FPIWPP2210B Cut panels to profile

Release: 1

FPIWPP2210B Cut panels to profile

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and cut panels to a profile, with shaping equipment, to produce moulded timber products

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP2210A Cut panels to profile

Application of the Unit

Application of the unit

The unit involves cutting panels to profile in a forest products factory

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for profiling	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environment</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to cutting panels to <i>profile</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be profiled is selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Profile to be cut is identified and cutting blades selected</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up profiling equipment	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Machine guides</i> are selected and attached to the machinery</p> <p>2.3. Cutting blades are installed in the selected machinery</p> <p>2.4. Depth of cut/profile is set in line with the required profile and minimisation of waste</p> <p>2.5. Panel stack is positioned in close proximity to maximise ease of machine feeding</p> <p>2.6. Equipment set-up is checked and adjusted by running a panel through the machine to set depth and profile</p>
3. Cut <i>material</i> to profile	<p>3.1. Panels are fed into the machine at the <i>feed rate</i> prescribed by organisational requirements</p> <p>3.2. Cutting sequence is followed, maintained and adjusted to produce the required quantity and maximise the feed rate</p> <p>3.3. Profiling process is regularly checked and adjusted to maintain the desired depth and profile</p> <p>3.4. Panels with <i>defects</i> are rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.5. Processing and equipment faults are reported to the</p>

ELEMENT	PERFORMANCE CRITERIA
4. Conduct operator maintenance	<p>appropriate personnel</p> <p>3.6. Panels are safely <i>stacked</i> in a designated location in line with work order requirements</p> <p>3.7. <i>Records and reports</i> are accurately completed, processed and maintained in line with workplace procedures</p> <p>4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2. Cutting blades are checked for blunt or damaged condition in line with site procedures</p> <p>4.3. Cutting blades are removed and replaced in line with manufacturer's recommendations</p> <p>4.4. Machine area is kept clear of dust and debris in line with OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut panels to profile
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting panels to profile
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for cutting panels to profile
- Environmental risks and hazards
- Characteristics of panels and panel defects
- Cutting profiles, feed rates and finish
- Cutting blade condition assessment
- Storage Systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut panels to profile within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to cutting panels to profile
- following organisational policies and procedures relevant cutting panels to profile
- cutting panels to profile in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on a multi-head planing machine
- stacking batches of cut panels in line with organisational requirements and OHS regulations
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Context of and specific resources for assessment

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Profile may include:

- various shapes and patterns to which steel cutting blades can be shaped, that will in turn shape the panel to achieve the desired profile outcome

profiled products may include:

- building components
- furniture components
- tops
- quad
- beading
- mouldings
- shaped beams
- architraves
- skirting boards
- scotia

Work order is to include:

- instructions for the cutting
- despatch of panel products from the work site

and may include:

- type
- size
- length
- profile
- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues

RANGE STATEMENT

Material may include:

- managers
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard
- other manufactured board products

Storage locations may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- multi-head planing machines (four siders)
- spindle moulders
- routing machines
- shaping machines
- profile cutting blades in various shapes and sizes

and is to include:

- procedures for machine lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- cutters are installed accurately
- machinery is operating to optimum performance

Machine guides may include:

- machine manufacturer produced guides located strategically on the machine to maintain timber in straight feed and ensure consistency of profile cut
- enterprise produced guides/jigs to maintain consistency of timber against cutting blades

Disposing of may include:

- recycling panels with defects
- re-using panels with defects

Feed rate is to include:

- the rate of speed the panel is passed through the machine affecting the sharpness of the cutting blades
- the finish of the material
- the production output

Defects may include:

- warp
- wane
- cupping
- holes
- breakages
- lifting veneer
- bonding problems

Stacking may include:

- preparing for transport
- categorising in common size, length, thickness and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

RANGE STATEMENT

Records and reports may include:

- product type
- size
- profile
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system
