Manage performance issues	<p>3.1. Signs of poor/unacceptable performance are identified</p> <p>3.2. Reasons for poor/unacceptable performance are investigated</p> <p>3.3. Appropriate responsive action is identified and implemented</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- ensure that relevant and appropriate information is available to people in the work area to define performance expectations, including workplace information on policies and procedures and on production targets/work outcomes required of the work role
- ensure that appropriate behaviour/procedures are consistently observed by all workplace personnel in the work area
- establish skill shortages and arrange for these to be addressed, such as direct training/explanation or referral to appropriate personnel
- provide regular feedback to foster confidence and appropriate workplace behaviours, such as providing aggregate information on work performance, e.g. key performance indicators (KPIs), as well as feedback on individual performance and behaviour
- identify indicators of poor or unacceptable work performance and investigate causes
- determine appropriate response within level of responsibility, including recording details of performance issues and response to meet workplace recording requirements
- develop a plan to structure and undertake a formal counselling interview
- demonstrate appropriate interview techniques to counsel in response to a performance management issue
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- workplace feedback and performance management systems and responsibilities in the workplace, including personal level of authority for performance counselling and disciplinary procedures
- company policies, procedures and related communication systems
- the effect of personal style and behaviour on others in the work area, including the importance of establishing effective relationships with people in the work area
- the importance of providing clear information on performance expectations and related communication systems/processes
- signs of poor performance, including patterns or behaviour that may lead to poor

REQUIRED SKILLS AND KNOWLEDGE

performance

- options and strategies to address performance issues, including the difference between competency performance and related responses
- systematic approaches for structuring a discussion on poor performance (at a minimum this includes a clear statement of the problem, an explanation of why it is a problem, the action or change required to address the problem and any follow up action)
- workplace and legal requirements to document instances of poor performance or unacceptable behaviour, including the legal processes that could eventuate and how reported information may be used
- relevant provisions of relevant industrial awards and enterprise agreements on employee rights and responsibilities related to work performance, including the relationship between the award and site agreements
- communication skills to consult and communicate with relevant personnel
- recording systems and requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify performance indicators and measures and assess performance against these • identify non-conformances • provide coaching and support to team members according to needs determined by performance outcomes • monitor performance • address poor performance according to organisational guidelines.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • workplace policies and procedures • relevant industrial awards and agreements • workplace information recording systems, requirements and procedures.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>The management of people performance issues is consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact of scheduling arrangements</p>
People management	<p>People management may relate to:</p> <ul style="list-style-type: none"> • a specific work area or apply across the workplace according to level of responsibility
Provisions	<p>Provisions to be covered include but are not limited to:</p> <ul style="list-style-type: none"> • work allocation (minimum callouts/hours) • notice periods required to change shifts arrangements/allocations • classification structure relevant to work role/hours of work • leave entitlements • conflict/dispute resolution procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify maintenance requirements	1.1. The approach to maintaining production equipment is identified 1.2. Advice on equipment maintenance requirements is identified and assessed 1.3. Special maintenance requirements are assessed and prioritised
2. Plan maintenance	2.1. Resources required to carry out maintenance are identified and secured 2.2. A maintenance schedule is developed to provide reliable equipment performance with minimal disruption to production 2.3. The maintenance schedule takes account of production schedules, equipment capability, special maintenance requirements and efficient resource utilisation and workplace environmental guidelines 2.4. The maintenance schedule is recorded in the appropriate workplace format 2.5. Responsibilities for implementing the maintenance schedule are defined and communicated 2.6. Work areas and personnel affected by the maintenance program are consulted and advised of maintenance progress
3. Monitor implementation of the maintenance schedule	3.1. Progress of maintenance is monitored to identify variance to schedule 3.2. Unplanned events that could affect the schedule are identified, assessed and addressed 3.3. Potential failure to meet maintenance deadlines are identified and communicated to relevant personnel in a timely manner
4. Contribute to the improvement of equipment reliability	4.1. Equipment performance information is reviewed to identify patterns or trends 4.2. Factors that affect equipment reliability are identified 4.3. Production and maintenance personnel are consulted to identify opportunities to improve equipment reliability 4.4. Action is taken to improve equipment reliability 4.5. The maintenance schedule and related programs and procedures are reviewed to reflect improvements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- describe the company's approach to equipment maintenance
- collect information on equipment maintenance requirements to identify routine lubrication and servicing requirements as appropriate
- analyse equipment maintenance data, such as the use of data analysis techniques to plot and interpret trends and patterns in equipment performance
- identify components of the maintenance program and related responsibilities for implementation, such as equipment monitoring, lubrication schedules, routine servicing and cleaning schedules and breakdown or emergency response (implementation is typically shared between production and maintenance personnel and/or external service providers)
- identify and confirm resource requirements to meet maintenance requirements, including the nature of maintenance tasks involved to identify the required maintenance equipment, materials/consumables and competencies and where required, identify and liaise with external maintenance service providers
- confirm that personnel with the required competencies are available to conduct maintenance activities, such as reporting and/or developing competencies required to implement the maintenance schedule, and where required, manage contracts with maintenance providers
- develop a schedule for equipment maintenance to support reliable equipment performance with minimal disruption to production, including consulting relevant personnel to confirm schedule feasibility, and notifying relevant personnel of any possibility that maintenance cannot be completed within scheduled timeframe
- record and communicate the schedule in appropriate formats, such as use of software, and communicating information to meet workplace and audience requirements
- ensure that operating procedures are available and include information on occupational health and safety (OHS), environmental management and food safety requirements and responsibilities
- monitor maintenance activities against the schedule to identify variances and take appropriate corrective action, such as assessing the consequences of any adjustments to the schedule, and where required, monitor completion of maintenance within maintenance budget constraints
- respond to unplanned events, such as major equipment breakdowns to minimise disruption and optimise efficiency
- communicate maintenance requirements and report outcomes, including ensuring effective communication between production and maintenance personnel to enhance equipment reliability and identify improvement opportunities

REQUIRED SKILLS AND KNOWLEDGE

- use planning and systems control software
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic maintenance approaches and differences between reactive, preventative and proactive maintenance models, such as reliability centred maintenance (RCM) and total productive maintenance (TCM)
- company systems, processes and responsibilities for collecting equipment condition information, analysing information and carrying out required servicing and maintenance tasks
- sources of data on equipment performance and maintenance requirements, related recording systems and data analysis tools
- the requirements of the maintenance scheduling process, including the production process to identify the impact of scheduling on production in order to oversee maintenance activities and establish maintenance priorities
- links to related activities, such as purchasing and contract management
- factors that influence the reliability of equipment, including equipment capability, equipment/process design, and operating conditions and practices
- methods used to measure effectiveness of maintenance including measures of plant availability, cost of maintenance, downtime and alternate resource utilisation
- OHS, environmental and food safety requirements and responsibilities associated with maintenance activities
- relevant personnel and departments to be consulted/notified of maintenance schedule and related amendments, including the information relevant to each group/person
- awareness of conditions that can affect achievement of the maintenance schedule, including conditions that are unusual or unplanned, and related options for response to equipment breakdowns/emergencies
- communication skills to consult and communicate with relevant personnel
- recording systems and requirements, including relevant software packages
- process improvement procedures
- maintenance service supplier capacity

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • determine maintenance requirements for work area • establish and document maintenance schedule • coordinate implementation of maintenance • ensure maintenance schedule is communicated and reported to all appropriate personnel • manage unplanned maintenance issues • assess equipment reliability and contribute to improving outcomes.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • maintenance scheduling system and associated information and communication systems • production equipment • relevant standard operating procedures (SOPs) • workplace information recording systems, requirements and procedures.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role. In addition, the following optional or ancillary units may be relevant: <ul style="list-style-type: none"> • FDFPPL4003A Schedule and manage production • FDFPPL4006A Manage a work area within budget • BSBRES401A Analyse and present research information.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements	1.1. Forecast and sales information is used to identify production requirements 1.2. Production priorities are identified to satisfy demand
2. Identify resource requirements to meet production requirements	2.1. Stock levels of raw materials/ingredients, packaging components and consumables are confirmed against production requirements 2.2. Equipment capacity and status and human resources are confirmed against production requirements
3. Develop and communicate the production schedule	3.1. The production schedule is developed to meet demand and delivery timelines within production capacity and budget 3.2. The production schedule takes account of stock levels, storage capacity, equipment capacity and product mix to minimise stock and product holdings and maximise production efficiency 3.3. The production schedule is recorded in the appropriate workplace format 3.4. The production schedule is made available to relevant personnel in a timely manner
4. Monitor actual against scheduled production	4.1. Production is monitored to identify actual and potential barriers to achieving the schedule 4.2. Resource usage rates are monitored to identify potential shortages 4.3. Unplanned events that could affect the schedule are identified, assessed and addressed
5. Adjust production schedules	5.1. Production schedules are adjusted to take account of changed conditions 5.2. Changes to the production schedule are negotiated and communicated to relevant personnel in a timely manner 5.3. Resource implications of amended schedules are identified and resources are accessed to meet requirements 5.4. Potential failure to meet delivery deadlines are identified and communicated to relevant personnel in a timely manner 5.5. Schedule documentation is amended as required to meet workplace reporting requirements
6. Review production schedule	6.1. The production scheduling process is reviewed to

ELEMENT	PERFORMANCE CRITERIA
development process	identify opportunities for improvement 6.2. Variances in production against schedule are identified, investigated and reported 6.3. Personnel responsible for implementing the schedule are consulted to identify improvement opportunities 6.4. The scheduling process is revised to reflect improvements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- collect and interpret sales and/or market forecast information, such as liaising with sales departments/functions and/or direct contact with customers
- identify production priorities to meet customer/market expectations
- identify and confirm resource requirements to meet the schedule, such as stock levels, equipment availability and capacity, personnel, storage capacity, and transport, and where required, identify alternate sources of supply for resources in short supply
- develop a schedule to match production priorities to available resources, such as consulting relevant personnel to confirm schedule feasibility, and notifying relevant personnel of any possibility that demand cannot be met within required timeframe
- record and communicate the schedule in appropriate formats, such as use of software and communicating information to meet workplace and audience requirements
- monitor actual production and materials usage levels against production plan to identify variances and take appropriate corrective action, including assessing the consequences of any adjustments to the schedule for the customer, the company and resource availability
- adjust the schedule in response to typical and atypical variables affecting achievement of schedule
- respond to unplanned events to minimise disruption and optimise efficiency
- confirm that resources and personnel are available to meet amended schedule and, if not, take action to secure requirements
- communicate schedule changes to affected personnel
- track and investigate variance to identify cause
- follow review procedures to identify opportunities to improve scheduling process
- follow procedures to adopt and communicate improvements to the scheduling process
- use planning and systems control software according to enterprise procedures
- match work allocation to competencies available in the work team according to enterprise procedures
- use communication skills to interpret and complete work information to support operations of work team or area
- use communication skills to consult and communicate with relevant personnel
- demonstrate and support cooperative work practices within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Knowledge of:

- the role and scope of the scheduling function, including flow of information to and from the scheduling process and the impact of scheduling for related planning, purchasing, production and despatch processes
- factors to be taken into account in planning the schedule, including the inter-relationships between factors, such as:
 - customer requirements
 - stock levels and supply options
 - use-by codes
 - production capacity and availability
 - labour requirements and availability
 - product compatibility
 - capacity of related processes and/or storage facilities
 - transport capacity
- consequences of failing to meet delivery timelines (this may differ according to customers and may include stock-out fines in addition to damage to customer relationships)
- the company's preferred approach to managing customer relations
- the characteristics of raw materials/ingredients, packaging components and consumables and production process to determine the most efficient plan to meet production requirements, including stock shelf-life, product compatibility (with the exception of dedicated product lines) and changeover procedures
- equipment capacity to ensure that production quantities and timelines are achievable
- methods used to monitor actual to planned production, such as use of systems software and key performance indicators (KPIs) where these are collected on a real time basis
- relevant personnel and departments to be consulted/notified of production schedule and related amendments, including the information relevant to each group/person
- awareness of conditions that can affect achievement of schedule, including conditions that are unusual or unplanned and related options for response
- options for maximising resource utilisation and minimising waste, including options for alternate resource allocation in response to unplanned events
- recording systems and requirements
- process improvement procedures
- supplier capacity and timeframes where relevant
- competencies required by the work process and competencies held by the work team where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work process scope	1.1. The scope and flow of the work process is identified 1.2. Work process information is identified and collected
2. Assess work process performance	2.1. Work process performance is assessed against plan and benchmark information 2.2. Variations in work process performance are identified and investigated 2.3. Opportunities for improvement are identified
3. Develop a plan to optimise process performance	3.1. Recommendations for improvements are developed and reported in the appropriate format 3.2. An implementation plan is developed and presented in the appropriate format
4. Implement, monitor and evaluate process improvement	4.1. Workplace documentation is reviewed to reflect process improvement 4.2. Changes to roles and responsibilities of workplace personnel involved in implementing the optimisation plan are identified and communicated 4.3. Resources to support implementation are identified, negotiated and secured 4.4. Process changes are implemented and monitored 4.5. Continuous improvement procedures are applied to evaluate and refine process optimisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- define the purpose and scope of the work process and develop a process map/workflow diagram, including information on the steps in the process under examination and the interaction of the process with related customers and suppliers
- identify steps in the process or conditions that result in workflow blockages or sub-optimal performance (this is typically undertaken in consultation with process operators)
- use workplace data to develop/confirm process performance information, such as historical information on process and equipment performance (where processes are seasonal, it should include reference to similar points in the cycle for comparative purposes)
- identify criteria against which to assess process performance, such as performance plans/targets, equipment operating capacity, process capability and relevant benchmark information as appropriate/available
- assess process performance information against agreed criteria
- identify sub-optimal performance events and/or patterns and investigate causes, such as facilitation of an investigation team
- identify opportunities to remove or minimise causes of sub-optimal process performance
- evaluate opportunities and assess related costs/benefits for each option
- recommend preferred options and report recommendations in the required workplace format
- develop an implementation plan, including identifying resource requirements, personnel affected and appropriate communication strategy, revised/new workplace documentation and evaluation/review process
- negotiate and secure resources to support implementation
- communicate proposals/implementation plan, invite feedback and take feedback into account
- follow continuous process procedures and monitor and review changes against improvement criteria
- trial changes prior to full implementation
- arrange training/development opportunities
- use communication skills to interpret and complete work information to support operations of work team or area, facilitate consultation processes and report, record and present information in the required formats
- demonstrate and support cooperative work practices within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge*****Knowledge of:***

- process/workflow mapping purpose and techniques
- characteristics of the work process, including typical factors that affect process performance, such as:
 - fluctuations in demand/throughput
 - quality of raw material/ingredient inputs
 - human resources availability/competencies
 - equipment configuration, capacity and performance
 - process capability
 - changeover times
 - cost of services
- criteria against which to assess performance, such as key performance indicators (KPIs), production plans/schedules, budgets and relevant benchmark information
- technical knowledge to identify and assess current performance and identify improvement opportunities and proposals
- process improvement tools and techniques
- related workplace documentation and systems
- relevant personnel and departments to be consulted/notified of optimisation implementation plan
- recording systems and requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • establish parameters of work process • analyse performance measures and identify opportunities for improvement • develop plan to optimise work process • appropriately engage other personnel in plan implementation • monitor implementation and analyse outcomes • engage continuous improvement processes to sustain and improve outcomes.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • information storage and retrieval systems • relevant workplace records and benchmarking information • opportunities to interact with others using typical workplace communication processes • workplace systems and procedures for consultation, feedback and continuous improvement.
Method of assessment	This unit should be assessed together with core units and other units of competence relevant to the function or work role. In addition, the following optional or ancillary units may be relevant: <ul style="list-style-type: none"> • FDFPPL3004A Lead work teams and groups • BSBRES4001 Analyse and present research information.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

EVIDENCE GUIDE

possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Policies and procedures</p>	<p>Changes introduced through process optimisation are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, workplace environmental guidelines, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact of scheduling arrangements</p>
<p>Work process information</p>	<p>Work process information includes but is not limited to:</p> <ul style="list-style-type: none"> • historical data on performance of process and equipment • costs • raw materials/ingredient grades and suppliers • packaging components/consumables type and suppliers • energy efficiency • labour efficiency • resource/service costs • throughput times • changeover times
<p>Options for process optimisation</p>	<p>Options for process optimisation may include but are not limited to:</p> <ul style="list-style-type: none"> • removing unnecessary process steps • improving communication • changing raw materials/ingredients and/or packaging components/consumables grades/types • changing work practices and/or equipment • changing labour allocation/skill composition

Co-requisite units

Co-requisite units		

FDFPPL4005A Establish process capability

Modification History

November 2011: inclusion of correct prerequisite.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to study process data to determine process capability using statistical process control techniques.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to people responsible for establishing control charts and related sampling plans.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFOP2015A	Apply principles of statistical process control* <i>FDFOP2061A Use numerical applications in the workplace</i>
	FDFTEC4007A	Describe and analyse data using mathematical principles

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to conduct a capability study	1.1. The scope and purpose of the process is identified 1.2. A representative data sample is determined 1.3. Data collection techniques are selected 1.4. Data is collected to meet sampling requirements
2. Analyse data to determine process capability	2.1. Appropriate statistical analysis techniques are selected and applied 2.2. Process stability and extent of variation are identified 2.3. The target mean for the process is identified 2.4. Process control parameters are calculated 2.5. Related data sampling requirements are specified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- establish process scope, boundaries and related information on process purpose, such as documentation, including product or process specifications where available
- apply sampling techniques to determine nature and extent of data collection to provide a reliable indication of process performance
- select and apply data collection methods (where data collection is automated, this may involve use of software and where data collection is to be carried out by operators, it involves communicating requirements and designing appropriate formats for recording data)
- confirm that data collected is complete and complies with sampling requirements
- identify characteristics of a normal distribution
- apply appropriate statistical techniques, including standard deviation to analyse data, and techniques to distinguish common and special causes of variation
- establish process capability, including establishing upper and lower limits and instructions for identifying and responding to trends
- develop a related data sampling plan, including advice on sampling regimes following corrective action
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- data collection requirements and techniques for collection of actual (quantitative) and variable data
- techniques to determine and validate a sampling plan capable of providing reliable information representative of the total population
- appropriate formats for presenting sampling plan requirements and related communication systems
- workplace conventions/formats for presenting and monitoring process capability information, such as control chart including a target mean, upper and lower limits and advice on how to interpret and confirm trends, and upper and lower warning limits where required
- process knowledge to identify possible causes of special variation
- the difference between a stable process and a capable process and action required to improve process performance in each case

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • determine scope of and purpose of study • establish data collection parameters • select data collection technique • collect and analyse data • determine process capability • complete workplace records as required • apply safe work practices and identify occupational health and safety (OHS) hazards and controls.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • workplace processes and procedures • workplace documentation, including process specifications/purpose, sampling plan and control chart formats, and related data collection methods, such as log sheets • data collection and analysis software and systems as appropriate • communication systems.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Data collection	Data collection is specified and may be collected by others
Data analysis	Data analysis typically involves the use of statistical analysis software

Co-requisite units

Co-requisite units		

FDFPPL4006A Manage a work area within budget

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to plan, allocate and monitor work to achieve required outcomes within budget allocations.
------------------------	---

Application of the Unit

Application of the unit	This unit would typically apply to a team leader function where the team leader is required to reach decisions on resource utilisation within budget constraints.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and plan within budget parameters	<p>1.1. Budget requirements and parameters are identified</p> <p>1.2. Resources are identified, confirmed and allocated to achieve production schedule within budget</p>
2. Monitor resource utilisation against budget	<p>2.1. Performance is monitored to identify actual/potential variance to budget</p> <p>2.2. Variances to budget are identified, investigated and reported according to workplace reporting requirements</p> <p>2.3. Potential failure to achieve targets within budget are identified and communicated to appropriate personnel in a timely manner</p> <p>2.4. Action is taken to minimise negative impact of variance</p>
3. Communicate budget information	<p>3.1. Budget information is made available to relevant personnel in a timely manner</p> <p>3.2. Budget information is reported in the appropriate format and timelines according to workplace reporting requirements</p> <p>3.3. Contributions are made to the development of workplace budgets</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify budgets relevant to the work function and role
- identify resource requirements of the production process and match these to availability, to options and constraints (this depends on the nature of budget management, for example, when applied to managing within labour costs, availability includes available numbers and skill levels of operators; options may include use of permanents, overtime and/or casuals, and constraints may include the relative costs associated with each of these options)
- secure, confirm and allocate required resources to meet production schedule within budget parameters
- monitor resource utilisation to confirm capability to achieve production schedule within existing resource allocation, which may require calculation of yield
- interpret budgets to track performance outcomes
- identify situations where achievement of required outcomes within budget is not possible
- investigate causes of variance and take appropriate action within level of responsibility
- identify the impact on budget of production-related decisions, such as structuring rosters and scheduling holidays, adjusting production volume, and scheduling equipment maintenance
- identify opportunities to improve performance against budget
- communicate information on budget performance to others in the work area, such as providing information on key performance indicators (KPIs)
- record and report budget information in the required formats
- participate in budget development processes within level of responsibility
- use communication skills to interpret and complete work information to support operations of work team or area, and to consult and communicate with relevant personnel
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- the basis on which budgets developed for the work area are constructed, including information supplied to budget planners, and how to read and interpret budget information and apply it to monitoring/reviewing work performance
- basic accounting concepts, including fixed and variable costs, rate of return,

REQUIRED SKILLS AND KNOWLEDGE

- methods of allocating indirect costs, methods of measuring investment value
- accounting models, including the difference between traditional accounting approaches and more recent developments, and accounting implications of value added management, life-cycle costing and triple bottom line
- company approach to cost management so that decisions on resource allocation are within both budget allocations and company philosophy/preferred approach
- resource requirements to meet production and related costs
- process knowledge to identify factors likely to impact on achieving budget
- relevant personnel and departments to be consulted/advised of budget information, including information relevant to each group/person and the importance of providing accurate and timely information to each of the stakeholders
- options for maximising resource utilisation and minimising costs
- recording systems and requirements
- process improvement procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • determine resource requirements for work area • establish budget and allocations for work area • monitor performance against budget targets and promptly identify and act on variances to minimise impact • ensure budget is communicated and reported to all appropriate personnel.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • budgets and associated information and communication systems • production area and related functions and resources • relevant Standard Operating Procedures (SOPs) • workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFPPL4003A Schedule and manage production • BSBRES4001A Analyse and present research information.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work planning and allocation to achieve outcomes within budget is consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact of scheduling arrangements</p>
Budgets	<p>Budgets may include but are not limited to:</p> <ul style="list-style-type: none"> • addressing labour costs • materials costs • yield/volume and related efficiency parameters • equipment costs • handling, storage and transport costs
Communication of budget information	<p>Communication of budget information includes:</p> <ul style="list-style-type: none"> • consulting the work team on budget related issues • providing prompt information on performance against budget • reporting budget information to relevant personnel in the required format

FDFPPL4007A Manage supplier agreements and contracts

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to manage internal and external agreements for the supply of goods and/or services.
------------------------	--

Application of the Unit

Application of the unit	This unit can apply to the evaluation and management of existing contractual arrangements and the development of new arrangements. It requires an understanding of supply chain relationships and arrangements.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish contractual arrangements	1.1. Specifications for the delivery of goods and/or services are documented and agreed 1.2. Criteria for selection of suppliers are developed and documented 1.3. Potential suppliers are identified and assessed against selection criteria 1.4. Supply contracts are documented and agreed by the parties 1.5. Contingency plans are developed in the event of supplier failure to deliver
2. Administer and evaluate delivery of goods and/or services against agreements	2.1. The quality of goods and services supplied is assessed against specifications 2.2. Non-compliance is identified, documented and corrective action is implemented within the terms of contractual arrangements 2.3. Relationships with suppliers are managed to support effective delivery 2.4. Vendor agreements are reviewed and renegotiated as required to ensure timely delivery and cost-effective supply of quality goods and services

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify the system in place to support management of supplier relationships, agreements and contracts, including goods and services specifications, existing vendor agreements and contracts, traceability systems and procedures, receivables procedures, invoicing system and related documentation, and where required, identify existing system features and/or identify system requirements and develop appropriate system components
- identify and/or develop criteria for selection of suppliers (the criteria should reflect the company's approach to supply chain management and take account of existing procurement policies, including any preferred supplier arrangements as well as historical experience with suppliers)
- identify current and potential suppliers with the capacity to meet supplier criteria
- establish a contingency supply plan in the event of failure to deliver within the terms of the agreement
- identify and/or develop a goods/service agreement to address company requirements
- identify and/or establish procedures to negotiate the terms of the agreement with the supplier, within level of responsibility
- identify and/or establish procedures to receive and evaluate goods/services against agreed criteria, including procedures for responding where goods/services are not within specification, within level of authority
- identify and/or establish recording and communication systems to document contract compliance issues
- monitor that contractors working on-site are inducted and aware of their roles and responsibilities according to enterprise procedures
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- approaches to supply chain management, including customer-led models, such as efficient consumer response (ECR), the contrast between independent company operations versus chain partnership arrangements, and the implications of a supply chain approach for the nature of the relationships between the company and its suppliers, including level of information sharing and cooperation

REQUIRED SKILLS AND KNOWLEDGE

- the company's approach to supply chain management, and related systems and documentation in place to support internal management and supplier relationship management, including levels of authority
- appropriate technical knowledge to determine capacity of a supplier to deliver and to assess quality of goods/service supplied (this may be addressed by identifying relevant technical expertise, such as a quality/laboratory function)
- legal rights and responsibilities of both the company and the supplier
- the role of benchmarking in determining appropriate criteria for supplier selection and contract management
- appropriate measures of contract delivery and relative importance/weighting given by the company
- induction and duty of care responsibilities for contractors working on-site where relevant

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • determine resource requirements for work area • establish contractual conditions and determine most suitable supplier • monitor supply against agreements and contracts and promptly identify and act on variances • establish supply contingencies • maintain relationships with suppliers to support service.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • workplace procurement policies and related documentation and systems • relevant legislation, codes of practice and agreements • access to suppliers of goods and services • information management systems, including planning, recording and reporting systems • technical support and advice as appropriate.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Service agreements

Service agreements are consistent with company policy objectives, legislative requirements, industry standards, codes and guidelines, industrial awards and agreements

Competency field

Competency field

Co-requisite units

Co-requisite units		

FDFPPL4008A Manage internal audits

Modification History

November 2011: update to imported unit, minor typographical error corrected.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to support the management of internal audit processes across a range of programs, including but not limited to occupational health and safety (OHS), quality and environmental management.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit is appropriate where internal audit processes are conducted to support externally audited programs. Auditing must occur in an area that the person is not directly responsible for and where they are required to follow a formal, structured process. In addition to this standard, an auditor would typically work within the audit procedures as outlined in ISO 10011.</p> <p>When conducting a food safety audit, FDFAU4003A Conduct food safety audits, should be used.</p> <p>When applied to the pharmaceutical industry, FDFPH2001A Apply Good Manufacturing Practice procedures should be selected to support the application of this unit. FDFPH2001A incorporates content covered in FDFOP2063A Apply quality systems and procedures and can be used as an alternative to this prerequisite unit for the pharmaceutical manufacturing sector.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFOHS2001A	Participate in OHS processes
	FDFOP2063A	Apply quality systems and procedures
	FDFPPL3005A	Participate in an audit process
	MSAENV272B	Participate in environmentally sustainable work practices

Employability Skills Information

Employability skills	
	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan an audit	1.1. The purpose and scope of the audit is negotiated and agreed 1.2. Information and resources required to conduct the audit are identified and secured 1.3. An audit schedule is developed and negotiated to meet audit scope and timelines
2. Prepare for an audit	2.1. Audit information sample and collection tools are determined 2.2. Roles, responsibilities and authority levels of the audit team are identified and communicated to audit team members as appropriate 2.3. Affected work areas/personnel are informed of schedule and advised of their role in the process
3. Monitor the audit process	3.1. Information collected is adequate, representative and meets audit requirements 3.2. Information is analysed to assess adequacy of performance against program objectives 3.3. Records are reviewed to confirm compliance with the program 3.4. Compliance with the program is observed in the workplace 3.5. Areas requiring corrective action are identified 3.6. Obstacles to achieving audit within agreed timelines are identified and addressed
4. Report and follow up audit outcomes	4.1. Situations presenting an imminent and serious risk to the program objectives are identified and reported immediately in accordance with reporting requirements 4.2. Audit reports are prepared to address audit scope requirements 4.3. The results of the audit are communicated to appropriate personnel according to audit purpose and requirements 4.4. A corrective action plan is developed and negotiated within level of responsibility 4.5. Implementation of corrective action as set out in the corrective action plan is monitored and confirmed 4.6. Where corrective action does not meet the corrective action plan requirements, follow up action is taken/reported according to level of responsibility

ELEMENT	PERFORMANCE CRITERIA
	and audit purpose

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify roles and responsibilities of personnel participating in the audit process
- establish and negotiate audit purpose and scope to meet the workplace and legislative requirements
- clarify program objectives and evaluation criteria to be applied, where appropriate, this includes identifying legal compliance requirements
- establish the audit sequence, activities and timelines
- identify roles, responsibilities and competencies required to conduct an audit and confirm that the required competencies are available within the project team, where appropriate
- identify and locate information required to conduct the audit
- review workplace documentation to confirm that required information is available
- select and apply appropriate data collection tools to provide information on both program outcomes and processes
- establish an audit plan and timetable and communicate the plan to relevant work areas/personnel, including allocating tasks to match requirements of the audit and competencies of the audit team
- assess information collected against program objectives and evaluation criteria to identify compliance/non-compliance
- identify any changes that have occurred in the workplace since initiating the program or since the last program audit that could affect program outcomes
- identify, investigate and record evidence of non-compliance
- assess severity of non-compliance and take immediate action to report non-compliance that presents an imminent and serious risk to achievement of program objectives (action must comply with company audit procedures and with legal responsibilities where relevant)
- based on the audit findings, assess the adequacy of the program under review, including verifying that information used to establish methods of controlling hazards is adequate and correct (technical experts/accessing external technical resources may be used to support verification. conclusions on audit outcomes should be objective and capable of duplication, given the evidence collected)
- where findings indicate either a failure to comply with the program or inadequacy of the program, investigate and determine the causes of non-conformance and identify corrective action requirements
- communicate audit findings, including corrective actions and timeframes with relevant work areas/personnel, such as negotiating/securing required resources
- report the findings of the audit in an appropriate format to meet the requirements of

REQUIRED SKILLS AND KNOWLEDGE

the workplace and legal compliance where relevant

- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- the purpose and intent of the program being audited, including the requirements of relevant national, state and local government legislation relating to program purpose and requirements
- auditor roles, responsibilities and legal obligations as relevant to the audit purpose, including the responsibilities of both internal and external auditors, and the different types of auditors and of authorised officers who may be involved in the audit program
- legal responsibilities for reporting imminent and serious non-conformities
- requirements and procedures for certification/registration of auditors and authorised officers according to audit type
- the frequency and scope of audit requirements to meet legal obligations
- appropriate ethical conduct of auditors as set out in codes of ethics of auditors and additional requirements as may be determined by the workplace
- the purpose and stages involved in the audit process, such as compliance with ISO audit standards as appropriate to audit requirements
- workplace information and related information management systems
- techniques for collecting information, including appropriate sampling techniques, information collection methods and the strengths and weaknesses of each method to ensure data is adequate and representative, as well as an understanding of techniques identified by ISO 10011
- data analysis methods relevant to the audit process
- communication skills and techniques, such as appropriate questioning, observation and related communication skills to support information collection, appropriate to the workplace
- technical knowledge relevant to the program being audited in order to verify the adequacy of:
 - hazard identification processes
 - control methods, including industry standards/practice
 - monitoring and record keeping
 - validation processes
 - corrective action/process improvement procedures
- where program control methods or limits vary from industry standards or where there are no industry standards, technical knowledge required to assess data used by the business to validate acceptable limits (this may be addressed by identifying

REQUIRED SKILLS AND KNOWLEDGE

and involving appropriate technical expertise)

- | |
|---|
| <ul style="list-style-type: none">• competency standards and related assessment and training options to support program implementation• information management and communication systems to document and communicate audit outcomes in appropriate formats |

------------------------	---

Application of the Unit

Application of the unit	This unit applies to areas, such as occupational health and safety (OHS), environmental management, food safety, quality and Good Manufacturing Practice (GMP). In workplaces where workplace programs are already in place, the outcomes of this unit can apply to the assessment and review of such programs.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFFS2001A	Implement the food safety program and procedures
	FDFFS3001A	Monitor the implementation of quality and food safety programs

Prerequisite units		
	FDFOHS4002A	Maintain OHS processes
	FDFTEC3001A	Participate in a HACCP team
	MSAENV472B	Implement and monitor environmentally sustainable work practices

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish workplace program and operating requirements	1.1. The workplace program reflects workplace policy objectives 1.2. Roles and responsibilities to support implementation are identified, negotiated and agreed 1.3. Resources required to support implementation are identified and secured
2. Establish/review consultative arrangements	2.1. Consultative mechanisms are established to encourage input from workplace personnel and their representatives 2.2. Information on consultation processes is available, appropriate and accessible 2.3. Procedures are established to ensure that issues raised are promptly addressed 2.4. Procedures are established to ensure that the outcomes of consultation are promptly communicated
3. Develop/review program procedures	3.1. Procedures outline the process for identifying and reporting actual and potential hazards 3.2. Risk assessment and control measures are documented and take account of the hierarchy of control 3.3. Corrective action and emergency response procedures are defined 3.4. Procedures to review program adequacy and effectiveness are established 3.5. Program implementation is monitored to ensure procedures are followed and effective
4. Establish/review program information and recording systems	4.1. Information is recorded to meet program and legislative requirements 4.2. Record formats and systems are appropriate and accessible to users
5. Establish/review development/training arrangements to support program implementation and maintenance	5.1. Roles and responsibilities of participants involved in implementing the program are identified 5.2. Mentoring, coaching and training requirements for each role are identified 5.3. Mentoring, coaching and training support is provided to meet the needs identified
6. Maintain a workplace	6.1. Information on program purpose, requirements,

ELEMENT	PERFORMANCE CRITERIA
program	<p>roles and responsibilities is provided in formats appropriate to purpose and audience</p> <p>6.2. Program procedures are followed and supervisory responsibilities are identified and addressed</p> <p>6.3. Workplace program records are analysed to identify patterns of non-conformance and opportunities for ongoing improvement</p> <p>6.4. Hazard identification, risk assessment and control are addressed when planning, designing and reviewing change in the workplace</p> <p>6.5. Evaluation of program effectiveness takes account of developments in best practice to support continuous program improvement</p> <p>6.6. Program audit procedures are established and communicated</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify roles and responsibilities for program development and maintenance, where appropriate this includes negotiating/confirming levels of authority
- identify and report on resource requirements to support implementation, such as human resources, capital equipment, training, support systems (e.g. maintenance and financial support), and where relevant, negotiate access to resources within level of responsibility
- confirm that personnel involved in implementation have the required skills and knowledge to carry out their role, including identifying and addressing skill gaps
- review strategies for provision of information to identify opportunities for improvement in conveying information appropriate to program requirements and the audience to ensure that information is accessible to and understandable by all employees
- establish and/or review consultative arrangements to confirm that they are effective channels of two-way information and forums for raising issues and generating ideas, that all areas and levels of the workgroup have opportunity for input, and there is feedback to contributors on the outcome of consultation
- develop/review procedures to support implementation (procedures must be documented and documents must be controlled, which may require the development of an appropriate system for recording and managing procedures)
- establish/review monitoring mechanisms to ensure that records are accurate and timely
- establish/review procedures to ensure that records and related program information are utilised to support program improvement
- trial/review implementation of procedures and identify opportunities for improvement
- use communication skills to interpret and complete work information to support operations of work team or area, and to support a review of existing information and/or design of information formats to meet program and audience requirements
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- objectives of legislation, regulations and relevant codes of practice relating to the program area, including the roles of relevant regulatory bodies
- company policy objectives, related legal requirements and workplace context,

REQUIRED SKILLS AND KNOWLEDGE

including resource capacity, authority levels, existing systems and processes, such as consultation processes, development/training systems, process improvement, document control and recording requirements

- workplace program objectives, their relationship to policy objectives and to related programs, including the benefits of the program for the company, employees and the wider community as appropriate
- the concept of a management systems as it applies to the program area
- the advantages and disadvantages of stand-alone and integrated programs, including variations in legal obligations and compliance systems, objectives and structure of related policies and programs, as well as consideration of audit trails, as appropriate
- principles and processes for hazard identification, risk assessment and control
- the program area and/or internal and external experts and resources to support design and implementation
- the circumstances, conditions or practices likely to result in program non-compliance and related control options
- technical knowledge and/or access to technical expertise to ensure adequacy of risk control methods and response to non-compliance/emergencies
- problem solving and process improvement techniques and processes
- program review methods and responsibilities, including internal audit arrangements, as well as external audit arrangements, and where the program supports legal compliance obligations, requirements and frequency of audits

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • define the parameters of the program • determine compliance requirements for program and conduct risk analysis • identify and engage relevant personnel through consultative mechanisms • design/develop program procedures to ensure compliance is achieved • complete detailed reporting to support the maintenance of compliance • provide support to personnel to ensure compliance • program is reviewed and monitored to ensure compliance is maintained.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • workplace policies, business and performance plans and budgets • relevant legislation, codes of practice and agreements • workplace procedures and related management systems relevant to the program area • technical support and advice as appropriate to the program area • consultative forums.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFPPL3003A Support and mentor individuals and groups • FDFPPL4008A Manage internal audits • BSBRES4001A Analyse and present research

EVIDENCE GUIDE	
	information <ul style="list-style-type: none">• BSBINN502A Build and sustain an innovative work environment.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Workplace programs	Workplace programs are developed to meet company policy objectives and are consistent with legislative requirements, codes, industrial awards and agreements, licensing arrangements and contractual arrangements and agreements
Programs and related documentation	Programs and related documentation may be: <ul style="list-style-type: none"> stand-alone or integrated
Program design	Program design takes account of contextual issues including: <ul style="list-style-type: none"> legislative responsibilities workplace culture budgets and people, including language and literacy levels of program users
Management systems	Management systems to support program implementation include: <ul style="list-style-type: none"> organisational structure planning activities responsibilities practices, procedures, processes and resources for developing, implementing, achieving, reviewing and maintaining the policy, managing the risks associated with the activities conducted in the workplace
Formal responsibility	Formal responsibility for program design and/or review may be shared with others

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to finish products	<p>1.1. Ingredients are confirmed and available to meet finishing requirements</p> <p>1.2. Equipment is checked to confirm readiness for use</p> <p>1.3. Finishing materials are prepared to meet product finishing requirements</p>
2. Assemble and finish products	<p>2.1. Finishing materials are applied to meet presentation requirements</p> <p>2.2. Finished product meets presentation requirements</p> <p>2.3. Unacceptable product is identified, rectified or reported</p> <p>2.4. Products are assembled to meet customer and quality requirements</p> <p>2.5. Housekeeping standards are maintained in the workplace</p> <p>2.6. Work is conducted in accordance with workplace environmental guidelines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify finishing requirements
- confirm condition, type, quality and quantity of ingredients and prepared finishing materials
- confirm that required fillings, toppings and finishing materials are available
- confirm that equipment required is available, clean and fit for use
- mix or prepare finishing materials as required, such as weighing or measuring ingredients to recipe specifications
- assemble product and apply fillings and finishing materials (assembly requirements depend on product) using appropriate finishing techniques
- take corrective action to ensure that finished product meets quality standards
- clean equipment and utensils to meet hygiene standards
- complete workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of assembling products and preparing and applying fillings and decorative finishes
- recognition of ingredients and storage requirements
- required characteristics of prepared finishing materials
- acceptable standards for equipment/utensils used, including cleaning requirements and signs of wear or unacceptable damage (where measuring equipment is used, it may also include procedures, such as taring of scales)
- the effect of variables, such as temperature of the product on the application of finishings
- application and decoration techniques, such as simple piping and placement
- product presentation and storage requirements, such as refrigeration, freezing and shelf-life
- causes of unacceptable finishes and corrective action required
- occupational health and safety (OHS) hazards and controls

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm readiness of equipment and ingredients used to finish product • confirm finishing requirements • complete finishing according to requirements • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on relevant finishing requirements, safe work practices, food safety, quality and environmental requirements • recipe for preparation of finishing materials where required and decoration instructions • final product specifications and related inspection/control points • finishing application utensils and equipment as required by product • product to be decorated, fillings and finishing materials/ingredients • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to fill and form pastry products	1.1. Pastry and fillings are confirmed and available to meet production requirements 1.2. Forming and filling equipment and/or utensils are available and ready for use 1.3. Equipment is checked to confirm readiness for use
2. Form and fill pastry products	2.1. Pastry is rolled and shaped to meet product requirements 2.2. Pastry is filled to meet product requirements 2.3. Tops and/or finishes are applied as required 2.4. Filled pastry product meets food safety and quality requirements 2.5. Unacceptable product is identified, rectified or reported
3. Clean equipment	3.1. Equipment is cleaned to meet production and hygiene requirements 3.2. The work area is maintained according to housekeeping standards 3.3. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify production requirements
- confirm that pastry types and fillings match product requirements
- confirm that equipment is clean and in operating order, including confirming that trays and tins are available as required
- prepare pastry and fillings for use, such as:
 - rolling pastry
 - loading fillings into hopper and setting automatic dispensing equipment
 - bringing fillings to required temperature
- form product shape
- dispense fillings within acceptable volume, weight and placement parameters
- apply tops, coding and/or toppings according to product requirements
- trim pastry keeping bottom and top pastry separate
- include reworked pastry according to workplace procedures
- monitor the forming and filling process to ensure that quality standards are met, such as monitoring:
 - pastry thickness
 - alignment of deposited filling or accuracy of manual positioning
 - amount and/or rate of filling deposited
 - product weight
 - enclosure of pastry product by forming, rolling or covering with a pastry top to form seal
 - application of washes (before baking) or glaze and toppings (after baking)
 - appearance (size and shape)
- take corrective action so that product quality standards are met
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Knowledge of:

- basic principles of pastry forming and filling
- acceptable standards for equipment/utensils used, including cleaning requirements and signs of wear or unacceptable damage
- quality requirements of filled pastry products, such as appearance, weight, and seal as required by product
- types of pastry suitable for use as tops and bottoms and in different products
- procedures for inclusion of rework, such as appropriate uses of rework; maximum number of batches that can contain rework before scrap is discarded, and importance of ensuring rework pastry is not contaminated by filling materials, other pastry types or other forms of contamination
- procedure for preparing and applying washes and glazes as required for product
- the effect of variables, such as filling temperature on finished product, and product temperature on glazing application
- settings, operating requirements and safety features of equipment used
- inspections/control points used to confirm that product meets quality requirements and related monitoring requirements
- causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning requirements and procedures

Evidence Guide

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify production requirements
- confirm condition, type, quality and quantity of ingredients
- weigh, scale or meter ingredients as required
- confirm equipment status and condition
- prepare ingredients as required, such as thawing or conditioning pre-prepared ingredients and/or preparing raw ingredients for use, and preparing solutions for addition (e.g. dissolving starch for use in a mixture)
- combine and process fillings, such as monitoring:
 - quality, quantity and sequencing of ingredient addition
 - blending/mixing process
 - cooking times and temperatures
 - filling characteristics (colour, texture, smell and viscosity)
- take corrective action so that fillings meet quality standards
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of filling preparation
- differences in filling types for different product types
- ingredient characteristics and purpose in filling, including types of thickeners used for filling types
- methods used to confirm accuracy of measuring equipment used, including taring of scales
- methods used to prepare fillings in the workplace
- quality characteristics and uses of fillings
- process requirements, such as:
 - time and temperature requirements relating to thawing, reheating, cooling (of cooked food) and cooking as required

REQUIRED SKILLS AND KNOWLEDGE

- storing/holding requirements
- cooking times and temperatures
- reconstituting dry ingredients
- settings, operating requirements and safety features of equipment used
- control points and related monitoring requirements, including time and temperature parameters for cooking
- causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- storage requirements for prepared fillings, such as refrigeration, freezing and shelf-life
- contamination (including cross-contamination) risks associated with ingredients/processes used
- waste handling and cleaning and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare and mix ingredients	1.1. Ingredients are confirmed and available to meet product requirements 1.2. Ingredients are weighed and/or measured to meet recipe requirements 1.3. Equipment is checked to confirm readiness for use 1.4. Ingredients are added and mixed in the correct sequence to meet recipe requirements 1.5. Mix meets specifications
2. Shape or form product	2.1. Meringue is shaped to meet product requirements 2.2. Meringue is topped and baked as required to meet recipe requirements 2.3. Product is baked as required by meringue type, to meet finished product requirements 2.4. Final product meets food safety and quality requirements 2.5. Unacceptable dough is identified, rectified and/or reported
3. Clean equipment	3.1. Equipment is cleaned to meet production and hygiene requirements 3.2. Waste is disposed of according to workplace procedure 3.3. Work is conducted in accordance with workplace environmental guidelines 3.4. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- Access workplace information to identify recipe requirements
- Confirm condition, type, quality and quantity of ingredients
- Prepare ingredients for use. This may include separating egg whites or reconstituting powdered whites and preparing sugar or sugar syrup as required by product
- Beat egg whites to achieve the required texture. This may be done manually or using mixing equipment
- Add remaining ingredients in the required sequence and stage to meet recipe requirements
- Monitor the appearance and consistency of mix and ensure that all ingredients are added
- Take corrective action as required so that meringue meets quality standards
- Shape meringue to meet product requirements. This may be done by piping or manually shaping
- Pipe or drop meringue to meet product requirements
- Apply toppings as required by product
- Bake meringue to remove moisture and achieve required appearance (applies to baked meringues only)
- Clean equipment and utensils to meet hygiene standards
- Maintain workplace records as required
- Maintain work area to meet housekeeping standards
- Finish products according to enterprise procedures
- Use oral communication skills / language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- Work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- Basic principles of making meringues
- Ingredient characteristics and purpose. This includes an understanding of how the preparation and conditioning of whites affects whisking
- Methods used to confirm accuracy of measuring equipment used
- Process requirements. This may include:
 - cleaning/degreasing bowls and utensils

REQUIRED SKILLS AND KNOWLEDGE

- mixing times and speeds
- baking as required
- cooling
- Required characteristics of meringues, uses and related processing methods
- Settings, operating requirements and safety features of equipment used
- Significance of variables such as:
 - time and speed at each stage of mixing
 - rate and sequence of ingredient addition
 - baking times and temperatures for final product
- Product presentation and storage requirements. This includes an understanding of the importance of thorough cooling prior to storing and potential effects of moisture on product
- Causes of variation and corrective action required
- Control points and related monitoring requirements
- OHS hazards and controls
- Waste handling and cleaning and procedures
- Preparing and applying decorations to finish products where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • plan and prepare ingredients, equipment and processes required for meringue • combine, shape and form ingredients according to requirements for type of product • assess meringue outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • clean equipment • apply safe work practices and identify OH&S hazards and controls • cost final product • apply food safety procedures
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures including advice on relevant meringue product preparation requirements, safe work practices, food safety, quality and environmental requirements • recipe instructions • product specifications and related inspection/control points • mixing bowls and utensils, piping equipment and oven equipment as required by product type • materials/ingredients • personal protective clothing, equipment and material safety data sheets as required • cleaning procedures, materials and equipment as required
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and</p>

EVIDENCE GUIDE	
	other units of competence relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes the Food Standards Code including labelling, weights and measures legislation; and legislation covering food safety, environmental management, occupational health and safety, anti-discrimination and equal opportunity
Workplace information	Workplace information can include verbal or written operating procedures, specifications, production schedules and recipe instructions
Base ingredients	Base ingredients include egg white and sugar
Eggs	Eggs may be mechanically or manually beaten
Equipment	Equipment may include mixing bowls, whisks, mechanical mixers, ovens and piping bags
Meringues	Meringues may be baked or unbaked depending on recipe requirements

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare work area	1.1. Work area and personal hygiene are confirmed as clean and in accordance with work food safety standards 1.2. Requirements for bread production are confirmed with supervisor or work procedures 1.3. Equipment requirements are identified and equipment checked for availability and readiness 1.4. Ingredients are identified and checked for availability and readiness
2. Mix basic dough	2.1. Ingredients are weighed and/or measured to meet recipe requirements 2.2. Ingredients are loaded into the mixer to meet recipe requirements 2.3. Mixer is operated according to dough requirements and operating instructions
3. Scale and mould dough	3.1. Dough is scaled and moulded according to product requirements 3.2. Proving requirements are identified and proving cabinet used as required 3.3. Dough is moulded for final shape and placed in tins, on tray or baking surface 3.4. Readiness for baking is confirmed by supervisor
4. Bake dough	4.1. Oven temperatures are confirmed and oven checked for readiness 4.2. Timing required for baking is confirmed 4.3. Dough pieces are loaded into oven and baking time monitored 4.4. Bread product is unloaded from oven and cooled in accordance with work requirements 4.5. Quality standards are checked and non-compliances identified and reported 4.6. Bread products are moved to allocated area for finishing, into racks or crates or prepared for sale
5. Clean equipment	5.1. Equipment is cleaned to meet production and hygiene requirements 5.2. Waste is disposed of according to workplace procedure 5.3. Work is conducted in accordance with workplace environmental guidelines

ELEMENT	PERFORMANCE CRITERIA
	5.4. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

Required skills

Ability to:

- access workplace information and liaise with supervisor to identify production requirements
- confirm type, quality and quantity of ingredients
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of bread baking, including processes such as mixing and producing, dividing and shaping, moulding dough to final shape, final proving dough and baking bread
- characteristics of ingredient and storage requirements
- settings, operating requirements and safety features of equipment used
- methods used to confirm accuracy of measuring equipment used
- time, temperature and humidity on the bread baking processes
- required characteristics of dough
- control points and related monitoring requirements
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare work area	1.1. Work area and personal hygiene are confirmed as clean and in accordance with work food safety standards 1.2. Requirements for production are confirmed with supervisor or work procedures 1.3. Equipment requirements are identified and equipment checked for availability and readiness 1.4. Ingredients are identified and checked for availability and readiness
2. Mix ingredients	2.1. Dry ingredients are weighed and/or measured to meet recipe requirements and combined 2.2. Ingredients are poured into mixer and wet ingredients combined according to recipe requirements 2.3. Mixer is operated according to product requirements and operating instructions 2.4. Dough or batter is moved to work area applying safe lifting procedures
3. Shape dough	3.1. Dough is rolled by hand and shaped according to product requirements 3.2. Flattening and shaping equipment is used according to workplace requirements 3.3. Dough waste is minimised and processed 3.4. Readiness for baking is confirmed by supervisor
4. Pour batter	4.1. Cake tins are prepared for use 4.2. Mixed product is fed into hopper for automatic dispensing into cake tins 4.3. Cake tins are filled according to product requirements and readiness for baking confirmed
5. Bake product	5.1. Oven temperatures are confirmed and oven checked for readiness 5.2. Timing required for baking is confirmed 5.3. Tins/trays/racks are loaded into oven and baking time monitored 5.4. Tins/trays/racks are turned as required to achieve even baking 5.5. Tins/trays/racks are removed from oven and cooled in accordance with work requirements 5.6. Quality standards are checked and non-compliances identified and reported

ELEMENT	PERFORMANCE CRITERIA
	5.7. Products are moved to allocated area for finishing or sale
6. Clean equipment	6.1. Equipment is cleaned to meet production and hygiene requirements 6.2. Waste is disposed of according to workplace procedure 6.3. Work is conducted in accordance with workplace environmental guidelines 6.4. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information and liaise with supervisor to identify production requirements
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- characteristics of ingredient and storage requirements
- settings, operating requirements and safety features of equipment used
- methods used to confirm accuracy of measuring equipment used
- time, temperature and humidity on the baking processes
- required characteristics of dough or mix
- control points and related monitoring requirements
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare and mix ingredients	1.1. Ingredients are confirmed and available to meet product requirements 1.2. Ingredients are weighed and/or measured to meet recipe requirements 1.3. Equipment is checked to confirm readiness for use 1.4. Mixing equipment is set and operated to meet recipe requirements 1.5. Ingredients are loaded into the mixer to meet recipe requirements 1.6. Mix meets specifications
2. Process pastry as required	2.1. Pastry is blocked to meet dough break requirements 2.2. Pastry is laminated and folded to meet product requirements 2.3. Pastry is piped, dropped or deposited to meet product requirements 2.4. Pastry meets food safety and quality requirements 2.5. Unacceptable pastry is identified, rectified and/or reported
3. Clean equipment	3.1. Equipment is cleaned to meet production and hygiene requirements 3.2. Work is conducted in accordance with workplace environmental guidelines 3.3. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe requirements
- confirm condition, type, quality and quantity of ingredients, including selecting shortening type to meet recipe and ambient temperature requirements
- weigh, scale or meter ingredients as required
- calculate yield based on given batch weight and/or main ingredient weight, according to workplace practices
- cook shortening, flour and water until starch is gelatinised and protein is denatured
- cool roux-type mixture to required temperature
- add egg to meet recipe requirements
- pipe or drop pastry to meet product requirements
- confirm equipment status and condition
- set mixing equipment to meet production requirements, such as:
 - selecting and fitting appropriate attachments
 - setting mixer times and speeds
- transfer ingredients to the mixer in the required sequence
- monitor the appearance and consistency of mix and ensure that all ingredients (including shortening) are added
- block pastry as required, to suit dough break capacity
- roll out pastry dough and add shortening if not already in the mix
- set aside for further use or proceed to laminate
- laminate and fold pastry to meet product requirements
- take corrective action as required so that pastry meets quality standards
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of pastry making

REQUIRED SKILLS AND KNOWLEDGE

- principles of choux pastry making
- ingredient characteristics and purpose in pastry, including shortening types, flour types, components and their effect on pastry quality
- significance of factors such as shortening type and temperature on final product
- methods used to confirm accuracy of measuring equipment used
- process requirements, such as:
 - mixing times and speeds
 - appearance and consistency to be met
 - batching or scaling off pastry for blocking
 - pastry rolling and folding for pastry type
 - resting time
- required characteristics of different types of pastry, uses and related processing methods
- settings, operating requirements and safety features of equipment used
- purpose and time required to allow pastry to rest
- product storage requirements, such as refrigeration, freezing and shelf-life
- causes of variation and corrective action required
- control points and related monitoring requirements
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of ability to:

- plan and prepare ingredients, equipment and processes required for pastry
- produce pastry, choux pastry and shortening

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • combine and process ingredients according to requirements for type of product • block and laminate pastry as required • assess pastry outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • clean equipment • apply safe work practices and identify OHS hazards and controls • cost final product • apply food safety procedures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant pastry product requirements, safe work practices, food safety, quality and environmental requirements • recipe instructions • product specifications and related inspection/control points • mixing, rolling, blocking and laminating equipment as required by pastry type • materials/ingredients • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes: <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • verbal or written instructions • standard operating procedures (SOPs) • specifications • production schedules • recipe instructions
Ingredients	Ingredients include but are not limited to: <ul style="list-style-type: none"> • flour • shortening • sugar • salt and water
Equipment	Equipment may include: <ul style="list-style-type: none"> • mixers • sieves • lifting equipment • dough break equipment for laminating
Shortening	Shortening may be added to the mixer or worked into the dough manually

RANGE STATEMENT	
Folding of pastry	Folding of pastry is typically in half or book folds
Lamination	Lamination does not apply to short paste and pie bottom paste

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to mix dough	1.1. Ingredient specifications are confirmed and available to meet product requirements 1.2. Equipment is checked to confirm readiness for use 1.3. Ingredients are weighed and/or measured to meet recipe requirements
2. Prepare a range of dough types	2.1. Ingredients are loaded into the mixer to meet recipe requirements 2.2. Dough mixing equipment is set and operated to meet recipe requirements 2.3. Dough meets specifications 2.4. Unacceptable dough is identified, rectified and/or reported
3. Clean equipment	3.1. Equipment is cleaned to meet production and hygiene requirements 3.2. Waste is disposed of according to workplace procedure 3.3. Work is conducted in accordance with workplace environmental guidelines 3.4. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify production requirements
- confirm condition, type, quality and quantity of ingredients
- confirm that equipment is clean and ready for operation
- weigh, scale or measure ingredients according to product specification
- calculate yield based on a given batch weight or flour weight according to workplace practice
- transfer ingredients to the mixer in the required sequence
- set mixing equipment to meet recipe requirements
- adjust water temperature to meet final finished dough temperature requirements
- operate and monitor the mixing process, such as monitoring:
 - dough consistency feel and texture
 - ingredient and finished dough temperature
 - dough development/bulk fermentation time
- take corrective action as required to ensure dough requirements are met
- finish dough to meet product requirements, such as adding shortening pastry margarine and/or butter if not already in the mix
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of dough making
- ingredient characteristics and purpose in dough., including flour quality and the components of wheat flour
- settings, operating requirements and safety features of equipment used
- methods used to confirm accuracy of measuring equipment used, including taring scales
- ingredient storage requirements
- significance of factors such as dough temperature, the amount of work

REQUIRED SKILLS AND KNOWLEDGE

input/mixing time, gluten development, water addition, yeast activity and consistency of dough

- purpose and time required to allow dough to rest/ferment following mixing
- required characteristics of dough
- causes of variation and corrective action required
- settings, operational requirements and safety features of mixing equipment
- control points and related monitoring requirements
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning and procedures

<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>

EVIDENCE GUIDE**Guidance information for assessment**

To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • verbal or written instructions • standards operating procedures (SOPs) • specifications • production schedules • recipe instructions
Typical ingredients	<p>Typical ingredients include but are not limited to:</p> <ul style="list-style-type: none"> • wheat flour • water • salt • yeast • shortenings • bread improvers • additional ingredients, such as rye flour, sours, fruit, spices, grains and fibre
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • mixers • sieves • weighing, metering and lifting equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare sponge, cake and cookie batter	1.1. Ingredients are confirmed and available to meet product requirements 1.2. Ingredients are weighed and/or measured to meet recipe requirements 1.3. Equipment is checked to confirm readiness for use 1.4. Mixing equipment is set and operated to meet recipe requirements 1.5. Ingredients are loaded into the mixer to meet recipe requirements 1.6. Batter meets specifications 1.7. Prepared batter is deposited into tins/onto papers
2. Clean equipment	2.1. Equipment is cleaned to meet production and hygiene requirements 2.2. Waste is disposed of according to workplace procedure 2.3. The work area is maintained according to housekeeping standards 2.4. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe requirements
- confirm condition, type, quality and quantity of ingredients, including selecting shortening type to meet recipe and ambient temperature requirements
- weigh, scale or meter ingredients as required
- calculate yield based on given batch weight and/or main ingredient weight according to workplace practices
- confirm equipment status and condition
- transfer ingredients to the mixer in the required sequence
- set mixing equipment to meet production requirements, such as:
 - selecting and fitting appropriate attachments
 - setting mixer times and speeds
- operate and monitor the mixing process, such as monitoring:
 - mixing time and speed
 - ingredient and finished batter temperature
 - batter consistency, appearance and texture
- identify batter that does not meet quality requirements and take necessary corrective action
- prepare tins/trays, liners and papers as required
- deposit, extrude or spread batter to meet product and volume/weight requirements
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of cake, sponge and cookie making
- ingredient characteristics and purpose in the final product, including flour types, sugar grades, shortening and emulsifiers, and fresh and/or pulp egg, as well as pre-mix composition, where required
- methods used to confirm accuracy of measuring equipment used

REQUIRED SKILLS AND KNOWLEDGE

- ingredient storage requirements
- methods used to prepare cake batter
- physical and chemical methods used to aerate batter
- significance of factors, such as temperature of batter on final product
- factors affecting sponge-making
- required characteristics of batter
- process requirements, such as:
 - mixing times and speeds
 - batter specifications
- settings, operating requirements and safety features of equipment used
- methods used to deposit batter including use of release agents as required
- causes of variation and corrective action required
- control points and related monitoring requirements
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • plan and prepare ingredients, equipment and processes required for batter • combine and process ingredients according to requirements for type of batter • assess batter outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • clean equipment • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipe instructions • product specifications and related inspection/control points • production equipment, such as mixing and depositing equipment as required by product type • materials/ingredients • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>

EVIDENCE GUIDE**Guidance information for assessment**

To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to decorate cakes and cookies	1.1. Ingredients are confirmed and available to meet finishing requirements 1.2. Equipment is checked to confirm readiness for use 1.3. Decorations and decorating materials are available to meet product decorating requirements
2. Decorate products to meet quality and customer requirements	2.1. Decorating materials are applied to meet presentation requirements 2.2. Finished product meets presentation requirements 2.3. Unacceptable product is identified, rectified or reported 2.4. Products are assembled to meet customer and quality requirements 2.5. Work is conducted in accordance with workplace environmental guidelines 2.6. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- confirm customer requirements
- select and/or follow appropriate decorating instructions
- confirm that the required type and quantity of cake ornaments, decorations and decorating materials and/or ingredients are available
- confirm that required equipment is clean and ready for use
- mix or prepare decorating materials as required
- select and mount cakes on appropriate cake bases
- demonstrate a range of decorating techniques to suit the product - at a minimum, decorating techniques will include:
 - flooding, icing or masking cakes
 - writing simple messages
 - using more than one decorating material to achieve the required finish
 - applying decorating materials to cover cakes in a timely manner to achieve an even, clean finish as required by product and customer requirements
- identify and take corrective action to ensure that finished product meets quality standards
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- temper chocolate according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- methods used to prepare a range of decorating materials, including preparation of ganache and fondants
- characteristics, role and storage requirements of materials used
- required characteristics of prepared decorating materials
- methods used to prepare powdered and liquid colours/flavours
- methods used to confirm accuracy of measuring equipment used
- board types, sizes and appropriate medium to secure cake to cake base

REQUIRED SKILLS AND KNOWLEDGE

- acceptable standards for equipment/utensils used, including cleaning requirements and signs of wear or unacceptable damage (where measuring equipment is used, it may also include procedures, such as taring of scales)
- decorating techniques, such as flooding, icing or masking, piping of simple messages and decorative finishes, and placement of ornaments and decorations
- the effect of variables, such as the temperature of decorating materials and application time on the finished product
- product quality, presentation and storage requirements, such as refrigeration, freezing and shelf-life
- inspections/control points used to confirm that product meets quality requirements and related monitoring requirements
- causes of variation and corrective action required
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning requirements and procedures
- chocolate preparation and tempering where relevant

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • plan and prepare ingredients, equipment and processes required for decoration • combine and process ingredients according to requirements for decoration • decorate to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • work procedures, including advice on relevant product decoration requirements, safe work practices, food safety, quality and environmental requirements • recipe/decorating instructions • product specifications and related inspection/control points • product to be decorated and related decorating materials and equipment • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to bake dough	1.1. Baking parameters are selected as required to meet safety and baking requirements 1.2. Dough pieces are loaded into the oven 1.3. Ingredients are confirmed and available to meet finishing requirements
2. Bake bread	2.1. Ovens are operated to meet required output 2.2. Baked product meets food safety and quality requirements 2.3. Unacceptable baked product is identified, rectified and/or reported 2.4. The work area is maintained according to housekeeping standards 2.5. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe/baking requirements
- select appropriate oven settings and start up the oven, including setting time and temperature controls
- load dough pieces
- schedule loads according to volume and temperature requirements to achieve time and energy efficiencies
- monitor baking process, including:
 - steam injection (as required)
 - crust colour
 - sheen
 - uniformity of shape
 - size (oven spring)
- take corrective action as required to maintain quality of product
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- changes that occur to the product during baking
- how dough characteristics such as shape/size and skin formation affect the final product
- the effect of variables, such as time, temperature and humidity on baking
- the effect of yeast activity on the final product
- quality characteristics of final product, including:
 - volume
 - grain
 - texture
 - crumb colour
 - crust formation and colour

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to bake pastry products	1.1. Baking parameters are selected as required to meet safety and baking requirements 1.2. Product is prepared, finished and arranged to meet quality and product requirements
2. Bake products	2.1. Ovens are operated to meet required output 2.2. Baked product meets food safety and quality requirements 2.3. Unacceptable baked product is identified, rectified and/or reported 2.4. The work area is maintained according to housekeeping standards 2.5. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify baking requirements
- prepare product for baking, such as thawing frozen product and allowing the required development/conditioning of product prior to baking
- select appropriate oven settings and start up the oven, including setting time and temperature controls
- load product, including positioning product on trays, slips or belts with correct spacing
- select required oven settings, such as setting time, temperature and steam controls
- monitor baking process, including:
 - colour
 - appearance/shape
 - seals that they show no signs of boil out
- remove baked products from oven and cool to meet required temperature
- present, package and/or store as required
- apply washes and/or glazes before or after baking as required
- take corrective action as required to maintain quality of product
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- changes that occur to the product during baking
- how pastry product characteristics affect the final product
- time required for conditioning products
- the effect of variables, such as temperature of fillings, time, temperature and humidity during the baking process
- quality characteristics of the final product
- presentation and/or storage requirements for baked product, such as refrigeration, freezing and shelf-life
- settings, operating requirements and safety features of equipment used

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on ovens used for baking • start, operate, monitor and adjust ovens to achieve required quality outcomes • assess product outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • safely shut down ovens • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipe instructions • specifications, control points and processing settings • baking equipment • pastry products • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of</p>

EVIDENCE GUIDE	
	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, OHS, anti-discrimination and equal opportunity
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • verbal or written instructions • standard operating procedures (SOPs) • specifications • production schedules • recipe instructions
Product	Product may be prepared fresh or frozen
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • topping equipment • oven loading equipment • ovens • cooling racks

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Store frozen dough	1.1.Storage conditions required to retain quality characteristics of frozen dough are identified and monitored 1.2.Consequences of inconsistent temperature and moisture controls for frozen dough are identified 1.3.The cold chain is monitored to ensure that product meets food safety and quality requirements
2. Thaw frozen dough	2.1.Dough is thawed at a rate and conditions required to maintain quality 2.2.Impact of thawing rate on yeast and/or laminated products are identified 2.3.Thawed dough meets food safety and quality requirements 2.4.Unacceptable dough is identified, rectified and/or removed 2.5.Waste is disposed of according to workplace procedure 2.6.Housekeeping standards are maintained in the workplace 2.7.Work is conducted in accordance with workplace environmental guidelines
3. Use thawed dough in baked products	3.1.Dough is proved and/or conditioned to prepare for use 3.2.Dough is baked in accordance to product specifications and requirements 3.3.Implications of using frozen dough on proving and baking are identified and managed in the baking process 3.4.identify and act on any quality inconsistencies in production processes and the final product

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access freezing requirements for dough type
- store frozen dough
- monitor equipment to confirm that freezing parameters are met
- thaw dough as required for use
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of freezing dough, including what occurs to dough during snap freezing and storage stages
- basic understanding of the freezing equipment used, freezing capacity and the effect of freezing method on product
- different handling requirements of made up and proved doughs to preserve the dough structure
- purpose and characteristics of packaging liners used to pack frozen dough
- procedures for maintaining temperature parameters of freezing equipment, including procedures to be followed when loading and removing dough to preserve temperature conditions
- storage patterns to make efficient use of space, allow for product rotation and minimise temperature fluctuations
- food safety issues that can result from temperature abuse
- the significance of timeliness when both freezing and thawing dough
- optimal storage times
- the significance of variables such as dough type and size on freezing and thawing processes
- procedures for efficiently thawing frozen product and the consequences of slow thawing
- the effect of freezing/thawing on the quality of the final product
- inspections/control points used to confirm that product meets quality requirements and related monitoring requirements

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to retard dough	1.1. Dough retardation requirements are identified 1.2. Equipment is set to meet retardation parameters
2. Retard and recover dough	2.1. Dough is retarded to meet specification 2.2. Equipment is set to meet dough recovery parameters 2.3. Retarded and recovered doughs meet specification 2.4. Unacceptable dough is identified, rectified and/or reported 2.5. Housekeeping standards are maintained in the workplace 2.6. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access retardation requirements for dough type
- set equipment to meet the parameters for retarding dough, including selecting time, temperature and humidity
- load dough into the retarder - this is done in a way that minimises the delay between dough make up and loading into the retarder and follows dough rotation procedures so that dough is not retarded for more than the optimal time
- follow procedure to ensure retarding and recovery times are met
- monitor equipment to confirm that parameters are met
- where recovery is achieved using separate equipment, allow sufficient rest time between recovery and proofer
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of retarding dough, including what occurs to dough when it is retarded and recovered and how retardation works by controlling temperature to slow yeast fermentation
- the significance of variables, such as time, temperature and humidity on the dough retardation and recovery process
- where dough recovery is achieved using separate equipment, the significance of dough conditioning prior to recovery
- the effect of any delay in loading dough into the retarder on fermentation
- the effect of finished dough temperature on retardation process
- the effect of humidity on the dough surface and formation of skin on dough
- the significance of variables, such as dough type and size on recovery time and conditions
- the effect of retardation on the quality of the final product
- optimal time for retarding dough and procedures to ensure this time is met
- causes of variation and corrective action required

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scale and mould dough	1.1. Dough is scaled to meet production requirements 1.2. Scaled dough meets weight requirements 1.3. Dough is moulded to provide initial shape 1.4. Dough is laminated, chilled or filled to suit product specification 1.5. Unacceptable scaled and moulded dough is identified, removed or rectified and/or reported
2. Mould dough and divide to meet product requirements	2.1. Dough is moulded to final shape 2.2. Dough is placed in tins or on baking surfaces as required 2.3. Dough meets specifications 2.4. Unacceptable final proved dough is identified, removed or rectified and/or reported
3. Clean equipment	3.1. Equipment is cleaned to meet production and hygiene requirements 3.2. Waste is disposed of according to workplace procedure 3.3. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe requirements
- confirm the required quantity of dough is available
- divide dough into pieces of the required weight
- round or mould dough to meet intermediate prove weight requirements
- allow dough to develop for the required time (intermediate prove)
- monitor size and shape of dough and skin formation on dough during intermediate prove
- identify, correct and/or remove unacceptable sized/shaped dough
- confirm that tins and/or baking surfaces are available and ready for use
- carry out final mould (this may be done manually or by using moulding and rounding equipment)
- tin or place dough on baking surfaces as required
- conduct final prove of dough (prover settings are set to allow the required development/proving time and conditions, such as temperature and humidity)
- prepare dough for baking, such as applying finishings, positioning lids on tins according to product requirements and shaping specialty breads
- monitor dough volume and maturity
- visually check the appearance of finished products and confirm that finishings are applied to meet quality requirements
- identify, correct and/or remove unacceptable sized/shaped dough
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- the effect of dough shape/size on the final product
- purpose and time required to allow dough to develop
- methods used to confirm accuracy of measuring equipment used
- required characteristics of proved dough, such as size, height and appearance

REQUIRED SKILLS AND KNOWLEDGE

- causes of variation and corrective action required
- settings, operational requirements and safety features of dividing and rounding equipment
- requirements of the final proof process, including the importance of relative humidity and temperature on proving stage
- purpose and procedures for conducting a wet or dry prove
- moulding techniques to achieve required product shape for untinned bread products
- control points and related monitoring requirements
- occupational health and safety (OHS) hazards and controls
- waste handling and cleaning and procedures

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify causes of unacceptable product quality	<p>1.1. Unacceptable products are analysed to determine cause</p> <p>1.2. Process parameters and reactions which occur during processing are monitored</p>
2. Take corrective action according to workplace procedures	<p>2.1. Corrective action is taken to remove unacceptable product and prevent recurrence of the problem according to workplace procedures</p> <p>2.2. Corrective action is recorded according to workplace procedures and food safety program</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information relating to troubleshooting
- select, fit and use personal protective clothing and/or equipment
- use relevant observation and/or test methods to confirm raw ingredient characteristics
- remove/isolate and report ingredients/materials of unacceptable quality
- determine likely causes of unacceptable final product relating to raw ingredients
- determine likely causes of unacceptable final product relating to the process and/or storage conditions
- develop procedures to prevent or minimise the likelihood of recurrence of the problem
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic composition, characteristics and function of each main ingredient used, including:
 - form/grade of ingredient supplied
 - behaviour/changes occurring during processing
 - role and purpose
- preparation requirements for use, such as conditioning fruit
- bread styles, types and textures, including labelling requirements for types of bread consistent with the Food Standards Code
- impact of ingredient cost and yields on profit margin
- principles of processing techniques used to achieve finished products, including:
 - wet and dry proving methods
 - types of mixers used
 - hand moulding
 - oven types, including method of steam generation
 - methods of delivering product to the oven
- effect of typical reactions during mixing, development and baking, such as:
 - yeast activity

REQUIRED SKILLS AND KNOWLEDGE

- gluten development
- browning and caramelisation
- gelatinisation as it occurs in different dough types
- formula balance and ingredient addition sequence
- impact of ingredient cost and yields on profit margin
- process parameters and their effect, such as starting and finishing temperatures of ingredients and dough, the amount of work input/mixing time, and factors, such as time, temperature and humidity during each proving stage, and during baking, depanning and cooling
- storage and handling conditions for raw ingredients and finished product
- procedures for reworking or disposing of unacceptable product
- factors that can affect shelf-life, including:
 - ingredients used
 - bread types
 - storage conditions
 - packaging
 - environmental factors

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify product faults and determine cause • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • production schedule • recipe instructions • raw materials specifications • production equipment • relevant personal protective clothing and equipment • troubleshooting advice where available • documentation and recording requirements and procedures • sampling schedules and test procedures and equipment as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFRB3002A Produce bread dough • FDFRB3005A Bake bread • FDFRB3010 Process dough.

EVIDENCE GUIDE**Guidance information for assessment**

To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. FDFRB3012A Diagnose and respond to product and process faults (pastry, cake and cookies)

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to determine causes and address faults in pastry, cake and cookie products.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit builds on the problem solving skills developed in operational units and provides technical competencies to support problem solving relating to pastry, cake and cookie production.</p> <p>Where recurrence of a problem cannot be prevented, procedures should be established to minimise the likelihood of recurrence and to identify any further incidents.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFRB2001A	Form and fill pastry products
	FDFRB2002A	Prepare fillings
	FDFRB3001A	Produce pastry
	FDFRB3003A	Produce sponge, cake and cookie

Prerequisite units		
		batter
	FDFRB3004A	Decorate cakes and cookies
	FDFRB3006A	Bake sponges, cakes and cookies
	FDFRB3007A	Bake pastry products

Employability Skills Information

Employability skills	This unit contains employability skills
-----------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify causes of unacceptable product quality	1.1. Unacceptable products are analysed to determine cause 1.2. Process parameters and reactions which occur during processing are monitored
2. Take corrective action according to workplace procedures	2.1. Corrective action is taken to remove unacceptable product and prevent recurrence of the problem according to workplace procedures 2.2. Corrective action is recorded according to workplace procedures and food safety program

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information relating to troubleshooting
- select, fit and use personal protective clothing and/or equipment
- use relevant observation and/or test methods to confirm raw ingredient characteristics
- remove/isolate and report ingredients/materials of unacceptable quality
- determine likely causes of unacceptable final product relating to raw ingredients
- determine likely causes of unacceptable final product relating to the process and/or storage conditions
- develop procedures to prevent or minimise the likelihood of recurrence of the problem
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic composition, characteristics and function of each main ingredient used, including:
 - form/grade of ingredient supplied
 - behaviour/changes occurring during processing
 - role and purpose
- preparation requirements for use, such as conditioning fruit and bringing ingredients to the required temperature
- styles, types and textures of finished products
- impact of ingredient cost and yields on profit margin
- the purpose and effect of each production stage for pastry, including:
 - all-in, French, rolled in and short dough methods
 - mixing
 - blocking
 - laminating
 - sheeting
 - shape forming
 - filling preparation

REQUIRED SKILLS AND KNOWLEDGE

- methods of assembly and finishing
- the purpose and effect of each production stage for cakes and cookies, including:
 - batter preparation methods, including flour batter, sugar batter, all-in and pre-mix methods
 - methods of aeration including mechanical and chemical methods
 - sponge preparation methods
 - baking methods, such as boiling, steaming and baking
 - browning and caramelisation
 - methods of assembly and finishing
- effect of typical reactions during mixing and baking for pastry, such as:
 - lift
 - shrinkage
 - dough development
 - gelatinisation
- effect of typical reactions during mixing and baking for cakes and cookies, such as:
 - emulsification
 - aeration, including the role of eggs in aeration
 - browning and caramelisation
- formula balance and ingredient addition sequence
- impact of ingredient cost and yields on profit margin
- recipe and preparation requirements relevant to product type, such as starting and finishing temperatures of ingredients and dough, the amount of work input/mixing time, and factors, such as time, temperature and humidity during each proving stage, and during baking, depanning and cooling
- storage and handling conditions for raw ingredients and finished product
- procedures for reworking or disposing of unacceptable product
- factors that can affect shelf-life, including:
 - product type
 - ingredients used
 - preparation methods
 - storage conditions
 - packaging
 - environmental factors

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify product faults and determine cause • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on safe work practices, food safety, quality and environmental requirements • production schedule • recipe instructions • raw materials specifications • production equipment • relevant personal protective clothing and equipment • troubleshooting advice where available • documentation and recording requirements and procedures • sampling schedules and test procedures and equipment as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFRB3001A Produce pastry • FDFRB3003A Produce sponge, cake and cookie batter

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• FDFRB3006A Bake sponges, cakes and cookies• FDFRB3007A Bake pastry products.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements</p>
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation; • legislation covering food safety, environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity
Raw materials	<p>Raw materials include:</p> <ul style="list-style-type: none"> • those used to manufacture pastry, cake and cookies
Causes of unacceptable quality	<p>Causes of unacceptable quality may relate to:</p> <ul style="list-style-type: none"> • raw materials, processing and/or storage
Ingredients	<p>Ingredients relate to:</p> <ul style="list-style-type: none"> • those ingredients used in product <p>Materials may include:</p> <ul style="list-style-type: none"> • packaging consumables
Typical process parameters	<p>Typical process parameters include:</p> <ul style="list-style-type: none"> • temperature • time • humidity • development/proving time

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and sequence preparation of artisan breads	1.1. Recipe is selected to meet product/customer requirements 1.2. Preparation and production stages are planned
2. Produce bread doughs for a range of artisan breads	2.1. Ingredients are selected to suit recipe specifications 2.2. Dough is prepared meet product requirements
3. Prepare and bake a range of artisan breads	3.1. Dough is prepared for baking according to product requirements 3.2. Product is baked to meet quality requirements 3.3. Final product is presented to meet food safety and customer requirements 3.4. Work is conducted in accordance with workplace environmental guidelines
4. Cost and price final product	4.1. Product ingredients are costed 4.2. Production costs are estimated 4.3. Product is priced within business pricing policy 4.4. Actual costs are measured against estimated costs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- select appropriate recipe/formulation to meet product/customer requirements
- price ingredients for use in product
- estimate cost of production
- select ingredients to meet recipe requirements
- produce bread dough to meet recipe requirements, such as:
 - dough-based flat bread dough
 - batter-based flat bread dough
 - unleavened or chemically leavened flat bread dough
 - chemical sour dough
 - natural sour dough
 - an extended fermentation period dough
 - an enriched dough
- prepare cultures/starters for use in sours from scratch, using a natural sour dough and using a chemical starter
- prepare dough for baking according to requirements of bread type, including moulding/shaping, such as novelty shapes and plaited products
- bake bread products
- finish and present bread product to meet product and customer requirements, including applying toppings as required
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- measure actual production costs against estimate and account for any variation
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- typical formulations for bread types
- principles and processes involved for extended fermentation doughs
- fermentation process in chemical and natural sour doughs as this affects dough preparation, baking and final product characteristics, and related food safety issues

REQUIRED SKILLS AND KNOWLEDGE

- preparation stages and requirements for nominated bread types, including:
 - starter preparation
 - dough scaling and rounding methods, including sheeting, hand and mechanical scaling and rounding
 - intermediate proving methods, including ambient temperature and normal proving
 - moulding, including novelty shapes and plaited product preparation
 - loading product into ovens, including stretching flat bread doughs, such as Turkish bread on the oven floor
 - baking parameters for different bread types
 - the effect of ingredients on shelf-life and food safety
- optimum storage conditions and shelf-life for ingredients and related sequencing requirements
- optimum storage conditions for the finished product prior to sale
- ingredient suppliers and pricing information
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- basic awareness of trade practice issues when pricing products
- business policy and parameters in pricing products

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to mix dough	1.1. Ingredients are confirmed, available and conditioned or prepared to meet production requirements 1.2. Equipment is checked to confirm readiness for use
2. Prepare dough	2.1. Ingredients are loaded into mixer to meet recipe requirements 2.2. Mixing equipment is set and operated to meet recipe requirements 2.3. Dough meets product requirements
3. Bake/fry product	3.1. Dough is shaped for baking or frying 3.2. The baking/frying process is operated to meet required output 3.3. Final product meets food safety and quality requirements 3.4. Unacceptable product is identified, rectified and/or reported
4. Clean equipment	4.1. Equipment is cleaned to meet production and hygiene requirements 4.2. Work is conducted in accordance with workplace environmental guidelines 4.3. Workplace records are maintained according to workplace recording requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to identify recipe requirements
- confirm condition, type, quality and quantity of ingredients
- prepare ingredients as required, such as weighing, scaling or metering ingredients and conditioning ingredients (e.g. dried fruit)
- confirm that equipment required is available, clean and fit for use
- transfer ingredients to the mixer in the required sequence
- set mixing equipment to meet recipe requirements, such as:
 - selecting and fitting attachments
 - setting mixing speed and time
- operate and monitor the mixing process, such as:
 - ingredient and finished dough temperature
 - dough development
 - dough consistency, feel and texture
 - addition of special ingredients, such as dried fruit
 - selecting and fitting attachments
- finish dough to meet product requirements, such as rolling, adding shortening if not already in the mix, laminating and folding
- allow dough to proof
- prepare cooking/baking trays
- deposit, extrude, roll or shape dough to meet product and volume/weight requirements
- set up baking/frying equipment, such as setting oven temperatures, times and humidity and/or preparing deep frying equipment
- operate and monitor baking/frying process, such as monitoring time, colour and appearance
- cool and present finished product, such as placing on cooling racks and slicing and applying glazes and/or sugar
- calculate product yield based on given batch weight and/or main ingredient weight, according to workplace practices
- take corrective action so that quality standards are met
- clean equipment and utensils to meet hygiene standards
- complete workplace records as required
- maintain work area to meet housekeeping standards
- finish products according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- form and fill products according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of producing yeast-raised products
- ingredient characteristics, purpose in the product and storage requirements, including flour types, sugar grades, shortening and emulsifiers and other ingredients used
- required characteristics of finished products
- method used to calculate ingredient weights to meet production and recipe requirements
- acceptable standards for equipment/utensils used, including cleaning requirements and signs of wear or unacceptable damage (where measuring equipment is used, it may also include procedures, such as taring of scales)
- process requirements, such as:
 - mixing times and speeds
 - purpose and time required to allow mix to proof
 - batter/dough specifications
 - baking times and temperatures
 - oven settings
- effect of variables, such as ambient conditions, on the proving process, dough temperature, gluten development, water addition, yeast activity and consistency of dough
- settings, operating requirements and safety features of equipment used
- product presentation and storage requirements, such as refrigeration, freezing and shelf-life
- inspections/control points used to confirm that product meets quality requirements and related monitoring requirements
- causes of variation and corrective action required, including the role of sugar in browning
- occupational health and safety (OHS) hazards and controls
- waste handling requirements and methods, such as salting down waste to prevent yeast development
- cleaning requirements and procedures
- preparing and applying decorations to finish products where relevant
- forming and filling products where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and sequence preparation of gateaux and tortes	1.1. Recipe is selected to meet product/customer requirements 1.2. Preparation and production stages are planned
2. Prepare sponges and other bases for use in gateaux and torte production	2.1. Ingredients are selected to suit recipe specifications 2.2. Bases are prepared meet product requirements 2.3. Product is baked to meet quality requirements
3. Prepare fillings and finishes for use in gateaux and tortes	3.1. Recipe is selected appropriate to preparation of fillings and finishes for final product 3.2. Fillings and finishes are prepared according to recipe requirements 3.3. Fillings and finishes meet food safety and quality requirements
4. Assemble gateaux and tortes	4.1. Bases are prepared for assembly 4.2. Bases and fillings are assembled to meet recipe specifications 4.3. The product is covered to meet recipe specifications
5. Finish and decorate gateaux and tortes	5.1. Decorating materials are prepared to meet customer requirements 5.2. Decorations and decorating materials are applied to meet customer requirements 5.3. Final product is presented to meet food safety and customer requirements 5.4. Work is conducted in accordance with workplace environmental guidelines
6. Estimate product cost	6.1. Product ingredients are costed 6.2. Production costs are estimated 6.3. Actual costs are measured against estimated costs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- given product description and/or customer request, select recipe to meet product/customer requirements
- select ingredients to meet recipe requirements
- price ingredients for use in product
- estimate cost of production
- review recipe to identify preparation and production stages and establish a plan to sequence each step so that ingredients are prepared and available in optimum condition for use
- produce bases to meet recipe requirements, such as:
 - sponge bases
 - meringue bases
 - pastry bases
- prepare fillings, finishings and toppings to meet recipe requirements, such as:
 - mousse
 - ganache
 - chocolate
 - creams/butter creams/pastry creams
 - jams
 - glazes
 - custard
 - fruit
 - cream cheese
 - fondant
 - nougat
- prepare bases for assembly, including cutting or trimming bases as required to meet product requirements
- assemble product to achieve the required layers and shape to meet quality requirements
- cover gateaux and tortes to meet recipe requirements and to achieve the required finish and appearance
- finish and decorate the final product, such as:
 - chocolate-themed gateaux/tortes
 - fruit-themed gateaux/tortes
- store ingredients, finished and part-finished product in appropriate storage

REQUIRED SKILLS AND KNOWLEDGE

conditions

- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- measure actual production costs against estimate and account for any variation
- determine an appropriate price for final products
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- ingredient characteristics, purpose and preparation requirements, such as:
 - scope to substitute or vary ingredients in a recipe
 - the effect of ingredients on shelf-life and food safety
 - characteristics of essences and liqueurs used in baking
 - the role, preparation requirements and uses of additives including colours, flavours and stabilisers
- optimum storage conditions and shelf-life for ingredients and related sequencing and preparation requirements
- optimum conditions for use of ingredients (this varies according to ingredient type and typically includes temperature and may include moisture content)
- the effect of refrigeration and freezing on finished product as appropriate to product type
- storage, handling and preparation requirements, including information to be provided to consumers as appropriate to product type and consistent with food safety requirements
- ingredient suppliers and pricing information
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- basic awareness of trade practice issues when pricing products
- business policy and parameters in pricing products

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • plan and prepare ingredients, equipment and processes required for gateaux and tortes • combine and process ingredients according to requirements • produce bases and fillings according to requirements • assess outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipes and customer specifications • production equipment appropriate to product type • materials/ingredients to meet recipe requirements • ingredient pricing information • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over</p>

EVIDENCE GUIDE	
-----------------------	--

assessment	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
-------------------	--

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity
Workplace information	<p>Workplace information can include</p> <ul style="list-style-type: none"> • verbal or written instructions • standard operating procedures (SOPs) • specifications • production schedules • recipe instructions
Bases	<p>Bases may be produced in:</p> <ul style="list-style-type: none"> • sheets or forms

FDFRB3016A Plan and schedule production for retail bakery

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to plan and schedule work to meet production requirements in a retail bakery or in-store bakery environment.
------------------------	---

Application of the Unit

Application of the unit	This unit applies in a retail bakery environment.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish production requirements	1.1. Identify sales history information 1.2. Identify any special conditions that may affect production requirements 1.3. Estimate production requirements
2. Schedule production to meet requirements	2.1. Calculate dough/batter types and volumes 2.2. Schedule batches to meet customer requirements and equipment capacity 2.3. Communicate production schedule as required according to workplace practice 2.4. Product is available to customer demand in the required quantities, at the required quality and at the required time

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify relevant information, such as sales volumes and purchasing patterns and any conditions that could influence sales
- estimate how much and what type of product is required and the time it should be available (this estimate can be for one day or according to workplace requirements)
- estimate dough weight compared to finished product weight
- determine optimum batch size, number and timing, taking account of process stages, equipment capacity and availability of labour
- produce or complete a production schedule covering each stage of the production process
- regulate dough/batter maturity and proving of yeast products so they arrive at the oven at the optimum time and condition
- develop a production schedule (where a workplace has an existing production schedule format, assessment can be based on completing production schedule details - where there is no established format, the assessee is required to produce a production schedule to describe a daily production requirement)
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- sources of information on sales performance, history and special events
- methods used to regulate dough/batter maturation and proving, including formulation, temperature control and time
- production schedule formats and level of detail as appropriate to meet workplace scheduling requirements
- an overview of baking processes and stages to match production to optimal timing and equipment capacity

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • determine sales patterns and production requirements • conduct estimations and calculations to determine production requirements • schedule production to meet customer requirements • communicate production requirements • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment of this unit must occur in a real or simulated workplace. Such an environment must provide an opportunity for the assessee to prepare or complete a daily production schedule given:</p> <ul style="list-style-type: none"> • sales performance, history and other relevant information • product formulations • formulae to calculate batch weight to finished product weight • process equipment and information on capacity.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research opportunities for new product	1.1. Market characteristics are identified 1.2. Opportunities for product development are matched to market
2. Develop a product proposal to meet market opportunity	2.1. Competing products are evaluated 2.2. Existing formulas are adapted to produce new product 2.3. Method of assembly and presentation is determined 2.4. Cost of production is estimated 2.5. Product concept is presented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify competitors
- identify local demography relevant to retail bakery products
- determine product development opportunities
- identify the main ingredients and method used to produce competing products
- modify existing formulas/recipes to produce required product
- determine product assembly and presentation
- cost product
- present product proposal
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- sources of information on local market, product range and performance of similar products
- expected quality and taste of products to meet business and customer expectations
- basic composition and methods used to produce retail bakery products relevant to the business
- availability of ingredients and processing equipment required by new product
- food safety issues related to production, preparation, presentation and storage of product
- methods of gaining customer feedback, such as conducting tastings
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- basic awareness of trade practice issues when pricing products
- communication skills required to research and present information

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • compare and evaluate product features • identify market opportunities • prepare product development proposal, including production processes, costings and rationale • present product ideas.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • local market for which product is to be developed • existing product range, ingredients, recipes/formulas, equipment and methods used in the workplace • product development procedures used in the workplace.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse marketing goals and influences	<p>1.1 Information sources on industry trends are identified and accessed to inform retail baking research</p> <p>1.2 The business plan is examined to determine marketing goals and strategies</p> <p>1.3 Type of retail bakery operation is analysed to determine impacts on promotional and marketing activities, including presentation and product display</p> <p>1.4 Trends in retail baking product range are identified</p> <p>1.5 Market influences on bakery products and presentation are examined</p> <p>1.6 Trends and influences are analysed to determine priorities for promotional and marketing activities</p>
2. Analyse market conditions	<p>2.1 Information is gathered on local population and target market determined and consumer profile identified</p> <p>2.2 Competing businesses are identified and market position and product range examined</p> <p>2.3 Market segmentation for specific bakery products are identified</p> <p>2.4 Consumer dietary needs are identified and impacts on retail baking determined</p> <p>2.5 Cultural and religious influences on retail baking are identified and impacts on retail baking determined</p> <p>2.6 Marketing opportunities are identified for retail bakery products and services</p>
3. Confirm and price product and service range	<p>3.1 Selection of bakery products is confirmed to meet market needs</p> <p>3.2 Type of service for bakery products is confirmed to meet market needs</p> <p>3.3 Position in market is determined and product range is selected accordingly</p> <p>3.4 Costs of production are accessed to determine product profitability</p> <p>3.5 Prices of competitor products are identified and used to inform price point and market position</p> <p>3.6 Costs for products are determined in accordance with production costs, market conditions and position</p> <p>3.7 Process for ongoing monitoring of bakery performance is confirmed to inform product changes</p>
4. Determine presentation for retail bakery	<p>4.1 Visual layout of bakery is designed to promote attractiveness and customer interest</p> <p>4.2 Lighting, décor and showcases are selected to promote bakery</p>

ELEMENT	PERFORMANCE CRITERIA
	appeal in accordance with marketing objectives
	4.3 Promotional props and product information are provided to generate customer sales
5. Determine packaging and presentation of bakery products	5.1 Types of packaging for bakery products are identified and assessed for suitability to meet market conditions
	5.2 Labelling design and features are determined to meet consumer information requirements
	5.3 Compliance of labelling and packaging with legislative requirements is confirmed
	5.4 Display area is examined and suitability to meet consumer needs assessed
	5.5 Options for display and presentation of bakery products are identified and strategy selected to maximise consumer appeal
6. Determine promotional mix for bakery products	6.1 Key events influencing consumer bakery purchases are identified and product range selected
	6.2 Consumer information requirements on bakery products are identified and strategies for meeting these needs are determined
	6.3 Options for marketing and promotion of bakery products are examined and suitable strategies selected
	6.4 Promotional ideas and options are documented

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access and interpret retail bakery business and market information
- analyse research findings and make recommendations
- analyse bakery business plan
- conduct research into bakery operation and consumer base
- make comparisons on product and service suitability
- determine suitability of bakery décor and displays
- cost and price bakery products
- analyse labelling and packaging options and legislative requirements
- assess suitability of promotional strategies
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- information sources available to inform marketing activity
- typical bakery products available to meet variety of consumer needs
- promotional resources suitable for bakery operations
- marketing principles and practices
- labelling and packaging options and legislative requirements
- dietary, cultural and religious influences on retail bakery product choice.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access and interpret industry information • analyse the business plan to determine marketing objectives and suitable marketing activity • identify key trends and influences on retail bakery • determine key features of target market • assess market conditions and position bakery • select suitable product range to meet the needs of target market • select showcases, displays and décor to meet marketing objectives • determine product pricing • analyse and select promotional options for bakery, including presentation, packaging and sales strategies.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • retail bakery market data and information.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Information sources	<p>Information sources may include:</p> <ul style="list-style-type: none"> • trade magazines and journals • networks and industry events • other businesses • internet • statistical data and population demographics • dietary and cultural information • colleagues and industry experts • business, marketing and promotional personnel
Specific dietary needs	<p>Specific dietary needs may include:</p> <ul style="list-style-type: none"> • low Glycemic Index (GI) • sugar free and fat free • dairy free • gluten free • rice flour • yeast free • low fat • low salt • vegetarian • vegan
Specific cultural and religious needs	<p>Specific cultural and religious needs may include:</p> <ul style="list-style-type: none"> • foods prepared to cultural and religious dietary laws (e.g. Kosher and Halal) • national and regional food products • foods that mark significant events (e.g. Christmas, Ramadan, Easter, Rosh Hashanah, Passover, Zul Hijjah and weddings) • feasting • fasting • alcohol-free beverages • pork-free foods • beef-free foods
Competing businesses	<p>Competing businesses may include:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cafes • restaurants • supermarkets • retail outlets • fast food chains • other bakeries
Visual presentation	<p>Visual presentation may include:</p> <ul style="list-style-type: none"> • colours, pictures, wall hangings and fabrics • product posters and price lists • counter, showcases, racks and trays • tables, chairs and dining implements • flooring and lighting • outside areas and awnings • staff outfits and presentation

FDFRB4002A Control bakery operations to meet quality and production requirements

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to determine production targets and control production processes in order to meet retail bakery output requirements.
------------------------	---

Application of the Unit

Application of the unit	This unit applies in a retail bakery environment where production requirements are determined by consumer purchasing patterns for bakery products. It applies to those responsible for the production management of the operation in order to meet consumer demand. Processes, such as retardation, are included as techniques used to control production flow.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish production targets	1.1 Sales history information is analysed and current variables considered to determine expected production targets 1.2 Special conditions that may affect production requirements are incorporated into production targets 1.3 Production targets are specified for product range 1.4 Production requirements for specialised product range are identified and incorporated into production planning 1.5 Quality criteria for product range are confirmed 1.6 Production targets are documented according to workplace practice
2. Determine requirements to meet production targets	2.1 Ingredients required to meet production targets are identified and quantities calculated and documented 2.2 Current stock is assessed and material order requirements determined 2.3 Equipment requirements are determined and availability and operational readiness assessed 2.4 Labour requirements to meet production targets are determined 2.5 Specialised skill requirements are identified and resourced 2.6 Production process is mapped to determine flow requirements
3. Determine production processes	3.1 Fermentation techniques are selected according to production requirements 3.2 Retarding strategies are selected according to production requirements 3.3 Strategies for the control and handling of frozen products are selected 3.4 Techniques for controlling retarding are implemented in the production process 3.5 Processes specified are in accordance with workplace environmental guidelines
4. Develop production schedule	4.1 Production is scheduled to meet production targets in accordance with quantity and quality standards 4.2 Production schedule reflects bakery capacity and expected consumer purchase patterns 4.3 Production schedule is documented according to workplace practice
5. Manage production flow	5.1 Production schedule is communicated to relevant staff members 5.2 Availability and readiness of all production requirements are arranged and confirmed 5.3 Production operations are monitored and assessed against

ELEMENT	PERFORMANCE CRITERIA
	production targets
	5.4 Variances to operations are assessed for impact on production outcomes and action taken accordingly
	5.5 Flow of product is monitored to ensure product quality is maintained
6. Assess production outputs	6.1 Achievement of production schedule is assessed and variations determined and documented
	6.2 Quality of bakery products is assessed against established standards
	6.3 Production waste is monitored at each stage of production and waste reduction strategies determined
	6.4 Outputs are documented with production scheduling information

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify relevant information, such as sales volumes and purchasing patterns and any conditions that could influence sales
- estimate how much and what type of product is required and the time it should be available
- calculate dough weight compared to finished product weight
- determine optimum batch size, number and timing, taking account of process stages, equipment capacity and availability of labour
- produce or complete a production schedule covering each stage of the production process
- regulate dough/batter maturity and proofing of yeast products so they arrive at the oven at the optimum time and condition
- develop a production schedule
- ensure availability of stock, human and material resources and equipment in order to meet production requirements
- monitor operations and address variations to production schedule
- compare outcomes against standards and targets
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- sources of information on sales performance, history and special events
- methods used to regulate dough/batter maturation and proofing, including formulation, temperature control and time
- production schedule formats and level of detail as appropriate to meet workplace scheduling requirements
- baking processes and stages to match production to optimal timing and equipment capacity
- monitoring procedures
- quality standards.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • determine production targets and requirements to meet targets • conduct estimations and calculations to determine production requirements • determine dough making and retarding processes required for production • schedule production to meet customer requirements • communicate production requirements and ensure resources are available • monitor production to ensure targets are achieved • address any non-conformance to meeting production targets • assess waste in production processes • apply food safety procedures.
Context of and specific resources for assessment	<p>Assessment of this unit must occur in a real or simulated workplace. Such an environment must provide an opportunity for the assessee to prepare or complete a daily production schedule, including:</p> <ul style="list-style-type: none"> • sales performance, history and other relevant information • product formulations • formulae to calculate batch weight to finished product weight • process equipment and information on machine capacity.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a

EVIDENCE GUIDE

	period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements

Sales history

Sales history may include:

- number of products sold over a given period
- pattern of sales over the course of a day

Special conditions

Special conditions that may affect production requirements may include:

- weather conditions
- special events or occasions affecting orders

Specialised product range

Specialised product range may include:

- products with specific dietary criteria (e.g. gluten free, flourless, wheat free, sugar free, vegetarian and low salt)

Production requirements for specialised product range

Production requirements for specialised product range may include:

- use of specific equipment
- absence of any traces of ingredients in equipment
- use of specialised ingredients
- additional preparation requirements

Retarding strategies

Retarding strategies may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • use of frozen dough • retarding by temperature controls • fermentation strategies • selection of starters
Waste	Waste may include: <ul style="list-style-type: none"> • time • ingredients • space • non-conforming product • human resources • energy

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and use ingredients to ensure quality outcomes	1.1 Impact of ingredients on final product is identified and considered in selection, measurement and use 1.2 Processes used in the manufacture of ingredients and their impact on quality are identified and considered in the selection of ingredients 1.3 Types of food additives and corresponding E numbers used in bakery products, their functions and possible reactions are considered in the selection of ingredients 1.4 Reactions and properties of sugars, proteins and fats can be identified and tracked through baking production processes 1.5 Properties of common emulsions, suspensions and solutions and their impacts on quality are considered in the selection of ingredients 1.6 Common chemical reactions and factors required to cause a reaction are managed to control impact on quality 1.7 Legal and quality requirements relating to use of ingredients and food additives are applied 1.8 Knowledge of ingredients, processes and interactions is used to predict product shelf life 1.9 Problems relating to ingredients are identified and addressed
2. Manage nutritional features of bakery products	2.1 Public health and environmental hazards relating to bakery products are identified and controlled in bakery production 2.2 Intolerances to foods, artificial and natural additives used in baking products and typical reactions are identified and considered in product development and labelling 2.3 Allergies and autoimmune diseases relating to bakery products and typical reactions are identified and considered in product development and labelling 2.4 Alternative ingredients, production processes and products are selected to cater to customers with intolerance and allergies 2.5 Role of bakery products in diet and their nutritional features are determined 2.6 Regulations regarding nutritional labelling are applied
3. Control aspects of fermentation	3.1 Role and science of fermentation in bakery products is identified and process variations applied to achieve different outcomes 3.2 Types of fermentation and features of process are examined and selected according to product requirements 3.3 Role of Lactic Acid Bacteria (LAB) in fermentation and influences/factors are identified and managed 3.4 Impact of different fermentation processes on the bakery product

ELEMENT	PERFORMANCE CRITERIA
4. Manage baking processes	<p>is considered in selection of production processes</p> <p>4.1 Role and science of retardation in bakery products is identified and process variations applied to achieve different outcomes</p> <p>4.2 Role and science of freezing in bakery products is identified and process variations applied to achieve different outcomes</p> <p>4.3 Impact of temperature, moisture and time on production and product outcome are considered in management of operations</p> <p>4.4 Impacts of varying baking processes on production and product outcome are considered in production planning and management</p> <p>4.5 Production problems are identified and addressed</p> <p>4.6 Processes specified are in accordance with workplace environmental guidelines</p> <p>4.7 Baking processes are selected and managed to maximise production efficiencies</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify bakery ingredients and group them by function, including:
 - proteins
 - fats
 - carbohydrates
 - additives
- identify the role of enzymes in generating biological reactions (e.g. amylase in bread)
- read and interpret technical information to describe food properties and/or reactions, including recognising and applying appropriate units of measurement and terms
- review and/or establish procedures to describe storage, handling and processing conditions that affect the characteristics of ingredients, such as:
 - changes in pH
 - temperature change
 - specific gravity
 - exposure to light
 - exposure to humidity
 - packaging materials
- review and/or establish procedures to describe the method of preparation and addition of ingredients to food products produced in the workplace
- address production problems and determine root cause
- use oral communication skills language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- types of ingredients and production processes used in bakery products
- the functions of ingredients
- what 'E' numbers are and how they apply to baking
- range of allergies and intolerances to bakery products
- the functions, interactions and potential problems associated with ingredients
- coding and labelling systems used to describe ingredients and additives
- the basic molecular structures of carbohydrates, proteins and fats
- for a given production process, the processing stages designed to affect the structure of these compounds

- information sources on allergies and intolerances relevant to baking products
- dough rheology and physical dough testing data
- determinants of bread quality
- hydrogenation of fats and oils
- shelf life prediction and testing
- legal requirements relating to labelling used as established by the Food Standards Code
- typical quantities used and related units of measurement
- preparation requirements
- mechanical and chemical aeration
- health and nutrition issues related to ingredients
- handling and processing conditions that affect the characteristics of ingredients
- typical problems with ingredients and production processes.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify bakery ingredients and describe their function and chemical changes through the production process • describe the nutritional features of bakery ingredients and products • identify possible allergies and reactions to bakery products • describe key baking processes and how and why they impact on ingredients and the final product outcome • identify and address common issues and problems with ingredients and production processes.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • product specifications, including advice on ingredients • Food Standards Code • product range and related production processes • workplace information recording systems, requirements and procedures.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p> <ul style="list-style-type: none"> • FDFTEC4005A Apply an understanding of food additives • FDFTEC4006A Apply an understanding of legal requirements in food production • FDFTEC4009A Identify the physical and chemical properties of materials, food and related products.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impacts
Bakery products	<p>Bakery products may include:</p> <ul style="list-style-type: none"> • breads • cakes • pastry products
Ingredients	<p>Ingredients may include:</p> <ul style="list-style-type: none"> • yeast • processing aids (e.g. enzymes) • functional ingredients • fat replacers • flours • water • salt • folic acid • eggs and egg by-products • fruit • nuts, seeds and cereals • oils and fats

RANGE STATEMENT	
	<ul style="list-style-type: none"> • improvers • emulsifiers • humectants • dairy products • essences, additives and preservatives • sugar and glucose • jams and fillings • spices
Autoimmune diseases	<p>Autoimmune diseases may include:</p> <ul style="list-style-type: none"> • coeliac disease • Are there others?
Aspects of fermentation	<p>Aspects of fermentation may include:</p> <ul style="list-style-type: none"> • alcoholic fermentation • lactic acid fermentation: • facultative heterofermentative bacteria • obligate heterofermentative bacteria • obligate homofermentative bacteria • microbial growth kinetics (e.g. lag, log, peak and death stages) • metabolic activity

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Examine features and processes in sourdough production	1.1 Key differences between sourdough and straight dough products and the range of sourdough products are identified 1.2 Implications of using sourdough on production processes and requirements are identified 1.3 Techniques used to produce sourdough are examined and the range of outcomes identified 1.4 Role of ingredients and bacteria in sourdough fermentation and types of yeast are identified 1.5 Benefits of sourdough products and organic ingredients are identified and marketing opportunities examined
2. Produce sourdough starter	2.1 Process for fermentation and development of sourdough starter is selected 2.2 Flour and other ingredients are selected to refresh culture and achieve desired outcomes 2.3 Impacts of flour types, temperature, time and moisture on fermentation is described and typical problems identified 2.4 Ingredients and equipment are selected and prepared for use 2.5 Starter is generated and refreshed to achieve optimum fermentation activity 2.6 Appearance, size and aroma are examined to assess starter maturity
3. Prepare sourdough products	3.1 Ingredients are selected, weighed and mixed according to production requirements 3.2 Bulk fermentation is conducted 3.3 Dough is divided, rested and moulded 3.4 Dough pieces are retarded according to anticipated sales requirements 3.5 Dough pieces are selected at optimum proof and baked according to product requirements 3.6 Final product is cooled, assessed for quality and prepared for sale 3.7 Processes specified are in accordance with workplace environmental guidelines
4. Assess commercial viability of sourdough product	4.1 Marketplace interest in sourdough products is assessed through research 4.2 Product ingredients and production costs are calculated 4.3 Product is priced according to business pricing policy and estimated costs calculated 4.4 Actual costs are analysed 4.5 Product range is selected and produced according to commercial

ELEMENT

PERFORMANCE CRITERIA

viability

4.6 Spoils and waste are recorded

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- evaluate sourdough products within bakery range
- compare and select ingredients for sourdough products
- produce and maintain starter cultures
- mould dough to meet market expectations
- monitor stages in the sourdough fermentation process
- assess product quality
- produce a range of sourdough products
- finish and present bread product to meet product and customer requirements, including applying toppings as required
- clean equipment, utensils and work area to comply with hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- measure actual production costs against estimate and account for any variation
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- the science behind the production of sourdough
- techniques and processes in the manufacture of sourdough
- health benefits associated with eating sourdough products
- markets for sourdough produce
- sourdough ingredients and processes, including:
 - preparation techniques
 - processing techniques
 - production techniques
- range of grains in breads and types of specialty flours
- use of pre-ferments, double hydration techniques, use of sprouted grains and use of specialty flours, such as buckwheat and spelt
- different mixing, shaping and baking techniques
- principles and processes involved for extended fermentation doughs
- fermentation process in chemical and natural sourdoughs as this affects dough preparation, baking and final product characteristics, and related food safety issues
- preparation stages and requirements for nominated bread types, including:

- starter preparation
- dough scaling and moulding methods, including sheeting, hand scaling, and mechanical dividing and rounding
- intermediate proof methods
- baking parameters for different bread types
- the effect of ingredients on shelf life and food safety
- optimum storage conditions and shelf life for ingredients and related sequencing requirements
- optimum storage conditions for the finished product prior to sale
- ingredient suppliers and pricing information
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- trade practice issues when pricing products
- business policy and parameters in pricing products.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • describe the features, benefits and processes that apply to sourdough products • describe the impacts of process and ingredients on sourdough products • produce starter culture • produce a range of sourdough products • identify and address problems with dough development, fermentation and production • investigate market interest in sourdough products • assess outcomes against quality standards • apply safe work practices and identify OHS hazards and controls

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • cost final product • apply food safety procedures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipes and customer specifications • production equipment appropriate to product type • materials/ingredients to meet recipe requirements • ingredient pricing information • personal protective clothing, equipment and material safety data sheets (MSDS), as required • cleaning procedures, materials and equipment as required.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in

RANGE STATEMENT	
	<p>procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management and occupational health and safety (OHS)
Ingredients	<p>Ingredients may include combinations of:</p> <ul style="list-style-type: none"> • flour (e.g. rye, white, wholemeal and organic) • water • fruit (e.g. apples, pears and dried fruits) • vegetables (e.g. potatoes and pumpkin) • nuts, grains and seeds • salt • eggs • dairy products • fats and oils
Fermentation problems	<p>Fermentation problems may relate to:</p> <ul style="list-style-type: none"> • temperature • moisture • timing • contamination • ingredients
Sourdough products	<p>Sourdough products may include:</p> <ul style="list-style-type: none"> • Organic • traditional and yeasted breads, cakes and pastries
Market research	<p>Market research may include:</p> <ul style="list-style-type: none"> • customer surveys • product tasting • customer consultations • product trials

FDFRB4005A Apply advanced finishing techniques for specialty cakes and desserts

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to research and apply a range of finishing and decorating techniques for cakes, petit fours, pastries and desserts.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a retail baking environment. It targets the worker responsible for the decoration, finishing and toppings used for bakery products, such as cakes, petit fours, pastries and desserts, in order to meet customer requirements.</p> <p>Note that this unit specifies minimum finishings, fillings and final product preparation requirements. Where these have been covered in earlier units of competency, these aspects of the unit do not need to be reassessed.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	
	FDFRB2002A Prepare fillings
	FDFRB2003A Produce meringue-based products
	FDFRB3001A Produce pastry

	FDFRB3003A	Produce sponge, cake and cookie batter
	FDFRB3004A	Decorate cakes and cookies
	FDFRB3006A	Bake sponges, cakes and cookies
	FDFRB3007A	Bake pastry products
	FDFRB3015A	Produce and decorate gateaux and tortes

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct research into finishing and decorating techniques	1.1 Information resources are identified and accessed to inform the technical and creative aspects of finishing and decorating cakes, petit fours, pastries and desserts 1.2 Events and festive seasons celebrated with bakery products are identified and a range of presentations explored 1.3 Research is conducted into taste, texture, appearance and presentation of cakes to determine key features of finished effect 1.4 Resources and suppliers available for creating different finished effects are identified and documented for future use 1.5 Costs associated with different finishing techniques and features are estimated and cost-efficient alternatives identified
2. Design finish and decoration for bakery products	2.1 Purpose and desired effect for bakery product are confirmed with customer or from product development criteria 2.2 Design parameters, including colours, flavours, any special requirements or preferences, budget, required servings and quality are confirmed 2.3 Type of bakery product is assessed to inform decoration and finishing options 2.4 Design for decoration and finishing is developed to meet product/customer requirements 2.5 Feedback is sought from client and design adjusted accordingly and final design confirmed 2.6 Design is documented
3. Plan finishing	3.1 Ingredients used in finishing are examined and key uses and limitations identified 3.2 Plan is developed for bakery product finishing which specifies required resources and plans work sequence 3.3 Ingredients are sourced and prepared for use 3.4 Equipment is prepared for use 3.5 Bakery product is prepared for finishing
4. Produce finishing and decorating effects	4.1 A range of decorative pieces and garnishes are produced 4.2 A range of fillings and toppings are produced 4.3 Bakery product decoration and finishing is completed according to plan and customer requirements 4.4 Work is conducted according to food safety requirements 4.5 Work is conducted to minimise waste and meet workplace environmental standards
5. Cost and price final product	5.1 Product ingredients are costed 5.2 Production costs are estimated

ELEMENT	PERFORMANCE CRITERIA
	5.3 Product is priced within business pricing policy
	5.4 Actual costs are measured against estimated costs
6. Prepare final product for market	6.1 Product shelf life is estimated and required storage conditions identified
	6.2 Bakery product is prepared for display, sale, packaging or presentation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select decoration to meet product/customer requirements
- price ingredients for use in product
- estimate cost of decoration
- select ingredients to meet decoration requirements
- prepare finishings and toppings to meet recipe requirements, including:
 - chocolate
 - creams/butter creams/pastry creams
 - glazes
 - fruit
 - cream cheese
- finish and decorate final product
- store ingredients, finished and part-finished product in appropriate storage conditions
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- provide customer advice on storage, preparation and portioning as appropriate to product type and intended use (advice must be consistent with food safety and quality requirements)
- measure actual production costs against estimate and account for any variation
- determine an appropriate price for final products
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- ingredient characteristics, purpose and preparation requirements, including:
 - scope to substitute or vary ingredients in a recipe
 - the effect of ingredients on shelf life and food safety
 - the role, preparation requirements and uses of additives, including colours, flavours and stabilisers
- optimum storage conditions and shelf life for finishings and related sequencing and preparation requirements
- optimum conditions for use of finishings, such as temperature and moisture content
- the effect of refrigeration and freezing on finished product as appropriate to product type

- optimum storage conditions for the finished product prior to sale
- storage, handling and preparation requirements of the finished product, including information to be provided to consumers as appropriate to product type and consistent with food safety requirements
- ingredient suppliers and pricing information
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- trade practice issues when pricing products
- business policy and parameters in pricing products.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • research finishes and decorations for cakes and identify suppliers • design finish and decoration for a minimum of five (5) cakes • plan and prepare ingredients, equipment and processes required for finishing • combine and process ingredients according to requirements • finish and decorate cakes according to requirements using a minimum of three (3) decorative pieces and garnishes • assess outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipes and customer specifications • production equipment appropriate to product type • materials/ingredients to meet recipe requirements • ingredient pricing information • personal protective clothing, equipment and material safety data sheets (MSDS) as required • cleaning procedures, materials and equipment as required.

EVIDENCE GUIDE	
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and refine product ideas	1.1 Marketplace opportunity and product ideas are identified 1.2 Marketplace testing is conducted to assess market acceptance of ideas and feedback used to refine concept 1.3 Product concept is developed and documented to determine production requirements 1.4 Commercial viability of product concept is estimated 1.5 Legislative requirements relating to product development are identified and compliance ensured 1.6 Product concept proposal is documented and features and benefits of product described
2. Prepare for product development	2.1 Ingredients and equipment required for production are checked for availability and readiness and ingredient orders completed if required 2.2 Technical aspects of development are identified and production plan prepared 2.3 Work area is prepared according to workplace food safety standards 2.4 Work is conducted according to workplace environmental guidelines
3. Apply baking skills and knowledge	3.1 Production plan is followed and results documented 3.2 Baking skills are applied to experiment with ingredients and production process and assess impacts of variations to product outcome 3.3 Variations to product concept are identified 3.4 Packaging and presentation requirements for product are identified and shelf life determined 3.5 Process and findings are documented
4. Evaluate product concept	4.1 Technical integrity of the product is assessed against quality standards of enterprise and expectation 4.2 Market testing is conducted to assess product acceptance 4.3 Commercial viability of actual production is reassessed and evaluated against enterprise requirements 4.4 Variations and improvements to process and outcome are identified 4.5 Product is reproduced to confirm final specifications 4.6 Product concept is documented and process specified to ensure consistent quality and commercial standards are achieved

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify market opportunities and assess value to enterprise
- conduct basic market testing of product ideas and outcomes
- cost ingredients and production processes to determine estimated and actual costs
- identify the ingredients and method used to produce product
- assess baking process and make adjustments
- determine product assembly and presentation
- present product proposal
- assess commercial viability of products
- evaluate technical properties of product
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce
- research and present information.

Required knowledge includes:

Knowledge of:

- sources of information on local market, product range and performance of similar products
- expected quality and taste of products to meet business and customer expectations
- baking methods used to produce retail bakery products relevant to the business
- availability of ingredients and processing equipment required by new product
- food safety issues related to production, preparation, presentation and storage of product
- methods of gaining customer feedback (e.g. conducting tastings)
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- trade practice issues when pricing products.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify market opportunities and determine commercially viable product solutions • apply baking skills and knowledge to develop product to meet quality standards • evaluate technical aspects of product • prepare product development proposal, including production processes, costings and rationale • present product ideas • conduct market testing.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • local market for which product is to be developed • existing product range, ingredients, recipes/formulas, equipment and methods used in the workplace • product development procedures used in the workplace.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
New products	<p>New products may include:</p> <ul style="list-style-type: none"> • products that meet specific dietary, religious or cultural needs, • products based on established products or involve entirely new ingredient combinations or production or cooking processes
Market testing	<p>Market testing may include:</p> <ul style="list-style-type: none"> • consumer product tasting and sampling • promotional activity • evaluation from colleagues or industry experts
Commercial viability	<p>Commercial viability refers to:</p> <ul style="list-style-type: none"> • the net profit margin of the product • consumer support and repeat purchase • ability to reproduce to establish standards • availability of ingredients • compliance with legislative and regulatory standards • compatibility with business objectives and standards
Technical aspects	<p>Technical aspects relate to:</p> <ul style="list-style-type: none"> • moisture • structure • taste • symmetry • appearance • aroma • organic • yeast free • dairy free • gluten free

RANGE STATEMENT**Experimentation**

Experimentation may relate to:

- variations in ingredients or processes to affect taste, texture, aroma or presentation

Unit Sector(s)**Unit sector**

Retail baking

FDFRB4007A Evaluate and assess bakery product

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to evaluate the quality of bakery products.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit has application in a retail baking environment. It incorporates examination of product to identify the features of the product and make judgements about the product quality. This unit can be applied to a specific bakery product range and should be customised to the quality standards of that product range.</p> <p>This skills and knowledge incorporated in this unit are suitable to be applied in the context of product development, product testing or judging product for a baking competition.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine methodology for evaluating product quality	1.1 Bakery product to be evaluated is defined and specific criteria for product is examined 1.2 National and international standards for product range are researched and identified 1.3 Applicable tests and methodologies for assessing product are identified 1.4 Evaluation methodology is selected to ensure standardised approach
2. Apply evaluation methodology	2.1 Volume and general appearance of product is assessed against standard and findings documented 2.2 Texture, aroma, colour and taste of product is assessed against standard and findings documented 2.3 Technical difficulty and originality of product are assessed and findings documented 2.4 Other tests are conducted as required to rate product 2.5 Processes specified are in accordance with workplace environmental guidelines
3. Determine product characteristics	3.1 Product characteristics are rated on all criteria 3.2 Common problems are identified and causes determined 3.3 Strengths and weaknesses of product are determined 3.4 Product characteristics are described and documented
4. Make product comparisons and recommendations	4.1 Product quality is compared with other products of its class 4.2 Recommendations are made for quality rating and commercial positioning of product 4.3 Recommendations for product improvement are made according to findings

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access and apply industry and product class standards and quality criteria
- conduct sensory assessment
- detect qualities of product
- identify problems or faults with product
- make comparative findings
- identify the ingredients and method used to produce product
- evaluate technical properties of product
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce
- research and present information.

Required knowledge includes:

Knowledge of:

- sources of information on product quality criteria
- industry standards for product
- expected quality and taste of products to meet business and customer expectations
- baking methods and ingredients used to produce retail bakery products
- common baking problems and causes
- food safety issues related to production, preparation, presentation and storage of product.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify and apply industry criteria to bakery product evaluation • apply industry standard methodology to evaluate criteria • conduct sensory evaluation of product • make comparative assessments of products • identify faults in product and determine cause • make qualitative judgements and recommendations about product quality.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • product quality criteria • products to be assessed.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work

RANGE STATEMENT	
environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements
Product characteristics	<p>May include:</p> <ul style="list-style-type: none"> • moisture • taste • quality of ingredients • storage stability and shelf life • viscosity • refraction • measurement • use of ingredients • costs • process and equipment requirements • appearance • texture • aroma • colour • packaging • microbiological testing • technical difficulty • volume • originality
Tests	<p>Tests may include:</p> <ul style="list-style-type: none"> • triangle • descriptive • rating • desirable product qualities • texture evaluation by bite • flavour evaluation • overall degree of liking
Appearance	<p>Appearance may include:</p> <ul style="list-style-type: none"> • symmetry and volume

RANGE STATEMENT	
	<ul style="list-style-type: none"> • presentation and cleanliness • character of spring • soundness • bloom • colour • general character and uniformity
Texture	<p>Texture refers to:</p> <ul style="list-style-type: none"> • evenness of internal texture • cell size • shape fineness of walls • holes • softness • crumb stability
Aroma	<p>Aroma refers to:</p> <ul style="list-style-type: none"> • the internal smell of product
Colour	<p>Colour should be:</p> <ul style="list-style-type: none"> • appropriate to the product
Bakery products	<p>Bakery products may include:</p> <ul style="list-style-type: none"> • breads • pastries • cakes • meat pies and savouries
Common faults	<p>Common faults for bread products include:</p> <ul style="list-style-type: none"> • holes in internal texture of loaf from moulding or grains being too wet • uneven or tearing break and crust • uneven colour and texture • under/over mixing, moulding and/or poor volume • crust lift/separation at the top of the loaf • too much or too little fruit • breaking apart of fruit • over proofing • under baking <p>Common faults for cake products include:</p> <ul style="list-style-type: none"> • overmixing of batter

RANGE STATEMENT

- bubbles
- top layer too crowded
- inside surface of pastry under baked
- over baking with pastry edges burnt
- unstable fillings
- excessive sugar
- filling too wet
- non-uniformity
- decorations not in proportion to the cake
- uneven distribution of flavors

FDFRB4008A Set up sustainable baking operations

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to examine the implications of sustainability on bakery operations and develop plans for sustainability.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit targets the planning of key requirements in setting up a sustainable retail bakery business. It applies to the business owner/operator or senior baker and includes the development of a plan that identifies physical layout and facilities, production processes and movement of staff and resources with a view to maximising sustainability outcomes. It incorporates identifying and addressing the implications associated with the style of bakery and explores environmental impact and generation of waste.</p> <p>This unit may be applied to the set-up of a new operation or the assessment of the set-up of an existing operation. It requires access to the bakery business plan.</p> <p>It targets additional skills for bakery-specific sustainability practice beyond the unit MSAENV472B Implement and monitor environmentally sustainable work practices.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct sustainability related research for the bakery business	1.1 Industry information resources are identified and accessed to maintain bakery business knowledge 1.2 Sustainability related regulatory requirements, drivers and influences that impact on the baking industry are analysed and assessed for relevance to business operations 1.3 Information is assessed and used to inform a sustainability plan for the business 1.4 Bakery business plan is examined and implications for set-up identified and prioritised
2. Analyse sustainability implications for bakery	2.1 The style of bakery and key characteristics and operational implications are confirmed 2.2 Implications for layout, equipment, stock and staffing are identified and incorporated into set-up planning 2.3 Criteria for sustainability in bakery operation are determined and strategies for achieving sustainability identified
3. Develop layout plan for bakery	3.1 Production area is measured and documented, including identification of services, openings and fixed facilities 3.2 Production process is mapped and a layout plan developed to identify placement of equipment and processes 3.3 Service and/or distribution requirements are examined and mapped 3.4 Layout is assessed for its efficiency, occupational health and safety (OHS) and potential for environmental impact 3.5 Potential for generating waste through production and service/distribution process is identified 3.6 Opportunities to reduce waste and increase efficiencies are identified and incorporated into planning 3.7 Layout plan is finalised and checked to ensure accuracy and completeness
4. Determine equipment requirements	4.1 Range of products and services to be offered are confirmed 4.2 Production equipment, services and facilities, and storage and transfer equipment options required for business operations are identified 4.3 Presentation and display equipment requirements are identified and options assessed against décor and image objectives 4.4 Equipment options are researched and assessed for appropriateness in meeting business plan goals, targets and budgets 4.5 Equipment features are assessed for their efficiency in relation to waste and energy and resource consumption and options

ELEMENT	PERFORMANCE CRITERIA
	prioritised according to sustainability
	4.6 Equipment is selected based on economic value, operational efficiency and environmental performance
	4.7 Equipment schedule is itemised, costed and documented
5. Determine stock requirements	5.1 Stock requirements for product range and quality criteria are identified and quantities estimated
	5.2 Stock options are assessed for their economic value, quality and their impact on the environment resulting from production and distribution processes
	5.3 Stock is specified based on economic value, quality and environmental performance
	5.4 Suppliers are researched and selected to support ongoing operations
	5.5 Purchasing schedule is developed, costed and documented
6. Determine human resource requirements	6.1 Activities and tasks required to operate bakery are identified
	6.2 Number of staff required is determined and job roles documented
	6.3 Costing implications of staff are calculated
7. Assess environmental sustainability of bakery	7.1 Concept of carbon footprint is described and types of environmental impact of bakery operations are identified
	7.2 Opportunities for improving environmental performance of operations are identified
	7.3 Measures of environmental performance are identified
	7.4 Strategy for ongoing monitoring of environmental performance is developed and documented

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify relevant information for bakery operation and assess information sources
- analyse bakery business plan
- compare products and services
- assess impact of trends and influences on bakery operations
- calculate costs associated with equipment, stock and human resources
- document plans
- conduct research
- analyse functions and processes within a retail bakery
- apply sustainability concepts to operations
- interpret information on environmental performance of products, services and equipment
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- sources of bakery business and industry information
- equipment used in retail bakery
- product and service range within retail bakery operations
- concepts of process flow, waste and energy efficiency.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • determine stock, equipment and human resources required for bakery operation • evaluate options for facilities and production operations • map bakery processes • identify sustainability issues for bakery and implications for operations • identify opportunities for improvement • develop sustainability plans that demonstrate an understanding of product and service flow and waste minimisation.
Context of and specific resources for assessment	Assessment of this unit must occur in a real or simulated workplace. Such an environment must provide an opportunity for the assessee to: <ul style="list-style-type: none"> • prepare or complete set-up plans given location and market information for bakery.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements</p>
Research	<p>Research may include:</p> <ul style="list-style-type: none"> • on-site visits • stakeholder engagement • trade publications • internet resources • engagement of professional services, such as solicitors, accountants, baking associations, business advisors, bakery operators, bakers, suppliers, and sustainability or lean manufacturing experts
Bakery businesses	<p>Bakery businesses may include:</p> <ul style="list-style-type: none"> • country style bakery • café bakery • franchise • retail bakery • specialist bakery, such as sourdough • wholesale bakery
Implications	<p>Implications may include:</p> <ul style="list-style-type: none"> • requirement to adhere to established criteria • scope of operation and product range • requirement for specific staffing expertise • time and process requirements for production • production methodologies • quality of ingredients • supply criteria • quantities and timelines for production • customer demands
Criteria for sustainability and environmental performance	<p>Criteria for sustainability and environmental performance may include:</p> <ul style="list-style-type: none"> • energy consumption

RANGE STATEMENT	
	<ul style="list-style-type: none"> • water consumption • use of alternative energy sources • type and transportation of ingredients and materials • use of chemicals and treatments • waste treatment, disposal, recycling, re-use and wastewater treatment • resource consumption • process efficiencies • waste
Waste	<p>Waste may include:</p> <ul style="list-style-type: none"> • excessive use of energy or material resources • overproduction • unnecessary movement of people, stock and product • unproductive time • faulty products or non-compliances with workplace standards • duplication • unnecessary costs • pollution
Stock requirements	<p>Stock requirements may include:</p> <ul style="list-style-type: none"> • ingredients • disposable supplies • water • cleaning agents • power

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm stock requirements for bakery	1.1 Production schedule and product range are analysed to identify stock and ordering requirements 1.2 Quality criteria for ingredients and other material supplies is identified 1.3 Range, type and volume of flour, yeast and other key baking ingredients required for operations are confirmed 1.4 Specifications and material safety data sheets (MSDS) relating to bakery stock are interpreted and confirmed 1.5 Special requirements are identified, including handling requirements for hazardous materials and storage conditions for bakery ingredients 1.6 Seasonal impacts on availability of bakery ingredients are identified and reflected in supply requirements 1.7 Stock requirements are documented according to workplace practice
2. Evaluate bakery suppliers	2.1 Existing suppliers for baking materials and other resources are identified and value add determined 2.2 Inputs to suppliers are determined and implications for bakery identified 2.3 Impacts of costs, service, quality and response times on bakery operations are determined 2.4 Supply relationships are examined for suitability to bakery operation 2.5 Types of supply arrangements are examined for suitability to bakery operations
3. Negotiate arrangements with suppliers	3.1 Research is conducted to identify suppliers for required ingredients according to production schedule 3.2 Sustainability criteria are used to assess value of suppliers 3.3 Suppliers are analysed and compared to make selection according to the quality, sustainability, delivery and cost requirements of the business 3.4 Ingredient knowledge is applied to identify quality standards, most suitable variations or alternatives 3.5 Suppliers are selected and supply relationships established 3.6 Supply arrangements are confirmed and documented according to the business needs
4. Monitor supply	4.1 Suppliers are monitored to ensure materials are received according to specifications 4.2 Variations in requirements due to marketing or product

ELEMENT	PERFORMANCE CRITERIA
	development activity are accommodated in supply arrangements
	4.3 Ingredient quality is regularly checked against established criteria
	4.4 Problems with supply are addressed and changes to arrangements made as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access and interpret retail bakery business and supplier information
- analyse research findings and make recommendations
- establish supply relationships
- make comparisons on product and service suitability
- cost and price bakery ingredients
- analyse labelling and packaging options and legislative requirements
- monitor compliance with supply arrangements
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- information sources available to inform supply activity
- specifications and MSDS documentation for bakery materials
- procurement procedures for business
- labelling and packaging options and legislative requirements for bakery operations
- range of bakery ingredients and alternatives.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • select suppliers for bakery ingredients to meet the quality, quantity and cost criteria of the business • research suppliers and make comparative judgements about supply suitability • apply knowledge of bakery ingredients to determine supply requirements and quality • solve supply related problems • ensure supply meets the production requirements of the business • complete documentation relating to supply.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • retail bakery production schedule and product range.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency of performance, competency should be assessed on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for production	<p>1.1 Purpose and desired effect for sweets and desserts are confirmed with customer or from product development criteria</p> <p>1.2 Product parameters, including colours, flavours, any special requirements or preferences, budget, required servings and quality, are confirmed</p> <p>1.3 Cultural influences on product type and production techniques are identified and considered in preparation</p> <p>1.4 Recipe is selected and ingredients measured and weighed</p> <p>1.5 Cooking methods required are determined and appropriate equipment prepared</p>
2. Produce sweets and desserts	<p>2.1 Sweets and desserts are prepared according to recipe and quality standards</p> <p>2.2 Cooking methods are applied to produce desired effect</p> <p>2.3 Hot and cold sauces are produced to required consistency and flavour according to product requirements and using appropriate ingredients and techniques</p> <p>2.4 Portions are allocated according to workplace standards</p> <p>2.5 Work is conducted to minimise waste and meet workplace environmental standards</p>
3. Produce finish effects	<p>3.1 A range of decorative pieces, accompaniments and garnishes are produced to enhance taste, texture and balance</p> <p>3.2 A range of fillings and toppings are produced</p> <p>3.3 Decoration and finishing is completed according to work requirements and in a manner which complements the product</p> <p>3.4 Work is conducted according to food safety requirements</p>
4. Cost and price final product	<p>4.1 Product ingredients are costed and production costs estimated</p> <p>4.2 Product is priced within business pricing policy</p> <p>4.3 Actual costs are measured against estimated costs</p>
5. Prepare final product for display or storage	<p>5.1 Product shelf life is estimated and required storage conditions identified</p> <p>5.2 Product is prepared for display or presentation and packaging selected as required to enhance appearance and preserve quality and taste</p> <p>5.3 Product is stored at appropriate temperature and under the correct conditions to maintain quality, freshness and customer appeal</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- price ingredients for use in product
- estimate cost of production
- select ingredients to meet production requirements
- prepare a range of sweets and desserts to meet recipe requirements
- finish and decorate the final product
- clean equipment and utensils to meet hygiene standards
- maintain workplace records as required
- maintain work area to meet housekeeping standards
- determine storage, preparation and portioning as appropriate to product type and intended use
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Knowledge of:

- characteristics, ingredients and cooking methods required for a range of sweets and desserts
- ingredient characteristics, purpose and preparation requirements
- details and characteristics of different types of desserts and sweets
- varieties of suitable ingredients and their uses for desserts and sweets
- past and current trends in desserts and sweets
- nutrition related to desserts and sweets, including food values of common desserts and low-fat or low-kilojoule alternatives and substituted ingredients
- storage of sweets, desserts and dessert ingredients, particularly dairy products
- costing, yield testing and portion control for desserts
- optimum storage conditions and shelf life for sweets and desserts and related sequencing and preparation requirements
- optimum conditions for use of finishings (This varies according to ingredient type and typically includes temperature and may include moisture content)
- the effect of refrigeration and freezing on finished product as appropriate to product type
- optimum storage conditions for the finished product prior to sale
- storage, handling and preparation requirements of the finished product, including an understanding of information to be provided to consumers as appropriate to product type and consistent with food safety requirements
- ingredient suppliers and pricing information

- business policy and parameters in pricing products.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • produce a range of sweets and desserts • plan and prepare ingredients, equipment and processes required for production • combine and process ingredients according to requirements and desired effect • finish and decorate sweets and desserts according to requirements • assess outcomes against quality standards • take corrective action in response to typical faults and inconsistencies • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures including advice on relevant product requirements, safe work practices, food safety, quality and environmental requirements • recipes and customer specifications • production equipment appropriate to product type • materials/ingredients to meet recipe requirements • ingredient pricing information • personal protective equipment (PPE) and material safety data sheets (MSDS) ,as required • cleaning procedures, materials and equipment as required.
Method of assessment	This unit should be assessed together with core units and other units of competence relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to:</p> <ul style="list-style-type: none"> company policies and procedures regulatory and licensing requirements legislative requirements industrial awards and agreements
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> the Food Standards Code, including labelling, weights and measures legislation legislation covering food safety, environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity
Workplace information	<p>Workplace information can include verbal or written:</p> <ul style="list-style-type: none"> operating procedures specifications production schedules recipe instructions
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> mixers blenders ice-cream machines

RANGE STATEMENT	
	<ul style="list-style-type: none"> • ice makers • juicers or vitamisers
Desserts and sweets	Desserts and sweets may include: <ul style="list-style-type: none"> • puddings, pies, tarts, flans and fritters • custards and creams • prepared fruit • charlotte, bavarois, mousse, soufflé and sabayon • meringues, crepes and omelettes • sorbet, ice-cream, bombe and parfait
Decorative pieces and garnishes	Decorative pieces and garnishes may include: <ul style="list-style-type: none"> • sugar flowers • cut shapes • moulded shapes
Sauces	Sauces may include: <ul style="list-style-type: none"> • sugar syrups • fruit syrups • fruit purées, sauces and coulis • chocolate-based sauces • sabayon and zabaglione • custards and crèmes • flavoured butters and creams

Unit Sector(s)

--------------------	---------------

FDFSUG101A Install pre-ballast

Modification History

New Unit based on *SUGSPPB1A Prepare pre-ballast*.

Unit Descriptor

This unit describes the outcomes required to lay pre-ballast in preparation for laying railway track for a cane haulage system.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	<ul style="list-style-type: none">1.1 The location and scope of work are identified1.2 Materials required to complete the work are confirmed and available1.3 Equipment status is confirmed1.4 Personal protective equipment is selected, correctly fitted and used1.5 Safety procedures are followed to confirm that work is clearly signed and relevant authorities are advised that work is in progress1.6 Site is inspected prior to commencing work to identify and remove potential hazards
2. Set out base and run pre-ballast	<ul style="list-style-type: none">2.1 Base/foundation is set out from off-set pegs to centre line and width for ballast according to track design and specifications2.2 Pre-ballast is applied evenly to meet specified thickness2.3 Pre-ballast is compacted to meet specifications
3. Complete work	<ul style="list-style-type: none">3.1 The construction area is cleared of debris3.2 Unused materials are stored as required3.3 Tools, plant and equipment is cleaned and stored as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret workplace information such as drawings and related instructions to identify the project requirements
- estimate material requirements for a given project
- assess operational status of pre-ballast laying equipment
- operate pre-ballast equipment to lay and compact materials to the required location and thickness
- identify faulty operation of equipment
- identify unacceptable work outcomes
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- understanding of the steps involved in constructing/repairing track
- functions and basic operating principles of pre-ballast laying equipment
- the impact of the pre-ballast base on related track laying operations
- the quality requirements of the foundation including the materials used, thickness and compactness of foundation
- common problems related to laying pre-ballast and corrective action required
- traffic control signage, communication and procedures
- safe work procedures including awareness of health and safety hazards related to pre-ballast laying and associated control measures and safe manual handling procedures
- purpose and limitations of protective clothing and equipment
- environmental issues and controls
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • estimate material requirements for a given project • operate pre-ballast equipment to lay and compact materials to the required location and thickness • take corrective action in response to abnormal or unacceptable performance.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Site and related project information • Relevant codes of practice and industry standards • Spreader, roller and related equipment • Materials handling equipment as required • Operating procedures and related advice on equipment operation • Base materials - typically gravel and stone • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications.
Cane railway networks	Cane railway network features and their characteristics may include: <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads • and road transport delivery points.
Information systems	Information systems may be print or screen based.
Equipment	Equipment may include: <ul style="list-style-type: none"> • materials handling equipment such loaders and jacks, • spreader • roller and • compacting equipment.
Equipment status	Confirming equipment status involves <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that all safety guards and equipment are ready and safe to operate.
Teamwork	Work may require the ability to work within a team environment.
Communication	Communication methods may include:

	<ul style="list-style-type: none">• use of two-way radios.

Unit Sector(s)

Sugar Milling

FDFSUG102A Undertake shunting operations

Modification History

New Unit based on *SUGTPSTIA Prepare for shunting operations*.

Unit Descriptor

This unit describes the outcomes required to prepare and direct the physical movement of rolling stock to meet requirements of the marshalling strategy.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for shunting operation	1.1 Personal protective clothing and equipment is selected and used 1.2 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures 1.3 Shunting requirements are interpreted from the marshalling strategy 1.4 Vehicles and equipment are located and prepared in accordance with marshalling strategy 1.5 Rolling stock movements, availability and locations are established in order to determine appropriate siding and/or track locations for vehicle placement
2 Carry out shunting control procedures	2.1 Points, levers, switches, signals and line of sight communications are used to assist the control of rolling stock movement 2.2 Hand, light and radio shunting commands conform with operational and statutory requirements 2.3 Consignment notes/tickets are checked and bins are located and sorted to comply with marshalling requirements 2.4 Coupling and uncoupling procedures are carried out to attach and detach rolling stock
3 Complete work	3.1 Workplace information is recorded according to workplace recording requirements 3.2 Tools, plant and equipment are cleaned and stored as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret the marshalling strategy
- select, fit and use personal protective clothing and/or equipment
- identify equipment requirements and carry out pre-start checks
- plan shunting operations to meet requirements of the marshalling plan
- use electronic data transfer and capture systems for mobile data collection as required
- demonstrate hand signals including use of lighting
- communicate with the locomotive operator to direct the positioning of rolling stock as required
- identify faults in bins and/or equipment
- take corrective action in response to abnormal or unacceptable quality of bins or rolling stock or equipment performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain workplace records
- maintain work area to meet housekeeping standards

Required knowledge include:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to work responsibilities and associated control measures
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- purpose and limitations of protective clothing and equipment
- functions and basic operating principles of equipment
- the requirements of cut to crush sequencing of cane rakes
- acceptable locomotive, bin and rake condition and procedure for tagging and reporting bins requiring repair
- communication procedures, methods and equipment including the meaning of hand and audible signals
- procedures for responding to emergency situations including use of two-way radio system to report emergencies
- environmental issues and controls
- requirements to liaise/advise related work areas
- housekeeping standards for the work area

- reporting and recording system

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • interpret the marshalling strategy • plan work to meet requirements of the marshalling plan • communicate with the locomotive operator • take corrective action with regard to bins and rolling stock.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Marshalling strategy • Operating procedures and related advice on equipment operation • Cane railway system • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications.
Documentation and recording requirements	Documentation and recording requirements may include <ul style="list-style-type: none"> • marshalling strategy • documentation relating to the traffic schedule such as run slips and loco running sheets • log books and employee time sheets/records.
Transport network features	Cane transport network features and their characteristics may include: <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads • and road transport delivery points.
Hazards	Hazards include working with moving machinery, manual handling and working in exposed conditions.
Information systems	Information systems may be print or screen based.
Locomotives	Locos may or may not be fitted with brake vans.
Equipment status	Confirming equipment status involves conducting relevant pre-start checks, confirming that all safety guards and equipment is ready and safe to operate.

Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods include use of two-way radios used in accordance with workplace requirements and state authority protocols.

Unit Sector(s)

Sugar Milling.

FDFSUG103A Move cane bins in a marshalling yard

Modification History

New Unit based on *SUGTCYMIA Control yard movements*.

Unit Descriptor

This unit describes the outcomes required to move cane bins in mill storage and marshalling yards to ensure efficient cane supply operations. Empty and full yards may be a combined yard.

Application of the Unit

This unit has application in the cane bins marshalling yards of a sugar mill.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for work in a cane bin marshalling yard	1.1 Personal protective clothing and equipment is selected and used 1.2 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Move full cane bins	2.1 Continuity of cane supply to mill is managed to meet cut to crush sequence 2.2 Cane bins are connected to the weighbridge system in accordance with workplace procedures 2.3 Yard control systems are operated to potential 2.4 Bins are un-coupled in accordance with OHS requirements and workplace procedures
3 Move empty cane bins	3.1 Bin supply to empty yard is managed to meet traffic schedule requirements 3.2 Bins are re-coupled/pinned in accordance with OHS requirements and workplace procedures 3.3 Yard control systems are operated to potential
4. Analyse and respond to unacceptable performance	4.1 System operating conditions are monitored to identify causes of unacceptable performance 4.2 Yard derailments are reported and rectified in accordance with workplace procedures 4.3 Bins requiring repair are identified and removed to bin repair line 4.4 System error messages are responded to and appropriate corrective action is taken

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select, fit and use personal protective clothing and/or equipment
- confirm yard control status at start up
- monitor yard capacity to direct cane bins to appropriate yard location
- operate systems (either automated or manual) to locate bins in required location
- monitor supply of full bins to the weighbridge system to meet cut-to-crush sequence
- connect rake to weighbridge system
- couple and uncouple cane bins safely to meet required length
- receive and report derailments
- divert damaged bins for repair
- monitor marshalling yard including checking:
 - that bins are recoupled to meet requirements of traffic schedule
 - that bin identifiers match the actual bins
 - the position of locos in the yard
- liaise with loco and equipment drivers
- use communication systems including use of a 2-way radio and hand and audible signalling
- complete yard control records and prepare for changeover
- take corrective action in response to abnormal equipment and/or system performance, including derailments

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and industry codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to yard control and associated control measures
- workplace documentation including consignment notes and trip/cut-to-crush documentation
- functions and basic operating principles of equipment and systems used
- function and location of signalling devices used to monitor cane bin movements in the yard
- cane yard system layout and line holding capacities
- implications of sub-optimal cut to crush times for mill performance and of disrupted supply
- operating requirements and controls
- communication system protocols
- procedures for responding to emergency situations
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • monitor yard capacity to direct cane bins to appropriate yard location • sequence supply of full bins to the weighbridge system to meet cut-to-crush sequence • couple and uncouple cane bins safely to meet required length • liaise with loco and equipment drivers • use communication systems.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • Assessment must occur in a real or simulated workplace where the assessee has access to: • Cane yards and related signalling and control systems • Cane locos (does not include operation) • Relevant codes of practice and industry standards • Bin consignment and trip/cut-to-crush documentation • Operating procedures and related advice on equipment operation • Loaded and empty bins • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p> <p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • traffic schedules • manufacturer's specifications.
Information systems	Information systems may be print or screen based.
Equipment	Equipment may include: <ul style="list-style-type: none"> • 2-way communication system • mimic or computer board • process control interface and • related control system.
Signalling devices	Signalling devices typically include: <ul style="list-style-type: none"> • colour aspect lights • mechanical signage.
Rakes	Movement of rakes may be: <ul style="list-style-type: none"> • automated • done using a dedicated loco, tractors or • using winch equipment.
Teamwork	Work may require the ability to work within a team environment
Communication methods	Communication methods include: <ul style="list-style-type: none"> • use of two-way radios used in accordance with workplace requirements and state authority protocols and

	<ul style="list-style-type: none">• hand and audible signalling.

Unit Sector(s)

Sugar Milling.

FDFSUG104A Check a cane sample for extraneous matter

Modification History

New Unit based on *SUGTAEMIA Assess extraneous matter in cane*.

Unit Descriptor

This unit describes the outcomes required to carry out a visual and physical assessment of extraneous matter in cane samples upon arrival at a sugar mill.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for assessment of cane	<ul style="list-style-type: none">1.1 Personal protective clothing and equipment is selected and used1.2 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures1.3 Cane sample is collected according to workplace procedure1.4 Weighing equipment is prepared for operation
2 Assess extraneous matter in cane	<ul style="list-style-type: none">2.1 Cane sample is inspected and sorted according to workplace procedure2.2 Extraneous matter in cane is assessed according to workplace procedure2.3 Results of assessment are recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information on operating requirements
- select, fit and use personal protective clothing and/or equipment
- collect cane samples for testing according to workplace procedure
- confirm that scales are tared or zeroed and operating correctly
- conduct visual and physical assessment of cane
- record results
- identify and report cane assessments that are not within specification
- follow procedures to repeat or validate results as required
- maintain work area to meet housekeeping standards
- maintain workplace records

Required knowledge includes:

Knowledge of:

- purpose of extraneous matter test and nature of extraneous matter typically found in cane
- conditions and practices that affect the level of extraneous matter found in cane
- the effect of high levels of extraneous matter on downstream operations
- safe work procedures including awareness of health and safety hazards related to turbine operation and associated control measures
- methods used to sort and calculate extraneous matter in a sample
- method and purpose of taring or zeroing weighing equipment
- procedure for reporting faulty weighing equipment

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • collect cane samples for testing according to workplace procedure • conduct visual and physical assessment of cane • follow procedures to repeat or validate results as required.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Sampling plan • Extraneous matter/quality specifications • Weighing equipment • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • sampling plans and • cane extraneous matter/quality specifications.
Cane inspection and assessment	Cane inspection and assessment may be visual and/or by weight.
Hazards	Hazards typically include those associated with manual handling.
Preparation of weighing equipment	Preparation of weighing equipment typically includes: <ul style="list-style-type: none"> • taring or zeroing scales and • confirming calibration using check weights.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling

FDFSUG105A Manually clean and maintain housekeeping standards

Modification History

New Unit based on *SUGCMCH1A Manually clean and maintain housekeeping standards*.

Unit Descriptor

This unit describes the outcomes required to carry out manual cleaning and housekeeping procedures where there is no requirement to use tools to dismantle equipment.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare cleaning and sanitizing agents, tools and equipment for cleaning	1.1 Cleaning and sanitizing agents, equipment and services are prepared for use 1.2 Equipment is safe to clean
2 Manually clean equipment	2.1 Equipment is cleaned to meet requirements 2.2 Equipment is prepared for operation after cleaning 2.3 Cleaning data is recorded according to workplace recording requirements
3 Collect and dispose of waste	3.1 Waste is sorted and collected as required 3.2 Waste is recycled, transferred for rework or further treatment or disposal as required
4 Maintain housekeeping standards of the work area	4.1 The work area is inspected to any non-compliance with housekeeping standards 4.2 Equipment and the work area meet housekeeping standards

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access and apply workplace information to identify cleaning requirements
- identify the cleaning and sanitizing agents used
- handle cleaning and sanitation agents safely including following correct handling and preparation procedures and use of appropriate protective clothing and equipment
- prepare cleaning and sanitizing agents as required
- prepare equipment for cleaning including rendering equipment safe to clean and clearing all materials, consumables and waste
- advise affected work areas of cleaning schedule and progress
- clean/sanitize equipment as required according to procedures
- return equipment to operating order
- maintain housekeeping standards
- contain spills and dispose of spilled material according to company procedure
- store cleaning agents and equipment as required
- record cleaning and sanitation data in required format

Required skills include:

Knowledge of:

- basic purpose of cleaning/sanitizing and housekeeping
- safe handling and storage of requirements of cleaning agents and equipment used
- purpose of protective clothing and equipment related to cleaning role
- action required in the event of an accident when handling cleaning chemicals
- methods used to render equipment safe to clean including lock-out, tag-out and isolation procedures where relevant
- housekeeping and cleaning standards and methods relevant to equipment and the work area
- procedures for preparing cleaning/sanitizing agents including consequences of mixing incorrectly and combining incompatible chemicals
- procedures for applying cleaning/sanitizing agents
- procedures for safe use of cleaning/sanitizing equipment and chemicals
- types of waste generated by both the production and the cleaning process and related collection, treatment and disposal requirements
- spill control procedures and recycling or disposal of spilled materials including environmental responsibilities covered by environmental legislation
- requirements to liaise/advise related work areas

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Requires the ability to:</p> <ul style="list-style-type: none"> • Handle cleaning and sanitation agents safely • Advise affected work areas of cleaning schedule and progress • Clean/sanitize equipment as required.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Cleaning schedule and related procedures, including OHS advice • Cleaning procedures including safe work procedures • Personal protective clothing and equipment • Material Safety Data Sheets as required • Cleaners, sanitisers and related equipment • Equipment to be cleaned • Waste collection and treatment/disposal procedures • Advice on environmental management issues relevant to work responsibilities • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs), • cleaning schedules and • Material Safety Data Sheets (MSDS).
Cleaning agents	Cleaning agents include: <ul style="list-style-type: none"> • cleaning and sanitizing chemicals.
Equipment	Equipment used to clean and sanitise depends on specific requirements and would normally include: <ul style="list-style-type: none"> • brooms, cloths, scrapers, brushes, mops, spray packs and hoses.
Teamwork	Work may require the ability to work within a team environment.
Services	Services depend on specific requirements. Examples include: <ul style="list-style-type: none"> • high-pressure water or steam.
Housekeeping standards	Housekeeping standards may be defined in housekeeping audit criteria.

FDFSUG201A Lay sleepers for cane rail systems

Modification History

New Unit based on *SUGSLSP2A Lay sleepers*.

Unit Descriptor

This unit describes the outcomes required to lay sleepers. It can apply to both construction of new track and repair of existing track.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare work	<ul style="list-style-type: none">1.1 The location and scope of work are identified1.2 Materials required to complete the work are confirmed and available1.3 Equipment status is confirmed and pre-operational checks are carried out1.4 Personal protective equipment is selected, correctly fitted and used1.5 Safety procedures are followed to confirm that work is clearly signed and relevant authorities are advised that work is in progress1.6 Site is inspected prior to commencing work to identify and remove potential hazards
2 Lay sleepers	<ul style="list-style-type: none">2.1 Sleepers are positioned to meet track laying specifications2.2 Sleepers are spaced and aligned as required for track construction
3 Complete work	<ul style="list-style-type: none">3.1 The construction area is cleared of debris3.2 Unused materials are stored as required3.3 Tools, plant and equipment is cleaned and stored as required3.4 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- interpret workplace information such as drawings and related instructions to identify the project requirements
- estimate material requirements for a given project
- assess operational status of equipment and carry out pre-operational checks
- position and align sleepers to meet specifications
- identify faulty operation of equipment
- identify unacceptable work outcomes
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- site operating procedures and practices
- understanding of the steps involved in laying/repairing sleepers
- functions and basic operating principles of equipment used
- the impact of the positioning and alignment of sleepers on related track laying operations
- the quality requirements of sleepers
- common problems related to laying sleepers and corrective action required
- traffic control signage, communication and procedures
- safe work procedures including awareness of health and safety hazards related to track laying and associated control measures including safe manual handling procedures
- purpose and limitations of protective clothing and equipment
- environmental issues and controls
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • interpret workplace information • estimate material requirements • assess operational status of equipment and carry out pre-operational checks • position and align sleepers to meet specifications • identify faulty operation of equipment • identify unacceptable work outcomes • take corrective action in response to abnormal or unacceptable performance.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Site and related project information • Relevant codes of practice and industry standards • Materials handling equipment and relevant hand and power tools • Operating procedures and related advice on equipment operation • Sleepers and related materials • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none"> • SUG217A Lay rails; and/or • SUG218A Lay skeleton track • AHCMOM207A Conduct front end loader operations.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over</p>

	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications.
Cane transport network	Cane transport network features and their characteristics may include: <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads • and road transport delivery points.
Equipment and materials	Equipment and materials may include: <ul style="list-style-type: none"> • materials handling equipment such as front end loaders and cranes • hand tools • pneumatic tools • base plates • clips • dog spikes • anchors • screws • insulating biscuits and • camber plates.
Information systems	Information systems may be print or screen based.
Confirming equipment status	Confirming equipment status involves conducting relevant

	pre-start checks, confirming that all safety guards and equipment are ready and safe to operate.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods may include use of two-way radios.

Unit Sector(s)

Sugar Milling

FDFSUG202A Lay rails for cane rail systems

Modification History

New Unit based on *SUGSLRT2A Lay rails*.

Unit Descriptor

This unit describes the outcomes required to lay rails. It can apply to both construction of new track and repair of existing track. Track has been pre-welded to meet track design and construction specifications.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare work	<ul style="list-style-type: none">1.1 The location and scope of work are identified1.2 Materials required to complete the work are confirmed and available1.3 Equipment status is confirmed and pre-operational checks are carried out1.4 Personal protective equipment is selected, correctly fitted and used1.5 Safety procedures are followed to confirm that work is clearly signed and relevant authorities are advised that work is in progress1.6 Site is inspected prior to commencing work to identify and remove potential hazards
2 Lay rails	<ul style="list-style-type: none">2.1 Rail lengths are positioned and fixed to meet construction specifications
3 Complete work	<ul style="list-style-type: none">3.1 Unused materials are stored as required3.2 Tools, plant and equipment is cleaned and stored as required3.3 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret workplace information such as drawings and related instructions to identify the project requirements
- estimate material requirements for a given project
- assess operational status of equipment and carry out pre-operational checks
- confirm that rail lengths meet design and construction specifications
- position rails to meet specification including positioning and fixing base plates where used and positioning and fixing rail lengths
- monitor track laying including confirming that the following meet construction specifications:
 - alignment of the first rail
 - joints between rail lengths
 - spike holes are bored to required pattern
 - clips/dog spikes are fitted and fixed to secure rail to each sleeper
 - rail anchors are positioned firmly against sleepers to prevent slippage
 - second rail is positioned to the correct gauge prior to fixing
 - rails are fixed in position
- circuit plans are maintained in jointing processes to switching/signalling requirements
- identify faulty operation of equipment
- identify unacceptable work outcomes
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- site operating procedures and practices
- understanding of the steps involved in laying/repairing track
- functions and basic operating principles of track laying equipment
- the impact of the positioning and alignment of rails on related track laying operations
- the quality requirements of rails
- common problems related to laying rails and corrective action required
- traffic control signage, communication and procedures
- safe work procedures including awareness of health and safety hazards related to track laying

and associated control measures including safe manual handling procedures

- purpose and limitations of protective clothing and equipment
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

Unit Sector(s)

Sugar Milling

FDFSUG203A Lay skeleton track for cane rail system

Modification History

New Unit based on *SUGSLST2A Lay skeleton track*.

Unit Descriptor

This unit describes the outcomes required to lay pre-fabricated rails.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare work	<ul style="list-style-type: none">1.1 The location and scope of work are identified1.2 Materials required to complete the work are confirmed and available1.3 Equipment status is confirmed and pre-operational checks are carried out1.4 Personal protective equipment is selected, correctly fitted and used1.5 Safety procedures are followed to confirm that work is clearly signed and relevant authorities are advised that work is in progress1.6 Site is inspected prior to commencing work to identify and remove potential hazards
2 Lay skeleton tracks	<ul style="list-style-type: none">2.1 Skeleton track section is placed on base foundation and aligned to meet construction specifications
3 Complete work	<ul style="list-style-type: none">3.1 The construction area is cleared of debris3.2 Unused materials are stored as required3.3 Tools, plant and equipment is cleaned and stored as required3.4 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret workplace information such as drawings and related instructions to identify the project requirements
- confirm that pre-fabricated skeleton track is available to meet the requirements of a given project
- assess operational status of equipment and carry out pre-operational checks
- lay skeleton track to meet design and construction specifications including checking track position and alignment and fixing track to sleepers
- identify faulty operation of equipment
- identify unacceptable work outcomes
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- site operating procedures and practices
- understanding of the steps involved in laying skeleton track
- functions and basic operating principles of equipment used
- the importance of rail positioning and alignment on track quality and performance
- the quality requirements of skeleton tracks
- common problems related to laying skeleton tracks and corrective action required
- traffic control signage, communication and procedures
- safe work procedures including awareness of health and safety hazards related to track laying and associated control measures including safe manual handling procedures
- purpose and limitations of protective clothing and equipment
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • interpret workplace information • assess operational status of equipment and carry out pre-operational checks • lay skeleton track to meet design and construction specifications • identify faulty operation of equipment • identify unacceptable work outcomes • take corrective action in response to abnormal or unacceptable performance.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Site and related project information • Relevant codes of practice and industry standards • Materials handling equipment and relevant hand and power tools • Operating procedures and related advice on equipment operation • Skeleton tracks - pre-fabricated to meet track design and construction specifications and related materials • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none"> • SUG219A Lay sleepers • AHCMOM207A Conduct front end loader operations.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over</p>

	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications.
Cane transport network	Cane transport network features and their characteristics may include: <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads.
Equipment and materials	Equipment and materials may include: <ul style="list-style-type: none"> • materials handling equipment such as front end loaders and cranes • hand tools • pneumatic tools • base plates • fish plates • clips • dog spikes • anchors • screws • insulating biscuits and • camber plates.
Nature of track	Track has been pre-fabricated.
Equipment status	Confirming equipment status involves:

	<ul style="list-style-type: none">• conducting relevant pre-start checks• confirming that all safety guards are in place• determining equipment is ready and safe to operate.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods may include: <ul style="list-style-type: none">• use of two-way radios.

Unit Sector(s)

Sugar Milling.

FDFSUG204A Operate tamping equipment

Modification History

New Unit based on *SUGTOTE2A Operate tamping equipment*.

Unit Descriptor

This unit describes the outcomes required to operate tamping equipment used to lift and pack track. It can apply to both construction of new track and repair of existing track.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare work	1.1 The location and scope of work are identified 1.2 Materials required to complete the work are confirmed and available 1.3 Equipment status is confirmed and pre-operational checks are carried out 1.4 Personal protective equipment is selected, correctly fitted and used 1.5 Safety procedures are followed to confirm that work is clearly signed and relevant authorities are advised that work is in progress 1.6 Site is inspected prior to commencing work to identify and remove potential hazards
2 Operate tamping equipment	2.1 Ballast hopper is operated to supply an even flow of ballast to the specified thickness 2.2 Tamper equipment is operated to lift, line track and pack ballast to specification 2.3 Track is dressed by final ballast spread and trimmed to meet the specified profile 2.4 Track is inspected to confirm that design and construction specifications are met
3 Analyse and respond to abnormal performance	3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Hazards are identified and reported as required according to workplace reporting procedure 3.3 Corrective action is taken in accordance with workplace in response to hazards and abnormal or unacceptable equipment performance 3.4 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4. Complete work	4.1 The construction area is cleared of debris 4.2 Unused materials are stored as required 4.3 Equipment is shut down and parked according to workplace requirements 4.4 Tools, plant and equipment is cleaned and stored as required 4.5 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret workplace information such as drawings and related instructions to identify the project requirements
- estimate material requirements for a given project
- assess operational status of tamper and carry out pre-operational checks
- operate tamper to apply and compact ballast and lift and align track to meet design and construction specifications
- monitor track laying including confirming that the following meet construction specifications:
 - spread and depth of ballast
 - compaction
 - track line
 - final dressing application and trim
- identify faults in operation of equipment
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- understanding of the steps involved in constructing/repairing track
- functions and basic operating principles of tamper equipment including the layout and purpose of major air, hydraulic, mechanical and electrical systems as relevant to equipment
- operational checks and operating capacity of equipment
- track construction specifications
- the impact of tamper operation on related track laying operations
- factors that can affect the tamper operation
- common problems related to tamping and corrective action required
- traffic control signage, communication and procedures
- safe work procedures including awareness of health and safety hazards related to track laying and associated control measures including safe manual handling procedures
- purpose and limitations of protective clothing and equipment
- environmental issues and controls
- requirements to liaise/advise related work areas

- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • Assess operational status of tamper and carry out pre-operational checks • Operate tamper to apply and compact ballast and lift and align track to meet design and construction specifications • Monitor track laying. • Identify faults in operation of equipment • Take corrective action in response to abnormal or unacceptable performance • Use appropriate communication methods and equipment.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Site and related project information • Relevant codes of practice and industry standards • Tamper and related equipment • Materials handling equipment and relevant hand and power tools • Operating procedures and related advice on equipment operation • Ballast • Track work • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>A tamper operator may also require competence in:</p> <ul style="list-style-type: none"> • TLIC2041A Operate on-track self-propelled equipment • FDFOP2030A Operate a process control interface <i>where the tamper is computer controlled.</i>

Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
-------------------------------------	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • drawings and • plans.
Railway network features	Cane railway network features and their characteristics may include <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads • road transport delivery points where relevant.
Information systems	Information systems may be print or screen based.
Equipment	Equipment may include tamper and related attachments.
Equipment status	Confirming equipment status involves <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met, all safety guards are in place • equipment is ready and safe to operate.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods may include use of two-way radios.

Unit Sector(s)

Sugar Milling.

FDFSUG205A Construct turnouts

Modification History

New Unit based on *SUGSCT2A Construct turnouts*.

Unit Descriptor

This unit describes the outcomes required to construct turnouts. It can apply to both construction of new turnouts and repair of existing turnouts.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFSUG217A Lay rails for cane rail systems

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare work	<p>1.1 The location and scope of work are identified</p> <p>1.2 Materials required to complete the work are confirmed and available</p> <p>1.3 Equipment status is confirmed and pre-operational checks are carried out</p> <p>1.4 Personal protective equipment is selected, correctly fitted and used</p> <p>1.5 Safety procedures are followed to confirm that work is clearly signed and relevant authorities are advised that work is in progress</p> <p>1.6 Site is inspected prior to commencing work to identify and remove potential hazards</p>
2 Construct turnouts	<p>2.1 Sleepers for turnouts are placed in required position for track junctions</p> <p>2.2 Base plates for switching are fixed to sleepers in specified locations</p> <p>2.3 Switch rails are positioned and fitted to specification</p> <p>2.4 Switching gear is installed to specification</p>
3 Complete work	<p>3.1 The construction area is cleared of debris</p> <p>3.2 Unused materials are stored as required</p> <p>3.3 Tools, plant and equipment is cleaned and stored as required</p> <p>3.4 Workplace information is recorded according to workplace recording requirements</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- interpret workplace information such as drawings and related instructions to identify the project requirements
- estimate materials required for a given project
- assess operational status of equipment and carry out pre-operational checks
- construct turnouts to meet design and construction specifications
- confirm that switching gear is operational
- identify faulty operation of equipment
- identify unacceptable work outcomes
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- report and/or record corrective action as required
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- overview of cane transport system
- track system layout and characteristics of each section
- the steps involved in laying/repairing track
- functions and basic operating principles of equipment
- the impact of turnout construction on related track laying operations
- factors that can affect turnout construction
- traffic control signage, communication and procedures
- safe work procedures including awareness of health and safety hazards related to track laying and associated control measures including safe manual handling procedures
- purpose and limitations of protective clothing and equipment
- environmental issues and controls
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • interpret workplace information • estimate materials • assess operational status of equipment • construct turnouts to meet design and construction specifications • confirm that switching gear is operational • identify faulty operation of equipment • take corrective action in response to abnormal or unacceptable performance.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Site and related project information • Relevant codes of practice and industry standards • Turnout construction equipment • Materials handling equipment and relevant hand and power tools • Operating procedures and related advice on equipment operation • Track work • Switching gear • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Cane transport network	Cane transport network features and their characteristics may include: <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads.
Information systems	Information systems may be print or screen based
Equipment and materials	Equipment and materials may include: <ul style="list-style-type: none"> • track laying equipment and related attachments • hand tools • pneumatic tools • base plates • fish plates • clips • dog spikes • anchors • screws • insulating biscuits • camber plates.
Confirming equipment status	Confirming equipment status involves conducting relevant pre-start checks, confirming that all safety

	guards and equipment are ready and safe to operate.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods may include: <ul style="list-style-type: none">• use of two-way radios.

Unit Sector(s)

Sugar Milling

FDFSUG206A Drive a cane locomotive

Modification History

New Unit based on *SUGTDCL2A Drive a cane locomotive*.

Unit Descriptor

This unit describes the outcomes required to prepare, start-up, operate and shut down a cane locomotive. Locos may or may not be fitted with break vans and may be single or double-headed. For locomotives in a master-slave configuration see *FDFSUG309A Drive a master-slave locomotive*.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for locomotive operation	1.1 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures 1.2 Workplace records are checked to confirm operational status 1.3 Locomotive and related equipment is inspected to confirm status and pre-start checks and warm up procedures are conducted 1.4 Pre-departure checks are conducted to confirm locomotive and related equipment meets operating standard 1.5 Appropriate end of train tail flags and brake vans are fitted as required
2 Start, operate and monitor locomotive	2.1 Authority to move locomotive is obtained 2.2 Locomotive is operated in accordance workplace procedures and manufacturer's specifications to meet transport requirements 2.3 Locomotive, rake and related equipment are monitored to maintain optimum operating condition and identify faults or defects 2.4 Operation is monitored against schedule and communicated as required 2.5 Housekeeping standards are maintained
3 Analyse and respond to abnormal conditions and performance	3.1 Hazardous situations and conditions are recognized and appropriate action taken to maintain safety of personnel and equipment 3.2 Faults are assessed to determine risk of injury to personnel or damage to equipment 3.3 Corrective action is taken in accordance with workplace procedures in response to Hazards, abnormal or unacceptable equipment condition or performance 3.4 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Prepare for shift handover	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Changeover drivers are aware of locomotive and related equipment status, track conditions and incidents at completion of handover
5 Shut down locomotive	5.1 Locomotive is parked in the appropriate location 5.2 Locomotive is shut down and secured in accordance with workplace procedures
6 Complete work	6.1 Workplace information is recorded according to workplace

ELEMENT**PERFORMANCE CRITERIA**

- recording requirements
- 6.2 Tools, plant and equipment are cleaned and stored/parked as required
- 6.3 Defects and faults are identified and reported according to workplace procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information such as running slips to identify driving requirements
- select, fit and use personal protective clothing and/or equipment
- prepare the locomotive and related equipment such as brake vans for operation including conducting visual inspection of equipment, pre-start checks and warm up procedures and pre-departure checks
- operate the locomotive and associated equipment such as brake vans according to work procedure to achieve work requirements including demonstrating manual and automatic control procedures
- monitor locomotive and equipment condition including monitoring operating status of the locomotive and related equipment and monitoring condition of bins in the rake
- take corrective action in response to abnormal or unacceptable quality of bins, rolling stock or equipment performance
- assess equipment faults to determine appropriate corrective action
- follow procedures to drop off and tag damaged bins including identifying an appropriate location, shunting bins and notifying appropriate personnel
- follow procedure to notify a locomotive breakdown
- communicate with the traffic officer and rail personnel as required
- use appropriate communication methods and equipment
- maintain workplace records
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to driving a locomotive and associated control measures
- purpose and limitations of protective clothing and equipment
- functions and basic operating principles of a locomotive and related equipment such as brake vans including the layout and purpose of the principal mechanical, pneumatic and electrical systems and of all equipment components
- function of all instruments and controls
- safe operating capacities of equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- cane rail system layout to identify the location of points, signals and crossings including crossover of non-company rail lines

- options for responding to unplanned events such as derailments, breakdowns, accidents or track damage including an understanding of the impact of different options on efficient performance and safety issues when parking/dropping off damaged bins or locomotives
- safe operating conditions and speeds including awareness of typical conditions and situations that are hazardous and appropriate preventative action
- typical faults to be able to assess severity and risk in order to determine appropriate corrective action
- acceptable bin and rake condition
- communication procedures, methods and equipment including an understanding of warning devices and signals
- meaning of hand and audible signals, including use of lights
- procedures for responding to emergency situations including use of two-way radio system to report emergencies
- environmental issues and controls
- requirements to liaise/advise related work areas and personnel
- housekeeping standards
- reporting and recording systems and responsibilities

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare the locomotive and related equipment such as brake vans for operation • operate the locomotive and associated equipment such as brake vans • assess equipment faults to determine appropriate corrective action • communicate with the traffic officer and rail personnel • use appropriate communication methods and equipment • maintain workplace records.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Locomotive and related equipment such as brake vans • Cane railway system • Relevant services and equipment required to carry out inspections, checks and monitoring • Workplace information including running slips and daily schedule, to advise of driving requirements • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of</p>

	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
<p>Hazard</p>	<p>Typical hazards include working with moving machinery, manual handling and working in exposed conditions.</p>
<p>Workplace documentation</p>	<p>Documentation and recording requirements may include:</p> <ul style="list-style-type: none"> • marshalling strategy • documentation relating to the traffic schedule such as run slips, loco running sheets and log books • tags to identify damaged bins • maintenance request forms.
<p>Visual inspection and pre-departure checks</p>	<p>Visual inspection may include checking:</p> <ul style="list-style-type: none"> • wheels and braking equipment, hoses and fittings for signs of wear or damage • fuel, oil, water and coolant levels • emergency and safety equipment • condition of the rake <p>Pre-departure checks may include checking:</p> <ul style="list-style-type: none"> • lubrication system • water and oil leaks • brake testing • communications equipment • traction systems • battery charging

	<ul style="list-style-type: none"> • sand boxes • gear changes.
Cane transport network	<p>Cane transport network features and their characteristics may include:</p> <ul style="list-style-type: none"> • main and branch lines • yards • sidings • loops • dump points and pads.
Information systems	Information systems may be print or screen based.
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • control systems • braking systems • manual and remote control systems • communication systems.
Equipment status	<p>Confirming equipment status involves:</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • determining equipment is ready and safe to operate.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	<p>Communication methods include:</p> <ul style="list-style-type: none"> • use of two-way radios used in accordance with workplace requirements and state authority protocols • hand and audible signalling.

Unit Sector(s)

Sugar Milling.

FDFSUG207A Conduct cane weighbridge operations

Modification History

New Unit based on *SUGTCW2A Conduct cane weighbridge operations*.

Unit Descriptor

This unit describes the outcomes required to operate a weighbridge to weigh and record incoming cane deliveries.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Set up weighbridge operations	1.1 Weighbridge systems, including equipment, computer and recording arrangements are checked for operational status 1.2 Tests to confirm accuracy of weighbridge operations and related functions are conducted in accordance with enterprise procedures, manufacturer's instructions and relevant legislation 1.3 Accurate reporting of the results of the inspection and testing is kept in accordance with statutory requirements, enterprise policy and industry guidelines 1.4 Faults/discrepancies in weighbridge operation and Hazards are identified and action undertaken in accordance with enterprise procedures
2 Weigh loaded vehicles/bins	2.1 Bins exceeding weight limit are rejected 2.2 Weight of loaded bins\vehicles is registered against bin identification 2.3 Net weight of bins\vehicles is calculated 2.4 Bins\vehicles and cane type are recorded according to workplace recording requirements 2.5 The workplace meets housekeeping standards
3 Prepare for shift changeover	3.1 Weighbridge systems, including equipment, computer and recording arrangements are secured or made ready for the next shift 3.2 Records of operations are maintained and filed in accordance with enterprise procedures and statutory requirements 3.3 Shift changeover is carried out according to workplace procedure 3.4 Incoming weighbridge operators are aware of weighbridge and related equipment status procedures and manufacturer's recommendations

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- confirm status of weighbridge and related equipment at start up
- select, fit and use personal protective clothing and/or equipment
- demonstrate manual and automatic modes of operation as appropriate to workplace equipment
- demonstrate load weighing procedure including confirming accuracy of weighbridge
- monitor weighbridge operation including:
 - confirming correct bins are tipped
 - recording bin weights
 - checking the zero of the bridge or within tolerance range
 - checking bin contents and fill height
 - using bin delivery pushers and spotters as appropriate for equipment
 - identifying faults or non-conformance in operation
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment
- liaise with pushers and pin-pullers as required
- report and/or record corrective action as required
- complete weighbridge operation records
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities, legislation relating to cane payment as it affects requirements weighing and sampling and weights and measures legislation
- functions and basic operating principles of weighbridge and related equipment components
- cut to crush sequence
- the relationship between the weighbridge and downstream operations
- purpose and procedures for testing accuracy of weighbridge using test weights
- safe work procedures including awareness of health and safety hazards related to weighbridge operation and associated control measures
- purpose and limitations of protective clothing and equipment
- procedures for responding to emergency situations
- method to calculate net bin weight
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of weighbridge and related equipment at start up • demonstrate load weighing procedure • liaise with pushers and pin-pullers as required • complete weighbridge operation records.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Weighbridge and related equipment • Relevant codes of practice and industry standards • Operating procedures and related advice on equipment operation • Loaded cane bins • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. Where the weighbridge operator conducts yard control and/or tipping operations, the following related units are to be co-assessed with this unit.</p> <ul style="list-style-type: none"> • SUG222A Operate a tipping station • SUG101A Move cane bins in a marshalling yard.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Information systems	Information systems may be print or screen based.
Weighbridge calibration	Calibration of weighbridges is determined using test weights.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods may include use of two-way radios.

Unit Sector(s)

Sugar Milling.

FDFSUG208A Operate a tipping station

Modification History

New Unit based on *SUGTOTS2A Operate a tipping station*.

Unit Descriptor

This unit describes the outcomes required to unload cane bins into a sugar mill feeding station.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the tipping station for operation	1.1 Pre-operational checks are conducted 1.2 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Start and monitor tipping	2.1 Bin contents are visually inspected and obvious signs of contamination are reported as required according to workplace reporting procedure 2.2 Cane is tipped according to workplace procedure to maintain supply of cane to the mill 2.3 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.4 Equipment is monitored to confirm operating condition 2.5 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Plant operating conditions are monitored to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace in response to hazards and abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Prepare for shift changeover	4.1 Workplace information is recorded according to workplace recording requirements 4.2 Shift changeover is carried out according to workplace procedure 4.3 Incoming yard control operators are aware of yard and related equipment status
5 Shutdown the tipping station	5.1 The tipping station is shut down according to workplace procedures and manufacturer's recommendations 5.2 Waste is collected, treated and disposed or recycled according to company procedures 5.3 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- confirm status of tipping process at start up
- select, fit and use personal protective clothing and/or equipment
- demonstrate manual and automatic modes of operation as appropriate to workplace equipment
- monitor tipping process to maintain a full carrier including monitoring:
 - rate of tipping to maintain full carrier
 - bin and equipment condition
- identify faulty bins and/or equipment and arrange transfer for repair
- take corrective action in response to abnormal or unacceptable performance
- use appropriate communication methods and equipment including 2-way radios
- complete tipping operation records and hand over tipping process
- maintain work area to meet housekeeping standards including clearing cane spillages

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and industry codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to tipping operation and associated control measures
- functions and basic operating principles of tipping process and related control system and equipment components
- the relationship between the tipping process and mill operation
- consequences of tipping contaminated cane
- typical faults in cane bins which affect haulage and tipping operations
- acceptable bin and rake condition and procedure for tagging and reporting bins requiring repair
- procedures for responding to emergency situations
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of tipping process at start up • monitor tipping process to maintain a full carrier • identify faulty bins and/or equipment and arrange transfer for repair • take corrective action in response to abnormal or unacceptable performance • use appropriate communication methods and equipment • complete tipping operation records and hand over tipping process • maintain work area to meet housekeeping standards.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Tipping process, milling train and related equipment • Relevant codes of practice and industry standards • Operating procedures and related advice on equipment operation • Loaded cane bins • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Where the tipping operator conducts weighbridge operations and/or yard control, the following related units are to be co-assessed with this unit.</p> <ul style="list-style-type: none"> • SUG214A Conduct rail weighbridge operations • SUG101A Move cane bins in a marshalling yard.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where</p>

	possible, over a number of assessment activities.
--	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Equipment status	Confirming equipment status involves <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met, all safety guards are in place • equipment is operational.
Equipment	Equipment may include <ul style="list-style-type: none"> • 2-way communication system • process control interface and related control system, • tipping unit or tippler • pushers • points • indexers.
Typical hazards	Typical hazards include working with moving machinery - pinch points.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG209A Operate an extraction station

Modification History

New Unit based on *SUGPOES2A Operate an extraction station*.

Unit Descriptor

This unit describes the outcomes required to prepare and operate an extraction station. In order to demonstrate competence in this unit the operator must also be competent to operate turbines and reciprocating engines where required.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the extraction process for operation	1.1 Cane is confirmed and available to meet production requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The extraction process is set to meet production requirements
2 Operate and monitor the extraction process	2.1 The extraction process is started up and operated according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Bagasse meets specifications 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification bagasse, process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure 2.6 The workplace meets housekeeping standards
3 Handover the extraction station	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 Extraction station operators are aware of system and related equipment status at completion of handover
4 Shut down the extraction system	4.1 The appropriate shut down procedure is identified 4.2 The extraction system is shut down according to workplace procedures 4.3 The extraction system is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm equipment status and condition
- liaise with other work areas - specifically boilers and evaporator station
- demonstrate start up procedures after an extended stop and after a short stop
- start up and operate in both automatic and manual modes
- monitor the process and equipment operation to maintain the process within the required parameters including monitoring:
 - temperatures
 - steam pressure
 - throughput
 - chute height
 - torques/mill loads
 - added water flows
 - feeding characteristics of cane
 - equipment condition including lubrication systems and vibration levels
- monitor supply and flow of cane to the process and bagasse and juice from the process
- take corrective action in response to out-of-specification results
- report and/or record corrective action as required
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- demonstrate an operational shut down procedure
- prepare equipment for cleaning/maintenance
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose and basic principles of extraction including shredder operation, mills and diffusers as required in the workplace
- the circuit flow of this process and relationship between extraction, boilers and evaporation
- effect on extraction of:
 - cane quality
 - added water

- mill operation
- consequences of poor lubrication
- the role of cooling water for equipment operation
- quality characteristics of bagasse and their effect on boiler operation
- equipment purpose and basic operating principles of extraction equipment
- services used
- operating requirements and parameters
- significance and method of monitoring control points within the process
- common causes of variation and corrective action required
- hazards and controls
- purpose and limitations of protective clothing and equipment
- lock out and tag out procedures
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- procedures and responsibility for reporting problems
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • Confirm equipment status and condition • Demonstrate start up procedures • Start up and operate in both automatic and manual modes • Monitor the process and equipment operation • Monitor supply and flow of cane to the process and bagasse and juice from the process • Take corrective action in response to out-of-specification results • Report and/or record corrective action • Demonstrate shift handover procedure • Shut down equipment in response to an emergency situation • Demonstrate an operational shut down procedure.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Operating procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Product and process specifications and operating parameters • Extraction station equipment • Materials and services as required • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems, requirements and procedures <p>They may also require access to:</p> <ul style="list-style-type: none"> • Cleaning procedures, sampling schedule and

	procedures and maintenance procedures and tools depending on the work requirements.
Method of assessment	Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include: SUG202A Collect and prepare samples SUG213A Perform standard tests on a cane sample FDFOP2030A Operate a process control interface.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • manufacturer's specifications.
<p>Extraction equipment</p>	<p>Extraction equipment may include:</p> <ul style="list-style-type: none"> • shredder • cane carrier • mills • diffuser • juice pumps • juice screen • lubrication systems • cooling water system • maceration system • steam turbines • hydraulic drives.
<p>Equipment status</p>	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational.
<p>Services</p>	<p>Services may include:</p> <ul style="list-style-type: none"> • power • steam • water

	<ul style="list-style-type: none">• compressed and instrumentation air.
Equipment operation and monitoring	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG210A Operate a juice clarification process

Modification History

New Unit based on *SUGPJCP2A Operate a juice clarification process*.

Unit Descriptor

This unit describes the outcomes required to operate a juice clarification process from the juice tanks through to the clarifiers.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the clarification process for operation	1.1 Raw juice is and available to meet production requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The clarification process is set to meet production requirements
2 Operate and monitor the clarification process	2.1 The clarification process is started up and operated according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Clarified product meets specifications 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification product, process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure 2.6 The workplace meets housekeeping standards 2.7 Workplace information is recorded according to workplace recording requirements
3 Handover the clarification process	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 Clarification operators are aware of system and related equipment status at completion of handover
4 Shut down the clarification process	4.1 The appropriate shut down procedure is identified 4.2 The clarification system is shut down according to workplace procedures 4.3 The clarification system is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- prepare lime, flocculant and saccharate for addition
- liaise with other work areas
- confirm equipment status and condition
- set up and start up the process in both automatic and manual modes
- undertake visual inspections and conducting tests to monitor characteristics such as:
 - juice temperatures
 - steam pressure
 - condensate flow and quality
 - throughput
 - juice pH
 - ESJ turbidity
 - addition rates
 - raw juice quality
 - clarifier mud levels and quality
 - equipment condition
- monitor supply and flow of materials to and from the process
- take corrective action in response to out-of-specification results
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- demonstrate an operational shut down procedure
- prepare equipment for cleaning/maintenance
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose and basic principles of clarification including heating, liming, juice degasification and flocculant addition
- the circuit flow of this process and relationship to related processes including the consequences of poor clarification on downstream processes
- the effect of recycle streams on the clarification process
- the purpose and role of materials added

- effect of faulty preparation of materials
- quality characteristics of raw juice and of clarified product
- the impact of dextran on sugar quality
- the function of the incubation tank and starch removal
- the effect of addition rates on the process
- the effect of variation in process parameters
- conditions that can cause deterioration in juice
- significance and method of monitoring control points within the process
- equipment purpose and basic operating principles of juice clarification equipment
- operating requirements and parameters
- services used
- common causes of variation and corrective action required
- hazards and controls
- purpose and limitations of protective clothing and equipment
- lock out and tag out procedures
- procedures and responsibility for reporting problems
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare lime, flocculant and saccharate for addition • set up and start up the process in both automatic and manual modes • monitor the process and equipment operation • take corrective action in response to out-of-specification results • record workplace information • demonstrate shift handover procedure • shut down equipment in response to an emergency situation
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Operating procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Product and process specifications and operating parameters • Juice clarification equipment • Materials including raw juice to be clarified • Services as required • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems, requirements and procedures <p>They may also require</p> <ul style="list-style-type: none"> • Cleaning procedures, sampling schedule and procedures and maintenance procedures and tools depending on the work requirements.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role</p>

	<p>should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none">• SUG202A Collect and prepare samples• SUG213A Perform standard tests• FDFOP2030A Operate a process control interface
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • manufacturer's specifications.
<p>Clarification equipment</p>	<p>Clarification equipment may include:</p> <ul style="list-style-type: none"> • tanks • juice pumps • juice heaters • flash tank • lime storage and mixing plant • saccharate tank • flocculant addition system • clarifier.
<p>Equipment status</p>	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational. <p>It may also involve checking operation/calibration of measuring instrumentation.</p>
<p>Equipment operation and monitoring</p>	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
<p>Services</p>	<p>Services may include:</p> <ul style="list-style-type: none"> • power

	<ul style="list-style-type: none"> • steam • water • compressed and instrumentation air.
Clarification materials	<p>Materials can include lime</p> <ul style="list-style-type: none"> • flocculants • enzymes • phosphoric acid • saccharate • preservatives.
Tests	Where tests are conducted as part of operation, typical requirements are for pH and thymol testing.
Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG211A Operate a mud filtration process

Modification History

New Unit based on *SUGPMFP2A Operate a mud filtration process*.

Unit Descriptor

This unit of competency covers the skills and knowledge required to operate the mud filtration process from the clarifiers to mud disposal.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the mud filtration process for operation	1.1 Mud is assessed and conditioned to meet filtration requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The mud filtration process is set to meet production requirements
2 Operate and monitor the mud filtration process	2.1 The mud filtration process is started and operated according to workplace procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Mud meets specification for pol and moisture 2.4 Equipment is monitored to confirm operating conditions 2.5 Out-of-specification mud, process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure 2.6 The workplace meets housekeeping standards
3 Handover the mud filtration process	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 Mud filtration operators are aware of system and related equipment status at completion of handover
4 Shut down the mud filtration process	4.1 The appropriate shut down procedure is identified 4.2 The mud filtration system is shutdown according to workplace procedures 4.3 The mud filtration system is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported according to workplace reporting requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- draw mud from the clarifier and assess mud quality
- confirm equipment status and condition
- set up filters and start up the process
- assess requirement for mud conditioning and add materials as required
- monitor the process and equipment operation to maintain the process within the required parameters. This typically involves visual inspections and conducting tests to monitor characteristics such as:
 - throughput
 - clarifier mud levels and quality
 - filter speed and cake thickness
 - filtrate clarity and pH
 - mud pol and moisture
 - equipment condition including filter vacuum and scraper and screen condition
 - wash water flow and temperature
- take corrective action in response to out-of-specification results
- report and/or record corrective action as required
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- demonstrate an operational shut down procedure
- prepare equipment for cleaning/maintenance
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- the purpose and basic principles of mud filtration
- the purpose and role of materials added and their effect on filter operation
- the effect of recycle streams on the mud filtration process
- the effect of addition rates on the process
- the effect of variation in process parameters
- the effect of mud age on filter performance
- the circuit flow of this process and relationship to related processes including mud output, filter speed, water addition and cake permeability

- equipment purpose and basic operating principles of mud filtration equipment including vacuum pumps and condensers
- services used
- operating requirements and parameters
- significance and method of monitoring control points within the process
- common causes of variation and corrective action required
- hazards and controls
- the purpose and limitations of protective clothing and equipment
- lock out and tag out procedures
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- procedures and responsibility for reporting problems
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pre-start checks on machinery used for filtration • start, operate, monitor and adjust process equipment to achieve required quality outcomes • take corrective action in response to typical faults and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • safely shut down equipment • apply food safety procedures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment • work procedures, including advice on safe work practices, food safety, quality and environmental requirements, stock flow systems, production schedules, and batch/recipe instructions • information on equipment capacity and operating parameters • production schedule/batch instructions • filtration and related equipment and services • materials required for filtration • sampling schedules and test procedures and equipment as required • documentation and recording requirements and procedures • cleaning procedures, materials and equipment as required.
Method of assessment	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over</p>

	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • manufacturer's specifications.
<p>Mud filtration equipment</p>	<p>Mud filtration equipment may include:</p> <ul style="list-style-type: none"> • clarifier mud removal • mud tank/mud mixer • bagacillo system • filtrate receivers and pump • vacuum pumps • mud filter • mud conveying system and storage • filter wash water supply • lime, flocculant and filtrate recycle to mud system.
<p>Equipment status</p>	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that cleaning standards are met • all safety guards are in place • equipment is operational. <p>It may also involve checking operation/calibration of measuring instrumentation.</p>
<p>Equipment operation and monitoring</p>	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
<p>Services</p>	<p>Services may include:</p>

	<ul style="list-style-type: none"> • power • water • compressed and instrumentation air.
Materials	Materials can include lime, flocculants, saccharate and preservatives
Tests	Where tests are conducted as part of operation, typical requirements are for pH and thymol testing.
Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG212A Chemically clean equipment

Modification History

New Unit based on *SUGPCCE2A Chemically clean equipment*.

Unit Descriptor

This unit describes the outcomes required to use chemical agents to clean in-line plant and equipment such as evaporators, pans, heaters and filters.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for cleaning	<ul style="list-style-type: none">1.1 Chemical stocks are available to meet cleaning and sanitation requirements1.2 Services are confirmed as available and ready for operation1.3 Equipment is checked to confirm readiness for use1.4 Equipment shutdown is planned and equipment is taken off line for cleaning1.5 The plant is set for the cleaning cycle
2 Operate and monitor the cleaning process	<ul style="list-style-type: none">2.1 The cleaning cycle is undertaken according to company procedures2.2 The cleaning process is monitored to confirm cleaning meets company requirements2.3 Cleaning data is recorded according to workplace recording requirements2.4 Out-of-specification process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure
3 Dispose of waste and return plant to operating condition	<ul style="list-style-type: none">3.1 Cleaning chemicals are flushed from plant and disposed of according to company procedures3.2 Plant is set up to meet operational requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information such as the cleaning schedule to identify cleaning requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- handle cleaning and sanitation agents safely including following correct handling and preparation procedures and use of appropriate protective clothing and equipment
- prepare cleaners and sanitisers as required
- pace production and/or liaise with related work areas to take equipment off-line with minimal disruption to production
- prepare equipment for cleaning including rendering equipment safe to clean, correctly positioning equipment such as valves, pipes, vents and taps, selecting appropriate cleaning cycle (CIP), removing waste and or dismantling equipment
- clean equipment according to cleaning process cycle and procedures including starting up and operating the CIP process in both automatic and manual modes
- monitor the process and equipment operation to maintain the cleaning process within the required parameters
- return plant to operating order
- take corrective action in response to out-of-specification results
- advise affected work areas of cleaning schedule and progress
- maintain and store chemicals and related equipment as required
- carry out relevant checks and inspections to confirm effectiveness of cleaning
- sort, collect, treat, recycle or dispose of waste
- record cleaning information
- maintain work area to meet housekeeping standards

Required knowledge includes

Knowledge of:

- purpose and basic principles of cleaning in place (in-line) including the use and functions of caustic and acid solutions and cleaning sequence and stages as required in the workplace
- terminology relating to the chemicals solutions used
- safe work procedures including appropriate signage of cleaning activities and safe handling and storage of cleaners and sanitisers used
- purpose and limitations of protective clothing and equipment
- cleaning and sanitation requirements for work area including different levels of cleaning requirements depending on the reason for cleaning
- methods used to render equipment safe to clean including lock-out, tag-out and isolation procedures

- equipment settings required for cleaning and for operating respectively
- basic operating principles of process control where relevant including the relationship between control panels and systems and the physical equipment
- inspection points for cleaning and sanitation
- consequences of contamination of process flows by cleaning solutions
- types of waste generated by both the production and the cleaning process and related collection, treatment and disposal requirements
- environmental consequences of incorrect waste disposal procedures
- requirements to liaise/advise related work areas
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • handle cleaning and sanitation agents safely • clean equipment according to cleaning process cycle and procedures • return plant to operating order • carry out relevant checks and inspections to confirm effectiveness of cleaning.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Cleaning procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Equipment to be cleaned and related cleaning system • Cleaning schedule or advice and related Standard Operating Procedures • Chemicals and/or automated chemical addition system • Services as required • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems, requirements and procedures. <p>They may also require access to:</p> <ul style="list-style-type: none"> • Sampling and testing schedules and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none"> • FDFOP2030A Operate a process control interface.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over</p>

	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Equipment	Equipment cleaned may include <ul style="list-style-type: none"> • evaporators • pans • heaters • filters • chemical mixing and storage equipment • pumps and pipes.
Services	Services may include: <ul style="list-style-type: none"> • power • water • steam • compressed and instrumentation air.
Tests	Where tests are conducted as part of operation a typical requirement is measurement of pH and condensate quality
Process monitoring	Monitoring the process depends on the cleaning requirements. It may include monitoring: <ul style="list-style-type: none"> • condensate quality (evaporators, heaters and pans) • vacuum and brix (evaporators) • time • storage tank levels • chemical strength • cycle time • temperatures.

Control panels and systems	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG213A Operate a pans station

Modification History

New Unit based on *SUGPOPS2A Operate a pans station*.

Unit Descriptor

This unit describes the outcomes required to operate the panning process from the liquor and A/B molasses tanks to the high-grade fugal distributor and low grade pan receiver.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the pans station for operation	1.1 Liquor and molasses are available to meet production requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The pans station is set up to meet production requirements
2 Operate and monitor pans station	2.1 The pans station is started up and operated according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 C sugar and C molasses meet specification 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification process and equipment performance is identified, rectified and/or reported 2.6 The workplace meets housekeeping standards
3 Handover the pans station	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 Pans station operators are aware of system and related equipment status at completion of handover
4 Shut down the pans station	4.1 The appropriate shut down procedure is identified 4.2 The pans station is shut down according to workplace procedures 4.3 The pans station is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm equipment status and condition
- start up and operate in both automatic and manual modes
- undertake visual inspection and conduct tests to monitor characteristics such as:
 - stirrer load
 - pan vacuum
 - sugar crystal size and distribution
 - pan station product purities
 - pan station stock levels including receiver stocks
 - high grade fugal times including spin and wash times
 - steam pressure
 - boiling formula
 - pan circulation
 - supersaturation
 - equipment condition
- control station throughput and A B balance to meet factory throughput through pan scheduling
- prepare magma and grain for high/low grade seed production
- shut down and clean pans according to schedule or as indicated by equipment monitoring
- prepare slurry for seed production
- add process additives as required by pan performance
- take corrective action in response to out-of-specification results
- report and/or record corrective action as required
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose and basic principles of pans station operation including the basic principles of crystallisation and may relate to operation of batch and continuous pans as required in the workplace

- terminology relating to sugar and molasses quality
- sugar industry quality standards for each brand of sugar
- the circuit flow of this process and relationship to related processes
- factors that affect throughput and recovery including the relationship between sugar pol and throughput; the balance between A, B and C pans and the effect of cane quality and boiling formula
- factors that affect flow of massecuite through the system
- the effect of massecuite quality on fugal operation
- relationship between boiling point and pressure in the pans station
- equipment purpose and basic operating principles of pans station equipment including vacuum pumps and condensers
- operating requirements and parameters
- services used
- significance and method of monitoring control points within the process
- common causes of variation and corrective action required
- shut down sequence including massecuite pumps and stock management
- OHS hazards and controls
- purpose and limitations of protective clothing and equipment
- lock out and tag out procedures
- procedures and responsibility for reporting problems
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>

<p>Equipment operation and monitoring</p>	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
<p>Services</p>	<p>Services may include:</p> <ul style="list-style-type: none"> • power

	<ul style="list-style-type: none"> • steam • water • compressed and instrumentation air.
Tests	<p>Where tests are conducted as part of operation a typical requirement is observation by microscope and product density.</p> <p>Sugar industry quality standards are determined at state level.</p>
Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG214A Operate a low grade fugal station

Modification History

New Unit based on *SUGPLGF2A Operate a low grade fugal station*.

Unit Descriptor

This unit describes the outcomes required to operate the low grade fugal process from the re-heater to the magma pump and molasses cooler.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the low grade fugal station for operation	1.1 Masecuite is conditioned to meet production requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The low grade fugal station is set up to meet production requirements
2 Operate and monitor low grade fugal station	2.1 The low grade fugal station is started up and operated according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 C sugar and C molasses meet specification 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure 2.6 The workplace meets housekeeping standards
3 Handover the low grade fugal station	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 Low grade fugal station operators are aware of system and related equipment status at completion of handover
4 Shut down the low grade fugal station	4.1 The appropriate shut down procedure is identified 4.2 The low grade fugal station is shut down according to workplace procedures 4.3 The low grade fugal station is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm equipment status and condition
- follow start up procedure
- start up and operate in both automatic and manual modes
- monitor:
 - fugal load
 - magma and molasses quality
 - crystal formation in C molasses
 - massecuite feed temperatures
 - equipment condition including screen condition and vibration
 - magma and molasses purity
 - molasses temperature and brix
 - magma tank stock level and remelt rates
- control station throughput to meet factory throughput
- take corrective action in response to out-of-specification results
- shut down and clean fugals according to schedule or as indicated by equipment monitoring
- report and/or record corrective action as required
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- demonstrate an operational shut down procedure
- prepare equipment for cleaning/maintenance
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose and basic principles of low grade fugal operation including C molasses cooling and storage and operating efficiencies for low grade fugals
- terminology such as brix and purity
- the effect of C molasses dilution and temperature on C massecuite viscosity
- the effect of C massecuite conditioning on low grade fugal performance
- the circuit flow of this process and relationship to related processes
- factors that affect throughput and recovery including the relationship between crystalliser

throughput, magma stock and remelt rate

- equipment purpose and basic operating principles of low grade fugal equipment
- services used
- operating requirements and parameters
- significance and method of monitoring control points within the process
- common causes of variation and corrective action required
- hazards and controls
- purpose and limitations of protective clothing and equipment
- lock out and tag out procedures
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- procedures and responsibility for reporting problems
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify production requirements • follow start up procedure • start up and operate in both automatic and manual modes • monitor the process and equipment operation to maintain the process • control station throughput to meet factory throughput • take corrective action in response to out-of-specification results • shut down and clean fugals • report and/or record corrective action as required • shut down equipment in response to an emergency situation • demonstrate an operational shut down procedure • prepare equipment for cleaning/maintenance.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Operating procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Product and process specifications and operating parameters • Low grade fugal station equipment • Materials including massequite and services as required • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems, requirements and procedures.

	<p>They may also require</p> <ul style="list-style-type: none"> • Cleaning procedures, sampling schedule and procedures and maintenance procedures and tools depending on the work requirements.
Method of assessment	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none"> • SUG202A Collect and prepare samples • SUG213A Perform standard tests on a cane sample • FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • manufacturer's specifications.
<p>Fugal equipment</p>	<p>Low grade fugal equipment may include:</p> <ul style="list-style-type: none"> • low grade fugals • massecuite feed pump • distributor • fugal water and steam system • magma screw and pump • molasses pump and cooler • magma remelt system • molasses tank.
<p>Equipment status</p>	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational. <p>It may also involve checking operation/calibration of measuring instrumentation.</p>
<p>Services</p>	<p>Services may include:</p> <ul style="list-style-type: none"> • power • water • steam • compressed and instrumentation air.

Tests	Where tests are conducted as part of operation typical requirements are observation using a microscope and product density.
Equipment operation and monitoring	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG215A Operate a high grade fugal station

Modification History

New Unit based on *SUGPHGF2A Operate a high grade fugal station*.

Unit Descriptor

This unit describes the outcomes required to operate the high grade fugal process from the high-grade fugal distributor to the sugar bin and the A and B molasses storage tanks.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the high grade fugal station for operation	1.1 Masecuite is available to meet production requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The high grade fugal station is set up to meet production requirements
2 Operate and monitor high grade fugal station	2.1 The high grade fugal station is started up and operated according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Output meets specification 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure 2.6 The workplace meets housekeeping standards
3 Handover the high grade fugal station	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 High grade fugal station operators are aware of system and related equipment status at completion of handover
4 Shut down the high grade fugal station	4.1 The appropriate shut down procedure is identified 4.2 The high grade fugal station is shut down according to workplace procedures 4.3 The high grade fugal station is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm equipment status and condition
- follow start up procedure
- start up and operate in both automatic and manual modes
- undertake visual inspections and conduct tests to monitor characteristics such as:
 - fugal load
 - sugar and molasses quality
 - crystal in A B molasses
 - A B molasses purity
 - A B molasses density
 - molasses stock level
 - sugar temperature, pol and moisture
 - fugal speed
 - atmospheric conditions
 - cycle times including spin and wash times
 - wash water temperature
 - basket charge
 - dry air and sugar flows
 - sugar dust levels
 - equipment condition including drip gate operation
- control station throughput and A B balance to meet pan stage throughput
- take corrective action in response to out-of-specification results
- shut down and clean fugals according to schedule or as indicated by equipment monitoring
- control drier airflows to achieve target sugar temperature and moisture
- report and/or record corrective action as required
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- prepare equipment for cleaning/maintenance
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose and basic principles of high grade fugal station operation including sugar drying and operation of batch and continuous fugals as required in the workplace
- terminology relating to sugar and molasses quality
- sugar industry quality standards for each brand of sugar
- the circuit flow of this process and relationship to related processes
- factors that affect throughput and recovery such as the relationship between sugar pol and throughput and the balance between A and B fugals
- the effect of massecuite quality on fugal operation and the effect of variation in operating parameters on the fugal output
- equipment purpose and basic operating principles of high grade fugal equipment
- services used
- operating requirements and parameters
- significance and method of monitoring control points within the process
- common causes of variation and corrective action required
- hazards and controls
- purpose and limitations of protective clothing and equipment
- lock out and tag out procedures
- shut down sequence including massecuite feed pumps and re-heaters
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- procedures and responsibility for reporting problems
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information to identify production requirements • follow start up procedure • start up and operate in both automatic and manual modes • monitor the process and equipment operation to maintain the process within the required parameters • control station throughput and A B balance to meet pan stage throughput • take corrective action in response to out-of-specification results • shut down and clean fugals according to schedule or as indicated by equipment monitoring • control drier airflows to achieve target sugar temperature and moisture • shut down equipment in response to an emergency situation
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Operating procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Product and process specifications and operating parameters • High grade fugal station equipment • Materials including massequite and services as required • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems,

	<p>requirements and procedures.</p> <p>They may also require access to:</p> <ul style="list-style-type: none"> • Cleaning procedures, sampling schedule and procedures and maintenance procedures and tools depending on the work requirements.
Method of assessment	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none"> • SUG202A Collect and prepare samples • SUG213A Perform standard tests on a cane sample • FDFOP2030A Operate a process control interface.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • manufacturer's specifications.
<p>Fugal equipment</p>	<p>High grade fugal equipment may include:</p> <ul style="list-style-type: none"> • high grade fugals (batch and/or continuous) • molasses pipes • tanks and pumps • massecuite feed pump • distributor • fugal water and steam system • sugar screw or belt • sugar conveyor system • drier and fans and air conditioners • sugar scrubber • sugar bin.
<p>Equipment status</p>	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational. <p>It may also involve checking operation/calibration of measuring instrumentation.</p>
<p>Equipment operation and monitoring</p>	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>

Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Services	Services may include: <ul style="list-style-type: none"> • power • water • compressed and instrumentation air.
Tests	Where tests are conducted as part of operation a typical requirement is pol and moisture by near infra-red. Molasses density may also be required. Sugar industry quality standards are determined at state level.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG216A Operate a crystalliser station process

Modification History

New Unit based on *SUGPCSP2A Operate a crystalliser station process*.

Unit Descriptor

This unit describes the outcomes required to operate the process from the low grade pan receiver through the crystallisers to the re-heater.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the crystalliser station for operation	1.1 Masecuite is confirmed and available to meet production requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The crystallisers are set up to meet production requirements
2 Operate and monitor crystalliser station	2.1 The crystallisation station is started up and operated according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 C masecuite feed to fugals meets specification 2.4 Equipment is monitored to confirm operating condition 2.5 Out-of-specification process and equipment performance is identified, rectified and/or reported according to workplace reporting procedure 2.6 The workplace meets housekeeping standards
3 Handover the crystalliser station	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 Crystalliser station operators are aware of system and related equipment status at completion of handover
4 Shut down the crystalliser station	4.1 The appropriate shut down procedure is identified 4.2 The crystalliser station is shut down according to workplace procedures 4.3 The crystalliser station is prepared for storage in shut down mode 4.4 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify production requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary materials and services
- confirm equipment status and condition
- start up from empty and start up from full
- maintain required levels in the crystallisers
- follow cooling and reheating profiles
- start up and operate in both automatic and manual modes
- monitor the process and equipment operation to maintain the process within the required parameters including monitoring:
 - throughput
 - loads on crystalliser drives
 - sugar crystal size and distribution
 - massecuite conductivity
 - massecuite dilution rates
 - end of cooling and reheating temperatures
 - stocks of C massecuite to match pan stage throughput
 - equipment condition
- detect and report water leaks from crystalliser coils
- take corrective action in response to out-of-specification results
- report and/or record corrective action as required
- record workplace information
- demonstrate shift handover procedure
- shut down equipment in response to an emergency situation
- demonstrate an operational shut down procedure
- prepare equipment for cleaning/maintenance
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose and basic principles of crystallisation including a basic understanding of crystal growth and super saturation of solutions
- the effect of C molasses dilution on C massecuite viscosity
- the effect on C molasses purity of variation in:
 - end of cooling and reheating temperatures

- residence time
- the effect of C massecuite conditioning on low grade fugal performance
- the circuit flow of this process and relationship to related processes
- equipment purpose and basic operating principles of crystallization equipment
- the risks and consequences of pipe failure related to massecuite decomposition
- services used
- operating requirements and parameters
- requirements when starting up full crystallisers containing cold massecuite
- requirements when shutting down full crystallisers containing hot massecuite
- significance and method of monitoring control points within the process
- common causes of variation and corrective action required
- hazards and controls
- lock out and tag out procedures
- shut down sequence including massecuite pumps and re-heaters
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- procedures and responsibility for reporting problems
- environmental issues and controls
- waste handling requirements and procedures
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • start up from empty or from full in manual and automatic modes • monitor the process and equipment operation • detect and report water leaks from crystalliser coils • demonstrate shift handover procedure • shut down equipment in response to an emergency situation • demonstrate an operational shut down procedure.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Operating procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Product and process specifications and operating parameters • Crystalliser station equipment • Materials including C masseuite and services as required • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems, requirements and procedures. <p>They may also require access to:</p> <ul style="list-style-type: none"> • Cleaning procedures, sampling schedule and procedures and maintenance procedures and tools depending on the work requirements.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p>

	<ul style="list-style-type: none">• SUG202A Collect and prepare samples• SUG213A Perform standard tests on a cane sample• FDFOP2030A Operate a process control interface.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Crystalliser station	The crystalliser station may include: <ul style="list-style-type: none"> • low grade pan receiver • massecuite pumps • batch and continuous crystallisers • re-heater • molasses lubrication system • hot and cold water systems.
Equipment status	Confirming equipment status involves <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational. <p>It may also involve checking operation/calibration of measuring instrumentation.</p>
Equipment operation and monitoring	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Services	Services may include: <ul style="list-style-type: none"> • power • water • compressed and instrumentation air.
Tests	Where tests are conducted as part of operation a typical requirement is observation using a microscope.

Process monitoring	Monitoring the process may involve the use of production data such as performance control charts.
Control points	Control points refer to those key points in a work process which must be monitored and controlled.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG217A Operate a turbine

Modification History

New Unit based on *SUGPOTB2A Operate a turbine*.

Unit Descriptor

This unit describes the outcomes required for continuous and short term operation of a turbine and for start-up and shut down after a prolonged break. This unit is based on the following Worksafe Australia Standards for Users and Operators of Industrial Equipment - NOHSC 1006 (2001):- Start steam turbine, Operate and monitor turbine, and Shut down turbine. Turbine operators holding a ticket from the relevant state regulatory authority will be granted equivalence in this unit *FDFSUG230A Operate a turbine* for the purpose of issuing a qualification.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the turbine for operation	1.1 Personal protective clothing and equipment is selected and used 1.2 Pre-operational checks are conducted 1.3 Run warm up sequence of turbine in preparation for handover to console 1.4 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Start and monitor turbine operation	2.1 The turbine is started and brought on line safely according to workplace procedures and manufacturer's recommendations 2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.3 Equipment is monitored to confirm operating condition 2.4 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to hazards and abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover turbine operations	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Turbine operators are aware of turbine status and related equipment at completion of handover
5 Shutdown the turbine	5.1 The turbine is operationally shut down according to workplace procedures and manufacturer's recommendations 5.2 Valves and fittings are removed in preparation for maintenance as required 5.3 The turbine is stored in shut down mode 5.4 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- access workplace information on operating requirements
- select, fit and use personal protective clothing and/or equipment
- handle chemicals safely. This includes following correct handling and storage procedures and use of appropriate protective clothing and equipment
- identify and report hazards and potential hazards in the work area
- confirm status of turbine and related services including availability of steam
- conduct pre-start checks. This typically include checking:
 - cooling water supply
 - overspeed trip
 - emergency stop
 - operation and position of valves, fittings, steam traps and steam line purge systems
 - lubrication system
 - condensate drainage system
 - steam quality and pressure
 - heat input rate
 - free rotation of turbine
 - reticulation line pressure and system warm up
- liaise with other work areas to advise of turbine status
- demonstrate set up and start up procedures in both manual and automatic modes and for both a hot start and cold start
- monitor turbine operation. This typically includes monitoring:
 - bearing temperature
 - steam pressures
 - speeds
 - glands
 - water filters
 - oil levels and flows
 - equipment condition including noise and vibration
 - steam reticulation line pressure
 - lubrication system
 - condenser operation (where fitted)
- take corrective action in response to abnormal or unacceptable performance
- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of equipment status and operating requirements prior to completing handover

- demonstrate procedure to take turbine off line
- demonstrate procedure to prepare the turbine for a prolonged shut down. This includes removal of valves and fittings
- demonstrate emergency trip procedure and related re-start
- record operating information
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safety features of the turbines. These include relief and over-speed trip valves
- safe work procedures including awareness of health and safety hazards related to turbine operation and associated control measures. Hazards typically include handling chemicals, working around hot surfaces, working around moving equipment, manual handling, oil and steam leaks.
- hierarchy of hazard control measures
- duty of care of the turbine operator
- purpose and limitations of protective clothing and equipment
- turbine system layout and steam cycle
- relationship to other processes. This includes suppliers and users of steam across the site
- the effect of steam quality on turbine operation
- the effect of low steam pressure on turbine operation
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- equipment purpose and basic operating principles of turbine and related equipment including the properties of steam
- operating requirements and parameters
- procedures for responding to emergency situations. This includes safe operational shutdown procedure
- handover and long term shut down and storage procedures
- environmental issues and controls
- housekeeping standards for the work area
- reporting and recording systems. This includes both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of turbine and related services including availability of steam • conduct pre-start checks • liaise with other work areas to advise of turbine status • demonstrate set up and start up procedures • monitor turbine operation • take corrective action in response to abnormal or unacceptable performance • demonstrate shift handover procedure • demonstrate procedure to take turbine off line • demonstrate procedure to prepare the turbine for a prolonged shut down • demonstrate emergency trip procedure and related re-start.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Turbine and related equipment • Relevant codes and standards • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>For assessment advice where the turbine operation is not a certified occupation, refer to the Assessment Guidelines for this Training Package. Where turbine operation is a certificated occupation, refer to the</p>

	<p>appropriate NOHSC competency standards, available from National Occupational Health and Safety Commission.</p> <p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Equipment status	Confirming equipment status involves <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational.
Turbines and related equipment	Turbines and related equipment may include <ul style="list-style-type: none"> • turbines and pass-out turbines • condensers • oil coolers • vacuum pumps • filters.
Equipment operation and monitoring	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Services	Services may include: <ul style="list-style-type: none"> • steam • water • mill • instrumentation air and power.
Tests	Tests may include trip tests.
Teamwork	Work may require the ability to work within a team environment.

Information systems	Information systems may be print or screen based.
----------------------------	---

Unit Sector(s)

Sugar Milling.

FDFSUG218A Operate a boiler - basic

Modification History

New Unit based on *SUGPOBB2A Operate a boiler - basic*.

Unit Descriptor

This unit describes the outcomes required for continuous and short term operation of a basic boiler and for start-up and shut down after a prolonged break. This unit is based on the boiler competency standards from the Worksafe Australia Standards for Users and Operators of Industrial Equipment NOHSC 1006 (2001). It should be selected where boiler operation is a certificated occupation. Boiler operators holding a ticket in Basic Boiler Operation from the relevant state regulatory authority will be granted equivalence in this unit *FDFSUG231A Operate a boiler basic* for the purpose of issuing a qualification.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the boiler for operation	1.1 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures 1.2 The boiler is purged according to workplace procedure 1.3 Services are confirmed and available 1.4 Pre-operational checks are conducted to confirm operational status of boiler and related equipment
2 Start and monitor boiler operation	2.1 The boiler is started and brought on line safely according to workplace procedures and manufacturer's specifications 2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.3 Equipment is monitored to confirm operating condition 2.4 Water quality is tested and adjusted as required 2.5 Sluice water is circulated to remove ash from boiler according to duty requirements 2.6 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to Hazards, out-of-specification test results and/or plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover boiler operations	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Boiler operators are aware of boiler status and related equipment at completion of handover
5 Carry out an operational shutdown	5.1 The boiler is shut down according to workplace procedures and manufacturer's recommendations 5.2 Maintenance requirements are identified and reported according to workplace reporting procedure
6 Shutdown the boiler and prepare for an internal inspection	6.1 The boiler is shut down according to workplace procedures and manufacturer's recommendations 6.2 The boiler is cleaned internally and externally according to workplace procedures and manufacturer's recommendations 6.3 Valves and fittings are removed in preparation for maintenance
7 Store boiler in	7.1 The boiler is stored in the appropriate storage mode according to

ELEMENT	PERFORMANCE CRITERIA
shutdown mode	workplace procedures and manufacturer's recommendations
8 Record information	8.1 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information on combustion and operating requirements
- select, fit and use personal protective clothing and/or equipment
- identify and report hazards and potential hazards in the work area
- confirm status of boiler and related equipment including the fuel supply system, ash removal and services
- demonstrate purge procedure
- conduct pre-start checks including checking:
 - feed water supply and system
 - fuel supply system
 - fans and dampers
 - inspection doors
 - boiler valves - operation and position
 - combustion air supply system
 - boiler water level
- liaise with other work areas to advise of boiler status
- demonstrate set-up and start-up procedures in both manual and automatic modes
- monitor boiler operation including monitoring:
 - steam reticulation line pressure
 - boiler steam pressure
 - steam supply/usage
 - condensate tank level
 - bagasse levels
 - feedwater levels and pressure
 - fuel levels
 - boiler load
 - water quality
 - furnace pressure
 - ash pit level and removal system
 - balance draft system
 - superheater temperature
 - drum levels
 - equipment condition
- conduct water quality test
- take corrective action in response to out-of-specification results

- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of all relevant issues prior to completing handover
- demonstrate procedure to take boiler off line
- demonstrate procedure to shut-down and clean the boiler
- demonstrate removal of valves and fittings to prepare the boiler for inspection
- demonstrate procedure to store boiler
- demonstrate emergency procedures and related re-start including the use of emergency fuel supply
- maintain workplace records
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to boiler operation and associated control measures
- purpose and limitations of protective clothing and equipment
- hierarchy of hazard control measures
- duty of care of the boiler operator
- purpose and basic principles of combustion and boiler operation including principles of heat transfer and properties of steam
- boiler system layout and steam cycle
- the purpose of purging a boiler
- the effect of fuel quality on boiler operation
- impact of ash removal on efficient boiler operation and impact of sluice water flow
- relationship to other processes including an understanding of the impact of sudden load changes on boiler pressure and plant operation
- purpose and limitations of protective clothing and equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- water quality test procedures
- typical causes of water/condensate contamination and corrective action required
- equipment purpose and basic operating principles including high pressure feed pumps, fuel supply system and dual fuel systems as required by boiler type
- operating requirements and parameters
- procedures for responding to emergency situations including safe shutdown procedure
- handover and long term shut down and storage procedures
- cleaning procedures and grate dumping
- environmental issues and controls including an understanding of sluice water usage
- requirements to liaise/advise related work areas
- housekeeping standards for the work area

- reporting and recording systems including both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of boiler and related equipment including the fuel supply system, ash removal and services • demonstrate purge procedure • conduct pre-start checks • liaise with other work areas to advise of boiler status • demonstrate set up and start up procedures in both manual and automatic modes • conduct water quality test • take corrective action in response to out-of-specification results • report and/or record corrective action • demonstrate emergency procedures and related re-start.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Boiler and related equipment. This includes fuel supply, grate cleaning and ash removal systems • Relevant codes and standards • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <ul style="list-style-type: none"> • FDFOP2030A Operate a process control interface
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over</p>

	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Boilers [basic]	Boiler (basic) and related equipment may be <ul style="list-style-type: none"> • fully or partly attended, and include • single fixed combustion air supply • non-modulating single heat source • fixed firing rate. <p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
Hazards	Hazards typically include: <ul style="list-style-type: none"> • working around hot surfaces • manual handling • steam, hot gasses and fuel leaks.
Services	Services can include fuel supply of bagasse, coal, gas, oil or other fuel types, steam, mill and instrumentation air, cooling water, general mill water supply and cooling water.
Equipment status	Confirming equipment status involves: <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that cleaning standards are met • all safety guards and manholes are in place • equipment is operational.
Internal cleaning	Internal cleaning is carried out in accordance with statutory requirements regarding confined space entry

	and does not typically include chemical cleaning.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG219A Operate a bagasse fuel supply system

Modification History

New Unit based on *SUGPFSB2A Operate a fuel supply system - bagasse*.

Unit Descriptor

This unit describes the outcomes required to operate a bagasse fuel system and related auxiliary fuel system to supply a boiler. The auxiliary fuel supply system is typically an oil system.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the fuel supply system for operation	1.1 Pre-operational checks are conducted 1.2 Health and safety hazards are identified and controlled 1.3 Maintenance requirements are identified and reported according to workplace reporting procedure 1.4 Primary and auxiliary fuel is available to meet combustion requirements 1.5 Services are confirmed as available and ready for operation
2 Start and monitor operation of the fuel supply system	2.1 The fuel supply system is operated within limits of manufacturer's specifications to meet workplace requirements 2.2 The fuel supply system is monitored to confirm performance is maintained within manufacturer's specifications to meet workplace requirements 2.3 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 System operating conditions are monitored to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to hazards and abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover fuel system operations	4.1 Workplace records are maintained in accordance with workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Fuel system operators are aware of system and related equipment status at completion of handover
5. Shutdown the fuel supply system	5.1 The fuel supply system is shut down according to workplace procedures and manufacturer's recommendations 5.2 The fuel supply system is prepared for storage in shut down mode 5.3 Maintenance requirements are identified and reported according to workplace reporting procedure 5.4 Fuel is stored to meet fuel requirements and workplace standards

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information fuel supply requirements
- select, fit and use personal protective clothing and/or equipment
- confirm status of fuel supply system and related services including confirming availability of auxiliary fuel
- conduct pre-start checks
- demonstrate set up and start up procedures in both manual and automatic modes and starting for normal operation and after emergency stops
- monitor fuel supply system operation including monitoring:
 - fuel levels
 - bagasse belt height
 - temperature
 - fuel oil pressure (on auxiliary system)
 - speed
 - vibration
 - smell
 - noise
- take corrective action in response to abnormal or unacceptable performance
- demonstrate procedure for test firing burners
- demonstrate procedure for removing, inspecting, cleaning and replacing oil burners including use of go/no go gauges on atomising tips
- demonstrate procedure for clearing fuel blockages or chokes throughout the system
- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of equipment status and operating requirements prior to completing handover
- demonstrate procedure to take fuel supply system off-line
- demonstrate emergency procedures including operation of auxiliary/emergency fuel supply system
- demonstrate fuel storage and/or reclamation procedures as required in the workplace
- record operating information
- maintain work area to meet housekeeping standards

Required knowledge includes

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to operation

of fuel supply system and associated control measures

- hierarchy of hazard control measures
- purpose and limitations of protective clothing and equipment
- properties of bagasse and bagacillo and impact of variation on combustion
- impact of bagasse belt levels on system capacity to supply
- principles of flame management systems including understanding of when and how to purge boiler before relighting in a flame out situation
- purpose and operation of auxiliary fuel supply
- functions and basic operating principles of fuel supply system, components and auxiliary equipment
- operating requirements and parameters
- supply system layout
- the effect of fuel quality and supply on boiler operation
- relationship between viscosity and temperature for burner operation
- purpose of atomising steam and/or air
- purpose of purge cycle for the burner
- relationship between fuel supply system and other processes
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- procedures for responding to emergency situations including emergency shutdown procedure
- handover and long term shut down and storage procedures
- fuel storage requirements
- fuel reclamation options and procedures as appropriate for the workplace and fuel type
- environmental issues and controls
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of fuel supply system • demonstrate set up and start up procedures in both manual and automatic modes • monitor fuel supply system operation • take corrective action in response to abnormal or unacceptable performance • demonstrate procedure for test firing burners • demonstrate procedure for removing, inspecting, cleaning and replacing oil burners • demonstrate procedure for clearing fuel blockages or chokes throughout the system • demonstrate shift handover procedure • demonstrate procedure to take fuel supply system off-line • demonstrate emergency procedures • demonstrate fuel storage and/or reclamation procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Bagasse fuel supply system and related equipment • Relevant codes and standards • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Where the operator is required to operate a boiler, select the appropriate boiler operation unit.</p> <p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This</p>

	may include: FDFOP2030A Operate a process control interface.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Hazards	Hazards typically include working with moving equipment, working on platforms, risk of bagasse forming an explosive dust and related risks of fire associated with hot work and spontaneous combustion.
Supply system equipment	Equipment components and auxiliary equipment may include: <ul style="list-style-type: none"> • fuel supply storage • conveyor systems • fines separation.
Services	Services may include: <ul style="list-style-type: none"> • instrumentation • mill air and power.
Reclamation procedures	Reclamation procedures refer to reclamation of bagasse stockpiles.
Equipment operation and monitoring	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Equipment status	Confirming equipment status involves <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational.

Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG220A Operate a coal fuel supply system

Modification History

New Unit based on *SUGPFSC2A Operate a fuel supply system - coal*.

Unit Descriptor

This unit describes the outcomes required to operate a coal fuel system and related auxiliary fuel system to supply a boiler. The auxiliary fuel supply system is typically an oil system.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the fuel supply system for operation	1.1 Pre-operational checks are conducted 1.2 Health and safety hazards are identified and controlled 1.3 Maintenance requirements are identified and reported according to workplace reporting procedure 1.4 Primary and auxiliary fuel is available to meet combustion requirements 1.5 Services are confirmed as available and ready for operation
2 Start and monitor operation of the fuel supply system	2.1 The fuel supply system is operated within limits of manufacturer's specifications to meet workplace requirements 2.2 The fuel supply system is monitored to confirm performance is maintained within manufacturer's specifications to meet workplace requirements 2.3 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 System operating conditions are monitored to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to hazards and abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover fuel system operations	4.1 Workplace records are maintained in accordance with workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Fuel system operators are aware of system and related equipment status at completion of handover
5 Shutdown the fuel supply system	5.1 The fuel supply system is shut down according to workplace procedures and manufacturer's recommendations 5.2 The fuel supply system is prepared for storage in shut down mode 5.3 Maintenance requirements are identified and reported according to workplace reporting procedure 5.4 Fuel is stored to meet fuel requirements and workplace standards

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information fuel supply requirements
- select, fit and use personal protective clothing and/or equipment
- confirm status of fuel supply system and related services including confirming availability of auxiliary fuel
- conduct pre-start checks
- demonstrate set up and start up procedures in both manual and automatic modes and starting for normal operation and after emergency stops
- monitor fuel supply system operation including monitoring:
 - fuel levels
 - temperature
 - coal system - may include shake times, blow pressure and fuel moisture levels
 - ash systems
- take corrective action in response to abnormal or unacceptable performance
- demonstrate procedure for test firing burners
- demonstrate procedure for clearing fuel blockages or chokes throughout the system
- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of equipment status and operating requirements prior to completing handover
- demonstrate procedure to take fuel supply system off-line
- demonstrate emergency procedures including operation of auxiliary/emergency fuel supply system
- record operating information
- maintain work area to meet housekeeping standards

Required knowledge includes

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to operation of fuel supply system and associated control measures
- hierarchy of hazard control measures
- purpose and limitations of protective clothing and equipment
- principles of flame management systems including understanding of when and how to purge boiler before relighting in a flame-out situation
- the amount of caustic addition for each tonne of coal burnt
- purpose and operation of auxiliary fuel supply

- functions and basic operating principles of fuel supply system, components and auxiliary equipment
- operating requirements and parameters
- supply system layout
- the effect of fuel quality and supply on boiler operation
- relationship between fuel supply system and other processes
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- procedures for responding to emergency situations including emergency shutdown procedure
- handover and long term shut-down and storage procedures
- fuel storage requirements
- fuel reclamation options and procedures as appropriate for the workplace and fuel type
- environmental issues and controls
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

Unit Sector(s)

Sugar Milling.

FDFSUG221A Operate an ash separation system

Modification History

New Unit based on *SUGPARS2A Operate an ash separation system*.

Unit Descriptor

This unit describes the outcomes required to operate a system to separate ash solids from boiler sluice water by use of clarifiers and filters.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the ash separation system for operation	1.1 Materials are confirmed and available to meet requirements 1.2 Services are confirmed as available and ready for operation 1.3 Equipment is checked to confirm readiness for use 1.4 The ash separation process is set to meet production requirements 1.5 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Operate the ash separation process	2.1 The ash separation system is operated within limits of manufacturer's specifications to meet workplace requirements 2.2 The ash separation system is monitored to confirm performance is maintained within manufacturer's specifications to meet workplace requirements 2.3 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 System operating conditions are monitored to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to hazards and abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover ash separation operations	4.1 Operating log is maintained in accordance with workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 System operators are aware of system and related equipment status at completion of handover
5 Complete ash separation operations	5.1 Ash is collected and disposed according to company procedures 5.2 Maintenance requirements are identified and reported according to workplace reporting procedure 5.3 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information ash separation requirements
- select, fit and use personal protective clothing and/or equipment
- confirm status of equipment and that services are available
- conduct pre-start checks
- demonstrate start-up procedures for preparing and operating each equipment component in the system
- demonstrate safe chemical preparation and handling
- monitor the ash separation system including visual inspection and conducting tests to monitor characteristics such as:
 - moisture content of ash going out of the system
 - available storage capacity of ash holding area
 - filter performance and condition
- take corrective action in response to abnormal or unacceptable performance
- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of equipment status and operating requirements prior to completing handover
- record operating information
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to operation of the ash removal system and associated control measures.
- purpose and limitations of protective clothing and equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- properties of ash or soot and the impact on filter operation
- functions and operating principles of ash separation system and related equipment
- relationship between vacuum, filter speed and cake permeability
- operating requirements and parameters
- test methods
- common causes of variation and corrective action required
- procedures for responding to emergency situations including safe shutdown procedure
- handover and long term shut down and storage procedures

- environmental issues and controls
- procedures for containing and managing ash spills
- housekeeping standards for the work area
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • Conduct pre-start checks • Demonstrate start-up procedures • Demonstrate safe chemical preparation and handling • Monitor the ash separation system • Take corrective action in response to abnormal or unacceptable performance • Report and/or record corrective action • Demonstrate shift handover procedure • Record operating information • Maintain work area to meet housekeeping standards.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Ash separation system and related equipment • Relevant codes and standards • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <p>FDFOP2030A Operate a process control interface.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Equipment	Equipment may include: <ul style="list-style-type: none"> • grate cleaning system • ash and soot blowing equipment • ash removal system • pumps • weirs • tanks • belt and rotary filters • chemical addition systems • clarifier.
Hazards	Hazards typically include working with airborne particulates containing silica, chemical handling and use of hot water.
Ash separation	Ash separation may involve use of clarifiers followed by a filter, use of screens or by filter only.
Services	Services may include: <ul style="list-style-type: none"> • power and mill • general mill water supply • instrumentation air.
Chemicals	Chemicals may include: <ul style="list-style-type: none"> • caustic soda • flocculants.

Tests	<p>Typical test requirements include:</p> <ul style="list-style-type: none"> • pH • settling tests • clarity or turbidity.
Equipment status	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational.
Equipment operation and monitoring	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
Teamwork	<p>Work may require the ability to work within a team environment.</p>
Information systems	<p>Information systems may be print or screen based.</p>

Unit Sector(s)

Sugar Milling.

FDFSUG222A Operate a waste water treatment system

Modification History

New Unit based on *SUGPWWT2A Operate a waste water treatment system*.

Unit Descriptor

This unit describes the outcomes required to operate waste water treatment systems to comply with workplace requirements, trade waste agreements and site environmental authority.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the waste water treatment process for operation	1.1 Chemicals and test equipment are available and ready for use 1.2 Services are confirmed as available and ready for operation 1.3 Pre-operational checks are conducted 1.4 Instrumentation and test equipment is calibrated to manufacturer's specifications to meet workplace requirements 1.5 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Operate and monitor the waste water treatment process	2.1 The waste water system is started up according to company procedures 2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.3 Equipment is monitored to confirm operating condition 2.4 Waste water quality is monitored, tested and adjusted as required to meet water standards as defined by site licence 2.5 First flush systems are operated during rainfall events 2.6 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Water condition and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to hazards, out-of-specification test results and/or plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover waste water treatment system	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Waste water treatment operators are aware of system status and related equipment at completion of handover
5 Shutdown the waste water treatment system	5.1 The waste water treatment system is shut down according to workplace procedures 5.2 The waste water treatment system is prepared for storage in shut down mode 5.3 Maintenance requirements are identified and reported according to workplace reporting procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information to identify waste treatment requirements
- select, fit and use personal protective clothing and/or equipment
- confirm services are available and equipment is clean and ready for operation
- handle chemicals safely including follow correct preparation, handling and storage procedures and use of appropriate protective clothing and equipment
- conduct pre-start checks
- liaise with other work areas as required
- demonstrate wastewater system operating procedures in both manual and automatic modes
- demonstrate first flush system operating procedures in both manual and automatic modes
- monitor waste water system operation including monitoring:
 - chemical addition rates and residuals
 - temperatures
 - flow rates
 - equipment condition including calibration of instruments
 - tests as required
 - dissolved oxygen levels
 - pH levels
- conduct water quality tests
- take corrective action in response to out-of-specification results or non-compliance
- monitor supply and quality of waste water to and from the process
- report and/or record corrective action as required
- demonstrate emergency procedures to control chemical spills or other major incidents relevant to the workplace
- demonstrate shift handover procedure
- demonstrate an operational shut down procedure
- maintain workplace records to meet the requirements of the workplace and site environmental authority
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, environmental acts and policies, standards and codes of practice relating to work responsibilities including awareness of standards set out in site license arrangements
- safe work procedures including awareness of health and safety hazards related to waste water system operation and associated control measures

- hierarchy of hazard control measures
- purpose and limitations of protective clothing and equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- water cycles for trade waste, storm water and sewerage including sources and flow patterns
- purpose and standards required by environmental agreements and responsibilities
- company policy relating to environmental performance
- consequences of non-conformance
- waste characteristics and treatment methods
- sampling and test procedures as appropriate
- purpose of chemicals used
- purpose of first flush systems and their relationship with the wastewater treatment system
- operating requirements and parameters
- water quality sampling and test procedures including the purpose of test and safe use, care and storage of relevant test equipment, interpretation and recording of results
- typical causes of non-conforming water quality and corrective action required
- equipment purpose and basic operating principles of waste water treatment equipment and methods
- requirements of both operational and long term shut down conditions to ensure the equipment is left in a safe state for the period of the shutdown and to minimise any delays in future start up
- housekeeping standards for the work area
- reporting and recording systems including both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • handle chemicals safely • demonstrate wastewater system operating procedures • demonstrate first flush system operating procedures • conduct water quality tests • take corrective action in response to out-of-specification results or non-compliance • monitor supply and quality of waste water • report and/or record corrective action • demonstrate emergency procedures • demonstrate shift handover procedure • demonstrate an operational shut down procedure.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Waste water treatment systems and related chemicals • Test equipment • Relevant advice on environmental agreements • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, manufacturer's recommendations, legislative requirements, site licenses and trade waste service agreements and industrial awards and agreements. Legislation refers to environmental acts and regulations.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications
<p>Equipment</p>	<p>Equipment may include</p> <ul style="list-style-type: none"> • screens • pH correction • oil/grease skimmers • settling and treatment ponds • aeration units • lagoons • first flush systems and wetlands • pumps and valves.
<p>Equipment status</p>	<p>Confirming equipment status involves</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks • confirming that housekeeping standards are met • all safety guards are in place • equipment is operational.
<p>Hazards</p>	<p>Hazards typically include handling chemicals, manual handling and flammable gases.</p>
<p>Equipment operation and monitoring</p>	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
<p>Tests</p>	<p>Typical tests may include</p> <ul style="list-style-type: none"> • pH • solids • colour/turbidity • flow rate

	<ul style="list-style-type: none">• settling rate• settled volume• DO• BOD/COD levels.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling.

FDFSUG223A Operate a cooling water system

Modification History

New Unit based on *SUGPCWS2A Operate a cooling water system*.

Unit Descriptor

This unit describes the outcomes required to operate cooling towers or spray ponds to supply treated, cool water for factory requirements.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the cooling tower/s for operation	1.1 Tower cleaning procedures are followed and cleaning records completed 1.2 Chemicals are available and delivery systems are ready for operation 1.3 Make-up water supply is available and meets quality requirements 1.4 Pre-operational checks are conducted 1.5 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Start and monitor cooling tower	2.1 The cooling tower system is started according to workplace procedures and manufacturer's recommendations 2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.3 Equipment is monitored to confirm operating condition and cleanliness 2.4 Water quality is monitored, tested and adjusted as required 2.5 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Water condition and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to hazards, out-of-specification test results and/or abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Shutdown and clean the cooling water system	4.1 The cooling water system is cleaned according to workplace cleaning schedule and to meet legal requirements 4.2 The timing and sequencing of cooling water system shut down meets production requirements 4.3 Maintenance requirements are identified and reported according to workplace reporting procedure
5 Record information	5.1 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information on cooling water requirements
- select, fit and use personal protective clothing and/or equipment
- confirm status of equipment, that it is clean and ready for operation and services are available
- prepare and handle chemicals safely including following correct preparation, handling and storage procedures and use of appropriate protective clothing and equipment
- conduct pre-start checks including checking:
 - raw water supply
 - tower condition and cleanliness
 - spray and pond condition
 - all safety guards and covers are in place and operational
 - mechanical integrity of pumps, drives and fans
 - drains are closed
 - chemicals are available
- liaise with other work areas to advise of users of cooling system status
- demonstrate set up and start up procedures in both manual and automatic modes
- monitor cooling water system operation including visual inspections and conducting tests to monitor characteristics such as:
 - chemical addition rates and residuals
 - water quality
 - blow-down rate
 - temperatures
 - water distribution
 - signs of fouling and corrosion
 - equipment condition including fans, sprays and pumps
 - water level and make-up flow
- take corrective action in response to out-of-specification results
- report and/or record corrective action as required
- demonstrate procedure to clean and shut down cooling water system
- demonstrate use of emergency cooling water supply system
- maintain workplace records including cleaning records and chemical usage
- maintain work area to meet housekeeping standards

Required knowledge include:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- purpose and basic principles of evaporative cooling and water treatment in order to prevent corrosion and microbiological fouling
- cooling water system layout
- the effect of make-up water quality on blow down rates and fouling rates
- the impact of variables including cooling water failure and high water temperature and plant operation
- purpose of chemicals used
- consequences of system fouling and typical causes
- safe work procedures including awareness of health and safety hazards related to cooling water system operation and associated control measures
- hierarchy of hazard control measures
- purpose and limitations of protective clothing and equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- water quality test procedures
- typical causes of water contamination and corrective action required
- equipment purpose and basic operating principles of cooling water system and related equipment including pumps, valves, tower and fans and dosing system
- operating requirements and parameters
- cleaning methods and procedures
- procedures for operating the emergency cooling water system
- environmental issues and controls including those relating to chemical and/or container disposal and any overflow of the system to waters of the state
- requirements to liaise/advise related work areas
- housekeeping standards for the work area
- reporting and recording systems including both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of equipment • demonstrate set up and start up procedures • monitor cooling water system operation • undertake visual inspections and conduct tests to monitor cooling water system operation • clean and shut down cooling water system.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Cooling water system and related equipment • Chemicals • Relevant codes and standard Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:</p> <p>FDFOP2030A Operate a process control interface.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, manufacturer's recommendations, licensing requirements, codes of practice, legislative requirements, industrial awards and agreements and Australian Standard AS3666, parts I, II and III.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include: <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Hazards	Hazards typically include handling chemicals, manual handling, risks of working with warm water systems (<i>Legionella</i>).
Equipment	Equipment may include: <ul style="list-style-type: none"> • the tower • spray ponds • supply pump and return pump • chemical addition systems and blow down system. <p>Typically a number of cooling towers would be located on site. They may be integrated or stand-alone.</p>
Equipment operation and monitoring	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Tests	Typical tests may include: <ul style="list-style-type: none"> • pH • total dissolved solids (TDS) • conductivity • standard plate count (SPC) • <i>Legionella</i> • tests specific to chemicals used.
Teamwork	Work may require the ability to work within a team environment.

Information systems	Information systems may be print or screen based.
----------------------------	---

Unit Sector(s)

Sugar Milling.

FDFSUG224A Perform standard tests on cane samples

Modification History

New Unit based on *SUGPPST2A Perform standard tests*.

Unit Descriptor

This unit describes the outcomes required to analyse samples for cane payment and routine factory control. Tests are typically routine, repetitive procedures based on defined methods and require interpretation of results within clearly defined guidelines.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for testing	<ul style="list-style-type: none">1.1 Testing requirements and methods are identified1.2 Testing equipment is confirmed as available and fit for use1.3 Test chemicals and reagents are prepared and labelled as required by test method1.4 Samples are prepared as required by test method1.5 Pre-test checks are conducted and recorded according to workplace recording requirements
2 Conduct test	<ul style="list-style-type: none">2.1 Conduct test in accordance with test method and test schedule2.2 Identify and report atypical test results2.3 Record and communicate test results as required2.4 Follow procedures to repeat or validate results2.5 Clean, care for and store equipment as required2.6 Dispose of waste materials according to workplace procedure
3 Record test data in laboratory information system	<ul style="list-style-type: none">3.1 Results are entered into laboratory information systems according to workplace procedure3.2 Correct data entry errors3.3 Store and retrieve data in the laboratory information system3.4 Produce standard reports from laboratory information system

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information such as the test regime to identify test requirements and methods
- select, fit and use personal protective clothing and/or equipment
- confirm that necessary test equipment, chemicals and reagents are available and fit for purpose
- confirm or conduct routine equipment calibration according to workplace procedures, methods and legislative requirements
- handle chemicals safely including following correct handling and preparation procedures and use of appropriate protective clothing and equipment
- demonstrate test procedures according to test schedule and test method
- identify and report any out-of-specification results
- communicate test results to relevant personnel
- maintain and store chemicals, reagents and test equipment required
- sort, collect, treat, recycle or dispose of tested materials
- record information in the laboratory information system including the ability to retrieve, enter and edit data, generate standard reports and store information
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose of the test procedure including a basic understanding of the principles of the test method and of equipment used
- awareness of legislative requirements relating to cane payment tests
- terminology relating to the types of tests and related methods used
- safe work procedures including hazards associated with specific test procedures requirements such as working with chemicals and test equipment
- specific test methods/procedures
- requirements to communicate out-of-specification results
- typical causes of out-of-specification results and procedure for repeating the analysis
- laboratory information system recording and reporting requirements that meet legislative record keeping requirements and workplace requirements.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>

Unit Sector(s)

Sugar Milling

FDFSUG225A Collect and prepare samples

Modification History

New Unit based on *SUGPCPS2A Collect and prepare samples*.

Unit Descriptor

This unit describes the outcomes required to collect and prepare a range of samples taken during the sugar milling process. It typically applies to an operator who has primary responsibility for sampling and/or testing.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for sampling	1.1 Sampling requirements are identified 1.2 Sampling method is determined to suit sampling requirement 1.3 Confirm that sampling tools and containers are available and fit for use
2 Collect and prepare samples	2.1 Collect samples in accordance with sampling schedule 2.2 Identify and report atypical observations made during sampling 2.3 Store and handle samples to preserve characteristics of sample 2.4 Prepare samples as required by sampling procedure
3 Record sampling information	3.1 Record sampling information according to workplace requirements 3.2 Sample labelling procedures are followed according to workplace requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information such as the sampling plan to identify sampling requirements
- select, fit and use personal protective clothing and/or equipment
- confirm that necessary tools, containers and chemicals are available and fit for purpose
- handle chemicals safely including handling preservatives
- demonstrate handling and preparation procedures and use of appropriate protective clothing and equipment
- demonstrate correct manual handling and safe work practices
- demonstrate sampling collection and preparation procedures
- return plant to operating conditions as required
- identify and report any obvious non-conformance
- maintain and store chemicals, containers and sampling tools as required
- sort, collect, treat, recycle or dispose of sample material
- label samples as required
- record sampling information
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose of a sampling plan including an understanding of the nature of representative samples and importance of maintaining the integrity of samples
- awareness of cane analysis program requirements relating to sampling for cane payment tests
- terminology relating to the types of samples and related methods used
- safe work procedures including appropriate and safe manual handling, safe practices in accessing the sampling point, hazards associated with specific sampling requirements such as working with equipment under pressure, at high temperatures and storage of chemicals used
- specific sample collection and preparation methods/procedures
- sampling regimes implemented in response to special causes or non-conformance
- inspection points for sampling
- typical characteristics of materials sampled to and common contaminants
- sample disposal procedures
- labelling requirements
- reporting and recording systems

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • demonstrate sampling collection and preparation procedures • identify and report any obvious non-conformance • label and record samples.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Sampling schedule • Sampling tools, chemicals, containers and related equipment • Materials to be sampled • Sampling methods and procedures • Sample preparation equipment • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Sample labelling and recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • sampling schemes • schedules.
Cane sampling equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • forks • shovels • scrapers • sample containers • purpose-related tools.
Cane sample preparation	<p>Sample preparation may include:</p> <ul style="list-style-type: none"> • addition of preservatives • fibre preparation such as disintegrator and cutter-grinders • sub-sampling to give a representative sample from given set of samples.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling

FDFSUG226A Perform general drilling operations

Modification History

New Unit based on *SUGSPGD2A Perform general drilling operations*.

Unit Descriptor

This unit describes the outcomes required to carry out general drilling operations using a radial arm drill. This unit achieves part of the outcomes of *MEM07005B Perform general machining*. A person who has achieved competence in this MEM unit is recognised as competent in this sugar milling unit.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisites units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for drilling operations	<ul style="list-style-type: none">1.1 Drilling requirements are identified1.2 Materials to be drilled are collected1.3 Drilling equipment is set up for operation1.4 Pre-operational equipment checks are conducted1.5 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Operate drill to achieve specifications	<ul style="list-style-type: none">2.1 Machining parameters are set to meet job requirements2.2 Materials are positioned for drilling operation2.3 The drill is started, operated and shut down according to operating procedures and manufacturer's specification2.4 Work are checked against specification2.5 Non-conforming components are identified and corrected as required2.6 Basic routine maintenance is carried out as required2.7 The workplace meets housekeeping standards

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify drilling requirements - this may require interpretation of technical drawings or sketches
- select, fit and use personal protective clothing and/or equipment
- collect and prepare materials according to job and equipment requirements - this may involve basic marking out
- confirm status of equipment, that safety guards are in place, equipment is fit for operation and required services are available
- set up, operate and shut down drilling equipment according to workplace procedures to meet job specification
- monitor and adjust process and equipment during operation to stay within specification
- confirm that components meet specification - this may involve the use of measuring instruments
- maintain work area to meet housekeeping standards.

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- relevant site operating procedures and practices
- purpose and basic operating principles of drilling and accessory equipment including awareness of equipment operating capacities
- care, maintenance and storage of drill parts and accessories
- scope to adjust machining parameters and related effect on outcome
- the impact of machining parameters and materials used on tool life
- safe work procedures including awareness of health and safety hazards related to the operation of the drill and related equipment
- housekeeping standards for the work area.

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify drilling requirements • select, fit and use personal protective clothing and/or equipment • collect and prepare materials according to job and equipment requirements • confirm status of equipment • set up, operate and shut down drilling equipment • monitor and adjust process and equipment • confirm that components meet specification.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Drill and related equipment • Relevant measuring instrumentation • Materials to be drilled • Drawings, templates and specifications as required • Operating procedures and related advice on equipment/instrumentation operation • Personal protective clothing and equipment • Housekeeping standards and procedures.
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Drilling operations	<p>Work is undertaken to pre-determined specifications.</p> <p>Drills are not CNC (Computer Numerical Control) machines.</p> <p>Typical drilling operations include</p> <ul style="list-style-type: none"> • drilling and tapping.
Machining parameters	<p>Machining parameters are typically given and include</p> <ul style="list-style-type: none"> • speeds • feeds • stops • coolant • cutting lubricants.
Measuring instrumentation	<p>Measuring instrumentation may include</p> <ul style="list-style-type: none"> • callipers • dividers • verniers • micrometers.
Pre-operational checks	<p>Pre-operational checks may include</p> <ul style="list-style-type: none"> • confirming that safety guards are in place • equipment is operational • other pre-start checks as required by workplace procedure.
Teamwork	Work may require the ability to work within a team environment.

Unit Sector(s)

Sugar Milling

FDFSUG227A Perform general lathe operations

Modification History

New Unit based on *SUGSPGL2A Perform general lathe operations*.

Unit Descriptor

This unit describes the outcomes required to carry out general lathe operations. A person who has achieved competence in *MEM07005B Perform general machining* or equivalent is recognised as competent in this sugar milling unit.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for lathe operations	<ul style="list-style-type: none">1.1 Machining requirements are identified1.2 Materials are to be machined collected1.3 Lathe equipment is set up for operation1.4 Pre-operational equipment checks are conducted1.5 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Operate lathe to achieve specifications	<ul style="list-style-type: none">2.1 Machining parameters are set to meet job requirements2.2 Materials are accurately positioned for lathe operation2.3 The lathe is started, operated and shut down according to operating procedures and manufacturer's specification2.4 Work is checked against specification2.5 Non-conforming components are identified and corrected as required2.6 Basic routine maintenance is carried out as required2.7 The workplace meets housekeeping standards

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills includes:

Ability to:

- identify lathe requirements which may require interpretation of technical drawings or sketches
- select, fit and use personal protective clothing and/or equipment
- confirm status of equipment, that safety guards are in place, equipment is fit for operation and required services are available
- collect and position materials according to job and equipment requirements which may require locating datum
- set up, operate and shut down equipment according to workplace procedures to meet job specification
- monitor and adjust process and equipment during operation to stay within specification
- confirm that components meet specification - this may involve the use of measuring instruments
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- relevant site operating procedures and practices
- purpose and basic operating principles of lathe and accessory equipment including awareness of equipment operating capacities
- care, maintenance and storage of tool parts and accessories
- scope to adjust machining parameters and related effect on outcome
- the impact of machining parameters and materials used on tool life
- safe work procedures including awareness of health and safety hazards related to the operation of the lathe and related equipment
- housekeeping standards for the work area

Unit Sector(s)

Sugar Milling

FDFSUG230A Undertake forming, bending and shaping

Modification History

New Unit based on *SUGSFBS2A Undertake forming, bending and shaping*.

Unit Descriptor

This unit describes the outcomes required to carry out forming, bending and shaping operations. A person who has achieved competence in *MEM05010B Apply fabrication, forming and shaping* or equivalent is recognised as competent in this sugar milling unit.

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisites units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for forming, bending and shaping to meet specifications	1.1 Forming, bending and shaping requirements are identified 1.2 The equipment is set up and adjusted to achieve required outcomes 1.3 Simple templates are prepared to meet outcome specifications 1.4 Pre-operational equipment checks are conducted 1.5 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures
2 Operate forming, bending and shaping equipment to achieve required outcome	2.1 Equipment is started, operated and shut down according to operating procedures and manufacturer's specification 2.2 Materials are accurately positioned in the machine/equipment 2.3 Equipment is adjusted as required to achieve required outcomes 2.4 The workplace meets housekeeping standards
3 Form, bend and shape material	3.1 Material is levelled, straightened, rolled, pressed or bent to achieve required outcomes 3.2 Material is formed and shaped to size to meet specifications 3.3 Final form/shape is checked for compliance to specification 3.4 Non-conforming shapes are identified and corrected as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify forming, bending and shaping requirements - this may require interpretation of technical drawings or sketches
- select, fit and use personal protective clothing and/or equipment
- confirm status of equipment, that safety guards are in place, equipment is fit for operation and required services are available
- mark out and produce simple templates - this involves producing sheet metal templates developed and cut to the required size
- position or feed material according to equipment requirements
- set up, adjust, operate and shut down equipment according to workplace procedures
- produce formed and/or shaped material to meet job specification
- confirm that the formed and/or shaped material meets specification - this may involve the use of templates and simple measuring instruments
- take corrective action in response to out-of-tolerance results
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- relevant site operating procedures and practices
- purpose and basic operating principles of forming, bending and shaping equipment including awareness of equipment operating capacities
- the effect of heating materials on the forming and bending process
- scope to adjust equipment parameters and related effect on outcome
- safe work procedures including awareness of health and safety hazards related to the operation of forming, bending and shaping equipment
- housekeeping standards for the work area

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify forming, bending and shaping requirements • select, fit and use personal protective clothing and/or equipment • mark out and produce simple templates • position or feed material according to equipment requirements • set up, adjust, operate and shut down equipment • produce formed and/or shaped material to meet job specification • confirm that the formed and/or shaped material meets specification
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Forming, bending and shaping equipment • Relevant measuring instrumentation • Materials to be formed, bent and/or shaped • Drawings, templates and specifications as required • Operating procedures and related advice on equipment/instrumentation operation • Personal protective clothing and equipment • Housekeeping standards and procedures
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Range of shapes and products</p>	<p>The range of shapes and products formed may include</p> <ul style="list-style-type: none"> • pipes • cylinders • cones • angles • ductwork • tubular shapes including hand rails and pipes.
<p>Materials</p>	<p>Materials may include ferrous, non-ferrous and non-metallic substances.</p>
<p>Forming processes</p>	<p>Forming processes may be hot or cold.</p>
<p>Tools and equipment</p>	<p>Tools and equipment may include</p> <ul style="list-style-type: none"> • presses • shapers • benders • drop hammers.
<p>Measuring instrumentation</p>	<p>Measuring instrumentation may include</p> <ul style="list-style-type: none"> • dividers • trammels • rulers.
<p>Pre-operational checks</p>	<p>Pre-operational checks may include</p> <ul style="list-style-type: none"> • confirming that safety guards are in place • equipment is operational • other pre-start checks as required by workplace procedure.

Teamwork	Work may require the ability to work within a team environment.
-----------------	---

Unit Sector(s)

Sugar Milling

FDFSUG231A Undertake simple fabrication

Modification History

New Unit based on *SUGSUSF2A Undertake simple fabrication*.

Unit Descriptor

This unit describes the outcomes required to carry out fabrication associated general jobbing work. A person who has achieved competence in *MEM05011C Assemble, fabricate components* or equivalent is recognised as competent in this sugar milling unit.

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for assembly of parts	1.1 Fabrication requirements are identified 1.2 Appropriate fabrication method is selected 1.3 Required materials and equipment are identified and collected 1.4 Materials are prepared for fabrication
2 Assemble fabricated components	2.1 Components are correctly positioned 2.2 Component positioning is checked against specification 2.3 Components are fixed using appropriate fixing method 2.4 Assembly is checked to confirm conformance to specification

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- identify fabrication requirements - this may involve interpretation of technical drawings and sketches or be based on measurements
- select, fit and use personal protective clothing and/or equipment
- identify and obtain the required components, equipment and measuring instrumentation
- use appropriate equipment to position components ready for joining
- check accuracy of component position using measuring instruments as required
- prepare ends for joining
- identify and correct unacceptable component assembly where appropriate
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- purpose and basic principles of fabrication including knowledge of methods used to assemble and fix components and basic understanding of the effects of distortion on fabricated components
- safe work procedures including awareness of health and safety hazards
- use of equipment to position components to meet assembly requirements
- use of instrumentation to achieve accurate measures
- methods used to prepare ends for joining
- appropriate joining method
- typical defects that can occur given the assembly and fabrication methods used
- options for correcting out-of-tolerance fabrication
- housekeeping standards for the work area

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify fabrication requirements • select, fit and use personal protective clothing and/or equipment • identify and obtain the required components, equipment and measuring instrumentation • check accuracy of component position • prepare ends for joining • identify and correct unacceptable component assembly where appropriate
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Fabrication equipment • Relevant measuring instrumentation • Components to be fabricated • Drawings, sketches and specifications as required • Operating procedures and related advice on equipment/instrumentation operation • Personal protective clothing and equipment • Housekeeping standards and procedures
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
<p>Fabricated components</p>	<p>Components may include general fabricated components in plate, pipe and section or sheet to form 90° or 45° angles or angles formed using pre-constructed jigs.</p> <p>Typical fixing/joining methods are by welding or screwing.</p>
<p>Materials for fabrication</p>	<p>Materials may include ferrous, non-ferrous and non-metallic substances.</p>
<p>Measuring instrumentation</p>	<p>Measuring instrumentation may include</p> <ul style="list-style-type: none"> • squares • line levels • rulers • spirit levels.
<p>Teamwork</p>	<p>Work may require the ability to work within a team environment.</p>

Unit Sector(s)

Sugar Milling

FDFSUG301A Drive a master-slave locomotive

Modification History

New Unit based on *SUGTDMS3A Drive a master-slave locomotive*.

Unit Descriptor

This unit describes the outcomes required to drive a master-slave locomotive.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFSUG206A Drive a cane locomotive

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare and connect the slave locomotive for operation	1.1 Personal protective clothing and equipment is selected and used 1.2 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures 1.3 Workplace records are checked to confirm operational status 1.4 The remote control system is set in accordance with workplace procedures and manufacturer's specifications 1.5 Slave locomotives are prepared and required operating mode is selected 1.6 Pre-start checks are conducted
2 Prepare and connect the master locomotive	2.1 Confirm that system is in link mode 2.2 Check control system and conduct system self-test to confirm that the system is operating effectively 2.3 Confirm braking system is operating effectively 2.4 Total control of the system is established and confirmed 2.5 Pre-departure tests are conducted to confirm control system and locomotive equipment meets operating standard 2.6 Front and rear train consists are coupled safely to form one train
3 Start, operate and monitor locomotive	3.1 Master-slave locomotives are operated in accordance with workplace procedures and manufacturer's specifications to meet transport requirements 3.2 Condition of locomotive equipment is monitored to maintain optimum operating condition and identify faults or defects 3.3 Faults are assessed to determine risk of injury to personnel or damage to equipment 3.4 Corrective action is taken in accordance with workplace procedures in response to OHS hazards, abnormal or unacceptable equipment condition or performance 3.5 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations 3.6 Housekeeping standards are maintained
4 Prepare for shift handover	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Changeover drivers are aware of locomotive and related equipment status, track conditions and incidents at completion of handover
5 Shut down locomotive	5.1 Shutdown procedures for master and slave locomotives are followed according workplace procedures

ELEMENT	PERFORMANCE CRITERIA
6 Complete work	<p>5.2 Shut down sequence is confirmed and complete and locomotives are secured in accordance with workplace procedures</p> <p>6.1 Workplace information is recorded according to workplace recording requirements</p> <p>6.2 Plant and equipment are cleaned and stored/parked as required</p> <p>6.3 Defects and faults are identified and reported according to workplace procedures</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information such as running slips to identify driving requirements
- select, fit and use personal protective clothing and/or equipment
- prepare the master and slave locomotive systems and operating settings including following procedures to prepare each unit, conducting visual inspections of equipment, pre-start checks and warm up procedures, and pre-departure checks and coupling of train components
- operate the master-slave locomotive and associated equipment according to work procedure to achieve work requirements including demonstrating full control of both locomotives
- monitor locomotive and equipment condition including monitoring operating status of both locomotives and related equipment and monitoring condition of bins in the rake
- take corrective action in response to abnormal or unacceptable performance of control systems or operating equipment
- assess equipment faults to determine appropriate corrective action
- follow procedure to notify a locomotive breakdown
- communicate with the traffic officer and rail personnel as required
- use appropriate communication methods and equipment
- maintain workplace records
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to driving a locomotive and associated control measures.
- purpose and limitations of protective clothing and equipment
- functions and basic operating principles of master and slave locomotive operating equipment
- purpose of the master and slave locomotives in controlling the train and operating principles of all instruments and controls
- safe operating capacities of equipment
- typical faults that can occur when operating a locomotive in a master-slave configuration including the ability to assess severity and risk in order to determine appropriate corrective action
- communication procedures, methods and equipment including an understanding of warning devices and signals
- procedures for responding to emergency situations including use of two-way radio system to report emergencies
- environmental issues and controls

- requirements to liaise/advise related work areas and personnel
- housekeeping standards
- reporting and recording systems and responsibilities

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • prepare the master and slave locomotive systems and operating settings • operate the master-slave locomotive and associated equipment • monitor locomotive and equipment condition • take corrective action in response to abnormal or unacceptable performance of control systems or operating equipment • assess equipment faults to determine appropriate corrective action • follow procedure to notify a locomotive breakdown • communicate with the traffic officer and rail personnel as required
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Master and slave locomotives and related equipment such as brake vans • Cane railway system • Relevant services and equipment required to carry out inspections, checks and monitoring • Workplace information including running slips and daily schedule, to advise of driving requirements • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures
Method of assessment	Other units of competency relevant to the work role should be assessed in conjunction with this unit.
Guidance information for assessment	To ensure consistency in one's performance, competency

	should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.
Workplace information	Workplace information can include <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • manufacturer's specifications.
Workplace documentation	Documentation and recording requirements may include: <ul style="list-style-type: none"> • marshalling strategy • documentation relating to the traffic schedule such as run slips • loco running sheets and log books.
Cane transport networks	Cane transport network features and their characteristics may include: <ul style="list-style-type: none"> • main and branch lines • yards, sidings • loops • dump points • pads.
Information systems	Information systems may be print or screen based.
Master-slave locomotive equipment	A master-slave configuration describes any mechanism and operating system that allows control of one motive power unit by another motive power unit which forms part of the same train. The slave or remote unit is not operated freely, unattached from the master or lead locomotive. Master-slave locomotives may be used within a yard for the purpose of marshalling and shunting and on running lines.
Hazards	Hazards include working with moving machinery, manual

	handling and working in exposed conditions.
Teamwork	Work may require the ability to work within a team environment.
Communication methods	Communication methods include: <ul style="list-style-type: none">• use of two-way radios used in accordance with workplace requirements and state authority protocols and• hand and audible signalling.

Unit Sector(s)

Sugar Milling

FDFSUG302A Control cane traffic movements

Modification History

New Unit based on *SUGTCCT3A Control cane traffic movements*.

Unit Descriptor

This unit describes the outcomes required to control movements on the cane railway delivery/transport network to ensure safe train separation, efficient running of the traffic system and continuous, fresh supply of cane to the mill. It may also include controlling truck movements.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for operation	<p>1.1 Participate in shift handover process to identify status and occurrences affecting traffic control</p> <p>1.2 Confirm status of traffic activities on the cane railway network and in the empty and full yards</p> <p>1.3 Establish communication with drivers, crews and other relevant personnel</p> <p>1.4 Housekeeping standards are maintained</p>
2 Implement schedule	<p>2.1 Train movement instructions are issued to maintain safe operations</p> <p>2.2 The communication system is used to provide timely information to relevant personnel</p>
3 Issue train clearances to maintain train separation	<p>3.1 Clearance instructions are issued</p> <p>3.2 Point-to-point clearances are issued</p>
4 Maintain train separation	<p>4.1 Access to the rail network is controlled, including access by drivers, navvies, contractors, harvesting crews and other third parties</p> <p>4.2 Train passing is arranged and co-ordinated in accordance with workplace procedures</p> <p>4.3 Transportation movements are managed using rail network procedures and systems</p>
5 Maintain efficient running	<p>5.1 Transport departures and arrivals are co-ordinated and adjusted</p> <p>5.2 Train running times are monitored and opportunities to improve efficiency are identified and acted upon</p> <p>5.3 Train loads are maximized within load limits</p> <p>5.4 Train passing is managed to minimize delays and maintain safe operations</p> <p>5.5 Overall operating efficiencies are monitored and optimised</p>
6 Complete traffic control operations	<p>6.1 Train movements and related workplace information is recorded according to workplace recording requirements</p> <p>6.2 Recording systems and advice reflects accurate information at the time of handover</p> <p>6.3 Handover is carried out according to workplace procedure</p> <p>6.4 Traffic controllers are aware of system and related equipment status at completion of handover</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- receive information on status of all traffic movements and occurrences on the cane rail network
- confirm status of traffic movements including location of all trains and maintenance crews
- operate communication system to provide relevant, timely instructions and advice to all relevant personnel including factory, transportation personnel, farmers and harvester operators
- demonstrate procedures for controlling train movements including issuing clearances, arranging and co-ordinating train crossings, arrivals and departures
- apply procedure to calculate efficient loads within equipment capacities and rail system tolerances
- use systems and tools such as mimic boards, control sheets and train graphs to monitor and maintain safe operations and schedules
- maintain workplace records in a timely manner so they reflect up-to-date information including the use of mimic boards
- prepare for and conduct handover including ensuring that all records are accurate and updated and that incoming traffic controllers are aware of traffic system status including hazards or incidents

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and industry codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to work responsibilities and associated control measures
- factors that impact on the scheduling of traffic movements including an understanding of the relationship between these factors
- procedures for co-ordinating locomotive and/or truck departures/arrivals and train crossings
- procedures for recording information including operating procedures for using mimic boards and physical records such as control sheets
- relevant personnel and factory departments to be notified of traffic movement instructions and advice including an understanding of the information relevant to each group/person
- communication systems, protocols and standards when using 2-way radios and handheld transceivers
- detailed information on maintaining mimic board information
- awareness of conditions that are unusual or unplanned and related options for response including an understanding of implications of different options for maintaining safe and efficient traffic movement
- factors that impact on efficient performance including:

- labour
- crib breaks
- holding locos
- waiting time (last bin)
- fuel use
- loads
- scheduled cleaning and programmed maintenance

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • receive information on status of traffic movements and occurrences • confirm status of traffic movements • operate communication systems to provide advice to personnel • demonstrate procedures for controlling train movements • apply procedure to calculate efficient loads • maintain workplace records • prepare for and conduct handover
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Transport system and associated information and communication systems and equipment • Relevant codes of practice and industry standards • Workplace information required to determine and monitor safe traffic movements on the cane transport network. This includes provision of a traffic schedule against which to assess, adjust and monitor work progress against schedule • Operating procedures related to work responsibilities • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of Practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.</p>
<p>Workplace information</p>	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • master schedule • daily schedule • bin allotments • mill crushing rate • harvesting roster • train running slips • maintenance advice
<p>Network systems</p>	<p>Network systems can include</p> <ul style="list-style-type: none"> • block sections and check points • multiple trains in block • mimic board • train graphs • control sheets.
<p>Traffic movement information</p>	<p>This is done at commencement of shift and may include use of verbal advice, log books, incident reports, mimic boards and related documentation.</p>
<p>Factors impacting on traffic scheduling</p>	<p>Factors can include:</p> <ul style="list-style-type: none"> • mill status and current crush rate • next planned mill stop • timing of crib breaks • availability of empty bins, taking into account mixed bin fleet if appropriate • availability of full-yard space • availability of empty-yard space

	<ul style="list-style-type: none"> • contractor/harvester rates • siding status • track infrastructure condition • rolling stock condition • transport schedule amendments
Workplace information	<p>Information provided includes</p> <ul style="list-style-type: none"> • instructions • running information including schedule changes for pickups and deliveries • maintenance status including location of non-operational locomotives and damaged bins • other hazards and all other information affecting cane transportation operations
Teamwork	<p>Work may require the ability to work within a team environment.</p>
Communication methods	<p>Communication methods include use of two-way radios used in accordance with workplace requirements and state authority protocols.</p>

Unit Sector(s)

Sugar Milling

FDFSUG303A Adjust cane delivery schedules to meet daily milling requirements

Modification History

New Unit based on *SUGTASD3A Adjust schedule(s) to meet daily workplace requirements*.

Unit Descriptor

This unit describes the outcomes required to adjust schedules to meet daily sugar mill operational requirements

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify daily factory requirements for cane supply	1.1 Workplace information are accessed 1.2 Factors that impact on cane supply are identified
2 Calculate zero hour	2.1 Zero hour is calculated to take account of daily variables 2.2 Relevant personnel are informed of zero hour
3 Amend daily bin allotment and bin allocations	3.1 Bin allotment requirements are determined 3.2 Daily bin allotment and bin allocations are calculated based on amended requirements 3.3 Schedule for bin allocation and loco runs to harvest groups is amended to meet requirements 3.4 Amended schedule is documented and submitted for approval in accordance with workplace procedures
4 Monitor supply and demand to maintain and adjust schedule	4.1 Transport departures and arrivals are co-ordinated and adjusted to meet schedule requirements 4.2 Regular two-way communication with locomotive drivers and harvester operators is used to maintain schedules and safe operations 4.3 Cane stock and deliveries (supply) are monitored against schedule 4.4 Variations between supply and schedule are identified and corrective action is taken 4.5 Resource implications of amended schedules are identified and resources are accessed to meet requirements 4.6 Progress against schedule is monitored

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- apply workplace information to calculate zero hour according to workplace procedure
- communicate zero hour to affected personnel
- amend daily schedule bin allotments and bin allocations to take account of variables affecting achievement of schedule
- monitor work progress and respond to update schedule as required
- respond to unplanned events to minimise disruption and optimise efficiency
- use communication systems and equipment to inform affected personnel of changes to schedule
- confirm that resources and personnel are available to meet amended schedule and if not, take action to secure requirements
- demonstrate workplace procedures for co-ordinating transport departures and arrivals to meet schedule requirements
- demonstrate workplace procedures for reallocating cane bin deliveries to harvesters in cases of factory/harvester breakdowns
- maintain workplace records and submit amendments for approval as required by workplace procedures

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to work responsibilities and associated control measures
- work schedule planning including the inter-relationships such as:
 - planned crushing rate
 - current stocks (yards and sidings)
 - yard and siding capacities
 - average bin weights
 - harvesting rosters
 - cut-to-crush delays
 - loco loads and performance
 - bin fleet size and availability
 - rail network capacity
 - labour requirements and availability
- purpose and procedure for calculating zero hour
- purpose and use of a computerized traffic systems

- factors that can affect the calculation of zero hour including:
 - factory performance including planned and unplanned mill stops
 - weather
 - transport system delays including locomotive/motor truck breakdown
 - availability of empty bins, taking into account mixed bin fleet if appropriate
 - availability of full-yard space
 - availability of empty-yard space
 - siding status
 - track infrastructure condition
 - harvester failure
- relevant personnel and factory departments to be notified of zero hour and related amendments to schedule including an understanding of the information relevant to each group/person
- standard allocation of bins to a group and procedure for adjusting allocations
- communication systems, protocols and standards when using 2-way radios
- awareness of conditions that are unusual or unplanned and related options for response including an understanding of implications of different options for maintaining the continuous and efficient supply of cane
- factors that impact on efficient performance such as:
 - labour
 - crib breaks
 - holding locos
 - waiting time (last bin)
 - fuel use
 - loads
 - scheduled cleaning and programmed maintenance
- relevant OH&S and environmental requirements
- procedures for responding to emergency situations

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Unit Sector(s)

Sugar Milling

FDFSUG304A Operate a boiler intermediate

Modification History

New Unit based on *SUGPOBI3A Operate a boiler - intermediate*.

Unit Descriptor

This unit describes the outcomes required for continuous and short term operation of an intermediate boiler and for start-up and shut down after a prolonged break. This unit is based on the boiler competency standards from the Worksafe Australia Standards for Users and Operators of Industrial Equipment NOHSC 1006 (2001). It should be selected where boiler operation is a certificated occupation

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the boiler for operation	1.1 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures 1.2 The boiler is purged according to workplace procedure 1.3 Services are confirmed and available 1.4 Pre-operational checks are conducted to confirm operational status of boiler and related equipment
2 Start and monitor boiler operation	2.1 The boiler is started and brought on line safely according to workplace procedures and manufacturer's specifications 2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.3 Equipment is monitored to confirm operating condition 2.4 Water quality is tested and adjusted as required 2.5 Sluice water is circulated to remove ash from boiler according to specification 2.6 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to Hazards, out-of-specification test results and/or plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover boiler operations	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Boiler operators are aware of boiler status and related equipment at completion of handover
5 Carry out an operational shutdown	5.1 The boiler is shut down according to workplace procedures and manufacturer's recommendations 5.2 Maintenance requirements are identified and reported according to workplace reporting procedure
6 Shutdown the boiler and prepare for an internal inspection	6.1 The boiler is shut down according to workplace procedures and manufacturer's recommendations 6.2 The boiler is cleaned internally and externally according to workplace procedures and manufacturer's recommendations 6.3 Valves and fittings are removed in preparation for maintenance
7 Store boiler in	7.1 The boiler is stored in the appropriate storage mode according to

ELEMENT	PERFORMANCE CRITERIA
shutdown mode	workplace procedures and manufacturer's recommendations
8 Record information	8.1 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information on combustion and operating requirements
- select, fit and use personal protective clothing and/or equipment
- identify and report hazards and potential hazards in the work area
- confirm status of boiler and related equipment including the fuel supply system, ash removal and services
- demonstrate purge procedure
- conduct pre-start checks including checking:
 - feed water supply and system
 - fuel supply system
 - fans and dampers
 - inspection doors
 - boiler valves - operation and position
 - combustion air supply system
 - boiler water level
- liaise with other work areas to advise of boiler status
- demonstrate set up and start up procedures in both manual and automatic modes
- monitor boiler operation including monitoring:
 - steam reticulation line pressure
 - boiler steam pressure
 - steam supply/usage
 - condensate tank level
 - bagasse levels
 - feedwater levels and pressure
 - fuel levels
 - boiler load
 - water quality
 - furnace pressure
 - ash pit level and removal system
 - balance draft system
 - superheater temperature
 - drum levels
 - equipment condition
- conduct water quality test
- take corrective action in response to out-of-specification results

- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of all relevant issues prior to completing handover
- demonstrate procedure to take boiler off line
- demonstrate procedure to shut down and clean the boiler
- demonstrate removal of valves and fittings to prepare the boiler for inspection
- demonstrate procedure to store boiler
- demonstrate emergency procedures and related re-start including use of emergency fuel supply
- maintain workplace records
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to boiler operation and associated control measures
- purpose and limitations of protective clothing and equipment
- hierarchy of hazard control measures
- duty of care of the boiler operator
- purpose and basic principles of combustion and boiler operation including principles of heat transfer and properties of steam
- boiler system layout and steam cycle
- the purpose of purging a boiler
- the effect of fuel quality on boiler operation
- impact of ash removal on efficient boiler operation and impact of sluice water flow
- relationship to other processes including an understanding of the impact of sudden load changes on boiler pressure and plant operation
- purpose and limitations of protective clothing and equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- water quality test procedures
- typical causes of water/condensate contamination and corrective action required
- equipment purpose and basic operating principles including high pressure feed pumps, fuel supply system and dual fuel systems as required by boiler type
- operating requirements and parameters
- procedures for responding to emergency situations including safe shutdown procedure
- handover and long term shut down and storage procedures
- cleaning procedures and grate dumping
- environmental issues and controls including an understanding of sluice water usage
- requirements to liaise/advise related work areas
- housekeeping standards for the work area

- reporting and recording systems including both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p> <p>Boiler operators holding a ticket in Intermediate Boiler Operation from the relevant state regulatory authority will be granted equivalence in this unit SUG305A Operate a boiler - intermediate for the purpose of issuing a qualification.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • confirm status of boiler and related equipment including the fuel supply system, ash removal and services • demonstrate purge procedure • conduct pre-start checks • liaise with other work areas to advise of boiler status • demonstrate set up and start up procedures in both manual and automatic modes • conduct water quality test • take corrective action in response to out-of-specification results • report and/or record corrective action • demonstrate emergency procedures and related re-start
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Boiler and related equipment. This includes fuel supply, grate cleaning and ash removal systems • Relevant codes and standards • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Workplace information recording systems, requirements and procedures
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit. This</p>

	may include: <ul style="list-style-type: none">• FDFOP2030A Operate a process control interface
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.</p>
Codes of Practice	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.</p>
Workplace information	<p>Workplace information can include</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications
Boilers [intermediate]	<p>Boiler (intermediate) with any or all of the following features:</p> <ul style="list-style-type: none"> • modulating combustion air supply • modulating heat source • superheaters and • economisers. <p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems</p>
Hazards	<p>Hazards typically include</p> <ul style="list-style-type: none"> • working around hot surfaces, • manual handling, • steam, hot gasses and fuel leaks
Services	<p>Services can include</p> <ul style="list-style-type: none"> • fuel supply of bagasse, coal, gas, oil or other fuel types, steam, • mill and instrumentation air, • cooling water, • general mill water supply and • cooling water.
Equipment status	<p>Confirming equipment status involves:</p> <ul style="list-style-type: none"> • conducting relevant pre-start checks

	<ul style="list-style-type: none">• confirming that cleaning standards are met• all safety guards and manholes are in place and• equipment is operational
Cleaning	Internal cleaning is carried out in accordance with statutory requirements regarding confined space entry and does not typically include chemical cleaning.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling

FDFSUG305A Operate a boiler advanced

Modification History

New Unit based on *SUGPOBA3A Operate a boiler - advanced*.

Unit Descriptor

This unit describes the outcomes required for continuous and short term operation of an advanced boiler and for start-up and shut down after a prolonged break. Boiler operators holding a ticket in Advance Boiler Operation from the relevant state regulatory authority will be granted equivalence in this unit *FDFSUG306A Operate a boiler - advanced* for the purpose of issuing a qualification

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the boiler for operation	1.1 Health and safety hazards/maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures 1.2 The boiler is purged according to workplace procedure 1.3 Services are confirmed and available 1.4 Pre-operational checks are conducted to confirm operational status of boiler and related equipment
2 Start and monitor boiler operation	2.1 The boiler is started and brought on line safely according to workplace procedures and manufacturer's specifications 2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements 2.3 Equipment is monitored to confirm operating condition 2.4 Water quality is tested and adjusted as required 2.5 Sluice water is circulated to remove ash from boiler according to specification 2.6 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to Hazards, out-of-specification test results and/or plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover boiler operations	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Boiler operators are aware of boiler status and related equipment at completion of handover
5 Carry out an operational shutdown	5.1 The boiler is shut down according to workplace procedures and manufacturer's recommendations 5.2 Maintenance requirements are identified and reported according to workplace reporting procedure
6 Shutdown the boiler and prepare for an internal inspection	6.1 The boiler is shut down according to workplace procedures and manufacturer's recommendations 6.2 The boiler is cleaned internally and externally according to workplace procedures and manufacturer's recommendations 6.3 Valves and fittings are removed in preparation for maintenance
7 Store boiler in	7.1 The boiler is stored in the appropriate storage mode according to

ELEMENT	PERFORMANCE CRITERIA
shutdown mode	workplace procedures and manufacturer's recommendations
8 Record information	8.1 Workplace information is recorded according to workplace recording requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information on combustion and operating requirements
- select, fit and use personal protective clothing and/or equipment
- identify and report hazards and potential hazards in the work area
- confirm status of boiler and related equipment including the fuel supply system, ash removal and services
- demonstrate purge procedure
- conduct pre-start checks including checking:
 - feed water supply and system
 - fuel supply system
 - fans and dampers
 - inspection doors
 - boiler valves - operation and position
 - combustion air supply system
 - boiler water level
- liaise with other work areas to advise of boiler status
- demonstrate set up and start up procedures in both manual and automatic modes
- monitor boiler operation including monitoring:
 - steam reticulation line pressure
 - boiler steam pressure
 - steam supply/usage
 - condensate tank level
 - bagasse levels
 - feedwater levels and pressure
 - fuel levels
 - boiler load
 - water quality
 - furnace pressure
 - ash pit level and removal system
 - balance draft system
 - superheater temperature
 - drum levels
 - equipment condition
- conduct water quality test
- take corrective action in response to out-of-specification results

- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of all relevant issues prior to completing handover
- demonstrate procedure to take boiler off line
- demonstrate procedure to shut down and clean the boiler
- demonstrate removal of valves and fittings to prepare the boiler for inspection
- demonstrate procedure to store boiler
- demonstrate emergency procedures and related re-start including use of emergency fuel supply
- maintain workplace records
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to boiler operation and associated control measures
- purpose and limitations of protective clothing and equipment
- hierarchy of hazard control measures
- duty of care of the boiler operator
- purpose and basic principles of combustion and boiler operation including principles of heat transfer and properties of steam
- boiler system layout and steam cycle
- the purpose of purging a boiler
- the effect of fuel quality on boiler operation
- impact of ash removal on efficient boiler operation and impact of sluice water flow
- relationship to other processes including an understanding of the impact of sudden load changes on boiler pressure and plant operation
- purpose and limitations of protective clothing and equipment
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- water quality test procedures
- typical causes of water/condensate contamination and corrective action required
- equipment purpose and basic operating principles including high pressure feed pumps, fuel supply system and dual fuel systems as required by boiler type
- operating requirements and parameters
- procedures for responding to emergency situations including safe shutdown procedure
- handover and long term shut down and storage procedures
- cleaning procedures and grate dumping
- environmental issues and controls including an understanding of sluice water usage.
- requirements to liaise/advise related work areas
- housekeeping standards for the work area

- reporting and recording systems including both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.</p>
Codes of Practice	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice.</p>
Workplace information	<p>Workplace information can include</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications
Boilers [advanced]	<p>Boiler (advanced) covers boilers with any or all of the following features:</p> <ul style="list-style-type: none"> • modulating combustion air supply • modulating heat source • superheaters • and economisers <p>However advanced boilers must also have multiple fuel types which may be fired simultaneously during normal operation. This does not include boilers that change fuel type during start sequence.</p>
Equipment operation and monitoring	<p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
Hazards	<p>Hazards typically include</p> <ul style="list-style-type: none"> • working around hot surfaces, • manual handling, • steam, hot gasses and fuel leaks
Services	<p>Services can include</p> <ul style="list-style-type: none"> • fuel supply of bagasse, coal, gas, oil or other fuel types • steam • mill and instrumentation air • cooling water • general mill water supply and

	<ul style="list-style-type: none">• cooling water
Equipment status	Confirming equipment status involves <ul style="list-style-type: none">• conducting relevant pre-start checks• confirming that housekeeping standards are met, all safety guards are in place and• equipment is operational
Internal cleaning	Internal cleaning is carried out in accordance with statutory requirements regarding confined space entry and does not typically include chemical cleaning.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling

FDFSUG306A Monitor a sugar mill powerhouse

Modification History

New Unit based on *SUGPMPH3A Monitor a powerhouse*.

Unit Descriptor

This unit describes the outcomes required to operate and monitor one or more turbines with attached alternators supplying factory power. This role is typically carried out in liaison with an electrician.

Application of the Unit

This unit has application in the sugar milling industry and applies to both continuous and short term operation including start-up and shut down after a prolonged break.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

FDFSUG217A Operate a turbine

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to operate the powerhouse	1.1 Personal protective clothing and equipment is selected and used 1.2 Run warm up sequence of turbines and alternator/s in preparation for handover from local powerhouse to powerhouse consul
2 Monitor powerhouse operation	2.1 Powerhouse output is monitored against site requirements 2.2 Equipment is monitored to confirm operating condition 2.3 The workplace meets housekeeping standards
3 Analyse and respond to abnormal performance	3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance 3.2 Corrective action is taken in accordance with workplace procedures in response to OHS hazards and abnormal plant performance 3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations
4 Handover powerhouse operation	4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures 4.2 Handover is carried out according to workplace procedure 4.3 Powerhouse operators are aware of powerhouse status and related equipment at completion of handover
5 Shutdown the powerhouse	5.1 The powerhouse is shut down according to workplace procedures and manufacturer's recommendations 5.2 The powerhouse is prepared for storage in shut down mode 5.3 Maintenance requirements are identified and reported

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information on power requirements
- select, fit and use personal protective clothing and/or equipment
- confirm that turbine/s and alternator/s are ready for warm up/operation
- conduct warm up sequence
- liaise with electrician as required to synchronise with external power supply
- handover control to operating consul
- liaise with other work areas to advise of powerhouse status
- demonstrate run up procedures in both manual and automatic modes
- monitor powerhouse operation including monitoring:
 - bearing temperature
 - steam pressure
 - speeds
 - oil flows
 - power factor
 - voltage
 - power frequency
 - equipment condition including noise and vibration
- take corrective action in response to abnormal or unacceptable performance
- report and/or record corrective action as required
- demonstrate shift handover procedure and confirm that replacement operators are aware of equipment status and operating requirements prior to completing handover
- demonstrate emergency trip procedure and related re-start
- record operating information
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- relevant state OHS legislation, standards and codes of practice relating to work responsibilities
- safe work procedures including awareness of health and safety hazards related to powerhouse operation and associated control measures
- hierarchy of hazard control measures
- purpose and limitations of protective clothing and equipment
- purpose and basic principles of power generation including the impact of out of range frequency voltage on equipment operation

- site procedures for the import and export of power
- operating principles of powerhouse and instrumentation components, purpose and operation including the requirement to bar over alternators on start-up, shut down and emergency stops
- basic operating principles of process control where relevant including the relationship between control panels and systems and the physical equipment
- layout of powerhouse including location of overload protection equipment/switches
- methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
- operating requirements and parameters
- procedures for responding to emergency situations including safe shutdown procedure
- handover and long term shut down and storage procedures
- environmental issues and controls including controlling oil spillages
- housekeeping standards for the work area
- reporting and recording systems including both statutory and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • access workplace information on power requirements • confirm that turbine/s and alternator/s are ready for warm up/operation • conduct warm up sequence • handover control to operating consul • demonstrate run up procedures in both manual and automatic modes • monitor powerhouse operation • take corrective action in response to abnormal or unacceptable performance • demonstrate shift handover procedure • demonstrate emergency trip procedure and related re-start • record operating information
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Turbine with an attached alternator • Relevant codes and standards • Operating procedures and related advice on equipment operation • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Workplace information	Workplace information can include <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) and • manufacturer's specifications
Powerhouse equipment	Equipment includes <ul style="list-style-type: none"> • turbines with attached alternators. <p>Operation and monitoring of equipment and processes typically requires the use of control panels and systems.</p>
Hazards	Hazards typically include working around hot surfaces, manual handling, fuel and steam leaks.
Services	Services may include: <ul style="list-style-type: none"> • steam • water • mill and • instrumentation • air and • power
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or instrumentation based.

Unit Sector(s)

Sugar Milling

FDFSUG307A Perform factory control tests

Modification History

New Unit based on *SUGPFCT3A Perform factory control tests*.

Unit Descriptor

This unit describes the outcomes required to perform tests for factory control. These tests are typically complex and/or non-routine and require interpretation of results within broad guidelines.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for testing	1.1 Testing requirements and methods are identified 1.2 Calibration of test equipment is managed to maintain accurate equipment 1.3 Standard graphs are prepared 1.4 Test chemicals and reagents are prepared and labelled as required for laboratory requirements 1.5 Samples are prepared as required by test method 1.6 Pre-test checks are conducted and recorded according to workplace recording requirements
2 Conduct test	2.1 Conduct test in accordance with test method and test schedule 2.2 Identify and report atypical test results 2.3 Record and communicate test results as required 2.4 Follow procedures to repeat or validate results 2.5 Clean, care for and store equipment as required 2.6 Dispose of waste materials according to workplace procedure
3 Record test data in laboratory information system	3.1 Results are entered into laboratory information systems according to workplace procedure 3.2 Correct data entry errors 3.3 Store and retrieve data in the laboratory information system 3.4 Produce standard and non-standard reports from laboratory information system

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- access workplace information such as the test regime to identify test requirements and methods
- select, fit and use personal protective clothing and/or equipment
- prepare standard graphs and standard chemicals for laboratory use
- manage calibration of test equipment
- handle chemicals safely including following correct handling and preparation procedures and use of appropriate protective clothing and equipment
- demonstrate test procedures according to test schedule and test method
- identify and report any out-of-specification results
- communicate test results to relevant personnel
- maintain stocks of laboratory chemicals and materials
- sort, collect, treat, recycle or dispose of tested materials
- record information in the laboratory information system including ability to enter and edit data, generate standard reports and store information
- maintain work area to meet housekeeping standards

Required knowledge includes:

Knowledge of:

- purpose of the test procedure including a basic knowledge of chemistry and physics principles relating to the tests performed and operating principles of equipment used
- mill operations for interpreting test results including identifying implications of results for mill performance
- awareness of legislative requirements relating to cane payment tests
- terminology relating to the types of tests and related methods used
- safe work procedures including hazards associated with specific test procedures requirements such as working with chemicals and test equipment
- specific test methods/procedures
- typical causes of out-of-specification results and procedure for repeating the analysis
- methods used to plot, analyse and present test data including production of both standard and non-standard reports
- laboratory information system recording and reporting requirements that meet legislative record keeping requirements and workplace requirements

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify test requirements and methods • prepare standard graphs and standard chemicals for laboratory use • manage calibration of test equipment • handle chemicals safely • demonstrate test procedures • identify and report any out-of-specification results • communicate test results to relevant personnel • record information in the laboratory information system
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Test equipment, chemicals and reagents and related equipment • Materials to be tested • Test methods and procedures • Personal protective clothing and equipment • Communication systems and equipment • Housekeeping standards and procedures • Sample labelling and recording systems, requirements and procedures • Laboratory recording and reporting system
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<p>Workplace information</p>	<p>Workplace information can include</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • Specifications • test methods and • procedures.
<p>Testing Equipment</p>	<p>Equipment is defined by test method and legislative requirements.</p> <p>Confirming equipment condition may include:</p> <ul style="list-style-type: none"> • conducting calibration procedures. <p>Calibration procedures are routine, documented procedures.</p>
<p>Factory control tests</p>	<p>The types of tests conducted depends on the test equipment and methods used and may include but are not limited to:</p> <ul style="list-style-type: none"> • Sugar - ash, colour, dextran, filterability, reducing sugars, starch, phosphate, grist/grain size • Molasses/massecuite/syrup - true purity by dry substandard and sucrose, HPLC • Cane/bagasse - POC, pol and brix by disintegrator method, fibre by prepared cane method • Clarified juice or ESJ - phosphate, starch • Mud - fibre, insolubles • Boiler water - caustic alkalinity, phosphate, sulphate, hardness, total dissolved solids, sulphate • Effluent - sucrose, BOD, suspended solids • Caustic - concentration

	<ul style="list-style-type: none">• EDTA - concentration and activity• Lime - sucrose soluble alkali
Teamwork	Work may require the ability to work within a team environment
Information systems	Information systems may be print or screen based

Unit Sector(s)

Sugar Milling

FDFSUG308A Analyse and convey workplace information

Modification History

New Unit based on *SUGAECWE3A Analyse and convey workplace information*.

Unit Descriptor

This unit describes the outcomes required to analyse and interpret information. It also involves preparing and presenting information to others. The presentation component of this unit supports the communication requirements for delivering workplace training.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

There are no pre-requisite units for this competency standard.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage information	<ul style="list-style-type: none">1.1 Information requirements are identified1.2 Information systems are used to store, retrieve and update information1.3 Consultative processes are used to collect and convey information1.4 Methods used to collect, store, retrieve and convey information are reviewed and improved
2 Analyse information	<ul style="list-style-type: none">2.1 Information is stored and collected in a format suitable for analysis and interpretation2.2 Information collection is timely and relevant to the needs of individuals and teams2.3 Information is collected, analysed and interpreted
3 Present information	<ul style="list-style-type: none">3.1 Information is effectively communicated to individuals and groups3.2 Communication takes into account social and cultural differences

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- facilitate consultative processes
- use information storage and retrieval systems to access store and update information
- select appropriate methods to communicate with different audiences in the workplace
- collect information in appropriate format
- analyse and interpret information
- select appropriate presentation methods to convey information for different purposes
- structure information in a logical sequence
- recommend improvements to information management practices

Required knowledge include:

Knowledge of:

- information recording, storage and retrieval systems
- consultative and group processes
- data collection and analysis techniques as required
- meeting procedures
- presentation techniques

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • exchange work-related information • ask questions to inform work practice • apply work information to work practice.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Opportunities to interact with others using typical workplace communication processes • Typical group forums which can include work groups and committees • Typical workplace information • Standard forms and equipment (as required) for recording workplace information • Information storage and retrieval systems
<p>Method of assessment</p>	<p>Other units of competency relevant to the work role should be assessed in conjunction with this unit.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company policies and procedures, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements.
Codes of Practice	Codes of practice include the Sugar Milling Operations Industry Code of Practice.
Communication content	Subjects for communication may be of a general, procedural or technical nature. They can also include providing feedback to individuals on work performance and discussing issues which may be of a sensitive and/or confidential nature.
Communication language	Every day workplace language is used. This may include technical terms.
Communication systems	Communication systems reflect the culture of the workplace and the workforce
Communication processes	Interactive communication processes include active listening, constructive feedback, negotiation and conflict resolution.
Workplace information	Information may be presented verbally, in written and screen-based forms. It can also include technical drawings, diagrams and graphs.
Data analysis	Data analysis can include techniques appropriate to work responsibilities such as statistical analysis, troubleshooting and problem solving and planning
Teamwork	Work may require the ability to work within a team environment.
Group processes	Group processes may include formal meeting procedures and informal group processes.

Unit Sector(s)

Sugar Milling

FDFSUG309A Operate a sugar system

Modification History

New Unit based on *SUGPOSS3A Operate a system (sugar)*.

Unit Descriptor

This unit describes the outcomes required to prepare and operate an integrated group of sugar milling sub-systems or unit operations. Typical systems consist of at least three connected unit operations such as preparation, crushing and power generation.

Application of the Unit

This unit has application in the sugar milling industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

The person being assessed in this unit of competence must be competent in the relevant technical units that form the system.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare the system for operation	1.1 Supply of materials is confirmed to meet production requirements 1.2 Work area is prepared for operation 1.3 Services are confirmed as available and ready for operation 1.4 Equipment is checked to confirm readiness for use
2 Operate and monitor the system	2.1 The system is started up according to company procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 System is operated to optimise performance for the current factory conditions 2.4 Equipment is monitored to confirm operating condition 2.5 System outputs meet specification
3 Handover the system	3.1 Workplace records are maintained in accordance with workplace procedures 3.2 Handover is carried out according to workplace procedure 3.3 System operators are aware of system and related equipment status at completion of handover
4 Shut down the system	4.1 The appropriate shut down procedure is identified 4.2 Waste generated by both the process and cleaning procedures is collected, treated and disposed or recycled according to company procedures 4.3 The system is shut down according to workplace procedures 4.4 The system is prepared for storage in shut down mode 4.5 Maintenance requirements are identified and addressed
5 Contribute to continuous improvement of the system	5.1 Opportunities for improvement are identified and investigated 5.2 Proposals for improvements are developed and implemented within company planning arrangements and according to company procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Ability to:

- liaise with relevant work areas to confirm or secure necessary materials, services, equipment and labour to meet production requirements
- confirm that all equipment within the system meets operating standards, all safety guards are in place and equipment is ready for operation
- confirm that materials have been cleared for use
- monitor implementation of set-up and start-up procedures including monitoring the use of check sheets by others
- monitor observance of work procedures and systems
- monitor materials flow and work-in-progress through the system
- confirm that the system operates within specified parameters and control points are monitored
- determine responses to out-of-specification results or non-conformance within level of responsibility
- coordinate batch/product changeovers
- communicate information effectively
- plan maintenance and cleaning procedures to minimise disruption
- monitor operating efficiencies of the system and investigate, resolve and/or report problems
- review and maintain procedures to support system improvements

Required knowledge includes:

Knowledge of:

- purpose and principles of the system including optimisation
- equipment purpose and operation including an understanding of process control systems where used
- technical knowledge of product characteristics and processing requirements for varying inputs.
- codes and legislation relating to product and packaging requirements
- equipment calibration schedule and responsibilities
- type and purpose of sampling and testing conducted
- related work areas and departments
- relevant procedures, specifications and operating parameters for the system and the individual units
- relevant systems and legislative responsibilities in areas such as human resources, quality, occupational health and safety and environmental management
- industrial awards and agreements relating to system operation
- hazards, risks, controls and methods for monitoring processes within the system
- maintenance and cleaning requirements of equipment in system

- process improvement procedures and related consultative arrangements
- troubleshooting procedures and problem solving techniques
- recording requirements and procedures

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • liaise with relevant work areas • confirm that all equipment within the system meets operating standards • monitor implementation of set-up and start-up procedures • monitor observance of work procedures and systems • monitor materials flow and work-in-progress through the system • confirm that the system operates within specified parameters and control points are monitored • determine responses to out-of-specification results or non-conformance within level of responsibility • coordinate batch/product changeovers • plan maintenance and cleaning procedures to minimise disruption • monitor operating efficiencies of the system • review and maintain procedures to support system improvements
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • Operating procedures and related advice on equipment operation including advice on safe work practices and environmental requirements • Personal protective clothing and equipment • Company policies and workplace systems including human resources, OHS, quality, food safety and environmental management • Product and process specifications and operating parameters • System processes and related equipment • Materials and services as required • Related work areas and communication system • Planning, resources management and training

	<p>arrangements</p> <ul style="list-style-type: none"> • Troubleshooting advice where available • Material Safety Data Sheets where appropriate • Housekeeping standards and procedures • Advice on environmental management issues relevant to work responsibilities • Workplace information recording systems, requirements and procedures
Method of assessment	Other units of competency relevant to the work role should be assessed in conjunction with this unit.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Policies and procedures</p>	<p>Work is carried out in accordance with company policies and procedures, licensing requirements, legislative requirements, codes of practice and industrial awards and agreements.</p>
<p>Codes of Practice</p>	<p>Codes of practice include the Sugar Milling Operations Industry Code of Practice and sugar industry codes of practice related to cane railway and transport operations.</p>
<p>Sugar system operations</p>	<p>System operation involves:</p> <ul style="list-style-type: none"> • planning • coordination • troubleshooting and • optimisation within the operator's level of authority.
<p>Unit operations</p>	<p>Unit operations include:</p> <ul style="list-style-type: none"> • cane receivals • weighing and feeding • preparation • crushing • boilers • ash system • power generation • waste water treatment • water and air services • juice circuit • clarification • mud filters • evaporators • high and low grade pans • crystallisers • sugar driers and storage • high and low grade fugalals.
<p>Control points</p>	<p>Control points refer to those key points in a work process which must be monitored and controlled. This includes:</p> <ul style="list-style-type: none"> • safety, quality and regulatory control points and

	<ul style="list-style-type: none"> inspection points.
System equipment	Operation and monitoring of equipment and processes typically requires the use of control panels and systems.
Workplace systems	<p>Workplace systems are in place to support production processes. These include:</p> <ul style="list-style-type: none"> occupational health and safety product quality factory throughput recovery maintenance and environmental management.
Teamwork	Work may require the ability to work within a team environment.
Information systems	Information systems may be print or screen based.

Unit Sector(s)

Sugar Milling

FDFTEC3001A Participate in a HACCP team

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to participate in the development and/or review of a HACCP-based food safety program under direction.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit is appropriate where the operator requires a detailed understanding of the steps and techniques used to develop and review a HACCP-based food safety program.</p> <p>This unit can be aligned at either AQF 3 or 4. When aligned at AQF 3 the person would typically participate in the development of the food safety program as part of a group. The scope of contribution would typically be limited to their immediate work area. When this unit is applied at AQF 4 the person may take a lead role in facilitating the development of the food safety program and would apply an understanding of food safety across more diverse operations or work areas.</p> <p>This unit is based on and achieves part of the guideline food safety unit GFSDFSPA Develop food safety programs.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFFS2001A	Implement the food safety program and procedures

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to develop and/or review a food safety program	1.1. Roles and responsibilities for participating in, developing or reviewing a food safety program are identified 1.2. The scope of the food safety program is identified
2. Identify and/or review food safety hazards	2.1. Processes to be covered by the food safety program are identified and steps within each process are described 2.2. Food safety hazards that are reasonably expected to occur are identified for each process 2.3. Handling methods, processing techniques and existing support programs used in the workplace are identified
3. Establish and/or review methods to monitor and control food safety hazards	3.1. Acceptable methods of control are established for each food safety hazard that is reasonably expected to occur 3.2. Control methods are validated 3.3. Procedures for taking preventative action are established 3.4. Appropriate methods for monitoring that processes remain within control are established 3.5. Required corrective action to respond to situations where hazards are not effectively controlled is established 3.6. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify personal roles and responsibilities for participating in the development or review of a food safety program
- identify processes and steps to be covered
- identify hazards that are reasonably expected to occur and establish appropriate methods of control, such as participating in validating existing control methods and where there is no adequate control method in place, establishing an appropriate method
- establish or review procedures for implementing preventative action, such as revision of materials, processes and/or food handling procedures, and where required, the revision of workplace practices and documentation, such as specifications, operating procedures and approved supplier programs
- describe the appropriate monitoring requirements for each food safety hazard, including the method or procedure to be followed, the frequency and timing, the person responsible, and the information to be recorded (procedures to be followed would typically be specified in the form of a standard operating procedure or work instruction)
- describe corrective action requirements in the event that acceptable limits or requirements of support programs are not met
- develop or review documentation relating to the design and maintenance of the food safety program, such as flow diagrams, hazard analysis charts and tables, support program requirements, data analysis reports, corrective action reports and verification reports
- develop or review documentation to communicate food safety responsibilities, such as standard operating procedures (SOPs), processing parameters and recording devices (e.g. log sheets)
- communicate food safety responsibilities within level of responsibility using techniques and presentation styles appropriate to the audience
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- the purpose and intent of food safety legislation
- purpose and responsibilities for maintaining records as required by legislation and workplace procedures
- roles and responsibilities for development and maintenance of the food safety program, including roles of internal and external auditors and of authorised officers
- techniques for applying HACCP-based principles, including techniques for identifying hazards, assessing the likelihood of occurrence, determining acceptable methods of control, monitoring and recording requirements for each control point, identifying corrective action if controls are not met, and developing system review procedures
- techniques used to map operations and analyse food safety requirements, such as preparation of flow charts, hazard analysis charts and tables, and data analysis reports
- raw materials, ingredient and finished product composition and characteristics, and related handling and storage requirements
- food processing methods used in the workplace or work area and their effect on food safety
- sources of technical expertise on food safety requirements
- the role of consultation in the development, implementation and ongoing maintenance of the food safety program
- documentation and recording requirements to support communication and monitoring of the food safety program, including procedures for maintaining and updating relevant documents, such as operating procedures
- main types of food safety hazards/contamination likely to occur given the type of product and processing methods used
- conditions required for bacterial food poisoning to occur, such as water activity, pH, composition, time and temperature as relevant to food handled
- acceptable control methods for the hazards identified and required corrective action when control requirements are not met
- typical support programs, such as cleaning schedules, pest control, stock rotation, product traceability and personal hygiene, and how they can be used as part of a food safety program
- acceptable control methods for the hazards identified and required corrective action when control requirements are not met
- validation and verification processes and techniques and responsibilities

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify components and parameters of a food safety program • identify food safety hazards in production processes • establish and validate control standards and methods for each hazard • establish procedures for unpredicted hazards • communicate and document hazards and control procedures • complete workplace records • apply safe work practices and identify occupational health and safety (OHS) hazards and controls • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • workplace food safety program documentation • advice on quality and food safety legislation • procedures for developing or modifying specifications and other advice on food safety requirements • procedures for developing or modifying documentation, such as work instructions and procedures, log sheets and other recording requirements • review/audit arrangements • consultative mechanisms • communication systems • training system • reporting/recording system.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and</p>

EVIDENCE GUIDE	
	other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Food safety programs</p>	<p>A food safety program is a written document that specifies how a business will control all food safety hazards that are reasonably expected to occur in the food business. The food safety program must provide for the systematic monitoring of the controls as well as appropriate corrective action if a hazard is found not to be under control. Records must be kept to demonstrate action in relation to, or in compliance with, the food safety program. A food safety program may be developed as a stand-alone program or may be integrated with the quality program in a workplace</p>
<p>Methods used to control hazards</p>	<p>Methods used to control hazards include:</p> <ul style="list-style-type: none"> • both support programs and specific hazard control limits or requirements <p>Typical examples of support programs include:</p> <ul style="list-style-type: none"> • product recall • cleaning schedules • pest control programs • personal hygiene practices • calibration procedures and related operating procedures
<p>Food safety hazards</p>	<p>Food safety hazards include:</p> <ul style="list-style-type: none"> • microbiological • chemical • physical hazards
<p>Validation</p>	<p>Validation refers to:</p> <ul style="list-style-type: none"> • the use of objective evidence in order to prove that materials, processes, procedures or equipment used are capable of delivering the intended result

RANGE STATEMENT	
Verification	<p>Verification refers to:</p> <ul style="list-style-type: none"> reviewing all aspects of the food safety program and related records to determine compliance with and adequacy of the food safety program <p>At a minimum, food safety programs must be verified annually</p>
Scope of the HACCP based plans	<p>The scope of the HACCP-based plan depends on workplace requirements and may extend outside the direct area of responsibility of the team participants</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor the implementation of pest prevention measures	1.1. Inspections are conducted to monitor the effectiveness of pest prevention measures 1.2. Signs of pest infestation are identified, analysed and reported 1.3. Hygiene standards are maintained to meet company requirements
2. Implement pest elimination procedures	2.1. Control measures suited to infestation are selected 2.2. Procedures for the elimination of pests are implemented 2.3. Records are maintained 2.4. Waste is collected, treated and disposed of according to company procedures 2.5. Work is conducted in accordance with workplace environmental guidelines
3. Review pest control programs	3.1. Pest infestation is monitored to confirm effectiveness of treatment method 3.2. The treatment program is modified within level of responsibility 3.3. Changes to the treatment program are reported to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- recognise indicators of pest invasion
- select appropriate control method according to the control program in place
- select, fit and use personal protective clothing and/or equipment
- follow pest elimination procedures, such as preparing pesticides for use, applying pesticides according to company procedures and licensing arrangements, setting up and operating equipment, such as fumigation and other pesticide application equipment, and preparing and placing baits as required
- follow procedures to measure and monitor pest populations, such as sampling, testing and recording data
- review effectiveness of control methods and amend or recommend changes to program as required
- safely dispose of pesticides, residues, empty containers and pests
- monitor the implementation of housekeeping and cleaning standards
- conduct tests according to enterprise procedures, such as using instrumentation to measure the presence of airborne pesticides
- carry out basic maintenance required to support pest prevention measures according to enterprise procedures
- liaise with external contractors according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic principles of integrated pest management (IPM), including identification of pest hazards, establishment of pest elimination methods and monitoring the effectiveness of these measures
- methods used to prevent pest invasion suited to workplace and typical pest invasion, including appropriate work area and storage design features to minimise the possibility of pest infestation through building access points, packaging materials/requirements to protect product from pests and other physical and mechanical control measures
- housekeeping and cleaning standards to minimise conditions which attract pests
- food safety issues relating to the use of pesticides in a food handling area

REQUIRED SKILLS AND KNOWLEDGE

- characteristics and behaviour of each type of pest at each life cycle stage
- conditions required by pests for survival
- methods and procedures used to minimise pest resistance to elimination methods
- range of pesticides used in the workplace
- legislation, codes of practice and procedures relating to the purchase, transport, storage, use and disposal of pesticides
- safe procedures for handling, using and storing pesticides and dangerous goods, identifying identification of information provided on labels, and where required, handling of gas cylinders
- purpose, application and limitations of protective clothing and equipment
- test methods where relevant
- basic maintenance procedures where relevant
- contractor service arrangements where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • conduct pest inspections • identify pest infestations and select suitable control measures • implement pest control measures in accordance with procedure • monitor effectiveness of controls • assess control procedures and contribute to improvement of pest control • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • apply food safety procedures
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • work procedures, including advice on safe work practices, food safety and environmental requirements • pesticide labels • MSDS and personal protective clothing and equipment • pest management program and procedures • pest management compounds and equipment • housekeeping procedures and cleaning schedules in the work area, such as storage, production and/or packaging areas • documentation and record keeping system.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be:</p>

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• FDFOP2011A Conduct routine maintenance• FDFOP2013A Apply sampling procedures• MSL973001A Perform basic tests.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with company procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • pest management program • pesticide labels • work instructions • standard operating procedures (SOPs) • specifications • materials safety data sheets (MSDS) • manufacturers' advice • standard forms and reports
Hazardous substances	<p>Work may involve:</p> <ul style="list-style-type: none"> • exposure to chemicals and other hazardous substances and may require working in accordance with a permit to work
Pests	<p>Pests include:</p> <ul style="list-style-type: none"> • vertebrates, such as birds, rats and mice • invertebrates, such as insects
Pest control methods	<p>Pest control methods may include:</p> <ul style="list-style-type: none"> • fumigation • application of insecticides, dusts, gas and/or baits (using registered controlled and generally available substances) <p>Where use of pesticides include work conditions covered by National Occupational Health and Safety Commission and/or state and territory health and safety authorities, the assessment criteria and methods prescribed by these</p>

RANGE STATEMENT	
	authorities must also be met
Selection of control measures	Selection of control measures occurs in the context of an existing program
Application equipment	Application equipment may include: <ul style="list-style-type: none"> • automated reticulation systems • sprayers • misters and dosing equipment
Tests	Tests may include: <ul style="list-style-type: none"> • testing the level of fumigant in the atmosphere and pressure testing
Records	Records are maintained to meet legal and company requirements

FDFTEC3003A Apply raw materials, ingredient and process knowledge to production problems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers skills and knowledge required to apply knowledge of ingredients and processes to troubleshoot typical problems that occur in preparing, processing and/or packaging product.
------------------------	---

Application of the Unit

Application of the unit	This unit applies where problem solving occurs over one or more processes and requires an understanding of the characteristics of raw materials and ingredients and processing methods used. It typically applies to the production operator where responsibility for solving problems relating to non-conforming raw materials, ingredients and processes.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify and respond to non-conforming ingredients/raw materials</p>	<p>1.1. Non-conformance in raw materials/ingredients is identified and reported according to workplace reporting requirements</p> <p>1.2. Causes of non-conformance are investigated and reported according to workplace reporting requirements</p> <p>1.3. Corrective action is determined and implemented within level of responsibility and workplace procedures</p> <p>1.4. Action is taken to prevent recurrence of non-conformance</p> <p>1.5. Action is reported according to workplace reporting requirements</p>
<p>2. Identify and respond to non-conforming product and processes</p>	<p>2.1. Processing parameters, stages and changes which occur during processing are monitored</p> <p>2.2. Non-conformance in processing, handling and/or storage is identified and corrective action taken according to workplace requirements</p> <p>2.3. Causes of non-conformance relating to processing, handling and/or storage are investigated and reported according to workplace reporting requirements</p> <p>2.4. Corrective action is determined and implemented within level of responsibility and workplace procedures</p> <p>2.5. Action is taken to prevent recurrence of non-conformance</p> <p>2.6. Action is reported according to workplace reporting requirements</p> <p>2.7. Work is conducted in accordance with workplace environmental guidelines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify requirements of ingredient/raw material characteristics within level of responsibility
- follow procedures to identify, remove/isolate and report non-conforming ingredients/materials and/or product according to workplace reporting requirements
- determine likely causes of non-conformance of ingredients/raw materials
- recognise indicators of unacceptable or non-conforming processing, handling and/or storage outcomes
- act promptly to identify, remove/isolate and report non-conforming product and/or processes
- access and apply workplace information relating to process troubleshooting
- investigate non-conformance to determine likely causes and report findings to appropriate personnel
- identify action required to correct non-conformance and implement within level of responsibility
- identify action required to prevent or minimise and control recurrence of non-conformance and implement within level of responsibility
- complete workplace records, including reporting non-conformance and documenting corrective actions according to workplace recording procedures
- conduct tests to confirm raw material/ingredient and/or final product quality characteristics according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic composition and function of each main raw material/ingredient used, such as awareness of ingredient grades or types
- common causes of contamination/unacceptable quality of raw materials/ingredients
- methods used to confirm quality standard, such as accessing information (e.g. certificates of analysis and/or laboratory clearance information)
- the effect of variation in raw materials/ingredients on processing stages and final product outcome, including factors likely to cause variation, and scope to adjust or

REQUIRED SKILLS AND KNOWLEDGE

- correct for variation at each processing stage
- appropriate handling and storage requirements for raw materials/ingredients and final product, and the effect of failing to meet required storage conditions
- the changes and reactions that occur through processing stages, including the signs and symptoms of poor/unacceptable processing or equipment operation
- factors that affect the shelf-life of product
- the inter-relationships between processing stages and the effect of variation in processing parameters on process outcome and on final product, including factors likely to cause variation, and scope to adjust or correct for variation at subsequent process stages
- procedures for identifying and isolating non-conforming product
- troubleshooting information and techniques
- procedures and related documentation required to amend or introduce a new method or procedure, such as short term procedures for amending or updating specifications and processing parameters
- reporting requirements and responsibilities
- test methods to confirm raw material/ingredient and/or final product quality characteristics where relevant

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • describe required quality characteristics for raw materials and ingredients • describe required processes to achieve production specifications • identify common non-conforming materials and ingredients and causes • identify common non-conforming processes and causes • determine and undertake corrective action for non-conformances • complete workplace documentation and report non-conformances • apply food safety procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • ingredient/raw materials specifications and related advice, such as certificates of analysis • ingredients/raw materials and final product and related processing equipment and stores areas • troubleshooting information relevant to workplace processes • sampling and test equipment and procedures as required • system for managing and updating workplace documents, such as Standard Operating Procedures (SOPs) and log sheets/processing parameters • reporting and recording system and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or</p>

EVIDENCE GUIDE	
	<p>work role. Examples could be:</p> <ul style="list-style-type: none">• FDFOP2013A Apply sampling procedures• FDFPPL3002A Report on workplace performance• MSL973001A Perform basic tests• PMBQUAL390A Solve problems using quality tools.
Guidance information for assessment	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Work is carried out according to company procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements.</p>
Legislative requirements	<p>Legislative requirements are typically reflected in procedures and specifications. Legislation relevant to this industry includes:</p> <ul style="list-style-type: none"> • the Food Standards Code, including labelling, weights and measures legislation • legislation covering food safety, environmental management, occupational health and safety (OHS), anti-discrimination and equal opportunity <p>When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply in place of the Food Standards Code and reference to food safety is replaced by GMP</p>
Ingredients/raw materials	<p>Ingredients/raw materials are those used to manufacture product</p>
Typical processing and related techniques	<p>Typical processing and related techniques include but are not limited to:</p> <ul style="list-style-type: none"> • raw materials/ingredient dispensing • preparation • mixing and blending • conditioning • primary and further processing • wrapping • packing and storage
Typical process parameters	<p>Typical process parameters include but are not limited to:</p> <ul style="list-style-type: none"> • temperature

RANGE STATEMENT	
	<ul style="list-style-type: none"> • time • pressure • flow rate
Typical reactions	Typical reactions depend on processing method. Examples include but are not limited to: <ul style="list-style-type: none"> • gelatinisation and hydration
Problem minimisation	Where recurrence of a problem cannot be prevented, procedures should be established to minimise the likelihood of recurrence and to identify any further incidents

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify packing, handling and storage requirements for perishable food product</p>	<p>1.1. Requirements and performance measures for packing, handling and storage of perishable food product are identified</p> <p>1.2. Current best practice for packing, handling and storage of perishable food product are identified and workplace practices assessed for performance</p> <p>1.3. Features and operational processes of equipment used to handle, pack and store perishable food product are identified</p> <p>1.4. Customer and legal requirements of packing, handling and storing perishable food product are identified</p> <p>1.5. Packing materials used are confirmed as suitable for perishable food product</p>
<p>2. Specify packing, handling and storage processes</p>	<p>2.1. Equipment and facilities available for packing, handling and storage of perishable food product are identified and cost-benefit analysis conducted to assess potential value to workplace operations</p> <p>2.2. Equipment and facilities are specified for work operations</p> <p>2.3. Processes for packing, handling and storing perishable food product are specified</p> <p>2.4. Processes specified are in accordance with workplace environmental guidelines</p> <p>2.5. Labelling and documentation requirements are specified</p> <p>2.6. Workplace processes and operating procedures are documented and communicated to personnel</p>
<p>3. Manage problems with perishable food product</p>	<p>3.1. Common problems with perishable product are identified and likely causes determined</p> <p>3.2. Equipment and procedures are assessed to identify contributing factors to food problems</p> <p>3.3. Problems are identified and addressed in accordance with workplace procedure</p> <p>3.4. Out-of-specification processes or outcomes are documented</p> <p>3.5. Opportunities for improvement are identified and investigated within level of technical responsibility</p> <p>3.6. Proposals for improvement are developed and implemented within level of authority and according</p>

ELEMENT	PERFORMANCE CRITERIA
	to company procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify packing, handling and storage requirements for perishable product
- identify the quality assurance systems in place to ensure that the product meets customer and legal requirements
- identify factors that affect shelf-life of the perishable product and the features of packing design that preserve the product
- identify problems that occur and investigate likely causes
- determine appropriate corrective action to prevent non-conformance
- identify packing materials suitable for use with perishable food products
- identify legal requirements relating to perishable product, including Food Standards Code requirements and other legislation relevant to the product
- identify pathogens and spoilage that can occur in perishable food and the conditions required for these to occur
- identify features intrinsic to the food type, according to food type, such as pH, water activity, nutrient content, presence of microbiological compounds, respiration rate and biological structure
- identify extrinsic factors, such as processing method, temperature, water loss/humidity, maturity (applies to maturity of fruit and vegetables when harvested), handling, cleaning, sanitation and personal hygiene practices and gaseous composition of the storage atmosphere
- identify food spoilage indicators, such as microbial contamination, enzymic browning and sensory degradation of characteristics such as flavour, aroma, colour and texture
- identify factors that influence selection of packing and storage processes, including suitability for use with the food products to be packaged, compatibility with packing technology, cost, environmental features and consumer safety/tamper evidence
- describe the significance of factors, such as moisture and temperature in promoting/preventing product spoilage
- identify typical problems that occur with perishable food product and outline likely causes and appropriate response options within level of responsibility
- identify relevant sources of technical expertise and related authority levels to address issues
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge*****Knowledge of:***

- properties of packing processes designed to protect perishable product and extend shelf-life
- relevant regulations, codes of practice and legislative requirements, including local and international regulations relevant to the handling and storage of perishable food products
- relevant occupational health and safety (OHS) and environmental protection procedures and regulations
- workplace procedures for the planning and management of the handling and storage of perishable food products
- problems that may occur during the planning and management of the handling and storage of perishable food products and action that can be taken to resolve or report the problems
- risks and hazards related to the handling and storage of perishable food products and ways of controlling the risks involved
- costs of equipment and facilities for handling and storing perishable food product
- pathogens and spoilage that can occur in perishable food and the conditions required for these to occur
- impact of extrinsic factors on perishable food products, such as temperature, water loss/humidity, maturity (applies to maturity of fruit and vegetables when harvested), handling, cleaning, sanitation and personal hygiene practices and gaseous composition of the storage atmosphere
- characteristics of product and its behaviour when packed, handled and stored over the shelf-life of the product
- typical problems that occur, and likely causes and appropriate response options

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • analyse packing, handling and storage requirements for perishable food product • specify processes and equipment to achieve workplace performance and quality outcomes • analyse and confirm safety aspects of processes and equipment • analyse non-conformances, problems and determine probable cause • propose improvements to the system.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • packaging specifications • product, packaging components and consumables • packaging process equipment • relevant workplace operating procedures • communication systems • workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Product packaging and related work processes are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of OHS and environmental impact

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse features and parameters of controlled atmosphere storage	1.1. Type of storage facility, components and construction are identified 1.2. All features of the facility are examined and operational processes identified 1.3. Cooling mechanisms and processes are examined 1.4. Implications and parameters of controls are examined and range determined for fresh fruit product 1.5. Consequences of inaccurate controls are identified 1.6. Procedures for opening and closing doors and risks associated with air tight chambers are identified 1.7. Chemicals associated with the storage process are identified 1.8. Occupational health and safety (OHS) risks and control measures relating to safe operation of controlled atmosphere storage are identified 1.9. Storage documentation is confirmed according to workplace requirements
2. Determine operational requirements for storage	2.1. Storage requirements for fresh produce product are identified 2.2. Storage settings and monitoring schedule are established 2.3. Specifications are documented according to workplace practice
3. Set and monitor controlled atmosphere storage	3.1. Operational equipment is checked to ensure readiness 3.2. Settings for controlled atmosphere storage facility are entered according to specifications 3.3. Cooling is conducted at a rate and temperature suitable to produce requirements 3.4. Test equipment is calibrated 3.5. Temperature, air tightness and atmosphere levels are tested daily to ensure accurate levels and details recorded 3.6. Chemicals used in the storage process and associated risks and handling requirements are identified 3.7. Work is conducted in accordance with workplace environmental guidelines 3.8. Non-compliances and variances in temperature and

ELEMENT	PERFORMANCE CRITERIA
	atmosphere are recorded 3.9. Equipment maintenance requirements are identified and documented
4. Complete documentation	4.1. All workplace documentation is completed and files maintained as required 4.2. Quality control documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access workplace information to determine storage requirements
- identify storage requirements including temperature limits, atmosphere, minimum duration at given temperatures, segregation and co-storage requirements
- select, fit and use personal protective clothing and/or equipment
- conduct testing of atmosphere and temperature
- read instrumentation, such as temperature gauges, digital and non-digital, O₂ and CO₂ test equipment, to monitor stores and zone temperatures
- identify and report out-of-specification temperatures in storage facilities
- take corrective action in response to out-of-specification temperatures, including implementation of procedures to segregate damaged or potentially unsafe product
- complete records of stock receipt and transfer as required
- maintain work area to meet housekeeping standards
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- OHS hazards and controls, including the purpose and limitations of protective clothing and equipment, conditions for working in confined spaces and modified atmospheres, safe use of handling equipment, use of hazardous chemicals and air tightness
- implications of expansion and contraction of rooms
- temperature controlled storage facilities and features in the work area, including temperatures required for a variety of produce
- acceptable temperature and atmosphere ranges and consequences of failing to meet these ranges, such as requirements for gradual temperature change
- food safety and quality consequences of stock temperature control requirements not being met
- monitoring procedures and instrumentation, including use of thermometers or other measuring and testing instrumentation
- notification, recording and reporting requirements
- operating procedures for goods handling equipment as required
- housekeeping requirements for work area

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify legal responsibilities to produce quality, safe food	1.1. Legal and ethical responsibilities to produce safe food are identified 1.2. Legal, company and customer quality standards for products are identified
2. Identify common causes of food poisoning and contamination	2.1. Food-borne pathogens and contamination that can occur in processed food are identified 2.2. Patterns of contamination and spoilage are traced through processing, storage and shelf-life for a given product 2.3. Conditions required for contamination to occur are identified 2.4. Laboratory results used to detect the presence of contamination and/or related conditions are analysed and applied
3. Manage control measures to eliminate and/or minimise the risk of contamination	3.1. Control measures related to receivals, handling and processing, storage and/or transport stages to guarantee food safety in the workplace are identified 3.2. Control measures to prevent food contamination and spoilage are documented and followed
4. Manage cleaning and sanitation regimes	4.1. The main types of cleaners and sanitisers used in the food industry are identified 4.2. Application methods and related materials, labour and equipment requirements are identified 4.3. Cleaning and sanitation methods and regimes are assessed for environmental impact 4.4. Appropriate cleaning and sanitation methods are selected to suit a given product, processing method and risk factors and to ensure minimal impact on the environment 4.5. Inspection and/or test methods are in place to confirm the effectiveness of the cleaning and sanitation program 4.6. Responsibilities for cleaning and sanitation are documented and communicated

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify the requirements of legislative responsibilities relating to food production, including food composition, specification of safe handling, processing, storage and transportation methods as appropriate, and establishment of related programs, such as cleaning and sanitation, personal hygiene practices, training and food traceability and recall procedures
- identify how legislative requirements have been applied in a production context (this will typically be based on the food safety program (HACCP) for a production process)
- identify related roles and responsibilities for implementing, maintaining and reviewing the food safety program in a production environment
- identify the types of pathogenic bacteria, viruses and chemicals that can occur in food, including the main types of pathogens and contamination that can occur for a given product and production method, as well as the specific strains that can occur
- identify the main types and causes of food spoilage that can occur, including:
 - bacterial growth
 - growth of yeasts and moulds
 - fermentation
 - enzymic reactions
 - physical degradation (oxidation)
- identify the conditions that cause or promote the growth of pathogens and other forms of contamination and food spoilage
- identify typical control measures used to prevent contamination from occurring, including microbiological, chemical and physical types of contamination
- distinguish between measures to control pathogenic growth (critical control measures) and those used to prevent other forms of contamination
- interpret test results and apply this information in a production context
- identify the types of contamination that can occur and the controls in place to prevent or minimise the likelihood of contamination occurring (where a food safety plan has been developed, compare the outcomes of this process with the provisions of the food safety plan)
- review workplace information to ensure that critical control measures and procedures are documented in a form appropriate to meet company and legal requirements and that quality control measures and procedures are documented to meet company and customer requirements (documentation includes action to be followed in the event of an incident or emergency and should be reflected in food safety plans and operating procedures)

REQUIRED SKILLS AND KNOWLEDGE

- identify the cleaning and sanitation requirements/standards appropriate for a food processing environment
- identify the types of cleaners, sanitisers and combined cleaning/sanitation agents used in the food industry and related application methods
- evaluate the appropriateness of available methods to a given production process/product type
- develop and/or review a cleaning regime suited to a given production process, including the nature, frequency and methods of cleaning and sanitation required, such as removal of residues as appropriate, inspection and/or test methods to confirm effectiveness and allocation of roles and responsibilities (the cleaning regime should balance the need to ensure effective cleaning and sanitation at the same time as minimising the disruption to production)
- identify the possible consequences of failing to follow the cleaning regime
- develop and/or review procedures to describe the methods, frequency, recording, inspection and test requirements related to implementation of cleaning and sanitation
- analyse and interpret test results relating to cleaning and sanitation
- for a given type of microbacterial and/or chemical contamination, identify likely causes, relevant tests and review of the effectiveness of existing controls, including cleaning and sanitation measures
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- the types of pathogenic bacteria, viruses and chemicals that can occur in food
- the main types of pathogens and contamination that can occur
- the main types and causes of food spoilage that can occur, including:
 - bacterial growth
 - growth of yeasts and moulds
 - fermentation
 - enzymic reactions
 - physical degradation (oxidation)
- the conditions that cause or promote the growth of pathogens and other forms of contamination and food spoilage
- criteria for evaluation to take account of the effectiveness of the method in controlling contamination risk, equipment requirements, cost and other criteria as identified by the workplace.
- issues of compatibility of cleaning agents with materials used in equipment/instrument fabrication

REQUIRED SKILLS AND KNOWLEDGE

- the legal responsibilities to maintain food production facilities in a clean and sanitary condition, the difference between a surface that appears clean and one that is microbiologically described as clean, and use of terms, such as sterile and commercially sterile
- laboratory procedures used to avoid erroneous results, including practices such as use of negative controls and the purpose of false positives/false negatives
- common terms, such as:
 - plate count
 - culture
 - colony
 - bacteriophage
 - spores
 - yeasts and moulds
 - water activity

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify legal, company and quality standards for food products • identify common causes of contamination and poisoning, and techniques used to verify status • identify and manage control measures used to address risks • manage cleaning procedures to ensure workplace standards meet food safety requirements.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • food safety plan and related information, including operating procedures, cleaning and sanitation regimes/plans • laboratory test results • a given production process and product as the basis for tracing contamination/spoilage and identifying control measures • cleaning and sanitation methods, equipment and procedures .
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Food-borne pathogens and contamination</p>	<p>Food-borne pathogens and contamination includes:</p> <ul style="list-style-type: none"> those listed in the World Health Organisation(WHO) table on 'Food-borne pathogens and chemicals of public health importance'. <p>This is reproduced in a number of food safety-related documents, including 'Food Safety Standards Costs and Benefits' ANZFA, May 1999</p>
<p>Food-related legislation</p>	<p>Food-related legislation relevant to this unit includes:</p> <ul style="list-style-type: none"> relevant state, territory and federal food safety legislation the Food Standards Code
<p>Identification</p>	<p>Identification can be based on active ingredients and includes but is not limited to:</p> <ul style="list-style-type: none"> alkaline and acid-based detergents steam/hot water-based methods of sanitation bleach-based sanitisers quaternary ammonium compounds (QUATs) alcohol-based sanitisers use of UV light, gamma radiation and combined cleaners/sanitisers

Co-requisite units

Co-requisite units		

FDFTEC4004A Apply basic process engineering principles to food processing

Modification History

September 2012: clarified pre-requisite information.

Unit Descriptor

Unit descriptor	This unit of competency provides an introduction to process engineering concepts. It covers the skills and knowledge required to map production processes, measure outputs (yields, material variances) and apply an understanding of the basic principles of systems and equipment commonly used in the food processing industry.
------------------------	--

Application of the Unit

Application of the unit	Application of this unit includes systems and equipment used for heat transfer, refrigeration, pumping and evaporation/drying.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFOP2030A	Operate a process control interface
	FDFTEC4007A	Describe and analyse data using mathematical principles* <i>FDFOP2015A Apply principles of statistical process control*</i>

Prerequisite units	
	<i>FDFO2061A Use numerical applications in the workplace</i>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Map a production process	1.1. The scope of a production process to be mapped is identified 1.2. Appropriate process mapping symbols are selected and used 1.3. A map is developed that identifies the relationship of each step in the process
2. Calculate yields and efficiencies of a production process	2.1. Inputs to and outputs of a production processing system are identified 2.2. Information required to monitor performance of a production process is collected 2.3. Calculate yields, efficiencies and material variances
3. Apply principles of fluid flow to a production process	3.1. Fluid properties that affect flow are identified 3.2. Components and related equipment used in the pumping system are identified 3.3. Features of the system design that affect performance of the pumping system are identified 3.4. The effect of pumping on the fluid properties is identified 3.5. The operating capacity of pumping systems used in the production process is established 3.6. Procedures for the safe use of pumping equipment are reviewed and/or established
4. Apply principles of heat transfer to a production process	4.1. Types of heat transfer are identified 4.2. Methods and related equipment used to transfer heat are identified 4.3. Types of heat transfer media are identified 4.4. Operating principles of cooling, chilling and freezing processes are identified 4.5. The effect of heat transfer on product/material properties is identified 4.6. The operating capacity of heat transfer equipment used in the production process is established 4.7. Procedures for the safe use of heat transfer equipment are reviewed and/or established
5. Apply principles of evaporation to a production process	5.1. Methods and related equipment used for evaporation are identified 5.2. The effect of evaporation on product/material properties is identified 5.3. Tests used to determine the concentration of a liquid

ELEMENT	PERFORMANCE CRITERIA
	<p>are identified</p> <p>5.4. The operating capacity of evaporation equipment used in the production process is established</p> <p>5.5. Procedures for the safe use of evaporation equipment are reviewed and/or established</p>
<p>6. Apply principles of drying to a production process</p>	<p>6.1. Methods and related equipment used for drying are identified</p> <p>6.2. The effect of drying on product/material properties is identified</p> <p>6.3. Tests used to determine moisture content of materials and/or product are identified</p> <p>6.4. The operating capacity of drying equipment used in the production process is established</p> <p>6.5. Procedures for the safe use of drying equipment are reviewed and/or established</p>
<p>7. Apply principles of process control to management of production processes</p>	<p>7.1. Sensors and instrumentation providing input information to the control system are located</p> <p>7.2. Consequences of a system malfunction are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- establish and apply process mapping protocols and symbols used in the workplace to describe a production process
- identify the inputs to a production process and the outputs of a production process
- identify the data required to calculate yields, efficiencies and material variances
- locate sources of information in the workplace, such as printing reports from information management systems
- calculate yields, efficiencies and material variances using software or application of a formula
- identify properties of fluids that affect fluid flow, including viscosity, temperature and size, and distribution of particulates
- identify types of pumping equipment appropriate for different types of liquids
- identify tests or measures taken to monitor operation of pumps and related performance information
- apply information to describe pump system capacity in a production process
- identify features in the pumping system design that affects pumping efficiencies, including length of pipework, number and placement of valves and fittings, height of inlet and discharge points, internal surface and diameter of the pipe
- identify possible effects of pumping on liquid properties
- identify operational and safety features of pumps used in a production process, including inspections required to identify signs of faulty performance and/or wear
- review and/or establish procedures to define safe pump operation and maintenance
- identify heat transfer methods and types of equipment commonly used in the food industry, such as:
 - retorts
 - jacketed vessels/kettles
 - heat exchangers, including plate, tubular and scraped surface
 - cooling tunnels
 - refrigeration circuits
 - chillers
 - freezers
- identify typical applications in the food industry and the heat transfer medium used for each heat transfer method
- identify the effects of heat transfer on properties of materials/products, including possible consequences where the heat transfer process is not operated within specified parameters

REQUIRED SKILLS AND KNOWLEDGE

- distinguish between conduction, convection and radiation in the application of heat
- identify the properties of heat and steam, including an understanding of the terms latent heat, saturated and supersaturated steam
- identify the heat transfer requirements and equipment used in a production process, including mapping the stages and equipment used in a heat transfer process and holding stages
- identify tests or measures taken to monitor performance of heat transfer equipment and related expression of performance information
- apply information to describe heat transfer process capacity in a production process
- identify operational and safety features of heat transfer equipment used in a production process, including inspections required to identify signs of faulty performance and/or wear
- review and/or establish procedures to define safe operation and maintenance of heat transfer processes and equipment used in a production process
- identify the effects of evaporation on product, such as:
 - physical property changes such as crystallisation, increased solids/viscosity
 - intensification of flavour and concentration of acids
 - changes in microbiological characteristics due to application of heat and reduction of moisture/water activity
- identify the equipment components of an evaporation process, such as:
 - heat transfer surface (rising film, falling film, forced circulation and plate)
 - vapour separator
 - vapour condenser
 - vacuum unit
- map the stages and equipment used in an evaporation process
- identify tests or measures taken to monitor performance of an evaporation process and related expression of performance information
- apply information to describe evaporation process capacity in a production process
- identify tests carried out to determine material/product solids and related terms (common test methods include baume, refractive index and brix)
- identify the processing parameters, time required to achieve the target result and steam required
- identify operational and safety features of evaporation equipment used in a production process, including inspections required to identify signs of faulty performance and/or wear
- review and/or establish procedures to define safe operation and maintenance of evaporation processes and equipment used in a production process
- identify the effects of drying on product, such as:
 - changes that occur at each stage of the drying process
 - reduction in weight and bulk
 - changes in microbiological characteristics due to application of heat and

REQUIRED SKILLS AND KNOWLEDGE

reduction of moisture/water activity

- identify the equipment components of a drying process, such as:
 - hot air drying (fluidised bed driers, spray driers, belt trough driers, and air lift driers)
 - freeze drying (vacuum)
- map the stages and equipment used in a drying process
- identify tests or measures taken to monitor performance of a drying process and related expression of performance information
- describe drying process
- identify tests carried out to determine process outcomes on material/product
- identify the processing parameters, time and energy required to achieve the target result
- identify operational and safety features of drying equipment used in a production process, including inspections required to identify signs of faulty performance and/or wear
- review and/or establish procedures to define safe operation and maintenance of drying processes and equipment used in a production process
- identify the main types of sensors used in food processing to provide input data to control systems and how these sensors operate
- identify the location and operation of sensors and related data input devices to a control system on equipment used in a production process
- for a given production process, identify the criticality of system control and consequences of a system malfunction or power outage
- develop and/or review procedures to be followed in the event of a system malfunction or power outage
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- the basic operating features and components of pumps commonly used and typical applications, such as:
 - rotodynamic (centrifugal) pumps
 - positive displacement pumps, including reciprocating piston pumps, rotary pumps (including gear and lobe pumps), screw pumps, eccentric rotor pumps (including progressive cavity or mono pumps) and flexible vane pumps
- related components of the pumping system, including valves, taps and pipework, and where required, Australian standards and workplace protocols for indicating materials carried by pipework
- features in the pumping system design that affects pumping efficiencies, including

REQUIRED SKILLS AND KNOWLEDGE

length of pipework, number and placement of valves and fittings, height of inlet and discharge points, internal surface and diameter of the pipe

- the following terms:
 - pressure and pressure drop
 - velocity
 - head
- typical applications in the food industry and the heat transfer medium used
- equipment components of a drying process
- heat transfer requirements and equipment used in a production process
- tests carried out to determine process outcomes on material/product
- operational and safety features of drying equipment
- inspections required to identify signs of faulty performance and/or wear
- main types of sensors used in food processing to provide input data to control systems and how these sensors operate

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • map a production process • apply engineering principles to a food production context • perform required calculations.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • production process and related equipment, manufacturers' advice and operating procedures • methods and related software systems as required for collecting data and calculating yields, efficiencies and material variances appropriate to production environment • tests used to report relevant product/process information and recorded results.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	<p>Uses of processing equipment and related work processes are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact</p>
Calculation	<p>Calculation of yields, efficiencies and material variances may involve:</p> <ul style="list-style-type: none"> • use of software programs and systems, such as SAP • application of a relevant formula

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify additives used in food	<p>1.1.Types of food additives and common additives used in food products are identified</p> <p>1.2.Functions of food additives are identified</p> <p>1.3.Legal requirements relating to use of food additives are identified</p> <p>1.4.Legal and quality consequences of incorrect additive addition are identified</p>
2. Manage use of additives in a production process	<p>2.1.Additives used in product range produced in the production process are identified</p> <p>2.2.Methods of addition are suited to food additive and production requirements</p> <p>2.3.Procedures for safe handling and addition of food additives are reviewed and/or established</p> <p>2.4.Handling, use and disposal of additives is conducted in accordance with environmental standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify common food additives and group them by function
- identify common types of additives used in the food industry
- identify the functions of food additives commonly used in food, such as:
 - texture modifying agents
 - organoleptic and nutritional modifying agents, including flavours, colours, flavour enhancers, sugar-free sweeteners, minerals, vitamins and food acids
 - shelf-life enhancing agents, including preservatives, anti-oxidants and food acids
 - technological aids, including humectants, enzymes, propellants, flour treatment, caking agents and bleaching agents
- identify additives, colours and flavours used in product range produced in the workplace, including:
 - coding system used to describe food additives, colours and flavours
 - legal requirements relating to additives used as established by the Food Standards Code
 - function in the food product
 - typical quantities used and related units of measurement
 - preparation requirements, and forming and breaking emulsions, and preparation of solutions where required
 - addition systems and related equipment requirements
 - health and safety issues related to handling of additives
 - process recording requirements
 - consequences of incorrect additive addition, including the Food Standards Code as it relates to food additives used in a given product range
- review and/or establish procedures to describe storage, handling and processing conditions that affect the characteristics of colours and flavours, such as:
 - changes in pH
 - temperature change
 - exposure to light
 - exposure to humidity
 - packaging materials
- review and/or establish procedures to describe the method of preparation and addition of additives to food products produced in the workplace
- provide examples of incorrect addition of food additives that could occur in the

REQUIRED SKILLS AND KNOWLEDGE

production process, determine appropriate corrective action within company policy and level of authority

- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- types of food additives and common additives used in food products
- the functions of food additives commonly used in food
- coding system used to describe food additives, colours and flavours
- legal requirements relating to additives used as established by the Food Standards Code
- typical quantities used and related units of measurement
- preparation requirements, such as forming and breaking emulsions, and preparation of solutions
- addition systems and related equipment requirements
- occupational health and safety (OHS) issues related to handling of additives
- consequences of incorrect additive addition, including Food Standards Code as it relates to food additives used in a given product range
- the quality and food safety hazards of incorrect addition
- handling and processing conditions that affect the characteristics of colours and flavours

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Manage production systems to meet legislative requirements relating to product and processing</p>	<p>1.1. Relevant legislation and regulations that apply to food production, packaging and labelling are identified</p> <p>1.2. The purpose and intent of relevant legislation is identified</p> <p>1.3. The roles and responsibilities of authorities responsible for administering legislation are identified</p> <p>1.4. Procedures to support compliance with legal requirements are established and/or reviewed</p>
<p>2. Manage production facilities to meet legislative requirements relating to food premises, equipment design and storage facilities</p>	<p>2.1. Identify relevant legislation and regulations that apply to food premises, storage facilities and equipment are identified</p> <p>2.2. Identify the purpose and intent of relevant legislation are identified</p> <p>2.3. Identify the roles and responsibilities of authorities responsible for administering legislation are identified</p> <p>2.4. Procedures to support compliance with legal requirements are established and/or reviewed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify the legal responsibilities of a food processing company, including responsibilities relating to:
 - product content (Food Standards Code)
 - product packaging and labelling, including use of nutritional information panels (Food Standards Code)
 - design requirements of food premises and equipment
 - requirements of storage facilities used for materials, ingredients and final product
 - other requirements as appropriate to the product and/or market (e.g. import and/or export legislation)
- identify and/or develop specifications and procedures to ensure that legal responsibilities related to product content and packaging are achieved
- inspect plant design to identify potential hazards that could be introduced as a result of equipment design and configuration, such as overhead pipes or equipment where dust could collect and fall into food
- where hazards are identified, apply the hierarchy of control to identify opportunities to remove or control the risk
- identify storage facilities across a production site
- identify the dangerous goods stored on site and confirm that storage of these goods (type and quantity) meets legal requirements
- confirm that employees required to handle chemicals and dangerous goods are advised of the associated risks, that this information is available in a form appropriate to the audience and that material safety data sheets are available
- develop and/or review recording systems to confirm compliance with legislative requirements and ensure that employees responsible for recording information are informed of these responsibilities
- establish internal review/audit procedures to confirm that legislative responsibilities are met
- identify the relevant authority responsible for administering the legislation
- identify the rights and responsibilities of related officers to access the production site
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common units of measurement and dimensions used to describe physical properties of materials and food	1.1. SI units of measurement and related unit symbols are identified 1.2. Common formulae used to measure characteristics of food are identified and applied 1.3. Calculations involving fractions and ratios are performed
2. Apply linear algebra to analyse workplace information	2.1. Given two known values, an unknown value is calculated 2.2. The principles of transposing values are applied to solve workplace problems
3. Use graphs to analyse workplace information	3.1. Data analysis and presentation requirements are identified 3.2. Graphs are generated to analyse and display workplace information 3.3. A process control chart is constructed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify the fundamental units (SI) of measurement (metres, kilograms and seconds)
- identify common derived units/measurements, related formulae and their application in a food processing context, such as:
 - density, specific gravity
 - viscosity
 - temperature
 - volume, weight and mass
 - velocity
 - other measures as appropriate to a production process
- apply relevant formulae to measure physical characteristics of food products and/or processes
- select production calculation requirements, such as the adjustment of a recipe formulation, to:
 - select required formulae
 - express the problem as an equation
 - identify the known and unknown values
 - manipulate equations by transposing values as required
 - convert units into compatible formats (i.e. SI units, multiples and sub-multiples)
 - calculate of percentages and ratios
 - conduct the calculation to obtain a solution
 - record the result in the appropriate units and level of detail
- identify graphs commonly used in the workplace and relevance to displaying workplace information
- construct charts to analyse and illustrate workplace information, such as use of relevant software
- calculate standard deviation for a given data set
- apply an understanding of standard deviation to determine capability of a process
- identify the target (mean value) for the process
- identify upper and lower control limits to provide for 98% of units to fall within the limits
- use communication skills to interpret and complete work information to support operations of work team or area

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify SI units of measurement • identify common derived units/measurements, related formulae and their application in a food processing context • apply relevant formulae to measure physical characteristics of food products and/or processes • calculate standard deviation • construct charts • identify mean value • identify upper and lower control limits.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • workplace processes and procedures • workplace documentation, including conversion charts, sampling plan and control chart formats, related data collection methods, such as log sheets, and relevant formulae to be applied to a production process.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role. An example could be:</p> <ul style="list-style-type: none"> • FDFPPL4005A Establish process capability.
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Common measurements

Common measurements include but are not limited to:

- density
- specific gravity
- volume
- weight
- mass
- speed

Graphs

Graphs include but are not limited to:

- statistical process control (SPC) charts
- x-y charts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify characteristics of packaging suitable for use with food products	1.1. Packaging materials suitable for food application are identified 1.2. Packaging interactions with food products are identified 1.3. Environmental impact and handling features of packaging materials are identified 1.4. Customer and legal requirements of packaging are identified 1.5. Packaging material characteristics meet the needs of the food to be packaged
2. Apply packaging knowledge in a production environment	2.1. Properties of packaging materials used in a packaging process are identified 2.2. Costs of packaging materials are identified 2.3. Procedures for safe operation of the packaging process are established and/or reviewed 2.4. Out-of-specification packaging outcomes are analysed to identify probable cause 2.5. Opportunities for improvement to materials, processes or environmental impacts are identified and investigated within level of technical responsibility 2.6. Proposals for improvement are developed and implemented within level of authority and according to company procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify properties of packaging materials as specified in packaging specifications for product handled
- identify the quality assurance systems in place to ensure that the packaged product meets customer and legal requirements
- identify factors that affect shelf-life of the packaged product and the features of packaging design that preserve the product
- identify problems that occur in the packaging process and investigate likely causes
- determine appropriate corrective action to prevent packaging non-conformance
- identify packaging materials suitable for use with food products, including plastics, paper-based materials, glass and metal-based materials
- describe the purpose of packaging and the properties of packaging materials designed to protect product and extend shelf-life, including the role of packaging to provide:
 - protection of product from contamination (microbial, pest infestation, and physical damage)
 - barriers (atmospheric, moisture, flavour and light)
 - package sealability and seal integrity
 - easy-to-open access to the product
 - information to the consumer about the product
 - market appeal
- identify legal requirements relating to packaged product, including Food Standards Code requirements and other legislation relevant to the product
- identify pathogens and spoilage that can occur in packaged food and the conditions required for these to occur
- identify features intrinsic to the food type, according to food type, such as pH, water activity, nutrient content, presence of microbiological compounds, respiration rate (fresh fruit and vegetables) and biological structure
- identify extrinsic factors, such as processing method, temperature, water loss/humidity, maturity (applies to maturity of fruit and vegetables when harvested), handling, cleaning, sanitation and personal hygiene practices and gaseous composition of the storage atmosphere
- identify food spoilage indicators, including microbial contamination, enzymic browning and sensory degradation of characteristics, such as flavour, aroma, colour and texture
- describe the features of packaging material requirements of products handled in the workplace, including coated packaging products, and active/interactive packaging

REQUIRED SKILLS AND KNOWLEDGE

films

- identify factors that influence selection of packaging materials, including market appeal, suitability for use with the food product/s to be packaged, compatibility with packaging technology, cost, environmental features, consumer safety/tamper evidence
- identify packaging methods and technologies designed to extend shelf-life, including active packaging materials, vacuum packing, gas flushing or sparging and modified atmosphere packaging (MAP)
- describe the significance of factors, such as moisture and temperature in promoting/preventing product spoilage
- identify typical problems that occur in the packaging process, and outline likely causes and appropriate response options within level of responsibility (where MAP is used, this includes pack collapse and may include fogging - relevant to fresh fruit and vegetables)
- identify relevant sources of technical expertise and related authority levels to address packaging issues
- for MAP packaging processes, describe the effect of gas composition on the packaged product according to enterprise procedures, including the role of the most commonly used gases in food packaging including carbon dioxide, oxygen and nitrogen and the reaction between gases, the packaged product and the packaging material
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- properties of packaging materials designed to protect product and extend shelf-life
- packaging interactions with food products
- costs of packaging materials
- legal requirements relating to packaged product, including Food Standards Code requirements and other legislation relevant to the product
- features of packaging design that preserve the product
- pathogens and spoilage that can occur in packaged food and the conditions required for these to occur
- impact of extrinsic factors on food products, such as processing method, temperature, water loss/humidity, maturity (applies to maturity of fruit and vegetables when harvested), handling, cleaning, sanitation and personal hygiene practices and gaseous composition of the storage atmosphere
- characteristics of product and its behaviour when packaged over the shelf-life of the product
- factors that influence selection of packaging materials

REQUIRED SKILLS AND KNOWLEDGE

- typical problems that occur in the packaging process, and likely causes and appropriate response options
- the characteristics of product handled and its behaviour when packaged over the shelf-life of the product, for example, reactions that occur when canning some types of vegetables requiring appropriately coated cans, respiration that is ongoing after fresh fruit and vegetables are packaged requiring gas permeable packaging materials, and the effect of high moisture and high fat content products on the packaging process where MAP packaging processes are used

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • analyse packaging system components, including materials used and interaction with product, costs, processes, legal and customer requirements and environmental and handling implications • analyse and confirm safety aspects of processes and equipment • analyse non-conformances and packaging problems and determine probable cause • propose improvements to the packaging system.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • packaging specifications • product, packaging components and consumables • packaging process equipment • relevant standard operating procedures (SOPs) • communication systems • workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Product packaging and related work processes are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact
Packaging processes and technologies	Packaging processes and technologies include: <ul style="list-style-type: none"> • active packaging materials • vacuum packing • gas flushing or sparging • MAP
Out-of-specification results	Follow-up action in response to out-of-specification results occurs in consultation with the relevant quality/technical expert responsible for packaging specifications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply understanding of common physical phenomena in the food industry	1.1. An understanding of common physical phenomena is applied to explain relevant changes that occur to ingredients and product through the production process 1.2. Information on the changes that occur is communicated to others in appropriate formats
2. Apply an understanding of the physical states of matter	2.1. The three states of matter and the atomic changes that occur at each phase are identified 2.2. The behaviour of each type of matter and its relationship to the production process is described 2.3. The relationship between pressure and temperature in phase transition is identified
3. Apply an understanding of common food science principles to a production process	3.1. The significance of pH for processing, food safety and cleaning applications is identified 3.2. The reactions and properties of carbohydrates, proteins and fats can be tracked through a given process 3.3. The properties of common emulsions, suspensions and solutions can be described 3.4. Common chemical reactions that occur, factors required to cause a reaction and the effect of reactions can be identified 3.5. Safe work procedures for processes requiring handling of chemicals and/or involving chemical reactions are reviewed and/or established
4. Communicate and interpret technical information	4.1. Appropriate technical terms are used to communicate information on properties of food and materials commonly used in the food industry 4.2. Test results and reporting formats to communicate information on composition, properties and reactions are interpreted and applied

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify physical characteristics or phenomena that occur through processing, including the following common physical phenomena, and any additional phenomena appropriate to the production process:
 - shear and strain
 - friction
 - surface tension
 - pressure
 - crystallisation
 - total solids
 - heat and temperature
 - relative humidity
 - work/energy input
 - viscosity
 - particle size
 - melting points, boiling points, freezing points
 - dew/condensation point
 - other phenomena as appropriate to product/process
- identify products and processes where these phenomena can be observed
- based on phenomena that can be observed in a production process, develop explanatory sketches or flow charts to communicate how these phenomena affect product and process
- identify tests commonly used to measure these phenomena and related units of measurement
- identify molecular changes that occur in states of matter, and apply this to an understanding of common applications, such as refrigerant or freeze drying
- for transition phases that apply in a given production process, identify the role of temperature and pressure in the transition process
- identify the difference between acids and bases
- classify commonly used materials, ingredients and indicators according to pH
- identify the difference between a strong acid and a concentrated acid and related units of measurement used to describe these acids
- identify typical strengths and concentration levels required for acids and bases commonly used in a production process (e.g. cleaning agents)
- for cleaning agents, identify compatibility with equipment surface materials

REQUIRED SKILLS AND KNOWLEDGE

- identify the significance of pH for processing, food safety and cleaning applications
- identify the basic molecular structures of carbohydrates, proteins and fats
- identify the processing stages designed to affect the structure of these compounds (e.g. hydrogenation or denaturing proteins in cooking processes of oil)
- distinguish the difference between solutions, suspensions and colloidal systems. Colloidal systems include:
 - emulsions (oil in water/water in oil)
 - sols (solid-liquid/solid-solid)
 - gels
 - foams (gas-liquid/gas-solid)
- identify typical applications of solutions, suspensions and colloidal systems in food processing
- distinguish between dispersed particles and the dispersion medium in colloids
- identify factors that affect stability of colloidal systems, including the stages in a production process that can cause a change in the structure of a colloid
- identify common chemical reactions that occur in food processing, including both spontaneous and controlled reactions (reactions to be covered include oxidation, enzymic, Maillard and acid-based reactions, and other reactions relevant to a given product type and production process)
- identify the role of enzymes in generating biological reactions (e.g. amylase in bread)
- identify safety hazards and control methods required when handling chemicals and working with processes that involve chemical reactions
- review and/or develop workplace procedures to include advice on hazards and related instructions on control methods, including advice on action required in the event of an incident such as a chemical spill or an emergency
- read and interpret technical information to describe food properties and/or reactions, including recognition and application of appropriate units of measurement and terms
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

knowledge of:

- physical characteristics or phenomena that occur through processing and products and processes where these phenomena can be observed
- tests commonly used to measure these phenomena and related units of measurement
- molecular changes that occur in states of matter

REQUIRED SKILLS AND KNOWLEDGE

- transition phases that apply in a given production process
- role of temperature and pressure in the transition process
- differences between a strong acid and a concentrated acid and related units of measurement
- classifications of commonly used materials, ingredients and indicators according to ph
- typical strengths and concentration levels required for acids and bases commonly used in a production process
- basic molecular structures of carbohydrates, proteins and fats
- difference between solutions, suspensions and colloidal systems
- typical applications of solutions, suspensions and colloidal systems in food processing
- factors that affect stability of colloidal systems
- common chemical reactions that occur in food processing
- role of enzymes in generating biological reactions
- safety hazards and control methods
- technical information resources

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify physical and chemical characteristics of food materials and the impacts of production processes on these characteristics • identify common tests and measures to assess food materials • identify the characteristics of acids and bases and their application in food processing • identify the basic molecular structures of carbohydrates, proteins and fats • distinguish the difference between solutions, suspensions and colloidal systems • identify hazards and control methods in managing hazardous materials • communicate technical information using correct technical terms, flow charts and sketches.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • production process and related equipment, manufacturers' advice and operating procedures • tests used to report relevant product/process information and recorded results.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Handling and processing of product and materials</p>	<p>Handling and processing of product and materials is consistent with company standards and requirements, legislative requirements, codes, industrial awards and agreements</p>
<p>Identification of molecular structure</p>	<p>Identification of molecular structure can be supported by others and does not necessarily involve use of microscopes in a laboratory</p>

Co-requisite units		

FDFTEC4010A Manage water treatment processes

Modification History

November 2011: update to imported prerequisite, minor typographical error corrected.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to treat water for use in production stages, such as washing and cooling and to treat waste water.
------------------------	---

Application of the Unit

Application of the unit	This unit is designed to provide an overview of water treatment methods and responsibilities across a food production site. It is not designed to meet the competency requirements of the person who specifies water quality standards and/or treatment methods.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	MSAENV272B	Participate in environmentally sustainable work practices

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage water treatment processes	1.1. Uses of water within the plant and the related quality requirement for each use are identified 1.2. Appropriate treatment methods are in place to meet treatment requirements 1.3. Environmental considerations for water treatment are identified and treatment options selected or applied to minimise environmental impact 1.4. Procedures for treating water are developed and/or reviewed
2. Manage waste water treatment and disposal	2.1. Sources and characteristics of waste water generated across food processing operations are identified 2.2. Methods for treating and recycling water are identified 2.3. Appropriate treatment methods are in place to meet treatment requirements 2.4. Legal requirements for water discharge are identified 2.5. Factors affecting the cost of water discharge are identified and monitored 2.6. Conditions that could result in non-compliance and the related control methods in place to prevent this from occurring are established 2.7. Procedures for treatment of waste water are developed and/or reviewed to ensure compliance with trade waste standards and minimal impact to the environment 2.8. Opportunities to reduce the volume of trade waste and improve treatment methods are identified, investigated and implemented within level of responsibility

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- map the uses of water in production across the production site, such as water used in cooling applications, and washing/flushing
- identify treatment requirements and methods for water used in production, such as addition of sanitising agents (e.g. chlorine and anti-rust agents)
- identify causes of risks associated with Legionella and related control measures
- describe the meaning of terms and concepts used to describe water quality, such as:
 - potable
 - total residual chlorine
 - free residual chlorine
 - available chlorine
- identify acceptable limits for water going to storm water (pH range)
- identify the legal, social and environmental consequences of releasing water to the environment that does not meet water quality standards
- identify characteristics that are monitored in waste water and how these affect the cost of trade waste disposal (this is set out in agreements with the water supplier and typically includes volume, BOD, suspended solids, and nitrogen - some types of heavy metals may also be monitored although this may not directly affect cost of disposal)
- identify equipment and methods used to monitor waste water characteristics, including meters used to measure volume and a sampling and testing regime to check water quality
- describe principles of common methods used to treat trade waste and identify typical applications, including both primary and secondary treatment stages
- identify conditions that could result in failure to comply with legal requirements for storm water and related control methods (e.g. spill control consequences and control methods)
- identify conditions that could result in high costs of trade waste disposal and related control methods, such as conditions or activities that place additional load on treatment processes (e.g. use of strong cleaning chemicals and related control measures)
- develop and/or review procedures to describe procedures to minimise costs of trade waste disposal, including good housekeeping practices, such as collection of solids and materials rather than hosing them down drains
- identify the rights of relevant authorities to enter the site and conduct independent sample collection and test procedures
- Identify appropriate communication and consultation systems to support

REQUIRED SKILLS AND KNOWLEDGE

- continuous improvement of resource efficiency and waste management
- identify trends in environmental management and social expectations of companies and assess the company environmental policy and related procedures in light of these trends
- map the drainage points across a production site, including identifying drains that go to banded areas, trade waste and storm water
- map the waste water generated at each stage of the food processing operation (for each stream generated, identify the characteristics of waste water and related treatment requirements)
- carry out an assessment on water use within a given process
- identify the quantities and applications of water, the treatment stages, if any, points where water could be more effectively conserved, such as running hoses, steam leaks, and waste water generated by the process
- identify the treatment methods currently in place and consider opportunities to improve resource utilisation through conservation of water, changing materials and processing methods and/or more effective treating and/or recycling of waste water
- based on investigations, develop improvement proposals (this may be undertaken with input from relevant technical specialists)
- establish and/or utilise consultative arrangements to canvass input on efficient water use and trade waste treatment methods
- communicate information on changes to workplace systems and procedures to support improvements
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- uses of water in production
- treatment requirements and methods for water used in production
- legal, social and environmental consequences of releasing water to the environment
- causes of risks associated with Legionella and related control measures
- acceptable limits for water going to storm water (pH range)
- characteristics that are monitored in waste water and how these affect the cost of trade waste disposal
- rights of relevant authorities to enter the site and conduct independent sample collection and test procedures
- trends in environmental management
- characteristics of waste water and related treatment requirements
- methods for recycling water
- conditions that could result in non-compliance and the related control methods

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • identify and assess water usage and disposal processes in the production site • identify environmental impacts of water use, treatment and disposal • identify risks associated with water quality • identify treatment requirements and methods for water used in production • identify costs associated with use, treatment and disposal • identify and assess opportunities for improving water efficiencies.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • company environmental policy and related procedures • site plans, including relevant advice on drainage system • advice on environmental hazards and control procedures relevant to the production facility • incident and emergency response procedures and equipment • workplace information recording systems, requirements and procedures.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of

EVIDENCE GUIDE	
	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Water treatment and related work processes	Water treatment and related work processes are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact
Procedures for waste water treatment	Procedures for waste water treatment include: <ul style="list-style-type: none"> • safety information and procedures to respond to non-compliance and emergency situations
Out-of-specification results	Follow up action in response to out-of-specification results occurs in consultation with the relevant quality/technical expert responsible for packaging specifications
Primary treatment stages	Primary treatment stages include but are not limited to: <ul style="list-style-type: none"> • separation • filtration • sedimentation (settling tanks) • dissolved air floatation (DAF)
Secondary processes	Secondary processes include but are not limited to: <ul style="list-style-type: none"> • activated sludge • trickling filter systems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify product recall situations	1.1. Circumstances that could result in a product recall are identified 1.2. Appropriate controls are in place to manage risks 1.3. Criteria used to initiate a product recall are identified 1.4. Legal responsibilities and requirements of a recall program are identified
2. Participate in a product recall	2.1. The components of the product recall system in the workplace are identified 2.2. Workplace systems are used to trace ingredients, materials and batch information 2.3. Product recall procedures are implemented within level of responsibility 2.4. Procedures to define roles and levels of authority in the event of a product recall are established/reviewed
3. Review processes to minimise the risk of recurrence	3.1. The cause of the product recalls are investigated 3.2. Purchasing arrangements and in-house procedures are established or reviewed to minimise the risk of recurrence 3.3. Consultative mechanisms are established and/or reviewed to support continuous improvement and communicate information on product recalls

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify relevant workplace information, including the company's food safety plan and vendor assurance arrangements
- identify the risks that could result in the need to initiate a product recall and the control measures in place to prevent incidents occurring
- identify legal and company requirements of the product recall system, including the provisions of food safety legislation and related company system and criteria for determining when a recall is required
- for a given range of circumstances that could result in the need for a product recall, outline appropriate responsive action within company policy and procedures
- identify and/or develop the components of the recall system to meet company and legal requirements, including information recording systems to support traceability; identification of personnel responsible for assessing information and determining appropriate action, and procedures that define roles and levels of responsibility
- identify the social, financial, environmental and legal consequences of failing to initiate a recall or for delaying the decision
- identify and/or develop procedures for the investigation of causes and review of arrangements and procedures in the event of an incident, such as reviewing responses to previous incidents to assess effectiveness and/or developing recommendations on appropriate procedures
- identify and/or develop the appropriate communication systems and channels for consulting with people affected by the recall procedure and communicating information on improvements to be implemented
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- circumstances that could result in a product recall
- legal responsibilities and requirements of a recall program
- components of the recall system to meet company and legal requirements
- company's food safety plan and vendor assurance arrangements
- risks that could result in the need to initiate a product recall and the control measures in place to prevent incidents occurring
- social, financial and legal consequences of failing to initiate a recall or for delaying

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify criteria and circumstances for a product recall • identify controls designed to prevent product recall • identify legal implications of a product recall • identify features of the workplace product recall system and procedures • participate in the implementation of the product recall procedures • determine and examine the cause of product fault • establish mechanisms to improve operations and minimise the risk of occurrence.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • company food safety program and related information relevant to product recall, such as contractual arrangements with suppliers, product specifications and process parameters, and recall procedures • legislation relating to product recall, including relevant food safety legislation • workplace information recording systems, requirements and procedures.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where</p>

EVIDENCE GUIDE

	possible, over a number of assessment activities.
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Product recalls and related work processes are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact

Competency field**Competency field****Co-requisite units****Co-requisite units**

Co-requisite units		

FDFTEC5001A Manage and evaluate new product trials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to plan, monitor and evaluate the trialing of new products in production.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the management of the trial in a production environment. New product trials typically involve working with a team of area specialists including product development and engineering experts.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish trial parameters	1.1. New product specifications are defined 1.2. Production resource requirements are identified 1.3. Project budget and timeline are established 1.4. Trial size is appropriate to provide reliable process and production information
2. Prepare for the new product trial	2.1. New product recipe/formula is scaled to suit trial production 2.2. Raw materials/ingredients, packaging components and consumables are identified and confirmed to meet trial requirements 2.3. Production equipment is identified, available and suitable for use 2.4. Production personnel are available and have the required competencies to operate the trial process 2.5. Environmental, food safety and health and safety hazards of the trial process are identified and appropriate control methods determined 2.6. Trial documentation format and procedures are agreed 2.7. The trial schedule timeline is established and barriers/constraints to achieving schedule are identified, monitored and addressed
3. Develop and communicate information on the trial process	3.1. Personnel in related work areas and functions are kept informed of trial status and progress 3.2. Operators directly participating in the trial are advised of trial parameters, roles and responsibilities 3.3. Advice on product specifications and operating procedures is communicated to the project team
4. Monitor trial progress	4.1. The trial process is monitored to identify actual and potential barriers to achieving the schedule 4.2. Trial product is produced within specification 4.3. Out-of-specification or unacceptable outcomes are identified and investigated 4.4. Unusual or atypical conditions that could affect the achievement of the schedule are identified 4.5. Modifications are made and reported as required according to trial arrangements
5. Evaluate trial outcome	5.1. Trial objectives are identified 5.2. Resource allocations are assessed against plan

ELEMENT	PERFORMANCE CRITERIA
	5.3. Trial product is assessed against specifications 5.4. Production parameters/operating conditions are compared with scheduled performance 5.5. Significant variances are identified and investigated 5.6. Improvement opportunities are identified and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify trial objectives and information requirements, including clarifying reporting requirements and formats
- identify trial participants, including clarifying roles, responsibilities and levels of authority (participants may include technical experts, related functions such as planning, quality assurance and engineering and trial process operators)
- establish and maintain effective communication processes to meet the information requirements of all stakeholders
- assess final product specifications against recipe/formulation and processing method to confirm capability
- identify production targets and timeframes against equipment and process capability
- confirm availability of resources to meet trial schedule, such as stock levels, equipment availability and capacity, personnel and storage capacity
- identify competencies required by trial operators and confirm availability, such as arranging training prior to trial
- confirm that all hazards have been identified and appropriate methods of control are in place to control environmental, food safety and OHS hazards (control methods should be selected consistent with the control hierarchy)
- establish a detailed trial schedule to manage the process
- ensure that relevant documentation is available in appropriate formats, including product specifications/recipe formulations, process parameters and operating procedures
- monitor trial progress against detailed plan to identify variances and identify factors that may need to be adjusted to achieve schedule, which may require consultation with operators and other experts
- investigate and report on causes of variation and identify opportunities for improvement, such as participating in/facilitating problem solving processes
- use project planning, scheduling and monitoring skills, such as use of relevant software applications
- collect and evaluate trial information, such as participating in/facilitating an evaluation team
- report on trial outcomes and related improvement opportunities to meet reporting requirements of the trial process
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse

REQUIRED SKILLS AND KNOWLEDGE

workforce

Required knowledge

Knowledge of:

- trial project parameters, constraints and criteria for evaluating outcomes
- sources of expertise available to support the trial process
- process documentation procedures and requirements to ensure that the process meets trial outcomes and is consistent with legislative and company policy objectives, including relevant legislation
- factors to be taken into account in planning and monitoring the trial process
- proposed formulations and preferred processing method to assess constraints and opportunities for improvement, including equipment capability, typical materials usage rates to achieve a given production outcome, and area experts in related roles, such as product development and engineering, where required, to provide additional expertise
- systems and procedures for managing OHS, environmental management and food safety through the trial process consistent with the hierarchy of control
- investigation and process improvement techniques and processes, including techniques to collect and evaluate trial data
- recording systems and requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • establish parameters and conditions and requirements for product trial • establish, document and communicate the procedure for the trial • monitor and evaluate trial outcomes against objectives and set conditions • document all aspects of trial to ensure repeatability and collection of evidence.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • trial objectives and parameters • new product specifications • raw materials/ingredients, packaging components and consumables • related production equipment • relevant Standard Operating Procedures (SOPs) • communication systems • workplace information recording systems, requirements and procedures.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role. An example could be: <ul style="list-style-type: none"> • FDFPPL4005A Establish process capability.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Trial conditions	Trial conditions are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of OHS and environmental impact of scheduling arrangements
Achieving schedule	Achieving schedule involves meeting product specifications within given resource allocations and timelines
Trial processes	Trial processes typically involve a multi-disciplinary team
Factors to be taken into account in planning and monitoring the trial process	<p>Factors to be taken into account in planning and monitoring the trial process may include but are not limited to:</p> <ul style="list-style-type: none"> • product specifications • raw materials/ingredients, packaging components and consumables • storage capacities • production capacity, configuration and availability • processing parameters • labour requirements and availability • trial production targets/timelines • related OHS, food safety and environmental hazards and controls

Co-requisite units		

FDFTEC5002A Manage utilities and energy for a production process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to monitor, conserve and control costs of utility and energy supply to a production process.
------------------------	---

Application of the Unit

Application of the unit	Responsibility for selecting suppliers and negotiating contracts will differ between workplaces. The purpose of this unit is to address the skills and knowledge required to assess requirements, identify suppliers with appropriate capacity, compare costs of supply, monitor usage patterns and recommend improvements to enhance efficiency and reduce cost. The authority to make final decisions on supply may or may not rest at this level.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess utility and energy requirements	1.1. Energy and utility requirements for a given production facility are estimated 1.2. Estimates of requirements take account of historical patterns of use and forecast production volumes
2. Identify suppliers of energy and utilities	2.1. Existing and potential suppliers of energy and utilities are identified 2.2. Environmental costs and benefits associated with supply are identified and considered in supply criteria 2.3. Criteria for selection of suppliers is established and applied 2.4. Suppliers capable of meeting supply criteria are selected 2.5. Contingency procedures are reviewed or developed in the event of failure of supply
3. Monitor energy and utility use against budget	3.1. Use of energy and utilities is measured and recorded 3.2. Usage patterns are analysed against performance standards and budget allocations 3.3. Cost-effective options for balancing the scheduling requirements for production with containment of energy and utility costs are identified, assessed and implemented within level of responsibility
4. Contribute to the more efficient use of energy and utilities	4.1. Energy and utility losses or sources of waste are identified 4.2. Opportunities to improve efficient energy/utility application are identified, investigated and reported 4.3. Consultative mechanisms are established and/or reviewed to support continuous improvement and communicate information on energy and utility efficiency and related procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- map the uses of energy and utilities in production across the production site, including identifying patterns of usage (volume and spread of load)
- identify the units of measurement used to quantify energy and utilities
- identify methods used to measure usage rates of energy and utilities, including physical measurement instruments, such as meters and measurement techniques used to track inputs to and outputs of a process
- analyse historical data and sale/production forecasts to project energy and utility requirements for a given production system over a fixed period
- identify supplier criteria, such as cost and capacity
- identify costs of supply, including tariffs and charges, and peak demand/cost periods
- identify and evaluate opportunities to spread supplier load and risk by use of multiple suppliers and/or co-generation
- establish contingency plans and procedures in the event of supply failure taking into account food safety issues
- identify common methods and equipment for generating utilities for use on-site, such as steam generation and other utilities as appropriate for a given production facility
- where boilers are operated on-site, identify relevant licensing requirements to be met by operators as appropriate to boiler types and relevant issuing authority
- given existing energy and utility supply arrangements, determine the most efficient scheduling of production to meet the dual objectives of production outcomes and efficient energy/utility use
- monitor energy and utility usage rates of a given production facility and identify variances against budget/plan
- identify factors that affect the efficient use of energy and utilities, such as:
 - features of process/system configuration and design that conserve and/or recycle energy and utilities such as steam, heat and water
 - poor maintenance which can result in losses such as steam, glycol or ammonia leaks etc
 - procedures for shutting down plant and equipment (e.g. equipment left running during breaks)
 - procedures for conserving resources not directly related to the process, such as lighting and airconditioning
- assess the impact of these factors on energy and utility utilisation for a given production facility and identify opportunities to improve efficiency

REQUIRED SKILLS AND KNOWLEDGE

- based on investigations, develop improvement proposals (this may be undertaken with input from relevant technical specialists)
- assess and/or develop procedures to support efficient energy and utility utilisation (this measure of efficiency needs to take account of impact on process equipment, health and safety and food safety)
- establish and/or utilise consultative arrangements to canvass input on energy and utility efficiency including input on waste identification and reduction and options for improved efficiency
- communicate information on changes to workplace systems and procedures to support improvements
- use communication skills to interpret and complete work information to support operations of work team or area
- demonstrate and support cooperative work practices within a culturally diverse workforce

Required knowledge

Knowledge of:

- uses of energy and utilities in production and units of measurement used to quantify energy and utilities
- methods used to measure usage rates
- elements of costs associated with supply, including tariffs and charges
- licensing requirements to be met by operators as appropriate to boiler types and relevant issuing authority
- factors that affect the efficient use of energy and utilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • determine utility requirements and assess current practices • establish supply options and conduct analysis to determine most efficient arrangements • monitor and evaluate utility usage against targets and identify wastage or losses • identify and assess opportunities for improving energy efficiencies.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • company information on energy and resource utilisation • details of contractual arrangements with suppliers • production scheduling requirements and systems • energy and resource utilisation information recording systems, requirements and procedures.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Use of utilities and energy supplies and related work processes are consistent with company policies and procedures, regulatory and licensing requirements, legislative requirements, and industrial awards and agreements and takes account of occupational health and safety (OHS) and environmental impact
Utility and energy for a production facility	<p>Utility and energy for a production facility refers to:</p> <ul style="list-style-type: none"> • gas • power • water • steam • airconditioning • other utilities as appropriate to a production facility
Supply options	<p>Supply options include:</p> <ul style="list-style-type: none"> • internal supply of utilities, such as steam and air conditioning as well as external supply

FDFWGG2001A Bench graft vines

Modification History

This unit supersedes and is equivalent to FDFWGGBGVB Bench graft vines.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to select appropriate vine material and bench graft vines.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to wine grape growing and covers the bench grafting of vines. The unit includes the selection of appropriate vine material, preparation of cuttings, grafting and post-grafting treatment and storage.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare to bench graft vines	1.1 Materials are confirmed as available to meet grafting requirements 1.2 Cuttings are selected and prepared for grafting 1.3 Equipment is checked to confirm readiness for use 1.4 Equipment is set to meet grafting needs as required
2. Bench graft vines	2.1 Cuttings are disbudded according to workplace procedures 2.2 Cuttings are bench grafted according to workplace procedures 2.3 Graft is treated and/or taped according to workplace procedures 2.4 Grafting process and equipment are monitored to ensure results are maintained within specifications 2.5 Out-of-specification process and equipment performance are identified, rectified and/or reported
3. Complete bench grafting activities	3.1 Equipment is shut down, cleaned and maintained as required 3.2 Grafted vines are packed, labelled and stored according to instructions 3.3 Waste generated by both the process and cleaning procedures is collected, treated and disposed of according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify grafting requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas and customers
- confirm supply of necessary materials
- select appropriate vine material for grafting. This may include consideration of:
 - variety and clone
 - matching cambium
 - matching bevels and sizes
 - wood diameters
 - customer or workplace requirements
- prepare vine material for grafting. This may include:
 - removal from cold storage
 - soaking
 - heat treatment
 - disbudding
 - hydration
 - grading
- select, prepare and set equipment as required
- operate equipment
- disbud vines according to instructions
- bench graft vines to match specifications
- treat vines after grafting. This may include:
 - packing into callusing boxes
 - hormonal treatment
 - careful handling
 - following hygiene procedures
- monitor the process and equipment operation to identify out-of-specification results or non-compliance. This may include monitoring:
 - tightness of graft union
 - progress (e.g. number per day)
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action as required

- sort, collect, treat, recycle or dispose of waste as required
- maintain work area to meet housekeeping standards. This should include hygiene requirements to prevent cross-infection
- clean equipment as required
- pack, label and store grafted vines. This may include consideration of:
 - cold room layout
 - cold room temperature variations
 - customer requirements
 - storage time requirements
 - care of vine material (e.g. moisture and disease)
- identify, rectify and/or report environmental non-compliance
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose of grafting and various methods of budding and grafting
- purpose and methods of disbudding
- criteria for successful grafting
- importance of selection and use of rootstock and Vinifera
- advantages of using clonal and registered vine improvement rootstock material
- criteria for selecting parent vines for scion material
- procedures and optimum conditions for the storage of material until required for grafting
- stages of the grafting procedure and their purpose
- common problems and corrective action required
- hygiene requirements and procedures
- purpose and components of grafting equipment
- operating procedures for grafting equipment
- methods of callusing vine cuttings and the criteria for best callus development
- procedures and responsibility for reporting problems
- environmental issues and controls
- cleaning requirements and procedures for work area and equipment
- reporting and recording requirements and procedures
- routine maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • select and prepare appropriate vine material for grafting including disbudding • undertake bench grafting of vines to instructions • post-grafting treatment and packing of vines is to instructions • monitor grafted vines and out of specification grafted vines identified and rectified or reported • follow personal and work area hygiene procedures • dispose of waste correctly • record and report results of grafting according to procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.

EVIDENCE GUIDE	
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for potting operations	1.1 Work instructions on potting operations are confirmed and understood 1.2 Materials are confirmed as available and ready to meet potting requirements 1.3 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures 1.4 Potting media is blended to according to workplace procedures 1.5 Pots and work areas are cleaned and sterilised to minimise risk of contamination 1.6 Grafted cuttings are prepared according to instructions
2. Pot on propagated material	2.1 Callused cuttings requiring potting are identified and collected according to instructions 2.2 Soil is placed in pots according to workplace procedures 2.3 Cuttings are planted according to instructions 2.4 Trays are labelled according to instructions 2.5 Safe work practices are implemented to minimise risk of hazards
3. Carry out post-potting treatments	3.1 Potted cuttings are transferred to the glasshouse according to instructions 3.2 Potted cuttings are watered according to instructions 3.3 Waste is collected and disposed of according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify potting requirements
- confirm supply of necessary materials
- liaise with other work areas and customers
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping standards
- maintain work area and equipment to meet workplace hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- implement safe work practices to minimise risk of hazard
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- prepare chemical treatments to required concentration and ensure a homogenous mix
- prepare cuttings as instructed. This may include:
 - grading
 - waxing
 - dipping in hormones
 - hydrating
- plant cuttings as instructed. This may include:
 - putting correct amount of media into the pots
 - placing cuttings with nodes facing upwards
- label trays as instructed
- transfer potted cuttings as instructed
- water potted cuttings as instructed
- collect and dispose of waste as instructed
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- Occupational health and safety (OHS) hazards and controls
- purpose and application of protective clothing and/or equipment
- correct operating procedures of equipment
- safe and effective handling of equipment
- safe preparation and handling of potting media
- cleaning requirements and procedures for work area and equipment
- eEnvironmental issues and controls
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies
- waste disposal requirements and procedures
- safe preparation and handling of chemicals
- commonly occurring problems with potted cuttings
- principles of nursery hygiene.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective equipment, MSDS and follow other specified OHS procedures • correctly handle potting media and chemicals and disinfectants • select and mix chemical treatments to required concentrations • sterilise posts and work surfaces to instructions • select or blend potting media according to instructions and placed into pots • correctly carry out grading, waxing or other preparations of cuttings before potting • plant cuttings correctly and label trays • dispose of waste according to procedures • complete records correctly.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> Standard Operating Procedures (SOPs) specifications production schedules instructions routine maintenance schedules work notes Material Safety Data Sheets (MSDS) manufacturer instructions verbal direction from manager, supervisor or senior operator
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> potting machines front-end loader

RANGE STATEMENT	
	<ul style="list-style-type: none"> • forklift
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • potting mix • pots • cuttings • trays • pallets
Waste	<p>Waste may include:</p> <ul style="list-style-type: none"> • rejected cuttings • spilled potting media • damaged pots • boxes
Hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • inhaling potting media • use of chemicals and disinfectants • moving machinery • transferring pots • exposure to sun • dust • using fungicide and hormone dips • operating potting equipment

FDFWGG2003A Hand prune vines

Modification History

This unit supersedes and is equivalent to FDFWGGHPVB Hand prune vines.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to hand prune vines under regular supervision.
------------------------	--

Application of the Unit

Application of the unit	This unit covers the pruning of vines used in winemaking using a variety of hand operated or handheld equipment. Pruning methods may include spur pruning, cane pruning, rod and spur pruning. Pruning includes the ability to recognise problems and anomalies with vines and to select the best spurs, canes and buds according to instructions. The unit also covers the use of sharpening equipment and air compressors used for power pruning and sharpening equipment.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare equipment for hand pruning	1.1 Pruning equipment is checked to confirm readiness for use
2. Hand prune vines	2.1 Pruning equipment is started up and operated according to instructions as required
	2.2 Equipment performance is monitored to confirm performance is maintained within specification as required
	2.3 Vines are pruned in accordance with instructions
	2.4 Anomalies and problems are recognised, rectified and/or reported
	2.5 Equipment is maintained in good working order
3. Complete hand pruning operations	3.1 Equipment is shut down according to instructions as required
	3.2 Equipment is cleaned and stored according to instructions
	3.3 Vine cuttings are disposed of according to instructions
	3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify pruning requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- handle pruning equipment safely. This includes following the correct handling and sharpening procedures
- start up and operate automatic pruning equipment as required
- monitor and recognise performance problems with pruning equipment and correct or report them as instructed. This includes oiling moving parts and sharpening blades
- identify different parts of the grape vine. This should include identifying:
 - vine trunk and permanent framework
 - canes and/or cordons
 - tendrils and buds
- prune vines according to instructions. This may include:
 - selecting the best possible spurs and canes
 - positioning spurs or canes
 - cleanly removing sucker shoots
 - leaving the correct quantity of spurs, rods and buds
 - making cuts correctly and cleanly
 - recognising and removing unwanted growth
 - rolling and securing extension canes onto trellis wire as required
- use appropriate cleaning techniques
- recognise and report problems and anomalies
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- clean and store equipment according to instructions
- identify, rectify and/or report environmental non-compliance
- maintain work area to meet housekeeping standards
- dispose of vine cuttings according to instructions
- carry out routine preventive maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose of pruning vines
- basic components of the vine
- basic difference between cane and spur pruning
- pruning requirements
- safe handling of pruning equipment
- purpose and application of personal protective clothing and/or equipment
- correct operating procedures for pruning equipment
- shutdown sequence
- tag-out and lock-out sequence and methods
- cleaning and storage requirements of pruning equipment
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- basic problems and anomalies
- procedures and responsibility for reporting problems and anomalies
- disposal requirements of vine cuttings
- routine preventive maintenance procedures for equipment where relevant.

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Inspect irrigation system	1.1 Irrigation system is checked for faults and anomalies 1.2 Faults and anomalies are recognised, rectified and/or reported
2. Maintain irrigation system	2.1 Cleaning and maintenance materials are prepared as required 2.2 Irrigation system is cleaned according to instructions 2.3 Routine preventive maintenance is carried out according to instructions 2.4 Waste generated by both the cleaning and maintenance procedures is monitored, collected, treated, disposed of or recycled according to workplace procedures 2.5 Work is conducted in accordance with workplace environmental guidelines
3. Record information	3.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify irrigation system maintenance requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- interpret readings on gauges and meters
- recognise performance problems with the irrigation system and correct or report them as instructed
- identify different components of the irrigation system
- use basic hand tools
- prepare cleaning materials as required
- clean the irrigation system according to instructions. This may include:
 - chemical injection (e.g. chlorine)
 - manual cleaning (e.g. brushes)
 - flushing end points
 - cleaning filters
- use appropriate cleaning techniques
- prepare maintenance materials as required
- conduct routine preventive maintenance of the irrigation system according to instructions. This may include:
 - replacing faulty components and seals
 - maintaining banks or channels
- collect, sort, treat and dispose of, or recycle waste
- identify, rectify and/or report environmental non-compliance
- clean and store equipment according to instructions
- maintain work area to meet housekeeping standards
- record workplace information as instructed
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose, features and components of the irrigation system
- common faults, problems and anomalies and how to solve them
- safe handling of hand tools and maintenance equipment
- maintenance requirements and methods of the irrigation system
- purpose and application of personal protective clothing and/or equipment
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems and anomalies
- cleaning and storage requirements of equipment and materials
- workplace recording requirements and procedures.

FDFWGG2005A Maintain callusing environment

Modification History

This unit supersedes and is equivalent to FDFWGGMCEB Maintain callusing environment.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for wine grape nurseries. It covers the skills and knowledge required to maintain a callusing environment under supervision.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to wine grape nursery staff who work with vine cuttings that are to be callused in preparation for planting. The unit covers the maintenance of the callusing environment, preparation of callusing boxes, pre- and post-callusing treatments and monitoring of callusing process. All work is done to specifications and knowledge of occupational health and safety (OHS), environmental and hygiene requirements is required.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare callusing environment	1.1 Work instructions on callusing are confirmed and understood 1.2 Materials required for callusing are confirmed as available and ready to meet requirements 1.3 Equipment is selected and used according to workplace procedures 1.4 Work area, equipment and boxes are cleaned and sterilised to minimise risk of contamination 1.5 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures 1.6 Pre-mixed callusing media is prepared as instructed 1.7 Callusing environment is prepared according to workplace procedures 1.8 Callusing boxes are prepared according to workplace procedures
2. Prepare cuttings for callusing	2.1 Cuttings are prepared for callusing according to instructions 2.2 Pre-callusing treatments are applied as instructed 2.3 Cuttings are counted, bundled and labelled according to instructions 2.4 Cuttings are placed into boxes according to instructions
3. Maintain cuttings in callusing room	3.1 Cuttings are placed into callusing environment according to workplace procedures 3.2 Callusing environment is maintained within specifications 3.3 Cuttings are monitored for potential health problems according to workplace procedures 3.4 Post-callusing treatments are applied to maintain plant health according to workplace procedures
4. Carry out post-callusing operations	4.1 Callused cuttings are removed from callusing room as instructed 4.2 Waste is collected and disposed of according to workplace procedures 4.3 Facilities are cleaned and sterilised according to workplace procedures 4.4 Work is conducted in accordance with workplace environmental guidelines
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify callusing requirements
- confirm supply of necessary materials
- liaise with other work areas
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store the required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping standards
- maintain work area and equipment to meet workplace hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- prepare callusing media to specified moisture levels
- prepare callusing environment. This may include:
 - turning on heaters and fans
 - setting and monitoring temperature and relative humidity
- prepare callusing boxes. This may include:
 - filling boxes with sand or vermiculite
 - lining boxes
 - storing excess media
- prepare chemical treatments to required concentration and ensure homogenous mix
- prepare cuttings for callusing. This may include:
 - taking cuttings out of storage
 - cutting just below basal bud
- apply pre-callusing treatment. This may include:
 - hydrating cuttings
 - applying fungicide treatments
 - applying root promoter treatment
- prepare labels in a clear and legible manner with waterproof ink
- place cuttings into boxes. This may include:
 - feeling into media
 - watering in
 - placing correct number of cuttings per box

- placing basal end at bottom
- dipping into hormone mixes
- arranging cuttings according to variety, clone and source
- labelling and mapping of beds
- maintain callusing environment. This may include consideration of:
 - temperature
 - relative humidity
 - moisture levels of growing medium
- monitor cuttings for potential health problems. This may include identifying:
 - uneven callusing
 - dehydration
 - presence of pests and diseases
- apply post-callusing treatments. This may include:
 - hydrating cuttings
 - applying fungicides
- remove callused cuttings. This may include:
 - loading cuttings onto trucks or trailers
 - potting or planting cuttings
- dispose of waste as instructed. This may include:
 - pasteurising callusing media
 - spreading waste material through the vineyard
 - placing waste in bins for removal by disposal company
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- OHS hazards and controls
- purpose of personal protective clothing and/or equipment
- correct operating procedures for equipment
- safe and effective handling of equipment
- cleaning requirements and procedures for work area and equipment
- environmental issues and controls
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies
- waste disposal requirements and procedures

- safe preparation and handling of chemicals
- purpose and benefit of pre- and post-callusing treatments
- pre-callusing treatment procedures
- post-callusing treatment procedures
- principles of nursery hygiene
- procedures for preparing pre-mixed callusing media
- factors in a controlled callusing environment that affect the vine cutting
- procedures for maintaining callusing environment
- common problems that occur during callusing and how they should be resolved (e.g. uneven callusing or evidence of dehydrated cuttings on arrival)
- quality control process in the callusing environment.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment where required • observe hygiene and housekeeping standards including correct cleaning and sterilisation of work area, equipment and boxes • prepare callusing media and boxes to specification • prepare cuttings and apply pre-callusing treatment correctly • place cuttings into callusing boxes correctly • monitor and maintain callusing environment to specification • monitor cuttings for correct callusing and report problems according to procedures • apply post-callusing treatment correctly • remove callused cuttings correctly • record information appropriately.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to process rootlings	<p>1.1 Work instructions for the processing of rootlings are confirmed and understood</p> <p>1.2 Facilities are cleaned and sterilised to minimise risk of contamination</p> <p>1.3 Materials are confirmed as available and ready to meet requirements</p> <p>1.4 Equipment is collected and checked for serviceability and sterilised as required by workplace procedures</p> <p>1.5 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures</p>
2. Obtain rootlings	<p>2.1 Requirement for rootlings from field nurseries, sand beds or callusing are checked against instructions</p> <p>2.2 Rootlings if required are dug from field nurseries using tractor mounted or trailed digging machines or hand-held tools</p> <p>2.3 Rootlings are obtained from sand beds or callusing room according to requirements</p>
3. Process rootlings	<p>3.1 Rootlings are treated and bundled according to instructions</p> <p>3.2 Bundles are labelled, packed and stored according to instructions</p> <p>3.3 Waste is collected and disposed of according to workplace procedures</p> <p>3.4 Work is conducted in accordance with workplace environmental guidelines</p> <p>3.5 Problems and anomalies are identified, rectified and/or reported according to workplace procedures</p> <p>3.6 Safe work practices are employed to minimise work hazards</p>
4. Prepare rootlings for dispatch	<p>4.1 Bundles of rootlings are assembled according to instructions</p> <p>4.2 Rootlings are prepared and packed for dispatch according to instructions</p> <p>4.3 Stock is loaded for dispatch according to instructions</p> <p>4.4 Orders are checked against goods being dispatched according to workplace procedures</p> <p>4.5 Safe work practices are employed to minimise work hazards</p>
5. Record information	<p>5.1 Workplace information is recorded in the appropriate format</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify rootling processing requirements
- confirm supply of necessary materials
- liaise with other work areas
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping and hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- select and use materials as required
- prepare chemical treatments to required concentration and ensure a homogenous mix
- handle rootlings correctly
- treat rootlings as instructed. This may include:
 - complete hydration of all rootlings
 - complete chemical treatment of all rootlings
 - removal of unwanted plant material
- monitor the standard of rootlings and grade them as instructed. This may include sorting for:
 - diameter of stem
 - appearance
 - length and number of shoots
 - strength of graft union
- bundle and label rootlings as instructed. This may include:
 - ensure correct numbers per bundle
 - lay rootlings all the same way in bundles
 - tie bundles securely
 - label legibly and accurately
- pack and store rootlings as instructed. This may include meeting instructions for:
 - cold room layout
 - cold room temperature variations
 - customer requirements
 - storage time requirements

- collect and dispose of waste as required to minimise risk of environmental damage
- check stock against orders. This may include checking order requirements for:
 - quantity of stock
 - varieties and clones
 - quality of stock is within specifications
- dispatch stock as instructed. This may include:
 - correct manual handling
 - correct use of mechanical transfer equipment
- liaise with customers. This may include:
 - taking orders
 - notifying customers about availability of stock
 - notifying customers about dispatch dates
 - identifying specific treatments of stock
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- occupational health and safety (OHS) hazards and controls
- purpose and application of personal protective clothing and/or equipment
- correct operating procedures for equipment
- safe and effective handling of equipment
- principles of nursery hygiene
- cleaning requirements and procedures for work area and equipment
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies
- waste disposal requirements and procedures
- environmental issues and controls
- equipment operation and maintenance requirements and procedures
- safe preparation and handling of chemicals
- common features of healthy vine rootlings
- common features of unhealthy vine rootlings
- factors that influence how a rootling should be graded and why
- package, storage requirements and procedures for rootlings ready for sale
- rootling preparation requirements and procedures for sales or transfers to customers.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective equipment, (MSDS and follow other specified OHS procedures • handle chemicals and disinfectants correctly • select and mix chemical treatments to required concentrations • sterilise equipment and work surfaces to instructions • obtain rootlings correctly from required sources (e.g. field nursery, sand beds or callusing room) • treat, bundle, store and label rootlings correctly • identify and report problems and anomalies • treat and dispose of waste correctly • keep appropriate records.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and

EVIDENCE GUIDE	
	procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Wine grape nursery facilities	<p>Wine grape nursery facilities may include:</p> <ul style="list-style-type: none"> • cold storage • bins • water

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fungicide treatment areas • storage bins or tanks • soakage tanks
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • secateurs • personal protective clothing and/or equipment • bins • boxes • counting machine • packing machine • forklift
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • string • labels • chemicals • sand • wax • pallets
Waste	<p>Waste may include:</p> <ul style="list-style-type: none"> • off-cuts • dropped or rejected rootlings • packaging materials
Work hazards	<p>Work hazards may include:</p> <ul style="list-style-type: none"> • damaging fingers or eyes from use of tools and equipment • manual handling • lifting bundles • falling over in an untidy work area • using chemicals and disinfectants
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • evidence of nematodes • crown gall • dehydration • infection • physical damage • damaged buds • immature wood

RANGE STATEMENT	
Rootlings	<p>Rootlings may include:</p> <ul style="list-style-type: none"> • those developed from cuttings in a sand bed or callusing room • those freshly dug from a field nursery
Grading rootlings	<p>Grading rootlings may include sorting for:</p> <ul style="list-style-type: none"> • diameter of stem • appearance • length of shoots • number of shoots • strength of graft union
Label information	<p>Label information may include:</p> <ul style="list-style-type: none"> • class of the material • variety and clone • grade of cutting • the source identification code • name of customer • date packed
Treatments	<p>Treatments may include:</p> <ul style="list-style-type: none"> • hydration • chemical treatment • trimming • grading
Customer requirements	<p>Customer requirements may include:</p> <ul style="list-style-type: none"> • quantity • level of root trimming • level of shoot trimming
Packing	<p>Packing may include:</p> <ul style="list-style-type: none"> • packing, venting and sealing cuttings into polythene film bags • wrapping cuttings in wet hessian • packing in woven polypropylene wool packs
Loading of rootlings	<p>Loading of rootlings may be:</p> <ul style="list-style-type: none"> • done manually or with the use of a forklift
Records	<p>Records will include:</p> <ul style="list-style-type: none"> • number of rootlings per bundle

RANGE STATEMENT

- number of bundles
- treatments
- date

Wine operations

FDFWGG2007A Tend containerised nursery plants

Modification History

This unit supersedes and is equivalent to FDFWGGTCPB Tender containerised nursery plants.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialised unit has been developed for wine grape nurseries. It covers the skills and knowledge required to tend containerised nursery plants under supervision.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the tending of containerised plants in wine grape nurseries. Tending includes maintaining of nursery facilities and equipment, carrying out specified treatment on plants, and sterilisation of specified equipment. All work is carried out according to instructions.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain nursery facilities	1.1 Work instructions on tending nursery plants are confirmed and understood 1.2 Irrigation system is maintained according to instructions 1.3 Temperature controls are checked according to workplace procedures 1.4 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures 1.5 Nursery hygiene requirements are followed to minimise risk of contamination
2. Treat plants to maintain growth	2.1 Common problems are recognised and reported according to instructions 2.2 Equipment and tools are selected and used according to workplace procedures 2.3 Materials are confirmed as available and ready to meet requirements 2.4 Treatments are applied according to instructions 2.5 Water is applied according to instructions 2.6 Safe work practices are followed to minimise potential and existing hazards
3. Carry out post-treatment operations	3.1 Waste is collected and disposed of according to workplace procedures 3.2 Equipment is shut down, cleaned and stored according to workplace procedures 3.3 Facilities are cleaned and sterilised according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify plant tending requirements
- confirm supply of necessary materials
- liaise with other work areas and customers
- select, fit and use appropriate personal protective clothing and/or equipment
- identify, rectify and/or report environmental non-compliance
- select, operate, maintain and store required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping standards
- maintain work area and equipment to meet workplace hygiene standards. This may include:
 - removing weeds
 - removing dead or diseased plant materials
 - washing work area on transfer of plants
 - disinfecting tools, equipment and work areas
 - using foot baths on entry to different work areas
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- maintain workplace records
- maintain irrigation system. This may include:
 - fixing blockages
 - servicing irrigation system components
 - identifying and reporting faulty components in an irrigation system
 - fixing leaking heads and hoses
- recognise under-performance of the irrigation system. This may include identifying:
 - dry spots
 - water dumping
 - abnormal water flow
- prepare and use equipment. This may include:
 - calibrating equipment
 - carrying out pre-operational checks
 - cleaning equipment
 - applying particular settings
- prepare chemical treatments to required concentration and ensure a homogeneous mix
- shut down equipment as instructed

- interpret chemical labels
- interpret Material Safety Data Sheets (MSDS) information
- collect and dispose of waste as instructed
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- purpose and application of personal protective clothing and/or equipment
- correct operating procedures for equipment
- safe and effective handling procedures for equipment
- cleaning requirements and procedures for work area and equipment
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies
- waste disposal requirements and procedures
- safe preparation and handling of chemicals
- principles of nursery hygiene
- workplace hygiene requirements
- common problems that may occur with potted plants in a controlled environment
- treatment practices and techniques for common problems
- principles and operations of a range of irrigation systems used in nurseries
- environmental requirements of plants growing in a nursery setting.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective equipment, MSDS and follow other specified OHS procedures • follow hygiene procedures • select, mix and apply chemical treatments according to instructions • correctly sterilise equipment • monitor irrigation system and correct or report faults • water and monitor plants to instructions.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

FDFWGG2008A Train vines

Modification History

This unit supersedes and is equivalent to FDFWGGTVB Train vines.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to train growing vines by hand.
------------------------	---

Application of the Unit

Application of the unit	This unit covers the training of vines used in winemaking using a variety of handheld hand or operated equipment. The unit requires knowledge of the different parts of a grape vine, the ability to detect problems and anomalies, and to use techniques for selection and training of laterals.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for training	1.1 Equipment is confirmed as available and ready for use 1.2 Materials are confirmed as available to meet training requirements
2. Train vines	2.1 Vines are trained according to instructions 2.2 Anomalies and problems are recognised, rectified and/or reported 2.3 Equipment is maintained in good working order
3. Complete training activities	3.1 Equipment is cleaned and stored according to workplace procedures 3.2 Waste generated by both the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify training requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- set up and operate equipment as required according to instructions
- identify different parts of the grapevine. This should include identifying:
 - vine trunk and permanent framework
 - canes and/or cordons
 - tendrils and buds
 - fruit
- recognise and rectify or report problems and anomalies
- identify, rectify and/or report environmental non-compliance
- train vines according to instructions. This may include:
 - heading height
 - selection of appropriate laterals
 - positioning of laterals
 - securing of laterals
 - removing unwanted laterals from trunk and crown
- maintain work area to meet housekeeping standards
- clean and store equipment according to instructions
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- safe and effective handling of equipment
- correct operating procedures for equipment
- basic maintenance requirements and procedures for equipment
- purpose and application of personal protective clothing and/or equipment
- Occupational health and safety (OHS) hazards and controls
- procedures and responsibility for reporting problems and anomalies

- range of vine training techniques, features and benefits
- basic components of the vine
- training requirements and procedures
- common vineyard pests and diseases and other common vine problems
- environmental issues and controls
- cleaning and storage requirements and procedures for equipment
- reporting responsibilities and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for canopy management activities	1.1 Canopy management requirements are identified and planned 1.2 Canopy management equipment is confirmed as available and ready for use 1.3 Equipment is set up to meet requirements
2. Operate canopy management equipment	2.1 Equipment is started up according to workplace procedures 2.2 Canopy management techniques are applied to vines according to their vigour, capacity and manager's instructions 2.3 Equipment performance is monitored to confirm performance is maintained within specifications 2.4 Canopy management activities are monitored to confirm performance is maintained within specifications 2.5 Out-of-specification performance is identified, rectified and/or reported
3. Shut down canopy management equipment	3.1 Canopy management equipment is shut down according to workplace procedures 3.2 Equipment is cleaned and stored according to workplace procedures 3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify canopy management requirements
- select, fit and use personal protective clothing and/or equipment
- liaise with other work areas
- identify canopy management requirements. Factors to be considered include:
 - grape variety
 - vine vigour
 - end use of fruit, quality and yield requirements
 - climate
 - operating conditions
 - workplace procedures, manager's instructions
- attach equipment to tractor
- set up equipment to meet requirements
- confirm equipment status and condition
- operate equipment to meet requirements
- recognise equipment performance problems and rectify and/or report according to workplace procedures
- monitor canopy management activities. This will include monitoring:
 - width of canopy
 - speed of tractor and power take-off rpm
 - density of foliage
 - air circulation
 - light penetration or shade
 - bud numbers, spur length
 - vine damage
 - progress
 - problems and anomalies
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- clean and store equipment
- detach equipment from tractor
- use appropriate cleaning techniques
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action

- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- maintain work area to meet housekeeping standards
- carry out routine maintenance of equipment according to enterprise procedures
- use hand tools according to enterprise procedures
- use power tools according to enterprise procedures
- interpret mechanical drawings according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- key factors affecting the canopy management technique adopted. These may include:
 - climate, forecast and current weather conditions
 - vineyard aspect and terrain
 - grape variety and vigour
 - grape quality and characteristics required
 - trellis design
 - harvesting techniques
 - disease risk and occurrence
 - stage of maturity and development
- operating parameters and procedures
- recognition of correct vine growth stages at which to carry out canopy management activities
- factors influencing vine vigour, including:
 - grape variety
 - trellis design
 - vine spacing
 - fertilisers
 - irrigation
 - rootstock
- features and benefits of a range of canopy management styles and techniques and their respective affect on grape quality, cropping yield and wine production requirements. This should include techniques to manage:
 - light penetration and shading
 - air circulation and disease reduction
 - annual growth stages of vine development
 - crop quality and quantity

- significance and method of monitoring canopy management activities
- purpose and basic components of canopy management equipment
- operational procedures for equipment
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- basic vine canopy problems or anomalies
- procedures and responsibility for reporting problems
- cleaning and storage requirements and procedures for equipment
- shutdown sequence
- routine maintenance procedures for equipment where relevant
- procedures for using hand tools where relevant
- procedures for using power tools where relevant
- interpretation of mechanical drawings where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment • select and confirm availability of equipment and prepare according to instructions • attach, set up equipment to meet requirements • start and operate equipment in accordance with operation instructions and requirements of workplace and task • perform emergency and routine shutdowns • take corrective action in response to out-of-specification results or non-compliance • demonstrate knowledge of OHS hazards, controls and emergency procedures • sort, collect, treat, recycle or dispose of waste • record information appropriately.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Polices and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> Standard Operating Procedures (SOPs) specifications production schedules routine maintenance schedules work notes Material Safety Data Sheets (MSDS) manufacturer instructions verbal directions from manager, supervisor or senior operator
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> tractor circular saws cutter bars

RANGE STATEMENT	
	<ul style="list-style-type: none"> • blades • knives • drum pruners • mechanical leaf pluckers • wire lifters
Terrain	<p>Terrain must enable safe and effective operation of equipment. It may include:</p> <ul style="list-style-type: none"> • tracks • access roads • vineyard rows • open paddocks • flat, undulating, steep, hilly or terraced land • and on- and off-road environments
Conditions	<p>Conditions must enable safe and effective operation of equipment. These may include:</p> <ul style="list-style-type: none"> • dry • wet • slippery • boggy • icy • foggy • windy • day and night conditions
Confirming equipment status	<p>Confirming equipment status will include:</p> <ul style="list-style-type: none"> • checking that all safety standards and pre-start requirements are met and that equipment is operational
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> • print or screen based
Canopy management techniques	<p>Canopy management techniques may vary and should include:</p> <ul style="list-style-type: none"> • those required by the workplace (e.g. pruning, trimming, plucking and lifting)
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • dead vines • signs of common pests and diseases, such as light brown apple moth (LBAM), boring insects, mildew,

RANGE STATEMENT

	<p>eutypa, phomopsis, dying arm, crown gall and diseased wood</p> <ul style="list-style-type: none">• signs of trellis and/or irrigation disrepair or problems• machinery breakdowns

FDFWGG2010A Field graft vines

Modification History

This unit supersedes and is equivalent to FDFWGGFGVB Field graft vines.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. This unit covers the skills and knowledge required to select appropriate vine material and field graft vines.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to work conducted in the field to select and prepare vines for grafting and complete grafting activities. It includes application of treatment as required.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare to field graft vines	1.1 Materials are confirmed and available to meet grafting requirements 1.2 Vine material is selected and prepared for grafting 1.3 Equipment is checked to confirm readiness for use
2. Field graft vines	2.1 Vines are field grafted according to instructions 2.2 Vine graft is treated and taped according to instructions 2.3 Grafting process and equipment are monitored to ensure results are maintained within specifications 2.4 Out-of-specification process and equipment performance are identified, rectified and/or reported
3. Complete field grafting activities	3.1 Equipment is cleaned as required 3.2 Unused grafting material is disposed of or stored according to workplace procedures 3.3 Waste generated by both the grafting and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines 3.5 Required documentation is completed

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify grafting requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas and customers
- confirm supply of necessary materials
- select appropriate vine material for grafting. This may include consideration of:
 - variety and clone
 - matching cambium
 - matching bevels and sizes
 - viable buds
 - achievement of tight unions
- prepare vine material for grafting. This may include:
 - soaking buds
 - working appropriate incisions
 - hot water treatment of cuttings
 - virus tests
 - compatibility tests
 - hydration of cuttings
 - cutting to size
- select and prepare equipment as required
- graft vines in the field according to instructions. This should include:
 - selecting appropriate bud location to graft
 - ensuring cohesion of graft union
- operate equipment safely
- treat vines after grafting. This may include:
 - applying fungicide
 - securing with tape
 - painting
 - waxing
- monitor the process and equipment operation to identify out-of-specification results or non-compliance. This may include monitoring:
 - percentage take
 - weather conditions

- pests and diseases (e.g. weevils)
- store unused grafting material
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action as required
- sort, collect, treat, recycle or dispose of waste as required
- maintain work area to meet housekeeping standards
- Clean equipment after use
- identify, rectify and/or report environmental non-compliance
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose of grafting and various methods of budding and grafting
- criteria for successful grafting
- advantages of using clonal rootstock material
- criteria for selecting parent vines for scion material
- correct procedure and optimum conditions for the storage and handling of material until required for grafting
- advantages of using clonal and registered vine improvement material
- importance of selection and use of rootstock
- stages of the grafting procedure and their purpose
- common problems and corrective action required
- purpose, components and operation of grafting equipment
- methods of callusing vine cuttings and the criteria for best callus development
- procedures and responsibilities for reporting problems
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- cleaning requirements for work area and equipment
- recording requirements and procedures
- routine maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • select and prepare appropriate vine material for grafting, including disbudding • field graft vines to instructions • conduct post-grafting treatment and packing of vines • monitor grafted vines and identify and rectify or report out-of-specification grafted vines • follow personal and work area hygiene procedures • dispose of waste correctly • record and report results of grafting according to procedures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of

EVIDENCE GUIDE	
	competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for installation of irrigation components	1.1 Equipment is checked to confirm readiness for use 1.2 Materials are selected according to instructions 1.3 Irrigation components are laid out in accordance with instructions 1.4 Trenches are dug or tidied up in accordance with instructions where required
2. Install irrigation components	2.1 Pipeline is joined or finished according to instructions 2.2 Components are added or inserted according to instructions 2.3 Lines are positioned and secured according to instructions 2.4 Problems and anomalies are recognised and reported
3. Complete installation activities	3.1 Equipment is cleaned and stored according to instructions 3.2 Materials are stored according to instructions 3.3 Waste is collected and disposed of or recycled according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify installation requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- check equipment is ready for use
- select appropriate materials
- lay out irrigation components according to instructions. This may include:
 - spacing
 - type, specification
 - numbers
 - positioning
 - safe handling procedures
- dig trenches according to instructions. This is likely to be tidying up after a mechanical digger and would include:
 - depth
 - slope
 - removal of anything that may damage irrigation pipes or affect flow
- operate equipment according to instructions
- join or finish pipeline according to instructions. This may include:
 - gluing and sealing
 - tying off ends
 - changing pipe sizes
 - T joins
 - elbows
- add or insert components according to instructions. This includes:
 - spacing
 - fitting specifications
 - fixing method
- position and secure lines according to instructions. This may include:
 - height
 - frequency and quality of ties
 - tying off ends
 - consideration of anything that may damage or affect performance of the irrigation system
- recognise, rectify and/or report problems and anomalies with component installation

- identify, rectify and/or report environmental non-compliance
- collect, sort, treat, dispose of and/or recycle waste
- clean and store equipment according to instructions
- use appropriate cleaning techniques
- store unused materials
- maintain work area to meet housekeeping standards
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose, features and components of the irrigation system
- irrigation installation process and procedures
- common faults, problems and how to solve them
- safe handling of materials and equipment
- purpose and application of personal protective clothing and/or equipment
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems and anomalies
- cleaning and storage requirements of equipment
- storage requirements of materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and prepare to treat plant disorders	<p>1.1 Work instructions on identifying and treating plant disorders are confirmed and understood</p> <p>1.2 Disorders commonly occurring in a particular work environment are identified according to workplace procedures</p> <p>1.3 Details of disorder are recorded and reported according to workplace procedures</p> <p>1.4 Treatment method is selected as instructed</p> <p>1.5 Materials are confirmed as available and ready to meet requirements</p> <p>1.6 Equipment is collected and checked for serviceability according to workplace procedures</p> <p>1.7 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures</p>
2. Treat disorders	<p>2.1 Treatments are prepared according to instructions</p> <p>2.2 Equipment is prepared according to workplace procedures</p> <p>2.3 Treatments are applied according to instructions</p> <p>2.4 Problems and anomalies are identified, rectified and/or reported according to workplace procedures</p> <p>2.5 Safe work practices are employed to minimise work hazards</p>
3. Carry out post-treatment operations	<p>3.1 Waste is collected and disposed of according to workplace procedures</p> <p>3.2 Equipment is shut down, cleaned and stored according to workplace procedures</p> <p>3.3 Work is conducted in accordance with workplace environmental guidelines</p>
4. Record information	<p>4.1 Workplace information is recorded in the appropriate format</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify and treat nursery plant disorders
- confirm supply of necessary materials
- liaise with other work areas
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping standards
- maintain work area and equipment to meet workplace hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- recognise common plant disorders occurring in vine nurseries
- recognise the stage of the life cycle of the pest, disease or weed
- implement appropriate control measures as instructed
- prepare chemical treatments. This may include:
 - setting up application equipment
 - measuring chemical rates
 - mixing chemical to ensure homogenous mix
 - interpreting chemical label information
 - interpreting Material Safety Data Sheet (MSDS) information
- prepare equipment. This may include:
 - calibrating equipment
 - cleaning equipment
 - applying particular settings
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- Occupational health and safety (OHS) hazards and controls
- purpose and application of personal protective clothing and/or equipment
- principles of nursery hygiene
- correct operating procedures for equipment
- safe and effective handling of equipment
- safe preparation and handling of chemicals
- cleaning requirements and procedures for work area and equipment
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies
- waste disposal requirements and procedures
- environmental issues and controls
- characteristics of common vine disorders
- life cycles of common vine disorders
- different types of control measures and their uses
- principles of integrated pest management (IPM)
- regulations affecting the application of chemicals.

FDFWGG2013A Deliver injection requirements

Modification History

This unit supersedes and is equivalent to FDFWGGIRB Deliver injection requirements.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to deliver injection requirements via an irrigation system according to instructions
------------------------	--

Application of the Unit

Application of the unit	This unit applies to employees who inject various materials for delivery via equipment used to irrigate vines. Material to be injected may be wet or dry and includes fertilisers, chlorine, acid and cleaning agents. Identification of and calculation of the amount to be injected is included. The unit covers injection into various types of irrigation equipment, including flood, dripper, microjet, sprinkler, overhead and water winch. Injection of materials must be consistent with environmental and occupational health and safety (OHS) requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare equipment for operation	1.1 Materials and services are confirmed as available and ready for operation 1.2 Materials are prepared to meet injection requirements 1.3 Equipment is checked to confirm readiness for use 1.4 Equipment is set to meet injection requirements
2. Operate the injection process	2.1 The injection process is started up according to workplace procedures 2.2 Control points are monitored to confirm performance is maintained within specification 2.3 Out-of-specification equipment performance is identified, rectified and/or reported 2.4 Injection requirements are delivered according to instructions 2.5 Equipment is maintained in good working order
3. Shut down injection equipment	3.1 Injection equipment is shut down according to workplace procedures 3.2 Injection equipment is cleaned according to workplace procedures 3.3 Waste generated by both the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify injection requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary services and materials
- liaise with other work areas
- identify, rectify and/or report environmental non-compliance
- detect and prepare injection materials as required. This may include the accurate completion of calculations, such as dilution rates
- confirm equipment status and condition
- set up and start up the process. This can involve the use of process control systems
- monitor the process and system operation to identify out-of-specification results or non-compliance. This can involve monitoring:
 - usage rates
 - dilution
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action as required
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards
- demonstrate safe handling of hazardous chemicals
- implement routine maintenance and minor repairs of the system
- implement routine system cleaning requirements
- apply information technology systems according to enterprise procedures
- apply sampling techniques according to enterprise procedures
- conduct routine tests according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge include:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose and principles of chemicals used and their effect on irrigation system or vine performance. This should include the effect of miscalculations and inaccurate deliveries
- purpose and operation of equipment and instrumentation components
- basic operating principles and process control systems where relevant
- services required
- control points and significance and methods of monitoring
- common causes of variation and corrective action required
- process specifications, procedures and operating parameters
- correct chemical handling techniques
- OHS hazards and controls
- lock-out and tag-out procedures
- environmental issues and controls
- procedures and responsibility for reporting problems
- cleaning requirements of system
- maintenance requirements of system
- shutdown sequence
- recording requirements and procedures
- cleaning procedures
- information technology systems where relevant
- sampling techniques and procedures where relevant
- routine testing procedures where relevant.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment where required • correctly select and prepare injection materials • correctly pre-start checks of equipment • start injection process correctly • monitor injection process control points and equipment, including checking for environmental compliance, usage rates and dilution • take corrective action in response to out-of-specification results or non-compliance • perform routine and emergency shutdowns • handle and/or remove waste in accordance with specified procedures • record information appropriately.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> Standard Operating Procedures (SOPs) specifications production schedules instructions routine maintenance schedules work notes Material Safety Data Sheets (MSDS) manufacturer instructions verbal directions from manager, supervisor or senior operator
Confirming equipment status	<p>Confirming equipment status involves:</p> <ul style="list-style-type: none"> checking that all safety standards and pre-start requirements are met and equipment is operational checking the operation and/or calibration of

RANGE STATEMENT	
	measuring instrumentation
Services	Services may include: <ul style="list-style-type: none"> • water and power
Monitoring the process	Monitoring the process may involve: <ul style="list-style-type: none"> • the use of production data, such as performance control charts
Process operation and monitoring functions	Process operation and monitoring functions may be: <ul style="list-style-type: none"> • manual or involve the use of a process control system
Control points	Control points refer to those key points in a work process that must be monitored and controlled. This includes: <ul style="list-style-type: none"> • quality and regulatory control points • inspection points
Irrigation systems	Irrigation systems may include: <ul style="list-style-type: none"> • flood • dripper • microjet • sprinkler • overhead • water winch
Materials to be injected	Materials to be injected may be wet or dry and may include, but are not restricted to: <ul style="list-style-type: none"> • fertilisers • chlorine • acid • cleaning agents
Equipment	Equipment may include: <ul style="list-style-type: none"> • injection pump • injection point • chemical holding tank
Information systems	Information systems may be: <ul style="list-style-type: none"> • print or screen based and may include information technology for injection scheduling systems, recording and reporting systems
Work hazards	Work may involve exposure to: <ul style="list-style-type: none"> • chemical, dangerous or hazardous substances

Unit Sector(s)

Unit sector	Wine operations
-------------	-----------------

FDFWGG2014A Operate the irrigation system

Modification History

This unit supersedes and is equivalent to FDFWGGISB Operate the irrigation system.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to operate the irrigation system and implement the irrigation system maintenance schedule according to instructions. It may include the supervision of maintenance personnel.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to employees who operate equipment used to irrigate vines used in winemaking. The unit covers the operation of various types of irrigation equipment, including flood, dripper, microjet, sprinkler, overhead and water winch. Operation of irrigation must be consistent with environmental and occupational health and safety (OHS) requirements and to irrigation specification.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the irrigation system for operation	1.1 Services are confirmed as available and ready for use 1.2 System is checked to confirm readiness for use 1.3 System is set to meet irrigation requirements
2. Operate the irrigation system	2.1 The irrigation system is started up according to workplace procedures 2.2 Control points are monitored to confirm that performance is maintained within specification 2.3 Out-of-specification system performance is identified, rectified and/or reported 2.4 Irrigation requirements are delivered according to instructions
3. Complete operation of the irrigation system	3.1 Irrigation system is shut down according to workplace procedures 3.2 Waste generated by both the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.3 Work is conducted in accordance with workplace environmental guidelines
4. Implement maintenance procedures for the irrigation system	4.1 Maintenance personnel are instructed as required 4.2 Irrigation system cleaning and maintenance activities are monitored to confirm performance is maintained within specification 4.3 Out-of-specification performance is identified, rectified and/or reported 4.4 Irrigation system cleaning and maintenance activities are implemented according to instructions 4.5 Problems and anomalies are identified, corrected and/or reported
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify irrigation requirements
- select, fit and use personal protective clothing and/or equipment
- confirm supply of necessary services and materials
- identify, rectify and/or report environmental non-compliance
- liaise with other work areas
- confirm equipment status and condition
- set up and start up the process. This can involve the use of process control systems
- monitor the process and system operation to identify out-of-specification results or non-compliance. This may involve monitoring:
 - application rates
 - irrigation times
 - dripper output
 - pressure variations
 - salinity levels and water quality
 - depth of irrigation
 - maintenance requirements and procedures
 - cleaning requirements and procedures
 - maintenance operator progress or performance
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action as required
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- maintain work area to meet housekeeping standards
- use appropriate cleaning techniques
- implement routine maintenance and minor repairs of the system
- implement routine system cleaning requirements
- supervise others according to enterprise procedures
- apply information technology systems according to enterprise procedures
- apply sampling techniques according to enterprise procedures
- conduct routine tests according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

- work cooperatively within a culturally diverse workforce.

Required knowledge

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- principles, purpose and benefits of different irrigation techniques and schedules and their affect on vine growth and grape and/or wine quality. This should include partial rootzone drying (PRD)
- soil characteristics as they apply to vine irrigation. These may include:
 - structure
 - compaction
 - condition
 - texture
 - moisture
- basic vine physiology in relation to the irrigation system, which may include:
 - transpiration
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grape vine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - rootstocks and scion stock
- industry processes for new variety development
- annual grape vine growth stages, including:
 - budburst
 - flowering
 - veraison
 - maturity
- key grape varieties and their distinguishing features. This may include factors, such as:

- berry and bunch characteristics
- frost and disease resistance
- flavour and style
- purpose and operation of irrigation system and instrumentation components
- basic operating principles and process control systems where relevant
- services required
- control points and significance and methods of monitoring
- common causes of variation and corrective action required
- process specifications, procedures and operating parameters
- OHS hazards and controls
- lock-out and tag-out procedures
- environmental issues and controls
- procedures and responsibility for reporting problems
- cleaning requirements and procedures for the system
- maintenance requirements and procedures for the system
- shutdown sequence
- recording requirements and procedures
- supervision techniques where relevant
- information technology systems where relevant
- sampling techniques and procedures where relevant
- routine testing procedures where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for harvest support activities	1.1 Work requirements are identified 1.2 Equipment is checked to confirm readiness for use 1.3 Equipment is set up to meet harvest support requirements
2. Collect grapes from harvester	2.1 Tractor towing trailer or gondola is driven alongside mechanical harvester according to instructions 2.2 Collection activities are monitored to confirm performance is maintained within specification 2.3 Out-of-specification performance is recognised, rectified and/or reported 2.4 Problems and anomalies are recognised, rectified and/or reported 2.5 Equipment is maintained in good working order
3. Transfer grapes to receival point	3.1 Chemicals are added to grapes according to instructions 3.2 Grapes are delivered to receival point according to instructions
4. Complete harvest support activities	4.1 Equipment is cleaned according to workplace procedures 4.2 Waste generated by the process or cleaning procedures is collected, sorted and disposed of or recycled, according to workplace procedures 4.3 Work is conducted in accordance with workplace environmental guidelines
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify harvest support requirements
- liaise with other work areas
- select, fit and use appropriate personal protective clothing and/or equipment
- select, attach and set up appropriate equipment
- carry out pre-operational checks of equipment according to workplace procedures
- operate equipment safely
- identify and rectify, remove and/or report potential occupational health and safety (OHS) hazards
- collect grapes from the discharge conveyer. This should include:
 - avoiding all contact with or damage to other machinery and equipment, vines, trellises or fences
 - safe handling of equipment
 - maintaining appropriate speed and distance
 - starting off and swapping over
 - changing rows
 - day-time and night-time harvesting
 - variety of harvesting conditions and varieties
- monitor grape collection activities. This may include monitoring:
 - equipment breakages or malfunction
 - vine or trellis damage
 - grape quality and quantity
 - matter other than grapes (MOG) collected
 - load weight
 - chemical application to fruit loads
 - collection accuracy of grapes
 - tipping accuracy of grapes at receival point
 - progress
 - congestion or backlog at receival point
 - performance according to specifications
- report and/or record problems and/or corrective action
- identify, rectify and/or report environmental non-compliance
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements

- handle, prepare and add chemicals according to instructions
- take the necessary action to protect fruit quality where possible. This may include parking fruit carriers in a shaded area
- deliver grapes to receival point according to instructions. This may include tipping the trailer or gondola
- maintain workplace records according to workplace standards
- maintain work area to meet housekeeping standards
- use appropriate cleaning techniques
- carry out routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- key factors that will affect grape and/or wine quality. This may include:
 - temperature
 - oxidation
 - MOG collected
 - speed of processing
 - chemical addition
- features and benefits of methods to preserve grape and/or wine quality
- common problems and anomalies
- procedures and operating parameters
- significance and methods of monitoring performance
- common faults and corrective action required
- OHS hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems
- recording requirements and procedures
- cleaning requirements associated with changeovers
- shutdown sequence of equipment
- cleaning procedures
- routine maintenance procedures for equipment where relevant.

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for trellising activities	1.1 Existing trellises are checked for signs of disrepair 1.2 Equipment is prepared and checked to confirm readiness for use 1.3 Materials are selected according to instructions 1.4 Posts and supports are laid out according to instructions 1.5 Wire is run out according to instructions
2. Erect and maintain trellises	2.1 Equipment is started up and operated according to workplace procedures 2.2 Trellis ends and posts are erected and assemblies strained according to instructions 2.3 Foliage and trellis wires are attached and tensioned according to instructions 2.4 Trellis maintenance is carried out according to workplace procedures 2.5 Problems and anomalies are recognised, rectified and/or reported
3. Complete trellising activities	3.1 Equipment is shut down according to workplace procedures as required 3.2 Equipment is cleaned and stored according to workplace procedures 3.3 Materials are stored according to workplace procedures 3.4 Waste is collected and disposed of or recycled according to workplace procedures 3.5 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify trellis requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- select appropriate materials. This will include type and quantity
- check equipment and complete pre-start checks as required
- repair trellis according to workplace standards. This may include:
 - positioning and depth of posts and strainers
 - positioning and number of wires
 - tightness and grade of wire
- lay out posts and supports according to instructions. This may include:
 - spacing
 - type
 - numbers
 - positioning
 - safe handling procedures
- run out wire according to instructions. This will include:
 - securing of ends
 - safe handling procedures
 - cutting correct length
 - positioning
- operate equipment according to instructions
- erect trellis ends and assemblies according to instructions
- attach foliage and trellis wires according to instructions. This includes:
 - spacing
 - alignment
 - height
 - tension
 - fixing method
 - joining systems (e.g. wire knots)
- recognise, rectify and/or report problems and anomalies of trellis installation
- use hand tools
- collect, sort, treat, dispose of and/or recycle waste
- identify, rectify and/or report environmental non-compliance

- clean and store equipment according to instructions
- use appropriate cleaning techniques
- implement appropriate occupational health and safety (OHS) procedures
- store unused materials
- maintain work area to meet housekeeping standards
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose, features and components of the trellis system
- trellis installation process and procedures
- common maintenance requirements of vineyard trellising and how to repair them
- common faults, problems and how to solve them
- safe handling of materials and equipment
- purpose and application of personal protective clothing and/or equipment
- OHS hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems and anomalies
- cleaning and storage requirements and procedures for equipment
- storage requirements and procedures for materials
- maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment where required • carry out trellis repairs according to instructions • lay out posts and supports according to instructions • cut, cure, position and tension wires according to instructions • store unused materials correctly • collect and recycle or dispose of waste according to procedures.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

FDFWGG2017A Recognise disorders and identify pests and diseases

Modification History

This unit supersedes and is equivalent to FDFWGGPDDA Recognise disorders and identify pests and diseases.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to recognise symptoms of pests, diseases and plant disorders at all stages of vine growth, to identify pests and diseases, and to report details in a timely and effective manner to appropriate personnel.
------------------------	---

Application of the Unit

Application of the unit	This unit requires recognition of symptoms of vine disorders but does not require identification of causes, such as nutrient deficiency or toxicity.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor vine health	1.1 Vineyard is monitored according to workplace procedures 1.2 Pest and disease symptoms are recognised 1.3 Symptoms of plant disorders are recognised
2. Assess symptoms of vine pests, diseases and disorders	2.1 Pests or diseases are identified from symptoms 2.2 Severity of pest or disease infestation or plant disorder is identified 2.3 Spread of infestation or disorder is identified 2.4 Vineyard location of infestation or disorder is identified
3. Report to appropriate personnel	3.1 Details of pest or disease infestation are reported to appropriate personnel according to workplace procedures 3.2 Details of plant disorder are reported to appropriate personnel according to workplace procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify recognition and identification requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- implement monitoring procedures according to workplace requirements
- monitor the health and growth of vines. This may include monitoring:
 - environmental factors
 - cultural factors
 - signs of pests and diseases
 - signs of plant disorders
- identify different parts of the grapevine. This will include:
 - vine trunk and permanent framework
 - canes and/or cordons
 - tendrils and buds
 - fruit
- identify and describe common vineyard weed species
- identify and describe common pests and diseases, including:
 - light brown apple moth (LBAM)
 - powdery mildew
 - downy mildew
 - botrytis
 - mites
- recognise and report pest and disease activity or symptoms of plant disorders in an appropriate time for treatment to be timely and effective
- identify, rectify and/or report environmental non-compliance
- maintain work area to meet housekeeping standards
- clean and store equipment according to instructions
- operate information technology systems according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and

processes that are used in the particular winery or workplace.

Knowledge of:

- range of vine monitoring procedures, which may include manual and/or automated sampling and testing techniques
- basic vine physiology, as it applies to:
 - water intake
 - nutrient uptake
 - photosynthesis
 - transpiration, respiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine and their role in how the vine works, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
 - Annual growth stages of grapevines, including:
 - budburst
 - flowering
 - veraison
 - maturity
- vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - root stocks and scion stock
- key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance
 - flavour and style
- a range of common vine disorders, pests and diseases, according to workplace requirements
- influence on the occurrence and development of vine disorders, pests and diseases of climatic factors (e.g. wind speeds, rainfall levels, humidity, dry heat and hail)
- pest and disease tolerance thresholds
- vine disorder reporting requirements and procedures
- purpose and application of personal protective clothing and/or equipment
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- reporting responsibilities and procedures
- information technology systems where relevant

- basic principles of workplace's integrated pest management (IPM) program where relevant
- pest and disease resistance management strategies employed by the workplace where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: <ul style="list-style-type: none"> • use personal protective equipment, MSDS and follow other specified OHS procedures • recognise symptoms of plant pests, diseases and disorders • identify location and extent of spread • determine severity of pests, diseases and disorders • report findings.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over

EVIDENCE GUIDE	
	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Monitoring procedures	<p>Vineyard monitoring procedures may include:</p> <ul style="list-style-type: none"> • monitoring techniques and monitoring schedules
Monitoring equipment	<p>Vineyard monitoring equipment may include:</p> <ul style="list-style-type: none"> • manual or automated sampling and testing kits, and pest and disease information
Pests and diseases	<p>Pests and diseases may include, but are not limited to:</p> <ul style="list-style-type: none"> • any form of vertebrate and invertebrate pest, weeds, and fungal, bacterial or viral disease • light brown apple moth (LBAM)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • powdery mildew • downy mildew • botrytis • mites
Reporting of pests and diseases	<p>Reporting details of pests and diseases may include:</p> <ul style="list-style-type: none"> • identification of pest or disease • location and quantity of affected plants • severity of attack • life cycle stage of pest • developmental stage of disease • number of pests • extent of disease on individual plants
Symptoms of plant disorders	<p>Symptoms of plant disorders may include:</p> <ul style="list-style-type: none"> • discolouration • stunted or abnormal plant parts • uneven growth or fruit set • dropping of plant parts (e.g. leaves and flowers) • general poor growth • burning off of extremities (e.g. tendrils and leaves) • weak or rotting plants parts (e.g. stems and fruit)
Reporting for plant disorders	<p>Reporting details for plant disorders may include:</p> <ul style="list-style-type: none"> • severity of symptoms • spread of symptoms • location of affected plants in vineyard • development of symptoms • any associated environmental or cultural factors that may be considered relevant (e.g. watering or fertilisation problems, mulch problems, recent vine work or treatment application)
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> • print or screen based and may include information technology systems, such as database of workplace or site pest, disease and disorder histories, symptom recognition and pest and disease identification aids, climatic information systems, work scheduling, reporting and recording systems

FDFWGG2018A Operate vineyard equipment

Modification History

This unit supersedes and is equivalent to FDFWGGVEQB Operate vineyard equipment.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to operate a range of vineyard equipment that does not require calibration. Where the operation of specialised equipment is required, alternative units should be selected.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to the operation of equipment used in wine grape growing. It includes the ability to attach, set up and detach equipment as required.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare equipment for operation	1.1 Requirements are interpreted and confirmed 1.2 Equipment is selected and checked to confirm readiness for use 1.3 Equipment is attached and set up according to instructions as required
2. Operate equipment	2.1 Equipment is started up according to workplace procedures 2.2 Equipment is operated according to workplace procedures 2.3 Equipment performance is monitored to confirm performance is maintained within specification 2.4 Out-of-specification equipment performance is identified, rectified and/or reported 2.5 Problems and anomalies are recognised and/or reported
3. Complete operation of equipment	3.1 Equipment is shut down according to workplace procedures 3.2 Equipment is prepared for cleaning and storage 3.3 Equipment is cleaned according to workplace procedures 3.4 Waste generated by both the activities and cleaning procedure is collected, treated and disposed of, or recycled according to workplace procedures 3.5 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas
- select appropriate equipment for the task
- confirm equipment status and condition. This may include checking:
 - fuel
 - water
 - oil (e.g. engine, gearbox and hydraulics)
 - belts
 - air intake
 - tyre pressure
 - metal fatigue or wear and tear
- attach equipment to towing vehicle as required
- set up equipment as required to meet operating instructions
- start up equipment
- operate equipment to meet operating instructions. This should include:
 - driving forward and reversing
 - operating in confined spaces
 - operating amongst other vineyard activities and a variety of conditions as required
- monitor equipment performance. This may include monitoring:
 - status and condition
 - handling and stopping ability
 - operating depth of equipment
 - blockages
 - ground speed or power take-off speed
 - width and/or coverage
 - environmental operating conditions
- recognise equipment performance problems and amend and/or report as instructed
- shut down equipment in response to emergency situations
- shut down equipment in response to routine shutdown requirements
- prepare equipment for cleaning and storage
- clean equipment

- store equipment according to instructions
- maintain work area to meet housekeeping standards
- collect, treat, recycle or dispose of waste according to workplace procedures
- identify, rectify and/or report environmental non-compliance
- use appropriate cleaning techniques
- maintain workplace records
- carry out routine maintenance of equipment according to enterprise procedures.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose, features and components of equipment
- equipment pre-start checks
- equipment operating procedures
- process specifications, procedures and operating parameters
- common causes of variation or malfunction and the corrective action required
- required weather conditions for equipment operation
- Occupational health and safety (OHS) hazards and controls in all operating conditions
- significance and methods of monitoring equipment performance
- lock-out and tag-out procedures
- recording requirements and procedures
- procedures and responsibility for reporting problems
- environmental issues and controls
- cleaning requirements of equipment associated with changeovers and types of shutdown
- cleaning procedures
- storage requirements
- shutdown sequence
- routine maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment • select and confirm availability of equipment and prepare according to instructions • attach and set up equipment to meet requirements • start and operate equipment in accordance with operation instructions and requirements of workplace and task • perform emergency and routine shutdowns • take corrective action in response to out-of-specification results or non-compliance • demonstrate knowledge of OHS hazards, controls and emergency procedures • sort, collect, treat, recycle or dispose of waste • record information appropriately.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> Standard Operating Procedures (SOPs) specifications production schedules instructions work notes Material Safety Data Sheets (MSDS) manufacturer instructions verbal direction from manager, supervisor or senior operator
Vineyard equipment	<p>Vineyard equipment may include, but is not limited to:</p> <ul style="list-style-type: none"> all terrain vehicles tractor mounted forklift front-end loader

RANGE STATEMENT	
	<ul style="list-style-type: none"> • towed equipment (e.g. gondola) • three point linkage equipment (e.g. discs) • power take-off driven equipment (e.g. slasher) • equipment with hydraulics (e.g. tipping trailer) • stationary equipment (e.g. pumps and generators)
Terrain	<p>Terrain, where applicable, must enable safe and effective operation of the equipment. It may include:</p> <ul style="list-style-type: none"> • tracks • access roads • vineyard rows • open paddocks • flat, undulating, steep, hilly or terraced land • on- and off road environments
Conditions	<p>Conditions, where applicable, must enable safe and effective operation of the equipment. These may include:</p> <ul style="list-style-type: none"> • dry • wet • slippery • boggy • icy • foggy • windy • day and night conditions
Loads	<p>Loads, where applicable, may range from:</p> <ul style="list-style-type: none"> • full to empty as required
Confirming equipment status	<p>Confirming equipment status will include:</p> <ul style="list-style-type: none"> • checking that all safety standards and pre- start requirements are met and equipment is operational
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> • print or screen based

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for vertebrate pest control activities	1.1 Equipment and materials are checked to ensure availability and readiness for use 1.2 Equipment is set up and calibrated to meet requirements as required 1.3 Materials are prepared as required
2. Carry out vertebrate pest control activities	2.1 Equipment is started up according to workplace procedures as required 2.2 Equipment performance is monitored to confirm performance is maintained within specifications 2.3 Vertebrate pest control activities are monitored to confirm performance is maintained within specifications 2.4 Out-of-specification performance is identified, rectified and/or reported 2.5 Equipment is maintained in good working order 2.6 Control measures are implemented according to instructions 2.7 Problems and anomalies are identified, corrected and/or reported
3. Complete vertebrate pest control activities	3.1 Equipment is shut down according to workplace procedures as required 3.2 Equipment is cleaned and stored according to workplace procedures 3.3 Waste generated by both the activities and the cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines 3.5 Unused materials are stored according to workplace procedures
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify vertebrate pest control requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- select, set up and operate equipment as required, according to instructions
- carry out vertebrate pest control activities according to instructions
- monitor vertebrate pest control activities. This may include monitoring:
 - material usage
 - occupational health and safety (OHS) hazards and controls
 - environmental conditions
 - success rate and/or progress
 - vertebrate pest response
 - problems and anomalies
 - equipment performance
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action
- identify, rectify and/or report environmental non-compliance
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- clean equipment as required
- maintain work area to meet housekeeping standards
- collect, sort, dispose of or recycle waste according to workplace procedures
- store unused materials according to workplace procedures
- maintain records according to enterprise standards
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- common vineyard vertebrate pests and their affect in the vineyard

- features and benefits of different types of vertebrate pest control measures
- correct operating procedures for equipment
- correct implementation procedures
- purpose and application of personal protective clothing and equipment
- OHS hazards and controls
- environmental issues associated with vertebrate pest control procedures and materials
- reporting and recording requirements and procedures
- procedures and responsibility for reporting problems and anomalies
- waste disposal requirements and procedures
- cleaning and storage requirements of equipment and unused materials
- shutdown sequence of equipment
- licensing requirements
- routine maintenance procedures for equipment where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for hot water treatment	1.1 Work instructions on hot water treatments are confirmed and understood 1.2 Materials are confirmed as available and ready to meet requirements 1.3 Equipment is set up according to specifications 1.4 Water is prepared for cool down, hot water treatment and hydration according to specifications 1.5 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures
2. Treat cuttings	2.1 Cuttings are dipped in the hot water according to AVIA protocols 2.2 The dipping process is monitored for compliance with AVIA specifications 2.3 Safe work procedures are followed to minimise risk of hazards
3. Carry out post-treatment procedures	3.1 Cuttings are cooled down according to AVIA protocols 3.2 Treated cuttings are stored according to AVIA and workplace procedures 3.3 Waste is collected and disposed of according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Treatment information is recorded according to AVIA requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information required to carry out hot water treatments
- confirm supply of necessary materials
- liaise with other work areas
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping standards
- maintain work area and equipment to meet workplace hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- set up equipment for hot water treatment. This will include:
 - placing correct volumes of water in the tanks
 - calibrating data loggers
 - calibrating temperature sensors against a certified thermometer
 - calibrating thermometers
- prepare water for cool down, hot water treatment and hydration. This will include:
 - testing and adjusting chlorination levels
 - checking and adjusting temperature levels
- prepare cuttings for treatment. This may include re-hydration
- dip cuttings, fully submersing for the specified amount of time, at the specified temperature in prepared hot water
- monitor the dipping process to ensure compliance with required specifications. This will include:
 - monitoring critical control points for compliance with specifications
 - analysing readouts from data logging devices
 - maintaining level of agitation in the tanks
 - maintaining chlorine level
 - recalibrating thermometers
- cool down cuttings in prepared cooling water immediately following hot water treatment. this is already mentioned above
- store treated cuttings. This will include:
 - separating from untreated cuttings to prevent contamination

- covering with clean covers
- placing cuttings in vented plastic bags to prevent dehydration
- placing cuttings in the cold room
- dispose of waste. This may include:
 - settling the water
 - racking off clean water
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose of hot water treatment
- importance of precise treatment
- consequences of mistreatment
- AVIA and workplace specifications for hot water treatments
- reasons for using different specifications for hot water treatments
- monitoring techniques to ensure temperature and water quality are within specifications
- quality assurance process for the hot water treatment process
- Occupational health and safety (OHS) hazards and controls when undertaking hot water treatments
- purpose and application of personal protective clothing and/or equipment
- correct operating procedures for equipment
- safe and effective handling of equipment
- principles of nursery hygiene
- cleaning requirements and procedures for work area and equipment
- environmental issues and controls
- waste disposal requirements and procedures
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment where required • follow hot water treatment safety procedures • apply AVIA standards to heat and cool cuttings • handle cuttings according to instructions • recognise vine problems • dispose of waste according to instructions • maintain required records.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • routine maintenance schedules • work notes • manufacturer instructions • verbal directions from manager or supervisor
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • hydration tanks • treatment tanks • cooling-off tanks • dipping apparatus • electronic data logging devices • monitoring apparatus • certified reference thermometer • dipping cages • appropriate personal protective clothing and/or equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • forklift
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • cuttings • rootlings • water • chlorine
Waste	<p>Waste may include:</p> <ul style="list-style-type: none"> • water • damaged plant material • sediment
Hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • heat sources • hot water • transferring vines • moving machinery • chlorine
Specifications	<p>Specifications will include:</p> <ul style="list-style-type: none"> • temperature range • length of time in a treatment • relative humidity • level of chlorination • amount of agitation required • quality of the water
Records	<p>Records will include:</p> <ul style="list-style-type: none"> • data logger print out • batch number • date of treatment • start and finish time of treatment • maximum temperature for treatments and cold room • minimum temperature for treatments and cold room • average temperatures for treatments and cold room • calibration information • name of operator

FDFWGG2021A Operate nursery cold storage facilities

Modification History

This unit supersedes and is equivalent to FDFWGGOCSB Operate nursery cold storage facilities.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for wine grape nurseries. It covers the skills and knowledge required to operate and monitor nursery cold storage facilities.
------------------------	---

Application of the Unit

Application of the unit	Application of this unit requires cold room operation in accordance with specifications and knowledge of occupational health and safety (OHS), environmental and hygiene requirements.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare cold room for storage	1.1 Work instructions are confirmed and understood 1.2 Cold room facilities are cleaned and sanitised according to workplace procedures 1.3 Cold room specifications are set according to workplace procedures 1.4 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures
2. Operate cold room	2.1 Environmental specifications are monitored according to workplace procedures 2.2 Movement of stock is monitored according to cold room plan and workplace procedures 2.3 Problems and anomalies are identified, rectified and/or reported according to workplace procedures 2.4 Safe work practices are employed to minimise work hazards
3. Shut down cold room	3.1 Cold room is shut down according to workplace procedures 3.2 Cold room is cleaned and secured according to workplace procedures 3.3 Waste is collected and disposed of according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information required to operate cold storage facilities
- liaise with other work areas
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store required equipment according to instructions
- identify, rectify and/or report environmental non-compliance
- maintain work area and equipment to meet workplace housekeeping and hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- follow safe work procedures to minimise hazards
- collect, treat and dispose of waste according to workplace procedures
- maintain workplace records
- interpret and apply cold room plan
- confirm equipment status and condition. This may include:
 - checking all safety standards
 - conducting pre-start checks
- move material in and out of cold room. This may include:
 - transferring stock manually
 - using a mechanical transfer device
- recognise equipment performance problems and amend and/or report as instructed
- monitor the health of cuttings during storage. This may include identifying:
 - signs of dehydration
 - signs of fungal infection
- monitor cold room facilities according to workplace procedures. This may include identifying:
 - temperature variations
 - humidity variations
 - air flow
- shut down equipment in response to emergency situations
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- OHS hazards and controls when working in a cold room
- environmental issues and controls
- principles of nursery hygiene
- purpose and application of personal protective clothing and/or equipment
- procedures and responsibility for reporting problems
- lock-out and tag-out procedures
- cleaning requirements and procedures
- reporting and recording requirements and procedures
- waste disposal requirements and procedures
- principles of cold room planning
- principles of cold room operation
- purpose and use of components of a cold room
- cold room equipment operating procedures
- shutdown sequence
- principles of maintaining cold room performance
- methods of maintaining cold room performance
- methods of monitoring a cold room
- methods of packing a cold room
- common causes of variation or malfunction and the corrective action required
- effect of cold storage on cuttings
- post-storage treatment of cuttings.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment where required • observe housekeeping standards • monitor cold storage and stock conditions and make required adjustments • shut down, clean and secure cold storage facilities • recognise and act upon out-of-specification conditions • record information appropriately.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal directions from manager, supervisor or senior operator
Waste	<p>Waste may include:</p> <ul style="list-style-type: none"> • cleaning agents • unused stock
Potential hazards	<p>Potential hazards may include:</p> <ul style="list-style-type: none"> • cold room door closing while working inside • working in cold conditions • slippery floors • obstacles on the floor

RANGE STATEMENT	
	<ul style="list-style-type: none"> • overhead objects • operating forklifts and other moving objects
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • fluctuations in temperature • breakdown of data loggers • fans or temperature controls • inadequate air flows due to incorrect stacking
Cold room specifications	<p>Cold room specifications may include:</p> <ul style="list-style-type: none"> • temperature range • spacing pattern for airflow • humidity
Cold room plans	<p>Cold room plans may include:</p> <ul style="list-style-type: none"> • stacking patterns • stacking heights • movement of stock
Records	<p>Records will include:</p> <ul style="list-style-type: none"> • temperature logs • material entering or leaving cold room • batch numbers

FDFWGG2022A Take and process vine cuttings

Modification History

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for wine grape nurseries. It covers the skills and knowledge required to take and process vine cuttings under supervision.
------------------------	--

Application of the Unit

Application of the unit	This unit covers the taking of vine cuttings from vines used in wine making cuttings and processing. A variety of hand operated or handheld equipment is used. Working with vine cuttings includes the ability to recognise problems and anomalies with vines and to select the best cuttings according to instructions.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Take vine cuttings	1.1 Cutting requirements are confirmed and understood 1.2 Equipment is checked to confirm readiness for use 1.3 Vine cuttings are taken according to instructions 1.4 Vine anomalies and problems are recognised, rectified and/or reported 1.5 Equipment is maintained in good working order
2. Complete vine cutting operations	2.1 Vine cuttings are collected according to instructions 2.2 Equipment is cleaned and stored according to instructions 2.3 Waste is collected and disposed of according to instructions
3. Prepare to process cuttings	3.1 Work instructions on the processing of cuttings are confirmed and understood 3.2 Facilities are cleaned and sterilised to minimise risk of contamination 3.3 Materials are confirmed as available and ready to meet requirements 3.4 Equipment is collected and checked for serviceability and sterilised as required by workplace procedures 3.5 Potential and existing hazards are identified, rectified and/or reported according to workplace procedures 3.6 Work is conducted in accordance with workplace environmental guidelines
4. Process cuttings	4.1 Cuttings are treated and bundled according to instructions 4.2 Bundles are labelled, packed and stored according to instructions 4.3 Waste is collected and disposed of according to workplace procedures 4.4 Problems and anomalies are identified, rectified and/or reported according to workplace procedures 4.5 Safe work practices are employed to minimise work hazards
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify cutting processing requirements
- confirm supply of necessary materials
- liaise with other work areas and customers
- select, fit and use appropriate personal protective clothing and/or equipment
- select, operate, maintain and store required equipment according to instructions
- maintain work area and equipment to meet workplace housekeeping standards
- maintain work area and equipment to meet workplace hygiene standards
- use appropriate cleaning techniques
- recognise problems and anomalies and correct and/or report them as instructed
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- handle pruning secateurs safely. This includes following the correct handling and sharpening procedures
- recognise performance problems with secateurs and correct or report them as instructed. This includes oiling moving parts and sharpening blades
- identify different parts of the grapevine. This should include identifying:
 - vine trunk and permanent framework
 - canes and/or cordons
 - tendrils and buds
- select and take vine cuttings according to instructions. This may include:
 - correct length and diameter
 - correct number of buds on the cutting
 - degree of straightness
 - cuts made correctly and cleanly
 - top cut at 45° angle or bottom bud flat, 1-2 cm from nearest bud
 - number of buds left on the vine
- collect and store vine cuttings according to instructions. This may include:
 - numbers per bundle
 - all lying the same way in the bundle (basal and distal ends)
 - secure tying of bundles
 - labelling
 - maintaining hydration of cuttings
- prepare chemical treatments to required concentration and ensure homogenous mix

- treat cuttings as instructed. This may include:
 - completing hydration of all cuttings
 - completing chemical treatment of all cuttings
 - removing unwanted plant material
- monitor the standard of cuttings and grade them as instructed
- bundle and label cuttings as instructed. This may include:
 - including correct numbers per bundle
 - cuttings all lying the same way in the bundle
 - tying bundles securely
 - labelling legibly and accurately
- pack and store cuttings as instructed. This may include:
 - cold room layout
 - cold room temperature variations
 - customer requirements
 - storage time requirements
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- occupational health and safety (OHS) hazards and controls
- purpose and application of personal protective clothing and/or equipment
- correct operating procedures for equipment
- safe and effective handling of equipment
- cleaning requirements and procedures for work area and equipment
- reporting and recording requirements and procedures
- procedures and responsibilities for reporting problems and anomalies
- waste disposal requirements and procedures
- environmental issues and controls
- principles of nursery hygiene
- basic components of the vine
- basic vine problems and anomalies
- cutting requirements and procedures
- cutting collection and storage requirements, including hydration
- specifications of vine cuttings
- factors that influence how a cutting should be graded and why
- common features of healthy vine cuttings

- common features of unhealthy vine cuttings
- safe preparation and handling of chemicals.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment where required • follow cutting equipment safety procedures • select cuttings and cut according to instructions • handle, bundle, and label cuttings according to instructions • recognise vine problems • dispose of waste according to instructions • maintain required records.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Facilities	<p>Facilities may include:</p> <ul style="list-style-type: none"> • cold storage • fungicide treatment areas • storage bins or tanks • soakage tanks
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • secateurs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • personal protective clothing and/or equipment • bins • boxes • packing machine • counting machine • forklift
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • string • labels • chemicals • sand • water • pallets
Waste	<p>Waste may include:</p> <ul style="list-style-type: none"> • off-cuts • dropped or rejected cuttings • packaging materials • chinisol • chemical containers
Work hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • damaging fingers or eyes from use of tools and equipment • manual handling • lifting bundles • falling over in an untidy work area • using chemicals and disinfectants
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • physical damage or signs of common pests and diseases, such as eutypa, phomopsis, nematodes, crown gall, diseased wood, dehydration, infection, physical damage, damaged buds, immature wood • different wood characteristics indicative of a different vine variety
Records	<p>Records will include:</p> <ul style="list-style-type: none"> • type of cuttings • quantity of cuttings • the count per bundle

RANGE STATEMENT	
	<ul style="list-style-type: none"> • number of bundles • treatments carried out • source identification code
Treatments	<p>Treatments may include:</p> <ul style="list-style-type: none"> • hydration • chemical treatment • trimming • grading
Grading	<p>Grading cuttings may include:</p> <ul style="list-style-type: none"> • sorting for length, diameter, appearance and number of viable buds
Label information	<p>Label information may include:</p> <ul style="list-style-type: none"> • class of the material • variety and clone • grade of cutting • the source identification code
Packing	<p>Packing may include:</p> <ul style="list-style-type: none"> • packing, venting and sealing cuttings into polythene film bags or packing bins • wrapping cuttings in wet hessian • packing in woven polypropylene wool packs

FDFWGG2023A Carry out basic canopy maintenance

Modification History

This unit supersedes and is equivalent to FDFWGGCMBB Carry out basic canopy maintenance.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to carry out basic, manual vine canopy maintenance under regular supervision.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to maintaining of wine grapevine canopies. Work is carried out according to instructions and may involve use of both manual and motorised equipment. The unit also requires the ability to recognise problems and anomalies with equipment or vines while carrying out canopy maintenance.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to carry out basic canopy maintenance activities	1.1 Equipment is checked to confirm readiness for use 1.2 Canopy maintenance requirements are identified and confirmed
2. Position the vine canopy	2.1 Equipment is started up and operated according to instructions as required 2.2 Unwanted growth is removed according to instructions 2.3 Vine shoots are positioned according to instructions 2.4 Equipment is maintained in good working order
3. Control exposure of crop to sunlight	3.1 Control measures are applied according to instructions 3.2 Problems and anomalies are rectified and/or reported
4. Complete canopy maintenance activities	4.1 Equipment is shut down according to instructions as required 4.2 Equipment is cleaned and stored according to instructions 4.3 Vine cuttings are disposed of according to instructions 4.4 Work is conducted in accordance with workplace environmental guidelines
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify canopy maintenance requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- handle equipment safely. This includes following the correct handling and sharpening procedures
- confirm equipment status and condition
- start up and operate equipment as required
- recognise performance problems with equipment and correct or report them as instructed. This includes oiling moving parts and sharpening blades
- identify different parts of the grapevine. This should include identifying:
 - vine trunk and permanent framework
 - canes and/or cordons
 - tendrils and buds
 - fruit
- position the vine canopy according to instructions. This includes:
 - identifying and removing unwanted growth
 - positioning spurs correctly
 - making cuts correctly and cleanly
 - manipulating the vines effectively without unnecessary damage to the vine
- control exposure of crop to light. This may include the positioning of foliage wires and shade cloth
- use appropriate cleaning techniques
- recognise and report problems and anomalies
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- identify, rectify and/or report environmental non-compliance
- clean and store equipment according to instructions
- maintain work area to meet housekeeping standards
- carry out routine preventive maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- safe handling procedures for equipment
- operating procedures for equipment
- purpose and application of personal protective clothing and/or equipment
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems and anomalies
- basic components of the vine
- basic vineyard problems and anomalies
- basic canopy management requirements
- purpose of canopy management activities
- cleaning and storage requirements and procedures for equipment
- shutdown sequence
- lock-out and tag-out procedures
- routine preventive maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE

1. Prepare to pick grapes	1.1 Equipment is checked to confirm readiness for use 1.2 Picking requirements are identified and confirmed
2. Pick the grapes	2.1 Grapes are selected according to workplace requirements 2.2 Grapes are picked according to instructions 2.3 Picking schedules are met 2.4 Equipment is maintained in good working order 2.5 Problems and anomalies are rectified and/or reported
3. Complete picking operations	3.1 Equipment is cleaned and stored according to instructions 3.2 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify picking requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- handle equipment safely. This includes following the correct handling and sharpening procedures
- recognise performance problems with equipment and correct or report them as instructed. This includes oiling moving parts and sharpening blades
- select grape bunches according to workplace requirements. This may include the ability to recognise diseased, over-ripe or immature grapes
- pick grapes according to instructions. This may include:
 - making cuts correctly and cleanly
 - minimising damage to fruit and/or vine
 - collecting and emptying grapes as instructed
 - adhering to occupational health and safety (OHS) controls
- meet work schedules by ensuring that work practices are methodical and economical
- use appropriate cleaning techniques
- recognise and report problems and anomalies
- clean and store equipment according to instructions
- maintain work area to meet housekeeping standards
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- safe handling procedures for equipment
- basic components of the vine
- correct operating procedures for equipment
- maintenance requirements and methods for equipment
- purpose and application of personal protective clothing and/or equipment
- OHS hazards and controls, including:

- bending
- repetition strains
- lifting
- manual handling and tipping
- heat stress and sunburn
- procedures and responsibility for reporting problems and anomalies
- picking requirements and procedures
- basic problems and anomalies
- cleaning and storage requirements of equipment.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment • handle cutting equipment correctly and safely • select grapes suitable for picking • recognise grapes that are unsuitable for picking • cut grape bunches according to specification with minimum damage to vine and grapes • pick grapes according to specified schedule.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over

EVIDENCE GUIDE	
	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • hand secateurs • knives • gloves • bags • containers
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • signs of common pests and diseases • mechanical damage

RANGE STATEMENT	
	<ul style="list-style-type: none">• damaged trellis and/or irrigation system• frost and wind damage• equipment malfunction
Grapes	Grapes may vary according to: <ul style="list-style-type: none">• grape variety• crop quality• quantity• trellis systems• collection methods

Not applicable.

FDFWGG2025A Plant vines by hand

Modification History

This unit supersedes and is equivalent to FDFWGGPVHB Plant vines by hand.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to hand plant vines.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the planting of grapevines that are to be used in winemaking. The unit covers planting of cuttings and rootlings. Planting is done to specifications and a variety of planting equipment and methods may be required.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plant vines	1.1 Equipment is started up according to workplace procedures as required 1.2 Equipment performance is monitored to confirm performance is maintained within specification as required 1.3 Equipment is maintained in good working order 1.4 Vines are planted in according to instructions 1.5 Problems and anomalies are recognised, rectified and/or reported
2. Complete planting operations	2.1 Equipment is shut down according to workplace procedures as required 2.2 Equipment is cleaned and stored according to workplace procedures 2.3 Waste generated by both the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 2.4 Work is conducted in accordance with workplace environmental guidelines
3. Record information	3.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify planting requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- set up and operate planting equipment according to instructions, as required
- maintain vine material ready for use. This includes consideration of dehydration and contamination
- plant vines according to instructions. These may include specifications for:
 - spacing
 - row width
 - depth
 - soil preparation
 - rootling preparation
 - soil compaction
 - planting procedure
 - rootling health
 - correct disposal of waste material
 - cleaning and storage of equipment
- report and/or record problems and take corrective action
- shut down equipment in response to an emergency situation, as required
- shut down equipment in response to routine situations, as required
- identify, rectify and/or report environmental non-compliance
- maintain work area to meet housekeeping standards
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- safe and effective handling of equipment
- correct operating procedures for equipment
- purpose and application of personal protective clothing and/or equipment

- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems and anomalies
- soil characteristics as they apply to vine establishment. These may include:
 - structure
 - compaction
 - condition
 - present moisture
 - present nutrients and toxic factors
- parts of the vine
- planting requirements and procedures
- appearance and features of healthy vine planting material
- cleaning and storage requirements for equipment
- reporting responsibilities and procedures.

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for spraying activities	1.1 Spraying schedule is interpreted correctly 1.2 Materials are confirmed as available and ready to meet spraying requirements 1.3 Equipment is checked to confirm readiness for use 1.4 Environmental conditions are checked and confirmed as acceptable 1.5 Sprays are prepared according to instructions 1.6 Equipment is calibrated and set up to deliver application requirements
2. Carry out spraying activities	2.1 Equipment is started up according to workplace procedures 2.2 Spraying activity is monitored to confirm that performance is maintained within specifications 2.3 Out-of-specification performance is identified, rectified and/or reported 2.4 Vineyard is sprayed according to schedule 2.5 Problems and anomalies are recognised and rectified and/or reported
3. Complete spraying activities	3.1 Spraying equipment is shut down according to workplace procedures 3.2 Spraying equipment is prepared for cleaning 3.3 Spraying equipment is cleaned according to workplace procedures 3.4 Unused chemicals are stored according to instructions 3.5 Waste generated by the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.6 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information and interpret spraying schedules to identify spraying requirements. This may include:
 - identifying the correct block and vines
 - identifying requested equipment and materials
 - calculating required concentration, ground speed and application rate
 - identifying specific occupational health and safety (OHS) requirements and hazards
 - calculating area to be sprayed
 - identifying appropriate environmental conditions for specific spraying activity
 - identifying canopy coverage required
- select, fit and use personal protective clothing and/or equipment
- liaise with other work areas
- assess suitability of environmental conditions (e.g. wind speed and direction, rain and heat)
- confirm equipment status and condition. This may include checking hoses, nozzles, regulators, gauges, filters and pumps
- calibrate and set up sprayer and associated equipment to deliver spraying requirements
- mix sprays to required concentration and ensure homogenous mix
- handle sprays correctly
- operate spraying equipment and spray the vineyard according to instructions. This may include consideration of:
 - location
 - chemical used
 - application rate
 - OHS precautions
 - other vineyard personnel and neighbouring properties
 - existing and forecast weather conditions
- monitor spraying activities. This may include monitoring:
 - off-target damage
 - ground speed
 - estimated versus actual usage of chemicals
 - stock levels versus estimated requirements
 - OHS precautions
 - equipment performance and calibration

- weather conditions
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine requirements
- prepare equipment for cleaning
- sort, collect, recycle or dispose of waste according to workplace procedures
- identify, rectify and/or report environmental non-compliance
- maintain work area to meet housekeeping standards
- clean and store equipment
- maintain spray records according to workplace and industry standards
- operate information technology systems according to enterprise procedures
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- range of common sprays, their purpose and the basic principles of how they work, including:
 - specified droplet size
 - suitability of application to production requirements, plant physiology and soil characteristics
- operating parameters and procedures
- chemical legislation relevant to immediate responsibilities
- basic vine physiology, where it applies to:
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration, transpiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- vine types, their characteristics and uses, including:

- family, genus and species
- *Vitis vinifera* and commercial varieties
- native species and hybrids (e.g. *labrusca*)
- rootstocks and scion stock
- industry processes for new variety development
- annual grapevine growth stages, including:
 - budburst
 - flowering
 - veraison
 - maturity
- key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance
 - flavour and style
- common pests and diseases and associated treatments
- licensing requirements
- required environmental conditions for safe and effective spraying operations
- safe handling and mixing of chemicals
- spray application calculations
- equipment set-up and calibration requirements and procedures, including:
 - droplet size and suitability of use
 - spray droplet spectrum and selection of nozzles
 - manufacturer specifications for nozzles
 - droplet behaviour and target coverage
- significance and method of monitoring spraying activities
- causes of off-target damage and how to minimise it
- purpose and components of spraying equipment
- common faults and corrective action required
- OHS hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems
- recording and reporting procedures and requirements
- cleaning requirements associated with changeovers and shutdowns
- shutdown sequence for spraying equipment
- cleaning procedures
- information technology systems where relevant
- routine maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for canopy management activities	1.1 Canopy management requirements are identified 1.2 Vine vigour and growth are assessed according to workplace procedures 1.3 Appropriate manual and/or automated canopy management techniques are selected 1.4 Equipment is confirmed as available and ready for use 1.5 Operators are instructed as required
2. Implement canopy management requirements	2.1 Canopy management activities are carried out according to vine vigour, growth guidelines and manager's instructions 2.2 Canopy management activities are monitored to confirm that performance is maintained within specification 2.3 Out-of-specification performance is identified, rectified and/or reported 2.4 Problems and anomalies are identified, corrected and/or reported
3. Record information	3.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify canopy management requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- identify, rectify and/or report environmental non-compliance
- implement canopy management requirements. This may include consideration of:
 - equipment and materials required
 - personnel required
 - location
 - transport
 - timing
 - environmental operating conditions
 - other vineyard activities (e.g. spraying)
- select appropriate canopy management techniques. This will include consideration of:
 - vine vigour
 - trellis design
 - grape variety
 - quality requirements
 - climate, current and forecast weather conditions
 - vineyard terrain and aspect
 - phenological development
 - workplace procedures and manager's instructions
- monitor canopy management activities. This may include monitoring:
 - removal of unwanted growth
 - positioning of vine shoots
 - cutting procedure and quality
 - manipulation and securing of vine
 - vine damage
 - exposure of crop to sunlight
 - addition and positioning of foliage wires or shade cloth
 - correct disposal of waste
 - cleaning and storage of equipment
 - problems and anomalies
 - equipment performance and maintenance

- team performance and progress
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective actions
- maintain canopy management records according to workplace standards
- facilitate and train teams and individuals
- conduct routine maintenance of equipment according to enterprise procedures
- apply information technology systems according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge include:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- basic vine physiology as it applies to:
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration, transpiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunches, berries and flowers
- vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - rootstocks and scion stock
- industry processes for new variety development
- annual grapevine growth stages, including:
 - budburst
 - flowering
 - veraison
 - maturity
- key grape varieties and their distinguishing features. This may include factors, such as:

- berry and bunch characteristics
- frost and disease resistance
- flavour and style
- effects of vine canopy reduction and grape exposure on fruit and wine quality
- features and benefits of a range of manual and/or automated canopy management styles and techniques and their respective affect on grape quality, cropping yield and wine production requirements. This should include techniques to manage:
 - light penetration and shading
 - air circulation and disease reduction
 - phenological stages of vine development
 - crop quality and quantity
- factors influencing vine vigour, including:
 - grape variety
 - trellis design
 - vine spacing
 - fertilisers
 - irrigation
 - rootstock
- key factors affecting the canopy management technique adopted. These may include:
 - climate, forecast and current weather conditions
 - vineyard aspect and terrain
 - grape variety and vigour
 - grape quality and characteristics required
 - trellis design
 - harvesting techniques
 - disease risk and occurrence
 - stage of maturity and development
- recognition of correct vine growth stages at which to carry out canopy management activities
- significance and method of monitoring canopy management activities
- safe handling of equipment
- correct operating procedures for equipment
- purpose and application of personal protective clothing and/or equipment
- Occupational health and safety (OHS) hazards and controls
- identification of common problems and anomalies
- procedures and responsibility for reporting problems
- environmental issues and controls
- cleaning and storage requirements of equipment
- Reporting and recording requirements and procedures
- team facilitation and training techniques
- routine maintenance procedures for equipment where relevant
- information technology systems where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment • determine requirements for canopy management according to vine vigour, growth guidelines and manager's instructions • select canopy management techniques • coordinate team activities to implement determined canopy management techniques • address problems and anomalies • complete workplace records.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • hydraulic or pneumatic pruners • a range of secateurs • knives • tractor • circular and hand saws • cutter bars • blades

RANGE STATEMENT	
	<ul style="list-style-type: none"> • drum pruners • mechanical leaf pluckers and wire lifters • bare hands • maintenance tools and team support equipment (e.g. toilet facilities, first aid box and spare equipment)
Unwanted growth	<p>Unwanted growth may include:</p> <ul style="list-style-type: none"> • suckers • water shoots • congested shoots • excess bunches

FDWGG3003A Coordinate crop harvesting activities

Modification History

This unit supersedes and is equivalent to FDFWGGCHAB Coordinate crop harvesting activities.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to lead a team of hand pickers, including transporters, to implement a hand picking schedule.
-----------------	---

Application of the Unit

Application of the unit	Coordination skills required in the application of this unit will involve facilitating others.
-------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDWGG2024A	Pick grapes by hand

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for hand picking activities	1.1 Picking requirements are identified 1.2 Equipment is confirmed as available and ready for use 1.3 Pickers and transporter are instructed as required
2. Implement grape picking requirements	2.1 Picking activities are monitored to confirm performance is maintained within specifications 2.2 Out-of-specification performance is identified, rectified and/or reported 2.3 Equipment is maintained in good working order 2.4 Grapes are harvested according to crop level and quality and workplace procedures 2.5 Anomalies and problems are identified, corrected and/or reported 2.6 Work is conducted in accordance with workplace environmental guidelines
3. Transfer grapes to receival point	3.1 Chemicals are added to grapes according to requirements 3.2 Grapes are delivered to receival point according to instructions
4. Complete hand picking operations	4.3 Pickers are debriefed as appropriate
5. Record information	5.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify harvesting requirements (e.g. block, variety and quality)
- liaise with other work areas (e.g. winery)
- select, fit and use appropriate personal protective clothing and/or equipment
- identify, rectify and/or report environmental non-compliance
- implement grape picking activities. This may include consideration of:
 - equipment and materials required
 - location
 - transport
 - timing
 - environmental conditions
 - other vineyard activity
 - quality and quantity requirements
- monitor harvesting activities. This will include:
 - team efficiencies and safe working practices
 - grape quality
 - equipment operation
 - weather
 - actual versus required production
 - cleaning and storage of equipment
 - collection and disposal of waste
 - problems and anomalies
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action or non-compliance
- supervise and motivate a team of pickers to achieve production goals
- resolve conflicts as required
- instruct a team of pickers to achieve desired outcomes. This may include:
 - picking techniques
 - quality parameters
 - production requirements
 - occupational health and safety (OHS) hazards and precautions
 - working arrangements

- handle and add chemicals according to instructions as required
- take the necessary action to protect fruit quality where possible. This may include removal of matter other than grape (MOG)
- deliver fruit to receipt point according to instructions. This may involve the supervision of transport operators
- facilitate and train teams and individuals
- complete any necessary workplace records
- conduct routine maintenance of equipment according to enterprise procedures
- operate information technology systems according to enterprise procedures.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- effect of different climatic conditions on timing and management of harvest
- factors that affect grape ripening (e.g. canopy management, irrigation, grape variety and climatic conditions)
- factors that affect fruit and wine quality, including:
 - oxidation
 - temperature
 - MOG
- basic vine physiology, as it applies to:
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration, transpiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - rootstocks and scion stock
- industry processes for new variety development
- annual grapevine growth stages, including:
 - budburst

- flowering
- veraison
- maturity
- key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance
 - flavour and style
- affect of fruit quality on wine
- quality assurance procedures and controls
- common problems and anomalies
- harvesting procedures and operating parameters. This may include picking grapes by hand, transporting grapes to the receival point and chemical treatment
- significance and method of monitoring team and equipment performance
- common faults and corrective action required
- OHS hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems
- cleaning requirements associated with changeovers
- team facilitation and training techniques
- handling conflicts
- cleaning procedures
- routine maintenance procedures for equipment where relevant
- information technology systems where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective clothing and equipment • determine requirements for crop harvesting according to crop level and quality • select harvesting techniques • coordinate activities to implement determined harvesting techniques • address problems and anomalies • complete workplace records.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • picking schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • tractors • trailers • gondolas • grape bins • forklift • snips • knives

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gloves • bags • fruit containers • buckets • fruit bins • team support equipment (e.g. toilet facilities, first aid box, water and spare equipment)
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • rotten, diseased, immature or over-ripe grapes • equipment malfunction • team performance
Work requirements	<p>Work requirements may include:</p> <ul style="list-style-type: none"> • specification of block • variety • quality • timing • tonnage • speed • treatment
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> • print or screen based and may include information technology systems, such as email and fax communication, baumé testing equipment, weather forecasting, rainfall mapping systems, reporting and recording systems
Work hazards	<p>Work may involve exposure to:</p> <ul style="list-style-type: none"> • chemical, dangerous or hazardous substances
Grapes	<p>Grapes may vary according to:</p> <ul style="list-style-type: none"> • grape variety • crop quality • quantity • trellis systems • collection procedures
Team members	<p>Team members may include:</p> <ul style="list-style-type: none"> • people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Unit Sector(s)

Application of the unit	Coordination skills required in the application of this unit will involve facilitating others.
--------------------------------	--

FDFWGG3004A Coordinate nursery activities

Modification History

This unit supersedes and is equivalent to FDFWGGCNAB Coordinate nursery activities.

September 2012: clarified pre-requisite information.

April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for wine grape nurseries. It covers the skills and knowledge required to coordinate nursery personnel in a range of day-to-day activities.
------------------------	--

Application of the Unit

Application of the unit	This unit includes allocation and monitoring of individual performance targets and requirements.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFWGG2002A	Carry out potting operations
	FDFWGG2006A	Obtain and process rootlings
	FDFWGG3009A	Monitor and maintain nursery plants* <i>FDFWGG2007A Tend containerised nursery plants</i> <i>FDFWGG2012A Identify and treat nursery plant disorders</i>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to coordinate nursery activities	1.1 Activity goals and performance requirements are identified and clarified 1.2 Tasks required to achieve performance requirements are identified 1.3 Personnel required are confirmed as available and having the appropriate competence 1.4 Equipment is confirmed as available and ready for use 1.5 Materials are confirmed as available and ready to meet requirements
2. Coordinate nursery activities	2.1 Individual work tasks and roles are allocated to ensure activity goals and performance requirements are met 2.2 Work targets and timelines are negotiated to achieve activity goals and performance requirements 2.3 Activities are monitored to ensure compliance with workplace procedures on occupational health and safety (OHS), environmental and quality issues 2.4 Activities are monitored against timelines and performance requirements 2.5 Potential barriers to achieving targets and performance requirements are identified, rectified and/or reported
3. Complete coordination of nursery activities	3.1 Activities are monitored to ensure compliance with relevant workplace procedures on completion, shutdown and waste disposal 3.2 Work is conducted in accordance with workplace environmental guidelines 3.3 Personnel are debriefed as appropriate
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify nursery activity requirements
- confirm supply of necessary resources
- select, fit and use appropriate personal protective clothing and/or equipment
- identify, rectify and/or report environmental non-compliance
- liaise with other work areas and customers
- plan nursery activities. This may include considering:
 - personnel requirements
 - equipment and materials required
 - location
 - transport
 - timing
 - environmental conditions
 - other nursery activities
 - quality and quantity requirements
- instruct individuals and/or a group
- provide feedback to individuals and/or a group
- monitor nursery activities. This may include monitoring:
 - compliance with OHS, environmental and quality procedures
 - individual and/or team performance
 - achievement of targets, timelines and performance requirements
 - own and other team members' learning needs
 - compliance with completion, shutdown and waste disposal procedures
- resolve conflicts
- take corrective action in response to out-of-specification results or non-compliance
- recognise, correct and/or report problems and anomalies
- maintain workplace records
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and

processes that are used in the particular winery or workplace.

Knowledge of:

- workplace planning processes
- workplace activity scheduling processes
- OHS hazards and controls
- environmental issues and controls
- reporting and recording requirements and procedures
- procedures and responsibility for reporting problems and anomalies
- communication principles and strategies
- procedures for monitoring and reporting on individual and team performance
- competency identification and training arrangements
- conflict resolution, negotiation and problem-solving strategies.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for field nursery planting	1.1 Field nursery bed is prepared according to instructions 1.2 Field nursery maintenance infrastructure is checked to confirm readiness for use as required
2. Maintain field nursery vines	2.1 Appropriate vine protection methods are applied 2.2 Field nursery activities are carried out as instructed 2.3 Young vine growth and health are monitored according to instructions 2.4 Problems and anomalies are recognised, rectified and/or reported
3. Process field nursery rootlings for removal from nursery	3.1 Vine rootlings are undercut and lifted according to instructions 3.2 Rootlings are prepared for transport according to instructions 3.3 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify nursery requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas and customers
- prepare field nursery bed for planting. This may include:
 - herbicide treatment
 - soil cultivations
 - fertiliser additions
 - planning vine planting (e.g. number of vines, area size, varietal lots, row spacing for mechanical operations and row orientation)
 - application of weed matting
 - positioning irrigation pipes and points
 - checking readiness of maintenance infrastructure
- select and apply appropriate vine protection methods. This should include consideration of:
 - climate, weather and prevailing wind
 - vineyard pests (e.g. rabbits)
 - aspect, orientation of vineyard
 - irrigation or fertilisation schedule
 - frost incidence
- maintain and care for young vines
- monitor the health and growth of young vines. This may involve monitoring:
 - soil moisture
 - signs of disease and pests
 - water stress
 - signs of nutrient deficiency
 - growth rate
- take corrective action in response to out-of-specification growth or appearance, or non-compliance
- report and/or record corrective action as required
- identify, rectify and/or report environmental non-compliance
- use appropriate cleaning techniques
- maintain work area to meet housekeeping standards
- lift rootlings from the beds whilst ensuring minimal plant damage. This may include:

- roots undercut adequately
- gentle handling
- prepare rootlings for transport. This may include:
 - trimming
 - counting and bundling
 - labelling
 - grading
 - packing
- plant vines according to enterprise procedures
- take samples and conduct tests according to enterprise procedures
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- purpose, requirements and procedures for nursery bed preparation
- protection and maintenance requirements of young vines
- requirements of growing vines
- common causes and signs of young vine growth disorders and corrective action required
- Occupational health and safety (OHS) hazards and controls
- correct procedures and requirements for lifting vine rootlings from the nursery bed
- preparation requirements and procedures for transporting rootlings
- storage requirements of rootlings
- procedures and responsibility for reporting problems
- environmental issues and controls
- reporting and recording requirements and procedures
- planting procedures where relevant
- sampling and testing procedures where relevant
- routine maintenance procedures for equipment where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for hand pruning activities	1.1 Pruning requirements are identified 1.2 Appropriate pruning techniques are selected 1.3 Pruning equipment is confirmed as available and ready for use 1.4 Pruning equipment is set up to meet requirements 1.5 Operators are instructed as required
2. Implement hand pruning requirements	2.1 Pruning activities are monitored to confirm performance is maintained within specification 2.2 Out-of-specification performance is identified, rectified and/or reported 2.3 Vines are pruned according to crop levels, vine vigour and workplace procedures 2.4 Anomalies and problems are identified, corrected and/or reported 2.5 Work is conducted in accordance with workplace environmental guidelines
3. Record information	3.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify pruning requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- train and/or facilitate a team of hand pruners
- implement hand pruning requirements. This may include consideration of:
 - equipment and materials required
 - personnel required
 - location
 - transport
 - timing
 - environmental conditions
 - other vineyard activities (e.g. spraying)
- select appropriate pruning techniques. This will include consideration of:
 - grape variety
 - vine vigour
 - quality and yield requirements
 - climate
 - workplace procedures and manager's instructions
- monitor pruning activities. This will include monitoring:
 - selection of best possible spurs and canes
 - positioning of spurs and canes
 - clean removal of sucker shoots
 - correct quantity of spurs, rods, canes and buds left
 - cuts made correctly and cleanly
 - recognition and removal of unwanted growth
 - rolling and securing extension canes onto trellis wire as required
 - correct disposal of pruned material
 - equipment performance
 - cleaning and storage of equipment
 - team performance and progress
- identify problems and anomalies
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action

- identify, rectify and/or report environmental non-compliance
- maintain work area to meet housekeeping standards
- maintain pruning records according to workplace standards
- conduct routine maintenance of equipment according to enterprise procedures
- apply information technology systems according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- basic vine physiology, as it applies to:
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration, transpiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis Vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - rootstocks and scion stock
- industry processes for new variety development
- annual vine growth stages, including:
 - budburst
 - flowering
 - veraison
 - maturity
- key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance

- flavour and style
- different types of pruning and their features, benefits and effects on grape quality
- relationship between bud numbers and cropping levels and the effect on wine quality
- effects of different pruning levels on wine quality
- concept of pruning to vine vigour
- safe handling of pruning equipment
- correct operating procedures for pruning equipment
- Occupational health and safety (OHS) hazards and controls
- common problems and anomalies associated with hand pruning activities
- procedures and responsibility for reporting problems
- cleaning and storage requirements of pruning equipment
- recording requirements and procedures
- team facilitation and training techniques
- environmental issues and controls
- routine maintenance procedures for equipment where relevant
- information technology systems where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • ensure use of personal protective clothing and equipment • determine requirements for hand pruning according to crop levels, vine vigour and workplace procedures • select hand pruning techniques • coordinate activities to implement determined hand pruning techniques • address problems and anomalies • complete workplace records.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • pneumatic secateurs • petrol air compressors • hydraulic snips • electronic secateurs • knives • saws • hand secateurs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • maintenance tools • team support equipment (e.g. toilet facilities, first aid box, spare pruning equipment)
Pruning methods	<p>Pruning methods may include:</p> <ul style="list-style-type: none"> • spur pruning • cane pruning • rod and spur pruning • hand clean up after machine pruning
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> • screen or print based and may include information technology systems, such as reporting, monitoring and recording, weather forecasting and rainfall mapping systems
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • dead vines • split cordon • extending cordon • poor bud position • signs of common pests and diseases, such as mildew, eutypa, phomopsis, boring insects, dying arm, crown gall or diseased wood

FDFWGG3007A Implement an irrigation schedule

Modification History

This unit supersedes and is equivalent to FDFWGGISIB Implement an irrigation schedule.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. This unit covers the skills and knowledge required to monitor soil requirements and implement and evaluate a vineyard irrigation and/or injection schedule, including consultation with the manager.
------------------------	--

Application of the Unit

Application of the unit	The application of this unit is likely to require supervision of others and assessment of the impact of the irrigation and/or program on surrounding areas.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	FDFWGG2014A	Operate the irrigation system

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor vineyard for irrigation requirements	1.1 Vineyard is monitored according to workplace procedures 1.2 Results are interpreted correctly 1.3 Appropriate irrigation activities are identified and recommended
2. Implement irrigation requirements	2.1 Resources are coordinated and personnel briefed to deliver requirements 2.2 Agreed irrigation schedule is implemented
3. Evaluate effectiveness of irrigation activities	3.1 Vineyard is monitored to evaluate effectiveness of irrigation activities 3.2 Surrounding areas are monitored to evaluate environmental impact of irrigation activities
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify irrigation requirements
- select, fit and use personal protective clothing and/or equipment
- liaise with other work areas
- consult with appropriate senior personnel or consultants
- monitor the vineyard and interpret the results to identify vineyard irrigation and/or injection requirements. Factors to be considered include:
 - soil moisture content
 - watertable level
 - water quality
 - signs of vine nutrient deficiencies
 - climatic conditions
 - frost risk
 - grape variety
 - soil type and depth
 - closeness to harvest
 - yield parameters
 - age of vine
 - grape quality requirements
 - symptoms of vine water stress
 - effective root depth
- calculate chemical application rates for injection requirements
- present and justify recommendations to senior personnel
- implement the irrigation and/or injection schedule. This may include consideration of:
 - resources, including operators with appropriate skills
 - application rates
 - timing and length
 - materials, chemicals and services
 - maintenance programs and supplies
 - interaction between different irrigation valves or shifts
- instruct irrigation system operators as required
- apply sampling techniques
- conduct routine tests

- monitor irrigation and/or injection activities. This may include:
 - measuring nitrogen output
 - measuring chlorine output
 - identifying soil moisture content and depth to which water will reach
 - identifying emitter output consistency
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action taken
- evaluate effectiveness of irrigation activities
- evaluate environmental impact of irrigation activities
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- maintain work area to meet housekeeping standards
- report and/or record problems according to instructions
- plan and organise
- apply information technology systems according to enterprise procedures
- calculate and present statistical data according to enterprise procedures
- write reports according to enterprise procedures
- facilitate teams according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- effect of irrigation techniques on vine growth, cropping levels and wine quality. This should include partial root zone drying (PRD) and regulated deficit irrigation (RDI)
- effect of a variety of injection methods on vine growth, cropping levels and wine quality
- effect of water and additives on vines during different key phenological stages
- visual symptoms of vine nutrient deficiencies, water stress and frost
- principles of soil moisture monitoring (e.g. volumetric soil moisture content, and percentage compared to soil moisture tension)
- fruit quality and quantity requirements
- monitoring requirements and procedures
- sampling techniques and procedures
- testing techniques and procedures
- interpretation of routine tests
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems

- resource requirements and availability
- recording requirements and procedures
- consultation requirements and procedures
- information technology systems where relevant
- calculation and presentation of statistical data where relevant
- report writing techniques and requirements where relevant
- team facilitation techniques where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • ensure use of personal protective clothing and equipment • recommend requirements for irrigation • implement irrigation activities • identify and address problems and anomalies • complete workplace records.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of

EVIDENCE GUIDE

circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised wording**, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures

Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements

Workplace information

Workplace information can include:

- Standard Operating Procedures (SOPs)
- specifications
- irrigation and/or injection schedules
- routine maintenance schedules
- work notes
- Material Safety Data Sheets (MSDS)
- manufacturer instructions
- verbal directions from manager or supervisor

Monitoring activities

Monitoring activities may include:

- drainage
- soil moisture
- watertable levels
- rainfall
- water quality
- vine and soil nutrient deficiencies
- irrigation system cleaning requirements
- air temperature
- frost risk

Tests

Tests may be:

- physical appearance or analytical

RANGE STATEMENT	
Information systems	Information systems may be: <ul style="list-style-type: none"> • print or screen based
Irrigation systems	Irrigation systems may include: <ul style="list-style-type: none"> • flood • dripper • microjet • sprinkler • overhead • water winch using dam, bore or river water The irrigation system may be used to: <ul style="list-style-type: none"> • supply water, nutrients or other additives to the vines • minimise frost damage
Work hazards	Work may involve exposure to: <ul style="list-style-type: none"> • chemical, dangerous or hazardous substances
Area management	Area managed may not be limited to the area under vines. Adjacent or ecologically linked landscapes may require management or consideration, and may include: <ul style="list-style-type: none"> • woodlots • seepage areas • waterways • landcare sites • revegetation sites • windbreaks • neighbouring vineyards and other primary production
Grapes	Grapes may vary according to: <ul style="list-style-type: none"> • grape variety • crop quality • quantity

Unit Sector(s)

Application of the unit	The application of this unit is likely to require supervision of others and assessment of the impact of the irrigation and/or program on surrounding areas.
--------------------------------	---

FDFWGG3008A Operate a mechanical harvester

Modification History

This unit supersedes and is equivalent to FDFWGGMHB Operate a mechanical harvester.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to identify harvesting requirements and then set up and operate a mechanical harvester to meet those requirements.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to the operation of specialised mechanical harvesting equipment used in wine grape growing.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for mechanical harvesting	1.1 Harvesting requirements are identified 1.2 Equipment is checked to confirm readiness for use 1.3 Equipment is set up to meet harvesting requirements
2. Operate mechanical harvester	2.1 Equipment is started up according to workplace procedures 2.2 Equipment performance is monitored to confirm performance is maintained within specification 2.3 Out-of-specification equipment performance is identified, rectified and/or reported 2.4 Vines are machine harvested according to workplace requirements 2.5 Problems and anomalies are recognised and rectified and/or reported 2.6 Equipment is maintained in good working order
3. Complete mechanical harvesting operations	3.1 Equipment is shut down according to workplace procedures 3.2 Equipment is cleaned and stored according to workplace procedures 3.3 Waste generated by both the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- Access workplace information to identify harvesting requirements
- Select, fit and use appropriate personal protective clothing and/or equipment
- Liaise with other work areas
- Confirm equipment status and condition
- Set up mechanical harvester to meet harvesting requirements
- Start up the mechanical harvester
- Operate a mechanical harvester according to harvesting conditions and requirements. These may include consideration of:
 - crop level
 - grape variety
 - vine age
 - row height, width and trellis design
 - slope, angle of row
 - visibility
 - other vineyard activities
- Monitor mechanical harvester operation. This will include monitoring:
 - vine damage
 - grape quality and maturity
 - harvesting effectiveness (amount of fruit left in fruiting zone)
 - matter other than grape (MOG) collected
 - hours worked and service history of machinery
 - problems and anomalies
 - climatic conditions
- Take corrective action in response to out-of-specification results or non-compliance
- Recognise problems and anomalies
- Report and/or record problems and/or corrective action taken
- Shut down equipment in response to an emergency situation
- Shut down equipment in response to routine requirements
- Identify, rectify and/or report environmental non-compliance
- Clean and store equipment
- Maintain work area to meet housekeeping standards
- Carry out routine maintenance of equipment according to enterprise procedures

REQUIRED SKILLS AND KNOWLEDGE

- Interpret mechanical drawings according to enterprise procedures
- Use hand and power tools according to enterprise procedures
- Use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- Work cooperatively within a culturally diverse workforce

Required knowledge

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- Effect of different climatic conditions on timing and management of harvest
- Basic vine physiology, as it applies to:
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration and transpiration
 - translocation
- Parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- Vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - rootstocks and scion stock
- Industry processes for new variety development
- Annual growth stages of grapevines, including:
 - budburst
 - flowering
 - veraison
 - maturity
- Key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance
 - flavour and style
- Factors that affect grape ripening (e.g. canopy management, irrigation, grape variety and

REQUIRED SKILLS AND KNOWLEDGE

- climatic conditions)
- Effect of fruit quality on wine
- Quality assurance procedures and controls
- Common problems and anomalies
- Harvesting procedures and operating parameters
- Significance and method of monitoring equipment performance
- Role and operating difficulties of harvester support operator
- Purpose of mechanical harvester components
- Common faults and corrective action required
- Occupational health and safety (OHS) hazards and controls
- Environmental issues and controls
- Procedures and responsibility for reporting problems
- Cleaning and storage requirements associated with changeovers and types of shutdowns
- Emergency and routine shutdown sequences
- Recording and reporting procedures and requirements
- Cleaning and storage procedures
- Routine maintenance procedures for equipment where relevant
- Interpretation of mechanical drawings where relevant
- Procedures for use of hand and power tools where relevant

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor environmental parameters	<p>1.1 Environmental parameters are monitored against the production plan and according to workplace procedures</p> <p>1.2 Environmental parameters are altered to meet the needs of the plants and according to workplace procedures</p>
2. Determine daily water requirements	<p>2.1 Plant water needs are determined according to workplace procedures</p> <p>2.2 Water is applied according to the needs of the plants and workplace procedures</p> <p>2.3 Water requirements are monitored according to workplace procedures</p>
3. Implement treatments to promote plant growth	<p>3.1 Potting media is tested to ensure specifications are met</p> <p>3.2 Overall health of plants is monitored according to workplace procedures</p> <p>3.3 Plant treatments are implemented according to production plans and workplace procedures</p> <p>3.4 Problems and anomalies are identified, rectified and/or reported according to workplace procedures</p>
4. Monitor the dispatch of stock	<p>4.1 Availability of stock and timing of dispatch is confirmed with customers according to workplace procedures</p> <p>4.2 Plants are prepared for dispatch in line with customer requirements</p> <p>4.3 Stock is checked to ensure it meets quality specifications</p> <p>4.4 Orders are checked against stock being dispatched to ensure compliance</p>
5. Record information	5. Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information required to monitor and maintain nursery plants
- liaise with other work areas and customers
- select, fit and use appropriate personal protective clothing and/or equipment
- identify potential and existing hazards in the work area
- identify, rectify and/or report environmental non-compliance
- monitor work areas to ensure they meet workplace housekeeping standards
- monitor work area to ensure they meet workplace hygiene standards. This may include:
 - removing weeds
 - removing dead or diseased plant materials
 - washing work area on transfer of plants
 - disinfecting tools, equipment and work areas
 - using foot baths on entry to different work areas
- identify, rectify and/or report problems and anomalies
- implement safe work procedures to minimise hazards
- maintain workplace records
- maintain irrigation systems. This may include:
 - fixing blockages
 - servicing irrigation system components
 - identifying and reporting faults in the irrigation system
 - fixing leaking heads and hoses
- monitor water requirements. This may include:
 - using soil moisture devices
 - checking plants for physical signs of water stress or waterlogging
- test potting media. This may include identifying:
 - pH
 - drainage
 - aeration
 - salinity
 - nitrate levels
 - water repellence
- monitor health of the vines
- apply treatments to vines. These may include:

- fungicides
- fertilisers
- insecticides
- hormones
- pruning
- hardening off
- irrigation
- monitor and/or prepare stock for dispatch. This may include:
 - labelling containers
 - checking orders against stock prepared
 - hydrating stock
- prepare, mix and use chemicals as required
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- basic vine physiology, as it applies to:
 - transpiration
 - water intake
 - nutrient uptake
 - photosynthesis
 - respiration
 - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- industry processes for new variety development
- key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance
 - flavour and style
- annual grapevine growth stages, including:

- budburst
- flowering
- veraison
- maturity
- methods of calculating daily water needs
- methods for monitoring water use
- relationship between water needs of nursery plants and environmental parameters
- characteristics of various types of potting media
- tests to determine quality of potting media
- principles of nursery hygiene
- optimum growing conditions for plants in a nursery
- quality parameters for a range of nursery plants
- symptoms of unhealthy plants
- treatments required by plants at different growth stages and environmental parameters
- packing, dispatch and handling techniques of nursery plants
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- reporting and recording requirements and procedures
- procedures and responsibility for reporting problems and anomalies

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective equipment, MSDS and follow other specified OHS procedures • identify environmental factors on plant growth and health • monitor and control application of water and special treatments to meet production outcomes • identify and address anomalies and problems • maintain stock levels to meet requirements • prepare stock for dispatch • complete documentation.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of

EVIDENCE GUIDE	
	competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor vineyard soil management requirements	1.1 Vineyard soil is monitored according to workplace procedures 1.2 Results are interpreted correctly 1.3 Appropriate soil management activities are identified and recommended
2. Implement soil management program	2.1 Resources are coordinated and personnel briefed to deliver requirements 2.2 Agreed soil management program is implemented
3. Evaluate effectiveness of soil management activities	3.1 Vineyard is monitored to evaluate effectiveness of activities 3.2 Surrounding areas are monitored to evaluate environmental impact of soil management activities
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify soil management requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas
- consult with appropriate senior personnel
- apply sampling techniques
- conduct routine tests
- monitor the vineyard and interpret the results to identify vineyard soil management requirements. This may include monitoring:
 - soil moisture content
 - watertable level
 - weed population
 - signs of vine nutrient deficiencies
 - climatic conditions
 - cover crop practices
 - soil analyses (e.g. pH and salinity)
 - evidence of hard pans
 - soil texture
 - vine root distribution
 - nutrient levels in plant and soil
 - irrigation water quality
 - climatic conditions
 - erosion risk
 - soil management history
 - growth of mid-row sward
- calculate application rates for soil addition requirements (e.g. fertilisers and ameliorants)
- present and justify recommendations to senior personnel
- implement the soil management program. This will include consideration of:
 - resources, including operators with appropriate skills
 - equipment availability and capability
 - materials and chemicals
 - maintenance programs and supplies
 - specific needs of individual blocks

- environmental conditions
- other vineyard activities
- instruct operators as required
- monitor soil management activities. This will include monitoring:
 - operator performance
 - operating conditions
 - operating results
 - material supplies
 - equipment performance
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- maintain work area to meet housekeeping standards
- report and/or record problems according to instructions
- plan and organise
- supervise operators according to enterprise procedures
- apply information technology systems according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- ideal soil environment for vines plus specific requirements of grapes grown
- soil management techniques and their affect on soil, vine growth, cropping levels and wine quality
- visual signs of vine nutrient deficiencies
- sampling techniques and procedures
- routine testing techniques and procedures
- interpretation of routine tests
- Occupational health and safety (OHS) hazards and controls
- environmental issues and controls
- procedures and responsibility for reporting problems
- resource requirements and availability
- reporting and recording requirements and procedures
- consultation requirements and procedures
- supervision techniques where relevant

- information technology systems where relevant
- resources required for assessment where relevant

Evidence Guide

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information may include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • soil management programs • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal directions from manager or supervisor
Monitoring activities	<p>Monitoring activities may include:</p> <ul style="list-style-type: none"> • drainage • soil moisture, pH and texture • watertable levels • rainfall • vine and soil nutrient deficiencies • weeds • air temperatures
Area management	<p>Area managed may not be limited to the area under vines. Adjacent or ecologically linked landscapes may require management or consideration, and may include:</p> <ul style="list-style-type: none"> • woodlots • seepage areas • waterways • landcare sites • revegetation sites • windbreaks • neighbouring vineyards and other primary production

RANGE STATEMENT	
Soil management activities	<p>Soil management activities may include, but are not limited to:</p> <ul style="list-style-type: none"> • the addition of ameliorants and fertilisers • cover cropping • mulching • cultivating • slashing • tilling • ploughing • weeding • spraying • frost management
Information systems	<p>Information systems may be:</p> <ul style="list-style-type: none"> • print or screen based

Unit Sector(s)

Unit sector	Wine operations
-------------	-----------------

FDFWGG3011A Perform shed nursery activities

Modification History

This unit supersedes and is equivalent to FDFWGGSNAB Perform shed nursery activities.
April 2012: Minor typographical corrections.

Unit Descriptor

Unit descriptor	This specialist unit has been developed for the wine grape growing stream of the wine sector. It covers the skills and knowledge required to treat and prepare vine cuttings and freshly dug rootlings for sale or planting in the vineyard.
------------------------	--

Application of the Unit

Application of the unit	This unit includes preparation for plantings, treating and callusing cuttings, care of rootlings and preparation for transfer and transportation.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare cuttings for callusing	1.1 Cuttings are counted, bundled and labelled according to instructions as required 1.2 Cuttings are chemically treated according to instructions 1.3 Cuttings are stored according to instructions
2. Prepare and maintain callusing environment	2.1 Sand bed or callusing room is prepared according to workplace procedures 2.2 Cuttings are placed into callusing environment according to instructions 2.3 Optimum callusing environment is maintained
3. Prepare rootlings for customer or planting	3.1 Rootlings are trimmed, graded, packed and stored according to instructions 3.2 Waste is collected and disposed of according to workplace procedures 3.3 Problems and anomalies are recognised, rectified and/or reported 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify nursery requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas and customers
- count, bundle and label cuttings as required
- treat cuttings as required prior to callusing. This may include:
 - fungicide treatment
 - re-hydration
 - scoring
 - root promoter treatment
 - cutting just below basal bud
 - assimilation after cool storage
- store cuttings. This may include maintaining and monitoring cold storage facilities
- prepare sand bed or callusing room. This may include:
 - packing sand or vermiculite
 - lining boxes
 - ensuring heaters and ventilators are working correctly to required temperature
- plant or place cuttings in callusing environment. This may include:
 - feeling into ground or sand
 - packing into boxes with vermiculite
 - watering in
 - correct number of cuttings per box
 - spacing (e.g. not too tight)
 - correct way up (e.g. basal end at bottom)
 - arranging according to variety, clone and source
 - labelling and mapping of beds
 - adding hormone mixes
- maintain optimum callusing environment. This will include consideration of:
 - temperature
 - relative humidity
 - moisture levels of growing medium
 - weed and pest prevention
- trim rootlings (top growth and roots) ready for planting

- grade rootlings according to workplace or customer requirements and standards
- pack rootlings. This should include consideration of:
 - customer requirements
 - maintenance of rootling health
 - minimisation of vine damage
 - mode of transport
 - destination time
 - storage time and method
 - prevention of dehydration
- recognise problems and anomalies with vines, equipment and materials
- take corrective action in response to out-of-specification results, activity or non-compliance
- report and/or record problems and/or corrective action
- identify, rectify and/or report environmental non-compliance
- collect, sort, grade, treat and/or dispose of waste as required
- handle cuttings or rootlings to minimise damage
- select and operate equipment as required
- select and use materials as required
- maintain work area to meet housekeeping standards
- clean equipment as required
- prepare and mix chemicals as required
- conduct routine maintenance of equipment according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- common features of healthy vine cuttings or rootlings. This may include:
 - thickness of original cane
 - no evidence of pests and diseases
 - number, strength and distribution of new roots
 - number, maturity and distribution of shoots
 - visually complete and robust graft union
- common features of unhealthy vine cuttings or rootlings. This may include:
 - galls on stem (e.g. crown gall)
 - galls on roots (e.g. nematodes)
 - no shoots or roots
 - damaged or destroyed buds

- excessive disease staining or spots on canes
- immature wood
- shoots on incorrect nodes
- faulty or broken graft unions
- too few or unevenly distributed root development
- pre-callusing treatment requirements
- purpose and benefit of treatments
- storage requirements of cuttings prior to callusing
- preparation requirements of callusing environment
- callusing options (e.g. features, pros and cons)
- optimum callusing environment and its effect on the vine cutting
- common problems that occur during callusing and how they should be resolved (e.g. uneven callusing or evidence of dehydrated cuttings on arrival)
- preparation requirements for rootlings and procedures for sales or transfer to vineyard
- package or storage requirements and procedures for rootlings ready for sale or transfer
- factors that influence how a cutting should be graded and why
- reasons for specific requirements, for example:
 - rootling preparation
 - packing preparation
 - packaging and storage requirements
- waste disposal requirements and procedures
- reporting and recording requirements and procedures
- safe handling of chemicals
- equipment operation requirements and procedures
- Occupational health and safety (OHS) hazards and controls
- procedures and responsibilities for reporting problems
- environmental issues and controls
- cleaning requirements and procedures for work area and equipment. This should include additional considerations when cleaning between batches and varieties
- safe preparation and mixing of chemicals
- routine maintenance procedures for equipment where relevant.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • use personal protective equipment, MSDS and follow other specified OHS procedures • conduct cutting and callusing activities • monitor the health of and tend rootlings • prepare for, implement and monitor nursery activities • prepare vine rootlings for transport • maintain nursery environment to optimise plant health • complete documentation.
Context of and specific resources for assessment	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • personal protective clothing and equipment as required • work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements • instructions, information, specifications and schedules as required • equipment, services and corresponding information as required • products and materials as required • internal and external customers and suppliers as required • cleaning procedures, materials and equipment as required • documentation and recording requirements and procedures.
Method of assessment	This unit should be assessed together with other units of competency relevant to the function or work role.

EVIDENCE GUIDE	
Guidance information for assessment	To ensure consistency in one's performance, competence should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Policies and procedures	Work is carried out in accordance with workplace procedures, licensing requirements and legislative requirements
Workplace information	<p>Workplace information can include:</p> <ul style="list-style-type: none"> • Standard Operating Procedures (SOPs) • specifications • production schedules • instructions • routine maintenance schedules • work notes • Material Safety Data Sheets (MSDS) • manufacturer instructions • verbal direction from manager, supervisor or senior operator
Rootlings	<p>Rootlings may include:</p> <ul style="list-style-type: none"> • those developed from cuttings in a sand bed or callusing room • those freshly dug from a field nursery
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • secateurs • personal protective clothing and/or equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • bins • boxes • spades • trowels • watering or irrigating equipment • heating equipment • packing machine • counting machine
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • string • labels • chemicals • sand • wax
Problems and anomalies	<p>Problems and anomalies may include:</p> <ul style="list-style-type: none"> • evidence of nematodes, crown gall, dehydration, infection, physical damage and graft union failure
Facilities	<p>Facilities may include:</p> <ul style="list-style-type: none"> • cold storage • callusing room • hot beds • sand storage bins • water • fungicide treatment areas • storage bins or tanks • soakage tanks • glasshouses
Work hazards	<p>Work may involve exposure to:</p> <ul style="list-style-type: none"> • chemical, dangerous or hazardous substances

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor vine health	1.1 Vineyard is monitored according to workplace procedures 1.2 Evidence of vine disorders and pest or disease presence is recognised 1.3 Cause of symptoms is identified 1.4 Appropriate activities are identified and recommended
2. Implement control measures	2.1 Resources are coordinated and personnel briefed to deliver requirements as required 2.2 Agreed control measures are implemented according to instructions
3. Evaluate effectiveness of control activities	3.1 Vineyard is monitored to evaluate the effectiveness of treatment
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access workplace information to identify vine damage monitoring and control requirements
- implement integrated pest management (IPM) program
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas
- apply sampling techniques
- conduct routine tests
- monitor vine health to meet workplace requirements
- recognise symptoms of vine disorders and identify their cause
- recognise and monitor beneficial organisms
- recommend preventive, corrective and/or eradication measures
- evaluate effectiveness of a range of control measures
- implement appropriate preventive, control and/or eradication measures
- rectify and/or report environmental non-compliance
- maintain workplace records
- implement occupational health and safety (OHS) procedures
- instruct and/or supervise vineyard personnel and/or contractors according to enterprise procedures
- operate information technology systems according to enterprise procedures
- use oral communication skills/language to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce.

Required knowledge includes:

Note: The following required knowledge should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Knowledge of:

- symptoms of vineyard pests, diseases, disorders and weeds, and their treatment
- effect of pests, diseases, disorders and weeds on vine, fruit and/or wine quality
- effect of prevention, control and eradication techniques on vine, fruit and/or wine quality (e.g. withholding periods for chemical sprays and inter-row cultivation)
- basic vine physiology, as it applies to:
 - water intake

- nutrient uptake
- photosynthesis
- respiration, transpiration
- translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality, including:
 - buds, nodes and tendrils
 - cambium, epidermis, phloem and xylem
 - leaf blade, bract and petiole
 - bunch, berries and flowers
- annual growth stages of grapevines, including:
 - budburst
 - flowering
 - veraison
 - maturity
- vine types, their characteristics and uses, including:
 - family, genus and species
 - *Vitis vinifera* and commercial varieties
 - native species and hybrids (e.g. *labrusca*)
 - rootstocks and scion stock
- key grape varieties and their distinguishing features. This may include factors, such as:
 - berry and bunch characteristics
 - frost and disease resistance
 - flavour and style
- industry processes for new variety development
- Climatic implications and influence on the occurrence, development and treatment of vine disorders and damage
- resistance management strategies
- features and benefits of a variety of preventive, control and eradication techniques, including costs and interaction with environmental conditions
- environmental issues associated with preventive, control and eradication techniques. This should include awareness of community issues and concerns (e.g. spray drift)
- IPM principles, features and benefits
- sampling techniques and procedures
- routine testing techniques and procedures
- monitoring techniques and procedures
- OHS hazards and control requirements
- legislative and licensing requirements relevant to the task
- prevention, control and eradication implementation procedures
- evaluation techniques
- procedures and responsibility for reporting problems

- reporting and recording requirements and procedures
- supervision techniques where relevant
- information technology systems where relevant.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare equipment for operation	1.1 Requirements are interpreted and confirmed 1.2 Materials are confirmed as available to meet requirements 1.3 Materials are prepared to meet requirements 1.4 Equipment is checked to confirm readiness for use 1.5 Equipment is attached and set up to meet application requirements
2. Operate equipment	2.1 Equipment is started up according to workplace procedures 2.2 Equipment is operated according to workplace procedures 2.3 Equipment performance is monitored to confirm performance is maintained within specification 2.4 Out-of-specification equipment performance is identified, rectified and/or reported 2.5 Materials are applied according to instructions 2.6 Problems and anomalies are recognised, rectified and/or reported
3. Shut down equipment	3.1 Equipment is shut down according to workplace procedures 3.2 Equipment is cleaned and stored according to workplace procedures 3.3 Waste generated by the process is collected, treated, disposed of or recycled according to workplace procedure 3.4 Work is conducted in accordance with workplace environmental guidelines
4. Record information	4.1 Workplace information is recorded in the appropriate format

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

Note: The following required skills should be applied as appropriate to the equipment and processes that are used in the particular winery or workplace.

Ability to:

- access and interpret workplace information to identify seeding and spreading requirements
- select, fit and use appropriate personal protective clothing and/or equipment
- liaise with other work areas
- select appropriate equipment for the task
- confirm equipment status and condition. This may include checking:
 - belts and chains
 - lubricants
 - hydraulics
 - air intake
 - tyre pressure and wear
 - wear and tear
- attach, set up and calibrate equipment to meet application requirements
- select, prepare and load materials according to requirements
- start up equipment
- operate equipment to meet operating instructions. This should include:
 - driving forward and reversing
 - operating in confined spaces
 - operating amongst other vineyard activities and a variety of conditions as required
