FPI11 Forest and Forest Products Training Package

Release: 2.1

CONTENTS

FPI11 Forest and Forest Products Training Package	16
Preliminary Information	19
List of AQF Qualifications.....	20
FPI units.....	21
Imported units.....	35
Mapping of Qualifications to the Previous Training Package.....	48
Mapping of Units of Competency to the Previous Training Pack.....	63
Overview.....	87
Introduction to FPI11 V2.1.....	92
Qualifications Frame work.....	93
Qualifications and Packaging Rules.....	99
Introduction to the Industry	105
Skill Sets in this Training Package.....	106
Qualification Pathways.....	108
Assessment Guidelines.....	110
Competency Standards.....	128
FPI10111 Certificate I in Forest and Forest Products.....	129
FPI20111 Certificate II in Forest Growing and Management.....	133
FPI20113 Certificate II in Forest Growing and Management.....	139
FPI20211 Certificate II in Harvesting and Haulage	146
FPI20213 Certificate II in Harvesting and Haulage	152
FPI20311 Certificate II in Sawmilling and Processing	158
FPI20411 Certificate II in Wood Panel Products	165
FPI20511 Certificate II in Timber Manufactured Products.....	172
FPI20611 Certificate II in Timber Merchandising.....	178
FPI20711 Certificate II in Timber Truss and Frame Design and Manufacture	185
FPI30111 Certificate III in Forest Growing and Management	190
FPI30113 Certificate III in Forest Growing and Management	198
FPI30211 Certificate III in Harvesting and Haulage	206
FPI30213 Certificate III in Harvesting and Haulage	216
FPI30311 Certificate III in Sawmilling and Processing.....	225
FPI30411 Certificate III in Wood Panel Products.....	234
FPI30511 Certificate III in Timber Manufactured Products	242
FPI30611 Certificate III in Timber Merchandising	250
FPI30711 Certificate III in Sawdoctoring	257
FPI30811 Certificate III in Woodmachining.....	262
FPI30911 Certificate III in Timber Truss and Frame Design and Manufacture	268
FPI40111 Certificate IV in Forest Operations	275
FPI40211 Certificate IV in Timber Processing	283
FPI40311 Certificate IV in Timber Truss and Frame Manufacture	291
FPI40411 Certificate IV in Timber Truss and Frame Design	297
FPI50111 Diploma of Forest and Forest Products	304
FPI50311 Diploma of Timber Truss and Frame Manufacture	313
FPI50411 Diploma of Timber Truss and Frame Design.....	318
FPI60113 Advanced Diploma of Forest Industry Sustainability	324
FPISS00011 Skill set for a boom delimeter operator	330
FPISS00012 Skill set for a crawler/dozer operator	332
FPISS00013 Skill set for a feller buncher operator	334
FPISS00014 Skill set for a forwarder operator.....	336

FPISS00015 Skill set for a heavy production mobile chipper operator	338
FPISS00016 Skill set for a loader operator	340
FPISS00017 Skill set for a mechanical processor operator	342
FPISS00018 Skill set for a native forest operator.....	344
FPISS00019 Skill set for a plantation forest operator	346
FPISS00020 Skill set for a single grip harvester operator.....	348
FPISS00021 Skill set for a skidder operator	350
FPISS00022 Skill set for an excavator operator.....	352
FPISS00023 Skill set for fire salvage operations	354
FPISS00024 Skill set for off road four wheel drive operations	356
FPISS00025 Skill set for soil and water protection (roading).....	358
FPISS00026 Skill set for carbon accounting	360
FPISS00027 Skill set for a forestry log truck driver	362
FPISS00028 Skill set for a forestry produce truck driver	364
FPISS00029 Skill set for a finger jointing plant operator.....	366
FPISS00030 Skill set for a finger jointing moulder operator	368
FPISS00031 Skill set for a finger jointing grader operator.....	370
FPISS00032 Skill set for a finger jointing quality control tester	372
FPISS00033 Skill set for forest and wood product innovation for leaders.....	374
FPISS00034 Skill set for forest and wood product innovation for managers.....	376
FPISS00035 Skill set for supporting forest and wood products innovation.....	378
FPISS00036 Skill set for managing change in the forest and wood products industry	380
FPISS00037 Skill set for forest and wood products industry stakeholder engagement....	382
FPISS00038 Skill set for supporting workplace engagement in the forest and wood products industry.....	384
FPISS00039 Skill set for leading business development in the forest and wood products industry	386
FPISS00040 Skill set for managing business development in the forest and wood products industry	388
FPISS00041 Skill set for supporting business development in the forest and wood products industry	390
FPICOR2201B Work effectively in the forest and forest products industry	392
FPICOR2202B Communicate and interact effectively in the workplace.....	403
FPICOR2203B Follow environmental care procedures	413
FPICOR2204B Follow fire prevention procedures	423
FPICOR2205B Follow OHS policies and procedures.....	433
FPICOR2207B Maintain quality and product care	443
FPICOR3201B Implement safety, health and environment policies and procedures	453
FPICOR3202B Conduct quality and product care procedures	464
FPICOR3203B Evaluate fire potential and prevention.....	474
FPICOR3204B Visually assess materials	485
FPICOR4201B Monitor safety, health and environment policies and procedures	496
FPICOR4202B Monitor and review forestry operations.....	507
FPICOR4203B Monitor quality and product care procedures	517
FPICOR6201A Manage sustainability in the workplace	526
FPICOR6202A Implement practices to maximise value from wood residues.....	536
FPICOT2201B Stack and bind material	547
FPICOT2202B Rack material.....	557
FPICOT2203B Finish products	566
FPICOT2205B Tail out materials.....	577
FPICOT2207B Dress boards and timber.....	586
FPICOT2208B Resaw boards and timber.....	597
FPICOT2209B Produce finger jointed timber.....	607

FPICOT2210B Tally material.....	617
FPICOT2211B Produce pointed timber products.....	626
FPICOT2212B Grade hardwood sawn and milled products.....	635
FPICOT2213B Grade softwood sawn and milled products.....	645
FPICOT2214B Grade cypress sawn and milled products.....	655
FPICOT2215B Visually stress grade hardwood.....	665
FPICOT2216B Visually stress grade softwood.....	675
FPICOT2217B Visually stress grade cypress.....	685
FPICOT2218B Cross cut materials with a fixed saw.....	695
FPICOT2219B Use hand-held tools.....	705
FPICOT2220B Select trees for tending operations.....	714
FPICOT2222B Produce laminated beams.....	723
FPICOT2223B Segregate and sort logs.....	734
FPICOT2224B Band edges of panels.....	743
FPICOT2225B Chip or flake wood.....	753
FPICOT2226B Debark logs mechanically.....	763
FPICOT2227B Process orders and despatch products.....	774
FPICOT2228B Store materials.....	783
FPICOT2229B Dock material to length.....	793
FPICOT2230B Assemble products.....	803
FPICOT2231B Pack products.....	813
FPICOT2232B Cut material to shape using a saw.....	823
FPICOT2233B Navigate in forest areas.....	834
FPICOT2235A Assess timber for manufacturing potential.....	844
FPICOT2236 Fall trees manually (basic).....	853
FPICOT2237A Maintain chainsaws.....	864
FPICOT2238A Cut materials with a hand-held chainsaw.....	873
FPICOT2239A Trim and cut felled trees.....	883
FPICOT2240 Cut material with a pole saw.....	894
FPICOT2241 Apply wood and timber product knowledge.....	903
FPICOT3201B Hand sharpen knives and blades.....	912
FPICOT3202B Navigate in remote or trackless areas.....	922
FPICOT3203B Weigh loads.....	932
FPICOT3204B Prepare and interpret sketches and drawings.....	940
FPICOT3205B Dress boards using multi-headed machines.....	949
FPICOT3206B Cut material using high speed optimiser.....	959
FPICOT3207B Set up, operate and maintain finger jointing operations.....	969
FPICOT3208B Test strength of joints.....	978
FPICOT3209B Set up, operate and maintain end matching operations.....	986
FPICOT3210B Sharpen cutting tools.....	995
FPICOT3211B Maintain sawdoctoring tools.....	1004
FPICOT3212B Replace saws, blades and guides.....	1014
FPICOT3213B Manufacture cutting tools.....	1023
FPICOT3214B Take off material quantities.....	1032
FPICOT3215B Swage and shape saw blades.....	1041
FPICOT3216B Assess and maintain saw performance.....	1050
FPICOT3217B Assess and maintain cutter performance.....	1059
FPICOT3218B Quote and interpret from manufactured timber product plans.....	1068
FPICOT3219B Produce standard truss or frame plans and details using computers....	1079
FPICOT3220B Quote and interpret from computerised timber manufactured product plans.....	1089
FPICOT3221B Rehabilitate tracks, quarries and landings.....	1099
FPICOT3222B Present forestry information and interpretations programs.....	1108

FPICOT3223B Grade and mark logs	1117
FPICOT3224B Plan and monitor equipment maintenance.....	1127
FPICOT3225B Mechanically stress grade timber.....	1137
FPICOT3226B Shift forestry logs using trucks.....	1147
FPICOT3227B Receive and measure logs.....	1158
FPICOT3228B Plane/s and panels.....	1167
FPICOT3229B Mechanically stress grade panels	1178
FPICOT3230B Operate automated stacking equipment.....	1188
FPICOT3231B Operate steam boiler.....	1199
FPICOT3232B Operate heat plant	1208
FPICOT3233B Sharpen and align blades and knives	1217
FPICOT3234B Cut material using CNC sizing machines	1228
FPICOT3235B Machine material using CNC machining and processing centres.....	1239
FPICOT3236B Coordinate stock control procedures	1250
FPICOT3237B Produce templates.....	1260
FPICOT3238B Operate a pole saw.....	1269
FPICOT3239B Create drawings using computer aided design systems	1279
FPICOT3240B Grade heavy structural/engineered products	1288
FPICOT3241B Assemble timber wall frames	1298
FPICOT3242B Lay up timber roof trusses	1309
FPICOT3243B Operate a truss press	1320
FPICOT3244B Cut material to profile	1331
FPICOT3245B Grade, sort and mark material	1342
FPICOT3246B Test heavy structural/engineered products	1352
FPICOT3247B Select timber for forestry operations.....	1361
FPICOT3248A Dry timber in solar assisted kilns	1372
FPICOT3249A Select timber preservation techniques.....	1385
FPICOT3250A Prepare timber to meet import/export compliance requirements.....	1394
FPICOT3251A Promote the carbon benefits of wood products	1403
FPICOT3252A Use environmental care procedures to undertake fire salvage operations	1411
FPICOT3253A Convert timber residue into products for further use	1422
FPICOT3254A Implement environmentally sustainable work practices in the work area/work site	1431
FPICOT3255 Apply silviculture principles.....	1440
FPICOT3256 Apply biodiversity protection principles.....	1449
FPICOT3257 Follow cultural heritage requirements.....	1460
FPICOT3258 Comply with soil and water protection.....	1471
FPICOT3259 Operate a four wheel drive on unsealed roads	1481
FPICOT3260 Recover four wheel drive vehicles.....	1492
FPICOT3261 Transport forestry logs using trucks.....	1502
FPICOT3262 Transport forestry produce using trucks.....	1513
FPICOT3263 Maintain and contribute to energy efficiency	1522
FPICOT3264 Build and maintain timber stacks.....	1530
FPICOT4201B Produce complex truss and frame plans and details using computers ..	1540
FPICOT4202B Design timber structures	1550
FPICOT4203B Plan and coordinate product assembly.....	1559
FPICOT4204B Schedule and coordinate load shifting	1569
FPICOT4205B Coordinate log debarking operations	1578
FPICOT4206B Plan and coordinate boiler operations.....	1587
FPICOT4207B Plan and coordinate heat plant operations	1596
FPICOT5201B Implement sustainable forestry practices	1606
FPICOT5202B Manage forestry information and interpretations programs	1614
FPICOT5203B Manage installation and commissioning of equipment.....	1624

FPICOT5204B Organise enterprise maintenance programs.....	1634
FPICOT5205A Develop biohazard contingency plans	1644
FPICOT5206B Implement forestry chain of custody certification system.....	1653
FPICOT5207A Implement sustainability in the workplace.....	1662
FPICOT5208B Build and maintain community relationships.....	1672
FPICOT5209B Manage tree harvesting to minimise environmental impact	1685
FPICOT6201B Manage community engagement.....	1695
FPICOT6202B Develop and manage a forestry chain of custody certification process for the workplace.....	1707
FPICOT6203A Develop engineered timber products to meet energy efficient building	1717
FPICOT6204A Use carbon accounting to estimate emissions in the workplace	1729
FPICOT6205A Prepare an enterprise carbon management report	1739
FPICOT6207A Develop forest management systems and processes.....	1748
FPIFGM2201B Collect seed.....	1758
FPIFGM2202B Prepare seedbed.....	1768
FPIFGM2203B Plant trees by hand.....	1778
FPIFGM2204B Plant trees mechanically	1786
FPIFGM2205B Prune trees	1794
FPIFGM2206B Collect data or samples for assessment.....	1804
FPIFGM2207B Undertake brushcutting operations	1814
FPIFGM2209B Cut, sort and set cuttings	1823
FPIFGM2210B Implement animal pest control procedures.....	1833
FPIFGM2211B Detect fires	1842
FPIFGM2212B Graft cuttings	1851
FPIFGM2213B Process seed.....	1860
FPIFGM2214B Maintain visitor sites.....	1870
FPIFGM2215B Measure trees	1879
FPIFGM3201B Manage seed collection.....	1887
FPIFGM3202B Extract seed.....	1898
FPIFGM3203B Conduct an instrument survey	1907
FPIFGM3206B Plan and implement non-commercial thinning operations.....	1917
FPIFGM3207B Coordinate stem improvement	1929
FPIFGM3209B Construct and maintain forest roads and tracks.....	1939
FPIFGM3210B Patrol forest.....	1949
FPIFGM3211B Manage coppice stems	1958
FPIFGM3212 Fall trees manually (intermediate)	1968
FPIFGM3213 Fall trees manually (advanced)	1979
FPIFGM3214 Operate a four wheel drive in a towing situation.....	1990
FPIFGM3215 Perform complex 4x4 operations.....	1999
FPIFGM4201B Implement a forest establishment plan	2010
FPIFGM4202B Manage stand health	2020
FPIFGM4203C Design plantations.....	2031
FPIFGM4204B Conduct a pests and diseases assessment.....	2040
FPIFGM4205B Monitor regeneration rates.....	2049
FPIFGM4206B Conduct a wood volume and yield assessment	2058
FPIFGM4207B Conduct a forest site assessment.....	2067
FPIFGM4208B Plan a quarry	2076
FPIFGM4209B Interpret and use aerial photographs for forest management.....	2085
FPIFGM4210B Prepare a tender.....	2096
FPIFGM5201B Plan and manage an inventory program.....	2104
FPIFGM5208B Manage road construction and maintenance	2115
FPIFGM5210A Manage tending operations in a native forest.....	2125
FPIFGM5211A Coordinate stand nutrition.....	2136

FPIFGM5212A Manage genetic resources.....	2146
FPIFGM5213A Coordinate plantation tending operations	2156
FPIFGM5214A Develop a native forest regeneration plan.....	2167
FPIFGM5215A Breed trees.....	2177
FPIFGM5216A Manage coupe planning	2188
FPIFGM5217A Promote plantations as a sustainable form of land use	2198
FPIFGM5219 Undertake carbon stock sampling of forests and plantations	2209
FPIFGM6201B Plan a biochar storage system for carbon capture and storage	2219
FPIFGM6203 Manage sustainable tree inventory.....	2230
FPIHAR2203B Hook up felled logs using cables (choker).....	2240
FPIHAR2204B Perform landing duties (chaser).....	2251
FPIHAR2205B Conduct mobile splitting operations	2262
FPIHAR2206B Operate a mobile chipper/mulcher.....	2271
FPIHAR2207A Trim and cut harvested trees.....	2281
FPIHAR3201B Monitor log recovery (rigging slinger)	2292
FPIHAR3206C Conduct forwarder operations.....	2303
FPIHAR3207C Conduct feller buncher operations.....	2316
FPIHAR3208C Conduct boom delimeter operations	2329
FPIHAR3210C Conduct mechanical processor operations	2341
FPIHAR3211B Operate yarder	2354
FPIHAR3213B Conduct mechanically assisted tree falling operations	2366
FPIHAR3214C Operate a single grip harvester.....	2377
FPIHAR3215C Operate a heavy production mobile chipper.....	2388
FPIHAR3216A Conduct forestry operations using crawler tractor	2399
FPIHAR3217A Conduct skidder operations	2409
FPIHAR3218A Conduct loader operations.....	2420
FPIHAR3219A Conduct excavator operations with grabs	2432
FPIHAR3220 Harvest trees manually (intermediate)	2443
FPIHAR3221 Harvest trees manually (advanced)	2454
FPIHAR4201B Apply tree jacking techniques	2465
FPIHAR4202B Coordinate log recovery (hook tender).....	2476
FPIHAR4203B Design log landings and snig tracks	2489
FPIHAR4204B Plan and coordinate fire salvage operations.....	2499
FPIHAR4205B Implement harvesting plans	2510
FPIHAR5201B Design harvesting plans	2520
FPISAW2201B Grade round poles and debarked logs	2530
FPISAW2202B Sort boards manually	2541
FPISAW2203B Sort boards mechanically	2552
FPISAW2204B Dock boards with mechanical feed.....	2563
FPISAW2205B Assemble materials using nail plates.....	2574
FPISAW2206B De-stack seasoning racks	2585
FPISAW2207B Round softwood logs.....	2595
FPISAW2208B Split wood products.....	2606
FPISAW2209B Dismantle, transport and assemble hand portable sawmill.....	2616
FPISAW2210B Prepare for timber treatment operations	2626
FPISAW3201B Treat timber	2637
FPISAW3202B Produce sawn green boards	2648
FPISAW3203B Break down logs	2659
FPISAW3204B Saw flitches and cants.....	2669
FPISAW3205B Dry hardwood	2680
FPISAW3206B Dry softwood	2692
FPISAW3207B Sharpen band saws	2704
FPISAW3208B Sharpen circular saws.....	2715

FPISAW3209B Align sawing production systems	2726
FPISAW3210B File and set saws	2736
FPISAW3211B Recondition guides.....	2746
FPISAW3212B Sharpen tipped circular saws.....	2756
FPISAW3213B Level and tension circular saws	2767
FPISAW3214B Join band saw blades.....	2777
FPISAW3215B Screen wood chips	2787
FPISAW3216B Transfer wood chips	2797
FPISAW3217B Hard face saw teeth	2807
FPISAW3218B Replace tungsten tips.....	2816
FPISAW3219B Replace stellite tips	2826
FPISAW3220C Maintain wide band saw blades.....	2836
FPISAW3221B Profile saw blanks.....	2847
FPISAW3222B Recondition band mill wheels	2857
FPISAW3223B Assess wood chips	2867
FPISAW3224B Coordinate and monitor the wood chip stockpile.....	2877
FPISAW3225B Maintain frame saw blades	2886
FPISAW3226B Saw logs using CNC optimising systems	2897
FPISAW3227B Select and saw logs in multi-species operations.....	2908
FPISAW3228B Apply principles of blade design to sawing procedures.....	2920
FPISAW3229B Operate a portable sawmill.....	2930
FPISAW4201B Plan and monitor timber treatment plant operations	2941
FPISAW4202B Plan and monitor saw log operations.....	2951
FPISAW4203B Coordinate timber drying operations	2961
FPISAW4204B Plan and monitor board conversion.....	2971
FPITMM2201B Cut material to length and angles.....	2981
FPITMM2202B Machine material.....	2992
FPITMM2203A Read and interpret timber truss, floor and/or frame fabrication plans.....	3003
FPITMM3201B Convert timber.....	3013
FPITMM3202B Manufacture using joinery machines.....	3024
FPITMM3203B Estimate and cost job.....	3036
FPITMM3204A Interpret designs to prepare timber roof truss drawings and documents using computers	3045
FPITMM3205A Interpret designs to prepare timber floor system drawings and documents using computers	3054
FPITMM3206A Interpret designs to prepare timber wall frame drawings and documents using computers	3063
FPITMM3207A Set up timber floor trusses.....	3072
FPITMM4201B Construct prototypes and samples.....	3082
FPITMM4202B Diagnose and calculate production costs	3093
FPITMM4203B Install and commission CNC software	3103
FPITMM4204B Sample and test products to specifications.....	3112
FPITMM4205A Prepare and advise on a broad range of timber roof truss details using computers	3121
FPITMM4206A Prepare and advise on a broad range of timber floor system details using computers	3129
FPITMM4207A Prepare and advise on a broad range of timber wall frame details using computers	3137
FPITMM5201B Assess product feasibility of designs.....	3146
FPITMM5202B Develop, trial and evaluate prototypes.....	3156
FPITMM5203B Generate and transfer complex computer-aided drawings and specifications.....	3167
FPITMM5204B Manage product design.....	3177

FPITMM5205B Optimise CNC operations	3187
FPITMM5206B Plan production	3197
FPIWPP2201B Cut panels	3206
FPIWPP2202B Surface treat raw board	3216
FPIWPP2203B Repair veneer and ply	3227
FPIWPP2204B Repair veneer mechanically	3237
FPIWPP2205B Prepare chip or fibre blends	3247
FPIWPP2206B Prepare veneer for ply	3257
FPIWPP2207B Scarf edges of veneer	3268
FPIWPP2208B Cut veneer	3279
FPIWPP2209B Saw products from continuous ply	3290
FPIWPP2210B Cut panels to profile	3301
FPIWPP2211B Move material by transfer equipment	3312
FPIWPP3201B Produce veneer from debarked logs	3322
FPIWPP3202B Paint panels	3332
FPIWPP3203B Produce fibre from chips	3343
FPIWPP3204B Form board	3353
FPIWPP3205B Match and join veneer	3364
FPIWPP3206B Laminate and veneer board surfaces	3375
FPIWPP3207B Clip veneer	3386
FPIWPP3208B Punch peg holes in panels	3397
FPIWPP3209B Prepare resin and additives	3408
FPIWPP3210B Laminate board	3418
FPIWPP3211B Maintain caul plates and screens	3429
FPIWPP3212B Dry material	3439
FPIWPP3213B Heat treat material	3451
FPIWPP3214B Treat paper	3463
FPIWPP3215B Cut paper	3474
FPIWPP3216B Press material using the daylight process	3485
FPIWPP3217B Process production effluent	3498
FPIWPP3218B Plan and coordinate machining of panels	3507
FPIWPP3219B Blend and test binding mixes	3517
FPIWPP3220B Plan and coordinate panel painting	3528
FPIWPP3221B Trim new panels to size	3538
FPIWPP3222B Press laminated ply	3549
FPIWPP3223B Immunise veneer	3560
FPIWPP3224B Profile sand products	3571
FPIWPP3225B Produce profile sanding shoes and wheels	3582
FPIWPP3226B Operate a continuous press	3592
FPIWPP3227B Vacuum paint	3604
FPIWPP3228B Dry Wood Flakes	3615
FPIWPP3229B Classify flake	3627
FPIWPP3230B Produce decorative veneers	3637
FPIWPP3231B Produce veneer from prepared flitches	3648
FPIWPP4201B Plan and coordinate panel production	3658
FPIWPP4202B Perform laboratory testing	3669
AHCBUS502A Market products and services	3678
AHCARB204A Undertake standard climbing techniques	3684
AHCARB206A Undertake stump removal	3689
AHCARB307A Undertake complex tree climbing	3694
AHCCHM201A Apply chemicals under supervision	3700
AHCCHM303A Prepare and apply chemicals	3706
AHCCHM304A Transport, handle and store chemicals	3713

AHCCHM401A Minimise risks in the use of chemicals	3718
AHCCHM402A Plan and implement a chemical use program	3723
AHCEXP303A Prepare and use explosives.....	3729
AHCFIR201A Assist with prescribed burning.....	3735
AHCILM201A Maintain cultural places.....	3740
AHCILM401A Protect places of cultural significance	3745
AHCINF202A Install, maintain and repair fencing	3751
AHCINF203A Maintain properties and structures.....	3756
AHCINF303A Plan and construct conventional fencing	3761
AHCIRG204A Lay irrigation and/or drainage pipes.....	3767
AHCIRG206A Maintain pressurised irrigation systems	3773
AHCIRG301A Implement a maintenance program for an irrigation system.....	3779
AHCIRG306A Troubleshoot irrigation systems	3784
AHCIRG406A Plan on-site irrigation system installation and construction work	3789
AHCIRG503A Design irrigation, drainage and water treatment systems	3794
AHCLSC302A Construct landscape features using concrete	3801
AHCLSC304A Erect timber structures and features.....	3806
AHCMOM301A Coordinate machinery and equipment maintenance and repair	3812
AHCMOM402A Supervise maintenance of property machinery and equipment	3818
AHCNAR303A Implement revegetation works	3824
AHCNAR402A Plan the implementation of revegetation works.....	3830
AHCNSY201A Pot up plants	3836
AHCNSY202A Tend nursery plants	3842
AHCNSY203A Undertake propagation activities	3847
AHCNSY301A Maintain nursery plants.....	3853
AHCNSY302A Receive and dispatch nursery products	3858
AHCNSY306A Implement a propagation plan.....	3863
AHCNSY401A Plan a growing-on program	3869
AHCNSY402A Plan a propagation program	3874
AHCPGD402A Plan a plant establishment program	3880
AHCPHT503A Manage a controlled growing environment.....	3886
AHCPMG201A Treat weeds.....	3892
AHCPMG202A Treat plant pests, diseases and disorders	3897
AHCPMG301A Control weeds	3902
AHCPMG302A Control plant pests, diseases and disorders	3907
AHCPMG402A Develop a pest management action plan within a local area.....	3913
AHCPMG503A Develop a strategy for the management of target pests	3919
AHCSAW201A Conduct erosion and sediment control activities	3926
AHCSAW302A Implement erosion and sediment control measures	3931
AHCWAT502A Manage water systems.....	3936
AHCWRK201A Observe and report on weather.....	3942
AHCWRK203A Operate in isolated and remote situations	3947
AHCWRK302A Monitor weather conditions	3953
AHCWRK304A Respond to rescue incidents	3958
AHCWRK505A Manage trial and/or research material.....	3964
BSBADM311A Maintain business resources	3969
BSBAUD501B Initiate a quality audit	3975
BSBCMM301B Process customer complaints	3983
BSBCMM401A Make a presentation.....	3989
BSBCMM402A Implement effective communication strategies.....	3996
BSBCRT402A Collaborate in a creative process	4004
BSBCUS301B Deliver and monitor a service to customers	4011
BSBCUS401B Coordinate implementation of customer service strategies	4018

BSBCUS402B Address customer needs	4025
BSBCUS501C Manage quality customer service	4031
BSBFIA301A Maintain financial records	4037
BSBFIM501A Manage budgets and financial plans.....	4044
BSBFLM303C Contribute to effective workplace relationships.....	4052
BSBFLM305C Support operational plan.....	4059
BSBFLM312C Contribute to team effectiveness.....	4067
BSBINM201A Process and maintain workplace information	4074
BSBINM301A Organise workplace information.....	4080
BSBINM401A IMPLEMENT WORKPLACE INFORMATION SYSTEM	4087
BSBINM501A Manage an information or knowledge management system.....	4093
BSBINN201A Contribute to workplace innovation	4100
BSBINN501A Establish systems that support innovation.....	4107
BSBINN502A Build and sustain an innovative work environment	4115
BSBINN601B Manage organisational change.....	4123
BSBINN801A Lead innovative thinking and practice	4130
BSBITS401B Maintain business technology	4139
BSBITU201A Produce simple word processed documents.....	4146
BSBITU306A Design and produce business documents.....	4154
BSBLED401A Develop teams and individuals	4161
BSBLED501A Develop a workplace learning environment	4168
BSBMGT402A Implement operational plan.....	4175
BSBMGT403A Implement continuous improvement.....	4182
BSBMGT502B Manage people performance	4188
BSBMGT515A Manage operational plan	4195
BSBMGT516C Facilitate continuous improvement.....	4202
BSBMGT608C Manage innovation and continuous improvement.....	4209
BSBMGT616A Develop and implement strategic plans.....	4216
BSBMKG501B Identify and evaluate marketing opportunities.....	4222
BSBPMG414A Apply project information management and communications techniques.....	4229
BSBPMG415A Apply project risk-management techniques.....	4235
BSBPMG416A Apply project procurement procedures	4241
BSBPMG522A Undertake project work.....	4248
BSBREL701A Develop and cultivate collaborative partnerships and relationships	4255
BSBRES401A Analyse and present research information	4268
BSBRES801A Initiate and lead applied research.....	4276
BSBRSK401A Identify risk and apply risk management processes	4287
BSBRSK501B Manage risk	4294
BSBSMB404A Undertake small business planning.....	4300
BSBSMB406A Manage small business finances.....	4309
BSBSUS501A Develop workplace policy and procedures for sustainability.....	4316
BSB WHS503A Contribute to the systematic management of WHS risk.....	4325
BSB WOR204A Use business technology.....	4334
BSB WOR301B Organise personal work priorities and development.....	4341
BSB WOR401A Establish effective workplace relationships	4348
BSB WOR402A Promote team effectiveness.....	4356
BSB WOR501B Manage personal work priorities and professional development	4363
BSB WOR502B Ensure team effectiveness	4369
BSB WRK506A Coordinate research and analysis	4376
BSB WRT401A Write complex documents.....	4383
CHCPOL403C Undertake research activities.....	4390
CPCCB C4001A Apply building codes and standards to the construction process for low rise building projects	4396

CPCCBC4004A Identify and produce estimated costs for building and construction projects.....	4404
CPCCBC4005A Produce labour and material schedules for ordering.....	4412
CPCCBC4014A Prepare simple building sketches and drawings	4419
CPCCBC4024A Resolve business disputes	4426
CPCCCA3006B Erect roof trusses	4433
CPCCCM1015A Carry out measurements and calculations.....	4443
CPCCLDG3001A Licence to perform dogging	4451
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry	4461
CPCCSV5010A Interact with clients in a regulated environment.....	4475
CPCCSV5011A Apply building codes and standards to residential buildings.....	4484
CPCCSV5012A Assess timber-framed designs for one and two storey buildings.....	4492
CPCCSV5015A Assess structural requirements for domestic scale buildings	4501
CPCSUS4001A Implement and monitor environmentally sustainable work practices..	4510
CPPSEC3007A Maintain security of environment.....	4523
CUVDES405A Research and apply techniques in spatial design	4532
HLTFA301C Apply first aid.....	4540
HLTFA302C Provide first aid in remote situation.....	4551
HLTFA311A Apply first aid.....	4559
HLTFA403C Manage first aid in the workplace.....	4569
HLTFA412A Apply advanced first aid.....	4579
ICAICT308A Use advanced features of computer applications	4588
ICTSUS7235A Use ICT to improve sustainability outcomes.....	4594
LGACOM401A Administer contracts	4602
LGACOM409A Prepare tender documentation	4608
LGACOM502B Devise and conduct community consultations	4614
LGAEHRR504C Implement public environmental health education programs	4620
LGAPLEM404A Prepare and present geographic information systems data	4626
LGAPLEM612B Protect heritage and cultural assets.....	4630
LGAWORK212A Perform field support duties in a roadwork environment.....	4636
LMFGG2008C Glaze reglaze residential windows and doors	4642
MEM05004C Perform routine oxy acetylene welding.....	4651
MEM05006C Perform brazing and or silver soldering	4657
MEM05049B Perform routine gas tungsten arc welding	4663
MEM05050B Perform routine gas metal arc welding	4669
MEM18001C Use hand tools	4675
MEM18011C Shut down and isolate machines/equipment	4681
MSACMT630A Optimise cost of product.....	4687
MSACMT631A Undertake value analysis of product costs in terms of customer requirements.....	4693
MSACMT671A Develop and manage sustainable environmental practices.....	4699
MSAPMOPS404A Co-ordinate maintenance	4705
MSAPMSUP390A Use structured problem solving tools.....	4712
MSS015002A Develop strategies for more sustainable use of resources	4718
MSS015003A Analyse product life cycle for sustainability	4724
MSS015011A Conduct a sustainability energy audit.....	4731
MSS402001A Apply competitive systems and practices	4737
MSS402030A Apply cost factors to work practices.....	4744
MSS402050A Monitor process capability	4750
MSS402051A Apply quality standards	4757
MSS402060A Use planning software systems in operations	4766
MSS403001A Implement competitive systems and practices	4774

MSS403010A Facilitate change in an organisation implementing competitive systems and practices.....	4782
MSS403032A Analyse manual handling processes.....	4791
MSS403051A Mistake proof an operational process.....	4798
MSS404050A Undertake process capability improvements	4805
MSS404052A Apply statistics to operational processes.....	4812
MSS404060A Facilitate the use of planning software systems in a work area or team..	4820
MSS404082A Assist in implementing a proactive maintenance strategy.....	4827
MSS405001A Develop competitive systems and practices for an organisation.....	4835
MSS405004A Develop business plans in an organisation implementing competitive systems and practices.....	4843
MSS405062A Develop a documentation control strategy for an organisation	4851
MSS405070A Develop and manage sustainable energy practices.....	4858
MSS405075A Facilitate the development of a new product.....	4866
PSPGOV521A Collect statistical data.....	4875
PSPPOL603A Manage policy implementation.....	4882
PSPREG603A Manage and lead inspection and monitoring programs.....	4888
PUACOM012B Liaise with media at a local level	4897
PUAEQU001B Prepare, maintain and test response equipment	4902
PUAFIR203B Respond to urban fire	4907
PUAFIR204B Respond to wildfire	4916
PUAFIR205B Respond to aviation incident (specialist)	4924
PUAFIR209B Work safely around aircraft	4930
PUAFIR215 Prevent injury	4936
PUAFIR303B Suppress wildfire	4942
PUAFIR309B Operate pumps	4952
PUAFIR406B Develop prescribed burning plans	4959
PUAFIR407B Conduct prescribed burning	4965
PUAFIR501B Conduct fire investigation and analysis activities	4972
PUAFIR509B Implement prevention strategies.....	4980
PUALAW001B Protect and preserve incident scene.....	4986
PUALAW002B Conduct initial investigation at incident scene	4992
PUAOHS002B Maintain safety at an incident scene.....	4999
PUAOPE001B Supervise response.....	5008
PUAOPE002B Operate communications systems and equipment.....	5018
PUAOPE005B Manage a multi team response.....	5023
PUAOPE007B Command agency personnel within a multi-agency emergency response	5033
PUATEA001B Work in a team.....	5043
PUATEA002B Work autonomously	5048
RIIHAN308A Load and unload plant.....	5054
RIIMPO315A Conduct tractor operations	5061
RIIMPO317A Conduct roller operations.....	5069
RIIMPO318B Conduct civil construction skid steer loader operations	5078
RIIMPO319A Conduct backhoe/loader operations	5087
RIIMPO320B Conduct civil construction excavator operations	5097
RIIMPO321B Conduct civil construction wheeled front end loader operations.....	5107
RIIMPO322A Conduct civil construction tracked front end loader operations	5117
RIIMPO323A Conduct civil construction dozer operations.....	5126
RIIMPO324A Conduct civil construction grader operations	5135
RIIOHS205A Control traffic with stop-slow bat.....	5146
RIIVEH304B Conduct tip truck operations.....	5154
SIRRRPK010A Recommend home and home improvement products and services.....	5162
SIRRRPK214 Recommend specialised products and services.....	5169

SIRXADM001A Apply retail office procedures	5177
SIRXCCS201 Apply point-of-sale handling procedures	5183
SIRXCCS202 Interact with customers	5190
SIRXFIN002A Perform retail finance duties	5197
SIRXFIN003A Produce financial reports	5203
SIRXFIN004A Manage financial resources	5209
SIRXFIN201 Balance and secure point-of-sale terminal	5216
SIRXICT001A Operate retail technology	5221
SIRXICT303 Operate retail information technology systems	5226
SIRXINV001A Perform stock control procedures	5233
SIRXINV002A Maintain and order stock	5238
SIRXINV004A Buy merchandise	5245
SIRXMER004A Manage merchandise and store presentation	5256
SIRXMER201 Merchandise products	5264
SIRXMER202 Plan, create and maintain displays	5270
SIRXMER303 Coordinate merchandise presentation	5276
SIRXMER406 Monitor in-store visual merchandising display	5282
SIRXQUA001A Develop innovative ideas at work	5287
SIRXRSK001A Minimise theft	5294
SIRXRSK002A Maintain store security	5301
SIRXRSK003A Apply store security systems and procedures	5307
SIRXSLS002A Advise on products and services	5312
SIRXSLS201 Sell products and services	5318
SIRXSLS303 Build relationships with customers	5324
SIRXSLS304 Coordinate sales performance	5332
SIRXSLS406 Manage sales and service delivery	5338
SIRXWHS302 Maintain store safety	5346
SITTPPD402 Develop interpretive activities	5354
TAEASS401B Plan assessment activities and processes	5360
TAEASS402B Assess competence	5367
TAEASS403B Participate in assessment validation	5375
TAEDEL301A Provide work skill instruction	5380
TAEDEL401A Plan, organise and deliver group-based learning	5388
TAEDEL402A Plan, organise and facilitate learning in the workplace	5395
TAEDES401A Design and develop learning programs	5403
TAEDES402A Use training packages and accredited courses to meet client needs	5409
TLIA2012A Pick and process orders	5415
TLIA3018A Organise despatch operations	5422
TLIC2002A Drive light rigid vehicle	5429
TLIC3003A Drive medium rigid vehicle	5437
TLIC3004A Drive heavy rigid vehicle	5445
TLIC3005A Drive heavy combination vehicle	5453
TLIC3063A Operate vehicle carrying special loads	5461
TLIC4006A Drive multi-combination vehicle	5469
TLID1001A Shift materials safely using manual handling methods	5477
TLID2004A Load and unload goods/cargo	5484
TLID2010A Operate a forklift	5491
TLID2012A Operate specialised load shifting equipment	5499
TLID2013A Move materials mechanically using automated equipment	5508
TLID2047A Prepare cargo for transfer with slings	5515
TLID3011A Conduct specialised forklift operations	5523
TLID3014A Load and unload vehicles carrying special loads	5531
TLID3033A Operate a vehicle-mounted loading crane	5539

TLID3035A Operate a boom type elevating work platform.....	5547
TLID3036A Lift and move load using a mobile crane.....	5556
TLID3043A Shift loads using gantry equipment.....	5565
TLID4032A Plan and conduct specialised lift	5574
TLIE3002A Estimate/calculate mass, area and quantify dimensions	5583
TLIE4006A Collect, analyse and present workplace data and information	5590
TLIF1002B Conduct housekeeping activities.....	5597
TLIF2010A Apply fatigue management strategies.....	5603
TLIF4007A Implement and coordinate accident-emergency procedures.....	5610
TLIH2001A Interpret road maps and navigate pre -de termined routes	5618
TLILIC2001A Licence to operate a forklift truck.....	5624
TLILIC2016B Licence to drive a heavy rigid vehicle.....	5633
TLILIC3017B Licence to drive a heavy combination vehicle.....	5638
TLILIC3018B Licence to drive a multi combination vehicle.....	5644
TLIR4002A Source goods/services and evaluate contractors	5650

Release Date: 30 September 2013

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 2.1 - check whether this is the latest version by going to the Training.gov.au (www.training.gov.au) and locating information about the Training Package. Alternatively, contact *ForestWorks* at www.forestworks.com.au to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Package's national code (which remains the same during its period of endorsement).

Explanation of the review date

The review date (shown on the title page and in the footer of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

List of AQF Qualifications

Qualification Code	Title
FPI10111	Certificate I in Forest and Forest Products
FPI20111	Certificate II in Forest Growing and Management
FPI20113	Certificate II in Forest Growing and Management
FPI20211	Certificate II in Harvesting and Haulage
FPI20213	Certificate II in Harvesting and Haulage
FPI20311	Certificate II in Sawmilling and Processing
FPI20411	Certificate II in Wood Panel Products
FPI20511	Certificate II in Timber Manufactured Products
FPI20611	Certificate II in Timber Merchandising
FPI20711	Certificate II in Timber Truss and Frame Design and Manufacture
FPI30111	Certificate III in Forest Growing and Management
FPI30113	Certificate III in Forest Growing and Management

FPI30211	Certificate III in Harvesting and Haulage
FPI30213	Certificate III in Harvesting and Haulage
FPI30311	Certificate III in Sawmilling and Processing
FPI30411	Certificate III in Wood Panel Products
FPI30511	Certificate III in Timber Manufactured Products
FPI30611	Certificate III in Timber Merchandising
FPI30711	Certificate III in Sawdoctoring
FPI30811	Certificate III in Woodmachining
FPI30911	Certificate II in Timber Truss and Frame Design and Manufacture
FPI40111	Certificate IV in Forest Operations
FPI40211	Certificate IV in Timber Processing
FPI40311	Certificate IV in Timber Truss and Frame Manufacture
FPI40411	Certificate IV in Timber Truss and Frame Design
FPI50111	Diploma of Forest and Forest Products
FPI50311	Diploma of Timber Truss and Frame Manufacture
FPI50411	Diploma of Timber Truss and Frame Design
FPI60113	Advanced Diploma of Forest Industry Sustainability

FPI units

Note: There are no pre-requisite requirements for any FPI unit of competency.

Unit Code	Unit Title
FPICOR2201B	Work effectively in the forest and forest products industry
FPICOR2202B	Communicate and interact effectively in the workplace
FPICOR2203B	Follow environmental care procedures
FPICOR2204B	Follow fire prevention procedures

FPICOR2205B	Follow OHS policies and procedures
FPICOR2207B	Maintain quality and product care
FPICOR3201B	Implement safety, health and environment policies and procedures
FPICOR3202B	Conduct quality and product care procedures
FPICOR3203B	Evaluate fire potential and prevention
FPICOR3204B	Visually assess materials
FPICOR4201B	Monitor safety, health and environment policies and procedures
FPICOR4202B	Monitor and review forestry operations
FPICOR4203B	Monitor quality and product care procedures
FPICOR6201A	Manage sustainability in the workplace
FPICOR6202A	Implement practices to maximise value from wood residues
FPICOT2201B	Stack and bind material
FPICOT2202B	Rack material
FPICOT2203B	Finish products
FPICOT2205B	Tail out materials
FPICOT2207B	Dress boards and timber
FPICOT2208B	Resaw boards and timber
FPICOT2209B	Produce finger jointed timber
FPICOT2210B	Tally material
FPICOT2211B	Produce pointed timber products
FPICOT2212B	Grade hardwood sawn and milled products
FPICOT2213B	Grade softwood sawn and milled products
FPICOT2214B	Grade cypress sawn and milled products
FPICOT2215B	Visually stress grade hardwood
FPICOT2216B	Visually stress grade softwood

FPICOT2217B	Visually stress grade cypress
FPICOT2218B	Cross cut materials with a fixed saw
FPICOT2219B	Use hand-held tools
FPICOT2220B	Select trees for tending operations
FPICOT2222B	Produce laminated beams
FPICOT2223B	Segregate and sort logs
FPICOT2224B	Band edges of panels
FPICOT2225B	Chip or flake wood
FPICOT2226B	Debark logs mechanically
FPICOT2227B	Process orders and despatch products
FPICOT2228B	Store materials
FPICOT2229B	Dock material to length
FPICOT2230B	Assemble products
FPICOT2231B	Pack products
FPICOT2232B	Cut material to shape using a saw
FPICOT2233B	Navigate in forest areas
FPICOT2235A	Assess timber for manufacturing potential
FPICOT2236	Fall trees manually (basic)
FPICOT2237A	Maintain chainsaws
FPICOT2238A	Cut materials with a hand-held chainsaw
FPICOT2239A	Trim and cut felled trees
FPICOT2240	Cut materials with a pole saw
FPICOT2241	Apply wood and timber product knowledge
FPICOT3201B	Hand sharpen knives and blades
FPICOT3202B	Navigate in remote or trackless areas

FPICOT3203B	Weigh loads
FPICOT3204B	Prepare and interpret sketches and drawings
FPICOT3205B	Dress boards using multi-headed machines
FPICOT3206B	Cut material using high speed optimiser
FPICOT3207B	Set up, operate and maintain finger jointing operations
FPICOT3208B	Test strength of joints
FPICOT3209B	Set up, operate and maintain end matching operations
FPICOT3210B	Sharpen cutting tools
FPICOT3211B	Maintain sawdoctoring tools
FPICOT3212B	Replace saws, blades and guides
FPICOT3213B	Manufacture cutting tools
FPICOT3214B	Take off material quantities
FPICOT3215B	Swage and shape saw blades
FPICOT3216B	Assess and maintain saw performance
FPICOT3217B	Assess and maintain cutter performance
FPICOT3218B	Quote and interpret from manufactured timber product plans
FPICOT3219B	Produce standard truss or frame plans and details using computers
FPICOT3220B	Quote and interpret from computerised timber manufactured product plans
FPICOT3221B	Rehabilitate tracks, quarries and landings
FPICOT3222B	Present forestry information and interpretations programs
FPICOT3223B	Grade and mark logs
FPICOT3224B	Plan and monitor equipment maintenance
FPICOT3225B	Mechanically stress grade timber
FPICOT3227B	Receive and measure logs

FPICOT3228B	Plane/sand panels
FPICOT3229B	Mechanically stress grade panels
FPICOT3230B	Operate automated stacking equipment
FPICOT3231B	Operate steam boiler
FPICOT3232B	Operate heat plant
FPICOT3233B	Sharpen and align blades and knives
FPICOT3234B	Cut material using CNC sizing machines
FPICOT3235B	Machine material using CNC machining and processing centres
FPICOT3236B	Coordinate stock control procedures
FPICOT3237B	Produce templates
FPICOT3238B	Operate a pole saw
FPICOT3239B	Create drawings using computer aided design systems
FPICOT3240B	Grade heavy structural/engineered products
FPICOT3241B	Assemble timber wall frames
FPICOT3242B	Lay up timber roof trusses
FPICOT3243B	Operate a truss press
FPICOT3244B	Cut material to profile
FPICOT3245B	Grade, sort and mark material
FPICOT3246B	Test heavy structural/engineered products
FPICOT3247B	Select timber for forestry operations
FPICOT3248A	Dry timber in solar assisted kilns
FPICOT3249A	Select timber preservation techniques
FPICOT3250A	Prepare timber to meet import/export compliance requirements
FPICOT3251A	Promote the carbon benefits of wood products
FPICOT3252A	Use environmental care procedures to undertake fire salvage operations

FPICOT3253A	Convert timber residue into products for further use
FPICOT3254A	Implement environmentally sustainable work practices in the work area/work site
FPICOT3255	Apply silvicultural principles
FPICOT3256	Apply biodiversity protection principles
FPICOT3257	Follow cultural heritage requirements
FPICOT3258	Comply with soil and water protection
FPICOT3259	Operate a four-wheel drive on unsealed roads
FPICOT3260	Recover four-wheel drive vehicles
FPICOT3261	Transport forestry logs using trucks
FPICOT3262	Transport forestry produce using trucks
FPICOT3263	Maintain and contribute to energy efficiency
FPICOT3264	Build and maintain timber stacks
FPICOT4201B	Produce complex truss and frame plans and details using computers
FPICOT4202B	Design timber structures
FPICOT4203B	Plan and coordinate product assembly
FPICOT4204B	Schedule and coordinate load shifting
FPICOT4205B	Coordinate log debarking operations
FPICOT4206B	Plan and coordinate boiler operations
FPICOT4207B	Plan and coordinate heat plant operations
FPICOT5201B	Implement sustainable forestry practices
FPICOT5202B	Manage forestry information and interpretations programs
FPICOT5203B	Manage installation and commissioning of equipment
FPICOT5204B	Organise enterprise maintenance programs
FPICOT5205A	Develop biohazard contingency plans

FPICOT5206B	Implement forestry chain of custody certification system
FPICOT5207A	Implement sustainability in the workplace
FPICOT5208B	Build and maintain community relationships
FPICOT5209B	Manage tree harvesting to minimise environmental impact
FPICOT6201B	Manage community engagement
FPICOT6202B	Develop and manage a forestry chain of custody certification process for the workplace
FPICOT6203A	Develop engineered timber products to meet energy efficient building
FPICOT6204A	Use carbon accounting to estimate emissions in the workplace
FPICOT6205A	Prepare an enterprise carbon management report
FPICOT6207A	Develop forest management systems and processes
FPIFGM2201B	Collect seed
FPIFGM2202B	Prepare seedbed
FPIFGM2203B	Plant trees by hand
FPIFGM2204B	Plant trees mechanically
FPIFGM2205B	Prune trees
FPIFGM2206B	Collect data or samples for assessment
FPIFGM2207B	Undertake brushcutting operations
FPIFGM2209B	Cut, sort and set cuttings
FPIFGM2210B	Implement animal pest control procedures
FPIFGM2211B	Detect fires
FPIFGM2212B	Graft cuttings
FPIFGM2213B	Process seed
FPIFGM2214B	Maintain visitor sites
FPIFGM2215B	Measure trees

FPIFGM3201B	Manage seed collection
FPIFGM3202B	Extract seed
FPIFGM3203B	Conduct an instrument survey
FPIFGM3206B	Plan and implement non-commercial thinning operations
FPIFGM3207B	Coordinate stem improvement
FPIFGM3209B	Construct and maintain forest roads and tracks
FPIFGM3210B	Patrol forest
FPIFGM3211B	Manage coppice stems
FPIFGM3212	Fall trees manually (intermediate)
FPIFGM3213	Fall trees manually (advanced)
FPIFGM3214	Operate a four-wheel drive in a towing situation
FPIFGM3215	Perform complex four-wheel drive operations
FPIFGM4201B	Implement a forest establishment plan
FPIFGM4202B	Manage stand health
FPIFGM4203C	Design plantations
FPIFGM4204B	Conduct a pests and diseases assessment
FPIFGM4205B	Monitor regeneration rates
FPIFGM4206B	Conduct a wood volume and yield assessment
FPIFGM4207B	Conduct a forest site assessment
FPIFGM4208B	Plan a quarry
FPIFGM4209B	Interpret and use aerial photographs for forest management
FPIFGM4210B	Prepare a tender
FPIFGM5201B	Plan and manage an inventory program
FPIFGM5208B	Manage road construction and maintenance
FPIFGM5210A	Manage tending operations in a native forest

FPIFGM5211A	Coordinate stand nutrition
FPIFGM5212A	Manage genetic resources
FPIFGM5213A	Coordinate plantation tending operations
FPIFGM5214A	Develop a native forest regeneration plan
FPIFGM5215A	Breed trees
FPIFGM5216A	Manage coupe planning
FPIFGM5217A	Promote plantations as a sustainable form of land use
FPIFGM5219	Undertake carbon stock sampling of forests and plantations
FPIFGM6201B	Plan a biochar storage system for carbon capture and storage
FPIFGM6203	Manage sustainable tree inventory
FPIHAR2203B	Hook up felled logs using cables (choker)
FPIHAR2204B	Perform landing duties (chaser)
FPIHAR2205B	Conduct mobile splitting operations
FPIHAR2206B	Operate a mobile chipper/mulcher
FPIHAR2207A	Trim and cut harvested trees
FPIHAR3201B	Monitor log recovery (rigging slinger)
FPIHAR3206C	Conduct forwarder operations
FPIHAR3207C	Conduct feller buncher operations
FPIHAR3208C	Conduct boom delimeter operations
FPIHAR3210C	Conduct mechanical processor operations
FPIHAR3211B	Operate yarder
FPIHAR3213B	Conduct mechanically assisted tree falling operations
FPIHAR3214C	Operate a single grip harvester
FPIHAR3215C	Operate a heavy production mobile chipper
FPIHAR3216A	Conduct forestry operations using crawler tractor

FPIHAR3217A	Conduct skidder operations
FPIHAR3218A	Conduct loader operations
FPIHAR3219A	Conduct excavator operations with grabs
FPIHAR3220	Harvest trees manually (intermediate)
FPIHAR3221	Harvest trees manually (advanced)
FPIHAR4201B	Apply tree jacking techniques
FPIHAR4202B	Coordinate log recovery (hook tender)
FPIHAR4203B	Design log landings and snig tracks
FPIHAR4204B	Plan and coordinate fire salvage operations
FPIHAR4205B	Implement harvesting plans
FPIHAR5201B	Design harvesting plans
FPISAW2201B	Grade round poles and debarked logs
FPISAW2202B	Sort boards manually
FPISAW2203B	Sort boards mechanically
FPISAW2204B	Dock boards with mechanical feed
FPISAW2205B	Assemble materials using nail plates
FPISAW2206B	De-stack seasoning racks
FPISAW2207B	Round softwood logs
FPISAW2208B	Split wood products
FPISAW2209B	Dismantle, transport and assemble hand portable sawmill
FPISAW2210B	Prepare for timber treatment operations
FPISAW3201B	Treat timber
FPISAW3202B	Produce sawn green boards
FPISAW3203B	Break down logs
FPISAW3204B	Saw flitches and cants

FPISAW3205B	Dry hardwood
FPISAW3206B	Dry softwood
FPISAW3207B	Sharpen band saws
FPISAW3208B	Sharpen circular saws
FPISAW3209B	Align sawing production systems
FPISAW3210B	File and set saws
FPISAW3211B	Recondition guides
FPISAW3212B	Sharpen tipped circular saws
FPISAW3213B	Level and tension circular saws
FPISAW3214B	Join band saw blades
FPISAW3215B	Screen wood chips
FPISAW3216B	Transfer wood chips
FPISAW3217B	Hard face saw teeth
FPISAW3218B	Replace tungsten tips
FPISAW3219B	Replace stellite tips
FPISAW3220C	Maintain wide band saw blades
FPISAW3221B	Profile saw blanks
FPISAW3222B	Recondition band mill wheels
FPISAW3223B	Assess wood chips
FPISAW3224B	Coordinate and monitor the wood chip stockpile
FPISAW3225B	Maintain frame saw blades
FPISAW3226B	Saw logs using CNC optimising systems
FPISAW3227B	Select and saw logs in multi-species operations
FPISAW3228B	Apply principles of blade design to sawing procedures
FPISAW3229B	Operate a portable sawmill

FPISAW4201B	Plan and monitor timber treatment plant operations
FPISAW4202B	Plan and monitor saw log operations
FPISAW4203B	Coordinate timber drying operations
FPISAW4204B	Plan and monitor board conversion
FPITMM2201 B	Cut material to length and angles
FPITMM2202 B	Machine material
FPITMM2203 A	Read and interpret timber truss, floor and/or frame fabrication plans
FPITMM3201 B	Convert timber
FPITMM3202 B	Manufacture using joinery machines
FPITMM3203 B	Estimate and cost job
FPITMM3204 A	Interpret designs to prepare timber roof truss drawings and documents using computers
FPITMM3205 A	Interpret designs to prepare timber floor system drawings and documents using computers
FPITMM3206 A	Interpret designs to prepare timber wall frame drawings and documents using computers
FPITMM3207 A	Set up timber floor trusses
FPITMM4201 B	Construct prototypes and samples
FPITMM4202 B	Diagnose and calculate production costs
FPITMM4203 B	Install and commission CNC software
FPITMM4204 B	Sample and test products to specifications

FPITMM4205 A	Prepare and advise on a broad range of timber roof truss details using computers
FPITMM4206 A	Prepare and advise on a broad range of timber floor system details using computers
FPITMM4207 A	Prepare and advise on a broad range of timber wall frame details using computers
FPITMM5201 B	Assess product feasibility of designs
FPITMM5202 B	Develop, trial and evaluate prototypes
FPITMM5203 B	Generate and transfer complex computer-aided drawings and specifications
FPITMM5204 B	Manage product design
FPITMM5205 B	Optimise CNC operations
FPITMM5206 B	Plan production
FPIWPP2201B	Cut panels
FPIWPP2202B	Surface treat raw board
FPIWPP2203B	Repair veneer and ply
FPIWPP2204B	Repair veneer mechanically
FPIWPP2205B	Prepare chip or fibre blends
FPIWPP2206B	Prepare veneer for ply
FPIWPP2207B	Scarf edges of veneer
FPIWPP2208B	Cut veneer
FPIWPP2209B	Saw products from continuous ply
FPIWPP2210B	Cut panels to profile
FPIWPP2211B	Move material by transfer equipment

FPIWPP3201B	Produce veneer from debarked logs
FPIWPP3202B	Paint panels
FPIWPP3203B	Produce fibre from chips
FPIWPP3204B	Form board
FPIWPP3205B	Match and join veneer
FPIWPP3206B	Laminate and veneer board surfaces
FPIWPP3207B	Clip veneer
FPIWPP3208B	Punch peg holes in panels
FPIWPP3209B	Prepare resin and additives
FPIWPP3210B	Laminate board
FPIWPP3211B	Maintain caul plates and screens
FPIWPP3212B	Dry material
FPIWPP3213B	Heat treat material
FPIWPP3214B	Treat paper
FPIWPP3215B	Cut paper
FPIWPP3216B	Press material using the daylight process
FPIWPP3217B	Process production effluent
FPIWPP3218B	Coordinate machining of panels
FPIWPP3219B	Blend and test binding mixes
FPIWPP3220B	Plan and coordinate panel painting
FPIWPP3221B	Trim new panels to size
FPIWPP3222B	Press laminated ply
FPIWPP3223B	Immunise veneer
FPIWPP3224B	Profile sand products
FPIWPP3225B	Produce profile sanding shoes and wheels

FPIWPP3226B	Operate a continuous press
FPIWPP3227B	Vacuum paint
FPIWPP3228B	Dry wood flakes
FPIWPP3229B	Classify flake
FPIWPP3230B	Produce decorative veneers
FPIWPP3231B	Produce veneer from prepared flitches
FPIWPP4201B	Plan and coordinate panel production
FPIWPP4202B	Perform laboratory testing

Imported units

Unit Code	Unit Title	Updated in FPI11 V2.1
AHCBUS502A	Market products and services	
AHCARB204A	Undertake standard climbing techniques	
AHCARB206A	Undertake stump removal	
AHCARB307A	Undertake complex tree climbing	
AHCCHM201A	Apply chemicals under supervision	
AHCCHM303A	Prepare and apply chemicals	
AHCCHM304A	Transport, handle and store chemicals	
AHCCHM401A	Minimise risks in the use of chemicals	
AHCCHM402A	Plan and implement a chemical use program	
AHCEXP303A	Prepare and use explosives	
AHCFIR201A	Assist with prescribed burning	
AHCILM201A	Maintain cultural places	
AHCILM401A	Protect places of cultural significance	

AHCINF202A	Install, maintain and repair fencing	
AHCINF203A	Maintain properties and structures	
AHCINF303A	Plan and construct conventional fencing	
AHCIRG204A	Lay irrigation and/or drainage pipes	
AHCIRG206A	Maintain pressurised irrigation systems	
AHCIRG301A	Implement a maintenance program for an irrigation system	
AHCIRG306A	Troubleshoot irrigation systems	
AHCIRG406A	Plan on-site irrigation system installation and construction work	
AHCIRG503A	Design irrigation, drainage and water treatment systems	
AHCLSC302A	Construct landscape features using concrete	
AHCLSC304A	Erect timber structures and features	
AHCMOM301A	Coordinate machinery and equipment maintenance and repair	
AHCMOM402A	Supervise maintenance of machinery and equipment	
AHCNAR303A	Implement revegetation works	
AHCNAR402A	Plan the implementation of revegetation works	
AHCNSY201A	Pot up plants	
AHCNSY202A	Tend nursery plants	
AHCNSY203A	Undertake propagation activities	Release 2
AHCNSY301A	Maintain nursery plants	
AHCNSY302A	Receive and dispatch nursery products	
AHCNSY306A	Implement a propagation plan	
AHCNSY401A	Plan a growing-on program	

AHCNSY402A	Plan a propagation program	
AHCPGD402A	Plan a plant establishment program	
AHCPHT503A	Manage a controlled growing environment	
AHCPMG201A	Treat weeds	
AHCPMG202A	Treat plant pests, diseases and disorders	
AHCPMG301A	Control weeds	
AHCPMG302A	Control plants, pests, diseases and disorders	
AHCPMG402A	Develop a pest management action plan within a local area	
AHCPMG503A	Develop a strategy for the management of target pests	
AHCSAW201A	Conduct erosion and sediment control activities	
AHCSAW302A	Implement erosion and sediment control measures	
AHCWAT502A	Manage water systems	
AHCWRK201A	Observe and report on weather	
AHCWRK203A	Operate in isolated and remote situations	
AHCWRK302A	Monitor weather conditions	
AHCWRK304A	Respond to rescue incidents	
AHCWRK505A	Manage trial and/or research material	
BSBADM311A	Maintain business resources	
BSBAUD501B	Initiate a quality audit	
BSBCMM301B	Process customer complaints	
BSBCMM401A	Make a presentation	
BSBCMM402A	Implement effective communication strategies	
BSBCRT402A	Collaborate in a creative process	

BSBCUS301B	Deliver and monitor a service to customers	
BSBCUS401B	Coordinate implementation of customer service strategies	
BSBCUS402B	Address customer needs	
BSBCUS501C	Manage quality customer service	
BSBFIA301A	Maintain financial records	
BSBFIM501A	Manage budgets and financial plans	
BSBFLM303C	Contribute to effective workplace relationships	
BSBFLM305C	Support operational plan	
BSBFLM312C	Contribute to team effectiveness	
BSBINM201A	Process and maintain workplace information	
BSBINM301A	Organise workplace information	
BSBINM401A	Implement workplace information system	
BSBINM501A	Manage an information or knowledge management system	
BSBINN201A	Contribute to workplace innovation	
BSBINN501A	Establish systems that support innovation	
BSBINN502A	Build and sustain an innovative work environment	
BSBINN601B	Manage organisational change	
BSBINN801A	Lead innovative thinking and practice	
BSBITS401B	Maintain business technology	
BSBITU201A	Produce simple word processed documents	
BSBITU306A	Design and produce business documents	
BSBLED401A	Develop teams and individuals	
BSBLED501A	Develop a workplace learning environment	

BSBMGT402A	Implement operational plan	
BSBMGT403A	Implement continuous improvement	
BSBMGT502B	Manage people performance	
BSBMGT515A	Manage operational plan	
BSBMGT516C	Facilitate continuous improvement	
BSBMGT608C	Manage innovation and continuous improvement	
BSBMGT616A	Develop and implement strategic plans	
BSBMKG501B	Identify and evaluate marketing opportunities	
BSBPMG414A	Apply project information management and communications techniques	
BSBPMG415A	Apply project risk-management techniques	Supersedes BSBPMG407A
BSBPMG416A	Apply project procurement procedures	Supersedes BSBPMG408A
BSBPMG522A	Undertake project work	Supersedes BSBPMG510A
BSBREL701A	Develop and cultivate collaborative partnerships and relationships	
BSBRES401A	Analyse and present research information	
BSBRES801A	Initiate and lead applied research	
BSBRSK401A	Identify risk and apply risk management processes	
BSBRSK501B	Manage risk	
BSBSMB404A	Undertake small business planning	
BSBSMB406A	Manage small business finances	
BSBSUS501A	Develop workplace policy and procedures for sustainability	
BSBWHS503A	Contribute to the systematic management of	Supersedes

	WHS risk	BSBOHS504B
BSBWOR204A	Use business technology	
BSBWOR301B	Organise personal work priorities and development	
BSBWOR401A	Establish effective workplace relationships	
BSBWOR402A	Promote team effectiveness	
BSBWOR501B	Manage personal work priorities and professional development	
BSBWOR502B	Ensure team effectiveness	
BSBWRK506A	Coordinate research and analysis	
BSBWRT401A	Write complex documents	
CHCPOL403C	Undertake research activities	
CPCCCBC4001A	Apply building codes and standards to the construction process for low-rise building projects	
CPCCCBC4004A	Identify and produce estimated costs for building and construction projects	
CPCCCBC4005A	Produce labour and material schedules for ordering	
CPCCCBC4014A	Prepare simple building sketches and drawings	
CPCCCBC4024A	Resolve business disputes	
CPCCCA3006B	Erect roof trusses	Supersedes CPCCCA3006A
CPCCCM1015A	Carry out measurements and calculations	Supersedes CPCCCM1005A
CPCCLDG3001A	Licence to perform dogging	
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry	
CPCCSV5010A	Interact with clients in a regulated environment	
CPCCSV5011A	Apply building codes and standards to	

	residential buildings	
CPCCSV5012A	Assess timber-framed designs for one and two storey buildings	
CPCCSV5015A	Assess structural requirements for domestic scale buildings	
CPCSUS4001A	Implement and monitor environmentally sustainable work practices	
CPPSEC3007A	Maintain security of environment	
CUVDES405A	Research and apply techniques in spatial design	
HLTFA301C	Apply first aid	
HLTFA302C	Provide first aid in remote situation	
HLTFA311A	Apply first aid	Supersedes HLTFA301C
HLTFA403C	Manage first aid in the workplace	
HLTFA412A	Apply advanced first aid	Supersedes HLTFA402C
ICAICT308A	Use advanced features of computer applications	
ICTSUS7235A	Use ICT to improve sustainability outcomes	
LGACOM401A	Administer contracts	Release 2
LGACOM409A	Prepare tender documentation	Release 2
LGACOM502B	Devise and conduct community consultations	Release 2
LGAEHRR504C	Implement public environmental health education programs	Release 2
LGAPLEM404A	Prepare and present geographic information systems data	Release 2
LGAPLEM612B	Protect heritage and cultural asset	Release 2
LGAWORK212A	Perform field support duties in a roadwork environment	Release 2
LMFGG2008C	Glaze reglaze residential windows and doors	

MEM05004C	Perform routine oxyacetylene welding	
MEM05006C	Perform brazing and/or silver soldering	
MEM05049B	Perform routine gas tungsten arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM18011C	Shut down and isolate machines/equipment	Release 2
MSACMT630A	Optimise cost of product	
MSACMT631A	Undertake value analysis of product costs in terms of customer requirements	
MSACMT671A	Develop and manage sustainable environmental practices	
MSAPMOPS404A	Co-ordinate maintenance	
MSAPMSUP390A	Use structured problem solving tools	
MSS015002A	Develop strategies for more sustainable use of resources	
MSS015003A	Analyse product lifecycle for sustainability	
MSS015011A	Conduct a sustainability energy audit	
MSS402001A	Apply competitive systems and practices	
MSS402030A	Apply cost factors to work practices	
MSS402050A	Monitor process capability	
MSS402051A	Apply quality standards	
MSS402060A	Use planning software systems in operations	Supersedes MSACMT260A
MSS403001A	Implement competitive systems and practices	
MSS403010A	Facilitate change in an organisation implementing competitive systems and practices	
MSS403032A	Analyse manual handling processes	
MSS403051A	Mistake proof an operational process	

MSS404050A	Undertake process capability improvements (*Prerequisite: MSS404052A Apply statistics to operational processes)	Supersedes MSACMT450A
MSS404052A	Apply statistics to operational processes	
MSS404060A	Facilitate the use of planning software systems in a work area or team	Supersedes MSACMT460A
MSS404082A	Assist in implementing a proactive maintenance strategy	
MSS405001A	Develop competitive systems and practices for an organisation	
MSS405004A	Develop business plans in an organisation implementing competitive systems and practices	
MSS405062A	Develop a documentation control strategy for an organisation	
MSS405070A	Develop and manage sustainable energy practices	
MSS405075A	Facilitate the development of a new product	Supersedes MSACMT675A
PSPGOV521A	Collect statistical data	
PSPPOL603A	Manage policy implementation	Release 3
PSPREG603A	Manage and lead inspection and monitoring programs	Release 3
PUACOM012B	Liaise with media at a local level	
PUAEQU001B	Prepare, maintain and test response equipment	
PUAFIR203B	Respond to urban fire OR	
PUAFIR204B	Respond to wildfire (unit has PUAFIR215 Prevent injury as a prerequisite)	Release 2
PUAFIR205B	Respond to aviation incident (specialist)	
PUAFIR209B	Work safely around aircraft	Release 3
PUAFIR215	Prevent injury	Supersedes

		PUAFIR201B
PUAFIR303B	Suppress wildfire (unit has PUAFIR204B Respond to wildfire as a prerequisite)	Release 2
PUAFIR309B	Operate pumps	Release 2
PUAFIR406B	Develop prescribed burning plans (unit has PUAFIR303B Suppress wildfire as a prerequisite)	
PUAFIR407B	Conduct prescribed burning (unit has PUAFIR303B Suppress wildfire as a prerequisite)	
PUAFIR501B	Conduct fire investigation and analysis activities (unit has PUALAW001B Protect and preserve incident scene as a prerequisite)	Release 3
PUAFIR509B	Implement prevention strategies	Release 3
PUALAW001B	Protect and preserve incident scene	Release 2
PUALAW002B	Conduct initial investigation at incident scene	Release 2
PUAOHS002B	Maintain safety at an incident scene	Release 3
PUAOPE001B	Supervise response	
PUAOPE002B	Operate communications systems and equipment	
PUAOPE005B	Manage a multi-team response	
PUAOPE007B	Command agency personnel within a multi-agency emergency response (unit has PUAOPE001B Supervise response as a prerequisite)	Release 3
PUATEA001B	Work in a team	Release 2
PUATEA002B	Work autonomously	Release 3
RIIHAN308A	Load and unload plant	
RIIMPO315A	Conduct tractor operations	
RIIMPO317A	Conduct roller operations	

RIIMPO318B	Conduct civil construction skid steer loader operations	
RIIMPO319A	Conduct backhoe/loader operations	
RIIMPO320B	Conduct civil construction excavator operations	
RIIMPO321B	Conduct civil construction wheeled front end loader operations	
RIIMPO322A	Conduct civil construction tracked front end loader operations	
RIIMPO323A	Conduct civil construction dozer operations	
RIIMPO324A	Conduct civil construction grader operations	
RIIOHS205A	Control traffic with stop-slow bat	
RIIVEH304B	Conduct tip truck operations	
SIRRRPK010A	Recommend home and home improvement products and services	Release 2
SIRRRPK214	Recommend specialised products and services	
SIRXADM001A	Apply retail office procedures	Release 2
SIRXCCS201	Apply point-of-sale handling procedures	
SIRXCCS202	Interact with customers	
SIRXFIN002A	Perform retail finance duties	Release 2
SIRXFIN003A	Produce financial reports	Release 2
SIRXFIN004A	Manage financial resources	Release 2
SIRXFIN201	Balance and secure point-of-sale terminal	
SIRXICT001A	Operate retail technology	Release 2
SIRXICT303	Operate retail information technology systems	
SIRXINV001A	Perform stock control procedures	Release 2
SIRXINV002A	Maintain and order stock	Release 2
SIRXINV004A	Buy merchandise	

SIRXMER004A	Manage merchandise and store presentation	
SIRXMER201	Merchandise products	
SIRXMER202	Plan, create and maintain displays	
SIRXMER303	Coordinate merchandise presentation	
SIRXMER406	Monitor in-store visual merchandising display	
SIRXQUA001A	Develop innovative ideas at work	
SIRXRSK001A	Minimise theft	
SIRXRSK002A	Maintain store security	Release 2
SIRXRSK003A	Apply store security systems and procedures	Release 2
SIRXSLS002A	Advise on products and services	
SIRXSLS201	Sell products and services	
SIRXSLS303	Build relationships with customers	
SIRXSLS304	Coordinate sales performance	
SIRXSLS406	Manage sales and service delivery	
SIRXWHS302	Maintain store safety	
SITTPPD402	Develop interpretive activities	Supersedes SITTPPD005A
TAEASS401B	Plan assessment activities and processes	
TAEASS402B	Assess competence	
TAEASS403B	Participate in assessment validation	
TAEDEL301A	Provide work skill instruction	
TAEDEL401A	Plan, organise and deliver group-based learning	
TAEDEL402A	Plan, organise and facilitate learning in the workplace	
TAEDES401A	Design and develop learning programs	
TAEDES402A	Use training packages and accredited courses to	

	meet client needs	
TLIA2012A	Pick and process orders	
TLIA3018A	Organise despatch operations	
TLIC2002A	Drive light rigid vehicle	
TLIC3003A	Drive medium rigid vehicle	
TLIC3004A	Drive heavy rigid vehicle	
TLIC3005A	Drive heavy combination vehicle	
TLIC3063A	Operate vehicle carrying special loads	
TLIC4006A	Drive multi-combination vehicle	
TLID1001A	Shift materials safely using manual handling methods	
TLID2004A	Load and unload goods/cargo	
TLID2010A	Operate a forklift	
TLID2012A	Operate specialised load shifting equipment	
TLID2013A	Move materials mechanically using automated equipment	
TLID2047A	Prepare cargo for transfer with slings	
TLID3011A	Conduct specialised forklift operations	
TLID3014A	Load and unload vehicles carrying special loads	
TLID3033A	Operate a vehicle-mounted loading crane	
TLID3035A	Operate a boom type elevating work platform	
TLID3036A	Lift and move load using a mobile crane	
TLID3043A	Shift loads using gantry equipment	
TLID4032A	Plan and conduct specialised lift	
TLIE3002A	Estimate/calculate mass, area and quantify dimensions	
TLIE4006A	Collect, analyse and present workplace data	

	and information	
TLIF1002B	Conduct housekeeping activities	
TLIF2010A	Apply fatigue management strategies	
TLIF4007A	Implement and coordinate accident-emergency procedures	
TLIH2001A	Interpret road maps and navigate pre-determined routes	
TLILIC2001A	Licence to operate a forklift truck	
TLILIC2016B	Licence to drive a heavy rigid vehicle	Supersedes TLILIC2016A
TLILIC3017B	Licence to drive a heavy combination vehicle	Supersedes TLILIC3017A
TLILIC3018B	Licence to drive a multi-combination vehicle	Supersedes TLILIC3018A
TLIR4002A	Source goods/services and evaluate contractors

Mapping of Units of Competency to the Previous Training Pack

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
Core	Core	
FPICOR2201B Work effectively in the forest and forest products industry	FPICOR2201B Work effectively in the forest and forest products industry	Equivalent
FPICOR2202B Communicate and interact effectively in the workplace	FPICOR2202B Communicate and interact effectively in the workplace	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
FPICOR2203B Follow environmental care procedures	FPICOR2203B Follow environmental care procedures	Equivalent
FPICOR2204B Follow fire prevention procedures	FPICOR2204B Follow fire prevention procedures	Equivalent
FPICOR2205B Follow OHS policies and procedures	FPICOR2205B Follow OHS policies and procedures	Equivalent
FPICOR2207B Maintain quality and product care	FPICOR2207B Maintain quality and product care	Equivalent
FPICOR3201B Implement SHE policies and procedures	FPICOR3201B Implement SHE policies and procedures	Equivalent
FPICOR3202B Conduct quality and product care procedures	FPICOR3202B Conduct quality and product care procedures	Equivalent
FPICOR3203B Evaluate fire potential and prevention	FPICOR3203B Evaluate fire potential and prevention	Equivalent
FPICOR3204B Visually assess materials	FPICOR3204B Visually assess materials	Equivalent
FPICOR4201B Monitor SHE policies and procedures	FPICOR4201B Monitor SHE policies and procedures	Equivalent
FPICOR4202B Monitor and review forestry operations	FPICOR4202B Monitor and review forestry operations	Equivalent
FPICOR4203B Monitor quality and product care procedures	FPICOR4203B Monitor quality and product care procedures	Equivalent
FPICOR6201A Manage sustainability in the workplace	FPICOR6201A Manage sustainability in the workplace	Equivalent
FPICOR6202A Implement practices to maximise value from wood residues	FPICOR6202A Implement practices to maximise value from wood residues	Equivalent
Common Technical	Common Technical	
FPICOT2201B Stack and bind material	FPICOT2201B Stack and bind material	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
FPICOT2202B Rack material	FPICOT2202B Rack material	Equivalent
FPICOT2203B Finish products	FPICOT2203B Finish products	Equivalent
FPICOT2205B Tail out materials	FPICOT2205B Tail out materials	Equivalent
FPICOT2207B Dress boards and timber	FPICOT2207B Dress boards and timber	Equivalent
FPICOT2208B Resaw boards and timber	FPICOT2208B Resaw boards and timber	Equivalent
FPICOT2209B Produce finger jointed timber	FPICOT2209B Produce finger jointed timber	Equivalent
FPICOT2210B Tally material	FPICOT2210B Tally material	Equivalent
FPICOT2211B Produce pointed timber products	FPICOT2211B Produce pointed timber products	Equivalent
FPICOT2212B Grade hardwood sawn and milled products	FPICOT2212B Grade hardwood sawn and milled products	Equivalent
FPICOT2213B Grade softwood sawn and milled products	FPICOT2213B Grade softwood sawn and milled products	Equivalent
FPICOT2214B Grade cypress sawn and milled products	FPICOT2214B Grade cypress sawn and milled products	Equivalent
FPICOT2215B Visually stress grade hardwood	FPICOT2215B Visually stress grade hardwood	Equivalent
FPICOT2216B Visually stress grade softwood	FPICOT2216B Visually stress grade softwood	Equivalent
FPICOT2217B Visually stress grade cypress	FPICOT2217B Visually stress grade cypress	Equivalent
FPICOT2218B Cross cut materials with a fixed saw	FPICOT2218B Cross cut materials with a fixed saw	Equivalent
FPICOT2219B Use hand-held	FPICOT2219B Use hand-held	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
tools	tools	
FPICOT2220B Select trees for tending operations	FPICOT2220B Select trees for tending operations	Equivalent
FPICOT2222B Produce laminated beams	FPICOT2222B Produce laminated beams	Equivalent
FPICOT2223B Segregate and sort logs	FPICOT2223B Segregate and sort logs	Equivalent
FPICOT2224B Band edges of panels	FPICOT2224B Band edges of panels	Equivalent
FPICOT2225B Chip or flake wood	FPICOT2225B Chip or flake wood	Equivalent
FPICOT2226B Debark logs mechanically	FPICOT2226B Debark logs mechanically	Equivalent
FPICOT2227B Process orders and despatch products	FPICOT2227B Process orders and despatch products	Equivalent
FPICOT2228B Store materials	FPICOT2228B Store materials	Equivalent
FPICOT2229B Dock material to length	FPICOT2229B Dock material to length	Equivalent
FPICOT2230B Assemble products	FPICOT2230B Assemble products	Equivalent
FPICOT2231B Pack products	FPICOT2231B Pack products	Equivalent
FPICOT2232B Cut material to shape using a saw	FPICOT2232B Cut material to shape using a saw	Equivalent
FPICOT2233B Navigate in forest areas	FPICOT2233B Navigate in forest areas	Equivalent
FPICOT2235A Assess timber for manufacturing potential	FPICOT2235A Assess timber for manufacturing potential	Equivalent
FPICOT2236 Fall trees manually (basic)	FPICOT2236 Fall trees manually (basic)	Equivalent
FPICOT2237A Maintain	FPICOT2237A Maintain	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
chainsaws	chainsaws	
FPICOT2238A Cut materials with a hand-held chain saw	FPICOT2238A Cut materials with a hand-held chain saw	Equivalent
FPICOT2239A Trim and cut felled trees	FPICOT2239A Trim and cut felled trees	Equivalent
FPICOT2240 Cut material with a pole saw	FPICOT2240 Cut material with a pole saw	Equivalent
FPICOT2241 Apply wood and timber product knowledge	No previous unit	New unit, no equivalent unit
FPICOT3201B Hand sharpen knives and blades	FPICOT3201B Hand sharpen knives and blades	Equivalent
FPICOT3202B Navigate in remote or trackless areas	FPICOT3202B Navigate in remote or trackless areas	Equivalent
FPICOT3203B Weigh loads	FPICOT3203B Weigh loads	Equivalent
FPICOT3204B Prepare and interpret sketches and drawings	FPICOT3204B Prepare and interpret sketches and drawings	Equivalent
FPICOT3205B Dress boards using multi-headed machines	FPICOT3205B Dress boards using multi-headed machines	Equivalent
FPICOT3206B Cut material using high speed optimiser	FPICOT3206B Cut material using high speed optimiser	Equivalent
FPICOT3207B Set up, operate and maintain finger jointing operations	FPICOT3207B Set up, operate and maintain finger jointing operations	Equivalent
FPICOT3208B Test strength of joints	FPICOT3208B Test strength of joints	Equivalent
FPICOT3209B Set up, operate and maintain end matching operations	FPICOT3209B Set up, operate and maintain end matching operations	Equivalent
FPICOT3210B Sharpen cutting tools	FPICOT3210B Sharpen cutting tools	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
FPICOT3211B Maintain sawdoctoring tools	FPICOT3211B Maintain sawdoctoring tools	Equivalent
FPICOT3212B Replace saws, blades and guides	FPICOT3212B Replace saws, blades and guides	Equivalent
FPICOT3213B Manufacture cutting tools	FPICOT3213B Manufacture cutting tools	Equivalent
FPICOT3214B Take off material quantities	FPICOT3214B Take off material quantities	Equivalent
FPICOT3215B Swage and shape saw blades	FPICOT3215B Swage and shape saw blades	Equivalent
FPICOT3216B Assess and maintain saw performance	FPICOT3216B Assess and maintain saw performance	Equivalent
FPICOT3217B Assess and maintain cutter performance	FPICOT3217B Assess and maintain cutter performance	Equivalent
FPICOT3218B Quote and interpret from manufactured timber product plans	FPICOT3218B Quote and interpret from manufactured timber product plans	Equivalent
FPICOT3219B Produce standard truss or frame plans and details using computers	FPICOT3219B Produce standard truss or frame plans and details using computers	Equivalent
FPICOT3220B Quote and interpret from computerised timber manufactured product plans	FPICOT3220B Quote and interpret from computerised timber manufactured product plans	Equivalent
FPICOT3221B Rehabilitate tracks, quarries and landings	FPICOT3221B Rehabilitate tracks, quarries and landings	Equivalent
FPICOT3222B Present forestry information and interpretations programs	FPICOT3222B Present forestry information and interpretations programs	Equivalent
FPICOT3223B Grade and mark logs	FPICOT3223B Grade and mark logs	Equivalent
FPICOT3224B Plan and monitor equipment	FPICOT3224B Plan and monitor equipment	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
maintenance	maintenance	
FPICOT3225B Mechanically stress grade timber	FPICOT3225B Mechanically stress grade timber	Equivalent
	FPICOT3226B Shift forestry logs using trucks	Deleted and replaced by FPICOT3261, No Equivalent
FPICOT3227B Receive and measure logs	FPICOT3227B Receive and measure logs	Equivalent
FPICOT3228B Plane/sand panels	FPICOT3228B Plane/sand panels	Equivalent
FPICOT3229B Mechanically stress grade panels	FPICOT3229B Mechanically stress grade panels	Equivalent
FPICOT3230B Operate automated stacking equipment	FPICOT3230B Operate automated stacking equipment	Equivalent
FPICOT3231B Operate steam boiler	FPICOT3231B Operate steam boiler	Equivalent
FPICOT3232B Operate heat plant	FPICOT3232B Operate heat plant	Equivalent
FPICOT3233B Sharpen and align blades and knives	FPICOT3233B Sharpen and align blades and knives	Equivalent
FPICOT3234B Cut material using CNC sizing machines	FPICOT3234B Cut material using CNC sizing machines	Equivalent
FPICOT3235B Machine material using CNC machining and processing centres	FPICOT3235B Machine material using CNC machining and processing centres	Equivalent
FPICOT3236B Coordinate stock control procedures	FPICOT3236B Coordinate stock control procedures	Equivalent
FPICOT3237B Produce templates	FPICOT3237B Produce templates	Equivalent
FPICOT3238B Operate a pole saw	FPICOT3238B Operate a pole saw	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
FPICOT3239B Create drawings using computer aided design systems	FPICOT3239B Create drawings using computer aided design systems	Equivalent
FPICOT3240B Grade heavy structural/engineered products	FPICOT3240B Grade heavy structural/engineered products	Equivalent
FPICOT3241B Assemble timber wall frames	FPICOT3241B Assemble timber wall frames	Equivalent
FPICOT3242B Lay up timber roof trusses	FPICOT3242B Lay up timber roof trusses	Equivalent
FPICOT3243B Operate a truss press	FPICOT3243B Operate a truss press	Equivalent
FPICOT3244B Cut material to profile	FPICOT3244B Cut material to profile	Equivalent
FPICOT3245B Grade, sort and mark material	FPICOT3245B Grade, sort and mark material	Equivalent
FPICOT3246B Test heavy structural/engineered products	FPICOT3246B Test heavy structural/engineered products	Equivalent
FPICOT3247B Select timber for forestry operations	FPICOT3247B Select timber for forestry operations	Equivalent
FPICOT3248A Dry timber in solar assisted kilns	FPICOT3248A Dry timber in solar assisted kilns	Equivalent
FPICOT3249A Select timber preservation techniques	FPICOT3249A Select timber preservation techniques	Equivalent
FPICOT3250A Prepare timber to meet import/export compliance requirements	FPICOT3250A Prepare timber to meet import/export compliance requirements	Equivalent
FPICOT3251A Promote the carbon benefits of wood products	FPICOT3251A Promote the carbon benefits of wood products	Equivalent
FPICOT3252A Use environmental care procedures to undertake fire salvage operations	FPICOT3252A Use environmental care procedures to undertake fire salvage operations	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
FPICOT3253A Convert timber residue into products for further use	FPICOT3253A Convert timber residue into products for further use	Equivalent
FPICOT3254A Implement environmentally sustainable work practices in the work area/work site	FPICOT3254A Implement environmentally sustainable work practices in the work area/work site	Equivalent
FPICOT3255 Apply silvicultural principles	FPICOT3255 Apply silvicultural principles	Equivalent
FPICOT3256 Apply biodiversity protection principles	FPICOT3256 Apply biodiversity protection principles	Equivalent
FPICOT3257 Follow cultural heritage requirements	FPICOT3257 Follow cultural heritage requirements	Equivalent
FPICOT3258 Comply with soil and water protection	FPICOT3258 Comply with soil and water protection	Equivalent
FPICOT3259 Operate a four-wheel drive on unsealed roads	FPICOT3259 Operate a four-wheel drive on unsealed roads	Equivalent
FPICOT3260 Recover four-wheel drive vehicles	FPICOT3260 Recover four-wheel drive vehicles	Equivalent
FPICOT3261 Transport forestry logs using trucks	FPICOT3226B Shift forestry logs using trucks	New unit, replaces FPICOT3226B. Not Equivalent
FPICOT3262 Transport forestry produce using trucks	No previous unit	New unit, no equivalent unit
FPICOT3263 Maintain and contribute to energy efficiency	No previous unit	New unit, no equivalent unit
FPICOT3264 Build and maintain timber stacks	No previous unit	New unit, no equivalent unit
FPICOT4201B Produce complex truss and frame plans and details using computers	FPICOT4201B Produce complex truss and frame plans and details using computers	Equivalent

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
FPICOT4202B Design timber structures	FPICOT4202B Design timber structures	Equivalent
FPICOT4203B Plan and coordinate product assembly	FPICOT4203B Plan and coordinate product assembly	Equivalent
FPICOT4204B Schedule and coordinate load shifting	FPICOT4204B Schedule and coordinate load shifting	Equivalent
FPICOT4205B Coordinate log debarking operations	FPICOT4205B Coordinate log debarking operations	Equivalent
FPICOT4206B Plan and coordinate boiler operations	FPICOT4206B Plan and coordinate boiler operations	Equivalent
FPICOT4207B Plan and coordinate heat plant operations	FPICOT4207B Plan and coordinate heat plant operations	Equivalent
FPICOT5201B Implement sustainable forestry practices	FPICOT5201B Implement sustainable forestry practices	Equivalent
FPICOT5202B Manage forestry information and interpretations programs	FPICOT5202B Manage forestry information and interpretations programs	Equivalent
FPICOT5203B Manage installation and commissioning of equipment	FPICOT5203B Manage installation and commissioning of equipment	Equivalent
FPICOT5204B Organise enterprise maintenance programs	FPICOT5204B Organise enterprise maintenance programs	Equivalent
FPICOT5205A Develop biohazard contingency plans	FPICOT5205A Develop biohazard contingency plans	Equivalent
FPICOT5206B Implement forestry chain of custody certification system	FPICOT5206A Implement Forestry Chain of Custody certification system	Explicit reference to Illegal Logging Prohibition Act 2012 included in required knowledge item relating to legislation Application section modified to include reference to native and plantation forest

Unit code and title FPI11 V 2.1	Unit code and title FPI11 V1.1	Relationship
		environments Equivalent
FPICOT5207A Implement sustainability in the workplace	FPICOT5207A Implement sustainability in the workplace	Equivalent
FPICOT5208B Build and maintain community relationships	FPICOT5208A Build and maintain community relationships	Application section modified to include reference to native and plantation forest environments Equivalent
FPICOT5209B Manage tree harvesting to minimise environmental impact	FPICOT5209A Manage tree harvesting to minimise environmental impact	Application section modified to include reference to native and plantation forest environments Equivalent
FPICOT6201B Manage community engagement	FPICOT6201A Manage community engagement	Application section modified to include reference to native and plantation forest environments Equivalent
FPICOT6202B Develop and manage a forestry chain of custody certification process for the workplace	FPICOT6202A Develop and manage a Forestry Chain of Custody certification process for the workplace	Explicit reference to Illegal Logging Prohibition Act 2012 included in required knowledge item relating to legislation Equivalent
FPICOT6203A Develop engineered timber products to meet energy efficient building	FPICOT6203A Develop engineered timber products to meet energy efficient building	Equivalent
FPICOT6204A Use carbon accounting to estimate emissions in the workplace	FPICOT6204A Use carbon accounting to estimate emissions in the workplace	Equivalent
FPICOT6205A Prepare an enterprise carbon management report	FPICOT6205A Prepare an enterprise carbon management report	Equivalent
FPICOT6207A Develop forest management systems and	FPICOT6207A Develop forest management systems and	Equivalent

Overview

What is a training package

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing peoples' skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Standards Skills Council (NSSC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

Training and assessment using Training Packages must be conducted by a Registered

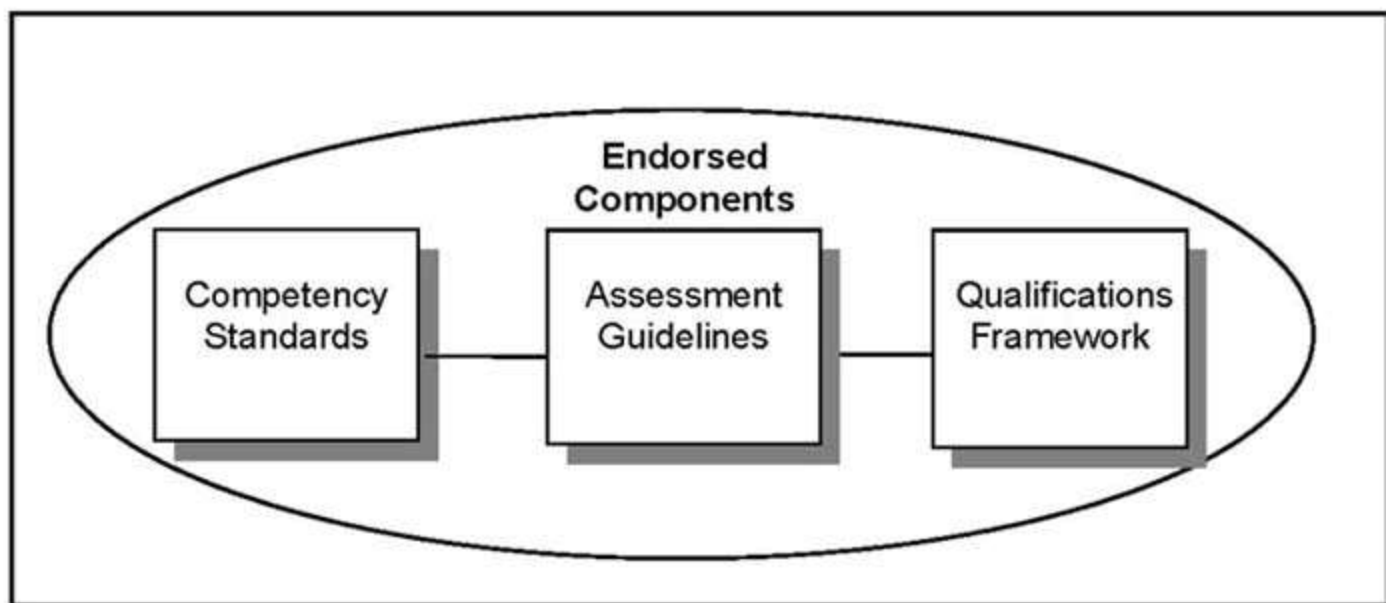

Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

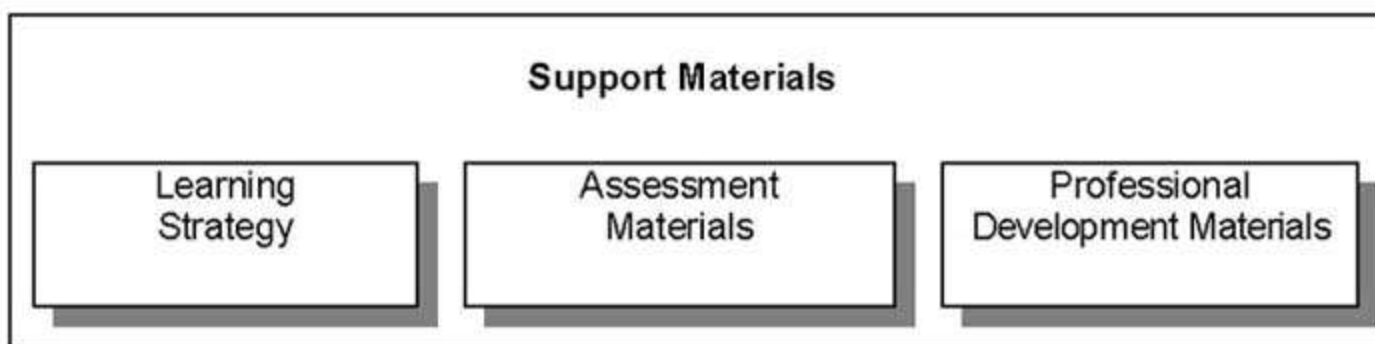

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the 'packaging rules'. The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example FPI05. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example FPI50111.

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used;

- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. The unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package.

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in FPISAW2201A;
- the first three characters signify the Training Package (FPI11 Forest and Forest Products Training Package in the above example) and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An 'A' at the end of the code indicates that this is the original unit of competency. 'B', or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and where changes are made that alter the outcome, a new code is assigned and the title is changed.

The uppercase letters in the codes for Forest and Forest Products Industry units of competency correspond to the industry sectors as follows:

FPICOR	Denotes Core units of competency
FPICOT	Denotes Common Technical units of competency (which are common to more than one sector of the industry)
FPIFGM	Denotes units of competency within the Forest Growing and Management sector
FPIHAR	Denotes units of competency within the Harvesting and Haulage sector
FPISAW	Denotes units of competency within the Sawmilling and Processing sector
FPIWPP	Denotes units of competency within the Wood Panel and Board Production sector
FPITMM	Denotes units of competency within the Timber Manufactured Products and Timber Merchandising sector

Imported units of competency retain the codes from their Training Package of origin.

Contextualisation Advice for Unit of Competency Codes in FPI11

Unit of Competency version control in this Training Package uses a new explicit 'Revision Number' as follows:

- Revision 1 indicates that this is the original unit of competency.
- Revision 2 or above means that minor changes have been made. For example FPICOT2235A becomes FPICOT2235A, Revision 2 rather than FPICOT2235B. Typically this level of revision would mean that wording has changed in the range statement or evidence guide, providing clearer unit intent.

The individual Unit of Competency 'Revision Number' is displayed in training.gov.au (TGA) and on the cover page of the published unit. The FPI11 Training Package incorporates these changes as follow:

- Codes allocated before the introduction of TGA will be retained indefinitely. However, the 'A', 'B', 'C' component of the code will no longer be incremented. Instead an explicit Unit of Competency 'Revision Number' will be used
- New unit codes will not include an 'A', 'B', 'C' suffix. As such all new codes will contain 11 Characters. For example FPIFGM3212
- Where changes are made that alter the outcome of the unit, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Package's broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words 'in' for Certificates I to IV, and 'of' for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- FPI20111 Certificate II in Forest Growing and Management
- FPI50111 Diploma of Forest and Forest Products.

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- FPICOT2201B Stack and bind material

- FPISAW3201B Treat timber.
-

Introduction to FPI11 V2.1

The Industry

The Forest and Forest Products Industry covers a diverse range of activities from growing and management of plantation and native forest resources, through harvesting, sawmilling and processing, to the manufacture, merchandising and retailing of finished products.

The industry is characterised by a mix of small, medium and large enterprises. Some enterprises show a high degree of vertical integration, being involved in activities across the six industry sectors. The six industry sectors are:

- Forest Growing and Management
- Harvesting and Haulage
- Sawmilling and Processing
- Timber Manufactured Products
- Timber Merchandising
- Wood Panel Products.

Forest Growing and Management has traditionally been dominated by very large organisations, usually either State owned, or associated with large downstream manufacturing operations. A new category of forest growers are the agroforesters, or farm foresters, who often run plantations as micro-businesses attached to a commercial farm.

Activities in the Forest Growing and Management sector generally involve the planting, tending, protection and preparation of trees for harvesting, including the general environmental management of the land and land usage. Forests are maintained not only for the production of timber products, but for conservation, land protection, recreational, social and scientific purposes.

Harvesting and Haulage typically involves small enterprises employing the 4-6 people needed to run a single logging crew. Harvesting operators usually have a contractual relationship with their suppliers (forest owners) and customers (sawmillers and manufacturers of various types), rather than an open-market relationship.

Forest harvesting is carried out in both native hardwood forests and softwood or hardwood plantations. Jobs in this sector, typically involving outdoor work, can include activities such as construction of roads and log-landings, harvesting trees either mechanically or manually, plant and equipment operation, shifting tree lengths into various products and grades of product, grading of sawlogs, loading logs for delivery to specified processing plants, and undertaking rehabilitation works to rejuvenate forest coupes (areas from which trees are harvested).

Sawmilling and Processing is comprised of small, medium and large organisations that undertake a range of activities. These include log sawmilling, production of hardwood and softwood chips for use by other sectors of the industry, and value adding through planing and moulding activities (including finger jointing), preservative treatment, kiln drying, the production of landscape bark and chips, production of flooring and joinery products, component manufacturing and planing, moulding and machining.

Increasingly, enterprises involved in sawmilling and processing are highly mechanised and rely on computer technology to control the production process.

Timber Manufactured Products comprises small, medium and large enterprises and is involved in the production of a wide range of products including doors, windows and prefabricated trusses and frames, for the construction industry. Other enterprises produce pallets, casks, boxes, crates etc. for agricultural and industrial use.

Enterprises employ skilled tradespeople (eg carpenters, joiners, builders and maintenance mechanics) as well.

Timber Merchandising outlets range from small ‘corner-shop’ timber and hardware stores to large national chains. Industry seems to be trending away from small independent stores towards larger businesses, or groups of small businesses coming together under the banner of a franchise. This sector includes:

- Wholesale distributors who import timber and wood or buy from local manufacturers for sale to merchants and other large volume clients. They are often associated with large timber producers and are usually based in capital cities or major regional centres.
- Merchants who sell to trade users of timber products. They usually handle many different types of timber species and products, bought from a large number of suppliers. They may provide ancillary services, eg. Quantities and sizes to order, drying, moulding etc.
- Retailers who sell timber products and associated hardware in smaller quantities to individual tradespeople and the general public. The emphasis is on display, customer service and packaging.
- **Wood Panel Products** is predominantly comprised of large enterprises due to high costs involved in establishing efficient production facilities. Activities in the wood panel products sector include the manufacture of veneers, plywood, particle board and medium density fibre board (MDF).

The manufacture of wood panel products is a highly mechanised, technology driven production process.

Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*.

<http://www.aqf.edu.au/wp-content/uploads/2013/05/AQF-2nd-Edition-January-2013.pdf>

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2010 *Essential*

Standards for Initial and Continuing Registration.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied

across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources

- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or

strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.

- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
 - Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Qualifications and Packaging Rules

Forest and Forest Products Industry Qualifications

Background

The qualifications structure of FPI11:

- supports both general and sector specific qualification pathways
- provides effective qualifications at the higher AQF levels (Certificate IV and Diploma) that suit industry needs for a technical qualification and a management focused qualification, or a balance of both
- provides qualifications consisting of a small core to ensure flexibility by allowing people to choose electives to suit their job outcomes and future job choices
- allows achievement of ‘skills sets’ within qualifications if achievement of a total qualification is not required.

The qualifications structure incorporates the outcomes of extensive industry consultation which determined that qualifications should:

- provide maximum flexibility to allow enterprises and individuals to select combinations of units of competency relevant to their training needs
- reflect any State or Territory licensing requirements
- recognise different entry points and development pathways
- recognise the trades of Sawdoctoring and Woodmachining as discrete qualifications
- reflect realities in terms of work organisation and job design
- allow for articulation between qualifications
- create career path opportunities for people within the industry.

Structure of the Qualifications

The qualification packaging rules provide maximum flexibility through the identification of mandatory units to meet occupational requirements, provision of a choice of electives to ensure enterprise needs are met, and the incorporation of relevant units from other endorsed Training Packages to facilitate portability of qualifications.

Units within qualifications are arranged in the following broad categories:

- **Core Units**

Includes identified compulsory or 'core' units which provide generic skills, for example in areas such as communication, OHS, working effectively, quality, the environment, teamwork and first aid.

- **Elective Units**

Includes 'sector' electives to meet the requirements of technical functional areas. Units have been placed into specialist 'streams' or skills sets such as fire control, harvesting operations, timber products, sawing operations, merchandising etc. Units in this group are generally technical in nature with outcomes directly relevant to the Forest and Forest Products Industry.

Includes 'common' electives to meet the requirements of common functional areas. Units have been placed into streams such as administration and business, load handling, communication and relationships, machinery and equipment etc. Units in this group are generally cross-industry in nature.

FPI11 allows customisation of qualifications through a choice of up to two or three (depending on the qualification) electives from FPI11, other nationally endorsed Training Packages, or State/Territory accredited courses. Generally, electives from this category must be either aligned to the same AQF level outcomes, or aligned to one AQF level up or down from the level of the qualification.

The packaging of the units of competency complements, but does not infringe on the responsibilities and requirements of State and Territory based regulatory authorities. An individual seeking a qualification for a position covered by State or Territory regulatory requirements should check with the relevant Act and regulatory authority, the employer and the RTO providing the training and assessment, when selecting elective units of competency to complete a qualification.

Access, Equity and Cultural Diversity

The skills required of employees in the Forest and Forest Products Industry are comprehensive and many employment opportunities are available. The qualifications in this Training Package reflect the required range of competencies and are written in a non-exclusive manner so as to increase the participation rates of all equity and disadvantaged groups and to minimise unintentional bias.

The Forest and Forest Products Industry recognises the importance of access and equity and is committed to ensuring that access to employment and training is available regardless of gender, socio-economic background, disability, ethnic origin, age or race. Catering for differences may involve adapting the physical environment, equipment, and training and assessment materials for learners. An inclusive environment is one that acknowledges and values the variations between people and cultures. It recognises and embraces difference and provides the means by which all clients have the greatest opportunity to achieve their goals.

Qualification Pathways

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package. For more information about qualifications and pathways contact ForestWorks ISC.

PO Box 612

NORTH MELBOURNE VICTORIA 3051

Ph: +61 1800 177 001

Fax: +61 3 9326 7800

Email: forestworks@forestworks.com.au

Web: www.forestworks.com.au

Forest and Forest Products Industry qualifications can be achieved via a variety of pathways and training delivery and assessment options. Possible pathways include:

- work-based training and assessment
- a mixture of institution-based training and assessment and work-based training and assessment
- recognition of prior learning and current competency (RPL/RCC)
- recognition of prior learning combined with further training, as required.

In considering pathways it is important to note that assessment for the issuing of an AQF qualification in some sectors of the Forest and Forest Products Industry may be conducted in the workplace or in a simulated situation where issues of safety and/or environmental damage are limiting factors. On-the-job assessment conducted in the workplace or in a simulated situation ensures that candidates can function effectively in the real work environment and that the competencies assessed are relevant to the work site or industry.

This Training Package provides open entry at each of the AQF levels. Open entry is available at all levels provided the prospective learner's general education and competency level is equivalent to the outcome of four to five years of secondary school. Additionally, entry levels provide an option for potential learners to choose a qualification suited to their needs while providing flexibility for recruitment action by employers. Entry into all qualifications is also available through progression from a lower level qualification, and Recognition of Prior Learning (RPL) arrangements.

Sector Qualifications

Entry-level qualification

The FPI1011 Certificate I in Forest and Forest Products is an 'entry-level' qualification within the Training Package to cover the basic entry level functions of an operator in the industry. These include core skills and knowledge relating to communication, working effectively in the industry, following environmental care and OHS procedures, and maintaining quality and product care.

Forest Growing and Management Sector

In general, jobs in this sector are focused at AQF levels 2 and 3 covering a range of activities from planting, weeding, pruning and pest management, to falling trees, fire management and construction and maintenance of roads. Two qualifications at these levels are provided for employees in the Forest Growing and Management sector:

- FPI20113 Certificate II in Forest Growing and Management, and
- FPI30113 Certificate III in Forest Growing and Management.

This sector also calls for higher level technical skills in forest management, with a natural progression to the FPI40111 Certificate IV in Forest Operations. This qualification provides a balance of supervisory functions together with technical skills in areas such as fire control, breeding and propagation, site establishment and maintenance, tree growing and maintenance.

Harvesting and Haulage Sector

Jobs in this sector are mainly focused at the operator level at AQF 3. The sector covers a range of activities from construction of roads and log-landings, plant and equipment operation, harvesting trees, to stump removal and segregating or sorting logs. Two qualifications at AQF levels 2 and 3 are provided for employees in the Harvesting and Haulage sector:

- FPI20213 Certificate II in Harvesting and Haulage, and
- FPI30213 Certificate III in Harvesting and Haulage.

A natural path for these operators is progression to the FPI40111 Certificate IV in Forest Operations which provides a balance of supervisory responsibilities together with technical skills in areas such as fire control, harvesting operations, machinery and equipment.

Sawmilling and Processing Sector

Jobs in this sector are focused at AQF levels 2 and 3 covering a range of activities from sawing logs, producing hardwood or softwood chips, kiln drying, conducting end matching and finger jointing operations, to weighing loads. Two qualifications at these levels are provided for employees in the Sawmilling and Processing sector:

- FPI20311 Certificate II in Sawmilling and Processing, and
- FPI30311 Certificate III in Sawmilling and Processing.

A natural path for these operators is progression to the FPI40211 Certificate IV in Timber Processing which provides a balance of supervisory responsibilities together with technical skills in areas such as grading and testing, timber treatment and drying, sawing operations and competitive manufacturing.

Wood Panel Products Sector

Jobs in this sector are focused at AQF levels 2 and 3 covering a range of activities from producing veneer, machining panel, laminating boards and assembling products, to chipping or flaking wood and cutting panels to profile. Two qualifications at these levels are provided for employees in the Wood Panel Products sector:

- FPI20411 Certificate II in Wood Panel Products, and
- FPI30411 Certificate III in Wood Panel Products.

A natural path for these operators is progression to the FPI40211 Certificate IV in Timber Processing which provides a balance of supervisory responsibilities together with technical skills in areas such as board and veneer production, timber products, timber treatment and drying, grading and testing and competitive manufacturing.

Timber Manufactured Products Sector

Jobs in this sector are focused at AQF levels 2 and 3 covering a range of activities from dressing boards and timber, cutting material using computer programmed machinery to assembling products. Two qualifications at these levels are provided for employees in the Timber Manufactured Products sector:

- FPI20511 Certificate II in Timber Manufactured Products, and
- FPI30511 Certificate III in Timber Manufactured Products.

A natural path for these operators is progression to the FPI40211 Certificate IV in Timber Processing which provides a balance of supervisory responsibilities together with technical skills in areas such as grading and testing, timber products, trusses and frames, logyard and material preparation and competitive manufacturing.

Additionally, qualifications designed specifically for the Truss and Frame sector of the industry now cover the complete range of jobs in both manufacture and design in this highly specialised area:

- FPI20711 Certificate II in Timber Truss and Frame Design and Manufacture
- FPI30911 Certificate III in Timber Truss and Frame Design and Manufacture
- FPI40311 Certificate IV in Timber Truss and Frame Manufacture
- FPI40411 Certificate II in Timber Truss and Frame Design
- FPI50311 Diploma of Timber Truss and Frame Manufacture
- FPI50411 Diploma of Timber Truss and Frame Design

Timber Merchandising Sector

Jobs in this sector are focused at AQF levels 2 and 3 covering a range of activities from stock control, estimating and costing jobs, cutting and machining material and grading products, to sales and customer service. Two qualifications at these levels are provided for employees in the Timber Merchandising sector:

- FPI20611 Certificate II in Timber Merchandising, and
- FPI30611 Certificate III in Timber Merchandising.

A natural path for these operators is progression to the FPI40211 Certificate IV in Timber Processing which provides a balance of supervisory responsibilities together with technical skills in areas such as logyard and material preparation and retail.

Trades

There are two trade qualifications at the AQF 3 level. The FPI30711 Certificate III in Sawdoctoring provides specialist coverage of sawdoctoring competencies, for example hand sharpening knives and blades, welding, aligning sawing production systems and assessing and maintaining saw and cutter performance. This qualification will ensure the integrity of the sawdoctoring trade by maintaining an appropriate depth of knowledge and skills and level of technical competence in sawdoctoring.

The FPI30811 Certificate III in Woodmachining also provides some specialist coverage of sawdoctoring competencies, but has a focus on an in-depth knowledge of timber technology. Progression from the trades would naturally be to FPI40211 Certificate IV in Timber Processing.

Diploma Qualifications

The FPI50111 Diploma of Forest and Forest Products provides a management pathway for all qualifications within the Training Package. While there is a balance between technical and generic management outcomes within the qualification, there is an emphasis on management, for example in areas such as planning and managing inventory programs, genetic resources, propagation programs, native forest regeneration, product design and panel production.

Diploma qualifications for the Timber Truss and Frame:

FPI50311 Diploma of Timber Truss and Frame Manufacture

FPI50411 Diploma of Timber Truss and Frame Design

Advanced Diploma Qualification

The FPI60113 Advanced Diploma of Forest Industry Sustainability recognises the emerging needs of the industry to provide pathways and links to the higher education sector via graduate certificate or degree programs in forestry or environmental science such as the new Graduate Certificate in Timber (Processing and Building) at the Centre for Sustainable Architecture with Wood, University of Tasmania.

Introduction to the Industry

Introduction to the Industry

The Forest and Forest Products Industry covers a diverse range of activities from growing and management of plantation and native forest resources, through harvesting, sawmilling and processing, to the manufacture, merchandising and retailing of finished products.

The industry is characterised by a mix of small, medium and large enterprises. Some enterprises show a high degree of vertical integration, being involved in activities across the six industry sectors. The six industry sectors are:

- Forest Growing and Management
- Harvesting and Haulage
- Sawmilling and Processing
- Timber Manufactured Products
- Timber Merchandising
- Wood Panel Products.

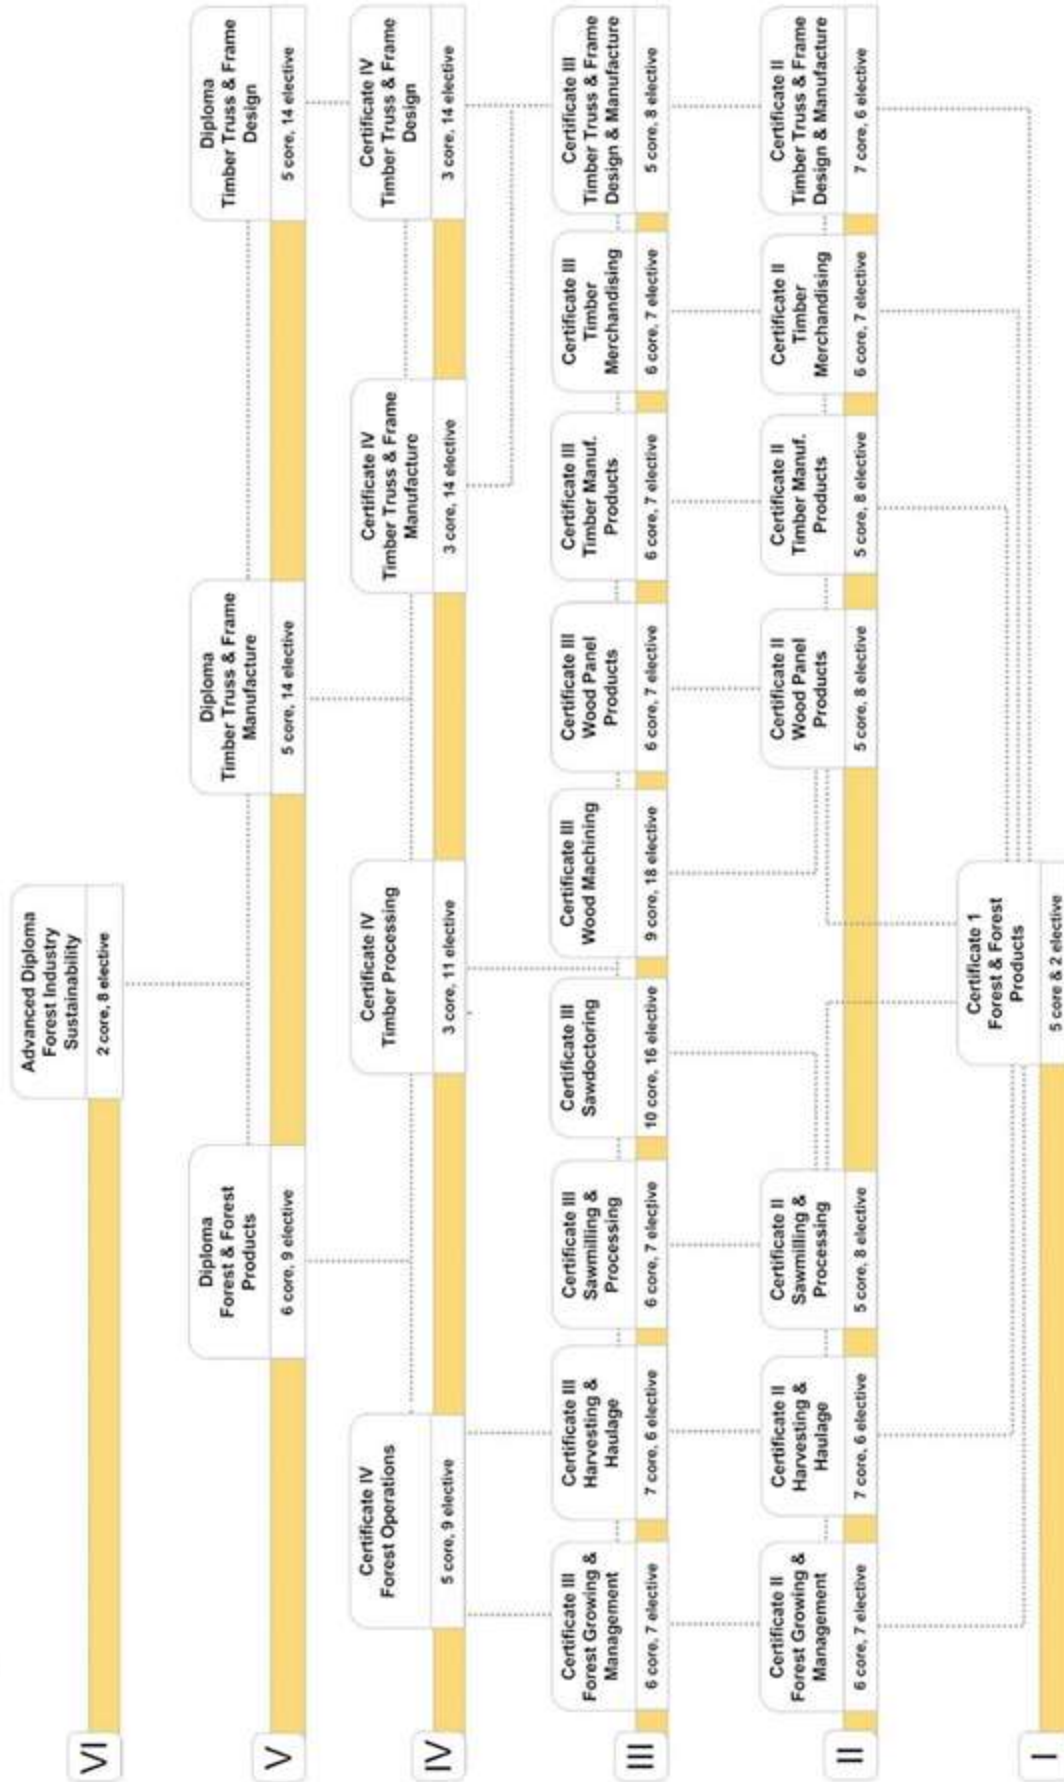

Skill Sets in this Training Package

Skill set for a boom delimeter operator
Skill set for a crawler/dozer operator
Skill set for a feller buncher operator
Skill set for a forwarder operator
Skill set for a heavy production mobile chipper operator
Skill set for a loader operator
Skill set for a mechanical processor operator
Skill set for a native forest operator
Skill set for a plantation forest operator
Skill set for a single grip harvester operator
Skill set for a skidder operator
Skill set for an excavator operator
Skill set for fire salvage operations
Skill set for off road four wheel drive operations
Skill set for soil and water protection (roading)
Skill set for carbon accounting
Skill set for a forestry log truck driver
Skill set for a forestry produce truck driver
Skill set for a finger jointing grader operator
Skill set for a finger jointing moulder operator
Skill set for a finger jointing plant operator
Skill set for a finger jointing quality control tester
Skill set for forest and wood product innovation for leaders
Skill set for forest and wood product innovation for managers

Skill set for supporting forest and wood products innovation
Skill set for managing change in the forest and wood products industry
Skill set for forest and wood products industry stakeholder engagement
Skill set for supporting workplace engagement in forest and wood products
Skill set for leading business development in the forest and wood products industry
Skill set for managing business development in the forest and wood products industry
Skill set for supporting business development in the forest and wood products industry

Qualification Pathways

Pathways Chart - FPI11

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing and registration requirements; and assessment pathways.

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:

- benchmarks for assessment
- specific industry requirements
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF

Benchmarks for Assessment

The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Principles of Assessment

All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:

- validity
- reliability
- flexibility

- fairness
- sufficiency

These principles must be addressed in the:

- design, establishment and management of the assessment system for this Training Package
- development of assessment tools, and
- the conduct of assessment.

Validity

Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:

- (a) assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance
- (b) assessment of knowledge and skills must be integrated with their practical application
- (c) judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency

Reliability

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

Flexibility

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

Fairness

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

Sufficiency

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough *appropriate* evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

Rules of Evidence

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.

Valid

Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

Sufficient

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

Current

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

Authentic

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.

Assessment Requirements of the Australian Quality Training Framework

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 *Essential Standards for Registration*.

The AQTF 2010 *Essential Standards for Initial and Continuing Registration* can be downloaded from <www.training.com.au>.

The following points summarise the assessment requirements.

Registration of Training Organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1.

Assessor Competency Requirements

Each person involved in training and assessment must be competent for the functions they perform. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 *Users' Guide to the Essential Standards for Registration* – Appendix 2.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*..

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Recording Assessment Outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Issuing AQF qualifications and Statement of Attainment

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current *AQF Implementation Handbook* and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF and the edition of the *AQF Implementation Handbook*—available on the AQF Council website <www.aqf.edu.au>

Licensing/Registration Requirements

This section provides information on licensing/registration requirements for this Training Package, with the following important disclaimer.

Licensing and registration requirements that apply to specific industries, and vocational education and training, vary between each State and Territory, and can regularly change. The developers of this Training Package, and DEEWR, consider that the licensing/registration requirements described in this section apply to RTOs, assessors or candidates with respect to this Training Package. While reasonable care has been taken in its preparation, the developers of this Training Package and DEEWR cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis.

Contact the relevant State or Territory Department(s) to check if the licensing/registration requirements described below still apply, and to check if there are any others with which you must comply. For further information contact <http://www.forestworks.com.au>.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, or a recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held – the critical issue is that the candidate is competent, not how the competency was acquired.

Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package, the AQTF and, where relevant, the Australian Qualifications Framework.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Credit Pathways

Credit is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were acquired, provided that the learning is relevant to the unit of competency outcomes.

Recognition of Prior Learning

Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of Recognition of Prior Learning (RPL) provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;
- people returning to the workplace; and
- people with disabilities or injuries requiring a change in career.
-

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.

Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:

- questioning (oral or written)

- consideration of a portfolio and review of contents
- consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification component
- mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
- observation of performance, and
- participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

Credit Transfer

Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.

This process involves education institutions:

- mapping, comparing and evaluating the extent to which the defined *learning outcomes and assessment requirements* of the individual *components of one qualification* are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification
- making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
- setting out the agreed credit outcomes in a documented arrangement or agreement, and

- publicising the arrangement/agreement and credit available.

Combination of Pathways

Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor Requirements

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

- 1.4 Training and assessment are conducted by trainers and assessors who:
- a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and
 - b) have the relevant vocational competencies at least to the level being delivered or assessed, and
 - c) can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and
 - d) continue to develop their Vocational Education and Training (VET) knowledge and skills as well as their industry currency and trainer/assessor competence.

* See AQTF 2010 *Users' Guide to the Essential Standards for Registration* – Appendix 2

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgements about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register <www.ntis.gov.au>.

Developing Assessment Tools

When developing their own assessment tools, assessors must ensure that the tools:

- are benchmarked against the relevant unit or units of competency;
- are reviewed as part of the validation of assessment strategies required under the AQTF; and
- meet the assessment requirements expressed in the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

Language, Literacy and Numeracy

The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory Assessment Requirements

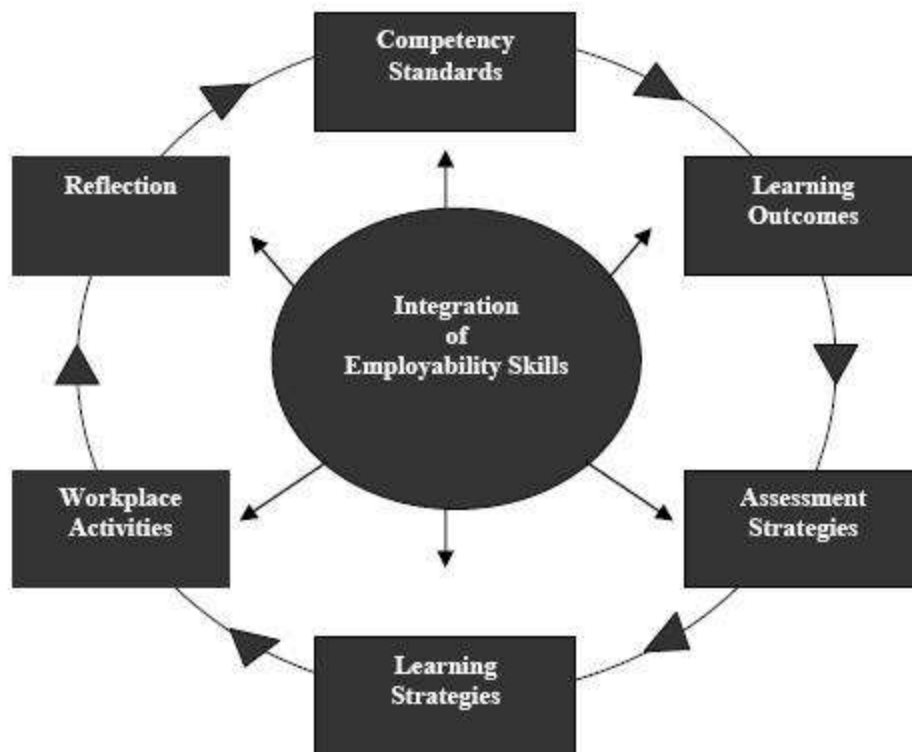

Assessments must meet the criteria set out in the AQTF 2010 *Essential Standards for Initial and Continuing Registration*. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 *Essential Standards for Initial and Continuing Registration* are as follows:

1.5 Assessment, including Recognition of Prior Learning (RPL):

- a) meets the requirements of the relevant Training Package or accredited course
- b) is conducted in accordance with the principles of assessment and the rules of evidence
- c) meets workplace and, where relevant, regulatory requirements
- d) is systematically validated.

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such, they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

The National Quality Council has endorsed a model for assessing and reporting Employability Skills, which contains further suggestions about good practice strategies in teaching, assessing, learning and reporting Employability Skills. The model is available from <<http://www.training.com.au/>>.

The endorsed approach includes learners downloading qualification specific Employability Skills Summaries for Training Package qualifications from an online repository at <<http://employabilityskills.training.com.au>>

For more information on Employability Skills in

Forest and Forest Product Training Packages go to the ForestWorks ISC website at www.forestworks.com.au <http://www..>

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from <http://employabilityskills.training.com.au> "

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable Adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability.

Under the Disability Standards for Education 2005, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While ‘reasonable adjustment’ and ‘unjustifiable hardship’ are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student’s disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. Go to <http://www.deewr.gov.au/tpdh/Pages/home.aspx>.

Further Sources of Information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Assessment Resources

Registered training organisations (RTOs) are at the forefront of vocational education and training (VET) in Australia. They translate the needs of industry into relevant, quality, client-focussed training and assessment.

RTOs should strive for innovation in VET teaching and learning practices and develop highly flexible approaches to assessment which take cognisance of specific needs of learners, in order to improve delivery and outcomes of training.

Resources can be purchased or accessed from:

- TVET Australia – provides an integrated service to enable users of the national training system to identify and acquire training materials, identify copyright requirements and enter licenses for use of that material consistent with the scope and direction of the NQC.

Competency Standards

Competency Standards - Industry Contextualisation

FPI10111 Certificate I in Forest and Forest Products

Modification History

Release 2

Imported unit updated to current release:

- PUATEA001B

Description

This qualification is designed for job roles in the forest and forest products industry.

Pathways Information

This qualification has two employment pathways for operational environments in the forest and forest products industry.

- Arboriculture Worker
- Forestry Worker

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
---------------------	--

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Communication	<ul style="list-style-type: none"> • Gather, receive and respond to verbal and written instructions with correct actions • Respond to work signage with correct action • Use appropriate communication and interpersonal techniques with colleagues and others • Use questions to gain additional information and to clarify understanding
Teamwork	<ul style="list-style-type: none"> • Participate in simple meeting processes • Provide assistance to and seek assistance from co-workers to achieve work tasks • Seek first aid assistance from others in a timely manner • Share relevant workplace information with co-workers to achieve designated individual and team goals and objectives
Problem-solving	<ul style="list-style-type: none"> • Effectively solve routine problems • Follow safe workplace procedures and safe work instructions for controlling risks • Follow up instances of unclear visual communications to avoid repeated problems • Identify problems and equipment faults and demonstrate appropriate response procedures
Initiative and enterprise	<ul style="list-style-type: none"> • Actively seek feedback on performance from appropriate personnel to confirm quality of performance and identify areas for improvement • Identify and clarify contradictions, ambiguity, uncertainty or misunderstandings with appropriate personnel • Promptly review and report to appropriate personnel, factors affecting the achievement of work tasks • Seek opportunities to improve environmental care practices
Planning and organising	<ul style="list-style-type: none"> • Accurately locate, record and report workplace information • Identify and comply with legal and procedural requirements • Identify environmental care requirements • Identify, prioritise and complete work tasks, within designated timeframes in accordance with work order
Self-management	<ul style="list-style-type: none"> • Apply, follow and adhere to quality system procedures to personal work • Identify and comply with applicable occupational health and safety, legislative and organisational requirements relevant to communicating and interacting with others • Maintain work relationships • Seek appropriate support to assist and improve own performance to achieve personal and organisational goals and objectives

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Learning	<ul style="list-style-type: none"> • Establish opportunities for professional development in consultation with appropriate personnel in accordance with organisational procedures • Practise and carry out emergency and evacuation procedures in the event of an emergency • Record and report information regarding learning and competency development in accordance with organisational requirements
Technology	<ul style="list-style-type: none"> • Select equipment appropriate to work task requirements and use in accordance with manufacturer's recommendations, which includes equipment necessary to complete work tasks, and may include telephones or communications equipment, tools, machinery, vehicles, navigational aids, instruments, computers and computer software, printers, facsimile machines and photocopiers

Packaging Rules

Total number of units = 7

- 5 core units plus
- 2 elective units recommended for packaging at Certificate I or II level from this or any endorsed Training Package or State/Territory accredited course.

Elective units must be relevant to work undertaken in the forest and forest products sector of the industry

CORE UNITS

Field	Unit Code	Unit Name
Core	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR2203B	Follow environmental care procedures
	FPICOR2205B	Follow OHS policies and procedures

	FPICOR2207B	Maintain quality and product care
ELECTIVE UNITS	FPIFGM2201B	Collect seed
	AHCILM201A	Maintain cultural places
	PUATEA001B	Work in a team
	FPIFGM2214B	Maintain visitor sites
	BSBINM201A	Process and maintain workplace information
	BSBWOR204A	Use business technology

FPI20111 Certificate II in Forest Growing and Management

Modification History

Release 3

Mapping of FPI20111 updated to reflect change of usage recommendation to Current.

One new unit added to elective bank: FPICOT3263

Elective unit PUAFIR215 replaces PUAFIR201B – Equivalent

Release 2

Imported units updated to current releases.

Release 1

Qualification code updated to FPI20111 in FPI11 Version 1.

The following units added to the qualification as electives:

- AHCCHM304A Transport, handle and store chemicals
- FPICOT2236 Fall trees manually (basic)
- FPICOT3259 Operate a four-wheel drive on unsealed roads

Description

This qualification is designed for job roles in the forest growing and management sector of the forest and forest products industry.

Pathways Information

This qualification has seven employment pathways for typical operational environments of forest growing and management. These are:

- Arboriculture Worker
- Farm Forestry Worker
- Forestry Worker
- Nursery Worker
- Plantation Establishment Worker
- Plantation Forest Officer
- Silviculturalist

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> Clarify legal and procedural requirements with appropriate personnel, to ensure consistency of interpretation and application Communicate and work safely with others in the work area Identify and comply with safety signs and symbols Notify appropriate personnel and complete an incident report
Teamwork	<ul style="list-style-type: none"> Receive and action feedback Make constructive contributions to the group Provide assistance to and seek assistance from co-workers to achieve work tasks Share relevant workplace information with co-workers to achieve designated individual and team goals and objectives
Problem-solving	<ul style="list-style-type: none"> Solve routine problems Eliminate or reduce and report fire risks and hazards according to workplace procedures Follow up instances of unclear visual communications to avoid repeated problems Minimise immediate risk to self, as well as the health and safety of others, by controlling hazards according to

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	occupational health and safety requirements
Initiative and enterprise	<ul style="list-style-type: none"> • Check own role and responsibilities with appropriate personnel according to organisational requirements • Note and communicate goals or outcomes to appropriate personnel • Recognise signs of fire and raise alarm at appropriate time according to workplace procedures • Suggest improvements to workplace practices and resource efficiency to relevant personnel
Planning and organising	<ul style="list-style-type: none"> • Locate, record and report workplace information • Comply with applicable legislative and procedural requirements in an ethical manner consistent with workplace standards • Maintain quality and product care according to environmental legislation and workplace procedures • Gather, convey and receive information
Self-management	<ul style="list-style-type: none"> • Apply, follow and adhere to quality system procedures in personal work • Identify and comply with applicable occupational health and safety, legislative and organisational requirements relevant to communicating and interacting with others • Maintain work relationships • Follow environmental care procedures according to organisational requirements
Learning	<ul style="list-style-type: none"> • Identify and establish opportunities for professional development in consultation with appropriate personnel and according to organisational procedures • Record and report information regarding learning and competency development according to organisational requirements
Technology	<ul style="list-style-type: none"> • Request appropriate medical assistance using relevant communication media and equipment, which may include mobile phone, satellite phone, HF or VHF radio, flags, flares, two-way radio, email and electronic equipment

Packaging Rules

Total number of units = 13

- 6 core units plus
- 7 elective units, consisting of:

- 3 units from Group A
- up to 4 units from Group A and/or Group B
- up to 2 units recommended for packaging at Certificate I, II or III level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the forest growing and management sector of the industry.

CORE UNITS

Field	Unit Code	Unit Title
Core	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR2203B	Follow environmental care procedures
	FPICOR2204B	Follow fire prevention procedures
	FPICOR2205B	Follow OHS policies and procedures
	FPICOR2207B	Maintain quality and product care
	HLTFA301C	Apply first aid

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Fire Control	AHCWRK201A	Observe and report on weather
	PUAEQU001B	Prepare, maintain and test response equipment
	PUAFIR215	Prevent injury
	PUAFIR204B	Respond to wildfire (unit has PUAFIR201B Prevent injury as a prerequisite)
	PUALAW001B	Protect and preserve incident scene
	PUAOPE002B	Operate communications systems and equipment
	PUATEA001B	Work in a team

Harvesting Operations	AHCARB204A	Undertake standard climbing techniques
	AHCARB206A	Undertake stump removal
	FPICOT2220B	Select trees for tending operations
	FPICOT2236	Fall trees manually (basic)
	FPIHAR2203B	Hook up felled logs using cables (choker)
	FPIHAR2204B	Perform landing duties (chaser)
	FPIHAR2205B	Conduct mobile splitting operations
	FPIHAR2206B	Operate a mobile chipper/mulcher
	FPIHAR2207A	Trim and cut harvested trees
Grading & Testing	FPICOT2223B	Segregate and sort logs

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Warehousing and Distribution	FPICOT2228B	Store materials
	TLID3033A	Operate a vehicle-mounted loading crane
Machinery and Equipment	FPICOT2237A	Maintain chainsaws
	TLIC2002A	Drive light rigid vehicle
	TLIC3003A	Drive medium rigid vehicle
Load Handling	TLID2004A	Load and unload goods/cargo
	TLID2010A	Operate a forklift
	TLILIC2001A	Licence to operate a forklift truck

**Safety and
Quality Processes**

AHCILM201A	Maintain cultural places
AHCWRK203A	Operate in isolated and remote situations
FPICOT2233B	Navigate in forest areas
FPICOT3263	Maintain and contribute to energy efficiency
RIOHS205A	Control traffic with stop-slow bat

**Administration
and Business**

BSBINM201A	Process and maintain workplace information
BSBITU201A	Produce simple word processed documents
BSBWOR204A	Use business technology

FPI20113 Certificate II in Forest Growing and Management

Modification History

Release 2

Mapping to FPI20111 removed.

Release 1

Qualification released as FPI20113 in FPI11 Version 2.

Core unit HLTF311A replaces HLTF301C – Not equivalent

One new unit added to elective bank: FPICOT3263

Elective unit PUAFIR215 replaces PUAFIR201B – Equivalent

Imported units updated to current release:

- AHCNSY203A
- LGAWORK212A
- PUAFIR204B
- PUAFIR209B
- PUALAW001B
- PUATEA001B

Description

This qualification is designed for job roles in the forest growing and management sector of the forest and forest products industry.

Pathways Information

This qualification has seven employment pathways for typical operational environments of forest growing and management. These are:

- Arboriculture Worker
- Farm Forestry Worker
- Forestry Worker
- Nursery Worker
- Plantation Establishment Worker
- Plantation Forest Officer
- Silviculturalist

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR2203B	Follow environmental care procedures
	FPICOR2204B	Follow fire prevention procedures
	FPICOR2205B	Follow OHS policies and procedures
	HLTFA311A	Apply first aid

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Fire Control	AHCFIR201A	Assist with prescribed burning
	AHCWRK201A	Observe and report on weather
	FPIFGM2211B	Detect fires
	PUAEQU001B	Prepare, maintain and test response equipment
	PUAFIR215	Prevent injury
	PUAFIR204B	Respond to wildfire (unit has PUAFIR201B Prevent injury as a prerequisite)
	PUAFIR209B	Work safely around aircraft
	PUALAW001B	Protect and preserve incident scene
	PUAOPE002B	Operate communications systems and equipment

	PUATEA001B	Work in a team
Site Establishment and Maintenance	AHCILM201A	Maintain cultural places
	AHCINF202A	Install, maintain and repair fencing
	AHCINF203A	Maintain properties and structures
	AHCIRG204A	Lay irrigation and/or drainage pipes
	AHCIRG206A	Maintain pressurised irrigation systems
	AHCPMG201A	Treat weeds
	AHCSAW201A	Conduct erosion and sediment control activities
	FPIFGM2207B	Undertake brushcutting operations
	FPIFGM2210B	Implement animal pest control procedures
	FPIFGM2214B	Maintain visitor sites
	LGAWORK212A	Perform field support duties in a roadwork environment
Breeding and Propagation	AHCNSY201A	Pot up plants
	AHCNSY203A	Undertake propagation activities
	FPIFGM2201B	Collect seed
	FPIFGM2202B	Prepare seedbed
	FPIFGM2209B	Cut, sort and set cuttings
	FPIFGM2212B	Graft cuttings
	FPIFGM2213B	Process seed
Tree Growing and Maintenance	AHCARB204A	Undertake standard climbing techniques
	AHCARB206A	Undertake stump removal
	AHCPMG202A	Treat plant pests, diseases and disorders

AHCNSY202A	Tend nursery plants
FPICOT2236	Fall trees manually (basic)
FPICOR2207B	Maintain quality and product care
FPICOT2220B	Select trees for tending operations
FPICOT2239A	Trim and cut felled trees
FPIFGM2203B	Plant trees by hand
FPIFGM2204B	Plant trees mechanically
FPIFGM2205B	Prune trees
FPIFGM2206B	Collect data or samples for assessment

Grading and Testing	FPIFGM2215B	Measure trees
----------------------------	-------------	---------------

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Warehousing and Distribution	AHCNSY302A	Receive and dispatch nursery products
	FPICOT2228B	Store materials
Machinery and Equipment	TLID3033A	Operate a vehicle-mounted loading crane
	FPICOT2237A	Maintain chainsaws
	FPICOT3259	Operate a four-wheel drive on unsealed roads
	TLIC2002A	Drive light rigid vehicle
	TLIC3003A	Drive medium rigid vehicle
Load Handling	AHCCHM304A	Transport, handle and store chemicals
	TLID2004A	Load and unload goods/cargo

	TLID2010A	Operate a forklift
	TLID2012A	Operate specialised load shifting equipment
	TLILIC2001A	Licence to operate a forklift truck
Safety and Quality Processes	AHCCHM201A	Apply chemicals under supervision
	AHCWRK203A	Operate in isolated and remote situations
	FPICOT2233B	Navigate in forest areas
	RIOHS205A	Control traffic with stop-slow bat
	FPICOT3263	Maintain and contribute to energy efficiency
Administration and Business	BSBINM201A	Process and maintain workplace information
	BSBITU201A	Produce simple word processed documents
	BSBWOR204A	Use business technology

FPI20211 Certificate II in Harvesting and Haulage

Modification History

Release 3

Mapping of FPI20211 updated to reflect change of usage recommendation to Current.

One new unit added to elective bank: FPICOT3263

Elective unit PUAFIR215 replaces PUAFIR201B – Equivalent

Release 2

Imported units updated to current releases.

TLID3033A replaces AHCMOM202A - due to a typographical error, AHCMOM202A was incorrectly included in this qualification. As per the Case for Endorsement, this error has now been corrected.

Release 1

Qualification code updated to FPI20211 in FPI11 Version 1.

The following units have been added to the qualification as electives:

- AHCCHM304A Transport, handle and store chemicals
- FPICOT2236 Fall trees manually (basic)
- FPICOT3259 Operate a four-wheel drive on unsealed roads

Description

This qualification is designed for job roles in the harvest and haulage sector of the forest and forest products industry.

Pathways Information

This qualification has ten employment pathways for typical operational environments of harvesting and haulage. These are:

- Bulldozer Operator
- Chainsaw Operator
- Excavator Operator
- Forest Harvester
- Forwarder Operator
- Grader
- Harvesting Technician

- Mobile Equipment Operator
- Rigging Slinger
- Skidder Operator

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Communicate details of an incident • Identify and comply with safety signs and symbols • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Make constructive contributions to the group • Notify appropriate personnel in the event of an emergency • Report breaches or potential breaches of relevant environmental regulations to relevant personnel • Share relevant workplace information with co-workers to achieve designated individual and team goals and objectives

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Problem-solving	<ul style="list-style-type: none"> Identify and report occupational health and safety issues and risks in the work area to appropriate personnel Identify problems and equipment faults and demonstrate appropriate response procedures Identify and promptly report problems to appropriate personnel to avoid repetition of de-valued product
Initiative and enterprise	<ul style="list-style-type: none"> Demonstrate effective response procedures to workplace risks, hazards and emergencies Note and communicate goals and outcomes to appropriate personnel Recognise signs of fire and raise alarm at appropriate time according to workplace procedures Suggest improvements to workplace practices and resource efficiency to relevant personnel
Planning and organising	<ul style="list-style-type: none"> Locate, record and report information Identify and comply with safety signs and symbols Access and apply workplace safety procedures Maintain quality and product care according to environmental legislation and workplace procedures Follow safe workplace procedures for dealing with accidents and emergencies within scope of responsibilities
Self-management	<ul style="list-style-type: none"> Follow and apply quality system procedures in personal work Maintain work relationships Follow environmental care procedures according to organisational requirements Seek appropriate support to assist and improve own performance to achieve personal and organisational goals and objectives
Learning	<ul style="list-style-type: none"> Identify and establish opportunities for professional development in consultation with appropriate personnel according to organisational procedures Practise and carry out emergency and evacuation procedures in the event of an emergency Record and report information regarding learning and competency development according to organisational requirements
Technology	<ul style="list-style-type: none"> Select equipment appropriate to work task requirements and use according to manufacturer's recommendations, which may include telephones and other communications equipment, tools, machinery, vehicles, navigational aids, instruments, computers and computer software, printers,

FPI20311 Certificate II in Sawmilling and Processing

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Elective unit HLTF311A replaces HLTF301C - Not equivalent

Imported unit updated to current release:

- MEM18011C

Release 1.1

Five imported units of competency updated:

- TLIF1002B replaces TLIF1002A - Equivalent
- TLID2004A replaces TLID407C - Equivalent
- TLID2047A replaces TLID707C - Equivalent
- MSS402001A replaces MSACMS200A - Equivalent
- SIRXCCS202 replaces SIRXCCS002A - Equivalent

Description

This qualification is designed for job roles in the sawmilling and processing sector of the forest and forest products industry.

Pathways Information

This qualification has five employment pathways for typical operational environments of sawmilling and processing. These are:

- Kiln Worker
- Timber Grader
- Treatment Plant Worker
- Production Worker
- Sawmill Worker

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

FPI20411 Certificate II in Wood Panel Products

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Elective unit HLTF311A replaces HLTF301C – Not equivalent

Imported unit updated to current release:

- MEM18011C

Release 1.1

Three imported units of competency updated:

- TLIF1002B replaces TLIF1002A - Equivalent
- MSS402001A replaces MSACMS200A - Equivalent
- SIRXCCS202 replaces SIRXCCS002A - Equivalent

Description

This qualification is designed for job roles in the wood panel products sector of the forest and forest products industry.

Pathways Information

This qualification has three employment pathways for typical operational environments of wood panel products. These are:

- Production Worker (Laminates)
- Production Worker (Panel and Board)
- Production Worker (Veneer)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> Convey information in simple language, and acknowledge and check message Establish and maintain communication with others according to organisational policies and procedures Identify and comply with safety signs and symbols Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> Check key legal and procedural principles relating to work order with appropriate personnel, according to organisational requirements Make constructive contributions to the group Provide assistance to and seek assistance from co-workers to achieve work tasks Share relevant workplace information with co-workers to achieve designated individual and team goals and objectives
Problem-solving	<ul style="list-style-type: none"> Follow safe workplace procedures and safe work instructions for controlling risks Identify and report occupational health and safety issues and risks in the work area to appropriate personnel Identify problems and equipment faults and demonstrate appropriate response procedures Identify and promptly report problems to appropriate

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	personnel to avoid repetition of de-valued product
Initiative and enterprise	<ul style="list-style-type: none"> Apply safe work practices, including effective response procedures, to workplace risk and emergencies, according to applicable occupational health and safety and organisational requirements Actively seek feedback on performance from appropriate personnel to confirm quality of performance and identify areas for improvement Identify and report existing and potential hazards in the work area to appropriate personnel Review factors affecting the achievement of work tasks and report to appropriate personnel
Planning and organising	<ul style="list-style-type: none"> Locate, record and report workplace information Identify and comply with applicable legislative and procedural requirements in an ethical manner consistent with workplace standards Follow safe workplace procedures for dealing with accidents and emergencies within scope of responsibilities
Self-management	<ul style="list-style-type: none"> Follow and apply quality system procedures in personal work Maintain work relationships Follow environmental care procedures according to organisational requirements Seek appropriate support to assist and improve own performance to achieve personal and organisational goals and objectives
Learning	<ul style="list-style-type: none"> Identify and establish opportunities for professional development in consultation with appropriate personnel according to organisational procedures Practise and carry out emergency and evacuation procedures in the event of an emergency Record and report information regarding learning and competency development according to organisational requirements
Technology	<ul style="list-style-type: none"> Maintain machinery and adjust equipment to minimise product damage and waste Use relevant equipment to complete work tasks within designated timeframes and according to workplace procedures, which may include telephones and other communications equipment, tools, machinery, vehicles, navigational aids, instruments, computers and computer software, printers, facsimile machines and photocopiers

Packaging Rules

Total number of units = 13

- 5 core units plus
- 8 elective units, consisting of:
 - 2 units from Group A
 - up to 6 units from Group A and/or Group B
 - up to 3 units recommended for packaging at Certificate I, II or III level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the wood panel products sector of the industry.

CORE UNITS

Field	Unit Code	Unit Title
Core	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR2203B	Follow environmental care procedures
	FPICOR2205B	Follow OHS policies and procedures
	FPICOR2207B	Maintain quality and product care

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Logyard and/or Material Preparation	FPICOT2218B	Cross cut materials with a fixed saw
	FPICOT2226B	Debark logs mechanically
Veneer/Board Production	FPICOT2202B	Rack material
	FPICOT2205B	Tail out materials

	FPICOT2207B	Dress boards and timber
	FPICOT2232B	Cut material to shape using a saw
	FPIWPP2201B	Cut panels
	FPIWPP2202B	Surface treat raw board
	FPIWPP2203B	Repair veneer and ply
	FPIWPP2204B	Repair veneer mechanically
	FPIWPP2206B	Prepare veneer for ply
	FPIWPP2207B	Scarf edges of veneer
	FPIWPP2208B	Cut veneer
	FPIWPP2209B	Saw products from continuous ply
	FPIWPP2210B	Cut panels to profile
Lamination and Finishing	FPICOT2203B	Finish products
	FPICOT2222B	Produce laminated beams
	FPICOT2224B	Band edges of panels
	FPICOT2230B	Assemble products
Grading and Testing	FPICOT2213B	Grade softwood sawn and milled products
	FPICOT2225B	Chip or flake wood
Woodchipping	FPIWPP2205B	Prepare chip or fibre blends

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Warehousing and	FPICOT2201B	Stack and bind material
	FPICOT2210B	Tally material

Distribution	FPICOT2227B	Process orders and despatch products
	FPICOT2228B	Store materials
	FPICOT2231B	Pack products
	FPICOT3264	Build and maintain timber stacks
	TLIF1002B	Conduct housekeeping activities
Load Handling	FPIWPP2211B	Move material by transfer equipment
	TLID2004A	Load and unload goods/cargo
	TLID2010A	Operate a forklift
	TLID2013A	Move materials mechanically using automated equipment
	TLID2047A	Prepare cargo for transfer with slings
	TLILIC2001A	Licence to operate a forklift truck
Machinery and Equipment	FPICOT2219B	Use hand-held tools
	FPICOT2237A	Maintain chainsaws
	FPICOT2240	Cut material with a pole saw
	MEM18011C	Shut down and isolate machines/equipment
Safety and Quality Processes	FPICOT3263	Maintain and contribute to energy efficiency
	HLTFA311A	Apply first aid
Administration and Business	BSBINM201A	Process and maintain workplace information
	BSBITU201A	Produce simple word processed documents
	BSBWOR204A	Use business technology

Manufacturing** MSS402001A Apply competitive systems and practices

**Communication
and
Relationships** FPICOT2241 Apply wood and timber product knowledge
 SIRXCCS202 Interact with customers

FPI20511 Certificate II in Timber Manufactured Products

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Elective unit HLTF311A replaces HLTF301C – Not equivalent

Release 1.1

Two Imported units of competency updated:

- LMFGG2008C replaces LMFGG2008B - Equivalent
- MSS402001A replaces MSACMS200A - Equivalent

Description

This qualification is designed for job roles in the forest and forest products industry.

Pathways Information

This qualification has six employment pathways for operational environments in the forest and forest products industry. These are:

- Grader
- Manufacturing Assistant (Timber Products)
- Saw Operator
- Timber Manufacturing Worker
- Timber Products Worker
- Timber Puller

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Description

This qualification is designed for job roles in the timber merchandising sector of the forest and forest products industry.

Pathways Information

This qualification has one employment pathway for timber merchandising. This is:

- Customer Service / Sales Assistant (Retail or Wholesale)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
<p>The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.</p>	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Apply detailed specialised knowledge of product to provide accurate advice to customers • Conduct communication with customers in a professional, courteous manner, according to store policy • Use effective questioning/active listening and observation skills to identify customers' special requirements • Use verbal and non-verbal communication to develop rapport with customers during service delivery
Teamwork	<ul style="list-style-type: none"> • Convey product knowledge to other staff members as required • Follow work plans to improve environmental practices and resource efficiency • Notify appropriate personnel in the event of an emergency • Provide a quality service environment by treating customers and team members in a courteous and professional manner through all stages of the service/sales procedure
Problem-solving	<ul style="list-style-type: none"> • Accurately identify the nature of customer complaints, resolve complaints and provide service to customers

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<p>according to store policies</p> <ul style="list-style-type: none"> • Follow safe workplace procedures and safe work instructions for controlling risks • Identify and report occupational health and safety issues and risks in the work area to appropriate personnel • Promptly refer unresolved customer dissatisfaction or complaints to supervisor
Initiative and enterprise	<ul style="list-style-type: none"> • Promptly identify customers with special needs or requirements by observation and questioning • Recognise and act upon opportunities to deliver additional levels of service beyond the customer's immediate request • Suggest improvements to workplace practices and resource efficiency to relevant personnel • Take opportunities to turn incidents of customer dissatisfaction into a demonstration of high quality service to customers in line with store policy
Planning and organising	<ul style="list-style-type: none"> • Access and apply workplace safety procedures • Accurately identify and comply with safety signs and symbols • Accurately locate, record and report workplace information • Gather, convey and receive information
Self-management	<ul style="list-style-type: none"> • Identify and comply with applicable occupational health and safety, legislative and organisational requirements relevant to communicating and interacting with others • Maintain work relationships • Safely and efficiently follow environmental care procedures according to organisational requirements • Seek appropriate support to assist and improve own performance to achieve personal and organisational goals and objectives
Learning	<ul style="list-style-type: none"> • Establish opportunities for professional development in consultation with appropriate personnel in accordance with organisational procedures • Identify opportunities for professional development • Practise and carry out emergency and evacuation procedures in the event of an emergency • Record and report information regarding learning and competency development in accordance with organisational requirements
Technology	<ul style="list-style-type: none"> • Select equipment appropriate to work task requirements and use in accordance with manufacturer's recommendations, which may include telephones or communications

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<p>equipment, tools, machinery, vehicles, navigational aids, instruments, computers and computer software, printers, facsimile machines and photocopiers</p> <ul style="list-style-type: none"> • Use a range of communication/electronic equipment

FPI30111 Certificate III in Forest Growing and Management

Modification History

Release 3

Mapping of FPI30111 updated to reflect change of usage recommendation to Current.

One new unit added to elective bank: FPICOT3263

Elective unit HLTF412A replaces HLTF402C – Not equivalent

Elective unit PUAFIR309B updated to latest release

Release 2

Four imported units of competency updated:

- RIIMPO318B replaces RIIMPO318A - Equivalent
- RIIMPO320B replaces RIIMPO320A - Equivalent
- RIIMPO321B replaces RIIMPO321A - Equivalent
- RIIVEH304B replaces RIIVEH304A - Equivalent

FPIFGM3207B added to Group A, Tree Growing and Maintenance as per Case for Endorsement, November 2011

Release 1

Qualification code updated to FPI30111 in FPI11 Version 1.

The following units have been added to the qualification as electives:

- AHCCHM304A Transport, handle and store chemicals
- FPICOT3255 Apply silvicultural principles
- FPICOT3256 Apply biodiversity protection principles
- FPICOT3257 Follow cultural heritage requirements
- FPICOT3258 Comply with soil and water protection
- FPICOT3259 Operate a four-wheel drive on unsealed roads
- FPICOT3260 Recover four-wheel drive vehicles
- FPIFGM3212 Fall trees manually (intermediate)
- FPIFGM3213 Fall trees manually (advanced)
- FPIFGM3214 Operate a four-wheel drive in a towing situation

Description

This qualification is designed for job roles in the forest growing and management sector of the forest and forest products industry.

Pathways Information

This qualification has seven employment pathways for typical operational environments of forest growing and management. These are:

- Arboriculture Technician
- Farm Forestry Technician
- Forestry Technician
- Nursery Technician
- Supervisor (Forestry Operations)
- Tree Planter
- Silviculturalist

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<p>management and follow up to ensure action is taken in response</p> <ul style="list-style-type: none"> • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Actively encourage and support team members to participate in team activities and communication processes • Identify appropriate personnel in the event of an emergency
Problem-solving	<ul style="list-style-type: none"> • Limited responsibility for addressing issues, concerns and problems identified by team members or referring them to relevant persons as required • Follow safe workplace procedures and safe work instructions for controlling risks and protecting the environment • Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures • Monitor environmental measures and impact on the environment and take corrective action as required according to workplace procedures
Initiative and enterprise	<ul style="list-style-type: none"> • Detect and assess hazards in the work area and report to appropriate personnel • Encourage team members to participate in the planning, decision making and operational aspects of the work team to their level of responsibility • Monitor hazardous and flammable substances to assess the potential of spillage and combustion
Planning and organising	<ul style="list-style-type: none"> • Record and report workplace information and maintain documentation • Identify and comply with occupational health and safety, legislative and organisational requirements relevant to implementing health, safety and environment policies and procedures • Organise duties, equipment and materials according to health, safety and environmental requirements and organisational procedures • Plan evaluation processes according to site procedures
Self-management	<ul style="list-style-type: none"> • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with customers • Follow safe workplace procedures for dealing with environmental incidents, accidents and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities • Seek appropriate support to assist and improve own

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	performance to achieve personal and organisational goals and objectives
Learning	<ul style="list-style-type: none"> Identify opportunities for professional development Implement training and operational controls according to workplace procedures, which may include: <ul style="list-style-type: none"> in-house or external training programs one-on-one supervision programs that maintain up-to-date knowledge of legislative changes at the local, state and federal level Practise and record emergency and evacuation procedures in the event of an emergency Record and report information regarding learning and competency development according to organisational requirements
Technology	<ul style="list-style-type: none"> Record and report health, safety and environment procedures according to workplace procedures, which may be manual, or using a computer-based system or other appropriate organisational communication system Use and maintain relevant tools, machinery and equipment

Packaging Rules

Total number of units = 13

- 6 core units plus
- 7 elective units, consisting of:
 - 3 units from Group A
 - up to 4 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate II, III or IV level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the forest growing and management sector of the industry.

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBFLM312C	Contribute to team effectiveness
	FPICOR2201B	Work effectively in the forest and forest products industry

FPICOR2202B	Communicate and interact effectively in the workplace
FPICOR3201B	Implement safety, health and environment policies and procedures
FPICOR3203B	Evaluate fire potential and prevention
HLTFA301C	Apply first aid

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Fire Control	AHCWRK302A	Monitor weather conditions
	PUAFIR303B	Suppress wildfire (unit has PUAFIR204B Respond to wildfire as a prerequisite)
	PUAFIR309B	Operate pumps (unit has the following prerequisite units: PUAFIR202B Respond to isolated/remote structure fire OR PUAFIR203B Respond to urban fire OR PUAFIR204B Respond to wildfire OR PUAFIR205B Respond to aviation incident (specialist))
	PUALAW002B	Conduct initial investigation at incident scene
	PUAOHS002B	Maintain safety at an incident scene
	PUATEA002B	Work autonomously
	Breeding and Propagation	AHCNSY301A
AHCNSY306A		Implement a propagation plan
FPIFGM3201B		Manage seed collection
FPIFGM3202B		Extract seed
Site Establishment and	AHCINF303A	Plan and construct conventional fencing

Maintenance	AHCIRG301A	Implement a maintenance program for an irrigation system
	AHCIRG306A	Troubleshoot irrigation systems
	AHCLSC302A	Construct landscape features using concrete
	AHCLSC304A	Erect timber structures and features
	AHCSAW302A	Implement erosion and sediment control measures
	FPICOT3221B	Rehabilitate tracks, quarries and landings
	FPIFGM3209B	Construct and maintain forest roads and tracks
	FPIFGM3210B	Patrol forest
Grading and Testing	FPICOR3204B	Visually assess materials
	FPICOT3223B	Grade and mark logs
	FPICOT3250A	Prepare timber to meet import/export compliance requirements
Tree Growing & Maintenance	FPICOR3202B	Conduct quality and product care procedures
	FPICOT3252A	Use environmental care procedures to undertake fire salvage operations
	FPIFGM3212	Fall trees manually (intermediate)
	FPIFGM3213	Fall trees manually (advanced)
	FPIFGM3206B	Plan and implement non-commercial thinning operations
	FPIFGM3207B	Coordinate stem improvement
	FPIFGM3211B	Manage coppice stems
	AHCPMG301A	Control weeds
	AHCPMG302A	Control plants, pests, diseases and disorders
	AHCARB307A	Undertake complex tree climbing

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Machinery and Equipment	AHCMOM301A	Coordinate machinery and equipment maintenance and repair
	FPICOT3259	Operate a four-wheel drive on unsealed roads
	FPICOT3260	Recover four-wheel drive vehicles
	FPIFGM3214	Operate a four wheel drive in a towing situation
	FPIFGM3215	Perform complex 4x4 operations
Specialist Machinery and Equipment	A maximum of 2 units may be selected from this field	
	FPICOT3238B	Operate a pole saw
	RIIHAN308A	Load and unload plant
	RIIMPO315A	Conduct tractor operations
	RIIMPO317A	Conduct roller operations
	RIIMPO318B	Conduct civil construction skid steer loader operations
	RIIMPO319A	Conduct backhoe/loader operations
	RIIMPO320B	Conduct civil construction excavator operations
	RIIMPO321B	Conduct civil construction wheeled front end loader operations
	RIIMPO322A	Conduct civil construction tracked front end loader operations
	RIIMPO324A	Conduct civil construction grader operations
	RIIVEH304B	Conduct tip truck operations
	TLID3036A	Lift and move load using a mobile crane
Load Handling	AHCCHM304A	Transport, handle and store chemicals
	TLID3011A	Conduct specialised forklift operations
	TLID3014A	Load and unload vehicles carrying special loads
Safety and	AHCCHM303A	Prepare and apply chemicals

Quality Processes	FPICOT3202B	Navigate in remote or trackless areas
	FPICOT3254A	Implement environmentally sustainable work practices in the work area/work site
	FPICOT3255	Apply silvicultural principles
	FPICOT3256	Apply biodiversity protection principles
	FPICOT3257	Follow cultural heritage requirements
	FPICOT3258	Comply with soil and water protection
	FPICOT3263	Maintain and contribute to energy efficiency
	HLTFA412A	Apply advanced first aid (unit has HLTFA311A Apply first aid as a prerequisite)
	TLID3035A	Operate a boom type elevating work platform
Administration and Business	BSBINM301A	Organise workplace information
	BSBITU306A	Design and produce business documents
Communication and Relationships	BSBFLM303C	Contribute to effective workplace relationships
	FPICOT3222B	Present forestry information and interpretations programs
Planning and Analysis	BSBFLM305C	Support operational plan

FPI30113 Certificate III in Forest Growing and Management

Modification History

Release 2

Mapping to FPI30111 removed.

Release 1

Qualification released as FPI30113 in FPI11 Version 2.

Core unit HLTF A311A replaces HLTF A301C – Not equivalent

One new unit added to elective bank: FPICOT3263

Elective unit HLTF A412A replaces HLTF A402C – Not equivalent

Imported units updated to current release:

- PUA FIR303B
- PUA FIR309B
- PUA LAW002B
- PUA OHS002B
- PUA TEA002B

Description

This qualification is designed for job roles in the forest growing and management sector of the forest and forest products industry.

Pathways Information

This qualification has seven employment pathways for typical operational environments of forest growing and management. These are:

- Arboriculture Technician
- Farm Forestry Technician
- Forestry Technician
- Nursery Technician
- Supervisor (Forestry Operations)
- Tree Planter
- Silviculturalist

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> Communicate information from line manager/management to the team Communicate unresolved issues to line manager/management and follow up to ensure action is taken in response Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> Actively encourage and support team members to participate in team activities and communication processes Identify appropriate personnel in the event of an emergency
Problem-solving	<ul style="list-style-type: none"> Limited responsibility for addressing issues, concerns and problems identified by team members or referring them to relevant persons as required Follow safe workplace procedures and safe work instructions for controlling risks and protecting the environment Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures Monitor environmental measures and impact on the environment and take corrective action as required according to workplace procedures

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Initiative and enterprise	<ul style="list-style-type: none"> • Detect and assess hazards in the work area and report to appropriate personnel • Encourage team members to participate in the planning, decision making and operational aspects of the work team to their level of responsibility • Monitor hazardous and flammable substances to assess the potential of spillage and combustion
Planning and organising	<ul style="list-style-type: none"> • Record and report workplace information and maintain documentation • Identify and comply with occupational health and safety, legislative and organisational requirements relevant to implementing health, safety and environment policies and procedures • Organise duties, equipment and materials according to health, safety and environmental requirements and organisational procedures • Plan evaluation processes according to site procedures
Self-management	<ul style="list-style-type: none"> • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with customers • Follow safe workplace procedures for dealing with environmental incidents, accidents and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities • Seek appropriate support to assist and improve own performance to achieve personal and organisational goals and objectives

FPI30211 Certificate III in Harvesting and Haulage

Modification History

Release 3

Mapping of FPI30211 updated to reflect change of usage recommendation to Current.

Packaging rules for special requirements for log truck driver descriptor updated.

Three new units added to elective bank:

- FPICOT3261 (new unit based on non-equivalent FPICOT3226B)
- FPICOT3262
- FPICOT3263

Elective units updated:

- HLTF412A replaces HLTF402C – Not equivalent
- TLILIC2016B replaces TLILIC2016A – Equivalent
- TLILIC3017B replaces TLILIC3017A – Equivalent
- TLILIC3018B replaces TLILIC3018A – Equivalent
- PUAFIR309B updated to latest release

Release 2

Two imported units of competency updated:

- RIIVEH304B replaces RIIVEH304A - Equivalent
- HLTF302C replaces HLTF302A - Equivalent

Due to a typographical error, the incorrect code was entered. TLILIC3017A has now replaced TLILIC3018A as per the Case for Endorsement.

Release 1

Qualification code updated to FPI30211 in FPI11 Version 1.

The following units have been added to the qualification as electives:

- FPICOT3255 Apply silvicultural principles
- FPICOT3256 Apply biodiversity protection principles
- FPICOT3257 Follow cultural heritage requirements
- FPICOT3258 Comply with soil and water protection
- FPICOT3259 Operate a four-wheel drive on unsealed roads
- FPICOT3260 Recover four-wheel drive vehicles
- FPIFGM3214 Operate a four-wheel drive in a towing situation
- FPIFGM3215 Perform complex four-wheel drive operations
- FPIHAR3220 Harvest trees manually (intermediate)

- FPIHAR3221 Harvest trees manually (advanced).

Description

This qualification is designed for job roles in the harvesting and haulage sector of the forest and forest products industry.

Pathways Information

This qualification has eleven employment pathways for typical operational environments of harvesting and haulage. These are:

- Bulldozer Operator
- Excavator Operator
- Feller Buncher Operator
- Forest Harvester
- Forwarder Operator
- Harvesting Technician
- In-field Chipper Operator
- Loader Operator
- Log truck driver
- Mobile Equipment Operator
- Skidder Operator

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Complete health, safety and environment, hazard, environmental and incident reports according to workplace procedures and state or territory legislation • Establish and maintain communication with others according to occupational health and safety requirements • Prepare reports to supervisors in a timely manner, presenting all relevant facts according to established organisational procedures • Record and report quality and product care procedures according to workplace procedures
Teamwork	<ul style="list-style-type: none"> • Seek first aid assistance from others in a timely manner • Share relevant workplace information with co-workers to achieve designated individual and team goals and objectives • Support team members in meeting expected outcomes
Problem-solving	<ul style="list-style-type: none"> • Participate in workplace meetings using agreed processes to resolve issues • Assess and rectify problems to avoid repetition of lost product within limits of own role • Monitor environmental measures and impact on the environment and take corrective action as required according to workplace procedures • Plan product recovery to optimise resource value and minimise waste
Initiative and enterprise	<ul style="list-style-type: none"> • Apply, implement and adhere to quality system procedures • Detect and assess hazards in the work area and report to appropriate personnel • Identify and clarify contradictions, ambiguity, uncertainty or misunderstandings with appropriate personnel • Monitor hazardous and flammable substances to assess the potential of spillage and combustion
Planning and organising	<ul style="list-style-type: none"> • Gather, convey and receive information • Identify and assess organisational environmental goals • Plan evaluation processes according to site procedures • Identify, review and interpret work requirements

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Self-management	<ul style="list-style-type: none"> • Complete daily work activities • Follow safe workplace procedures for dealing with environmental incidents, accidents and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities • Maintain work relationships
Learning	<ul style="list-style-type: none"> • Establish opportunities for professional development in consultation with appropriate personnel according to organisational procedures • Implement training and operational controls according to workplace procedures, which may include: <ul style="list-style-type: none"> • in-house or external training programs • one-on-one supervision • programs that maintain up-to-date knowledge of legislative changes at the local, state and federal level • Practise and record emergency and evacuation procedures in the event of an emergency • Record and report information regarding learning and competency development according to organisational requirements
Technology	<ul style="list-style-type: none"> • Monitor equipment conditions for overheating and electrical sparking and respond according to workplace procedures • Check equipment to ensure it is serviceable for emergencies

Packaging Rules

Total number units = 13

- 7 core units plus
- 6 elective units, consisting of:
 - 2 units from Group A
 - up to 4 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate II, III or IV level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the harvesting and haulage sector of the industry.

Guidelines for use of qualification descriptors:

Descriptors are minimum industry recommendations to assist training providers, employers and trainees with the development of training plans for those employed in the job roles below.

The qualification descriptor may be used to describe a specific job profile.

The use of a descriptor does not alter the nationally recognised qualification and the descriptor selected must adhere to the qualification's packaging rules.

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBFLM312C	Contribute to team effectiveness
	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR3201B	Implement safety, health and environment policies and procedures
	FPICOR3202B	Conduct quality and product care procedures
	FPICOR3203B	Evaluate fire potential and prevention
	HLTFA301C	Apply first aid

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Harvesting Operations	AHCARB307A	Undertake complex tree climbing
	AHCEXP303A	Prepare and use explosives
	FPICOT3252A	Use environmental care procedures to undertake fire salvage operations
	FPICOT3261	Transport forestry logs using trucks
	FPICOT3262	Transport forestry produce using trucks
	FPICOT3253A	Convert timber residue into products for further use
	FPICOT3254A	Implement environmentally sustainable work practices in the work area/work site

	FPIHAR3201B	Monitor log recovery (rigging slinger)
	FPIHAR3216A	Conduct forestry operations using crawler tractor
	FPIHAR3217A	Conduct skidder operations
	FPIHAR3218A	Conduct loader operations
	FPIHAR3206C	Conduct forwarder operations
	FPIHAR3207C	Conduct feller buncher operations
	FPIHAR3208C	Conduct boom delimber operations
	FPIHAR3210C	Conduct mechanical processor operations
	FPIHAR3211B	Operate yarder
	FPIHAR3213B	Conduct mechanically assisted tree falling operations
	FPIHAR3214C	Operate a single grip harvester
	FPIHAR3215C	Operate a heavy production mobile chipper
	FPIHAR3219A	Conduct excavator operations with grabs
	FPIHAR3220	Harvest trees manually (intermediate)
	FPIHAR3221	Harvest trees manually (advanced)
Grading and Testing	FPICOR3204B	Visually assess materials
	FPICOT3223B	Grade and mark logs
	FPICOT3250A	Prepare timber to meet import/export compliance requirements
Machinery and Equipment	FPICOT3224B	Plan and monitor equipment maintenance

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
--------------	------------------	-------------------

Fire Control	AHCWRK302A	Monitor weather conditions
	PUAFIR303B	Suppress wildfire (unit has PUAFIR204B Respond to wildfire as a prerequisite)
	PUAFIR309B	Operate pumps (unit has three prerequisites – check training.gov.au)
	PUAOHS002B	Maintain safety at an incident scene
	PUATEA002B	Work autonomously
Site Establishment and Maintenance	AHCNAR303A	Implement revegetation works
	FPICOT3221B	Rehabilitate tracks, quarries and landings
	FPIFGM3203B	Conduct an instrument survey
Machinery and Equipment	AHCMOM301A	Coordinate machinery and equipment maintenance and repair
	FPICOT3259	Operate a four-wheel drive on unsealed roads
	FPICOT3260	Recover four-wheel drive vehicles
	FPIFGM3214	Operate a four-wheel drive in a towing situation
	FPIFGM3215	Perform complex 4x4 operations
Specialist Machinery and Equipment	A maximum of two units may be selected from this field	
	RIIMPO315A	Conduct tractor operations
	RIIMPO317A	Conduct roller operations
	RIIMPO319A	Conduct backhoe/loader operations
	RIIMPO323A	Conduct civil construction dozer operations
	RIIMPO324A	Conduct civil construction grader operations
	RIIVEH304B	Conduct tip truck operations
	TLID3033A	Operate a vehicle-mounted loading crane

Load Handling	TLIC3063A	Operate vehicle carrying special loads
	TLID1001A	Shift materials safely using manual handling methods
	TLID3011A	Conduct specialised forklift operations
	TLID3014A	Load and unload vehicles carrying special loads
	TLIE3002A	Estimate/calculate mass, area and quantify dimensions
	TLIH2001A	Interpret road maps and navigate pre-determined routes

Specialised Log Truck Driver One of the following may be selected:

or	TLIC3004A	Drive heavy rigid vehicle
	TLILIC2016B	Licence to drive heavy rigid vehicle
or	TLIC3005A	Drive heavy combination vehicle
	TLILIC3017B	Licence to drive heavy combination vehicle
or	TLIC4006A	Drive multi-combination vehicle
	TLILIC3018B	Licence to drive multi-combination vehicle

Safety and Quality Processes	AHCWRK304A	Respond to rescue incidents
	FPICOT3202B	Navigate in remote or trackless areas
	FPICOT3255	Apply silvicultural principles
	FPICOT3256	Apply biodiversity protection principles
	FPICOT3257	Follow cultural heritage requirements

	FPICOT3258	Comply with soil and water protection
	FPICOT3263	Maintain and contribute to energy efficiency
	HLTFA302C	Provide first aid in remote situation (to be assessed in conjunction with or after HLTFA311A Apply first aid)
	HLTFA412A	Apply advanced first aid (has HLTFA311A Apply first aid as a prerequisite)
	TLID3035A	Operate a boom type elevating work platform
	TLIF2010A	Apply fatigue management strategies
Administration and Business	BSBINM301A	Organise workplace information
	BSBITU306A	Design and produce business documents
Communication and Relationships	BSBFLM303C	Contribute to effective workplace relationships
	FPICOT3222B	Present forestry information and interpretations programs
Planning and Analysis	BSBFLM305C	Support operational plan

Special requirements for log truck driver descriptor:

The log truck driver descriptor can only be used when electives have been selected from the Group A and B list of specialist units below.

Please note the learner must complete the two units indicated with an asterisk (*).

Log truck driver

GROUP A ELECTIVE UNITS

FPICOT3223B Grade and mark logs

FPICOT3224B Plan and monitor equipment maintenance

*FPICOT3261 Transport forestry logs using trucks

FPICOT3262 Transport forestry produce using trucks
FPIHAR3218A Conduct loader operations
FPIHAR3219A Conduct excavator operations with grabs

GROUP B ELECTIVE UNITS

TLID1001A Shift materials safely using manual handling methods
TLID3014A Load and unload vehicles carrying special loads
TLIE3002A Estimate/calculate mass, area and quantify dimensions
*TLIF2010A Apply fatigue management strategies
TLIH2001A Interpret road maps and navigate pre-determined routes

At least one but no more than two of the following licensing/driving units must be completed to achieve log truck driver descriptor:

TLIC3004A Drive heavy rigid vehicle or TLILIC2016B Licence to drive heavy rigid vehicle

TLIC3005A Drive heavy combination vehicle or TLILIC3017B Licence to drive heavy combination vehicle

TLIC4006A Drive multi-combination vehicle or TLILIC3018B Licence to drive multi combination vehicle

FPI30213 Certificate III in Harvesting and Haulage

Modification History

Release 2

Mapping to FPI30211 removed.

Release 1

Qualification released as FPI30213 in FPI11 Version 2.

Core unit HLTF311A replaces HLTF301C – Not equivalent

Three new units added to elective bank:

- FPICOT3261 (new unit based on non-equivalent FPICOT3226B)
- FPICOT3262
- FPICOT3263

Elective units updated:

- HLTF412A replaces HLTF402C – Not equivalent
- TLILIC2016B replaces TLILIC2016A – Equivalent
- TLILIC3017B replaces TLILIC3017A – Equivalent
- TLILIC3018B replaces TLILIC3018A – Equivalent

Imported units updated to current release:

- PUAFIR303B
- PUAFIR309B
- PUAOHS002B
- PUATEA002B

Description

This qualification is designed for job roles in the harvesting and haulage sector of the forest and forest products industry.

Pathways Information

This qualification has eleven employment pathways for typical operational environments of harvesting and haulage. These are:

- Bulldozer Operator
- Excavator Operator
- Feller Buncher Operator
- Forest Harvester
- Forwarder Operator
- Harvesting Technician

- In-field Chipper Operator
- Loader Operator
- Log truck driver
- Mobile Equipment Operator
- Skidder Operator

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Complete health, safety and environment, hazard, environmental and incident reports according to workplace procedures and state or territory legislation • Establish and maintain communication with others according to occupational health and safety requirements • Prepare reports to supervisors in a timely manner, presenting all relevant facts according to established organisational procedures • Record and report quality and product care procedures according to workplace procedures
Teamwork	<ul style="list-style-type: none"> • Seek first aid assistance from others in a timely manner • Share relevant workplace information with co-workers to

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<p>achieve designated individual and team goals and objectives</p> <ul style="list-style-type: none"> • Support team members in meeting expected outcomes
Problem-solving	<ul style="list-style-type: none"> • Participate in workplace meetings using agreed processes to resolve issues • Assess and rectify problems to avoid repetition of lost product within limits of own role • Monitor environmental measures and impact on the environment and take corrective action as required according to workplace procedures • Plan product recovery to optimise resource value and minimise waste
Initiative and enterprise	<ul style="list-style-type: none"> • Apply, implement and adhere to quality system procedures • Detect and assess hazards in the work area and report to appropriate personnel • Identify and clarify contradictions, ambiguity, uncertainty or misunderstandings with appropriate personnel • Monitor hazardous and flammable substances to assess the potential of spillage and combustion
Planning and organising	<ul style="list-style-type: none"> • Gather, convey and receive information • Identify and assess organisational environmental goals • Plan evaluation processes according to site procedures • Identify, review and interpret work requirements
Self-management	<ul style="list-style-type: none"> • Complete daily work activities • Follow safe workplace procedures for dealing with environmental incidents, accidents and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities • Maintain work relationships
Learning	<ul style="list-style-type: none"> • Establish opportunities for professional development in consultation with appropriate personnel according to organisational procedures • Implement training and operational controls according to workplace procedures, which may include: <ul style="list-style-type: none"> • in-house or external training programs • one-on-one supervision • programs that maintain up-to-date knowledge of legislative changes at the local, state and federal level • Practise and record emergency and evacuation procedures in the event of an emergency • Record and report information regarding learning and competency development according to organisational

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	requirements
Technology	<ul style="list-style-type: none"> • Monitor equipment conditions for overheating and electrical sparking and respond according to workplace procedures • Check equipment to ensure it is serviceable for emergencies

Packaging Rules

Total number units = 13

- 7 core units plus
- 6 elective units, consisting of:
 - 2 units from Group A
 - up to 4 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate II, III or IV level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the harvesting and haulage sector of the industry.

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBFLM312C	Contribute to team effectiveness
	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR3201B	Implement safety, health and environment policies and procedures
	FPICOR3202B	Conduct quality and product care procedures
	FPICOR3203B	Evaluate fire potential and prevention
	HLTFA311A	Apply first aid

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Harvesting Operations	AHCARB307A	Undertake complex tree climbing
	AHCEXP303A	Prepare and use explosives
	FPICOT3252A	Use environmental care procedures to undertake fire salvage operations
	FPICOT3261	Transport forestry logs using trucks
	FPICOT3262	Transport forestry produce using trucks
	FPICOT3253A	Convert timber residue into products for further use
	FPICOT3254A	Implement environmentally sustainable work practices in the work area/work site
	FPIHAR3201B	Monitor log recovery (rigging slinger)
	FPIHAR3216A	Conduct forestry operations using crawler tractor
	FPIHAR3217A	Conduct skidder operations
	FPIHAR3218A	Conduct loader operations
	FPIHAR3206C	Conduct forwarder operations
	FPIHAR3207C	Conduct feller buncher operations
	FPIHAR3208C	Conduct boom delimber operations
	FPIHAR3210C	Conduct mechanical processor operations
	FPIHAR3211B	Operate yarder
	FPIHAR3213B	Conduct mechanically assisted tree falling operations
	FPIHAR3214C	Operate a single grip harvester
	FPIHAR3215C	Operate a heavy production mobile chipper
	FPIHAR3219A	Conduct excavator operations with grabs
FPIHAR3220	Harvest trees manually (intermediate)	

	FPIHAR3221	Harvest trees manually (advanced)
Grading and Testing	FPICOR3204B	Visually assess materials
	FPICOT3223B	Grade and mark logs
	FPICOT3250A	Prepare timber to meet import/export compliance requirements
Machinery and Equipment	FPICOT3224B	Plan and monitor equipment maintenance
GROUP B ELECTIVE UNITS		
Field	Unit Code	Unit Title
Fire Control	AHCWRK302A	Monitor weather conditions
	PUAFIR303B	Suppress wildfire (unit has PUAFIR204B Respond to wildfire as a prerequisite)
	PUAFIR309B	Operate pumps (unit has three prerequisites – check training.gov.au)
	PUAOHS002B	Maintain safety at an incident scene
	PUATEA002B	Work autonomously
Site Establishment and Maintenance	AHCNAR303A	Implement revegetation works
	FPICOT3221B	Rehabilitate tracks, quarries and landings
	FPIFGM3203B	Conduct an instrument survey
Machinery and Equipment	AHCMOM301A	Coordinate machinery and equipment maintenance and repair
	FPICOT3259	Operate a four-wheel drive on unsealed roads
	FPICOT3260	Recover four-wheel drive vehicles

FPIFGM3214 Operate a four-wheel drive in a towing situation

FPIFGM3215 Perform complex 4x4 operations

Specialist Machinery and Equipment

A maximum of two units may be selected from this field

RIIMPO315A Conduct tractor operations

RIIMPO317A Conduct roller operations

RIIMPO319A Conduct backhoe/loader operations

RIIMPO323A Conduct civil construction dozer operations

RIIMPO324A Conduct civil construction grader operations

RIIVEH304B Conduct tip truck operations

TLID3033A Operate a vehicle-mounted loading crane

Load Handling

TLIC3063A Operate vehicle carrying special loads

TLID1001A Shift materials safely using manual handling methods

TLID3011A Conduct specialised forklift operations

TLID3014A Load and unload vehicles carrying special loads

TLIE3002A Estimate/calculate mass, area and quantify dimensions

TLIH2001A Interpret road maps and navigate pre-determined routes

Specialised Log Truck Driver One of the following may be selected:

TLIC3004A Drive heavy rigid vehicle

or TLILIC2016B Licence to drive heavy rigid vehicle

	TLIC3005A	Drive heavy combination vehicle
or	TLILIC3017B	Licence to drive heavy combination vehicle
	TLIC4006A	Drive multi-combination vehicle
or	TLILIC3018B	Licence to drive multi-combination vehicle
Safety and Quality Processes	AHCWRK304A	Respond to rescue incidents
	FPICOT3202B	Navigate in remote or trackless areas
	FPICOT3255	Apply silvicultural principles
	FPICOT3256	Apply biodiversity protection principles
	FPICOT3257	Follow cultural heritage requirements
	FPICOT3258	Comply with soil and water protection
	FPICOT3263	Maintain and contribute to energy efficiency
	HLTFA302C	Provide first aid in remote situation (to be assessed in conjunction with or after HLTFA311A Apply first aid)
	HLTFA412A	Apply advanced first aid (has HLTFA311A Apply first aid as a prerequisite)
	TLID3035A	Operate a boom type elevating work platform
	TLIF2010A	Apply fatigue management strategies
Administration and Business	BSBINM301A	Organise workplace information
	BSBITU306A	Design and produce business documents
Communication and Relationships	BSBFLM303C	Contribute to effective workplace relationships
	FPICOT3222B	Present forestry information and interpretations programs

Analysis**

BSBFLM305C

Support operational plan

FPI30311 Certificate III in Sawmilling and Processing

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Imported elective units updated:

- MSS404060A replaces MSACMT460A – Not equivalent
- HLTFA412A replaces HLTFA402C – Not equivalent

Imported unit updated to current release:

- MEM18011C

Release 1.1

Three imported units of competency updated:

- RIIMPO321B replaces RIIMPO321A - Equivalent
- TLIF1002B replaces TLIF1002A - Equivalent
- MSS402001A replaces MSACMS200A - Equivalent

Due to a typographical error, FPICOT3215 was included incorrectly in the Group B Electives under Machinery and Equipment. This unit has been removed, as per the Case for Endorsement.

Description

This qualification is designed for job roles in the forest sawmilling and processing sector of the forest and forest products industry.

Pathways Information

This qualification has eleven employment pathways for typical operational environments of sawmilling and processing. These are:

- Benchman
- Chipper Operator
- Head Rig Operator
- Kiln Operator
- Machine Operator (e.g. Finger Jointing, Moulding, Planing)
- Production Technician

- Sawmilling Technician
- Sawyer
- Timber Grader
- Timber Products Technician
- Treatment Plant Operator

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to State/Territory licensing, legislative, regulatory or certification requirement.

Some imported units contained within the elective bank may be subject to State/Territory codes, regulations, licence and/or permit. These units must be implemented in line with the licensing requirements as outlined in the unit's Parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Gather, receive and respond to verbal and written instructions • Record and report quality and product care procedures according to workplace procedures • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Contribute to team outcomes • Communicate and work safely with others in the work area

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • Support team members in meeting expected outcomes
Problem-solving	<ul style="list-style-type: none"> • Limited responsibility for addressing issues, concerns and problems identified by team members or referring them to relevant persons as required • Identify and resolve problems • Record and report assessment outcomes and distribution problems according to workplace procedures • Visually evaluate material characteristics for defects and quality
Initiative and enterprise	<ul style="list-style-type: none"> • Efficiently and safely follow quality and product care procedures • Monitor quality of output and follow product care procedures • Reject and dispose of sub-standard materials according to site requirements
Planning and organising	<ul style="list-style-type: none"> • Record and report workplace information and maintain documentation • Follow quality and product care procedures according to environmental legislation and workplace procedures • Monitor on-site movement of material to ensure intended flow is achieved • Review work order and clarify with appropriate personnel
Self-management	<ul style="list-style-type: none"> • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with customers • Follow safe workplace procedures for dealing with environmental incidents, accidents and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities
Learning	<ul style="list-style-type: none"> • Establish opportunities for professional development in consultation with appropriate personnel according to organisational procedures • Practice and record emergency and evacuation procedures in the event of an emergency • Record and report information regarding learning and competency development according to organisational requirements • Support the team to identify and resolve problems impeding its performance
Technology	<ul style="list-style-type: none"> • Select equipment appropriate to work requirements and check for operational effectiveness according to manufacturer recommendations, which may include moisture

FPI30411 Certificate III in Wood Panel Products

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Imported units updated to non-equivalent versions:

- HLTF311A replaces HLTF301C – Not equivalent
- HLTF412A replaces HLTF402C – Not equivalent
- MSS402060A replaces MSACMT260A – Not equivalent
- MSS404060A replaces MSACMT460A – Not equivalent

Imported unit updated to current release:

- MEM18011C

Release 1.1

Two imported units of competency updated:

- MSS402001A replaces MSACMS200A - Equivalent
- TLIF1002B replaces TLIF1002A - Equivalent

Description

This qualification is designed for job roles in the wood panel products sector of the forest and forest products industry.

Pathways Information

This qualification has seven employment pathways for typical operational environments of wood panel products. These are:

- Engineered Timber Products Technician / Operator
- Kiln Operator
- Production Technician / Operator (Laminates)
- Production Technician / Operator (Panel and Board)
- Production Technician / Operator (Veneer)
- Timber Fabricator
- Timber Fabricator (Laminates)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> Gather, receive and respond to verbal and written instructions Record and report quality and product care procedures according to workplace procedures Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> Contribute to team outcomes Communicate and work safely with others in the work area Encourage and support team members to take responsibility for their own work and assist each other in undertaking required roles and responsibilities Support team members in meeting expected outcomes
Problem-solving	<ul style="list-style-type: none"> Address issues, concerns and problems identified by team members or refer to relevant persons as required Identify and resolve problems Record and report assessment outcomes and distribution

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<p>problems according to workplace procedures</p> <ul style="list-style-type: none"> • Visually evaluate material characteristics for defects and quality

	FPIWPP3205B	Match and join veneer
	FPIWPP3207B	Clip veneer
	FPIWPP3211B	Maintain caul plates and screens
	FPIWPP3213B	Heat treat material
	FPIWPP3216B	Press material using the daylight process
	FPIWPP3217B	Process production effluent
	FPIWPP3218B	Plan and coordinate machining of panels
	FPIWPP3219B	Blend and test binding mixes
	FPIWPP3221B	Trim new panels to size
	FPIWPP3223B	Immunise veneer

	FPIWPP3226B	Operate a continuous press
	FPIWPP3230B	Produce decorative veneers
	FPIWPP3231B	Produce veneer from prepared flitches
Lamination and Finishing	FPICOT3228B	Plane/sand panels
	FPIWPP3202B	Paint panels
	FPIWPP3206B	Laminate and veneer board surfaces
	FPIWPP3208B	Punch peg holes in panels
	FPIWPP3209B	Prepare resin and additives
	FPIWPP3210B	Laminate board
	FPIWPP3214B	Treat paper
	FPIWPP3215B	Cut paper
	FPIWPP3220B	Plan and coordinate panel painting
	FPIWPP3222B	Press laminated ply
	FPIWPP3224B	Profile sand products
	FPIWPP3225B	Produce profile sanding shoes and wheels
	FPIWPP3227B	Vacuum paint
Timber Drying and Treatment	FPICOT3231B	Operate steam boiler
	FPICOT3232B	Operate heat plant
	FPICOT3248A	Dry timber in solar assisted kilns
	FPIWPP3212B	Dry material
	FPIWPP3228B	Dry wood flakes
Timber Products	FPICOT2241	Apply wood and timber product knowledge

Woodchipping	FPIWPP3203B	Produce fibre from chips
Sawdoctoring	FPICOT3212B	Replace saws, blades and guides
	FPICOT3216B	Assess and maintain saw performance
	FPICOT3217B	Assess and maintain cutter performance

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Machinery and Equipment	FPICOT2240	Cut material with a pole saw
	FPICOT3224B	Plan and monitor equipment maintenance
	FPICOT3233B	Sharpen and align blades and knives
	MEM18011C	Shut down and isolate machines/equipment
Warehousing & Distribution	FPICOT3230B	Operate automated stacking equipment
	FPICOT3236B	Coordinate stock control procedures
	TLIA3018A	Organise despatch operations
Load Handling	RIIMPO323A	Conduct civil construction dozer operations
	TLID3011A	Conduct specialised forklift operations
	TLID2012A	Operate specialised load shifting equipment
	TLID3014A	Load and unload vehicles carrying special loads
	TLID3043A	Shift loads using gantry equipment
Safety and Quality	CPPSEC3007A	Maintain security of environment
	FPICOR3203B	Evaluate fire potential and prevention

Processes	FPICOT3254A	Implement environmentally sustainable work practices in the work area/work site
	FPICOT3263	Maintain and contribute to energy efficiency
	HLTFA311A	Apply first aid
	HLTFA412A	Apply advanced first aid (unit has HLTFA311A Apply first aid as a pre-requisite)
	AHCCHM303A	Prepare and apply chemicals
	TLID3035A	Operate a boom type elevating work platform
	TLIF1002B	Conduct housekeeping activities
Administration and Business	BSBINM301A	Organise workplace information
	BSBITU306A	Design and produce business documents
Communication and Relationships	BSBFLM303C	Contribute to effective workplace relationships
Competitive Manufacturing	MSS402001A	Apply competitive systems and practices
	MSS402060A	Use planning software systems in operations
	MSS404060A	Facilitate the use of planning software systems in a work area or team
Planning and Analysis	BSBFLM305C	Support operational plan

FPI30511 Certificate III in Timber Manufactured Products

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Imported units updated to non-equivalent versions:

- HLTFA311A replaces HLTFA301C – Not equivalent
- HLTFA412A replaces HLTFA402C – Not equivalent
- MSS402060A replaces MSACMT260A – Not equivalent
- MSS404060A replaces MSACMT460A – Not equivalent

Release 1.1

Two imported units of competency updated:

- SIRXSLS201 replaces SIRXSLS001A - Equivalent
- MSS402001A replaces MSACMS200A - Equivalent

Typographical error corrected - TLIC3036A was incorrectly entered as TLIC3063A

Description

This qualification is designed for job roles in the timber manufactured products sector of the forest and forest products industry.

Pathways Information

This qualification has five employment pathways for typical operational environments of timber manufactured products. These are:

- Press Operator
- Jig Setter
- Machine Operator (e.g. Finger Jointing, Moulding, Planing)
- Saw Operator
- Timber Manufactured Products Technician

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Accurately record and report workplace information, and maintain documentation • Gather, receive and respond to verbal and written instructions with correct actions • Record and report quality and product care procedures in accordance with workplace procedures • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Contribute to team outcomes • Effectively communicate and work safely with others in the work area • Encourage and support team members to take responsibility for their own work and to assist each other in undertaking required roles and responsibilities • Support team members in meeting expected outcomes

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Problem-solving	<ul style="list-style-type: none"> • Address issues, concerns and problems identified by team members or refer to relevant persons as required • Identify and resolve problems • Record and report assessment outcomes and distribution problems in accordance with workplace procedures • Visually evaluate material characteristics for defects and quality
Initiative and enterprise	<ul style="list-style-type: none"> • Efficiently and safely conduct quality and product care procedures • Monitor quality of output and follow product care procedures • Provide feedback to team members to encourage, value and reward team members' efforts and contributions • Reject and dispose of sub-standard materials in accordance with site requirements
Planning and organising	<ul style="list-style-type: none"> • Efficiently conduct quality and product care procedures in accordance with environmental legislation and workplace procedures • Identify team purpose, roles, responsibilities, goals, plans and objectives in consultation with team members • Monitor on-site movement of material to ensure intended flow is achieved • Review work order and clarify with appropriate personnel
Self-management	<ul style="list-style-type: none"> • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers • Follow safe workplace procedures for dealing with environmental incidents, accidents, and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities
Learning	<ul style="list-style-type: none"> • Establish opportunities for professional development in consultation with appropriate personnel in accordance with organisational procedures • Practise and record emergency and evacuation procedures in the event of an emergency • Record and report information regarding learning and competency development in accordance with organisational requirements • Support the team to identify and resolve problems which impede its performance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Technology

- Select equipment appropriate to work requirements and check for operational effectiveness in accordance with manufacturer's recommendations - equipment may include moisture meters and lifting equipment for the movement of materials

Packaging Rules

Total number of units = 13

- 6 core units plus
- 7 elective units, consisting of:
 - 3 units from Group A
 - up to 4 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate II, III or IV level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the timber manufactured products sector of the industry

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBFLM312C	Contribute to team effectiveness
	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR3201B	Implement safety, health and environment policies and procedures
	FPICOR3202B	Conduct quality and product care procedures
	FPICOR3204B	Visually assess materials

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Sawdoctoring	FPICOT3210B	Sharpen cutting tools
	FPICOT3211B	Maintain sawdoctoring tools
	FPICOT3212B	Replace saws, blades and guides
	FPICOT3216B	Assess and maintain saw performance
	FPICOT3217B	Assess and maintain cutter performance
	FPICOT3244B	Cut material to profile
Timber Grading & Testing	FPICOT3208B	Test strength of joints
	FPICOT3240B	Grade heavy structural/engineered products
	FPICOT3246B	Test heavy structural/engineered products
	FPICOT3250A	Prepare timber to meet import/export compliance requirements
Trusses & Frames	FPICOT3204B	Prepare and interpret sketches and drawings
	FPICOT3214B	Take off material quantities
	FPICOT3218B	Quote and interpret from manufactured timber product plans
	FPICOT3219B	Produce standard truss or frame plans and details using computers
	FPICOT3220B	Quote and interpret from computerised timber manufactured product plans
	FPICOT3239B	Create drawings using computer aided design systems
	FPICOT3241B	Assemble timber wall frames
	FPICOT3242B	Lay up timber roof trusses
FPICOT3243B	Operate a truss press	

Timber Products	FPICOT3205B	Dress boards using multi-headed machines
	FPICOT3206B	Cut material using high speed optimiser
	FPICOT3207B	Set up, operate and maintain finger jointing operations
	FPICOT3209B	Set up, operate and maintain end matching operations
	FPICOT3228B	Plane/sand panels
	FPICOT3230B	Operate automated stacking equipment
	FPICOT3234B	Cut material using CNC sizing machines
	FPICOT3235B	Machine material using CNC machining and processing centres
	FPICOT3253A	Convert timber residue into products for further use
	FPISAW3226B	Saw logs using CNC optimising systems
	FPITMM3201B	Convert timber
	FPITMM3202B	Manufacture using joinery machines
	FPIWPP3203B	Produce fibre from chips
	FPIWPP3209B	Prepare resin and additives

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Machinery & Equipment	TLIC3004A	Drive heavy rigid vehicle
	TLIC3005A	Drive heavy combination vehicle
Warehousing & Distribution	FPICOT3236B	Coordinate stock control procedures
	TLIA3018A	Organise despatch operations

Load Handling	FPICOT3264	Build and maintain timber stacks
	TLIC3063A	Operate vehicle carrying special loads
	TLID3011A	Conduct specialised forklift operations
	TLID2012A	Operate specialised load shifting equipment
	TLID3014A	Load and unload vehicles carrying special loads
	TLID3043A	Shift loads using gantry equipment
Safety & Quality Processes	FPICOR3203B	Evaluate fire potential and prevention
	FPICOT3254A	Implement environmentally sustainable work practices in the work area/work site
	FPICOT3263	Maintain and contribute to energy efficiency
	HLTFA311A	Apply first aid
	HLTFA412A	Apply advanced first aid (unit has HLTFA311A Apply first aid as a pre-requisite)
	TLID3035A	Operate a boom type elevating work platform
Administration & Business	BSBADM311A	Maintain business resources
	BSBINM301A	Organise workplace information
	BSBITU306A	Design and produce business documents
	FPICOT2241	Apply wood and timber product knowledge
	FPITMM3203B	Estimate and cost job
	SIRXSL201	Sell products and services
Communication & Relationships	BSBFLM303C	Contribute to effective workplace relationships
Competitive	MSS402001A	Apply competitive systems and practices

Manufacturing	MSS402060A	Use planning software systems in operations
	MSS404060A	Facilitate the use of planning software systems in a work area or team
Planning & Analysis	BSBFLM305C	Support operational plan

FPI30611 Certificate III in Timber Merchandising

Modification History

Release 2

Three new units added to elective bank:

- FPICOT2241
- FPICOT3263
- FPICOT3264

Updated imported unit HLTF412A replaces HLTF402C – Not equivalent

Imported units updates to current release:

- SIRRRPK010A
- SIRXFIN003A
- SIRXINV002A
- SIRXRSK002A
- SIRXRSK003A

Release 1.1

Twelve imported units of competency updated:

- SIRRRPK214 replaces SIRRRPK014A - Equivalent
- SIRXSLS303 replaces SIRXSLS004A - Equivalent
- SIRXICT303 replaces SIRXICT003A - Equivalent
- SIRXMER303 replaces SIRXMER002A - Equivalent
- SIRXMER406 replaces SIRXMER003A - Equivalent
- SIRXMER202 replaces SIRXMER005A - Equivalent
- SIRXWHS302 replaces SIRXOHS002A - Equivalent
- SIRXSLS304 replaces SIRXSLS003A - Equivalent
- HLTF403C replaces HLTF403A - Equivalent
- HLTF402C replaces HLTF402B - Equivalent
- ICAICT308A replaces ICAU3126B - Equivalent
- BSBCMM301B replaces BSBCMM301A - Equivalent

Due to a typographical error, TLIC4006A was included in this qualification. It has been updated to TLIC3005A which is the correct unit.

Description

This qualification is designed for job roles in the timber merchandising of the forest and forest products industry.

Pathways Information

This qualification has five employment pathways for typical operational environments of timber merchandising. These are:

- Customer Service / Sales Assistant (Retail or Wholesale)
- Customer Service Officer
- Sales and Merchandising Team Leader
- Sales and Merchandising Team Leader (Timber Products)
- Timber Advisor

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Accurately record and report workplace information, and maintain documentation • Demonstrate features and benefits of products and services to customer to create a buying environment

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • Provide customers with information in a clear, concise manner • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Actively encourage and support team members to participate in team activities and communication processes, and to take responsibility for their actions • Work collaboratively within a team to meet customers' needs • Establish and maintain communication with others in accordance with safety, health and environmental requirements • Support team members in meeting expected outcomes
Problem-solving	<ul style="list-style-type: none"> • Identify and anticipate possible problems and take action to minimise the effect on customer satisfaction • Identify problems and equipment faults and demonstrate appropriate response procedures • Immediately assess and rectify problems to avoid repetition of lost product • Monitor environmental measures and impact on the environment and take corrective action as required in accordance with workplace procedures
Initiative and enterprise	<ul style="list-style-type: none"> • Detect and assess hazards in the work area and report to appropriate personnel • Locate and assess safety, health and environmental issues and risks in the work area and report to appropriate personnel • Monitor quality of output and follow product care procedures • Provide feedback to team members to encourage, value and reward team members' efforts and contributions
Planning and organising	<ul style="list-style-type: none"> • Assess products for quality and customer specification requirements • Efficiently conduct quality and product care procedures in accordance with environmental legislation and workplace procedures • Identify team purpose, roles, responsibilities, goals, plans and objectives in consultation with team members • Research and apply comparisons between products and services
Self-management	<ul style="list-style-type: none"> • Develop and maintain product knowledge according to store policy and legislative requirements

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers • Follow safe workplace procedures for dealing with environmental incidents, accidents, and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities
Learning	<ul style="list-style-type: none"> • Identify opportunities for professional development • Implement training and operational controls in accordance with workplace procedures - training may include in-house or external training programs or one-on-one supervision, programs that maintain up-to-date knowledge of legislative changes at the local, State and Federal level • Practise and record emergency and evacuation procedures in the event of an emergency • Support the team to identify and resolve problems which impede its performance
Technology	<ul style="list-style-type: none"> • Select and use equipment appropriate to work task requirements in accordance with manufacturer's recommendations - equipment is to include equipment necessary to complete work tasks, and may include telephones or communications equipment, tools, machinery, vehicles, navigational aids, instruments, computers and computer software, printers, facsimile machines and photocopiers • Use a range of communication/electronic equipment

Packaging Rules

Total number of units = 13

- 6 core units plus

FPI30711 Certificate III in Sawdoctoring

Modification History

Release 2

New unit added to elective bank:

- FPICOT3263

Release 1.1

One imported unit of competency updated:

- MEM05006C replaces MEM05006B - Equivalent

Description

This qualification is designed for job roles in the sawmilling and processing sector of the forest and forest products industry.

Pathways Information

This qualification has three employment pathways for typical operational environments of sawmilling and processing. These are:

- Saw Maker
- Saw Repairer
- Sawdoctor

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Accurately interpret and convey information in written, sketch or oral form • Establish and maintain communication with others in accordance with occupational health and safety requirements • Record and report sketch and drawing preparation and interpretation activities to the appropriate personnel • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Communicate effectively and work safely with others in the work area • Contribute to team outcomes • Encourage and support team members to take responsibility for their own work and to assist each other in undertaking required roles and responsibilities • Review and clarify work order with appropriate personnel, which may include supervisors, suppliers, clients, colleagues and managers
Problem-solving	<ul style="list-style-type: none"> • Assess and control risks • Identify and resolve problems including methods for identifying omissions or areas of insufficient detail in sketches and drawings • Identify problems and equipment faults and demonstrate appropriate response procedures • Immediately assess and rectify problems to avoid repetition of damage to blades
Initiative and enterprise	<ul style="list-style-type: none"> • Detect and assess hazards in the work area and report to appropriate personnel • Effectively identify omissions and areas of insufficient detail and demonstrate appropriate response procedures • Encourage team members to participate in the planning, decision making and operational aspects of the work team to their level of responsibility

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • Visually inspect products before processing or completion
Planning and organising	<ul style="list-style-type: none"> • Check and conform with product specifications • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and interpreting sketches and drawings • Prepare for maintenance • Review and accurately identify work requirements
Self-management	<ul style="list-style-type: none"> • Apply, follow and adhere to quality system procedures to personal work • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers • Follow safe workplace procedures for dealing with environmental incidents, accidents, and emergencies within scope of responsibilities • Integrate care for the environment into all day-to-day activities
Learning	<ul style="list-style-type: none"> • Identify opportunities for professional development • Implement training and operational controls in accordance with workplace procedures - training may include in-house or external training programs or one-on-one supervision, programs that maintain up-to-date knowledge of legislative changes at the local, State and federal level • Practise and record emergency and evacuation procedures in the event of an emergency • Support the team to identify and resolve problems which impede its performance
Technology	<ul style="list-style-type: none"> • Accurately identify and interpret sketches or drawing features to provide a three-dimensional picture of components, assemblies or structures - sketches or drawings may be computer assisted, free hand or completed with simple drawing instruments • Use and maintain relevant tools, machinery and equipment • Use computerised design where appropriate

Packaging Rules

Total number of units = 26

- 10 core units plus

- 16 elective units, consisting of:
 - up to 16 units from the elective units listed below
 - up to 2 units recommended for packaging at Certificate II, III or IV level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the sawdoctoring sector of the industry

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBFLM312C	Contribute to team effectiveness
	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR3201B	Implement safety, health and environment policies and procedures
	FPICOT3204B	Prepare and interpret sketches and drawings
	FPICOT3211B	Maintain sawdoctoring tools
	FPICOT3233B	Sharpen and align blades and knives
	FPICOT3247B	Select timber for forestry operations
	FPISAW3228B	Apply principles of blade design to sawing procedures
	MEM05006C	Perform brazing and/or silver soldering

ELECTIVE UNITS

Field	Unit Code	Unit Title
Sawdoctoring	FPICOT3201B	Hand sharpen knives and blades
	FPICOT3210B	Sharpen cutting tools
	FPICOT3212B	Replace saws, blades and guides
	FPICOT3213B	Manufacture cutting tools

FPICOT3215B	Swage and shape saw blades
FPICOT3216B	Assess and maintain saw performance
FPICOT3217B	Assess and maintain cutter performance
FPICOT3237B	Produce templates
FPICOT3263	Maintain and contribute to energy efficiency
FPISAW3207B	Sharpen band saws
FPISAW3208B	Sharpen circular saws
FPISAW3209B	Align sawing production systems
FPISAW3210B	File and set saws
FPISAW3211B	Recondition guides
FPISAW3212B	Sharpen tipped circular saws
FPISAW3213B	Level and tension circular saws
FPISAW3214B	Join band saw blades
FPISAW3217B	Hard face saw teeth
FPISAW3218B	Replace tungsten tips
FPISAW3219B	Replace stellite tips
FPISAW3220C	Maintain wide band saw blades
FPISAW3221B	Profile saw blanks
FPISAW3222B	Recondition band mill wheels
FPISAW3225B	Maintain frame saw blades
MEM05004C	Perform routine oxyacetylene welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding

FPI30811 Certificate III in Woodmachining

Modification History

Release 2

New unit added to Group B elective bank:

- FPICOT3263

Release 1.1

Due to a previous typographical error, BSBWOR204A has been moved from the Timber Grading & Testing field to the Administration & Business field.

Description

This qualification is designed for job roles in the sawmilling and processing sector of the forest and forest products industry.

Pathways Information

This qualification has one employment pathway for typical operational environments of sawmilling and processing. These are:

- Wood Machinist

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Communicate information from line manager/management to the team • Establish and maintain communication with others in accordance with occupational health and safety requirements • Record and report quality and product care procedures in accordance with workplace procedures • Use appropriate communication and interpersonal techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Actively encourage and support team members to participate in team activities and communication processes and to take responsibility for their actions • Contribute to team outcomes • Make constructive contributions to the group • Support team members in meeting expected outcomes
Problem-solving	<ul style="list-style-type: none"> • Address issues, concerns and problems identified by team members or refer to relevant persons as required • Effectively carry out pre start-up checks • Identify problems and equipment faults and demonstrate appropriate response procedures • Plan product recovery to optimise the resource value and minimise waste
Initiative and enterprise	<ul style="list-style-type: none"> • Encourage team members to participate in the planning, decision making and operational aspects of the work team to their level of responsibility • Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures • Locate, assess and report safety, health and environment issues and risks in the work area to appropriate personnel • Provide feedback to team members to encourage, value and reward team members' efforts and contributions
Planning and organising	<ul style="list-style-type: none"> • Accurately locate, record and report information • Check and conform with product specifications • Comply with legislation, regulations, standards, codes of

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<p>practice and established safe practices and procedures for selecting blades for sawing procedures</p> <ul style="list-style-type: none"> Identify and assess organisational environmental goals
Self-management	<ul style="list-style-type: none"> Apply, follow and adhere to quality system procedures to personal work Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers Follow safe workplace procedures for dealing with environmental incidents, accidents, and emergencies within scope of responsibilities Integrate care for the environment into all day-to-day activities
Learning	<ul style="list-style-type: none"> Implement training and operational controls in accordance with workplace procedures - training may include in-house or external training programs or one-on-one supervision, programs that maintain up-to-date knowledge of legislative changes at the local, State and federal level Practise and record emergency and evacuation procedures in the event of an emergency Record and report information regarding learning and competency development in accordance with organisational requirements Support the team to identify and resolve problems which impede its performance
Technology	<ul style="list-style-type: none"> Record and report safety, health and environmental procedures in accordance with workplace procedures - may be manual, using a computer-based system or another appropriate organisational communication system Safely and efficiently use relevant equipment to complete work tasks within designated timeframes

Packaging Rules

Total number of units = 27

- 9 core units plus
- 18 elective units, consisting of:
 - 13 units from Group A
 - up to 5 units from Group B

- up to 2 units recommended for packaging at Certificate II, III or IV level from this or any other endorsed Training Package or state/territory accredited course.
- Elective units must be relevant to work undertaken in the woodmachining sector of the industry

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBFLM312C	Contribute to team effectiveness
	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR3201B	Implement safety, health and environment policies and procedures
	FPICOR3202B	Conduct quality and product care procedures
	FPICOT3201B	Hand sharpen knives and blades
	FPICOT3204B	Prepare and interpret sketches and drawings
	FPICOT3247B	Select timber for forestry operations
	FPISAW3228B	Apply principles of blade design to sawing procedures

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Sawing Operations	FPICOT2207B	Dress boards and timber
	FPICOT2208B	Resaw boards and timber
	FPICOT3205B	Dress boards using multi-headed machines
	FPICOT3206B	Cut material using high speed optimiser
	FPICOT3207B	Set up, operate and maintain finger jointing operations
	FPICOT3209B	Set up, operate and maintain end matching operations
	FPICOT3214B	Take off material quantities

	FPICOT3239B	Create drawings using computer aided design systems
	FPICOT3244B	Cut material to profile
	FPITMM2202B	Machine material
	FPITMM3202B	Manufacture using joinery machines
Sawdoctoring	FPICOT3210B	Sharpen cutting tools
	FPICOT3212B	Replace saws, blades and guides
	FPICOT3213B	Manufacture cutting tools
	FPICOT3216B	Assess and maintain saw performance
	FPICOT3217B	Assess and maintain cutter performance
	FPICOT3233B	Sharpen and align blades and knives
	FPICOT3237B	Produce templates
	FPISAW3208B	Sharpen circular saws
	FPISAW3210B	File and set saws
	FPISAW3213B	Level and tension circular saws
	FPISAW3218B	Replace tungsten tips

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Sawing Operations	FPICOT2205B	Tail out materials
	FPICOT2219B	Use hand-held tools
	FPICOT2232B	Cut material to shape using a saw
	FPICOT3234B	Cut material using CNC sizing machines
	FPICOT3235B	Machine material using CNC machining and processing centres
	FPISAW3226B	Saw logs using CNC optimising systems

FPITMM3201B Convert timber

FPI30911 Certificate III in Timber Truss and Frame Design and Manufacture

Modification History

Release 2

Two new units added to elective bank:

- FPICOT3263
- FPICOT3264

Imported non-equivalent units updated:

- CPCCCM1015A replaces CPCCCM1005A – Not equivalent
- HLTFA311A replaces HLTFA301C – Not equivalent
- HLTFA412A replaces HLTFA402C – Not equivalent

Release 1.1

Five imported units of competency updated:

- BSBCUS301B replaces BSBCUS301A - Equivalent
- BSBCUS402B replaces BSBCUS402A - Equivalent
- MSS402001A replaces MSACMS200A - Equivalent
- MSS403032A replaces MSACMT432A - Equivalent
- MSS403051A replaces MSACMT451A - Equivalent

Description

Qualification Notes

Specialised Job Roles

RTO please note: Insert specialisation (job role) on certificate only if the industry recommended electives listed below are achieved

Industry strongly recommends the selection of particular electives to meet different job roles

Designer

Recommended electives for those working in design are:

- 1 unit from Group A plus
- 5 units from Group A or B plus
- 2 units from Group A, B or C or up to 2 relevant units may be selected from units recommended for packaging at Certificate II, Certificate III or Certificate IV in any endorsed Training Package or State/Territory accredited course

Production fabricator Recommended electives for those working in production are:

- 6 units from Group A, B or C plus
- 2 units from Group A, B or C or up to 2 relevant units may be selected from units recommended for packaging at Certificate II, Certificate III or Certificate IV in any endorsed Training Package or State/Territory accredited course

Pathways Information

This qualification has two employment pathways for typical operational environments of timber truss and frame design. These are:

- Designer (Timber Truss & Frame)
- Production Fabricator (Timber Truss & Frame)

Pathways advice

There is an entry requirement into FPI40411 Certificate IV in Timber Truss and Frame Design. For those seeking a pathway to this qualification, recommended elective units are:

FPICOT3204B	Prepare and interpret sketches and drawings
FPICOT3214B	Take off material quantities
FPICOT3218B	Quote and interpret from manufactured timber product plans
FPICOT3220B	Quote and interpret from computerised timber manufactured product plans
FPICOT3239B	Create drawings using computer aided design systems

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Communicate with management • Gather, convey and receive information • Convey instructions accurately • Establish and maintain communication with others
Teamwork	<ul style="list-style-type: none"> • Contribute to the effectiveness of the work team • Participate in and facilitate the work team • Make constructive contributions to the work team
Problem-solving	<ul style="list-style-type: none"> • Solve routine problems • Detect, assess and report hazards in the work area • Review and report factors affecting the achievement of work tasks to appropriate personnel
Initiative and enterprise	<ul style="list-style-type: none"> • Select equipment appropriate to work task • Grade materials to best 'end use' • Identify and assess organisational environmental goals
Planning and organising	<ul style="list-style-type: none"> • Plan potential of materials to provide the highest value added return • Plan product recovery to optimise resource value and minimise waste • Prepare products for despatch
Self-management	<ul style="list-style-type: none"> • Utilise own contribution to the work team • Check own role and responsibilities with appropriate personnel • Identify and prioritise work tasks within designated timeframes
Learning	<ul style="list-style-type: none"> • Identify opportunities for professional development • Actively seek feedback on performance • Seek appropriate support to assist and improve own performance
Technology	<ul style="list-style-type: none"> • Use relevant equipment • Maintain and adjust machinery and equipment

Packaging Rules

Total number of units = 13

- 5 core units plus
- 8 Elective units, with at least 6 from the list below. Up to 2 relevant units may be selected from units recommended for packaging at Certificate II, Certificate III or Certificate IV in any endorsed Training Package or State/Territory accredited course

Elective units must be relevant to work undertaken in the timber truss and frame design sector of the industry

CORE UNITS

Field	Unit Code	Unit Title
Core	FPICOR2201B	Work effectively in the forest and forest products industry
	FPICOR2202B	Communicate and interact effectively in the workplace
	FPICOR3201B	Implement safety, health and environment policies and procedures
	FPICOR3202B	Conduct quality and product care procedures
	BSBFLM312C	Contribute to team effectiveness

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Specialist Design units. (one unit from this group must be selected to pursue a design pathway at Cert IV)	FPITMM3204A	Interpret designs to prepare timber roof truss drawings and documents using computers
	FPITMM3205A	Interpret designs to prepare timber floor system drawings and documents using computers
	FPITMM3206A	Interpret designs to prepare timber wall frame drawings and documents using computers

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Forest	FPICOT3204B	Prepare and interpret sketches and drawings
	FPICOT3214B	Take off material quantities
	FPICOT3218B	Quote and interpret from manufactured timber product plans
	FPICOT3220B	Quote and interpret from computerised timber manufactured product plans
	FPICOT3239B	Create drawings using computer aided design systems
	FPICOT4202B	Design timber structures
Construction	CPCBC4001A	Apply building codes and standards to the construction process for low rise building projects

GROUP C ELECTIVE UNITS

Field	Unit Code	Unit Title
Forest	FPICOR3204B	Visually assess materials
	FPICOT2235A	Assess timber for manufacturing potential
	FPICOT3234B	Cut material using CNC sizing machines
	FPICOT3235B	Machine material using CNC machining and processing centres
	FPICOT3236B	Coordinate stock control procedures
	FPICOT3241B	Assemble timber wall frames
	FPICOT3242B	Lay up timber roof trusses
	FPICOT3243B	Operate a truss press
	FPICOT3264	Build and maintain timber stacks
	FPICOT4203B	Plan and coordinate product assembly

	FPICOT4204B	Schedule and coordinate load shifting
	FPITMM2203A	Read and interpret timber truss, floor and/or frame fabrication plans
	FPITMM3207A	Set up timber floor trusses
Business	BSBCUS301B	Deliver and monitor a service to customers
	BSBCUS402B	Address customer needs
	BSBFLM305C	Support operational plan
	BSBINM301A	Organise workplace information
Construction	CPCCBBC4014A	Prepare simple building sketches and drawings
	CPCCCM1015A	Carry out measurements and calculations
Health and Safety	HLTFA311A	Apply first aid
	HLTFA412C	Apply advanced first aid (unit has HLTFA311A Apply first aid as a prerequisite)
Manufacturing	FPICOT3263	Maintain and contribute to energy efficiency
	MSS402001A	Apply competitive systems and practices
	MSS403032A	Analyse manual handling processes
	MSS403051A	Mistake proof an operational process
	MSAPMSUP390A	Use structured problem solving tools
Training	TAEDEL301A	Provide work skill instruction
Transport	TLIA3018A	Organise despatch operations

FPI40111 Certificate IV in Forest Operations

Modification History

Release 2

Imported units added to Group B elective bank:

- MSS015011A
- MSS405070A

Native and imported units updated to current versions:

- BSBPMG416A replaces BSBPMG408A – Not equivalent
- FPIFGM4203C replaces FPIFGM4203B – Equivalent
- HLTFA311A replaces HLTFA301C – Not equivalent
- HLTFA412A replaces HLTFA402C – Not equivalent
- SITTPPD402 replaces SITTPPD005A – Equivalent

Imported units updated to current release:

- PSPGOV602B
- PUALAW002B

Release 1.1

Seven imported units of competency updated:

- HLTFA403C replaces HLTFA403A - Equivalent
- BSBITS401B replaces BSBITS401A - Equivalent
- BSBCUS401B replaces BSBCUS401A - Equivalent
- TAEASS401B replaces TAEASS401A - Equivalent
- TAEASS402B replaces TAEASS402A - Equivalent
- TAEASS403B replaces TAEASS403A - Equivalent
- BSBWOR301B replaces BSBWOR301A - Equivalent

Description

This qualification is designed for job roles in the forest operations sector of the forest and forest products industry.

Pathways Information

This qualification has eight employment pathways for typical forest operations environments. These are:

- Arboriculture Supervisor

- Farm Forestry Supervisor
- Forestry Supervisor
- Forestry Operations Supervisor
- Harvesting Supervisor
- Harvesting Team Leader
- Propagation and Stand Health Supervisor
- Tree Farm Supervisor

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit’s parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
<p>The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.</p>	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Give and receive feedback constructively • Establish and maintain communication with others in accordance with forestry operation requirements • Record and report forestry operation procedures in accordance with workplace procedures • Use appropriate communication and interpersonal

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	techniques with colleagues and others
Teamwork	<ul style="list-style-type: none"> • Collect feedback on performance of team members from relevant sources and compare with established team learning needs • Make plans to introduce change in consultation with appropriate personnel • Provide workplace learning opportunities and coaching and mentoring assistance to facilitate individual and team achievement of competencies • Report potential of fire to appropriate personnel
Problem-solving	<ul style="list-style-type: none"> • Control and monitor fire risks and hazards in accordance with workplace procedures • Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures • Immediately assess and rectify problems to avoid repetition of lost product • Monitor safe workplace procedures and safe work instructions for controlling risks and protecting the environment
Initiative and enterprise	<ul style="list-style-type: none"> • Coordinate product visual inspection before processing or completion • Record and review improvement recommendations for resourcing requirements • Review operational plans and site practices for potential improvement, modifications and time savings • Use feedback from individuals or teams to identify and implement improvements in future learning arrangements
Planning and organising	<ul style="list-style-type: none"> • Identify and comply with applicable occupational health and safety, legislative and organisational requirements relevant to monitoring safety, health and environmental policies and procedures • Monitor organisation of duties, equipment and materials in accordance with safety, health and environmental requirements and organisational procedures • Plan potential of materials to provide the highest value added return • Plan product recovery to optimise the resource value and minimise waste
Self-management	<ul style="list-style-type: none"> • Apply, monitor and coordinate quality system procedures to personal work • Monitor care for the environment to check for integration into all day-to-day activities

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • Monitor safe workplace procedures for dealing with environmental incidents, accidents and emergencies within scope of responsibilities • Use and maintain personal protective equipment and clothing
Learning	<ul style="list-style-type: none"> • Identify and implement learning opportunities for others • Identify learning and development program goals and objectives to match specific knowledge and skill requirements of competency standards • Monitor training and operational controls to be in accordance with workplace procedures - training may include in-house or external training programs or one-on-one supervision • Systematically identify and implement learning and development needs in line with organisational requirements
Technology	<ul style="list-style-type: none"> • Select equipment appropriate to potential work requirements and check for operational effectiveness in accordance with manufacturer's recommendations • Use and maintain relevant tools, machinery and equipment

Packaging Rules

Total number of units = 14

- 5 core units plus
- 9 elective units, consisting of:
 - 2 units from Group A
 - up to 7 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate III, IV or Diploma level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the forest operations sectors of the industry, including forest growing and management and harvesting and haulage.

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBLED401A	Develop teams and individuals

FPICOR3203B	Evaluate fire potential and prevention
FPICOR4201B	Monitor safety, health and environment policies and procedures
FPICOR4202B	Monitor and review forestry operations
FPICOR4203B	Monitor quality and product care procedures

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Fire Control	PUAFIR406B	Develop prescribed burning plans (unit has PUAFIR303B Suppress wildfire as a prerequisite)
	PUAFIR407B	Conduct prescribed burning (unit has PUAFIR303B Suppress wildfire as a prerequisite)
	PUAOPE001B	Supervise response
Breeding & Propagation	AHCNSY402A	Plan a propagation program
Site Establishment & Maintenance	AHCNAR402A	Plan the implementation of revegetation works
	AHCILM401A	Protect places of cultural significance
	AHCIRG406A	Plan on-site irrigation system installation and construction work
	FPIFGM4201B	Implement a forest establishment plan
	FPIFGM4207B	Conduct a forest site assessment
	FPIFGM4208B	Plan a quarry
	FPIFGM4209B	Interpret and use aerial photographs for forest management
	PSPGOV521A	Collect statistical data

Tree Growing & Maintenance	AHCCHM402A	Plan and implement a chemical use program
	AHCPMG402A	Develop a pest management action plan within a local area
	FPIFGM4202B	Manage stand health
	FPIFGM4203C	Design plantations
	FPIFGM4204B	Conduct a pests and diseases assessment
	FPIFGM4205B	Monitor regeneration rates
	FPIFGM4206B	Conduct a wood volume and yield assessment
Harvesting Operations	FPIHAR4201B	Apply tree jacking techniques
	FPIHAR4202B	Coordinate log recovery (hook tender)
	FPIHAR4203B	Design log landings and snig tracks
	FPIHAR4204B	Plan and coordinate fire salvage operations
	FPIHAR4205B	Implement harvesting plans
Machinery & Equipment	AHCMOM402A	Supervise maintenance of machinery and equipment

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Safety & Quality Processes	BSBMGT403A	Implement continuous improvement
	BSBRSK401A	Identify risk and apply risk management processes
	HLTFA311A	Apply first aid
	HLTFA412A	Apply advanced first aid (unit has HLTFA311A Apply first aid as a prerequisite)
	HLTFA403C	Manage first aid in the workplace (to be assessed in conjunction with or after HLTFA412A)

	PUALAW002B	Conduct initial investigation at incident scene
	TLIF4007A	Implement and coordinate accident-emergency procedures
	MSS015011A	Conduct a sustainability energy audit
	MSS405070A	Develop and manage sustainable energy practices
Administration & Business	BSBINM401A	Implement workplace information system
	BSBITS401B	Maintain business technology
	BSBPMG416A	Apply project procurement procedures
	BSBWRT401A	Write complex documents
	FPIFGM4210B	Prepare a tender
	TLIR4002A	Source goods/services and evaluate contractors
Communication & Relationships	BSBCUS401B	Coordinate implementation of customer service strategies
	BSBWOR401A	Establish effective workplace relationships
	BSBWOR402A	Promote team effectiveness
	PUACOM012B	Liaise with media at a local level
	SITTPPD402	Develop interpretive activities
Training & Assessment	BSBCMM401A	Make a presentation
	TAEASS401B	Plan assessment activities and processes
	TAEASS402B	Assess competence
	TAEASS403B	Participate in assessment validation
	TAEDEL301A	Provide work skill instruction
	TAEDEL401A	Plan, organise and deliver group-based learning

- TAEDES401A Design and develop learning programs
- TAEDES402A Use training packages and accredited courses to meet client needs

**Planning &
Analysis**

- BSBMGT402A Implement operational plan
- BSBRES401A Analyse and present research information
- BSBSMB404A Undertake small business planning
- BSBWOR301B Organise personal work priorities and development

FPI40211 Certificate IV in Timber Processing

Modification History

Release 2

Imported units added to Group B elective bank

- MSS015011A
- MSS405070A

Updated non-equivalent imported unit:

- BSBPMG416A replaces BSBPMG408A – Not equivalent
- HLTFA412A replaces HLTFA402C (co-requisite unit to HLTFA403C)– Not equivalent

Imported units updated to current release:

- PSPGOV602B
- LGACOM409A

Release 1.1

Ten imported units of competency updated:

- SIRXSLS406 replaces SIRXSLS005A - Equivalent
- MSS403010A replaces MSACMC410A - Equivalent
- MSS403001A replaces MSACMS400A - Equivalent
- HLTFA403C replaces HLTFA403A - Equivalent
- BSBCUS401B replaces BSBCUS401A - Equivalent
- BSBITS401B replaces BSBITS401A - Equivalent
- TAEASS401B replaces TAEASS401A - Equivalent
- TAEASS402B replaces TAEASS402A - Equivalent
- TAEASS403B replaces TAEASS403A - Equivalent
- BSBWOR301B replaces BSBWOR301A - Equivalent

Description

This qualification is designed for job roles in the timber processing sector of the forest and forest products industry.

Pathways Information

This qualification has seven employment pathways for typical operational environments of timber processing. These are:

- Customer Service Manager (Wholesale)
- Sawmill Supervisor

- Production Supervisor
- Treatment Plant Supervisor
- Timber Advisor Supervisor
- Timber Manufacturing Supervisor
- Timber Supervisor (Wholesale)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Accurately record and report workplace information, and maintain documentation • Give and receive feedback constructively • Establish and maintain communication with others in accordance with forestry operation requirements • Record and report safety, health and environmental procedures in accordance with workplace procedures

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Teamwork	<ul style="list-style-type: none"> • Collect feedback on performance of team members from relevant sources and compare with established team learning needs • Encourage individuals to self evaluate performance and identify areas for improvement • Facilitate participation of individuals in the work of the team • Provide support to colleagues through coaching and mentoring skills
Problem-solving	<ul style="list-style-type: none"> • Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures • Immediately assess and rectify problems to avoid repetition of lost product • Monitor and assess safety, health and environmental issues and risks in the work area and report to appropriate personnel • Monitor safe workplace procedures and safe work instructions for controlling risks and protecting the environment
Initiative and enterprise	<ul style="list-style-type: none"> • Coordinate product visual inspection before processing or completion • Monitor and assess hazards in the work area and report to designated personnel • Monitor and check environmental measures for corrective action • Monitor safe workplace procedures for dealing with environmental incidents, accidents, and emergencies within scope of responsibilities
Planning and organising	<ul style="list-style-type: none"> • Efficiently and safely monitor quality and product supply care • Monitor organisation of duties, equipment and materials in accordance with safety, health and environmental requirements and organisational procedures • Plan potential of materials to provide the highest value added return • Plan product recovery to optimise the resource value and minimise waste
Self-management	<ul style="list-style-type: none"> • Apply, monitor and coordinate quality system procedures to personal work • Monitor care for the environment to check for integration into all day-to-day activities • Monitor safe workplace procedures for dealing with environmental incidents, accidents and emergencies within

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	scope of responsibilities <ul style="list-style-type: none"> • Use and maintain personal protective equipment and clothing
Learning	<ul style="list-style-type: none"> • Identify and implement learning opportunities for others • Identify learning and development program goals and objectives to match specific knowledge and skill requirements of competency standards • Monitor training and operational controls to be in accordance with workplace procedures - training may include in-house or external training programs or one-on-one supervision • Systematically identify and implement learning and development needs in line with organisational requirements
Technology	<ul style="list-style-type: none"> • Use and maintain relevant tools, machinery and equipment

Packaging Rules

Packaging Rules

Total number of units = 14

- 3 core units plus
- 11 elective units, consisting of:
 - 3 units from Group A
 - up to 8 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate III, IV or Diploma level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the timber processing and production sectors of the industry, including sawmilling and processing, wood panel products, timber manufactured products and timber merchandising

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBLED401A	Develop teams and individuals
	FPICOR4201B	Monitor safety, health and environment policies and procedures

FPICOR4203B Monitor quality and product care procedures

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Logyard and/or Material Preparation	FPICOT4205B	Coordinate log debarking operations
Sawing Operations	FPISAW4202B	Plan and monitor saw log operations
	FPISAW4204B	Plan and monitor board conversion
Sawdoctoring	FPICOT3216B	Assess and maintain saw performance
	FPICOT3217B	Assess and maintain cutter performance
Timber Treatment & Drying	FPICOT4206B	Plan and coordinate boiler operations
	FPICOT4207B	Plan and coordinate heat plant operations
	FPISAW4201B	Plan and monitor timber treatment plant operations
	FPISAW4203B	Coordinate timber drying operations
Grading & Testing	FPITMM4204B	Sample and test products to specifications
	FPIWPP4202B	Perform laboratory testing
	PSPGOV521A	Collect statistical data
Board & Veneer Production	FPIWPP4201B	Plan and coordinate panel production

Trusses & Frames	FPICOT4201B	Produce complex truss and frame plans and details using computers
	FPICOT4202B	Design timber structures
Timber Products	FPICOT4203B	Plan and coordinate product assembly
	FPITMM4201B	Construct prototypes and samples
	FPITMM4202B	Diagnose and calculate production costs
	FPITMM4203B	Install and commission CNC software
Retail	SIRXINV004A	Buy merchandise
	SIRXMER004A	Manage merchandise and store presentation
	SIRXSLS406	Manage sales and service delivery
	TLIR4002A	Source goods/services and evaluate contractors
Machinery & Equipment	AHCMOM402A	Supervise maintenance of machinery and equipment
	TLIC4006A	Drive multi-combination vehicle
Competitive Manufacturing	MSS403010A	Facilitate change in an organisation implementing competitive systems and practices
	MSS403001A	Implement competitive systems and practices

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Load Handling	FPICOT4204B	Schedule and coordinate load shifting
	TLID4032A	Plan and conduct specialised lift

Safety & Quality Processes	BSBRK401A	Identify risk and apply risk management processes
	BSBMGT403A	Implement continuous improvement
	HLTFA403C	Manage first aid in the workplace (to be assessed in conjunction with or after HLTFA412A Apply advanced first aid)
	TLIF4007A	Implement and coordinate accident-emergency procedures
	MSS015011A	Conduct a sustainability energy audit
	MSS405070A	Develop and manage sustainable energy practices
Administration & Business	BSBCUS401B	Coordinate implementation of customer service strategies
	BSBINM401A	Implement workplace information system
	BSBITS401B	Maintain business technology
	BSBPMG416A	Apply project procurement procedures
	BSBSMB406A	Manage small business finances
	BSBWOR401A	Establish effective workplace relationships
	BSBWOR402A	Promote team effectiveness
	BSBWRT401A	Write complex documents
	LGACOM409A	Prepare tender documentation
Training & Assessment	BSBCMM401A	Make a presentation
	TAEASS401B	Plan assessment activities and processes
	TAEASS402B	Assess competence
	TAEASS403B	Participate in assessment validation
	TAEDEL301A	Provide work skill instruction
	TAEDEL401A	Plan, organise and deliver group-based learning

TAEDEL402A Plan, organise and facilitate learning in the workplace

TAEDES401A Design and develop learning programs

TAEDES402A Use training packages and accredited courses to meet client needs

**Planning &
Analysis**

BSBMGT402A Implement operational plan

BSBRES401A Analyse and present research information

BSBSMB404A Undertake small business planning

BSBWOR301B Organise personal work priorities and development

FPI40311 Certificate IV in Timber Truss and Frame Manufacture

Modification History

Release 2

Imported units added to elective bank:

- MSS015011A
- MSS405070A

Imported units updated to current versions:

- BSBPMG415A replaces BSBPMG407A – Not equivalent
- BSBPMG522A replaces BSBPMG510A – Equivalent
- CPCCA3006B replaces CPCCA3006A – Equivalent
- HLTFA412A replaces HLTFA402C – Not equivalent
- MSS404050A replaces MSACMT450A – Equivalent, new prerequisite unit
- MSS404060A replaces MSACMT460A – Not equivalent

Release 1.1

Eleven imported units of competency updated:

- BSBCUS401B replaces BSBCUS401A - Equivalent
- BSBCUS501C replaces BSBCUS501B - Equivalent
- BSBITS401B replaces BSBITS401A - Equivalent
- CUVDES405A replaces CUVDSP15B - Equivalent
- HLTFA403C replaces HLTFA403A - Equivalent
- MSS403010A replaces MSACMC410A - Equivalent
- MSS403001A replaces MSACMS400A - Equivalent
- MSS402050A replaces MSACMT250A - Equivalent
- MSS404082A replaces MSACMT482A - Equivalent
- TAEASS401B replaces TAEASS401A - Equivalent
- TAEASS402B replaces TAEASS402A - Equivalent

Description

This qualification is designed for job roles in the timber truss and frame sector of the forest and forest products industry.

Pathways Information

This qualification has one employment pathway for typical operational environments of timber truss and frame. This is:

- Production Supervisor (Timber Truss & Frame)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> Record and report quality and product care procedures Interact appropriately with colleagues and others in the workplace Use culturally appropriate communication skills
Teamwork	<ul style="list-style-type: none"> Facilitate the development of the workgroup Determine team development needs
Problem-solving	<ul style="list-style-type: none"> Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures Assess and rectify problems to avoid loss of product Identify and implement improvements in learning arrangements
Initiative and enterprise	<ul style="list-style-type: none"> Identify resources and timelines required for learning activities Conduct progress reviews Monitor material grading for best end use
Planning and organising	<ul style="list-style-type: none"> Monitor and record organisational environmental goals Plan product recovery to optimise resource value and minimise

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	waste <ul style="list-style-type: none"> • Coordinate and monitor quality of output
Self-management	<ul style="list-style-type: none"> • Monitor tasks in accordance with legislative requirements • Organise duties, equipment and materials in accordance with SHE requirements
Learning	<ul style="list-style-type: none"> • Identify and implement learning and development needs • Provide workplace learning opportunities • Provide coaching and mentoring assistance
Technology	<ul style="list-style-type: none"> • Monitor machinery and equipment maintenance

Packaging Rules

Total number of units = 17

- 3 core units plus
- 14 elective units, consisting of:
 - up to 14 units from the elective units listed below
 - up to 3 units recommended for packaging at Certificate III, IV or Diploma level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the timber processing and production sectors of the industry, including sawmilling and processing, wood panel products, timber manufactured products and timber merchandising

CORE UNITS

Field	Unit Code	Unit Title
Core	FPICOR4201B	Monitor safety, health and environment policies and procedures
	FPICOR4203B	Monitor quality and product care procedures
	BSBLED401A	Develop teams and individuals

ELECTIVE UNITS

Field	Unit Code	Unit Title
--------------	------------------	-------------------

Forest	FPICOT3239B	Create drawings using computer aided design systems
	FPICOT4202B	Design timber structures
	FPICOT4203B	Plan and coordinate product assembly
	FPITMM4201B	Construct prototypes and samples
	FPITMM4202B	Diagnose and calculate production costs
	FPITMM4203B	Install and commission CNC software
	FPITMM4205A	Prepare and advise on a broad range of timber roof truss details using computers
	FPITMM4206A	Prepare and advise on a broad range of timber floor system details using computers
	FPITMM4207A	Prepare and advise on a broad range of timber wall frame details using computers
Business	BSBCMM401A	Make a presentation
	BSBCUS401B	Coordinate implementation of customer service strategies
	BSBCUS501C	Manage quality customer service
	BSBINM401A	Implement workplace information system
	BSBITS401B	Maintain business technology
	BSBLED501A	Develop a workplace learning environment
	BSBMGT402A	Implement operational plan
	BSBPMG415A	Apply project risk-management techniques
	BSBPMG522A	Undertake project work
Construction	CPCCBBC4001A	Apply building codes and standards to the construction process for low rise building projects
	CPCCBBC4004A	Identify and produce estimated costs for building and construction projects

	CPCBC4005A	Produce labour and material schedules for ordering
	CPCBC4024A	Resolve business disputes
	CPCCA3006B	Erect roof trusses
	CPCSV5010A	Interact with clients in a regulated environment
	CPCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
	CPCUS4001A	Implement and monitor environmentally sustainable work practices
Visual Arts, Crafts and Design	CUVDES405A	Research and apply techniques in spatial design
Health and Safety	HLTFA403C	Manage first aid in the workplace
	HLTFA412A	Apply advanced first aid
Manufacturing	MSAPMOPS404A	Co-ordinate maintenance
	MSAPMSUP390A	Use structured problem solving tools
	MSS015011A	Conduct a sustainability energy audit
	MSS402050A	Monitor process capability
	MSS403001A	Implement competitive systems and practices
	MSS403010A	Facilitate change in an organisation implementing competitive systems and practices
	MSS404050A	Undertake process capability improvements (*Prerequisite: <i>MSS404052A Apply statistics to operational processes</i>)
	MSS404060A	Facilitate the use of planning software systems in a work area or team
	MSS404082A	Assist in implementing a proactive maintenance strategy

	MSS405070A	Develop and manage sustainable energy practices
Training	TAEASS401B	Plan assessment activities and processes
	TAEASS402B	Assess competence
	TAEDEL401A	Plan, organise and deliver group-based learning
	TAEDEL402A	Plan, organise and facilitate learning in the workplace

FPI40411 Certificate IV in Timber Truss and Frame Design

Modification History

Release 2

Imported units added to Group B elective bank:

- MSS015011A
- MSS405070A

Imported units updated to current versions:

- BSBPMG415A replaces BSBPMG407A – Not equivalent
- BSBPMG522A replaces BSBPMG510A – Equivalent
- CPCCCA3006B replaces CPCCCA3006A – Equivalent
- HLTFA412A replaces HLTFA402C – Not equivalent
- MSS404050A replaces MSACMT450A – Equivalent, new prerequisite unit
- MSS404060A replaces MSACMT460A – Not equivalent

Release 1.1

Ten imported units of competency updated:

- BSBCUS401B replaces BSBCUS401A - Equivalent
- BSBITS401B replaces BSBITS401A - Equivalent
- CUVDES405A replaces CUVDSP15B - Equivalent
- HLTFA403C replaces HLTFA403A - Equivalent
- MSS403010A replaces MSACMC401A - Equivalent
- MSS403001A replaces MSACMS400A - Equivalent
- MSS402050A replaces MSACMT250A - Equivalent
- MSS404082A replaces MSACMT482A - Equivalent
- TAEASS401B replaces TAEASS401A - Equivalent
- TAEASS402B replaces TAEASS402A - Equivalent

Description

This qualification is designed for job roles in the timber processing sector of the forest and forest products industry.

Pathways Information

This qualification has one employment pathway for typical operational environments of timber truss and frame design. This is:

- Designer (Timber Truss & Frame)

Pathways advice

There is an entry requirement into FPI50411 Diploma of Timber Truss and Frame Design. For those seeking a pathway to this qualification, recommended elective units are:

Forest	FPICOT4202B	Design timber structures
	FPITMM4201B	Construct prototypes and samples
Manufacturing	MSAPMSUP390A	Use structured problem solving tools
Construction	CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
	CPCSUS4001A	Implement and monitor environmentally sustainable work practices

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements*Entry Requirements*

The entry requirement for this qualification is the successful achievement of the following units contained in FPI30911 Certificate III Timber Truss and Frame Design and Manufacture:

FPICOT3204B Prepare and interpret sketches and drawings

FPICOT3214B Take off material quantities

FPICOT3218B Quote and interpret from manufactured timber product plans

FPICOT3220B Quote and interpret from computerised timber manufactured product plans

FPICOT3239B Create drawings using computer aided design systems

Plus at least one of the following units:

PITMM3204A Interpret designs to prepare timber roof truss drawings and documents using computers

FPITMM3205A Interpret designs to prepare timber floor system drawings and documents using computers

FPITMM3206A Interpret designs to prepare timber wall frame drawings and documents using computers

or demonstration of equivalent competence

Note: The design unit selected will be determined by the industry sector and type of product being manufactured

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> Record and report quality and product care procedures Interact appropriately with colleagues and others in the workplace Use culturally appropriate communication skills
Teamwork	<ul style="list-style-type: none"> Facilitate the development of the workgroup Determine team development needs
Problem-solving	<ul style="list-style-type: none"> Identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures Assess and rectify problems to avoid loss of product Identify and implement improvements in learning arrangements
Initiative and enterprise	<ul style="list-style-type: none"> Identify resources and timelines required for learning activities Conduct progress reviews Monitor material grading for best end use
Planning and organising	<ul style="list-style-type: none"> Monitor and record organisational environmental goals Plan product recovery to optimise resource value and minimise waste Coordinate and monitor quality of output
Self-management	<ul style="list-style-type: none"> Monitor tasks in accordance with legislative requirements Organise duties, equipment and materials in accordance with SHE requirements
Learning	<ul style="list-style-type: none"> Identify and implement learning and development needs Provide workplace learning opportunities

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • Provide coaching and mentoring assistance
Technology	<ul style="list-style-type: none"> • Monitor machinery and equipment maintenance • Identify and verify design inputs • Review and test design options • Prepare truss drawings, production documents and installation instructions and test designs and specifications using custom software

Packaging Rules

Total number of units = 17

- 3 core units plus
- 14 elective units, consisting of:
 - 1 unit from Group A
 - 5 units from Group A and/or Group B
 - up to 8 units from Group A, B or C
 - up to 3 units recommended for packaging at Certificate III, IV or Diploma level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the truss and frame industry.

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBLED401A	Develop teams and individuals
	FPICOR4201B	Monitor safety, health and environment policies and procedures
	FPICOR4203B	Monitor quality and product care procedures

Field	Unit Code	Unit Title
Forest	FPITMM4205A	Prepare and advise on a broad range of timber roof truss details using computers

FPITMM4206A	Prepare and advise on a broad range of timber floor system details using computers
FPITMM4207A	Prepare and advise on a broad range of timber wall frame details using computers

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Forest	FPICOT4202B	Design timber structures
	FPITMM4201B	Construct prototypes and samples
Business	BSBLED501A	Develop a workplace learning environment
Manufacturing	MSAPMSUP390A	Use structured problem solving tools
	MSS015011A	Conduct a sustainability energy audit
	MSS405070A	Develop and manage sustainable energy practices
Construction	CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
	CPCSUS4001A	Implement and monitor environmentally sustainable work practices

GROUP C ELECTIVE UNITS

Field	Unit Code	Unit Title
Forest	FPICOT4203B	Plan and coordinate product assembly
	FPITMM4202B	Diagnose and calculate production costs
	FPITMM4203B	Install and commission CNC software

Business	BSBCMM401A	Make a presentation
	BSBCUS401B	Coordinate implementation of customer service strategies
	BSBINM401A	Implement workplace information system
	BSBITS401B	Maintain business technology
	BSBMGT402A	Implement operational plan
	BSBPMG415A	Apply project risk-management techniques
	BSBPMG522A	Undertake project work
Construction	CPCCBBC4004A	Identify and produce estimated costs for building and construction projects
	CPCCBBC4005A	Produce labour and material schedules for ordering
	CPCCBBC4024A	Resolve business disputes
	CPCCCA3006B	Erect roof trusses
	CPCCSV5010A	Interact with clients in a regulated environment
	CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
Visual Arts, Crafts and Design	CUVDES405A	Research and apply techniques in spatial design
Health and Safety	HLTFA403C	Manage first aid in the workplace
	HLTFA412A	Apply advanced first aid (unit has HLTFA311A Apply first aid as a prerequisite)
Manufacturing	MSS403010A	Facilitate change in an organisation implementing competitive systems and practices

	MSS403001A	Implement competitive systems and practices
	MSS402050A	Monitor process capability
	MSS404050A	Undertake process capability improvements (*Prerequisite <i>MSS404052A Apply statistics to operational processes</i>)
	MSS404060A	Facilitate the use of planning software systems in a work area or team
	MSS404082A	Assist in implementing a proactive maintenance strategy
	MSAPMOPS404A	Co-ordinate maintenance
Training	TAEASS401B	Plan assessment activities and processes
	TAEASS402B	Assess competence
	TAEDEL401A	Plan, organise and deliver group-based learning
	TAEDEL402A	Plan, organise and facilitate learning in the workplace

FPI50111 Diploma of Forest and Forest Products

Modification History

Release 2

Updated equivalent imported core unit:

- BSBWHS503A Contribute to the systematic management of WHS risk replaces BSBOHS504B Apply principles of OHS risk management

Imported units added to Group B elective bank:

- MSS015011A
- MSS405070A

Native and imported units updated to equivalent versions:

- BSBPMG522A replaces BSBPMG510A
- FPICOT5206B replaces FPICOT5206A
- FPICOT5208B replaces FPICOT5208A
- FPICOT5209B replaces FPICOT5209A
- FPIFGM5219 replaces FPIFGM5218A

Imported units updated to current release:

- LGACOM401A
- LGACOM409A
- LGACOM502B
- LGAEHRR504C
- LGAPLEM404A
- LGAPLEM612B
- PUAFIR501B
- PUAFIR509B
- PUALAW001B
- PUAOPE007B

Release 1.1

Four imported units of competency updated:

- BSBCUS501C replaces BSBCUS501B - Equivalent
- MSS405001A replaces MSACMS600A - Equivalent
- MSS405004A replaces MSACMS603A - Equivalent
- BSBR5K501B replaces BSBR5K501A - Equivalent

Four typographical errors have been fixed - AHCCHM401A, BSBR5K501B, BSBINM501A and BSBFIM501A had incorrectly listed unit titles.

Description

This qualification is designed for job roles in the forest and forest products industry.

Pathways Information

This qualification has twelve employment pathways for typical management environments of forest and forest products industries. These are:

- Arboriculture Manager
- Forest Manager
- Forestry Manager
- Harvesting Manager
- Nursery Manager
- Plantation Establishment Manager
- Plantation Manager
- Production Manager
- Sawmill Manager
- Timber Advisory Manager
- Timber Manufacturing Manager
- Tree Farm Manager

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Adjust and communicate strategies to all stakeholders according to organisational procedures • Communicate information from line manager/management to the team • Consult team members to establish team purpose, roles, responsibilities and accountabilities in accordance with organisational goals, plans and objectives • Manage records, reports and recommendations within the organisation's systems and processes
Teamwork	<ul style="list-style-type: none"> • Develop strategies to ensure that team members are actively encouraged and supported to participate in decision making processes, and to assume responsibility and exercise initiative as appropriate • Ensure leadership, supervision, coaching and mentoring assist colleagues to overcome difficulty in meeting customer service standards • Manage team performance to consistently meet the organisation's quality and delivery standards • Support team members in meeting expected performance outcomes
Problem-solving	<ul style="list-style-type: none"> • Communicate to, and follow up with, line manager/management and other relevant stakeholders, unresolved issues, concerns and problems raised by team members • Develop processes to ensure that issues, concerns and problems identified by team members are recognised and addressed • Take decisions to overcome problems and to adapt customer service and products and/or service delivery in consultation with appropriate individuals and groups • Use problem-solving skills to deal with complex and non-routine difficulties
Initiative and enterprise	<ul style="list-style-type: none"> • Identify and develop new skills to achieve and maintain a competitive edge

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • Seek and use feedback from employees, clients and colleagues to identify and develop ways to improve competence • Take individual initiative to achieve and extend personal work goals beyond those planned • Take initiative to prioritise and facilitate competing demands to achieve personal, team and the organisation's goals and objectives
Planning and organising	<ul style="list-style-type: none"> • Ensure personal work goals, plans and activities reflect the organisation's plans, and own responsibilities and accountabilities • Ensure personal work planning and organisation serve as a positive role model in the workplace • Investigate, understand and assess the needs of customers and include in planning processes • Prepare action plans, including allocated responsibilities and time frames for implementation
Self-management	<ul style="list-style-type: none"> • Adjust own interpersonal styles and methods to the organisation's social and cultural environment, and guide and support members of the work team in their personal adjustment process • Assess the effectiveness of own management development • Ensure own contribution to work team serves as a role model for others and enhances the organisation's image to all stakeholders • Undertake participation in networks to enhance personal knowledge, skills and work relationships
Learning	<ul style="list-style-type: none"> • Assess personal knowledge and skills against competency standards to determine development needs, priorities and plans • Identify, evaluate, select and use development opportunities suitable to personal learning style/s to develop competence • Manage opportunities for further improvement
Technology	<ul style="list-style-type: none"> • Develop strategies to ensure that systems and procedures including technology are used to monitor operational progress and to identify ways in which planning and operations could be improved • Use technology efficiently and effectively to manage work priorities and commitments

Packaging Rules

Total number of units = 15

- 6 core units plus
- 9 elective units, consisting of:
 - 5 units from Group A
 - up to 4 units from Group A and/or Group B
 - up to 2 units recommended for packaging at Certificate IV, Diploma or Advanced Diploma level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the forest and forest products industry

CORE UNITS

Field	Unit Code	Unit Title
Core	BSBCUS501C	Manage quality customer service
	BSBMGT502B	Manage people performance
	BSBMGT516C	Facilitate continuous improvement
	BSBWHS503A	Contribute to the systematic management of WHS risk
	BSBWOR501B	Manage personal work priorities and professional development
	BSBWOR502B	Ensure team effectiveness

GROUP A ELECTIVE UNITS

Field	Unit Code	Unit Title
Fire Control	PUALAW001B	Protect and preserve incident scene
	PUAOPE001B	Supervise response
	PUAFIR501B	Conduct fire investigation and analysis activities (unit has PUALAW001B Protect and preserve incident scene as a prerequisite)
	PUAFIR509B	Implement prevention strategies
	PUAOPE007B	Command agency personnel within a multi-agency emergency response (unit has PUAOPE001B

		Supervise response as a prerequisite)
Breeding & Propagation	AHCPHT503A	Manage a controlled growing environment
	FPIFGM5212A	Manage genetic resources
	FPIFGM5215A	Breed trees
Site Establishment & Maintenance	AHCIRG503A	Design irrigation, drainage and water treatment systems
	AHCWAT502A	Manage water systems
	FPIFGM5201B	Plan and manage an inventory program
	FPICOT5206B	Implement forestry chain of custody certification system
	FPIFGM5208B	Manage road construction and maintenance
	FPIFGM5214A	Develop a native forest regeneration plan
	FPIFGM5217A	Promote plantations as a sustainable form of land use
	LGAPLEM404A	Prepare and present geographic information systems data
	LGAPLEM612B	Protect heritage and cultural asset
Tree Growing & Maintenance	AHCPGD402A	Plan a plant establishment program
	AHCPMG503A	Develop a strategy for the management of target pests
	AHCNSY401A	Plan a growing-on program
	AHCNSY402A	Plan a propagation program
	AHCWRK505A	Manage trial and/or research material
	FPICOT5205A	Develop biohazard contingency plans
	FPIFGM5210A	Manage tending operations in a native forest
	FPIFGM5211A	Coordinate stand nutrition
	FPIFGM5213A	Coordinate plantation tending operations

	FPIFGM5216A	Manage coupe planning
Harvesting	FPICOT5209B	Manage tree harvesting to minimise environmental impact
	FPIHAR5201B	Design harvesting plans
Timber Products & Processes	FPICOT4201B	Produce complex truss and frame plans and details using computers
	FPICOT4202B	Design timber structures
	FPICOT4204B	Schedule and coordinate load shifting
	FPICOT4205B	Coordinate log debarking operations
	FPICOT4206B	Plan and coordinate boiler operations
	FPICOT4207B	Plan and coordinate heat plant operations
	FPICOT5207A	Implement sustainability in the workplace
	FPIFGM5219	Undertake carbon stock sampling of forests and plantations
	FPISAW4201B	Plan and monitor timber treatment plant operations
	FPISAW4202B	Plan and monitor saw log operations
	FPISAW4203B	Coordinate timber drying operations
	FPISAW4204B	Plan and monitor board conversion
	FPITMM4202B	Diagnose and calculate production costs
	FPITMM4203B	Install and commission CNC software
	FPITMM4204B	Sample and test products to specifications
	FPITMM5201B	Assess product feasibility of designs
	FPITMM5202B	Develop, trial and evaluate prototypes
	FPITMM5203B	Generate and transfer complex computer-aided drawings and specifications

	FPITMM5204B	Manage product design
	FPITMM5205B	Optimise CNC operations
	FPITMM5206B	Plan production
	FPIWPP4201B	Plan and coordinate panel production
	FPIWPP4202B	Perform laboratory testing
Competitive Manufacturing	MSS405001A	Develop competitive systems and practices for an organisation
	MSS405004A	Develop business plans in an organisation implementing competitive systems and practices

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Machinery & Equipment	FPICOT5203B	Manage installation and commissioning of equipment
	FPICOT5204B	Organise enterprise maintenance programs

FPI50311 Diploma of Timber Truss and Frame Manufacture

Modification History

Release 2

Updated equivalent imported core unit:

- BSBWHS503A Contribute to the systematic management of WHS risk replaces BSBWHS504B Apply principles of OHS risk management

Imported unit added to elective bank:

- MSS015011A

One imported unit of competency updated:

- MSS405075A replaces MSACMT675A - Equivalent

Release 1.1

Nine imported units of competency updated:

- BSBCUS501C replaces BSBCUS501B - Equivalent
- BSBMGT516C replaces BSBMGT516B - Equivalent
- ICAICT308A replaces ICAU3126B - Equivalent
- MSS405001A replaces MSACMS600A - Equivalent
- MSS405004A replaces MSACMS603A - Equivalent
- MSS402030A replaces MSACMT230A - Equivalent
- MSS404052A replaces MSACMT452A - Equivalent
- MSS405062A replaces MSACMT662A - Equivalent
- MSS405070A replaces MSACMT670A - Equivalent

Description

This qualification is designed for job roles in the timber truss and frame sector of the forest and forest products industry.

Pathways Information

This qualification has one employment pathway for typical operational environments of timber truss and frame. This is:

- Production Manager (Timber Truss & Frame)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Document performance • Articulate expected standards of performance • Adjust and communicate strategies to stakeholders • Communicate opportunities for improvement
Teamwork	<ul style="list-style-type: none"> • Manage team performance • Counsel individuals who continue to perform below expectations • Involve stakeholders and operational staff in risk management processes
Problem-solving	<ul style="list-style-type: none"> • Make decisions to overcome problems • Deal with complex and non-routine difficulties • Identify potential factors impacting on the effectiveness of controls
Initiative and enterprise	<ul style="list-style-type: none"> • Develop strategies to manage organisational systems • Develop, procure and use resources effectively • Identify factors contributing to risk
Planning and organising	<ul style="list-style-type: none"> • Develop work plans • Consider areas identified for further improvement when undertaking planning

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • Ensure plans achieve agreed specifications
Self-management	<ul style="list-style-type: none"> • Manage own performance and development • Measure and maintain personal performance in varying work conditions • Maintain appropriate work-life balance
Learning	<ul style="list-style-type: none"> • Provide on the job coaching to improve performance • Monitor and coach individuals with poor performance • Lead and manage continuous improvement systems • Conduct formal and informal research
Technology	<ul style="list-style-type: none"> • Source tools to assist in analysing potential hazards • Use technology efficiently and effectively to manage work priorities and commitments

Packaging Rules

Total number of units = 19

- 5 core units plus
- 14 elective units, consisting of:
 - up to 14 units from the elective units listed below
 - up to 3 units recommended for packaging at Certificate IV, Diploma or Advanced Diploma level from this or any other endorsed Training Package or state/territory accredited course.

Elective units must be relevant to work undertaken in the truss and frame industry.

CORE UNITS

Field	Unit Code	Unit Name
Business	BSBCUS501C	Manage quality customer service
	BSBMGT502B	Manage people performance
	BSBMGT516C	Facilitate continuous improvement
	BSBWHS503A	Contribute to the systematic management of WHS risk
	BSBWOR501B	Manage personal work priorities and professional development

ELECTIVE UNITS

Field	Unit Code	Unit Name
Forest	FPICOT5203B	Manage installation and commissioning of equipment
	FPICOT5204B	Organise enterprise maintenance programs
	FPITMM4202B	Diagnose and calculate production costs
	FPITMM5201B	Assess product feasibility of designs
	FPITMM5202B	Develop, trial and evaluate prototypes
	FPITMM5203B	Generate and transfer complex computer-aided drawings and specifications
	FPITMM5204B	Manage product design
	FPITMM5205B	Optimise CNC operations
Information and Communication	FPITMM5206B	Plan production
	ICAICT308A	Use advanced features of computer applications
Construction	CPCCSV5011A	Apply building codes and standards to residential buildings
	CPCCSV5012A	Assess timber-framed designs for one and two storey buildings
	CPCCSV5015A	Assess structural requirements for domestic scale buildings
Business	BSBAUD501B	Initiate a quality audit
	BSBINM501A	Manage an information or knowledge management system
	BSBLED501A	Develop a workplace learning environment

	BSBMGT515A	Manage operational plan
	BSBMKG501B	Identify and evaluate marketing opportunities
	BSBSUS501A	Develop workplace policy and procedures for sustainability
Manufacturing	MSS405001A	Develop competitive systems and practices for an organisation
	MSS405004A	Develop business plans in an organisation implementing competitive systems and practices
	MSS402030A	Apply cost factors to work practices
	MSS404052A	Apply statistics to operational processes
	MSACMT630A	Optimise cost of product
	MSACMT631A	Undertake value analysis of product costs in terms of customer requirements
	MSS405062A	Develop a documentation control strategy for an organisation
	MSS015011A	Conduct a sustainability energy audit
	MSS405070A	Develop and manage sustainable energy practices
	MSS405075A	Facilitate the development of a new product
	MSAPMSUP390A	Use structured problem solving tools

FPI50411 Diploma of Timber Truss and Frame Design

Modification History

Release 1.1

Updated equivalent imported core unit:

- BSBWHS503A Contribute to the systematic management of WHS risk replaces BSOHS504B Apply principles of OHS risk management

Imported unit added to Group B elective bank:

- MSS015011A

One imported unit of competency updated:

- MSS405075A replaces MSACMT675A - Equivalent

Release 1.1

Eight imported units of competency updated:

- BSBCUS501C replaces BSBCUS501B - Equivalent
- BSBMGT516C replaces BSBMGT516B - Equivalent
- MSS405001A replaces MSACMS600A - Equivalent
- MSS405004A replaces MSACMS603A - Equivalent
- MSS402030A replaces MSACMT230A - Equivalent
- MSS404052A replaces MSACMT452A - Equivalent
- MSS405062A replaces MSACMT662A - Equivalent
- MSS405070A replaces MSACMT670A - Equivalent

Description

This qualification is designed for job roles in the timber truss and frame sector of the forest and forest products industry.

Pathways Information

This qualification has one employment pathway for typical operational environments of timber truss and frame. This is:

- Designer (Timber Truss & Frame)

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

Entry Requirements

The entry requirement for this qualification is the successful achievement of the following units contained in FPI40411 Certificate IV Timber Truss and Frame Design:

FPICOT4202B	Design timber structures
FPITMM4201B	Construct prototypes and samples
MSAPMSUP390A	Use structured problem solving tools
CPCCBC4001A	Apply building codes and standards to the construction process for low-rise building projects
CPCSUS4001A	Implement and monitor environmentally sustainable work practices

Plus at least one of the following units:

FPITMM4205A	Prepare and advise on a broad range of timber roof truss details using computers
FPITMM4206A	Prepare and advise on a broad range of timber floor system
FPITMM4207A	Prepare and advise on a broad range of timber wall frame details using computers

or demonstration of equivalent competence

Note: The design unit selected will be determined by the industry sector and type of product being manufactured

Employability Skills Summary

FPI60113 Advanced Diploma of Forest Industry Sustainability

Modification History

Release 2

Qualification code updated to FPI60113 in FPI11 Version 2.

Revised qualification packaging rules to further increase flexibility of the qualification.

- Total number of units required to complete the qualification reduced from 14 to 10, with core unit requirement reduced from 3 to 2 and elective unit requirement reduced from 11 to 8; with the number of units required under each elective group also modified
- Renaming of qualification fields and reallocation of units to those fields
- Updates to native and imported elective units of competency, while maintaining equivalence:
 - FPICOT5206A updated to FPICOT5206B
 - FPICOT5208A updated to FPICOT5208B
 - FPICOT5209A updated to FPICOT5209B
 - FPICOT6202A updated to FPICOT6202B
 - FPIFGM5219 replaces FPIFGM5218A
 - FPIFGM6203 replaces FPIFGM6202A
 - FPIFGM6201A updated to FPIFGM6201B
- Addition of imported elective units into leadership field of elective bank:
- BSBMGT616A Develop and implement strategic plans
- BSBPMG414A Apply project information management and communications techniques
- Imported units removed as already covered by existing units:
- PSPGOV521A and BSBPMG510A replaced by BSBPMG414A
- PSPGOV602B replaced by BSBREL701A
- PSPMNGT604B and PSPMNGT703A replaced by BSBMGT608C and BSBINN601B
- The following units no longer relevant to job roles and so removed from qualification:
 - BSBADM502B
 - BSBWOR501B
 - SIRXFIN005A
 - SIRXMER004A
 - SIRXMGT005A

Imported units updated to current release:

- PSPPOL603A
- PSPREG603A
- SIRXFIN004A

Release 1.1

FPICOT5208A and FPICOT6201A returned to Group A, Forestry field as per Case for Endorsement November 2011.

Description

This qualification is designed for supervisory and leadership roles in the forest and forest products industry.

Pathways Information

This qualification has various employment pathways for typical supervisor and management roles within the forest and forest products industry. These are:

- Community Liaison Officer
- Designer (Manufacturing and Engineered Wood Products)
- Environmental Manager
- Environmental Planner
- Forest / Timber Harvester
- Forest Auditor (e.g. certification provider)
- Forest Planner
- Forest Sustainability Manager
- Forestry Manager
- General Manager
- Plantation Manager
- Sustainability Manager
- Technical Forester
- Technical Services Officer
- Technical Services Manager
- Value Recovery Officer

Entry may be gained through progression from a lower level FPI qualification or recognition of existing industry experience or qualifications.

This qualification provides a pathway from VET into higher education and from higher education into VET. An example of a pathway from higher education to VET would be a technical forester, holding a university qualification, gaining leadership and sustainability skills through this Advanced Diploma qualification.

This qualification may be suited to an Australian Apprenticeship pathway.

Licensing/Regulatory Information

Native FPI units may be subject to state or territory licensing, legislative, regulatory or certification requirements.

Some imported units in the elective bank may be subject to state or territory codes, regulations, licences and/or permits. These units must be implemented in line with the licensing requirements outlined in the unit's parent Training Package.

Entry Requirements

There are no entry requirements.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
The following table contains a summary of the employability skills for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on the packaging options.	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Communicate production schedule for the value maximisation plan • Document recommendations based on research outcomes and provide feedback to appropriate personnel and stakeholders • Interact appropriately with stakeholders, colleagues and others
Teamwork	<ul style="list-style-type: none"> • Consult with stakeholders • Establish timelines and budget for implementation with appropriate personnel • Use consultative processes to obtain input into work in line with site requirements
Problem-solving	<ul style="list-style-type: none"> • Analyse data on enterprise resource consumption • Develop and implement appropriate response procedures • Identify and review work requirements
Initiative and enterprise	<ul style="list-style-type: none"> • Evaluate changing trends and opportunities for improved workplace sustainability and consider for ongoing improvements • Identify market demand
Planning and organising	<ul style="list-style-type: none"> • Coordinate the acquisition of required resources, including obtaining required authorisations and approvals • Develop and implement systems and procedures to assist in the achievement of sustainability in the workplace • Plan the policy design process, including organising meetings

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	with stakeholders
Self-management	<ul style="list-style-type: none"> • Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to • Measure and maintain personal performance in varying work conditions, contexts and contingencies • Set and meet own work priorities
Learning	<ul style="list-style-type: none"> • Assess personal knowledge and skills against competency standards to determine development needs, priorities and plans • Identify and develop new skills to achieve and maintain a competitive edge • Identify, evaluate, select and use development opportunities suitable to personal learning style/s to develop competence
Technology	<ul style="list-style-type: none"> • Use software and communication systems to research, analyse, create and present documents and reports • Use technology to manage work priorities and commitments

Packaging Rules

Total number of units = 10

- 2 core units plus
- 8 elective units, of which:
 - 4 units must be from Group A, and
 - up to 4 further units may be from Group A and/or Group B
 - up to 2 units may be chosen from outside this qualification, from this or any other endorsed Training Package or accredited course.

Elective units chosen from outside this qualification must be relevant to work undertaken in supervisory and leadership roles in the forest and forest products industry.

CORE UNITS

Field	Unit Code	Unit Title
Core	FPICOR6201A	Manage sustainability in the workplace
	FPICOR6202A	Implement practices to maximise value from wood residues

Field	Unit Code	Unit Title
-------	-----------	------------

Sustainable Industry Practices	FPICOT5201B	Implement sustainable forestry practices
	FPICOT5202B	Manage forestry information and interpretations programs
	FPICOT5205A	Develop biohazard contingency plans
	FPICOT5206B	Implement forestry chain of custody certification system
	FPICOT5207A	Implement sustainability in the workplace
	FPICOT5209B	Manage tree harvesting to minimise environmental impact
	FPICOT6202B	Develop and manage a forestry chain of custody certification process for the workplace
	FPICOT6203A	Develop engineered timber products to meet energy efficient building
	FPICOT6204A	Use carbon accounting to estimate emissions in the workplace
	FPICOT6205A	Prepare an enterprise carbon management report
	FPICOT6207A	Develop forest management systems and processes
	FPIFGM5219	Undertake carbon stock sampling of forests and plantations
	FPIFGM6201B	Plan a biochar storage system for carbon capture and storage
	FPIFGM6203	Manage sustainable tree inventory
	MSS015003A	Analyse product lifecycle for sustainability

GROUP B ELECTIVE UNITS

Field	Unit Code	Unit Title
Leadership	BSBINN601B	Manage organisational change
	BSBINN801A	Lead innovative thinking and practice
	BSBMGT608C	Manage innovation and continuous improvement
	BSBMGT616A	Develop and implement strategic plans
	BSBPMG414A	Apply project information management and

		communications techniques
	BSBREL701A	Develop and cultivate collaborative partnerships and relationships
	FPICOT5208B	Build and maintain community relationships
	FPICOT6201B	Manage community engagement
	FPIFGM5217A	Promote plantations as a sustainable form of land use
Administration and Business	BSBAUD501B	Initiate a quality audit
	BSBFIM501A	Manage budgets and financial plans
	BSBSUS501A	Develop workplace policy and procedures for sustainability
	BSBWRK506A	Coordinate research and analysis
	ICTSUS7235A	Use ICT to improve sustainability outcomes
	MSACMT671A	Develop and manage sustainable environmental practices
	PSPPOL603A	Manage policy implementation
	PSPREG603A	Manage and lead inspection and monitoring programs
	SIRXFIN004A	Manage financial resources

FPISS00011 Skill set for a boom delimeter operator

Modification History

FPI11 V2

Superseded unit updated:

- HLTFA311A replaces HLTFA301C

Pathway qualification code updated to reflect changes made in FPI11 V2

FPI11 V1

Skill set code updated to FPI11 to reflect Training Package update from FPI05 V3 to FPI11 V1

Description

This skill set is for people wishing to work as a boom delimeter operator in a commercial forest operation in the harvesting and haulage sector of the forest and forest products industry.

Pathways Information

Pathway These units provide credit towards a number of qualifications including FPI30213 Certificate III in Harvesting and Haulage.

Licensing/Regulatory Information

In a number of jurisdictions some of these units are required for the issuing of a timber harvesting operator's licence as a boom delimeter operator.

Skill Set Requirements

Unit	FPICOR2203B Follow environmental care procedures
	FPICOR2205B Follow OHS policies and procedures
	HLTFA311A Apply first aid
	FPIHAR3208C Conduct boom delimeter operations

Target Group

Target group This skill set is for people wishing to work as a boom delimeter operator in a commercial forest operation in the harvesting and haulage sector of the forest and forest products industry.

Suggested words for Statement of Attainment

Suggested words for
Statement of
Attainment These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for operating a boom delimeter and may meet some State and Territory regulatory requirements for gaining a licence as a boom delimeter operator.

FPISS00012 Skill set for a crawler/dozer operator

Modification History

FPI11 V2

Superseded unit updated:

- HLTF311A replaces HLTF301C

Pathway qualification code updated to reflect changes made in FPI11 V2

- FPIHAR3215C replaces FPIHAR3215B

Pathway qualification code updated to reflect changes made in FPI11 V2

FPI11 V1

Skill set code updated to FPI11 to reflect Training Package update from FPI05 V3 to FPI11 V1

Description

This skill set is for people wishing to work as a heavy production mobile chipper operator in a commercial forest operation in the harvesting and haulage sector of the forest and forest products industry.

Pathways Information

Pathway These units provide credit towards a number of qualifications including FPI30213 Certificate III in Harvesting and Haulage.

Licensing/Regulatory Information

In a number of jurisdictions some of these units are required for the issuing of a timber harvesting operator's licence as a heavy production mobile chipper operator.

Skill Set Requirements

Unit	FPICOR2203B Follow environmental care procedures
	FPICOR2205B Follow OHS policies and procedures
	HLTF311A Apply first aid
	FPIHAR3215C Conduct heavy production mobile chipper operations

Target Group

Target group This skill set is for people wishing to work as a heavy production mobile chipper operator in a commercial forest operation in the harvesting and haulage sector of the forest and forest products industry.

Suggested words for Statement of Attainment

Suggested words for
Statement of
Attainment These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for operating a heavy production mobile chipper and may meet some State and Territory regulatory requirements for gaining a licence as a heavy production mobile chipper operator.

FPISS00016 Skill set for a loader operator

Modification History

FPI11 V2

Superseded unit updated:

- HLTF311A replaces HLTF301C

Pathway qualification code updated to reflect changes made in FPI11 V2

FPI11 V1

Skill set code updated to FPI11 to reflect Training Package update from FPI05 V3 to FPI11 V1

Description

This skill set is for people wishing to work as a loader operator in a commercial forest operation in the harvesting and haulage sector of the forest and forest products industry.

Pathways Information

Pathway These units provide credit towards a number of qualifications including FPI30213 Certificate III in Harvesting and Haulage.

Licensing/Regulatory Information

In a number of jurisdictions some of these units are required for the issuing of a timber harvesting operator's licence as a loader operator.

FPISS00024 Skill set for off road four wheel drive operations

Modification History

FPI11 V2

Pathway qualification codes updated to reflect changes made in FPI11 V2

FPI11 V1

New skill set

Description

This skill set is for forestry undertaking four wheel drive operations on unsealed roads within the harvesting and haulage, forest growing and management and sawmilling sectors of the forest and forest products industry.

Pathways Information

These may provide credit towards a number of qualifications including:

- FPI20113 Certificate II in Forest Growing and Management
- FPI20213 Certificate II in Harvesting and Haulage
- FPI20311 Certificate II in Sawmilling and Processing
- FPI30113 Certificate III in Forest Growing and Management
- FPI30213 Certificate III in Harvesting and Haulage
- FPI30311 Certificate III in Sawmilling and Processing

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

FPIFGM3215 Perform complex four wheel drive operations

FPICOT3259 Operate a four wheel drive on unsealed roads

FPICOT3260 Recover four wheel drive vehicles

FPIFGM3214 Operate a four wheel drive in a towing situation

FPICOT2233B Navigate in forest areas

Target Group

This skill set is for forestry undertaking four wheel drive operations on unsealed roads within the harvesting and haulage, forest growing and management and sawmilling sectors of the forest and forest products industry.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements Off Road Four Wheel Drive Operations.

Custom Content Section

Not applicable.

FPISS00025 Skill set for soil and water protection (roading)

Modification History

FPI11 V2

Pathway qualification codes updated to reflect changes made in FPI11 V2

FPI11 V1

New skill set

Description

Not applicable.

Pathways Information

These units provide credit towards a number of qualifications including FPI30113 Certificate III in Forest Growing and Management and FPI30213 Certificate III in Harvesting and Haulage.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

FPICOT3258 Comply with soil and water protection

FPICOR2203B Follow environmental care procedures

AHCSAW302A Implement erosion and sediment control measures

Target Group

This skill set is for forestry workers and people wishing to work in a forest soil and water protection role within a forestry environment.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for Forest Soil and Water Protection.

Custom Content Section

Not applicable.

FPISS00026 Skill set for carbon accounting

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

This skill set provides the specialised skills and knowledge required to design plantations, develop a tree inventory, and undertake carbon storage sampling.

Pathways Information

Pathway These units provide credit towards a number of qualifications, including FPI60113 Advanced Diploma of Forest Industry Sustainability

Licensing/Regulatory Information

To be registered as an auditor, candidates need to meet the requirements of the National Greenhouse and Energy Reporting (NGER) guidelines as set out in the National Greenhouse and Energy Reporting Act 2007.

Further information is available at www.cleanenergyregulator.gov.au

Skill Set Requirements

Units FPIFGM4203C Design plantations
FPIFGM5219 Undertake carbon stock sampling of forests and plantations
FPIFGM6203 Manage sustainable tree inventory

Target Group

Target group The skill set is targeted at enterprises and individuals who are providing services to landowners undertaking, or wishing to undertake, farm forestry projects.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements to design plantations, develop a tree inventory, and undertake carbon stock sampling.

FPISS00027 Skill set for a forestry log truck driver

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

Not applicable.

Pathways Information

This skill set provides credit towards a number of qualifications, including FPI30213 Certificate III in Harvesting and Haulage, which allows for specialisation for the role of log truck driver.

Licensing/Regulatory Information

In a number of jurisdictions, some of the units in this skill set are required for the issuing of licences to drive heavy vehicles, which include vehicles required to transport forestry logs from a forestry harvesting site.

Skill Set Requirements

Units FPICOR2203B Follow environmental care procedures
 FPICOR2205B Follow OHS policies and procedures
 FPICOT3261 Transport forestry logs using trucks

Target Group

This skill set is for people wishing to work as a log truck driver in commercial forest operations in the harvesting and haulage sector of the forest and forest products industry.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for driving a log truck, as well as knowing the workplace procedures for loading and unloading log trucks. They may meet state and territory licensing

requirements for driving heavy vehicles that transport forestry logs, depending on individual state requirements.

Custom Content Section

Not applicable.

FPISS00028 Skill set for a forestry produce truck driver

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

Not applicable.

Pathways Information

This skill set provides credit towards a number of qualifications, including FPI30213 Certificate III in Harvesting and Haulage.

Licensing/Regulatory Information

In a number of jurisdictions, some of the units in this skill set are required for the issuing of licences to drive heavy vehicles, which include vehicles required to transport forestry produce from a forestry harvesting site.

Skill Set Requirements

Units FPICOR2203B Follow environmental care procedures
FPICOR2205B Follow OHS policies and procedures
FPICOT3262 Transport forestry produce using trucks

Target Group

This skill set is for people wishing to work as a truck driver transporting forestry produce (apart from forestry logs) in commercial forest operations in the harvesting and haulage sector of the forest and forest products industry.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the

industry requirements for driving a heavy vehicle used for the transport of forestry produce. They may meet state and territory licensing requirements for driving heavy vehicles that transport forestry produce, depending on individual state requirements.

Not applicable.

FPISS00029 Skill set for a finger jointing plant operator

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

Not applicable.

Pathways Information

These units provide credit towards a number of qualifications, including:

FPI30311 Certificate III in Sawmilling and Processing

FPI30511 Certificate III in Timber Manufactured Products

FPI30811 Certificate III in Wood Machining

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to the units in this skill set; however there are no specific licensing or certification requirements at the time of publication.

Skill Set Requirements

- Units**
- FPICOT2209B Produce finger jointed timber
 - FPICOT3207B Set up, operate and maintain finger jointing operations
 - FPICOT3212B Replace saws, blades and guides
 - MEM18011C Shut down and isolate machines/equipment

Target Group

This skill set is for people who set up, operate and maintain finger jointing operations in a forest products factory setting. Their job role will involve planning production parameters, maintaining and replacing equipment, resolving problems, shutting down and isolating equipment as required to produce finger jointed timber to required specifications.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for setting up, operating and maintaining finger jointing operations to produce finger jointed timber according to established production parameters.

Custom Content Section

Not applicable.

FPISS00030 Skill set for a finger jointing moulder operator

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

Not applicable.

Pathways Information

These units provide credit towards a number of qualifications including:

FPI30311 Certificate III in Sawmilling and Processing

FPI30511 Certificate III in Timber Manufactured Products

FPI30811 Certificate III in Wood Machining

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to the units in this skill set; however there are no specific licensing or certification requirements at the time of publication.

Skill Set Requirements

- Units**
- FPICOR3204B Visually assess materials
 - FPICOT3205B Dress boards using multi-headed machines
 - FPICOT3217B Assess and maintain cutter performance

Target Group

This skill set is for people who assess and maintain cutter performance and dressing boards using multi-headed machines in a forest products factory setting that produces finger jointed timber.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for planning and evaluating dressing conditions and processes to set, adjust and maintain cutters and equipment for finger jointed timber. The competencies also meet industry requirements to inspect and test moulding and planing machines and other associated equipment for moulder operators producing finger jointed timber.

Custom Content Section

Not applicable.

FPISS00031 Skill set for a finger jointing grader operator

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

Not applicable.

Pathways Information

These units provide credit towards a number of qualifications, including:

FPI30311 Certificate III in Sawmilling and Processing

FPI30511 Certificate III in Timber Manufactured Products

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to the units in this skill set; however there are no specific licensing or certification requirements at the time of publication.

Skill Set Requirements

Units FPICOR3204B Visually assess materials
FPICOT2210B Tally material
FPICOT3245B Grade, sort and mark material

Target Group

This skill set is for people who grade, sort and mark material in a forest products factory setting that produces finger jointed timber.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements to visually evaluate material characteristics and features for

classification into various strength or appearance grades suitable for the production of finger jointed timber.

Custom Content Section

Not applicable.

FPISS00032 Skill set for a finger jointing quality control tester

Modification History

FPI11 V2

Primary release with FPI11 Training Package V2

Description

Not applicable.

Pathways Information

These units provide credit towards a number of qualifications including:

FPI30311 Certificate III in Sawmilling and Processing

FPI30511 Certificate III in Timber Manufactured Products

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to the units in this skill set; however there are no specific licensing or certification requirements at the time of publication.

Skill Set Requirements

Units FPICOR3202B Conduct quality and product care procedures

FPICOR3204B Visually assess materials

FPICOT3208B Test strength of joints

Target Group

This skill set is for people who conduct quality and product care procedures and test strength of joints for finger jointed timber in a forest products factory setting.

Suggested words for Statement of Attainment

These competencies from the FPI11 Forest and Forest Products Training Package meet the industry requirements for monitoring quality of output and following product care

procedures in the production of finger jointed timber. These competencies also meet industry requirements to interpret test results used in identifying production problems and necessary changes to processes.

Custom Content Section

FPICOR2201B Work effectively in the forest and forest products industry

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to work effectively in the forest and forest products industry. It requires the ability to identify and follow legal and procedural requirements, complete daily work activities, and identify opportunities for professional development. These work functions would be carried out under routine supervision within organisational guidelines

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOR2201A Work effectively in the forest and forest products industry

Application of the Unit

Application of the unit

The unit involves working effectively in the forest and forest products industry in operations of all sizes in a variety of work settings including a forest environment, saw mill, wood chip mill, veneer mill, board/plywood mill, timber treatment plant, downstream processing of timber, forest products factory, forest products sales and service, horticultural, domestic, local council and emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Identify and follow legal and procedural requirements

1.1. Applicable *Occupational Health and Safety* (OHS), *environmental*, *legislative* and *organisational requirements* relevant to working effectively in the forest and forest products industry are identified and followed

1.2. Key legal and procedural principles relating to *work order* are checked with *appropriate personnel* in line with organisational requirements

1.3. Legal and procedural requirements are clarified with appropriate personnel as required to ensure consistency of interpretation and application

1.4. Procedures are followed to ensure applicable legislative and procedural requirements are *ethically* implemented and to required standards

2. Prioritise and

2.1. Own role and responsibilities are checked with

ELEMENT	PERFORMANCE CRITERIA
complete daily work activities	<p>appropriate personnel in line with organisational requirements</p> <p>2.2. Work tasks are identified, prioritised and completed within designated timeframes in line with work order</p> <p>2.3. Factors affecting the achievement of work tasks are promptly reviewed and reported to appropriate personnel</p> <p>2.4. Equipment is selected appropriate to work task requirements and is used in line with manufacturer recommendations</p> <p>2.5. Work is consistent with organisational and legislative requirements related to cultural diversity, access and equity, and equal employment opportunity</p>
3. Identify and access future learning opportunities	<p>3.1. Feedback on performance is actively sought from appropriate personnel to confirm quality of performance and identify areas for improvement</p> <p>3.2. Opportunities for professional development are established in consultation with appropriate personnel in line with organisational procedures</p> <p>3.3. Appropriate support is sought to assist and improve own performance to achieve personal and organisational goals and objectives</p> <p>3.4. Information regarding learning and competency development is recorded and reported in line with organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report workplace information
- Numeracy skills sufficient to estimate, measure and calculate time required to

REQUIRED SKILLS AND KNOWLEDGE

complete a task

- Problem solving skills sufficient to complete work tasks within designated timeframes; establish opportunities for personal professional development; review and accurately identify work requirements

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for working effectively in the forest and forest products industry
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to working effectively in the forest and forest products industry
- Workplace communication channels, protocols and procedures
- Organisational structure and reporting channels
- Workplace safety and emergency procedures
- Role of forests, forestry and forest products in carbon capture and storage
- Concept of sustainable forest management
- Life cycle of forests and forest products
- Terms and conditions of employment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can work safely and efficiently in the forest and forest products industry

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to working effectively in the forest and forest products industry
- following organisational policies and procedures relevant to working effectively in the forest and forest products industry
- the safe use of relevant equipment to complete work tasks within designated timeframes
- participation in processes to improve professional development

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of

EVIDENCE GUIDE

process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management

RANGE STATEMENT

Environmental requirements may include:

- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine guarding
- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements

RANGE STATEMENT

- Work order** is to include:
- environmental management requirements (waste disposal, recycling and re-use guidelines)
 - instructions from supervisors or management
 - specific client requirements
 - objectives and timeframes
 - work tasks and procedures
 - resource and equipment requirements
 - reporting and documentation requirements
 - personal protective clothing and equipment requirements

and may include:

- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers

Ethically implementing procedures

is to ensure work practices:

- maximise resource use
 - minimise waste, maximise recycling and reduce landfill
 - use energy and materials efficiently
- Factors** may include:
- own competency level
 - limits defined through common law
 - contract law or statutes which apply to the nature of the work being performed
 - limits described in job specifications and organisational policy and procedures
 - competing work demands
 - technology and equipment breakdowns
 - unforeseen incidents
 - workplace hazards
 - risks and controls

RANGE STATEMENT

Equipment is to include:

- impact of work practices on the environment
- non-availability of resources and materials and budget constraints
- equipment necessary to complete work tasks

and may include:

- telephones or communications equipment
- tools
- machinery
- vehicles
- navigational aids
- instruments
- computers and computer software
- printers
- facsimile machines and photocopiers

and is to include:

Feedback may include:

- using this equipment in an environmentally responsible way
- formal or informal performance appraisals
- comments from supervisors
- colleagues or clients
- personal
- reflective behaviour strategies and workplace assessment
- reference to industry and/or organisational areas of interest such as environmental sustainability

Opportunities for professional development may include:

- coaching
- mentoring or supervision
- formal or informal learning programs
- induction programs
- internal or external training provision
- work experience or exchange of opportunities
- personal study
- career planning or development
- performance appraisals

RANGE STATEMENT

- workplace skills assessment
 - recognition of prior learning assessment and recognition of current competencies assessment
 - accessing new approaches/developments (such as social networking sites) to increase awareness of current areas of community concern and industry interest
- Appropriate support** may include:
- mentors
 - coaches
 - supervisors
 - colleagues
- Organisational goals and objectives** may include:
- reporting deadlines
 - team participation
 - team and individual learning goals
 - continuous improvement strategies and OHS requirements
- Records and reports** may be:
- manual
 - using a computer-based system or another appropriate organisational communication system
- Work practices in relation to methods/techniques/tools/equipment** may include:
- preventing and minimising risks
 - improving resource/energy efficiency
 - conserving energy
 - reducing carbon emissions
 - reducing use of non-renewable resources
 - re-using and recycling
 - minimising and reducing waste
 - reducing material consumption
 - eliminating or reducing the use of hazardous and toxic materials
 - reducing chemical use

| <p>2. Carry out face-to-face routine communication</p> | <p>2.1. Routine instructions and messages are received and followed</p> <p>2.2. Workplace procedures are carried out to company requirements</p> <p>2.3. Information from a range of sources is accessed,</p> |

ELEMENT**PERFORMANCE CRITERIA**

- interpreted* and checked with *appropriate personnel*
- 2.4. Information is selected and *sequenced* correctly
- 2.5. Verbal and written *reporting* is conducted clearly and legibly in line with workplace procedures
3. Apply visual communications
- 3.1. *Visual communications* are used following accepted industry practices and/or social conventions
- 3.2. Attention of the communicating parties is obtained, checked and acknowledged
- 3.3. Intention of visual communications is clarified and checked at each step
- 3.4. Unclear or ambiguous visual communications are questioned or visually cancelled
- 3.5. Instances of unclear visual communications are followed up to avoid repeated problems
4. Participate in simple meeting processes
- 4.1. Correct process for *meetings* is identified and followed in line with pre-determined or agreed procedures
- 4.2. Responses are sought and provided to others in the group
- 4.3. Constructive contributions are made to the group
- 4.4. Goals or outcomes are noted and communicated to appropriate personnel
5. Maintain work relationships
- 5.1. Communication with co-workers is conducted in a courteous manner which reflects sensitivity to individual, *social and cultural differences*
- 5.2. Relevant workplace information is shared with co-workers to achieve designated individual and team, goals and objectives
- 5.3. Assistance is provided to, and sought from, co-workers to achieve work tasks
- 5.4. Contradictions, ambiguity, uncertainty or misunderstandings are identified and clarified with appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant equipment
- Communication skills sufficient to; effectively request information; actively listen; effectively receive and action feedback; effectively relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities; use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to effectively solve routine problems, review and accurately identify and interpret work requirements

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for effective communication and interaction in the workplace
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to effective communication and interaction in the workplace
- Basic principles of effective communication
- Basic principles of working relationships
- Differences between written and spoken language
- Organisational standards for the presentation of written information
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can communicate and interact effectively in the workplace

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to communicating and interacting effectively in the workplace
- following organisational policies and procedures relevant to communicating and interacting effectively in the workplace
- the ability to receive and relay verbal, non-verbal and written information in a clear, concise and accurate manner
- the use of a range of visual communication signals
- participation in workplace meetings using agreed processes to resolve issues

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

RANGE STATEMENT

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- job risk assessments
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards

RANGE STATEMENT

- recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Verbal and written instructions** may include:
- graphical instructions
 - signage
 - plans
 - work bulletins
 - charts and hand drawings
 - documents
 - memos
 - maps
 - material safety data sheets (MSDS)
 - diagrams
 - sketches
 - graphics
- Communication modes** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
 - use of telephones (including mobile)
 - email
 - facsimile
 - internet
 - two-way radios
- Work signage** may include:
- site safety signs
 - directional signs
 - traffic signs
 - facility or location signs
 - hazards
- Interpreting information** may
- company procedures
 - regulations

RANGE STATEMENT

include:

- OHS requirements
- induction procedures
- industrial agreements
- checklists
- instructions
- delivery dockets
- MSDS
- workplace policies
- quality requirements
- bulletins
- maps
- work schedules
- emergency procedures
- job risk assessments

Appropriate personnel may include:

- supervisors
- colleagues
- clients

Sequencing information is to include:

- receiving the information and converting it into a logical order of activities

Reporting may include:

- verbal or written communication of work output
- quality outcomes
- hazards
- incidents or equipment malfunctions
- completion of written notes
- simple workplace proformas or documents
- email communication

Visual communications may include:

- eye contact
- hand signals
- electronic signals
- mechanical signals

Meetings may be:

- on or off-site

and are to include:

- tool box meetings
- team meetings
- project meetings
- meetings with land owners
- staff meetings
- industrial meetings

RANGE STATEMENT

Social and cultural differences
may be expressed in:

- language
- traditional practices and observations
- beliefs
- values
- practices
- food
- diet
- dress
- religious and spiritual observances
- social conventions
- cultural stereotypes
- conventions of gender or sexuality

- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Environmental care procedures** may include:
- integrating environmental considerations into everyday duties such as preventing and minimising the production of pollution (discharges to air, land and water, hazardous waste, reducing burning off activities, recycling materials, conservation practices)
 - improving workplace maintenance practices (such as using a broom instead of a hose, using environmental friendly cleaning agents)
- Work order** is to include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Environmental care requirements** may include:
- environmental sustainability
 - protection of water courses and water quality

RANGE STATEMENT

- soil and salinity management
- reduction and disposal of waste
- energy efficiency
- biodiversity and habitat protection
- conservation of natural resources
- fire management

and actions to limit the impact of:

- water pollution
- soil erosion
- land contamination
- noise

and actions to limit the impact to:

- air quality
- supervisors
- safety officers
- suppliers
- clients
- colleagues
- managers
- environmental officers

Appropriate personnel may include:

Environmental risks and hazards may include:

- spills
- leaks
- pollution
- planned and unplanned emissions
- soil compaction
- disturbance and erosion
- accidents
- disposal of waste
- damage or disruption to eco-systems
- displacement of plants or animals
- changes in land use
- fire risks and hazards
- damage to habitats
- illegal vegetation clearing
- seed collection
- firewood gathering
- verbal and non-verbal language
- constructive feedback
- active listening

Communication may include:

RANGE STATEMENT

Improving environmental care practices and resource efficiency may include:

- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Environmental regulations are specified in:

- assessing existing work practices and resource usage
- implementing new policies and procedures
- using resources in new ways
- work orders
- work plans
- relevant policies and procedures

Recording and reporting breaches of environmental care procedures may include:

- referring to OHS policies and procedures
- referring to quality outcomes
- identifying risks and hazards
- identifying incidents or equipment malfunctions

and may be compiled:

Work practices in relation to methods/techniques/tools/equipment may include:

- using a computer-based or other appropriate organisational communication system
- preventing and minimising risks
- improving resource/energy efficiency
- conserving energy
- reducing carbon emissions
- reducing use of non-renewable resources
- re-using and recycling
- minimising and reducing waste
- reducing material consumption
- eliminating or reducing the use of hazardous and toxic materials
- reducing chemical use

Unit Descriptor

Unit descriptor This unit describes the outcomes required to follow fire prevention techniques and procedures during normal work activities. The unit includes implementing basic fire prevention measures

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOR2204A Follow fire prevention procedures

Application of the Unit

Application of the unit The unit involves following fire prevention procedures in a variety of work settings including a forest environment, saw mill, wood chip mill, veneer mill, board/plywood mill, timber treatment plants, downstream processing of timber, timber and wood products production, timber and wood products sales and service, forest products factory, forest products sales and service, horticultural, domestic, local council, emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| <p>1. Prepare for fire prevention</p> | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to following fire prevention procedures are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed in the context of <i>fire prevention</i> requirements, checked and clarified with <i>appropriate personnel</i></p> <p>1.3. Existing and potential <i>fire risks and hazards</i> are detected and reported to appropriate personnel</p> <p>1.4. <i>Fire extinguishing equipment</i> is selected appropriate to work requirements and fire prevention in line with site requirements</p> <p>1.5. Workplace procedures, work instructions and legislation for fire prevention practices are followed</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| <p>2. Implement fire prevention activities</p> | <p>2.1. Fire risks and hazards are eliminated or reduced, and reported in accordance with workplace procedures</p> <p>2.2. <i>Signs of fire</i> are recognised and alarm raised at</p> |

ELEMENT**PERFORMANCE CRITERIA**

- appropriate time in line with workplace procedures
- 2.3. Appropriate *fire extinguishing equipment* is selected in line with the nature and type of fire expected, checked and properly stored
- 2.4. *Training and/or professional development is accessed to maintain currency of competence in assessing fires within role and skill to respond to, and in using and/or accessing fire extinguishing equipment*
- 2.5. Appropriate personnel are notified and incident report completed
- 2.6. Fire prevention procedures are *recorded and reported* in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to select and use fire extinguishing equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to effectively recognise signs of fire or fire hazards; identify problems and equipment faults and demonstrate appropriate response procedures; review and accurately identify work requirements

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for fire prevention
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for fire prevention
- Environmental risk assessment and hazard identification

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, maintenance and minimisation of carbon emissions
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently follow fire prevention procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to following fire prevention procedures
- compliance with organisational policies and procedures relevant to following fire prevention procedures
- compliance with applicable licensing or certification requirements
- effective communication and working safely with others
- the ability to follow fire prevention procedures in accordance with environmental legislation and workplace procedures

Context of and specific resources for

- Competency is to be assessed in the workplace or realistically simulated workplace

EVIDENCE GUIDE

assessment

- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment

EVIDENCE GUIDE

task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- hot work permits to be issued by authorised personnel
- protective shields for welding and grinding activities
- written/displayed evacuation procedures
- appropriate fitness for the task
- legislation
- organisational policies and procedures
- workplace practices
- environmental risk assessment and hazard

Environmental requirements may include:

RANGE STATEMENT

identification

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- established Emergency Evacuation Committee

Work order is to include:

- instructions for the environmental monitoring of work and procedures, such as:
 - hot work permits
 - procedures to prevent fires

and may include:

- environmental care requirements relevant to the work

RANGE STATEMENT

Fire prevention may include:

- cutting of fire breaks
- clearing of undergrowth
- identifying and using appropriate equipment to cut fire breaks and clear undergrowth
- ensuring equipment is far enough away from combustible materials
- housekeeping to ensure work area is clear of waste
- provision of suitable fire fighting equipment
- undertaking regular evacuation training

Appropriate personnel may include:

- fire wardens
- supervisors
- suppliers
- clients
- colleagues
- managers
- emergency evacuation committee

Fire risks and hazards may include:

- weather conditions which induce fire
- welding or grinding sparks
- dry undergrowth
- unsafe work practices and use of equipment to create fire
- combustible materials such as dry or dead scrub, tall grasses, rubbish, oily rags
- waste material proximity to equipment
- flammable liquids
- inappropriate storing of materials and equipment
- blocked or no access and exit

Fire extinguishing equipment may include:

- extinguishers for electrical, chemical, gas, mechanical, paper, wood or natural fires

and may also include:

- fire trucks
- fire reels
- fire hydrants and hoses
- manual fire fighting instruments
- fire service approved fire suppression extinguishing agents, such as foam and retardants

Communication may include:

- verbal and non-verbal language

RANGE STATEMENT

- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

and may relate to:

- evacuation
- visitors
- members of the public on site
- lightning strikes
- smoke
- flames
- storms
- equipment overheating
- flammable liquid spills
- electrical ignition
- changes to environmental conditions
- fire prevention procedures such as risk, hazards, incidents or equipment malfunctions

Signs of fire may include:

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Records and reports may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Follow safe work practices

- 1.1. Applicable ***OHS, environmental, legislative and organisational requirements*** relevant to following OHS policies and procedures are identified and followed
- 1.2. Work tasks are performed following safe operating procedures in line with organisational policies and procedures
- 1.3. ***Operation and use of tools, equipment and machinery*** is appropriate to work task requirements and in line with manufacturer's recommendations and organisational policies and procedures
- 1.4. ***Personal protective equipment and clothing*** is selected and used appropriate to work task requirements, and stored in line with organisational procedures
- 1.5. ***Plant and equipment guards*** are used in line with manufacturer's specifications
- 1.6. ***Safety signs and symbols*** are identified and followed
- 1.7. ***Communication*** with others is established and

ELEMENT	PERFORMANCE CRITERIA
2. Identify risks	maintained in line with organisational policies and procedures
	2.1. Existing and potential hazards in the work area are identified and reported to appropriate personnel
	2.2. OHS issues and risks in the work area are identified and reported to appropriate personnel
	2.3. Hazard, accident or incident reports are completed accurately and clearly in line with organisational policies and procedures
3. Follow emergency procedures	3.1. Appropriate personnel are notified in the event of an emergency
	3.2. Workplace procedures and work instructions are followed for controlling risks and protecting the environment
	3.3. Safe workplace procedures for dealing with accidents and emergencies are followed within scope of responsibilities
	3.4. Emergency and evacuation procedures are practised and carried out in the event of an emergency
	3.5. Emergency and evacuation procedures are recorded and reported accurately and clearly in line with organisational policies and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain personal protective equipment and clothing
- Communication skills sufficient to accurately follow emergency and evacuation procedures; use appropriate communication and interpersonal techniques with colleagues; accurately identify and follow safety signs and symbols
- Literacy skills sufficient to accurately complete and maintain workplace information, records and reports
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify potential or existing risks and hazards

REQUIRED SKILLS AND KNOWLEDGE

in the workplace and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for OHS policies and procedures
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for OHS policies and procedures
- Environmental risks and hazard identification
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently follow OHS policies and procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to following OHS policies and procedures
- following organisational policies and procedures relevant to OHS policies and procedures

EVIDENCE GUIDE

Context of and specific resources for assessment

- effective communication and safe work practices
- response procedures to workplace risk, hazards and emergencies
- accessing and applying workplace safety procedures
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Organisational requirements may include:

Operation and use of tools, equipment and machinery may include:

minimising:

- the impact of their use on the environment
- carbon emissions
- waste

Personal protective equipment and clothing may include:

that prescribed under legislation, regulation and workplace policies and practices including:

- overalls
- steel capped boots
- high visibility vest
- jackets

RANGE STATEMENT

- gloves
 - safety glasses
 - safety visors
 - hard hats
 - caps
 - dust masks
 - respirators
 - ear muffs
 - ear plugs
 - cut resistant leg protection
- Plant and equipment guards** may include:
- those prescribed by the manufacturer of the plant or equipment and specified to be used under OHS legislation
- Safety signs and symbols** may include:
- hazard identification
 - site safety
 - directional
 - traffic
 - warning signs and symbols
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Hazards** may include:
- chemical spills
 - gases
 - liquids under pressure
 - moving machinery and equipment
 - hazardous materials
 - work at heights
 - high temperatures
 - noise
 - dust
 - vapours
 - fires
 - protrusions
 - sharp equipment

RANGE STATEMENT

- Work area** may include:
- overhanging beams
 - traffic
 - forest site
 - manufacturing plant
 - retail outlet
 - warehouse
 - factory
 - office
 - plant
- Appropriate personnel** may include:
- safety officers
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Controlling risks and protecting the environment must ensure:** own safety and safety of others takes priority over environmental protection
- Records and reports** may include but not be limited to:
- OHS policies and procedures
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

PERFORMANCE CRITERIA

- | | |
|---------------------------------------|--|
| 1. Maintain quality output | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to maintaining quality and product care are identified and followed
1.2. <i>Quality system</i> procedures are applied to personal work, followed and adhered to
1.3. <i>Products</i> are <i>visually inspected</i> before processing or completion of handling
1.4. <i>Product specifications</i> are identified and checked with <i>appropriate personnel</i>
1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Apply timber technology assessment | 2.1. <i>Species</i> and <i>timber structure</i> are classified and checked with appropriate personnel
2.2. <i>Features</i> are located and compared with product specification requirements
2.3. <i>Characteristics</i> are evaluated and drying or treatment requirements recorded as required by the enterprise |

ELEMENT	PERFORMANCE CRITERIA
3. Monitor and control product care	<p>2.4. <i>Visual appearance</i> is assessed and reported in line with workplace procedures as required by the enterprise</p> <p>3.1. <i>Product recovery</i> is monitored to optimise the resource value and <i>minimise waste</i></p> <p>3.2. Potential of materials to provide the highest <i>value added</i> return is checked with appropriate personnel</p> <p>3.3. Machinery and equipment is <i>regularly maintained</i> and adjusted to minimise waste and product damage</p> <p>3.4. Problems are immediately identified and promptly reported to appropriate personnel to avoid repetition of de-valued product</p> <p>3.5. Quality and product care procedures are <i>recorded and reported</i> in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to classify species and timber structures; assess visual appearance of timber
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify and interpret work requirements

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for the maintenance of quality and product care
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to the maintenance of quality and product care
- Environmental risks and hazard identification

REQUIRED SKILLS AND KNOWLEDGE

- Optimisation of timber
- Quality systems
- Product care and processing
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity

RANGE STATEMENT

- Organisational requirements** may include:
- anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Quality systems** may include:
- enterprise based systems
 - second party certification
 - third party certification
 - ISO9000 series
 - other regulatory systems
- Product** may include:
- trees
 - logs
 - seed
 - planting stock
 - timber
 - panels
 - board
- Product specifications** may include:
- specifications set for optimisation of timber set in line with the available resource
 - customer requirements
 - industry standard cross sections and lengths
 - enterprise standards
- Visual inspection** may include:
- assessing the appropriateness of defects
 - contamination
 - timber colours
 - insect attack
 - surface finishes

RANGE STATEMENT

- loose surfaces
 - bubbles
 - holes
 - breakages
 - machine caused defects
- Appropriate personnel** may include:
- supervisors
 - line managers
 - colleagues
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Species** may include:
- native
 - imported species
- Timber structures** may include:
- hardwood or softwood cell structured timber
- Features** may include:
- warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Characteristics** may include:
- colour
 - density
 - texture
 - grain
 - figure
 - qualities
 - uses
- Visual appearance** may include:
- colour
 - grain
 - figure
 - aesthetics

RANGE STATEMENT

- Product recovery** may include:
- sawn timber used in manufacturing of timber engineered products where defective timber can be recovered to be used in other parts of the plant to minimise waste
 - recovering logs or converting logs into useable boards without damage or loss of product
- Minimising waste** may include:
- appropriately assessing timber for recovery
 - maximising product or resource use
 - recycling defective product, off cuts and residues in line with organisational guidelines
- Value adding** is to include:
- maximising use of the product or resource
 - minimising waste
 - optimising the use of natural resources
- Regular maintenance of machinery and equipment** may include:
- minimising:
- the impact of the use of machinery and equipment on the environment
 - carbon emissions
- Records and reports** may include but not be limited to:
- OHS policies and procedures
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to implement SHE policies and procedures on a site adhering to defined policies and procedures to ensure own safety and that of others, together with protection of the environment. The unit includes implementation of recognised environmental care principles

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOR3201A Implement SHE policies and procedures

Application of the Unit

Application of the unit

The unit involves the implementation of SHE policies and procedures in a variety of work settings including forest environment, saw mill, wood chip mill, veneer mill, board/plywood mill, timber treatment plants, downstream processing of timber, forest products factory, forest products sales and service, horticultural, domestic, local council, emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------|--|
| 1. Apply SHE practices | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to the implementation of <i>SHE</i> policies and procedures are identified and followed
1.2. <i>Communication</i> with others is established and maintained in line with SHE requirements
1.3. Tasks are performed in a safe manner and in line with legislative requirements and <i>environmental care principles</i> , organisational policies and procedures
1.4. Duties, equipment and materials are organised in line with SHE requirements and organisational procedures |
| 2. Assess and control risks | 2.1. <i>SHE issues and Hazards</i> in the work area are detected, assessed and reported to <i>appropriate personnel</i>
2.2. Work practices and processes are analysed to identify areas for improvement in relation to SHE issues and hazards |

ELEMENT	PERFORMANCE CRITERIA
	2.3.Changes to work practices and processes to improve SHE concerns are proposed, provided to appropriate personnel and acted on as directed
	2.4.Workplace procedures and work instructions are followed for <i>controlling risks and protecting the environment</i>
	2.5.SHE, hazard, environmental or incident reports are completed in line with workplace procedures and State or Territory legislation
3. Follow emergency procedures	3.1.In an emergency, appropriate personnel are identified and contacted
	3.2.Workplace procedures for dealing with own safety, safety of others, environmental incidents, accidents, and emergencies are followed within scope of responsibilities
	3.3.Emergency and evacuation procedures are practised, recorded and implemented as required
	3.4.SHE procedures are <i>recorded and reported</i> in line with workplace procedures
4. Implement environmental procedures	4.1.Organisational <i>environmental goals</i> are identified and assessed
	4.2. <i>Training</i> and <i>operational controls</i> are implemented in line with workplace procedures
	4.3. <i>Environmental measures</i> and <i>impact</i> on the environment are monitored and <i>corrective action</i> taken as required in line with workplace procedures
	4.4.Care for the environment is integrated into all day-to-day activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain personal protective equipment and clothing
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for the implementation of SHE policies and procedures
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for the implementation of SHE policies and procedures
- Environmental risks and hazard identification
- Community issues in relation to the environment
- Hazard identification
- Assessment and control of risks
- Emergency procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can implement SHE policies and procedures

Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the

EVIDENCE GUIDE

competency in this unit

requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to the implementation of SHE policies and procedures
- following organisational policies and procedures relevant to the implementation of SHE policies and procedures
- the ability to maintain safe and healthy working conditions
- the control of environmental measures within the organisation

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions

RANGE STATEMENT

- relating to forest fire
- manual handling including shifting, lifting and carrying
 - machine guarding
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - heritage and traditional land owner issues
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- SHE is to include:**
- policy set by governments, local authorities, regulatory bodies or organisations to care for people and the environment

RANGE STATEMENT

- Communication** may include:
- ensuring a safe and productive workplace while protecting the natural environment and supporting its sustainability
 - using effective communication and education
 - verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language

Environmental care principles are to include:

environmental policy which ensures:

- compliance, improvement (where required to reflect environmental policy) and prevention
- continuous cycle of planning, implementing, monitoring, reviewing and improving environmental practices and systems

Hazards may include:

- chemical spills
- gases
- liquids under pressure
- moving machinery and equipment
- hazardous materials
- work at heights
- high temperatures
- noise
- dust
- vapours
- fires
- protrusions
- sharp equipment
- overhanging beams
- traffic
- potential of equipment use and unsafe work practices to adversely impact on the environment
- inappropriate storing of materials and equipment
- blocked or no access and exit

RANGE STATEMENT

Appropriate personnel may include:

- safety officers
- supervisors
- suppliers
- clients
- colleagues
- managers
- environmental officers

Controlling risks and protecting the environment must ensure: own safety and safety of others takes priority over environmental protection

Records and reports may include:

- OHS policies and procedures
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Environmental goals are to include:

- environmental sustainability considerations and actions for operational and activity interface
- material, energy (including renewable energy) and other resource use
- emissions control and where possible, reduction
- waste generation, control and where possible, reduction
- product and service use
- land and infrastructure interaction
- accident prevention
- practices that use materials and energy efficiently and effectively in terms of environmental sustainability
- waste management, recycling and re-use outcomes that are environmentally effective, efficient and safe

Training may include:

- in-house or external training programs
- one-on-one supervision
- programs that maintain up-to-date knowledge of legislative changes at the local, State,

RANGE STATEMENT

Operational controls may include:

Territory and Commonwealth levels

- control of air emissions
- solid and hazardous wastes
- contamination of land
- noise
- odour
- dust
- traffic
- water discharges
- energy use
- raw material and resource use
- hazardous material storage and handling

Environmental measures may include:

- environmental and energy efficiency improvement plans (including the use of renewable energy)
- workplace waste management systems
- reducing emissions of greenhouse gases
- reducing use of non-renewable resources
- reducing chemical use
- supply chain management such as choosing suppliers with environmental sustainability (and methods to monitor and improve their environmental performance) as part of their charter
- holistically managing wood waste
- applying carbon footprint strategies in forest operations

Impact may include:

- assessment of actual outcome or potential outcome
- beneficial or damaging
- magnitude or degree
- frequency
- likelihood
- duration
- geographic area
- which aspects of the environment it affects
- is it regulated
- who is involved
- any consequences for other aspects of the environment
- potential for escalation

RANGE STATEMENT

Corrective action: is action that supports environmental sustainability

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct quality procedures	<p>1.1.Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to conducting quality and <i>product</i> care procedures in line with environmental legislation and workplace procedures are identified and followed</p> <p>1.2.<i>Quality system</i> procedures are applied to work, implemented and adhered to</p> <p>1.3.Products are <i>visually inspected</i> before processing or completion</p> <p>1.4.<i>Product specifications</i> are checked and conformed with</p> <p>1.5.<i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Monitor and control product care	<p>2.1.<i>Product recovery</i> is planned to optimise the resource value and <i>minimise waste</i></p> <p>2.2.Potential of materials to provide the highest <i>value added return is planned</i></p> <p>2.3.<i>Species, timber structure, features</i> and <i>characteristics</i> are assessed and reported as required by the enterprise</p> <p>2.4.Materials are <i>graded</i> and directed to best end use in line with industry standards as required by the</p>

ELEMENT	PERFORMANCE CRITERIA
3. Control product quality	<p>enterprise</p> <p>2.5.Machinery and equipment is regularly maintained and adjusted to minimise product waste</p> <p>2.6.Problems are immediately assessed and rectified to avoid repetition of lost product</p> <p>3.1.Products are assessed for quality and customer specification requirements</p> <p>3.2.Products are prepared for <i>despatch</i> to prevent or minimise damage</p> <p>3.3.Finished products are supplied to customer in line with <i>work order</i> and workplace procedures</p> <p>3.4.Quality and product care procedures are <i>recorded and reported</i> in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to efficiently and safely conduct quality and product care procedures; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for quality and product care procedures
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to

REQUIRED SKILLS AND KNOWLEDGE

- quality and product care
- Environmental risks and hazard identification
- Quality systems and supply coordination
- Product care and processing
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--------------------------|---|
| 1. Prepare for fires | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to the evaluation of fire potential and <i>fire prevention</i> are identified and followed</p> <p>1.2. <i>Types</i> and <i>potential of fire</i> are constantly evaluated and documented through risk assessment</p> <p>1.3. <i>Equipment</i> is selected appropriate to potential work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. <i>Evaluation processes</i> are planned in line with site procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Assess fire potential | <p>2.1. <i>Weather</i> conditions are monitored and reports inspected for changing conditions such as storms and high winds</p> <p>2.2. Equipment conditions are monitored for overheating</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Prevent fires	<p>and electrical sparking and acted upon immediately</p> <p>2.3. <i>Hazardous and flammable substances</i> are monitored to assess the potential for spillage and combustion</p> <p>2.4. Potential of fire is reported to <i>appropriate personnel</i></p> <p>3.1. <i>Fire risks and hazards</i> are <i>controlled</i> and monitored in line with workplace procedures</p> <p>3.2. <i>Fire extinguishing equipment</i> is regularly checked to ensure it is serviceable for emergencies</p> <p>3.3. Hazardous or flammable substances are handled in line with OHS and <i>environmental management regulations</i></p> <p>3.4. <i>Signs of fire potential</i> are recognised and alarm raised to alert appropriate personnel</p> <p>3.5. Fire potential and prevention procedures are <i>recorded and reported</i> in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment.
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures, efficiently and safely evaluate fire potential and prevention

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for evaluating fire potential and prevention

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to evaluating fire potential and prevention
- Fire types and potential methods of ignition
- Environmental risks and hazard prevention
- Fire awareness and prevention techniques
- Recognised tools such as threat and risk analysis
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- hot work permits to be issued by authorised personnel
- protective shields for welding and grinding activities
- written/displayed evacuation procedures
- appropriate fitness for the task

RANGE STATEMENT

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Fire prevention may include:

- cutting of fire breaks
- clearing of undergrowth
- ensuring equipment is far enough away from combustible materials
- housekeeping to ensure work area is clear of waste and that waste is stored in line with

RANGE STATEMENT

workplace procedures

- providing suitable fire extinguishing equipment
- undertaking regular evacuation training
- maintaining an ordered work area to ensure access and exit
- assessing equipment to ensure it is serviced as required in line with workplace procedures
- quarantining equipment to be serviced in line with workplace procedures

Types of fires may include:

- wildfires
- electrical storm induced fires
- arson
- accidental fires
- electrical fires
- mechanical fires

Potential of fires may include:

- assessing environmental conditions and operating procedures for any possible aspects which may cause fire
- monitoring changes and forecasting potential changes (where possible) to environmental conditions which may cause fire
- keeping appropriate personnel informed of changes and potential changes to environmental conditions which may cause fire

Equipment may include:

- any plant and equipment used in harvesting or forest growing activities

Evaluation processes may include:

- referring to available information (via MSDSs , HAZCHEM codes and signs) for chemical-based fires
- continuous monitoring of environmental, weather and equipment conditions and changes
- continuous monitoring of the impact of activities on the environment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative

RANGE STATEMENT

language

- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

and may relate to:

- evacuation
- visitors or members of the public on site

Weather may include:

conditions such as:

- high winds
- electrical storms
- lightning strikes
- excessive heat and low humidity

Hazardous and flammable substances may include:

- engine oils
- fuels
- treatment substances
- cleaning products
- fire wardens
- fire response personnel
- supervisors
- suppliers
- clients
- colleagues
- managers
- emergency evacuation committee

Appropriate personnel may include:

- weather conditions which induce fire
- welding or grinding sparks
- dry undergrowth
- potential of equipment use and unsafe work practices to create fire
- combustible materials such as dry or dead scrub, tall grasses, rubbish, oily rags
- waste material proximity to equipment
- flammable liquids
- inappropriate storing of materials and equipment
- blocked or no access and exit

Fire risks and hazards may include:

Controlled may include:

- controlling vegetation (such as grass, heath, scrub and forest undergrowth) to minimise

RANGE STATEMENT

	risk
	<ul style="list-style-type: none">• cutting of firebreaks (including clearing areas which are slashed or ploughed and clear of any combustible material, wide enough to prevent fires jumping the break)• housekeeping to ensure flammable, combustible or waste materials are in safe proximity to machinery• extinguishers for electrical, chemical, gas, mechanical, paper, wood or natural fires
Fire extinguishing equipment may include:	and may also include: <ul style="list-style-type: none">• fire trucks• fire reels• fire hydrants and hoses• manual fire fighting instruments• fire service approved fire suppression extinguishing agents, such as foam and retardants
Environmental management regulations:	eliminate or minimise exposure to hazards within the workplace and may cover: <ul style="list-style-type: none">• environmental monitoring and audit plan• emissions - hazardous substances• air quality• noise pollution• dangerous goods/hazardous substances• risk of fire• waste minimisation• reuse and recycling• lightning strikes• high winds• smoke• flames• storms• equipment overheating• flammable liquid spills• electrical ignition• changes to environmental conditions
Signs of fire potential may include:	<ul style="list-style-type: none">• environmental care and fire prevention procedures such as risk, hazards, incidents, equipment malfunctions
Records and reports may include:	

RANGE STATEMENT

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assessing	1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to the visual assessment of <i>materials</i> are identified and followed 1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i> 1.3. Visual assessment processes are planned in line with site procedures 1.4. Type and quantity of material to be visually <i>assessed</i> is acquired from the <i>storage location</i> 1.5. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements
2. Visually assess material	2.1. Material requirements for storage or subsequent <i>processing operations</i> are selected 2.2. Characteristics and <i>defects</i> of material are visually assessed against industry standards 2.3. Defects are clearly marked for <i>treatment or sawing</i> in line with site requirements 2.4. Assessment outcomes and distribution problems are

ELEMENT	PERFORMANCE CRITERIA
	<i>recorded and reported</i> in line with workplace procedures
3. Distribute material	3.1. Material is directed and moved to storage or processing operations in line with site requirements 3.2. Sub-standard materials are rejected and <i>disposed of</i> in line with site requirements 3.3. <i>On-site movement of material</i> is monitored to ensure intended flow is achieved 3.4. Storage locations are labelled in line with site systems

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; recognise and mark defects and sub-standard materials; assess materials to industry standards
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for visually assessing materials
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to visually assessing materials
- Environmental risks and hazard prevention
- Methods of visual estimation and assessment, colour identification and tagging

REQUIRED SKILLS AND KNOWLEDGE

- Typical material defects and characteristics
- Distribution processes for assessed materials
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can visually assess materials

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to the visual assessment of materials
- following organisational policies and procedures relevant to the visual assessment of materials
- visual assessment of a full range of materials in readiness for storage and/or processing
- distribution of materials using designated equipment
- effective communication and safe work practices
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised

Context of and specific resources for assessment

EVIDENCE GUIDE

work practices, safety requirements and environmental constraints

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity

RANGE STATEMENT

Organisational requirements may include:

- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Materials may include:

- hardwood and softwood logs and timber
- boards
- panels
- veneer
- laminated veneer
- imported species
- native species
- recently felled or stored materials
- wood chips
- plywood
- particle board
- fibreboard
- medium density fibreboard

Work order is to include:

- instructions for the environmental monitoring of work and procedures
- instructions for the receipt/despatch and visual assessment of materials to/from the designated storage location or processing operations

and may include:

- type
- size
- quantity

RANGE STATEMENT

- Appropriate personnel** may include:
- environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Assessment** is to include:
- visually assessing the quality of materials for characteristics, defects and imperfections
- and may include:
- measuring the amount of moisture contained in a log to determine if it falls within specifications for conversion and drying or other processing operations
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** may include:
- moisture meters
 - lifting equipment for the movement of materials
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Processing operations** may include:
- sawmilling
 - panel production
 - wood chipping
 - pulp and paper production
- Defects** may include:
- water damage
 - chips
 - splits
 - warp
 - wane
 - cupping
 - shakes
 - insect defects or attack
 - resin pockets
 - contamination
 - burls
 - cracks
 - dry rot
 - wet rot
 - breakage from felling
 - dents
 - loose surface
 - lifting coatings
 - poor adhesion
 - thin or missing coatings
 - chipped edges
 - surface bubbles
 - pin holes
 - grain angles
 - gum veins
 - loose or missing knots
- Treatment** may include:
- chemical treatment of materials to eradicate insect attack or other defects
- Sawing** may include:
- cutting out sections of the material (if practical) to retain good quality sections

RANGE STATEMENT

Records and reports may include:

- product type
- size
- visual inspection
- labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

Disposing of rejected sub-standard materials may include:

- manual
- using a computer-based system or another appropriate organisational communication system
- environmentally effective, efficient and safe waste management, recycling and re-use practices and guidelines

On-site movement of material:

lifting equipment may include:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting may include:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

| 2. Monitor and assess risks | <p>2.1. <i>Hazards</i> in the work area are monitored, assessed and reported to designated personnel</p> <p>2.2. SHE issues and risks in the work area are monitored, assessed and reported to <i>appropriate personnel</i></p> <p>2.3. Work practices and processes are analysed to identify areas for improvement in relation to SHE</p> |

ELEMENT	PERFORMANCE CRITERIA
	issues and risks
	2.4.Changes to work practices and processes to improve SHE concerns are determined and implemented
	2.5.Workplace procedures and work instructions are monitored for <i>controlling risks and protecting the environment</i>
	2.6.SHE or incident reports are checked to ensure they are in line with workplace procedures and State or Territory legislation
3. Monitor emergency procedures	3.1.In an emergency, appropriate personnel verification is monitored
	3.2.Workplace procedures for dealing with own safety, safety of others, environmental incidents, accidents, and emergencies are monitored within scope of responsibilities
	3.3.Emergency and evacuation procedures are monitored and checked after an emergency, and suggestions made to appropriate personnel about lessons learnt and changes required
	3.4.SHE procedures are <i>recorded and reported</i> in line with workplace procedures
4. Monitor environmental procedures	4.1.Community and organisational <i>environmental goals</i> are monitored and recorded
	4.2. <i>Training</i> and <i>operational controls</i> are monitored to ensure they are in line with workplace procedures
	4.3. <i>Environmental measures</i> are monitored and checked for <i>corrective action</i>
	4.4.Care for the environment is monitored to check for integration into all day-to-day activities
	4.5.Progress reviews are conducted to assess <i>impact</i> on the environment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain personal protective equipment and

REQUIRED SKILLS AND KNOWLEDGE

clothing

- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for monitoring SHE policies and procedures
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to monitoring SHE policies and procedures
- Community issues in relation to the environment
- Lessons learnt after an emergency
- Environmental risk and hazard identification
- Assessment and control of risks
- Emergency procedures
- Environmental management systems
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently monitor SHE policies and procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to monitoring SHE policies and procedures
- following organisational policies and procedures relevant to monitoring SHE policies and procedures
- monitoring of SHE policies and procedures within the organisation
- monitoring of safe and healthy working conditions
- assessment of environmental measures within the organisation

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements

RANGE STATEMENT

- SHE** is to include:
- environmental management requirements (waste disposal, recycling and re-use guidelines)
 - policy set by governments, local authorities, regulatory bodies or organisations to care for people and the environment
 - ensuring a safe and productive workplace while protecting the natural environment and supporting its sustainability
 - using effective communication and education
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Environmental management systems** are to include:
- environmental policy which ensures:
- compliance, improvement and prevention
 - continuous cycle of planning, implementing, monitoring, reviewing and improving environmental practices and systems
- Hazards** may include:
- chemical spills
 - gases
 - liquids under pressure
 - moving machinery and equipment
 - hazardous materials
 - work at heights
 - high temperatures
 - noise
 - dust
 - vapours
 - fires
 - protrusions
 - sharp equipment
 - overhanging beams
 - traffic

RANGE STATEMENT

- Appropriate personnel** may include:
- potential of equipment use and unsafe work practices to adversely impact on the environment
 - inappropriate storing of materials and equipment
 - blocked or no access and exit
 - safety officers
 - managers
 - suppliers
 - clients
 - colleagues
 - environmental officers
- Controlling risks and protecting the environment must ensure:** own safety and safety of others takes priority over environmental protection
- Records and reports** may include: but not be limited to:
- OHS policies and procedures
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system
- Environmental goals** are to include:
- environmental sustainability considerations and actions for operational and activity interface
 - material, energy and other resource use
 - emissions control and where possible, reduction
 - waste generation, control and where possible, reduction
 - product and service use
 - land and infrastructure interaction
 - accident prevention
 - practices that use materials, energy and other resources efficiently and effectively in terms of environmental sustainability
 - waste management, recycling and re-use

RANGE STATEMENT

outcomes that are environmentally effective, efficient and safe

Training may include:

- in-house or external training programs
- one-on-one supervision
- programs that maintain up-to-date knowledge of legislative changes at the local, State, Territory and Commonwealth levels

Operational controls may include:

- control of air emissions
- solid and hazardous wastes
- contamination of land
- noise
- odour
- dust
- traffic
- water discharges
- energy use, raw material and resource use
- hazardous material storage and handling

Environmental measures may include:

- environmental and resource/energy efficiency improvement plans
- workplace waste management systems
- reducing emissions of greenhouse gases
- reducing use of non-renewable resources
- reducing chemical use
- supply chain management such as choosing suppliers with environmental sustainability (and methods to monitor and improve their environmental performance) as part of their charter
- holistically managing wood waste
- applying carbon footprint strategies in forest operations

Corrective action:

is action that supports environmental sustainability

Impact may include:

- assessment of actual outcomes or potential outcomes
- beneficial or damaging
- magnitude or degree
- frequency
- likelihood
- duration
- geographic area

RANGE STATEMENT

- which aspects of the environment it affects
- is it regulated
- who is involved
- any consequences for other aspects of the environment
- potential for any escalation

3. Develop new and flexible approaches	<p>2.3. <i>Training</i> and <i>operational controls</i> are monitored to ensure they are in line with workplace procedures</p> <p>2.4. Recommendations for improvement are recorded and reviewed for resourcing requirements</p> <p>2.5. Plans to introduce change are made in consultation with <i>appropriate personnel</i></p> <p>3.1. New systems and technologies are <i>developed and trialled</i> on site following OHS requirements and in line with site requirements</p> <p>3.2. New systems are checked for effective improvements or time savings, modified and communicated to appropriate personnel for implementation</p> <p>3.3. <i>Care for the environment</i> is monitored to check for integration into all day-to-day activities</p> <p>3.4. Progress reviews are conducted to assess <i>impact</i> of improvement and on the environment</p> <p>3.5. Forestry operation procedures are <i>recorded and reported</i> in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain personal protective equipment and clothing
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems, environmental issues and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards,

REQUIRED SKILLS AND KNOWLEDGE

codes of practice and established safe practices relevant to the full range of processes for monitoring and reviewing forestry operations

- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to monitoring and reviewing forestry operations
- Sustainable procurement practices, including selecting products and services on the basis of how they minimise and monitor their impact on the environment
- Types of equipment and procedures and their environmentally friendly use, operation and maintenance
- Forestry operations, techniques and technology
- Operational systems
- Environmental risks and hazard identification
- Environmental management systems
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently monitor and review forestry operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and

EVIDENCE GUIDE

codes of practice relevant to monitoring and reviewing forestry operations

- following organisational policies and procedures relevant to monitoring and reviewing forestry operations
- monitoring and reviewing of operational policies and procedures within the organisation
- monitoring of on-site forestry operations and recommended improvement systems, techniques or technology
- assessment of environmental measures as a result of improvements within the organisation

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements may include:**
- manual handling including shifting, lifting and carrying
 - machine isolation and guarding
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - heritage and traditional land owner issues
 - legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Organisational requirements may include:**
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm
- Communication may include:**

RANGE STATEMENT

- Forestry operations** may include:
- understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
 - improvement of timber technology methodologies
 - on-site forestry operations
 - ancillary forest operations
- Environmental management systems** are to include:
- environmental policy which ensures:
- compliance, improvement and prevention
 - continuous cycle of plan, implement, monitor, review and improve environmental practices and systems
- Reviewed is to include**
- assessing operational plans and site practices in relation to:
- energy consumption
 - carbon emissions
 - renewable and non-renewable resources
 - waste management, recycling and re-use
 - material consumption
 - hazardous and toxic materials
 - chemical use
 - equipment use and safety of work practices
 - storing of materials and equipment
 - environmental considerations and actions for operational and activity interface, material, energy and other resource use
 - emission control
 - waste generation and control
 - product and service use
 - land and infrastructure interaction
 - accident prevention
 - waste management, recycling and re-use outcomes that are environmentally effective, efficient and safe
- Training** may include:
- in-house or external training programs
 - one-on-one supervision

RANGE STATEMENT

Operational controls may include:

- measurement of improvement outcomes
- coaching and mentoring of personnel in regard to new methodologies
- control of environmental conditions

Appropriate personnel may include:

- safety officers
- supervisors
- suppliers
- clients
- colleagues
- managers

Developing and trialling new systems and technologies is to consider:

- environmental resource management and services such as reducing waste, sustainable procurement practices
- energy and material efficiency such as recycling, re-using, water usage and management, energy usage and management

Care for the environment includes:

- environmental sustainability
- protection of water courses and water quality
- soil and salinity management
- reduction and disposal of waste
- energy efficiency
- biodiversity and habitat protection
- conservation of natural resources
- fire management

Impact may include:

- assessment of actual outcomes or potential outcomes
- beneficial or damaging
- magnitude or degree
- frequency
- likelihood
- duration
- geographic area
- which aspects of the environment it affects
- is it regulated
- who is involved
- any consequences for other aspects of the environment
- potential for any escalation

Records and reports may include:

- forestry operations
- OHS policies and procedures
- quality outcomes

RANGE STATEMENT

- technology requirements

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Unit Descriptor

Unit descriptor This unit describes the outcomes required to coordinate and monitor quality of output and care of products and product supply procedures

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOR4203B Monitor quality and product care procedures

Application of the Unit

Application of the unit The unit involves the monitoring of quality and product care procedures in a variety of work settings including a forest environment, saw mill, wood chip mill, veneer mill, board/plywood mill, timber treatment plants, downstream processing of timber, forest products factory, forest products sales and service, horticultural, domestic, local council, emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Coordinate quality procedures	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to the monitoring of quality and product care procedures are identified and followed</p> <p>1.2. <i>Quality system</i> procedures are applied to work, monitored and coordinated</p> <p>1.3. Product <i>visual inspection</i> is coordinated before processing or completion</p> <p>1.4. <i>Product specifications</i> are checked and coordinated</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Monitor and control product care	<p>2.1. <i>Product recovery</i> is planned to optimise the resource value and to <i>minimise waste</i></p> <p>2.2. Potential of materials to provide the highest <i>value added</i> return is planned</p> <p>2.3. <i>Species, timber structure, features and characteristics</i> assessment is monitored and reported as required by the enterprise</p> <p>2.4. Material <i>grading</i> is monitored and directed to best end use in line with industry standards as required by the enterprise</p> <p>2.5. Machinery and equipment maintenance is <i>monitored</i></p>

ELEMENT	PERFORMANCE CRITERIA
3. Control product supply quality	<p>and adjusted to minimise product waste</p> <p>2.6. Problems are immediately assessed and rectified to avoid repetition of lost product</p> <p>3.1. Products are assessed for quality and customer specification requirements</p> <p>3.2. Product <i>despatch</i> preparation is monitored and controlled to ensure the prevention and minimisation of damage</p> <p>3.3. Products are supplied on time and to customer expectations</p> <p>3.4. Quality and product care procedures are <i>recorded and reported</i> in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information and maintain documentation
- Numeracy skills sufficient to estimate and measure and to calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for monitoring of quality and product care procedures
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures relevant to monitoring of quality and product care procedures
- Environmental risks and hazard identification

REQUIRED SKILLS AND KNOWLEDGE

- Optimisation of timber
- Quality systems and supply coordination
- Product care and processing
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Quality systems** may include:
- enterprise based systems
 - second party certification
 - third party certification
 - ISO9000 series
 - other regulatory systems
- Visual inspection** may include:
- assessing the appropriateness of features
 - contamination
 - timber colours
 - insect attack
 - surface finishes
 - loose surfaces
 - bubbles
 - holes
 - breakages
 - machine caused defects
- Product specifications** may
- specifications set for optimisation of timber set in line with the available resource

RANGE STATEMENT

include:

- customer requirements
- industry standard cross sections and lengths
- enterprise standards

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Product recovery is to include:

- recovering logs or converting logs into useable boards without damage or loss of product

Minimising waste may include:

- appropriately assessing timber for recovery
- maximising product or resource use
- recycling defective product, off cuts and residue in line with organisational guidelines

Value adding is to include:

- maximising use of the product or resource
- minimising waste
- optimising the use of natural resources

Species may include:

- native
- imported species

Timber structures may include:

- hardwood or softwood cell structured timber

Features may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Characteristics may include:

- colour
- density
- texture
- grain
- figure
- qualities

RANGE STATEMENT

- uses
 - is the process of visually inspecting logs or timber to classify their quality and use
- Grading**
- Monitoring machinery and equipment maintenance may include:**
- minimising:
 - the impact of their use on the environment
 - carbon emissions
 - is the sending out of products relating to a customer order via various means of transport
- Despatch**
- Records and reports may include:**
- monitoring quality and product supply care procedures
 - risk
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate workplace sustainability requirements	1.1.Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to managing <i>sustainability</i> in the workplace are identified and followed 1.2.Existing policies and procedures for the workplace are assessed in relation to sustainability requirements 1.3.Research is conducted to define <i>scope of sustainability requirements</i> for the workplace 1.4. <i>Stakeholders</i> are consulted as a key component of the research process 1.5.Recommendations based on research outcomes are

ELEMENT	PERFORMANCE CRITERIA
	documented and feedback is provided to <i>appropriate personnel</i> and stakeholders
2. Design policy	2.1. Draft policy is developed and circulated to stakeholders and appropriate personnel for feedback 2.2. Policy is reviewed and revised, based on feedback 2.3. Policy is designed that reflects the organisation's commitment to sustainability as an integral part of the business planning 2.4. Appropriate <i>strategies</i> for implementation are agreed, documented and communicated to stakeholders
3. Manage policy implementation	3.1. Timelines and budget for implementation are established with appropriate personnel 3.2. <i>Resources</i> are allocated to the implementation process in line with timelines and budget 3.3. Those involved in implementing the policy are informed as to expected outcomes and responsibility is assigned 3.4. Targets and indicators are established to maximise policy outcomes 3.5. <i>Processes</i> are established to facilitate policy implementation
4. Review policy	4.1. Changing trends and opportunities for improved workplace sustainability are evaluated and considered for ongoing improvements 4.2. Reports are monitored for feedback that supports continuous improvement of procedures to enhance sustainability 4.3. Policy is regularly evaluated and modified to reflect ongoing improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use software and communication systems to research,

REQUIRED SKILLS AND KNOWLEDGE

analyse, create and present documents and reports; develop and implement systems and procedures to aid in the achievement of sustainability in the workplace

- Communication skills and interpersonal techniques sufficient to interact appropriately with stakeholders, colleagues and others in the workplace
- Literacy skills sufficient to read and evaluate complex and formal documents, such as policy and legislation
- Numeracy skills sufficient to analyse data on enterprise resource consumption
- Problem solving skills sufficient to review and identify work requirements; identify problems; develop and implement appropriate response procedures
- Planning and organisational skills sufficient to plan the policy design process, including organising meetings with stakeholders

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing sustainability in the workplace
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions and noise, the cleaning of plant, tools and equipment, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for managing sustainability in the workplace
- Policy development and implementation processes and practices
- Principles, practices and available tools and techniques of sustainability management
- Quality assurance systems
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements

may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance

RANGE STATEMENT

- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- access and equity principles and practices
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Sustainability may include:

- reduction, recycling or elimination of waste and ecologically incompatible by-products
- elimination of chemical substances or physical agents and conditions that present hazards to human health or the environment
- conservation of energy and materials
- use of forms of energy and materials that are most appropriate to the desired ends
- design of work spaces to minimise or eliminate chemical, ergonomic and physical hazards

Scope of sustainability requirements may include:

- an integrated approach to sustainability which includes environmental, economic and social aspects or a narrower approach which focuses on each aspect individually
- parts of the enterprise to which sustainability is to apply, including whether the focus is on the whole enterprise, one work site, one work area or a number of work sites or work areas
- investigation of the particular business and market context of the industry/enterprise
- addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
 - federal government standards, including five-star rating for all new homes
 - ecological footprinting
 - Energy Efficiency Opportunities Bill
 - Global Report Initiative
 - Green Office Program
 - green purchasing

RANGE STATEMENT

- greenhouse challenge
- environmental management systems
- life cycle analyses
- product stewardship
- supply chain management
- sustainability covenants and compacts
- triple bottom line reporting
- Australian Forest Certification Scheme (AFCS)
- Forest Stewardship Council (FSC)

Stakeholders may include:

- individuals and groups both inside and outside the organisation who have some direct interest in the organisation's conduct, actions, products and services, including:
 - customers
 - employees at all levels of the organisation
 - government
 - investors
 - key personnel within the organisation and specialists outside it who may have particular technical expertise
 - local community
 - other organisations
 - regulators
 - suppliers

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Strategies may include:

- promotional activities
- raising awareness among stakeholders
- training staff in sustainability principles and techniques
- reducing toxic material and hazardous chemical use
- minimising resource use through changes in processes, facility design and management
- supply chain and life cycle management approaches

RANGE STATEMENT

- sourcing renewable energy and low carbon footprint materials
- reducing, re-using and recycling waste
- product and process improvements
- carbon offsets
- reducing greenhouse gas and other emissions
- use of solar or renewable energies and water
- monitoring disposal processes

Resources may include:

- people
- materials
- equipment

Processes may include:

- communication
- monitoring
- reporting
- feedback
- evaluation
- ongoing review

FPICOR6202A Implement practices to maximise value from wood residues

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to evaluate and implement effective wood management practices that ensure maximum product value recovery and adherence to environmentally sustainable principles

General workplace legislative and regulatory requirements apply to this unit. Subject to enterprise requirements specific licences/certification may be required in the following areas: Forest sustainability certification, Chain of Custody certification

Application of the Unit

Application of the unit The unit involves implementing practices to maximise value from wood and residues in a variety of work settings including

- forest /plantation environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production
- timber and wood products sales and service
- other settings, such as farms, agriculture, workshops, domestic, nursery, local council applications, as applicable to the unit

The skills and knowledge required for competent workplace performance are to be used within the scope of

the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Develop a value maximisation plan

- 1.1. Applicable ***Occupational Health and Safety (OHS), environmental, legislative and organisational requirements*** relevant to implementing practices to maximise value from wood and wood residue are identified and followed
- 1.2. Management plans and priorities for site are reviewed
- 1.3. Site environmental protection measures are identified and adhered to in line with relevant legislation and regulations

ELEMENT	PERFORMANCE CRITERIA
	1.4. Timeline and budget are established and checked with appropriate personnel
	1.5. Applications and demand for wood and residue material are determined and documented in line with site requirements
	1.6. Product value chain is determined and documented in line with site requirements
	1.7. Consultative processes are used to obtain input to the plan in line with site requirements
	1.8. Most appropriate value maximisation options for the site are determined and documented
2. Determine appropriate value maximisation practices	2.1. Legislative, organisational and best practice parameters governing wood management practices are identified
	2.2. Management plans and priorities for the site are reviewed
	2.3. Most appropriate value maximisation practices for the site are determined
	2.4. Technology, materials and resources required for implementation are defined
	2.5. Value maximisation plan is developed and submitted to the appropriate personnel for approval
3. Implement value maximisation practices	3.1. Value maximisation plan is implemented in line with methodology , schedule, budget and legislative requirements
	3.2. Required technology, materials, resources and authorisations are obtained in line with organisational and legislative requirements
	3.3. Production schedule for the value maximisation plan is communicated to appropriate personnel
	3.4. Processes to monitor implementation of the plan are established
4. Review and improve value maximisation practices	4.1. Value maximisation plan is monitored and reviewed against methodology and production schedule in line with organisational requirements
	4.2. Information and data is analysed to determine effectiveness of the value maximisation practices and improvement opportunities are determined
	4.3. Improvement recommendations are prepared based on information, data analysis and consultative processes
	4.4. Outcomes are recorded and reported to appropriate

ELEMENT**PERFORMANCE CRITERIA**

personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use practices to maximise wood product value and avoid or minimise residue production
- Communication skills sufficient to use consultative, communicative, interpersonal and reporting techniques with colleagues and contractors
- Literacy skills sufficient to prepare and present written and oral information to colleagues and contractors
- Numeracy skills sufficient to analyse qualitative and quantitative information and data
- Problem solving skills sufficient to identify potential uses for wood products; identify market demand; demonstrate time and project management
- Planning and organisational skills sufficient to coordinate the acquisition of required resources, authorisations and approvals; implement management practices

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for implement practices to maximise value from wood products
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for implementing practices to maximise value from wood and residues
- Environmental risks and hazards
- Role of wood or waste products in generating renewable energy through biomass
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Extensive range of wood products, uses, markets and values
- Work practices that avoid or reduce wood residues
- Potential uses for wood residues and by products
- Data collection and analysis methods
- Established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for analysing, estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently implement practices to maximise value of wood products and residues

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to implementing practices to maximise value from wood and residues
- following organisational policies and procedures relevant to implementing practices to maximise value from wood and residues
- practical implementation of practices to maximise value from wood and wood residues

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or

EVIDENCE GUIDE

Australian Standards requirements

- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- fatigue management
- hazard and risk control
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Timeline

- may be critical to the success of the program
- must identify any environmental restrictions such as excessive heat or rain impacting on production

Appropriate personnel may include:

- coordinating or operational personnel
- management
- colleagues
- clients
- relevant groups

Applications

are the uses for wood and residues and may include:

- poles
- piles and bridge timbers
- veneer logs
- saw logs
- chip logs
- charcoal logs
- woody biomass
- structural and non-structural timbers
- timber composites
- timber panel products
- timber engineered products
- carbon storage
- eucalyptus oil

RANGE STATEMENT

Demand

- extractives
- is market demand

and must include assessment of:

- volume
- price
- special process requirements

Product value chain

is a summary of the obtainable products and their market value

Consultative processes may include:

- face-to-face meetings
- telephone
- fax, written and email communication

and may be with:

- clients
- technical operators
- marketing groups
- operational personnel
- colleagues
- relevant groups such as environmental groups
- local, State/Territory and federal government bodies
- internal policy groups

Resources

- are the resources needed to implement the plan

and may include:

- staff
- production
- technical
- subcontractors

Methodology

- is the system of practices to be implemented to maximise value

and may include:

- avoiding production of residues
- reducing the volume of residues
- marketing practices
- sales practices
- new work practices

Authorisations must include:

- permits and licences relating to:
 - sites or properties

RANGE STATEMENT

- hours of operation
- use and application of chemicals
- environmental issues

Production schedule

is the anticipated timing, volume and product range to be produced from an area

Communication

see consultative processes

Monitored may be:

- time-based
- frequency-based
- value-based

Reviewed may include:

- compliance with OHS, legislative and environmental regulations, procedures, practices and precautions
- adherence to site imperatives, specifications, quality and performance targets
- completion and submission of documentation as required

Information and data

- will relate to the operational area and methodologies employed

and may include:

- data
- previous reports
- management information systems data
- marketing
- strategic and business plans, and associated implementation issues

Analysed may include:

- assessment and judgement of:
 - quantitative and qualitative data
 - performance
 - adherence to work practices
 - value judgements

Improvement recommendations

are recommendations for adjustment to practices based on analysis

Records and reports may include:

- results
- costs
- data analysis
- recommendations for future work
- planning and implementation difficulties or issues faced

RANGE STATEMENT

and may be:

- manual
- computer based

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|--|
| 1. Identify material | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to stacking and binding material are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Materials</i> for packing are <i>identified</i> in line with site standards and procedures</p> <p>1.4. Materials and pack are <i>inspected and checked for grading, labelling</i> and quality in line with site procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Build packs manually | <p>2.1. Packs are <i>built</i> and <i>bearers checked</i> in line with OHS requirements, site procedures and environmental requirements</p> <p>2.2. Material is <i>confirmed</i> to meet labelled or expected content</p> <p>2.3. <i>Problems or faults</i> are identified and reported to supervisor in line with site procedures</p> <p>2.4. As directed by supervisor, material with faults and damaged/inconsistent bearers are <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.5. Finished packs are <i>labelled</i> in line with site standards</p> <p>2.6. <i>Limitations</i> in building packs are identified and assistance is sought as required in line with site procedures</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Strap and wrap packs	<p>3.1. Finished packs are <i>strapped and wrapped</i> in line with OHS requirements and site standards and procedures</p> <p>3.2. <i>Straps are tightened</i> to prevent component slippage, strap breakage and damage in line with site procedures</p> <p>3.3. Area is regularly cleared of packing and loose material in line with site procedures and environmental requirements</p> <p>3.4. Strapping and wrapping waste material is minimised and <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.5. Production and quality <i>records and reports</i> are completed in line with site standards and procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely build, strap and wrap packs; identify acceptable bearers
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for stacking and binding material; ***confirm*** appropriate labelling
- Numeracy skills sufficient to measure and allocate material sizes; estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for stacking and binding material
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

material (including preservative treated timber) and the cleaning of plant, tools and equipment

- Organisational and site standards, requirements, policies and procedures for stacking and binding material
- Environmental risks and hazards
- Criteria for recycling and re-using material with faults
- Methods of visual estimation, grading, colour identification and tagging
- Industry standard cross sections and length dimensions and tolerances
- Industry standard cross section profiles and names
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently stack and bind material in line with site standards and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to stacking and binding material
- following organisational policies and procedures relevant to stacking and binding material

EVIDENCE GUIDE

- identifying materials using visual assessment or measurement processes to allocate standard sizes
 - building packs manually following site standards for dimension, component numbers, end and vertical alignment, and bearer quality
 - applying straps and wrapping to packs with a sufficient quality of tension and finish
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling, including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the stacking and binding of material

and may include:

- type
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to

RANGE STATEMENT

- Appropriate personnel** may include:
- the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Materials** may include:
- sawn or dressed finish timber
 - differing timber species
 - preservative treated timber, including water-borne preservatives and light organic solvent preservatives (LOSP)
 - panel types, including laminated veneer, chipboard, fibreboard, medium density fibreboard, and boards made from material other than wood
 - panels with various treatments, coatings and hardware items
 - cross sections and sizes to be stacked, which may include:
 - timber with rectangular and common profile cross sections with industry standard dimensions
 - panels with industry standard thickness and sheet dimensions and hardware sizes as necessary to differentiate between separate stock items
- Identified** may include:
- identifying industry standard sizes by visual estimate or using a measuring tool or other scale
 - identifying industry standard thickness, diameter and cross section by visual estimate or using a measuring tape or gauge
- Inspected and checked for grading and labelling** may include:
- visual estimation
 - confirmation of stress-grading
 - identification and categorisation of standard cross sections and length
 - profile
 - colour identification
 - general information about labelling and tagging
 - pack quality

RANGE STATEMENT

- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Built** relates to:
- building packs from identified material, with required dimensions or number of components, with ends aligned and sides vertical
- Bearers checked** relates to:
- placing specified bearers and spacing sticks squarely, evenly and consistently
 - checking bearers for consistent thickness and damage
- Confirmed** may include:
- material of consistent type, section and length
- Problems or faults** may include:
- identifying and separating material with apparent faults
 - pack quality
 - damaged or inconsistent bearers
- Disposing of** may include:
- recycling material with faults and damaged or inconsistent bearers
 - re-using material with faults and damaged or inconsistent bearers
 - redirecting material with faults and damaged or inconsistent bearers for energy recovery
- Labelled** relates to:
- identifying packs with written information or completed tags
- Limitations** may relate to:
- job role and responsibilities
 - own competency level
 - industry requirements
 - own understanding of risk identification processes
 - own interpretation of maps, legislation, regulations and procedures
 - OHS requirements
 - legal responsibilities
- Strapped and wrapped** may
- applying protective strips to packs

RANGE STATEMENT

include:

- applying wrapping to packs
- placing and finishing wrapping to prevent water penetration during storage and transportation

Straps are tightened using:

- hand-held equipment to a sufficient tension to prevent slippage and damage

Dealing with may include:

- recycling bracing and strapping waste
- sending bracing and strapping waste to landfill

Records and reports may include:

- product type and size
- inspection information
- grading and labelling outcomes
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------|--|
| 1. Prepare to rack material | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to racking <i>material</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations and site procedures</p> <p>1.4. Racking material procedures are identified and assessed for safe working conditions and planned in line with site procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures</p> |
| 2. Identify material | <p>2.1. Type and quantity of material to be racked is identified in line with work order</p> <p>2.2. Round poles are identified by visual estimate or using a measuring tool to meet industry requirements for standard diameter ranges</p> <p>2.3. Sawn or dressed boards are identified by visual estimate or using a measuring tool to meet industry requirements for standard cross sections</p> <p>2.4. Industry requirements for standard lengths of material are identified by visual estimate or using a measuring tool</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Rack material	<p>2.5. Stress grade labels, colour identification marks and other tags are identified and interpreted</p> <p>3.1. Material is racked in line with work order, and environmental and OHS requirements</p> <p>3.2. Material of consistent type, section and length is racked in line with work order requirements</p> <p>3.3. Material with faults is identified, separated and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.4. Bearers and spacing sticks are placed squarely, evenly and consistently in line with site procedures</p> <p>3.5. Bearers and spacing sticks are checked for consistent thickness and damage, and disposed of as necessary</p> <p>3.6. Work area is regularly cleared to maintain a safe and efficient workflow in line with site procedures and environmental requirements</p> <p>3.7. Problems associated with racking material processes are rectified or reported for resolution</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely rack material to industry and site standards; use suitable bearers and spacing sticks for racking
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; locate and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for racking material; locate, interpret and apply workplace information and instructions
- Numeracy skills sufficient to apply appropriate mathematical processes to measure material against industry standards for sizing; estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for racking material
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated material) and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for racking material
- Criteria for recycling and re-using material with faults
- Hazards and risks associated with racking material, including environmental hazards and risks
- Range and types of material to be racked
- Industry standard cross section and length dimensions and tolerances
- Industry standard cross section profiles and names
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- identify, sort and rack hardwood or softwood material to industry standards
- separate material with identified faults according to organisational guidelines

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to racking material
- following organisational policies and procedures relevant to racking material
- safely preparing, sorting and racking material to industry standards
- identifying, separating and safely disposing of material with faults

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of

EVIDENCE GUIDE

process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances

RANGE STATEMENT

- Environmental requirements may include:**
- safe forest practices, including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Material may be:**
- hardwood or softwood
 - sawn or dressed finish
 - timber species
 - preservative treated or untreated, with

RANGE STATEMENT

preservative treatment type, including:

- copper chromium arsenate (CCA)
- light organic solvent preservatives (LOSP)
- creosote
- water-borne
- round poles of all industry standard diameter ranges
- rectangular and common profile cross sections with industry standard dimensions and industry standard lengths to a maximum weight and flexibility consistent with manual handling

Work order is to include:

- details of material to be racked
- special client requirements
- production timelines
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Disposing of may include:

- recycling material with faults/inconsistent or damaged spacing sticks and bearers
- re-using material with faults/inconsistent or damaged spacing sticks and bearers
- redirecting material with faults/inconsistent or damaged spacing sticks and bearers for energy recovery

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to set up and conduct the finishing process and pack products. The unit includes machining and manual or machine coating products

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2203A Finish products

Application of the Unit

Application of the unit

The unit involves finishing products in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---------------------------------|--|
| 1. Set up production processes | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to finishing <i>products</i> are identified and followed</p> <p>1.2. Products, processes and production requirements are identified in line with site procedures</p> <p>1.3. <i>Tools, equipment</i> and materials are identified, obtained and checked for operational effectiveness in line with production requirements and site procedures</p> <p>1.4. Startup checks are completed on equipment in line with manufacturer recommendations and site procedures</p> <p>1.5. Material is machined in line with setup processes and site requirements</p> <p>1.6. Machined product is checked for faults and setup is altered to rectify identified problems</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Conduct finishing operations | <p>2.1. Material is measured and marked for processing in line with <i>work order</i> and in consultation with <i>appropriate personnel</i></p> <p>2.2. Material is machined and defects are identified, removed and repaired or <i>disposed of</i> in line with site procedures</p> <p>2.3. Equipment faults and routine problems are identified, investigated and resolved</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Coat products	<p data-bbox="572 297 1307 405">2.4. Work area is cleared and waste material disposed of in line with relevant environmental policies and procedures</p> <p data-bbox="572 421 1307 495">3.1. <i>Coating requirements</i> are identified and <i>planned</i>, and coat is selected in line with site procedures</p> <p data-bbox="572 506 1307 613">3.2. Coating area is <i>prepared</i> to provide suitable clean area that minimises surface defects during drying, in line with site procedures</p> <p data-bbox="572 624 1307 698">3.3. Coat is opened, decanted and mixed in line with manufacturer recommendations</p> <p data-bbox="572 710 1307 817">3.4. Coat is applied according to planned <i>method</i> and sequence using equipment in line with manufacturer recommendations and site standards</p> <p data-bbox="572 828 1307 902">3.5. Coat is regularly <i>assessed</i> and <i>faults</i> are identified and removed in line with site standards</p> <p data-bbox="572 913 1307 972">3.6. Products with coat faults are disposed of in line with site procedures and environmental requirements</p>
4. Pack finished products	<p data-bbox="572 994 1307 1137">4.1. Finished items are checked for faults and conformance, <i>segregated</i> and stored in line with workplace procedures and environmental requirements</p> <p data-bbox="572 1149 1307 1223">4.2. Packing requirements are identified from work orders and other related documentation and located</p> <p data-bbox="572 1234 1307 1341">4.3. Finished items are packed in line with site procedures and work orders, using suitable packing materials</p> <p data-bbox="572 1352 1307 1426">4.4. Packaged products are identified and recorded in line with site procedures</p> <p data-bbox="572 1438 1307 1496">4.5. Finishing process is <i>recorded and reported</i> to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely prepare and apply coats to products

REQUIRED SKILLS AND KNOWLEDGE

- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for finishing fabricated products
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and product faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for finishing products
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for finishing products
- Criteria for recycling and re-using material with defects
- Routine maintenance procedures
- Hazards and risks associated with finishing and coating fabricated products, including environmental hazards and risks
- Established communication channels and protocols
- Problem identification and resolution strategies, common fault finding techniques, and typical product and coat defects
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- set up production processes
- carry out finishing and coating operations
- package finished products according to organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to finishing products
- following organisational policies and procedures relevant to finishing products
- selecting and using appropriate tools, equipment and materials over the full range of processes for finishing fabricated products
- packaging products using the full range of equipment and packaging materials
- coating products ensuring accurate identification and correction of defects and faults

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE

workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and

RANGE STATEMENT

may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage

RANGE STATEMENT

- Products** may include:
- requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - laminated items
 - components and items requiring special finishing operations
- Tools and equipment** may include:
- standard or special production tooling drills
 - router bits
 - clamps
 - jigs and templates
 - drill press
 - sanders
 - routers
 - surface planers
 - portable power tools
 - hand tools
 - nail guns
 - pneumatic fastener and saws
 - tooling
 - cambers
 - coating machine
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Work order** may include:
- type, size and quantity of products to be finished and packed
 - drawings
 - packing documentation
 - type of packing material
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work

RANGE STATEMENT

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Disposing of may include:

- recycling material with defects that cannot be repaired, waste material, or products with coat faults
- re-using material with defects that cannot be repaired, waste material, or products with coat faults
- redirecting material with defects that cannot be repaired, waste material, or products with coat faults for energy recovery

Coating may be:

- by machine or manual
- by brush
- by spraying and dipping

Coating requirements may include:

- products, such as paints, sealants, timber stains and primers
- coat characteristics
- colour and finish
- equipment, such as brush and spray equipment, including airless or compressed air-operated

Planned may relate to:

- number of separate coat applications
- number of coats
- coating sequence
- stands and supports to minimise coating time and handling damage

Prepared may relate to:

- product surfaces

and is to include:

- sanding
- rubbing
- scraping
- cleaning by hand

Method may be selected to suit:

- coat
- product
- surface to be coated
- required coat finish
- minimal application time

RANGE STATEMENT

Assessed may cover:

- timber species
- manufactured product type
- surface finish
- cleanliness
- moisture level

Faults may include:

- incomplete cover
- orange peel
- solvent boil
- base product faults
- contamination
- coating defects

Segregating may include:

- recycling finished items with faults or items that do not conform
- re-using finished items with faults or items that do not conform

Records and reports may include:

- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

and may relate to:

- production details
- maintenance details
- breakdowns or equipment faults
- computer problems
- interruptions to production

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Prepare for cutting or machining process | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to tailing out <i>materials</i> are identified and followed</p> <p>1.2. Work order is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Required finished board sizes and quantities are identified in line with operator and work order</p> <p>1.4. Where multiple cuts are required, sequence of cuts or machining passes are checked with operator and work order</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Maintain process flow | <p>2.1. Flitch, cant or board is <i>controlled</i> to maintain process flow in line with sawing or dressing speed, OHS requirements and production standards</p> <p>2.2. Sawn waste or material is controlled and regularly cleared in line with site procedures and environmental requirements</p> <p>2.3. Flitch, cant or board is assessed for further processing requirements and returned to operator in line with production standards</p> <p>2.4. Work area is regularly cleared in line with site procedures, and OHS and environmental requirements</p> <p>2.5. <i>Problems</i> in flow or processing of materials are identified and reported to operator for resolution</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Sort finished product	<p data-bbox="576 297 1311 405">2.6.As directed by operator, material with faults or defects is <i>disposed of</i> in line with site procedures and environmental requirements</p> <p data-bbox="576 421 1246 495">3.1.Boards are sorted and stacked in line with site procedures and specific operational requirements</p> <p data-bbox="576 506 1270 613">3.2.Boards are assessed for standard sizes by visual estimate or using a measuring tool in line with site procedures</p> <p data-bbox="576 624 1305 732">3.3.<i>Recoverable material</i> and waste are segregated and <i>stored or directed for further processing</i> in line with site procedures</p> <p data-bbox="576 743 1235 848">3.4.Production and quality <i>records and reports</i> are processed in line with site procedures and organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for tailing out material
- Numeracy skills sufficient to use appropriate methods of analysis, assessment and evaluation to tail out materials; sort finished material into required grades and waste from recoverable or finished materials; estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for tailing out materials
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

- material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for tailing out materials
- Environmental risks and hazards
- Criteria for recycling and re-using material with faults or defects
- Industry standard cross section and length dimensions and tolerances
- Tailing out processes and procedures
- Common industry terminology
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- tail out material, demonstrating the correct maintenance of process flow
- sort material according to organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to tailing out materials
- following organisational policies and procedures

EVIDENCE GUIDE

- relevant to tailing out materials
 - safely tailing out material while maintaining process flow
 - identifying processing faults and sorting finished material
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- timber
- other materials that are solid or manufactured by lamination of boards or veneers
- supervisors
- clients
- colleagues
- line management
- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language

Organisational requirements may include:

Materials may be:

Appropriate personnel may include:

Communication may include:

RANGE STATEMENT

- use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Controlled** may relate to:
- material movement
 - position of the material being sawn or dressed
 - avoiding contact with tail of saw or cutter
 - removing waste
- Problems** may relate to:
- speed of production
 - flow of product
 - sharpness of blades or cutters
 - quality of materials
 - communication
 - housekeeping
 - burn marks
 - rough finish
 - tear out
 - machine marks
 - irregular size of finished product
- Disposing of** may include:
- recycling material with faults or defects
 - re-using material with faults or defects
 - redirecting material with faults or defects for energy recovery
- Recoverable material:**
- is the volume of timber sawn from a resource compared to the volume of that resource
 - is expressed as a percentage (sawn timber volume/initial log volume x 100)
 - maximises the value of the resource
- Storing or directing for further processing** may include:
- recycling segregated recoverable material and waste
 - re-using segregated recoverable material and waste
 - redirecting segregated recoverable material and waste for energy recovery
- Records and reports** may include:
- tally sheets
 - quality sheets and forms
 - production sheets and downtime sheets
- and may relate to:
- production details
 - maintenance details
 - breakdowns or equipment faults

RANGE STATEMENT

- interruptions to production

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---------------------------------|---|
| 1. Prepare for dressing process | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to dressing boards and <i>timber</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Machinery and <i>equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. Machinery is adjusted to suit size and type of boards or timber to be dressed in line with work order</p> <p>1.5. Pre-operational checks and lock-out procedures are conducted in line with manufacturer recommendations</p> <p>1.6. Required dressed board sizes and quantities, and available material for dressing are identified from work orders, schedules and site procedures</p> <p>1.7. Sequence of machining operations is planned where multiple passes are required</p> <p>1.8. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures</p> |
| 2. Dress boards and timber | <p>2.1. Boards and timber are dressed in line with work order, environmental and OHS requirements, and site procedures</p> <p>2.2. Pre-operational checks and lock-out procedures are</p> |

ELEMENT**PERFORMANCE CRITERIA**

- conducted in line with manufacturer recommendations
- 2.3. Boards and timber are dressed using appropriate equipment in line with site procedures and manufacturer recommendations
- 2.4. Guides, conveyors, speeds and feeds are adjusted to suit dimensions and grade outcomes, and cutting sequence is selected
- 2.5. Boards not meeting processing requirements are identified prior to dressing, and rejected and *disposed of* in line with site procedures
- 2.6. *Work area is regularly cleared* in line with site standards, and environmental and OHS requirements
- 2.7. *Problems* are identified and resolved in line with site procedures
- 2.8. Dressed boards are tallied and monitored against work orders
3. Assess dressing conditions
- 3.1. Dressing conditions are regularly assessed to ensure product quality, continuity of supply and processing in line with site standards and procedures
- 3.2. Dressing feed rates and finish are evaluated to determine board size, timber condition and other relevant characteristics in line with site procedures
- 3.3. Dressed board dimensions and profiles are regularly measured and recorded in line with site procedures
- 3.4. Routine processing and equipment *faults* are recognised and resolved or reported in line with site procedures
4. Maintain simple dressing processes
- 4.1. Dressing conditions are adjusted to optimise feed rate and finish and to maintain finished dimensions, in line with work order and site standards
- 4.2. Equipment lock-out procedures are applied in line with OHS requirements and site procedures
- 4.3. Equipment is *maintained* in line with OHS requirements, site procedures, manufacturer recommendations and environmental requirements
- 4.4. Problems and faults are identified, resolved and reported in line with site procedures
- 4.5. Blunt cutters or saw blades are *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
- 4.6. Production and quality *records and reports* are

ELEMENT**PERFORMANCE CRITERIA**

processed in line with site procedures and organisational requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, including to carry out lock-out procedures; efficiently and safely dress boards and timber at optimum rate and finish quality; conduct lock-out procedures
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; locate, record and report information
- Literacy skills sufficient to comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for dressing boards and timber
- Numeracy skills sufficient to apply mathematical processes to measure finished dimensions and profiles with accuracy appropriate to tolerances; estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for dressing boards and timber
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for dressing boards and timber
- Environmental risks and hazards
- Recycling and re-using procedures for dressed boards not meeting processing requirements
- Typical timber defects and dressing problems which require action to be taken
- Industry standard cross section and length dimensions and tolerances, profiles and terminology
- Purpose of lock-out procedures
- Established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- dress boards and timber
- maintain equipment in line with organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to dressing boards and timber
- following organisational policies and procedures relevant to dressing boards and timber
- communicating and working safely with others in the work area
- preparing for, evaluating and maintaining dressing processes and conditions
- setting, adjusting, operating and maintaining equipment to suit required dimensions, cutting sequence, feed rates and finish

Context of and specific resources for

- Competency is to be assessed in the workplace or

assessment

realistically simulated workplace

- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment

EVIDENCE GUIDE

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy

RANGE STATEMENT

- Organisational requirements** may include:
- OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Timber** may be:
- softwood or hardwood
 - treated or untreated
 - planed or sized along its length
 - cross sections produced to standard industry profiles within the enterprise's normal range
- Work order** is to include:
- details of material to be dressed
 - special client requirements
 - production timelines
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Equipment** may include:
- moulder

RANGE STATEMENT

- jointer/buzzer or thicknesser
 - machine incorporating splitting saw
 - planing machine
 - moulding machine
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Disposing of** may include:
- recycling boards identified as not meeting processing requirements prior to dressing
 - re-using boards identified as not meeting processing requirements prior to dressing
 - redirecting boards identified as not meeting processing requirements prior to dressing for energy recovery
- Regularly clearing work area** may include:
- area around equipment and conveyors
 - clearing timber scraps around equipment and conveyors
 - monitoring conveyors for material flow problems
- Problems** may relate to:
- equipment faults and malfunctions
 - quality of product and machine settings
 - efficient rejection prior to dressing of boards that do not meet processing requirements
 - transfer and flow of material
 - dressing problems
 - feed rate
 - product finish
- Faults** may include:
- blunt or damaged cutters
 - inadequate supply of materials
 - disruption to continuity of flow
 - sub-optimal production rate and finish
 - finished dimensions
 - burn marks
 - end damage

RANGE STATEMENT

- poor surface finish
 - extra cuts
 - excessive cutter marks
 - dimensional errors
- Maintenance** may include:
- cleaning machine of wood chips and sawdust
 - replacing blunt cutters or saw blades
 - inspecting machine parts for wear or damage (including guards)
 - greasing and lubricating moving parts
 - checking the operation of emergency stop buttons and lock-out systems
- Dealing with** may include:
- repairing or sending for repair blunt cutters or saw blades
 - recycling blunt cutters or saw blades that cannot be repaired
 - sending blunt cutters or saw blades that cannot be repaired to landfill
- Records and reports** may include:
- tally sheets
 - quality sheets and forms
 - production sheets and downtime sheets
- and may relate to:
- production details
 - maintenance details
 - breakdowns or equipment faults
 - computer problems
 - interruptions to production
- and may be:
- manual
 - computer-based system
 - other appropriate organisational communication system

Employability Skills Information

Employability skills

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for operation	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to resawing <i>boards</i> and <i>timber</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Machinery and <i>equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. Machinery is adjusted to suit size and type of boards/timber to be processed in line with work order instructions</p> <p>1.5. Pre-operational checks and lock-out procedures are conducted in line with manufacturer recommendations</p> <p>1.6. Required sawn board sizes and quantities and available material for sawing are identified from work order, schedules and site procedures</p> <p>1.7. Sequence of cuts is planned where multiple cuts are required</p> <p>1.8. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Produce boards	<p>2.1. Boards and timber are sawn in line with work order, and environmental and OHS requirements</p> <p>2.2. Boards and timber are sawn using appropriate equipment in line with manufacturer</p>

ELEMENT**PERFORMANCE CRITERIA**

- recommendations, and OHS and site requirements
- 2.3.Saws, carriage and feeds are adjusted to suit dimensions and cutting sequence selected
- 2.4.Product quality, finish and material flow are maximised through *cutting processes* in line with OHS requirements, work order and site procedures
- 2.5.*Work area is regularly cleared* in line with site standards, and environmental and OHS requirements
- 2.6.*Problems* are identified and resolved in line with site procedures
- 2.7.Damaged sawn material is *disposed of* in line with site procedures and environmental requirements
- 2.8.Sawn material is tallied and monitored against work order
3. Maintain sawing conditions
- 3.1.Sawing conditions are regularly assessed and adjusted to optimise feed rate and finish in line with OHS requirements, site standards and procedures
- 3.2.Sawing feed rates and finish are evaluated to determine board size, timber species and condition in line with site procedures
- 3.3.Cross section dimensions of sawn boards are regularly monitored against standard sizes and tolerances, and sawing process is adjusted as required
- 3.4.Routine sawing and equipment *faults* are recognised and resolved or reported in line with site procedures
- 3.5.Equipment is *maintained* in line with OHS requirements, site procedures, manufacturer recommendations and environmental requirements
- 3.6.Blunt cutters or saw blades are *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
- 3.7.Equipment lock-out procedures are applied in line with OHS requirements and site procedures
- 3.8.Production and quality *records and reports* are processed in line with site procedures and organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, including to carry out lock-out procedures; safely saw boards and timber at optimum rate and finish
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for resawing boards and timber
- Numeracy skills sufficient to apply mathematical processes to measure sawn dimensions with accuracy appropriate to tolerances; estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for resawing boards and timber
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for resawing boards and timber
- Environmental risks and hazards
- Criteria for recycling and re-using damaged sawn material
- Industry standard cross section and length dimensions and tolerances
- Typical cutting patterns
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- resaw boards and timber
- maintain sawing conditions and equipment according to organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to resawing boards and timber
- following organisational policies and procedures relevant to resawing boards and timber
- communicating and working safely with others in the work area
- preparing for, monitoring and maintaining sawing processes and conditions to produce boards at an appropriate finish and volume
- operating and maintaining equipment to suit required dimensions, cutting sequence, feed rates and finish
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit

Context of and specific resources for assessment

EVIDENCE GUIDE

Method of assessment

- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance

Organisational requirements may include:

RANGE STATEMENT

- procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Boards** may be produced by:
- resawing larger boards, for example, recovering boards from one edge at each pass
 - splitting a larger board into two or more sections
- Timber** may be:
- solid
 - manufactured by lamination of boards or veneers
- Work order** is to include:
- details of material to be resawn
 - special client requirements
 - production timelines
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Equipment** may include:
- simple saw benches necessitating significant manual handling, to more complex handling arrangements using conveyor systems to transfer and position material
 - circular or band saws
 - single or multiple saws
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative

RANGE STATEMENT

- language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Cutting processes** involve:
- adjusting saws, carriage and feeds to suit dimensions and cutting sequence selected
- Regularly clearing work area** may include:
- area around equipment and conveyors
 - clearing timber scraps around equipment and conveyors
 - regularly monitoring conveyors for material flow problems
- Problems** may relate to:
- equipment faults and malfunctions
 - quality of product and machine settings
 - transfer and flow of material
 - routine sawing problems
 - feed rate and product finish
 - infeed and outfeed systems
 - damage to sawn board
 - damage to saw blade
 - timber positioning
- Disposing of** may include:
- recycling damaged sawn material
 - re-using damaged sawn material
 - redirecting damaged sawn material for energy recovery
- Faults** may include:
- blunt or damaged saw blade
 - problems with the carriage or feeds
 - inadequate supply of materials
 - disruption to continuity of flow
 - sub-optimal production rate and finish
- Maintenance** may include:
- cleaning the machine of wood chips and sawdust
 - replacing blunt cutters or saw blades
 - inspecting machine parts for wear or damage (including guards)
 - greasing and lubricating moving parts
 - checking the operation of emergency stop buttons and lock-out systems
- Dealing with** may include:
- repairing or sending for repair blunt cutters or saw blades
 - recycling blunt cutters or saw blades that cannot be repaired

RANGE STATEMENT

- Records and reports** may include:
- sending blunt cutters or saw blades that cannot be repaired to landfill
 - tally sheets
 - quality sheets and forms
 - production sheets and downtime sheets
- and may relate to:
- production details
 - maintenance details
 - breakdowns or equipment faults
 - computer problems
 - interruptions to production
- and may be:
- manual
 - computer-based system
 - other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for operation	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to producing <i>finger jointed timber</i> are identified and followed</p> <p>1.2. Work order is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is checked, adjusted where necessary, and operated in line with manufacturer recommendations and site procedures</p> <p>1.4. <i>Glue requirements</i> are identified and glue is mixed to ensure minimum wastage in line with site standards, and OHS and environmental requirements</p> <p>1.5. Excess material is disposed of in line with relevant environmental policies and requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Start jointing process	<p>2.1. <i>Materials</i> are prepared and samples checked in line with site procedures and OHS requirements</p> <p>2.2. Sub-standard samples are <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.3. Pre-operational checks and lock-out procedures are conducted in line with manufacturer recommendations</p>

ELEMENT	PERFORMANCE CRITERIA
3. Maintain production flow	<p>2.4. <i>Jointing process</i> is commenced in line with site standards and procedures, and OHS requirements</p> <p>2.5. Finished joints are checked for strength and appearance in line with site quality standards</p> <p>2.6. <i>Problems</i> are identified and settings adjusted as required in line with site procedures</p> <p>3.1. Jointing process is run automatically and correct operation of all sections is checked in line with site procedures and OHS requirements</p> <p>3.2. Processes are regularly <i>monitored</i> to ensure product quality, continuity of supply, and processing in line with site standards and procedures</p> <p>3.3. Routine processing and equipment <i>faults</i> are recognised and resolved or reported in line with site procedures</p> <p>3.4. Blunt or damaged cutters are identified and <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.5. Sub-standard product is disposed of in line with site procedures and environmental requirements</p> <p>3.6. Work area is regularly cleared in line with site standards, and environmental and OHS requirements</p> <p>3.7. Production and quality <i>records and reports</i> are processed in line with site procedures and organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; conduct lock-out procedures; efficiently and safely handle, mix, cure and apply glue
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of

REQUIRED SKILLS AND KNOWLEDGE

practice and established safe practices and procedures for producing finger jointed timber

- Numeracy skills sufficient to estimate, measure and calculate strengths, tolerances, quantities and time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing finger jointed timber
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing finger jointed timber
- Environmental risks and hazards
- Criteria for recycling and re-using sub-standard product
- Types of glue, and procedures and standards for mixing, curing and applying it
- Industry standard cross sections, and their strength and tolerances
- Purpose of lock-out procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - manual handling including shifting, lifting and carrying
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

- Finger jointed timber** may cover:
- the full range of board cross sections jointed and finger profiles used by the enterprise
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line managers
- Equipment** may include:
- that used for glue mixing and preparation
 - finger jointing machine stations and equipment
 - conveyors
- Glue requirements** may include:
- glue quantities determined from scheduled requirements
 - glue-handling requirements and precautions
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Materials** may include:
- identifying and confirming cross section of cleats/shooks to match finger jointing machine setup
 - loading cleats/shooks to conveyor
 - feeding cleats/shooks to jointing operation
 - machining fingers on sample cleats/shooks
 - curing glue
 - checking and adjusting settings for glue curing
 - applying glue to sample cleats/shooks
 - joining sample cleats/shooks
- Disposing of** may include:
- recycling sub-standard samples/sub-standard product
 - re-using sub-standard samples/sub-standard product
 - redirecting sub-standard samples/sub-standard product for energy recovery
- Jointing process** may include:
- loading cleats/shooks to conveyor
 - feeding cleats/shooks to jointing operation

RANGE STATEMENT

Problems may relate to:

- machining fingers on cleats/shooks
- curing and applying glue
- equipment faults and malfunctions
- glue mix, curing and application
- loading of cleats/shooks
- quality of product
- machine settings

Monitored includes:

- regular monitoring of processes to ensure continuity of production, including recognising and rectifying blunt or damaged cutters
- loading
- supplying and feeding cleats/shooks
- rejecting cleats/shooks not meeting grading requirements
- regularly checking
- cleaning and filling glue spreader
- making adjustments to machine settings, equipment and materials as required
- coordinating cleats/shooks
- docking finished boards with others to ensure continuous supply

Faults may include:

- blunt or damaged cutters
- cleats/shooks or product not meeting grading requirements
- inadequate supply of materials
- disruption to continuity of flow
- sub-optimal production rate and finish

Dealing with may include:

- reporting blunt or damaged cutters for repair or replacement
- recycling blunt or damaged cutters that cannot be repaired
- re-using blunt or damaged cutters that have been repaired

Records and reports may include:

- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

and may relate to:

- production details
- maintenance details
- breakdowns or equipment faults

RANGE STATEMENT

- computer problems
- interruptions to production

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for tallying	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>tallying material</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Suitable <i>personal protective equipment and clothing</i> are selected, used and maintained</p> <p>1.4. Potential and existing risks and <i>hazards</i> in the work area are identified and controlled in line with site procedures, environmental and OHS requirements</p> <p>1.5. Location of material to be tallied is identified and <i>access arrangements</i> are made in line with workplace procedures</p> <p>1.6. Tallying procedures are planned in line with work order and to ensure continuous workflow</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures</p>
2. Record piece or pack details	<p>2.1. Material is tallied in line with work order, environmental and OHS requirements and site procedures</p> <p>2.2. Supply of tally sheets, bar coding material or other documents is monitored and replaced as required</p> <p>2.3. Pieces or <i>packs</i> are counted, and legibly and accurately recorded in the required format</p> <p>2.4. Packs are checked to ensure conformance to relevant specifications</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.5. Work area is regularly cleared to maintain a safe and efficient workflow in line with site procedures and environmental requirements
- 2.6. Operational problems, non-conformances and damaged material are identified and reported
- 2.7. Tallying results are accurately *reported and recorded* in line with site procedures and organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to visually identify material and pack types; safely handle material to be tallied
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for tallying material; clearly and accurately record tallied details; interpret and apply common industry terminology
- Numeracy skills sufficient to accurately tally material; select appropriate mathematical processes to calculate timber volumes or lineal metres in a pack
- Problem solving skills sufficient to review and identify work requirements; identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for tallying material
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for tallying material
- Hazards and risks associated with tallying material, including environmental hazards and risks
- Industry standard sizing and names for timber, timber profiles and boards

REQUIRED SKILLS AND KNOWLEDGE

- Relevant packing standard specifications
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- measure and conduct tallies of different types of material
- record counts clearly and accurately according to organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to tallying material
- following organisational policies and procedures relevant to tallying material
- tallying material
- selecting and using appropriate mathematical procedures to calculate tallies
- accurately and clearly recording material tallies and maintaining workplace information

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards

RANGE STATEMENT

- confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Tallying** may be:
- manual (tally sheets)
 - electronic (bar coding)
 - for the purpose of cyclic or periodic stocktaking
- Material** may include:
- timber
 - hardware items and fittings, such as nail plates and fasteners
- Work order** may include:
- details of material to be tallied (product type or packs, categories of product)
 - access arrangements
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management

RANGE STATEMENT

Personal protective equipment and clothing may include:

- safety helmet
- high visibility clothing
- steel-capped boots
- ear protection
- gloves
- eye protection
- sun and wind protection

Hazards may include:

- repetitive movements in manual handling
- excessive noise from machinery
- timber or other debris cluttering work area
- strapping
- sharp edges
- possibility of strap breaking while tensioning

Access arrangements include:

- advising appropriate personnel, including those working in the area, of location in which material will be tallied

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Packs may include:

- random timber cross sections, lengths or panel sizes
- set timber cross sections, lengths or panel sizes

Records and reports may include:

- production records
- quality and accounting records
- tally sheets
- QA forms

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------------|--|
| 1. Prepare for pointing operation | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to producing pointed timber products are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Machinery and <i>equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. Machinery is adjusted to suit size and type of timber to be processed in line with work order</p> <p>1.5. Pre-operational checks and lock-out procedures are conducted in line with manufacturer recommendations</p> <p>1.6. Pointing operations are assessed for safe work conditions and planned in line with site procedures and environmental requirements</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Maintain pointing operation | <p>2.1. Pointing operation is conducted in line with work order, and environmental and OHS requirements</p> <p>2.2. <i>Posts</i> and pegs are produced at <i>optimal rate</i> consistent with material type, acceptable surface finish and equipment capability</p> <p>2.3. Pointing operation is monitored to ensure consistency of product dimension, quality and finish</p> |

ELEMENT**PERFORMANCE CRITERIA**

- that are in line with industry and site standards
- 2.4. Shaving and sawdust removal system is routinely monitored to ensure waste material is *effectively controlled*
- 2.5. Supply of material is coordinated with appropriate personnel and timber faults are identified and reported in line with site procedures
- 2.6. Finished products are sorted and processed in line with site procedures
- 2.7. Routine operational problems are recognised, rectified or reported for resolution
3. Shut down operation
- 3.1. Pointing operation is shut down in line with manufacturer recommendations
- 3.2. Equipment is cleaned, maintained and stored in line with manufacturer recommendations and environmental requirements
- 3.3. Malfunctions, faults, wear and damage to equipment are reported for repair or replacement
- 3.4. Machinery and equipment *maintenance* requirements are identified and carried out in line with manufacturer recommendations and environmental requirements
- 3.5. Work area is cleared and waste material *disposed of* in line with site environmental management policies and procedures
- 3.6. Pointing operation outcomes are *recorded and reported* in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; set up, operate and shut down pointing equipment for a range of materials; conduct lock-out procedures
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report

REQUIRED SKILLS AND KNOWLEDGE

information

- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for producing pointed timber products
- Numeracy skills sufficient to select appropriate mathematical processes to calculate and order the timber to be pointed; produce pointed products to order specifications; estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing pointed timber products
- Environmental protection requirements, including the safe disposal of waste material, minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing pointed timber products
- Environmental risks and hazards
- Pointing procedures and processes
- Purpose of lock-out procedures
- Types of timber faults and defects
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- set up and maintain machinery and equipment
- demonstrate an understanding of the materials and procedures required to produce pointed timber products according to organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to producing pointed timber products
- following organisational policies and procedures relevant to producing pointed timber products
- applying mathematical procedures to calculate and order timber to be pointed
- setting up and operating machinery and equipment to produce pointed timber products within the required tolerances
- monitoring and maintaining pointing operations
- maintaining machinery and equipment, including removing and replacing cutters or saw blades and carrying out shutdown and lock-out procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- details of material to be pointed
- special client requirements
- production timelines

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line managers

Equipment may be:

- manually loaded
- rotating cutters and saws

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Posts may be:

- round poles covering the full range of sizes for which the equipment is suitable
- rectangular sawn material covering the full range of sizes for which the equipment is suitable

Optimal rate includes:

- planning to achieve the most from the production of posts and pegs

RANGE STATEMENT

- Effectively controlled** may include:
- ensuring environmental requirements are central to this planning process
 - containing waste material
 - minimising waste material sent to landfill
 - ensuring waste material is not contaminated so where possible it can be effectively recycled
- Maintenance** may include:
- cleaning the machine of wood chips and sawdust
 - replacing blunt cutters or saw blades
 - inspecting machine parts for wear or damage, including guards
 - greasing and lubricating moving parts
 - checking the operation of emergency stop buttons and lock-out systems
- Disposing of** may include:
- recycling waste material
 - re-using waste material
 - redirecting waste material for energy recovery
- Records and reports** may include:
- tally sheets
 - quality sheets and forms
 - production sheets and downtime sheets
- and may be:
- manual
 - computer-based system
 - other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for grading	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to grading hardwood sawn and milled products are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>sawn and milled products</i> to be graded are acquired from <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations and site procedures</p> <p>1.5. Grading process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures</p>
2. Grade products	<p>2.1. Sawn and milled product requirements for storage or subsequent processing operations are selected</p> <p>2.2. <i>Size</i> of sawn and milled products is visually assessed in line with industry standards and number of <i>ranges</i> estimated</p> <p>2.3. Material <i>characteristics</i> of each product are</p>

ELEMENT**PERFORMANCE CRITERIA**

- evaluated against industry standards for grade type
- 2.4. **Moisture content** is measured and evaluated against standards and seasoning requirements
- 2.5. Characteristics are clearly marked for docking in line with site requirements
- 2.6. Material is sorted in line with its grade classification and clearly marked with markers or stickers
- 2.7. Sub-standard material is rejected and **disposed of** in line with site requirements
- 2.8. Grading outcomes and distribution problems are **recorded and reported** in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant equipment; grade hardwood sawn and milled products
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for grading hardwood sawn and milled products
- Numeracy skills sufficient to estimate, measure and calculate size and moisture content of sawn and milled material and time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grading hardwood sawn and milled products
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

grading hardwood sawn and milled products

- Environmental risks and hazards
- Criteria for recycling and re-using sub-standard material
- Methods of visual estimation, grading, colour identification and tagging
- Sorting, marking and distribution processes
- Industry standard cross sections and lengths
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the receipt, despatch and grading of sawn and milled products to and from the designated storage location or processing
- and may include:
- type
 - size
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues

RANGE STATEMENT

Sawn and milled products must be:

- managers
- hardwood

and may include:

- strip flooring
- light decking
- parquet flooring
- lining boards
- dress boards
- joinery
- mouldings
- cladding
- fascia
- barge boards
- sawn boards for feed stocks
- overlay strip flooring
- furniture components

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- moisture meters
- lifting equipment for the movement of sawn and milled products

Communication may include:

- verbal and non-verbal language

RANGE STATEMENT

- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- a range of sizes for standard cross sections and length of sawn and milled products

Size is to include:

Range

is the number of classifications or grades sawn and milled products are sorted into, based on cross section or length

Characteristics may include:

- warp
- wane
- curvature
- shakes
- insect defects
- knots
- resin pockets

Moisture content

is the amount of moisture maintained in sawn and milled products before and after kiln drying to avoid cracking and deforming

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material
- redirecting sub-standard material for energy recovery

Records and reports may include:

- product type and size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system

RANGE STATEMENT

- other appropriate organisational communication system

ELEMENT**PERFORMANCE CRITERIA**

- evaluated against industry standards for grade type
- 2.4. **Moisture content** is measured and evaluated against standards and seasoning requirements
- 2.5. Characteristics are clearly marked for docking in line with site requirements
- 2.6. Material is sorted in line with its grade classification and clearly marked with markers or stickers
- 2.7. Sub-standard material is rejected and **disposed of** in line with site requirements
- 2.8. Grading outcomes and distribution problems are **recorded and reported** in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely grade softwood sawn and milled products
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for grading softwood sawn and milled products
- Numeracy skills sufficient to estimate, measure and calculate sizes and moisture content of sawn and milled products and time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grading softwood sawn and milled products
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

grading softwood sawn and milled products

- Environmental risks and hazards
- Criteria for recycling and re-using sub-standard material
- Methods of visual estimation, grading, colour identification and tagging
- Sorting, marking and distribution processes
- Industry standard cross sections and lengths
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently grade softwood sawn and milled products in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to grading softwood sawn and milled products
- following organisational policies and procedures relevant to grading softwood sawn and milled products
- grading a full range of softwood sawn and milled

EVIDENCE GUIDE

Context of and specific resources for assessment

products in readiness for storage or processing

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

EVIDENCE GUIDE

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the receipt, despatch and grading of sawn and milled products to and from the designated storage location or processing
- and may include:
- type
 - size
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues

RANGE STATEMENT

Sawn and milled products must be:

- managers
- softwood

and may include:

- strip flooring
- light decking
- parquet flooring
- lining boards
- dress boards
- joinery
- mouldings
- cladding
- fascia
- barge boards
- sawn boards for feed stocks
- overlay strip flooring
- furniture components

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- moisture meters
- lifting equipment for the movement of sawn and milled products

Communication may include:

- verbal and non-verbal language

RANGE STATEMENT

- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- a range of sizes for standard cross sections and length of sawn and milled products

Size is to include:

Range

is the number of classifications or grades sawn and milled products are sorted into, based on cross section or length

Characteristics may include:

- warp
- wane
- curvature
- shakes
- insect defects
- knots
- resin pockets

Moisture content

is the amount of moisture in timber

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material
- redirecting sub-standard material for energy recovery

Records and reports may include:

- product type and size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

FPICOT2214B Grade cypress sawn and milled products

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to visually evaluate cypress sawn and milled product characteristics for classification into various strength and appearance grades. It includes sorting cypress into classifications and marking material in line with grade type

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2214A Grade cypress sawn and milled products

Application of the Unit

Application of the unit

The unit involves grading cypress sawn and milled products in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------|---|
| 1. Prepare for stress-grading | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to visually stress-grading hardwood are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Grading</i> requirements are identified in line with site procedures, <i>standards</i> and specifications</p> <p>1.4. Materials, hardware items, tools and <i>equipment</i> requirements are identified from work order and obtained in line with workplace procedures</p> <p>1.5. <i>Hardwood</i> to be graded is positioned to provide appropriate access and facilitate efficient workflow</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures</p> |
| 2. Evaluate hardwood | <p>2.1. <i>Species</i> is identified and status of <i>seasoning</i> is checked in line with site procedures</p> <p>2.2. Size and <i>tolerance</i> measurements are recorded accurately in line with site requirements</p> <p>2.3. <i>Characteristics</i> are established and evaluated in line with standards and product specifications</p> <p>2.4. <i>Moisture content</i> is checked, measured and evaluated against standards and <i>seasoning</i> requirements</p> |
| 3. Grade hardwood | <p>3.1. Hardwood is visually stress graded based on grading standards and criteria in line with required <i>structural</i></p> |

ELEMENT**PERFORMANCE CRITERIA***grade*

- 3.2. Characteristics with the greatest limiting effect on the grade are diagnosed and checked
- 3.3. *Appearance* criteria are assessed and timber is marked, segregated and *disposed of* in line with site procedures and environmental requirements
- 3.4. Results of grading are *recorded and reported* in line with workplace procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to identify and apply correct methods and procedures when preparing, evaluating and grading hardwood; use and maintain relevant tools, machinery and equipment; efficiently and safely visually stress grade hardwood
- Communication skills sufficient to use effective communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures when visually stress-grading hardwood; access, identify and apply information relevant to hardwood grading
- Numeracy skills sufficient to estimate, measure and calculate sizes and time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems, malfunctions and defects; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for visually stress-grading hardwood
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber)
- Organisational and site standards, requirements, policies and procedures for visually stress-grading hardwood
- Environmental risks and hazards
- Criteria for recycling and re-using timber with inappropriate defects or contamination

REQUIRED SKILLS AND KNOWLEDGE

- Visual stress-grading techniques
- Grading markings and standards
- Methods of visual inspection
- Characteristics and properties of hardwood
- Stress-grading equipment calibration and grade thresholds
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can visually grade hardwood by following stress-grading rules and regulations

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to visually stress-grading hardwood
- following organisational policies and procedures relevant to visually stress-grading hardwood
- preparing for stress-grading, including accurately interpreting grading requirements
- stress-grading hardwood in readiness for storage or

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for visually stress-grading material
- and may include:
- type
 - width
 - length
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues

RANGE STATEMENT

- Grading is to include:**
- managers
 - visually evaluating material characteristics for classification into various strength and structural grades
- Standards may include:**
- Australian Standards
 - requirements established by the client
 - requirements established by the producer
- Equipment may include:**
- vernier callipers
 - profile gauges
 - moisture meters (resistance and capacitance)
 - tapes
 - marking implements
- Hardwood:**
- usually comes from trees with leaf foliage and has large tube-like vessels or pores consisting of short stubby cells varying in size
- and may include:
- native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - preservative treated timber
- Communication may include:**
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Species may include:**
- native species
 - imported species
- Seasoning** is the process of drying timber either with kilns or air-drying methods
- Tolerance** is the enterprise-accepted deviation from the perfect specifications
- Characteristics may include:**
- knots
 - borer holes

RANGE STATEMENT

- stain
- checks
- tight resin pockets
- shakes
- wane
- want
- heart and heart shakes
- termite galleries
- decay
- lyctus susceptible sapwood and compression failures and fractures
- colour
- density
- texture
- grain
- figure
- qualities

Moisture content

is the amount of moisture maintained in timber after kiln drying or production to avoid cracking and deforming

Structural grade is to include:

- structural conformity of the timber
- consistency of the structural quality
- free of defects which may weaken strength, such as knots, shakes and short grain

Appearance is to include:

assessing the appropriateness of:

- defects
- contamination
- timber colours
- surface characteristics
- grain pattern

Disposing of may include:

- recycling timber with inappropriate defects or contamination
- re-using timber with inappropriate defects or contamination
- redirecting timber with inappropriate defects or contamination for energy recovery

Records and reports may include:

- stress-grading requirements
- product type and size
- inspection information
- grading and marking outcomes

RANGE STATEMENT

- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------|---|
| 1. Prepare for stress-grading | <ul style="list-style-type: none"> 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to visually stress-grading softwood are identified and followed 1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i> 1.3. <i>Grading</i> requirements are identified in line with site procedures, <i>standards</i> and specifications 1.4. Materials, hardware items, tools and <i>equipment</i> requirements are identified from work order and obtained in line with workplace procedures 1.5. <i>Softwood</i> to be graded is positioned to provide appropriate access and facilitate efficient workflow 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures |
| 2. Evaluate softwood | <ul style="list-style-type: none"> 2.1. <i>Species</i> is identified and status of <i>seasoning</i> is checked in line with site procedures 2.2. Size and <i>tolerance</i> measurements are recorded accurately in line with site requirements 2.3. <i>Characteristics</i> are established and evaluated in line with standards and product specifications 2.4. <i>Moisture content</i> is checked, measured and evaluated against standards and <i>seasoning</i> requirements |
| 3. Grade softwood | <ul style="list-style-type: none"> 3.1. Softwood is visually stress graded based on grading standards and criteria in line with required <i>structural</i> |

ELEMENT**PERFORMANCE CRITERIA***grade*

- 3.2. Characteristics with the greatest limiting effect on the grade are diagnosed and checked
- 3.3. *Appearance* criteria are assessed and timber is marked, segregated and *disposed of* in line with site procedures and environmental requirements
- 3.4. Results of grading are *recorded and reported* in line with workplace procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to identify and apply correct methods and procedures when preparing, evaluating and grading softwood; use and maintain relevant tools, machinery and equipment; efficiently and safely visually stress grade softwood
- Communication skills sufficient to use effective communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures when visually stress-grading softwood; access, identify and apply information relevant to softwood grading
- Numeracy skills sufficient to estimate, measure and calculate sizes and time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems, malfunctions and defects; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for visually stress-grading softwood
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber)
- Organisational and site standards, requirements, policies and procedures for visually stress-grading softwood
- Environmental risks and hazards
- Criteria for recycling and re-using timber with inappropriate defects or contamination

REQUIRED SKILLS AND KNOWLEDGE

- Visual stress-grading techniques
- Grading markings and standards
- Methods of visual inspection
- Characteristics and properties of softwood
- Stress-grading equipment calibration and grade thresholds
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can visually grade softwood by following stress-grading rules and regulations

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to visually stress-grading softwood
- following organisational policies and procedures relevant to visually stress-grading softwood
- communicating and working safely with others in the work area
- preparing for stress-grading, including accurately

EVIDENCE GUIDE

- interpreting grading requirements
- stress-grading softwood in readiness for storage or processing
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling, including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- instructions for visually stress-grading material

Work order is to include:

and may include:

- type
- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors

Appropriate personnel may

RANGE STATEMENT

include:

- suppliers
- clients
- colleagues
- managers

Grading

is the process of visually evaluating material characteristics for classification into various strength and structural grades

Standards may include:

- Australian Standards
- requirements established by the client
- requirements established by the producer

Equipment may include:

- vernier callipers
- profile gauges
- moisture meters (resistance and capacitance)
- tapes
- marking implements

Softwood:

- is non-pored wood that usually comes from trees with needle-like foliage and a more uniform cell structure

and may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- preservative treated timber

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Species may include:

- native species
- imported species

Seasoning

is the process of drying timber either with kilns or air-drying methods

RANGE STATEMENT

Tolerance

is the enterprise-accepted deviation from the perfect specifications

Characteristics may include:

- knots
- borer holes
- stain
- checks
- tight resin pockets
- shakes
- wane
- want
- heart and heart shakes
- termite galleries
- decay
- lyctus susceptible sapwood and compression failures and fractures
- colour
- density
- texture
- grain
- figure
- qualities
- uses

Moisture content

is the amount of moisture maintained in timber after kiln drying or production to avoid cracking and deforming

Structural grade is to include:

- structural conformity of the timber
- consistency of the structural quality
- free of defects which may weaken strength, such as knots, shakes and short grain

Appearance is to include:

- assessing the appropriateness of:
- defects
- contamination
- timber colours
- surface characteristics
- colour
- grain pattern

Disposing of may include:

- recycling timber with inappropriate defects or contamination
- re-using timber with inappropriate defects or

RANGE STATEMENT

contamination

- redirecting timber with inappropriate defects or contamination for energy recovery

Records and reports may include:

- stress-grading requirements
- product type and size
- inspection information
- grading and marking outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Work area is regularly checked and <i>cleared</i> in line with OHS requirements, site procedures and environmental requirements</p> <p>2.6. <i>Sub-standard material</i> is <i>disposed of</i> in line with</p> |

ELEMENT**PERFORMANCE CRITERIA**

- site procedures and environmental requirements
- 2.7. **Problems** are identified and reported in line with site procedures
- 2.8. Materials are tagged, and required **records and reports** completed in line with site standards and procedures
3. Maintain sawing conditions
- 3.1. Equipment lock-out procedures are applied in line with OHS requirements and site procedures
- 3.2. Cutting rate is compared with that anticipated from knowledge of saw, size of log, species and condition
- 3.3. Saw blades are checked for blunt or damaged condition in line with site procedures
- 3.4. Blunt or damaged saw blades are identified and **dealt with** in line with site procedures, manufacturer recommendations and environmental requirements
- 3.5. Malfunctions, damage or irregular performance are identified, recorded and reported in line with site requirements
- 3.6. Equipment is cleaned, maintained and stored in line with manufacturer recommendations, site procedures and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; use appropriate methods to cross cut the full range of timber, timber sizes and species
- Communication skills sufficient to use effective communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for using a circular saw or fixed chainsaw
- Numeracy skills sufficient to maximise volume and quality recovery
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures;

REQUIRED SKILLS AND KNOWLEDGE

identify blunt or damaged saw

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cross cutting materials with a fixed saw
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cross cutting materials with a fixed saw
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Criteria for recycling and re-using sub-standard material
- Industry standard length dimensions
- Effects of defects on recovery
- Procedures for lock-out
- Common industry terminology
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- job role and responsibilities
 - own competency level
 - industry requirements
 - own understanding of risk identification processes
 - own interpretation of maps
 - legislation
 - regulations and procedures
 - OHS requirements
 - legal responsibilities
- Cutting techniques** may relate to:
- cutting positions
 - work order requirements
 - industry standard lengths
 - straightness requirements
 - cutting patterns
 - maximising volume and quality of recovery requirements
 - cutting procedures that minimise capping and splitting of material
 - placing material on conveyor or carriage
 - securing material
 - cutting at optimum feed rate to avoid damage to saw blade
 - using energy effectively and efficiently

RANGE STATEMENT

- Recovery:**
- using material effectively and efficiently
 - is the volume of timber sawn from a resource compared to the volume of that resource
 - is expressed as a percentage - $\text{sawn timber volume} / \text{initial log volume} \times 100$
 - maximises the value of the resource
- Cleared** may relate to:
- using hand tools and a water jet to clear debris from the surface of material
 - clearing the work area of off-cuts
 - debris
 - ensuring saw clearance around material
 - depositing off-cuts and debris in recognised areas
 - clearing surfaces of debris likely to cause saw damage in the cutting area
- Sub-standard material** may include:
- material with defects
 - material cut outside established standard tolerances for length and angle relative to centre
- Disposing of** may include:
- recycling sub-standard material
 - re-using sub-standard material
 - redirecting sub-standard material for energy recovery
- Problems** may relate to:
- performance of saw
 - defects in material
 - communication
 - hazards and risks at the work site
 - capping and splitting of material
- Records and reports** may include:
- tally sheets
 - quality sheets and forms
 - production sheets and downtime sheets
 - production details
 - maintenance details
 - breakdown or equipment faults
 - computer problems
 - interruptions to production
- and may be:
- manual
 - computer-based system
 - other appropriate organisational

RANGE STATEMENT**Dealing with** may include:

- communication system
- repairing or sending for repair blunt or damaged saw blades
- recycling blunt or damaged saw blades that cannot be repaired
- sending blunt or damaged saw blades that cannot be repaired to landfill

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to use hand-held tools, including the selection and use of a variety of manual hand tools and power tools to be used for various tasks

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2219A Use hand-held tools

Application of the Unit

Application of the unit

The unit involves using hand-held tools in a range of work settings

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for using hand-held tools	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to using hand-held tools are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Types of <i>hand-held tools</i> are identified for the tasks to be undertaken</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Hand-held tool operating process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Select and operate hand-held tools	<p>2.1. Production requirements are assessed and hand-held tools selected to complete the task</p> <p>2.2. Tools are checked before use and unsafe or faulty items are documented and marked for repair in line with organisational standard operating procedures</p> <p>2.3. Hand and power tools are used in line with manufacturer recommendations to produce the required outcomes</p> <p>2.4. Tool operation is regularly checked to assess the need for <i>sharpening</i> or other maintenance requirements</p> <p>2.5. <i>Operational maintenance</i> of hand and power tools is</p>

ELEMENT**PERFORMANCE CRITERIA**

completed in line with organisational requirements, manufacturer specifications, and environmental and legislative regulations

2.6. Hand-held tools and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain hand-held tools and equipment
- Communication skills sufficient to use appropriate interpersonal techniques with colleagues and others
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for using hand-held tools; review, identify and report work requirements
- Numeracy skills sufficient to estimate the time required to complete tasks
- Problem solving skills sufficient to identify problems and faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for using hand-held tools
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for using hand-held tools
- Environmental risks and hazards
- Characteristics of hand and power tools
- Sharpening equipment, methods and geometry
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including

REQUIRED SKILLS AND KNOWLEDGE

- calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently use hand-held tools in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to using hand-held tools
- following organisational policies and procedures relevant to using hand-held tools
- using hand-held tools in line with the work order and prescribed organisational requirements
- sharpening and maintaining hand-held tools in line with workplace and manufacturer specifications

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised***

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role

RANGE STATEMENT

and responsibility

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the use of hand-held tools for the completion of designated projects

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Hand-held tools may include:

- manual hand tools consisting of:
 - handsaws
 - knives
 - chisels
 - hammers
 - hand drills
 - files
 - rasps
- portable power tools consisting of:
 - drills
 - grinders
 - sanders
 - saws
 - nail guns

RANGE STATEMENT

Equipment is to include:

- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- manual and portable power hand-held tools and equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Sharpening is to include:

- pitch
- angle
- depth of cut
- speed the knife or blade is sharpened at to obtain a sharp edge

Operational maintenance may include:

- sharpening
- cleaning
- lubricating
- tightening
- adjusting

Records and reports may include:

- knife or blade type
- size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational

RANGE STATEMENT

communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify trees	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>selecting trees</i> for tending operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. Selection <i>method</i>, characteristics and tree distribution are determined from <i>work order</i> and checked with <i>appropriate personnel</i></p> <p>1.4. <i>Hazards</i> and site conditions are inspected and assessed in line with regulations and site procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Select and mark trees	<p>2.1. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>2.2. Forest area for tree selection is located and checked in line with work order and environmental regulations</p> <p>2.3. Trees are selected in line with work order, site procedures and environmental regulations</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.4. Trees are marked or re-marked using appropriate marking equipment in line with site procedures
- 2.5. Recommendations for further tree selection are made to appropriate personnel in line with site procedures and environmental regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and marking equipment; select trees; recognise common diseases, pests and nutritional deficiencies
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for selecting trees; review and identify work requirements; locate forest area in the field from maps and plans
- Numeracy skills sufficient to measure, estimate, and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for selecting trees for tending operations
- Environmental protection requirements, including the safe disposal of waste material and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for selecting trees for tending operations
- Environmental risks and hazards
- Using material effectively and efficiently
- Tree species and tree selection components of the work order
- Hazards associated with tree selection
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding

REQUIRED SKILLS AND KNOWLEDGE

techniques

- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently identify, select and mark appropriate trees by following specific guidelines, criteria and procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to selecting trees for tending operations
 - following organisational policies and procedures relevant to selecting trees for tending operations
 - identifying forest location, tree distribution and characteristics maps, work order and other instructions
 - selecting and marking trees using marking equipment
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in

Context of and specific resources for assessment

EVIDENCE GUIDE

an off-site context

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Tree selection may include:

- dominance and vigour
- leader defects
- straightness
- lean
- size
- angle
- number of branches
- spacing and overall tree health
- stocking
- green crowns
- quality requirements

and may be selected for:

- thinning
- pruning
- disease treatment
- harvesting
- retaining
- seed collection
- removal because of tree damage
- species
- retention as habitat trees
- recruitment habitat trees

Environmental protection measures may relate to:

- hygiene of the area
- relevant national, state or territory, and local

RANGE STATEMENT

legislation and regulations

and may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions

Method may include:

- counting trees at regular intervals (e.g. every fifth tree)
- selecting trees with particular characteristics (e.g. storm damage or disease)
- selecting predetermined number of trees in a given area
- selecting trees for specialised products
- assessing and selecting trees in relation to their role in carbon capture and storage

Work order may relate to:

- tree species
- required safety clothing and equipment
- required pruning equipment
- tree selection
- production target
- quality
- stock
- required stub length
- pruning height

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management

RANGE STATEMENT

Hazards may include:

- slope
- water
- rock
- undergrowth
- slash
- depressions and holes
- falling or fallen branches

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Equipment may include:

- marking equipment
- tape
- paint
- blaze

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to producing <i>laminated beams</i> are followed</p> <p>1.2. <i>Work order</i> and construction plans are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>timber</i> and <i>glue</i> to be used in assembly are collected</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. <i>Assembly jigs</i> required for production are specified and prepared</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Cut boards for beams	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Condition of boards is <i>visually assessed</i> and <i>moisture content</i> checked</p> <p>2.3. Boards are <i>straight or scarf cut</i>, optimising quantity and eliminating faults where possible</p> <p>2.4. Cut boards are segregated in line with length and</p>

ELEMENT**PERFORMANCE CRITERIA**

- marked in line with site requirements
- 2.5. **Defective components** are rejected and **disposed of** in line with site procedures and environmental requirements
- 2.6. Assembly jigs are stored for further use or disposed of in line with site procedures and environmental requirements
3. Assemble beams
- 3.1. **Timber components** are selected from pre-cut material in line with cutting list and beam design
- 3.2. Glue is mixed to site requirements using manufacturer recommended glue-handling techniques
- 3.3. **Glue spreader** is set to apply even coating to components and glue line is applied with minimal wastage in line with standard operating procedures
- 3.4. Components are laid in jigs ready for joining with allowable faults, joins and grain in line with construction standards and grading rules
- 3.5. **Press** is started, and controls and operation are checked in line with standard operating procedures
- 3.6. Press is set with jigs and beam is positioned to the correct orientation
- 3.7. Load and heat are applied to the beam in line with site requirements
- 3.8. Beam is checked and removed from the press
4. Prepare beams for despatch and report
- 4.1. Finished beams are checked and labelled in line with work order
- 4.2. Components are removed from jigs and safely **stacked** in a designated location in line with work order
- 4.3. Finished beams are **strapped**, packed and labelled ready for transportation
- 4.4. Strapping waste is minimised and **dealt with** in line with site procedures, manufacturer recommendations and environmental requirements
- 4.5. **Equipment faults** are recognised and reported in line with site procedures
- 4.6. **Records and reports** are accurately completed, processed and maintained in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely assemble laminated beams
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for producing laminated beams; review and identify work requirements
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing laminated beams
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing laminated beams
- Environmental risks and hazards
- Using energy effectively and efficiently
- Criteria for recycling and re-using material with defective components/assembly jigs no longer required
- Types of laminated beams and their use and defects
- Procedures for assembly sequences and jigs
- Assembly componentry and construction standards
- Industry standard cross sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including

REQUIRED SKILLS AND KNOWLEDGE

- calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently produce laminated beams in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all the requirements of, the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to producing laminated beams
- following organisational policies and procedures relevant to producing laminated beams
- assembling laminated beams in line with work order and construction plans to meet construction standards
- stacking and strapping bundles of completed beams in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements

EVIDENCE GUIDE

Method of assessment

- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

- legal

RANGE STATEMENT

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Laminated beams:

- are wide thick beams which may be straight or curved
- are made up of many layers of timber board to provide the beam with bulk and subsequent strength to withstand building loads

Work order is to include:

- instructions for the assembly and despatch of timber laminated beams from the work site

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Timber may include:

- native timber species
- imported timber species
- dressed timber
- stress and non-stress graded timber

RANGE STATEMENT

- Glue** is to include:
- preservative treated timber
 - water resistant adhesives, such as epoxy resins
- Equipment** may include:
- measuring equipment
 - assembly jigs
 - docking and trimming saws
 - presses
 - marking equipment
 - strapping equipment
- Assembly jigs** may include:
- enterprise-manufactured templates that assist in the positioning of components during the assembly process
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Pre-startup checks** are conducted to ensure:
- equipment has been set up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance
- Visual assessment** is the inspection of timber to determine finish quality and faults
- Moisture content:**
- is the amount of moisture maintained in timber after kiln drying to avoid cracking and deforming
 - in Australia, generally ranges between 10% in warmer, more humid climates to 14% in cooler climates
- Straight or scarf cutting:**
- straight cutting is docking timber to length with a vertical cut
 - scarf cutting is docking timber at a bevel, providing a larger end grain surface for bonding

RANGE STATEMENT

Defective components may include:

- components with an unacceptable level of:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets

Disposing of may include:

- recycling material with defective components/assembly jigs no longer required
- re-using material with defective components/assembly jigs no longer required
- redirecting material with defective components/assembly jigs no longer required for energy recovery

Timber components:

are the sections of timber that have been pre-cut in readiness for assembly and have been cut to follow the construction plans and cutting list

Glue spreader is to include:

- equipment that spreads glue evenly to boards being laminated

Press is to include:

- flat presses
- presses with curved templates

Stacking may include:

- preparing for transport
- categorising in common size and shape
- marking lots in line with work order and site requirements

Strapping may include:

- locating so as not to block access or passage
- securing bundles with metal or plastic strap
- tightening and tensioning using hand-held equipment to prevent slippage, without risk of strap breakage or damage to products

Dealing with may include:

- recycling strapping waste
- sending strapping waste to landfill

Equipment faults may include:

- damaged equipment components
- electrical faults

Records and reports may include:

- product type
- size
- inspection information
- grading and labelling outcomes

RANGE STATEMENT

- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to segregate and sort logs	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to segregating and sorting logs are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.4. Standards, specifications and lengths of <i>timber products</i> are identified and assessed in line with their planned usage</p> <p>1.5. Log and wood <i>characteristics</i> are specified and logs to be segregated and sorted are identified and checked</p> <p>1.6. Log segregation and sorting operations are identified for <i>safe working conditions</i> and planned in line with site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Segregate and sort logs	<p>2.1. Logs are <i>segregated</i> in line with work order, and environmental and OHS requirements</p> <p>2.2. Log species and sizes are identified in line with work order and end use requirements</p> <p>2.3. Mechanical equipment is directed to the specified logs and extraction from the stockpile is executed</p> <p>2.4. Segregated logs are <i>sorted</i> into end use batches or individual stockpiles</p> <p>2.5. Logs are <i>measured</i> and data is recorded clearly and</p>

ELEMENT**PERFORMANCE CRITERIA**

- accurately in line with industry standards
- 2.6. Segregation and sorting results are *recorded and reported* in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment; efficiently and safely segregate and sort logs; segregate and sort logs on the basis of species, size and characteristics across the full range required; identify and calculate log defects; optimise recovery of logs
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for segregating and sorting logs
- Numeracy skills sufficient to select appropriate mathematical processes and accurately measure logs
- Problem solving skills sufficient to review and identify work requirements; analyse problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for segregating and sorting logs
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for segregating and sorting logs
- Environmental risks and hazards
- Industry standards for log species, size and characteristics requirements across the full range
- Procedures for segregating and sorting logs
- Segregation codes
- Industry standards for defects and length dimensions

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently evaluate, segregate and sort logs in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all the requirements of, the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to segregating and sorting logs
- following organisational policies and procedures relevant to segregating and sorting logs
- safely and efficiently segregating and sorting logs into designated categories from stockpiles
- estimating and measuring logs

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than

EVIDENCE GUIDE

confirmatory questions, will usually be conducted in an off-site context

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles

Work order is to include:

- details of material to be evaluated, graded and marked

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- managers

Timber products may include:

- poles
- piles
- veneer

RANGE STATEMENT

Characteristics may include:

- graded sawlogs
- non-graded sawlogs
- pulp
- species
- pipe
- open pipe
- discontinuous and irregular shaped pipes
- loose gum veins
- gum pockets and rings
- termites and grubs
- hearts out of centre
- brown stain
- rot
- punk
- cork or pith
- black borer
- black heart
- straight shakes
- shakes in spiral grain
- overgrowth and doze pockets
- small log pipe allowance
- length
- non-allowable length defects
- control of potential and existing risks and hazards
- ensuring log stability during:
 - evaluation
 - grading
 - marking

Safe working conditions will include:

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Segregating

is the process of locating and removing designated

RANGE STATEMENT

logs from a stockpile or landing to a specified location

Sorting

is the process of allocating segregated logs into batches, based on:

- species
- sizes
- characteristics
- using callipers
- using other standard measuring tools
- segregating and sorting operations
- difficulties or issues faced
- environmental issues
- recommendations for future work
- results
- costs
- hazards
- incidents
- equipment malfunctions

Measurement may include:

Records and reports may include:

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for edge banding	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to banding edges of panels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be <i>edge banded</i> are acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Edge banding process is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up edge banding equipment	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Machine <i>settings</i> and adjustments are made in line with job requirements and machine manufacturer's instructions</p> <p>2.3. <i>Test runs</i> are conducted to check machine operation, accuracy and quality of finished work</p> <p>2.4. Adjustments are made to machine settings to suit material being edged and as a result of the test runs</p> <p>2.5. Test run material is <i>processed</i> in line with site procedures and environmental requirements</p>
3. Apply edging	<p>3.1. Panels are <i>fed</i> into the machine in line with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer's instructions and safe handling procedures</p> <p>3.2. Machine is operated and monitored to ensure product quality and output in line with manufacturer recommendations</p> <p>3.3. <i>Waste quantities</i> are checked and minimised in line with site procedures</p> <p>3.4. Items not meeting quality requirements are repaired or <i>disposed of</i> in line with workplace procedures and environmental requirements</p> <p>3.5. Edge banding process and equipment faults are <i>recorded and reported</i> to appropriate personnel</p>
4. Conduct operator maintenance	<p>4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2. Edging mechanisms are checked for build-up of glue and blunt condition in line with site procedures</p> <p>4.3. <i>Edge treatments</i> are checked or reloaded in line with manufacturer recommendations</p> <p>4.4. Machine area is kept clear of dust and debris in line with OHS and environmental requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely band edges of panels
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures relating to edge banding panels
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for banding edges of panels
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for banding edges of panels
- Environmental risks and hazards
- Criteria for recycling and re-using items that cannot be repaired
- Panel products and edging purposes
- Edge banding techniques
- Distribution processes
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the receipt, despatch and edge banding of panels to or from the designated storage location or processing

and may include:

- type
- size
- thickness

RANGE STATEMENT

- quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Panel** may include:
- laminated veneer
 - chipboard
 - fibreboard, including medium density fibreboard
 - other manufactured board products
- Edge banding** is the process of:
- securing a timber, veneer or laminate strip to panels using edge banding equipment and glue-backed edge treatments or gluing applications
 - pressing the edge treatment to secure it and removing any lumps or bubbles
 - trimming the edge treatment
- Equipment** is to include:
- automated or mechanical edge banding machines
 - procedures for machine lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Pre-startup checks** are conducted to ensure:

RANGE STATEMENT

- Settings** are to include:
- machine has been set up correctly
 - systems are performing accurately
 - machine is operating to optimum performance
 - panel size
 - squareness
 - profile
 - edge treatment width
 - alignment of the edge treatment
 - speed of the application
 - trim allowances
 - glue application rates (if not glue-backed)
- Test runs** are trials of the settings on short pieces to minimise waste and ensure correct edging application
- Processing** may include:
- including test material that meets quality requirements as part of the process
 - recycling test material that does not meet quality requirements
 - re-using test material that does not meet quality requirements
- Fed** is the speed at which panels are entered into the edging process, whether manually or automatically fed
- Waste quantities** are to include:
- processes for minimising waste
 - checking the trim distances for cut off on each panel
- Disposing of** may include:
- recycling items that cannot be repaired
 - re-using items that cannot be repaired
 - redirecting items that cannot be repaired for energy recovery
 - sending items that cannot be repaired to landfill
- Records and reports** may include:
- edging type
 - product type
 - size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards

RANGE STATEMENT

- incidents
- equipment malfunctions

and may be:

Edge treatments may include:

- manual
- computer-based system
- other appropriate organisational communication system
- glue-backed veneer edge strip role
- timber edging strips
- laminate edge stripping (glue-backed or glued, on a role or in strips)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for chip or flake production	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>chipping or flaking</i> wood are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of wood to be chipped or flaked is <i>assessed</i> and acquired from the <i>stockpile</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Chipping or flaking process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Produce chips and flakes	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Machines and <i>feed systems</i> are started and adjusted to produce chip or flake size in line with organisational requirements</p> <p>2.3. Chip or flake production is regularly checked to ensure it meets wood chip or flake quality</p>

ELEMENT**PERFORMANCE CRITERIA**

- specifications and organisational requirements
- 2.4. *Conveyor operations* are monitored and jams cleared to ensure free flow of waste output material, which is kept to a minimum
- 2.5. Output of chips or flakes is directed to storage bins in line with prescribed fill levels
- 2.6. Faults requiring *emergency shutdown* are detected and action is taken to rectify the problem
- 2.7. Processing and equipment faults are *recorded and reported* to the appropriate personnel
3. Conduct operator maintenance
- 3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 3.2. Blades or knives are checked for faulty, blunt or damaged condition
- 3.3. Blades or knives are removed and replaced in line with manufacturer recommendations
- 3.4. Machine and surrounding area are kept clear of dust and debris in line with OHS and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely produce chips or flakes
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for producing chips or flakes
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for chipping or flaking wood
- Environmental protection requirements, including the safe disposal of waste material, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for chipping or flaking wood
- Environmental risks and hazards
- Using energy effectively and efficiently
- Characteristics of wood chips and stock levels
- Chip and flake production process
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation

Environmental requirements

RANGE STATEMENT**may include:**

- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements**may include:**

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Chips or flakes

are the output product as a result of converting wood into chip or flake material, which is then used to produce other products

Work order is to include:

- instructions for the assessment of chips and the chip or flake grade

and may include:

- feed rate
- quantity

RANGE STATEMENT

- Appropriate personnel** may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Assessing wood** is to include:
- species
 - size
 - moisture content
 - contamination issues associated with selected wood, such as:
 - logs
 - billets
 - off-cuts
 - waste timber
 - down grade timber
 - residue
 - chips
 - reject boards
- Stockpile** is the pile of available wood products ready for conversion to chips or flakes, classified in size and species
- Equipment** is to include:
- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source
- and may include:
- chippers
 - hogs
 - shredders and knife mills
 - mechanised feed systems
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- machine has been set up correctly
- systems are performing accurately
- machine is operating to optimum performance

Feed systems may include:

- conveyors
- chutes or track systems moving wood to the chipper
- moving processed wood chips or flakes from the chipping machines

Conveyor operations may include:

- moving wood products to the chipping/flaking machinery
- extracting chips or flakes and moving to collection bins

Emergency shutdown

is the immediate shutting off of equipment to prevent an accident or damage to the machine or product

Records and reports may include:

- product type
- size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

FPICOT2226B De bark logs mechanically

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to mechanically debark logs to a set diameter and length. The unit includes assessing logs for diameter, species, faults and moisture content

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2226A De bark logs mechanically

Application of the Unit

Application of the unit The unit involves debarking logs mechanically in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for debarking	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to debarking logs mechanically are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be <i>debarked</i> are selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Debarking process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Debark logs	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Material is fed into the machine at the <i>feed rate</i> prescribed by organisational requirements</p> <p>2.3. Debarking process is maintained and adjusted to produce required quantity of logs and to maximise feed rate</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Debarking process and <i>conveyors</i> are regularly checked and adjusted to maintain desired quality and output
	2.5. Logs with <i>defects</i> are segregated, rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.6. Debarking process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.7. Debarked logs are safely directed to storage in a designated location in line with work order
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Cutters are checked for blunt or damaged condition in line with site procedures
	3.3. Cutters are removed and replaced in line with manufacturer recommendations
	3.4. Blunt or damaged cutters are <i>dealt with</i> in line with site procedures and environmental requirements
	3.5. Machine area is kept clear of dust and debris in line with OHS and environmental requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely debark logs mechanically
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for debarking logs mechanically
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for debarking logs mechanically
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for debarking logs mechanically
- Environmental risks and hazards
- Criteria for recycling and re-using timber with defects
- Using energy effectively and efficiently
- Debarking systems
- Characteristics of timber and timber defects
- Debarking processes, feed rates and finish
- Assessment criteria for cutter condition
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently mechanically debark logs in line with organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to debarking logs mechanically
- following organisational policies and procedures relevant to debarking logs mechanically
- debarking logs mechanically in line with the work order and prescribed organisational specifications
- conducting operator maintenance on debarking equipment
- storing logs in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related

EVIDENCE GUIDE

conditions (real or simulated) and require evidence of process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and

RANGE STATEMENT

substances

- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for debarking logs and despatching logs from the work site to downstream processing

RANGE STATEMENT

and may include:

- species
- diameter
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs are to include:

- assessment of diameter range
- curvature
- faults
- species
- moisture content

Debarking is the process of:

- forcing a log through a debarking machine which strips the log bare of its bark, making the log available for further downstream processing
- outfeeding the bark for landscaping supplies

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight

RANGE STATEMENT

- Equipment** is to include:
- grade
 - shelf life
 - stock rotation position
 - measuring equipment
 - debarking plant
 - procedures for machine lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- computer-automated systems
 - automated storage-conveyor systems
 - automated diameter and length sorting systems
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice

Pre-startup checks

are conducted to ensure:

- debarking plant has been set up correctly
- cutters are installed accurately
- machinery is operating to optimum performance

Feed rate

is the rate of speed the material is passed through the machine affecting the sharpness of the cutters, the finish of the material, and the production output

Conveyor is to include:

- belts
- chutes or travelator methods of transporting logs to and from the debarker, which may be automated in conjunction with the log storage area

Defects may include:

- incorrect moisture content
- warp

RANGE STATEMENT

- wane
- curvature
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling timber with defects
- re-using timber with defects
- redirecting timber with defects for energy recovery

Records and reports may include:

- debarking system
- product type
- size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Dealing with may include:

- repairing or sending to be repaired blunt or damaged cutters
- recycling blunt or damaged cutters that cannot be repaired
- sending blunt or damaged cutters that cannot be repaired to landfill

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for orders and despatch	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to processing orders and despatching products are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Orders</i> and consignment <i>documentation</i> are reviewed and checked with appropriate personnel</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. <i>Despatch</i> schedules are planned and sequenced in line with workplace procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Process orders	<p>2.1. <i>Products</i> are selected and orders compiled and completed</p> <p>2.2. Products for despatch are checked against product knowledge, labels and other <i>identification systems</i></p> <p>2.3. Products are sorted and consolidated in line with workplace procedures</p> <p>2.4. Finished products are wrapped as required and</p>

ELEMENT	PERFORMANCE CRITERIA
3. Despatch products	<p>ensuring minimal wastage, in line with order, workplace procedures and environmental requirements</p> <p>2.5. Order is checked against despatch schedule and order documentation</p> <p>3.1. Workplace records for despatch and product movement are completed</p> <p>3.2. Load labels and documentation are attached and checked, and loading is organised</p> <p>3.3. Final check of load labels and documentation is conducted</p> <p>3.4. Transportation requirements are explained to the driver</p> <p>3.5. Stock records are updated in line with workplace procedures</p> <p>3.6. Documentation and equipment faults are recorded and reported to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for filling customer orders
- despatch allocation

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients

RANGE STATEMENT

- colleagues
 - managers
- Orders** are to include:
- customer orders
 - organisational requirements
- Documentation** may include:
- order dockets
 - despatch orders
 - stock records
 - tally sheets
 - delivery records
 - quality and accounting records
 - QA forms
 - load manifests
 - payment instructions
- Equipment** may include:
- computers
 - calculators
 - measuring equipment
- Despatch** is the sending out of products relating to an order
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Products** may include:
- timber
 - wood panel products
 - manufactured timber products
- Identification systems** may include:
- tags
 - labelling
 - bar codes
 - organisational coding
 - stickers
- Load labels** are to include:
- information about loading requirements, including:
 - customer details
 - carrier

RANGE STATEMENT

Transportation may include:

- time of despatch
- courier companies
- trucking companies
- rail
- shipping
- documentation listed above together with:
 - inspection and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions

Records and reports may include:

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

3. Store materials
- 3.1. Material is separated by *size* and placed in planned storage locations
- 3.2. Material not meeting *quality requirements* is *disposed of* in line with site procedures
- 3.3. Storage locations are labelled in line with site systems
- 3.4. *Records and reports* are accurately completed, processed and maintained in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely receive and store timber and timber products
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for storing timber and timber products
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for storing materials
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber)
- Organisational and site standards, requirements, policies and procedures for storing materials
- Environmental risks and hazards

REQUIRED SKILLS AND KNOWLEDGE

- Criteria for recycling and re-using material
- Methods of visual estimation, grading, colour identification and tagging
- Industry standard cross sections and lengths
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently receive timber or timber products, and sort and store them in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to storing materials
- following organisational policies and procedures relevant to storing materials
- preparing for, receiving and inspecting a pack of timber or timber products for storage
- sorting a pack of timber, and moving and allocating its contents to storage locations in line with organisational requirements

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Materials** may include:
- native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - medium density fibreboard
 - laminated veneer
 - chipboard, fibreboard and other manufactured board products
 - coated and/or treated timber products
 - hardware products
 - building materials
 - landscape products
- Work order** is to include:
- instructions for the receipt, despatch and storing of timber and timber products to or from the designated storage location

RANGE STATEMENT

and may include:

- type
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Inspection and checking for grading and labelling may include:

- visual estimation
- confirmation of stress-grading
- identification and categorisation of standard cross sections and length
- profile
- colour identification
- general information labelling
- tagging

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life

RANGE STATEMENT

- Lifting equipment and assistance** may include:
- stock rotation position
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting, such as:
- involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Pack release and unbinding** may include:
- removing wrapping material
 - controlling the release cutting of binding straps clear of other personnel
 - controlling the shifting of materials after release
 - carefully disposing of all packing materials
- Size** may include:
- cross sectional size
 - width
 - thickness
 - length
 - diameter
 - profile
- Quality requirements** may include:
- inspection and acceptance of material that does not exceed organisational specifications for:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects

RANGE STATEMENT

- knots
 - resin pockets
- Disposing of** may include:
- recycling material that does not meet quality requirements
 - re-using material that does not meet quality requirements
 - redirecting material that does not meet quality requirements for energy recovery
- Records and reports** may include:
- product type
 - size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - computer-based system
 - other appropriate organisational communication system

FPICOT2229B Dock material to length

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and dock material to length with a power driven saw. The unit includes operator maintenance

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2229A Dock material to length

Application of the Unit

Application of the unit

The unit involves docking material to length in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to docking <i>material</i> to length are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. Cutting list is reviewed in line with work order and site procedures</p> <p>1.5. Material <i>cutting patterns and saw setup sequences</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Cut material to length	<p>2.1. Material is marked and stops are set in preparation for cutting</p> <p>2.2. Cutting sequence and patterns are followed to produce required quantity</p> <p>2.3. Cuts are <i>checked</i> for length within a set <i>tolerance</i></p> <p>2.4. Material with <i>features</i>, incorrect cuts and off-cuts are <i>disposed of</i> in line with site procedures</p> <p>2.5. Processing and equipment faults are reported to appropriate personnel</p> <p>2.6. Material is safely <i>stacked</i> in a designated location in line with work order requirements</p>
3. Conduct operator	<p>3.1. Equipment lock-out procedures are followed in line</p>

ELEMENT	PERFORMANCE CRITERIA
maintenance	<p>with OHS legislation and site procedures</p> <p>3.2.Saw blades are checked for blunt or damaged condition in line with site procedures</p> <p>3.3.Blunt or damaged saws are identified and <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.4.Saw area is kept clear of dust, off-cuts and debris in line with OHS and environmental requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut material to length and angle
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for cutting timber to length and angle
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures; identify blunt or damaged saw

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for docking material to length
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for docking material to length
- Environmental risks and hazards
- Criteria for recycling and re-using material with features, incorrect cuts and

REQUIRED SKILLS AND KNOWLEDGE

off-cuts

- Characteristics of timber and timber features
- Cutting patterns and sequences
- Optimal docking practices
- Methods for assessing condition of saw blades
- Industry standard cross sections and lengths
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dock materials to length according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to docking material to length
- following organisational policies and procedures relevant to docking material to length
- cutting material to length in line with the work order and within prescribed organisational tolerances

EVIDENCE GUIDE

Context of and specific resources for assessment

- conducting operator maintenance on a docking saw
- stacking batches of cut material in line with organisational requirements and OHS regulations
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams, including laminated beams

Organisational requirements
may include:

Material may include:

RANGE STATEMENT

Work order is to include:

- instructions for the cutting and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment is to include:

- procedures for saw lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- measuring equipment
- power-operated, manually-controlled docking and trimming saws, where the cutting angle is controlled relative to the board guides and clamps
- saws with adjustable angle
- saws with one blade
- radial arm saws
- table saws
- bench saws
- saws with automatic feed

Cutting patterns and saw setup sequences

are to be limited to single angles requiring one cutting pass or single vertical cuts

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm

RANGE STATEMENT

- understanding
- use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Checking** may include:
- required nominal lengths in conjunction with the grading manual and appropriate Australian Standard
- Tolerance** is a set limit for cutting over or under the required length within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements
- Features** may include:
- warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Disposing of** may include:
- recycling material with features, incorrect cuts and off-cuts
 - re-using material with features, incorrect cuts and off-cuts
 - redirecting material with features, incorrect cuts and off-cuts for energy recovery
- Stacking** may include:
- preparing for transport
 - categorising in common size
 - length and angle
 - marking lots in line with work order and site requirements
 - locating so as not to block access or passage
- Dealing with** may include:
- repairing or sending for repair blunt or damaged saws and saw blades
 - recycling blunt or damaged saws and saw blades that cannot be repaired
 - sending blunt or damaged saws and saw blades that cannot be repaired to landfill

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|--|
| 1. Prepare for assembly | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to assembling <i>products</i> are identified and followed</p> <p>1.2. <i>Work order</i> and construction plans are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> and <i>assembly hardware</i> are collected</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. <i>Setup jigs</i> required for construction are specified and prepared</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Set up components | <p>2.1. <i>Timber components</i> are selected from pre-cut material in line with the cutting list</p> <p>2.2. Components are positioned and clamped in jigs ready for joining with allowable faults, joins and grain, in line with construction standards and grading rules</p> <p>2.3. Material with <i>defective components</i> is rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.4. Components are stapled to maintain temporary alignment during assembly</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Install assembly hardware	3.1. Assembly hardware is located and selected in line with the construction plans and standards 3.2. Hardware is positioned on joints and installed 3.3. <i>Temporary bracing</i> is nailed or stapled to the product in line with construction standards 3.4. <i>Assembly faults</i> are corrected in line with site procedures
4. Prepare products for despatch and report outcomes	4.1. Finished product is checked and labelled in line with the work order 4.2. Components are removed from jigs and safely <i>stacked</i> in a designated location in line with work order requirements 4.3. Finished products are <i>strapped</i> , packed and labelled ready for transportation 4.4. Strapping waste is minimised and <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements 4.5. <i>Equipment faults</i> are recognised and reported in line with site procedures 4.6. <i>Records and reports</i> are accurately completed, processed and maintained in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely assemble products
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for assembling products
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify

REQUIRED SKILLS AND KNOWLEDGE

problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for assembling products
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber) and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for assembling products
- Environmental risks and hazards
- Criteria for recycling and re-using material with defective components
- Characteristics of timber and timber defects
- Products and their use
- Assembly sequences and jigs, componentry and construction standards
- Industry standard cross sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- Environmental requirements may include:**
- carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Products may include:**
- pallets
 - crates
 - trellises
 - stairs
 - doors
 - windows

RANGE STATEMENT

- Work order** is to include:
- beams
 - instructions for the assembly and despatch of timber and timber products from the work site
- and may include:
- construction plans or drawings
 - type of product
 - size
 - quantity and grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Material** may include:
- native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - medium density fibreboard
 - laminated veneer
 - chipboard
 - fibreboard and other manufactured board products
 - coated and/or treated timber products
 - beams, including laminated beams
- Assembly hardware** may include:
- nailing plates
 - gang nails
 - nail gun nails
 - staples
- Equipment** may include:
- measuring equipment
 - assembly jigs
 - nail plate presses
 - staple guns
 - nail guns
 - compressor or compressed air supply

RANGE STATEMENT

- Setup jigs** may include:
- marking equipment
 - strapping equipment
 - enterprise manufactured templates that assist in the positioning of components during the assembly process
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Timber components** are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut in line with the construction plans and cutting list
- Defective components** may include:
- components with an unacceptable level of:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Disposing of** may include:
- recycling material with defective components
 - re-using material with defective components
 - redirecting material with defective components for energy recovery
- Temporary bracing** may be fixed to secure the assembled product in alignment and square during transportation, moving and positioning on site
- Assembly faults** may include:
- incorrectly positioned joints
 - timber splits from nailing
 - incorrectly positioned hardware
- Stacking** may include:
- preparing for transport
 - categorising in common size and shape

RANGE STATEMENT

- Strapping** may include:
- marking lots in line with work order and site requirements
 - locating so as not to block access or passage
 - securing bundles with metal or plastic strap
 - tightening and tensioning using hand-held equipment to prevent slippage, strap breakage and damage to products
- Dealing with** may include:
- recycling strapping waste
 - sending strapping waste to landfill
- Equipment faults** may include:
- damaged equipment components
 - electrical faults
- Records and reports** may include:
- product type and size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - computer-based system
 - other appropriate organisational communication system

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------|---|
| 1. Prepare for packing | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to packing <i>products</i> are identified and followed</p> <p>1.2. Number of items, type of material to be packed, and method of <i>transport</i> are selected from <i>work orders</i> in line with site procedures</p> <p>1.3. Material to be packed is assessed for strength, flexibility and liability to damage during the packing process or when being moved</p> <p>1.4. Planned pack sizes and weights are consistent with <i>handling systems</i> at despatch and delivery site</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Pack orders | <p>2.1. <i>Packing material</i> is selected to suit the specific order requirements</p> <p>2.2. Standard site <i>packing methods</i> that meet relevant regulations and site requirements are applied in line with site procedures</p> <p>2.3. <i>Stacking, bracing and strapping</i> methods are selected to provide strength and minimise damage during transport</p> <p>2.4. <i>Labelling</i> methods are selected and applied in line with site procedures</p> <p>2.5. Bracing and strapping waste material is minimised and <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Modify packing of routine orders	<p>3.1. <i>Changes</i> to type or quantity of material to be packed are assessed</p> <p>3.2. Transport or packing methods are reviewed or altered</p> <p>3.3. Pack <i>handling problems</i> or material damage as a result of changes are reported and corrected</p> <p>3.4. Changes resulting in potential major problems are reviewed with the customer</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely pack products
- Communication skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for packing products; use appropriate communication and interpersonal techniques with colleagues and others; locate and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for packing products
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for packing products
- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for packing products
- Environmental risks and hazards
- Criteria for recycling and re-using bracing and strapping waste material
- Characteristics of pack shift and movement

REQUIRED SKILLS AND KNOWLEDGE

- Products and their use
- Packing sequences and weight distribution
- Packing methods and applications
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan for and pack products according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to packing products
- following organisational policies and procedures relevant to packing products
- planning for and packing products in line with work order, customer requirements, site procedures and regulations
- stacking, bracing, strapping and labelling packs of products in line with organisational requirements and OHS regulations

Context of and specific resources for

- Competency is to be assessed in the workplace or realistically simulated workplace

EVIDENCE GUIDE

assessment

- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment

EVIDENCE GUIDE

task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards

RANGE STATEMENT

- confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Products** may include:
- packs of timber
 - pallets
 - crates
 - trellises
 - trusses
 - stairs
 - doors
 - windows
 - frames
 - beams
- Transport** may include:
- trucks
 - vans
 - utilities
 - trains
 - planes
 - ships
- Work order** is to include:
- instructions for the packaging and despatch of timber and timber products from the work site

RANGE STATEMENT

and may include:

- pack sizes
- weights
- type of product
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Handling systems are to include:

- hydraulic hoists
- truck-mounted loading cranes
- trolley jacks
- fork lifts
- gantry cranes
- loaders

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Packing material may include:

- boxes
- pallets
- bearers
- braces
- spacers
- wrapping
- strapping

Packing methods may include:

- manual loading
- mechanical loading
- mechanical lifting equipment, which may include:
 - fork lifts
 - slings

RANGE STATEMENT

- trolley jacks
 - gantry cranes
 - hydraulic hoists
 - truck mounted loading cranes
 - loaders
 - manual lifting, such as involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Stacking** may include:
- preparing for transport
 - categorising in common size and shape
 - marking lots in line with work order and site requirements
 - locating so as not to block access or passage
- Bracing** may be fixed to secure the packed product in alignment and square during transportation and to prevent movement or sliding
- Strapping** may include:
- securing bundles with metal or plastic strap
 - tightening and tensioning using hand-held equipment or automated strapping machines to prevent slippage without risk of strap breakage or damage to products
- Labelling** may include:
- client identification
 - destination
 - address
 - contents
 - special instructions
 - handling instructions
- Dealing with** may include:
- recycling bracing and strapping waste material
 - re-using bracing and strapping waste material
 - redirecting bracing waste material for energy recovery
 - sending bracing and strapping waste to landfill
- Changes** may include:
- special orders, which include specially manufactured items that may require unusual packing requirements
- Handling problems** may include:
- overweight packs
 - oversize packs
 - weight distribution or balance problems
 - damage to goods
 - product or equipment malfunction

FPICOT2232B Cut material to shape using a saw

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and cut material to shape using sawing equipment in order to produce shaped timber products. This unit includes equipment maintenance

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2232A Cut material to shape using a saw

Application of the Unit

Application of the unit

The unit involves cutting material to shape using a saw in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for shaping	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to cutting material to <i>shape</i> using a saw are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be shaped is selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Profile to be cut is identified and cutting blades are selected</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up shaping equipment	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Machine guides</i> are selected and attached to the machinery</p> <p>2.3. Saw blade in the selected machinery is checked to be sharp and correctly aligned</p> <p>2.4. Cut is set in line with the required shape and</p>

ELEMENT**PERFORMANCE CRITERIA**

- minimisation of waste
- 2.5. Off-cuts are *disposed of* in line with site procedures and environmental requirements
- 2.6. Material stack is positioned in close proximity to maximise ease of machine feeding
- 2.7. Equipment setup is checked and adjusted by running a piece of timber through the machine to check alignment
3. Cut material to shape
- 3.1. Material is fed into the machine at the *feed rate* prescribed by manufacturer's recommendations
- 3.2. Cutting sequence is followed, maintained and adjusted to produce the required shape and quantity of shaped products
- 3.3. Jig or shape line is regularly checked and adjusted to maintain the desired cut
- 3.4. Material with *features* is rejected and disposed of in line with site procedures and environmental requirements
- 3.5. Processing and equipment faults are reported to appropriate personnel
- 3.6. Material is safely *stacked* in designated location in line with work order
- 3.7. *Records and reports* are accurately completed, processed and maintained in line with workplace procedures
4. Conduct operator maintenance
- 4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 4.2. Saw blade is checked for blunt or damaged condition in line with site procedures
- 4.3. Saw blade is removed, replaced and *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
- 4.4. Machine area is kept clear of dust and debris in line with OHS and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut material to shape
- Communication skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for cutting material to shape; use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for cutting material to shape using a saw
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting material to shape using a saw
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for cutting material to shape using a saw
- Environmental risks and hazards
- Criteria for recycling and re-using off-cuts or material with features
- Characteristics of timber and timber features
- Shapes, feed rates and finish
- Methods for assessing condition of saw blades
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut material to shape using a saw in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to cutting material to shape using a saw
 - following organisational policies and procedures relevant to cutting material to shape using a saw
 - cutting material to shape in line with the work order and prescribed organisational specifications
 - conducting operator maintenance on a bandsaw
 - stacking batches of cut material in line with organisational requirements and OHS regulations
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment

EVIDENCE GUIDE

Guidelines of the FPI11 Training Package

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement

RANGE STATEMENT

processes and standards

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Shapes may include:

curved shapes for:

- construction
- furniture components

Work order is to include:

- instructions for the cutting and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- profile
- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard

RANGE STATEMENT

- Storage locations** may include:
- fibreboard and other manufactured board products
 - coated and/or treated timber products
 - beams, including laminated beams
 - storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** is to include:
- procedures for machine lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- measuring equipment
 - band saws
 - jig saws
 - other shaping equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences

RANGE STATEMENT

- control of tone of voice
- Pre-startup checks** are conducted to ensure:
- machine has been set up correctly
 - blade is installed accurately
 - machine is operating to optimum performance
- Machine guides** may include:
- machine manufacturer produced guides located strategically on the machine to maintain timber in straight feed and ensure consistency of shape cut
 - enterprise produced guides/jigs to maintain consistency of timber against the saw blade
- Disposing of** may include:
- recycling off-cuts or material with features
 - re-using off-cuts or material with features
 - redirecting off-cuts or material with features for energy recovery
- Feed rate** is the rate of speed the material is passed through the machine affecting the sharpness of the saw blade, the finish of the material, and the production output
- Features** may include:
- warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Stacking** may include:
- preparing for transport
 - categorising in common size, length and angle
 - marking lots in line with work order and site requirements
 - locating so as not to block access or passage
- Records and reports** may include:
- product type and size
 - profile
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions

RANGE STATEMENT

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Dealing with may include:

- repairing or sending for repair blunt or damaged saw blades
- recycling blunt or damaged saw blades that cannot be repaired
- sending blunt or damaged saw blades that cannot be repaired to landfill

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for navigation	<p>1.1.Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to navigating in forest areas are identified and followed</p> <p>1.2.<i>Information</i> is gathered and <i>relevant factors</i> are identified and checked with <i>appropriate personnel</i></p> <p>1.3.Suitable <i>maps, equipment</i> and <i>navigation aids</i> are selected and checked for accuracy, currency and operational effectiveness in line with manufacturer recommendations</p> <p>1.4.Faults or errors in maps and equipment are detected and corrected</p> <p>1.5.<i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plan the route	<p>2.1.Route is planned according to assignment instructions and OHS requirements</p> <p>2.2.Maps are examined to identify relevant <i>symbols, information, navigation data and environmental requirements</i></p> <p>2.3.Emergency or contingency exit routes are planned</p> <p>2.4.<i>Limitations</i> in planning are specified and assistance is sought in line with organisational requirements</p>
3. Conduct navigation	<p>3.1.Navigation is undertaken according to planned route</p>

ELEMENT	PERFORMANCE CRITERIA
	and schedule
	3.2. Maps are correctly orientated to <i>surroundings</i> according to planned route
	3.3. Equipment and navigation aids are used in line with manufacturer recommendations
	3.4. Alternative routes are navigated to bypass <i>obstacles</i> and improve efficiency of route or course
	3.5. Impact on the environment as a result of navigation is minimised

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment
- Communication skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for navigating in forest areas; use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for navigating in a forest area
- Numeracy skills sufficient to calculate bearings using maps and compass correctly
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures; interpret maps, charts, distances, relevant symbols, map meaning and line types; estimate resource and equipment requirements; solve problems and bypass obstacles; locate own position on a map

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for navigating in forest areas
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for navigating in forest areas

REQUIRED SKILLS AND KNOWLEDGE

- Environmental risks and hazards
- Types of maps and charts, and their uses
- Representation of topographic features on maps and plans
- Common scales used on maps and plans
- Features and use of a compass and factors that affect its accuracy
- Advantages and disadvantages of different map and chart types and sources of error
- Techniques for estimating distance travelled within a particular activity context
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently navigate in forest areas demonstrating the correct orientation and use of maps, plans and compass

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to navigating in forest areas
- following organisational policies and procedures relevant to navigating in forest areas
- selecting, interpreting and applying maps and other relevant information in written, diagrammatic and

EVIDENCE GUIDE

- verbal form
- using maps, compass and navigation aids to navigate in forest areas, confirming factors affecting the use of navigation equipment
 - planning and conducting navigation by passing obstacles within designated timeframes
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Information may relate to:

- local inhabitants
- type of terrain or features of the route
- access and exit routes
- natural protection or shelter
- land management and legislative requirements
- guide books

Relevant factors may relate to:

- types of terrain and gradient
- weather conditions
- obstacles
- hazards and access to required resources and facilities

RANGE STATEMENT

- distance
 - estimated travelling time
 - magnetic bearings
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Maps** may include:
- cadastral and topographic maps
 - charts
 - guide books
 - aerial photographs
 - sketches
 - cave maps
 - diagrams
- Equipment** may include:
- compass
 - track and survey markers
 - beacons
 - personal protective equipment and clothing
 - global positioning system (GPS) units
- Navigation aids** may include:
- track and creek junctions and crossings
 - survey markers
 - beacons
 - track markers
 - paths
 - signs
 - arrows
 - compass and man-made objects or features
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Symbols and information** may include:
- grid lines and numbers
 - contour lines
 - scale

RANGE STATEMENT

- map legend
 - topographic features
 - markers and beacons
 - water depth
- Navigation data** may include:
- grid reference points
 - distances
 - estimated travelling times
 - height gain and loss
 - gradient
 - identifiable features
 - exit routes
- Limitations** may relate to:
- job role and responsibilities
 - own competency level
 - industry requirements
 - own understanding of risk identification processes
 - own interpretation of maps
 - legislation
 - regulations and procedures
 - legal responsibilities
 - OHS environmental requirements
- Surroundings** may include:
- ground or terrain
 - bodies of water
 - beacons and markers
 - natural formations
 - landmarks
 - man-made features
- Obstacles** may include:
- thick vegetation
 - drops and climbs
 - marshes and bogs
 - fog
 - rivers
 - lakes and dams
 - tides
 - hazards, such as rocks

FPICOT2235A Assess timber for manufacturing potential

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to assess timber for its manufacturing potential for frame and truss construction including the ability to hold nail plates and retain engineered strength ratings with particular attention given to serviceability

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit

The unit involves assessing timber for plating potential in a factory environment, usually as part of production of prefabricated trusses, frames and/or floors

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--------------------------|--|
| 1. Prepare for assessing | <p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to assessing <i>timber</i> for manufacturing potential are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Visual assessment processes are planned in line with site procedures</p> <p>1.4. Type and quantity of <i>material</i> to be visually assessed is acquired from the storage location</p> <p>1.5. <i>Tools and equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p> |
| 2. Assess timber | <p>2.1. Material requirements for storage or subsequent processing operations are selected</p> <p>2.2. Characteristics and defects of material are assessed against industry and Australian <i>Standards</i> in determining plating potential</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.3. Defects are clearly identified prior to plating or sawing in line with site requirements
	2.4. Timber components are orientated to make best use of the characteristics
	2.5. Timber assessed as unsuitable for plating is identified for reprocessing to minimise wastage
	2.6. Assessment outcomes and distribution problems are recorded and reported to appropriate personnel in line with site procedures
3. Distribute material	3.1. Material is directed and moved to storage or processing operations in line with site requirements
	3.2. Sub-standard materials are rejected and disposed of in line with site requirements to minimise wastage
	3.3. On-site movement of material is monitored to ensure intended flow is achieved
	3.4. Material is labelled in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to identify and assess a range of timber characteristics likely to impact on nail plate holding ability and to orientate components to ensure optimum utilisation of the resource
- Communication skills sufficient to liaise with co-workers and supervisors to ensure efficient work flow
- Literacy skills sufficient to identify and record timber characteristics impacting on nail plate holding ability
- Numeracy skills sufficient to measure, estimate and record size of undesirable timber characteristics
- Problem solving skills sufficient to identify and resolve work flow problems resulting from undesirable timber characteristics
- Planning and organisational skills sufficient to plan visual assessment processes

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for assessing timber for plating potential
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for assessing timber for plating potential
- Knowledge of materials handling and transport systems
- Orientation of components to ensure products conform with manufacturing guidelines
- A range of timber characteristics likely to affect nail plate holding ability
- A range of industry standard timber species, lengths, cross sections and grades that may affect nail plate holding ability
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment used for assessing timber and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess timber for manufacturing potential

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to assessing timber for

EVIDENCE GUIDE

- plating potential
- following organisational policies and procedures relevant to assessing timber for plating potential
 - the application of knowledge of timber characteristics to make an accurate assessment of the potential of a piece of timber to be used for a particular component of trusses, and/or frames and/or floors
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to comply with relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- fatigue management
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

RANGE STATEMENT

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Timber** characteristics may include:
- bow, spring and twist
 - wane/want and collapse
 - cupping and other distortion
 - knots and knot holes
 - borer damage
 - gum/resin veins and pockets
 - decay
 - end splits, internal checks and surface checks
 - low density material
 - compression failures and fractures
 - durability
 - heart in material
 - joint strength
- Work order** may include:
- type
 - size

RANGE STATEMENT

- length
 - angle
 - quantity
 - grade
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Material** may include:
- native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - laminated veneer coated and/or treated timber products
 - beams or laminated beams
- Tools and equipment** may include:
- charts
 - gauges
 - standard operating procedures
 - picture cards
 - measuring equipment
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - use of electronic devices
- Standards**
- are those contained in Australian Standards and additional requirements established by the client or nail plate producer
- Records and reports** may include:
- stress-grading requirements
 - product type
 - size
 - inspection
 - grading and marking outcomes
 - storage locations
 - quality outcomes
 - hazards, incidents or equipment malfunctions
- and may be:

RANGE STATEMENT

- manual
- using a computer-based system or another appropriate organisational communication system

On-site movement of material may include the use of:

- trolley use
- fork lift
- pallet truck

FPICOT2236 Fall trees manually (basic)

Modification History

Version	Detail
1	Unit replaces FPIFGM2208A Fall trees manually (basic) and FPIHAR2202A Harvest trees manually (basic)

Unit Descriptor

This unit describes the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw.

It is an introductory or base-level unit that covers the felling procedures for relatively small trees with a low level of complexity.

Techniques for trees with a diameter greater than the bar length, while not excluded, would generally be regarded as techniques beyond the scope of this unit.

Application of the Unit

This unit involves tree felling in a variety of work settings, which may include a forest, agricultural, domestic, local council, and emergency services and other government agency environment.

With the exception of minor forest produce, it is not considered a suitable level for commercial harvesting operations.

These skills and knowledge are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for felling

- 1.1. Identify and adhere to work specifications and site *environmental protection measures* relevant to felling *basic trees* in line with *organisational requirements* and relevant regulations
- 1.2. Review and check *job requirements* as required with *appropriate personnel*
- 1.3. Select and check *tools and equipment* appropriate to work requirements for operational effectiveness according to manufacturer recommendations
- 1.4. Identify trees to be retained and felled
- 1.5. Establish general falling direction
- 1.6. Determine and progressively plan tree felling sequence for individual trees
- 1.7. Establish and maintain *communication* with others according to occupational health and safety (OHS) requirements

2. Visually assess site conditions and surroundings

- 2.1. Review location and stability for conditions likely to affect felling activities
- 2.2. Monitor movement and location of activity in the work area and modify plan for felling activity according to OHS regulations
- 2.3. Identify and report site *environmental conditions* to appropriate personnel
- 2.4. Identify and control potential and existing risks and *hazards*
- 2.5. Identify and monitor other personnel working on the site

3. Assess tree and plan felling
- 3.1. Identify *trees considered outside own skill level* and seek assistance from appropriate personnel
 - 3.2. Visually assess tree for felling characteristics, defects and stresses
 - 3.3. Determine and check required falling direction and possible deviation
 - 3.4. Plan sequence of cuts to fell tree according to standard felling procedures
 - 3.5. Select suitable escape route
 - 3.6. Clear work site and escape route of debris and growth according to environmental care principles and statutory requirements
4. Apply tree felling techniques
- 4.1. Fell individual trees using selected *cutting techniques* according to OHS and job requirements
 - 4.2. Adjust cutting technique in response to movement and condition of tree
 - 4.3. Use planned escape route when tree starts to fall
 - 4.4. Monitor fall and movement of tree on ground until determined stable
 - 4.5. Identify and implement procedures for removal of trees that are hung-up
 - 4.6. Dispose of waste materials in line with environmental and operational requirements
5. Maintain equipment
- 5.1. Inspect equipment on completion of trimming and cutting activities
 - 5.2. Identify damaged saws and cutting attachments for repair or replacement according to organisational requirements and manufacturer recommendations
 - 5.3. Remove, clean, adjust or replace chain and other components according to manufacturer recommendations
 - 5.4. Maintain tools and equipment according to OHS requirements and manufacturer recommendations

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- Awareness of legislation, regulations, standards, codes of practice and established safe practices and procedures for felling trees manually
- Technical skills to:
 - use and maintain relevant tools and equipment
 - safely operate and maintain a chainsaw
 - assess, plan and carry out tree-felling operations appropriate to site conditions
- Communication skills to:
 - use appropriate communication and interpersonal techniques and methods with colleagues and others
 - use hand signals with other operators to maintain effective and safe tree felling
- Literacy skills to:
 - locate and report information
 - interpret, apply and convey information in written, diagrammatic and verbal form
- Numeracy skills to:
 - estimate tree height
 - calculate product mass and determine tree fall zone
 - measure tree length and diameter
- Problem-solving skills to:
 - review and identify work requirements
 - identify appropriate trees to be felled at basic level: small in size and low in complexity
 - recognise own limitations given the conditions and trees for felling
 - assess that capacity of equipment is appropriate to tree being felled
 - identify equipment faults and problems and demonstrate appropriate response procedures
 - apply safe work practices, including the use of personal protective equipment (PPE) and control of hazards

Required knowledge:

- Basic knowledge of applicable federal, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for felling trees manually
- Key characteristics of trees that are considered to be in the basic, intermediate and advanced categories
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for felling trees manually
- Types of tools and equipment used when felling trees manually, and the procedures for their safe use, operation and maintenance

- Problem identification and resolution strategies and common fault-finding techniques applicable to tree felling
- Established communication channels and protocols
- Key features of structural defects and stresses in trees to enable their identification and evaluation
- Types and purposes of a range of cuts to fell trees
- Operational principles and limitations of a chainsaw
- Procedures for recording and reporting workplace information

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently fell trees manually according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to felling trees manually
- compliance with organisational policies and procedures relevant to felling trees manually
- compliance with applicable licensing or certification requirements relevant to felling trees manually
- communicating effectively and working safely with others in the work area
- Identifying key features of structural defects and stresses in trees and the impact on felling trees at the basic level contributing to a tree and conditions assessment, and planning for and felling trees within the range of variables for trees and conditions
- planning felling sequence of basic trees and prepare surroundings including escape route
- felling a range of basic trees using a range of cuts safely without damage to personnel, equipment and surrounding environment
- selecting, using and maintaining appropriate tools and equipment for felling basic trees manually, and recognising faults, problems and malfunctions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work

applicable to this unit

- specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Environmental protection measures may include:

- action to limit the impact to:
 - native vegetation
 - soil and water
 - heritage and archeological artefacts
 - flora and fauna
 - geomorphologic features
 - landscape
 - external site pollution
 - recreational opportunities
 - regeneration opportunities

Basic trees typical to the scope of this unit may include the following characteristics:

- lean and distribution of the crown weight does not create a complex situation to assess or fell
- small dimensions relative to local forest size distribution
- no excessive lean
- no visible damage or defect
- species that are not prone to free splitting and adverse reactions during felling
- a crown that is free of hazards, entanglement or malformation, and is fully visible for assessment and monitoring
- single stem or non-complex multi-stems
- diameter of tree is less than chainsaw bar length
- grown on terrain and slope that does not add significant complexity to the operation

Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS requirements, that are in accordance with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, including:
 - PPE and clothing
 - safety equipment
 - first aid equipment

- firefighting equipment
- hazard and risk control
- fatigue management
- appropriate signage
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- techniques for manual handling, including shifting, lifting and carrying
- legislative requirements that are to be in accordance with applicable federal, state or territory legislation, regulations, certification requirements and codes of practice, including:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - native vegetation
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste disposal, recycling and re-use guidelines

Job requirements may include:

- information and instructions relevant to tree-felling operations, including:
 - processing location details
 - trees to be felled and retained
 - general environmental requirements, including site plan and environmental features

- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - managers
- Tools and equipment** may include:
- warning signs
 - chainsaw and components
 - PPE and clothing
 - first aid equipment
 - maintenance requirements
 - support tools
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening and questioning to clarify and confirm understanding
 - electronic communication devices
- Environmental conditions** may relate to:
- ground growth
 - canopy
 - general forest lean
 - ground slope
 - ground hazards
 - wind speed and direction
- Hazards** may include:
- uneven/unstable terrain
 - unsafe trees
 - fires
 - overhead and underground services
 - excavations
 - traffic
 - structures
 - hazardous materials
 - insects and animals
 - other personnel and machinery
- Trees considered outside**
- trees that contain hazards and are deemed unsafe

own skill level may include:

- trees where cuts made may lead to loss of control of tree in felling
- trees that are considered to be in the intermediate or advanced categories

Cutting techniques:

- will be suited to small non-complex felling situations and will include:
 - scarf cutting
 - back cutting to provide hinge-wood and maintain control of tree
- and may include:
 - use of wedges to assist in controlling falling direction

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for maintenance	<p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative, organisational requirements</i> and manufacturer's specifications relevant to the maintenance of <i>chainsaws</i> are identified and followed</p> <p>1.2. Suitable personal protective equipment and/or clothing is selected, used and maintained</p> <p>1.3. Job requirements are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.4. Tools, equipment and materials are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations and site operating procedures</p> <p>1.5. Potential and existing risks and <i>hazards</i> in the work area are identified and controlled</p>
2. Conduct chainsaw maintenance	<p>2.1. <i>Frequent/daily services</i> are carried out in line with manufacturer's recommendations and organisational requirements</p> <p>2.2. <i>Periodic services</i> are carried out in line with manufacturer's recommendations and organisational requirements</p> <p>2.3. Chain and other components are removed,</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete maintenance records and clean up	<p>sharpened, <i>maintained</i>, adjusted or replaced in line with manufacturer's recommendations</p> <p>2.4. Serviced chainsaw components are reassembled and checked for operational effectiveness</p> <p>2.5. Chainsaw is tagged and stored</p> <p>3.1. <i>Records and reports</i> are accurately completed, processed and maintained in line with workplace procedures</p> <p>3.2. Chainsaw faults, malfunctions or irregular operation are identified, tagged and reported for repair or replacement</p> <p>3.3. Work area is cleared and waste materials disposed of, or recycled, in line with organisational <i>environmental policies and procedures</i></p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, conduct routine maintenance procedures and to apply mechanical reasoning
- Communication skills sufficient to discuss work orders with colleagues and others
- Literacy skills sufficient to read and interpret work requirements and specifications and to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure, calculate time required to complete a task and calculate fuel/oil ratios
- Problem solving skills sufficient to troubleshoot and identify problems and equipment faults, and apply appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for maintaining chainsaws
- Environmental protection requirements, including the safe disposal of waste material

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for maintaining chainsaws; organisational communication channels and protocols; and procedures for the recording and reporting of workplace documentation and information
- Types of tools and equipment required for the maintenance of hand-held chainsaws and the procedures for their safe use, operation and maintenance
- Types, functions, specifications and operational principles of chainsaws
- Specifications and types of bars, chains and sprockets
- Chainsaw routine maintenance procedures
- Potential hazards and risks when maintaining chainsaws including fire hazards and prevention
- Problem identification and resolution strategies and common fault finding techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely carry out a maintenance service and adjustment of hand-held chainsaws

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS and environmental and manufacturer's specifications relevant to maintaining chainsaws
- following organisational policies and procedures relevant to workplace requirements when maintaining chainsaws
- communication with others in the workplace
- maintenance and adjustment procedures of chainsaws in line with manufacturer's recommendations

EVIDENCE GUIDE

- selection and use of appropriate tools, equipment and materials to carry out maintenance of chainsaws
 - identification and diagnosis of chainsaw faults, malfunctions or irregular operations
 - sharpening and tensioning of saw chain
 - application of tagging, repairing, reporting and recording processes
 - maintenance, storing and cleaning of tools and work area
 - safe disposal of waste materials
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to comply with relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred

EVIDENCE GUIDE

to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- Australian Standards
- OHS
- the environment
- equal opportunity
- relevant industry codes of practice
- award and enterprise agreements
- industrial relations
- confidentiality and privacy
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS
- emergency and evacuation procedures
- fire prevention procedures
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- access and equity principles and practices

Chainsaws may include:

- engine or electrically operated hand-held chainsaws

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management

Hazards may include

exposure to:

- loud noise and exhaust fumes

RANGE STATEMENT

- mechanical vibration
- hazardous substances (fuel)
- cuts and hot surfaces
- rotating parts

Frequent/daily services

are to be conducted in line with manufacturer's instructions and may include:

- removing, checking and cleaning air filter for damage and penetration of foreign material
- cleaning saw body, air intake vents and cooling fins
- cleaning chain brake
- inspecting chain and guide bar
- checking screws/nuts for tightness
- checking safety devices
- filling fuel tanks and chain oil tanks

Chain checks are to be conducted in line with manufacturer's instructions and may include:

- inspecting and adjusting chain
- inspecting and replacing chain that is worn, damaged or incorrectly sharpened
- sharpening a range of chain types and setting of depth gauges without supervision

Periodic services

are to be conducted in line with manufacturer's instructions and may include:

- replacing drive sprocket
- cleaning or replacing and setting spark plug
- checking and replacing fuel filter
- checking chain brake, oil system, flywheel assembly, anti-vibration system, muffler and spark arrestor
- inspecting and replacing starter cord and starter spring
- matching pitches and gauges of cutting components
- dressing and cleaning cutter bar
- cleaning fly wheel
- removing and cleaning exhaust and fire screen
- sharpening

Maintenance must include:

Records and reports may

- log book recording of maintenance outcomes,

RANGE STATEMENT

include:

faults, malfunctions and damage, hazards and incidents

- may be compiled using a computer-based system or other appropriate organisational communication system to record and report
- waste disposal
- recycling
- re-use

Environmental policies and procedures may relate to:

FPICOT2238A Cut materials with a hand-held chainsaw

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to prepare and cut materials with a hand-held chainsaw. This unit includes basic operator maintenance checks

More comprehensive servicing and maintenance procedures are covered in FPICOT2237A Maintain chainsaws

General legislative, regulatory and workplace requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2206B Cross cut materials with an hand-held chainsaw

Application of the Unit

Application of the unit The unit involves cutting materials with a hand-held chainsaw in a variety of work settings including a construction, saw mill, forest products factory, timber retail yard or horticultural environment

The skills and knowledge required for competent performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--------------------------|---|
| 1. Prepare for operation | <p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative, organisational requirements</i> and manufacturer's specifications relevant to cutting <i>materials</i> with a hand-held chainsaw are identified and followed</p> <p>1.2. <i>Job requirements</i> are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Tools and equipment</i> are selected appropriate to job requirements and checked for operational effectiveness in line with manufacturer's recommendations and site procedures</p> <p>1.4. Tasks are identified and planned in line with job requirements</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements and site procedures</p> <p>1.6. Requirements for recycling or disposal of waste material are identified</p> |
| 2. Cut material | <p>2.1. Work area is prepared, checked and <i>cleared</i> in line with OHS requirements and site procedures</p> |

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|----|------------------------------|---|
| 3. | Conduct chainsaw maintenance | <p>2.2. Supports are placed as required to ensure a stable base</p> <p>2.3. Material is visually assessed for defects in line with site standards</p> <p>2.4. Cutting techniques are used to maximise volume and quality of recovery in line with work order and industry standard lengths</p> <p>2.5. Material is cut within site standard tolerances for length and angle relative to centre line in line with OHS requirements</p> <p>2.6. Chainsaw is operated in line with OHS and site procedures, and manufacturer's recommendations</p> <p>2.7. Debris is cleared and disposed of in line with site procedures and environmental requirements</p> <p>2.8. Production and quality records and reports are processed in line with site procedures and organisational requirements</p> <p>2.9. Problems are identified and reported in line with site procedures</p> <p>3.1. Damaged saws or cutting attachments are identified and dealt with according to site procedures and manufacturer's recommendations</p> <p>3.2. Chainsaw is cleaned, maintained and stored in line with manufacturer's recommendations and site procedures</p> |
|----|------------------------------|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to safely and efficiently use a hand-held chainsaw and carry out lock-out procedures on associated machinery; use and maintain relevant tools, machinery and equipment; use appropriate methods to cut materials with a hand-held chainsaw and maximise volume and quality recovery
- Communication skills sufficient to interact effectively with colleagues and others

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to review and accurately identify work requirements and accurately locate, record and report information
- Numeracy skills sufficient to estimate and measure lengths and calculate time to complete a task
- Problem solving skills sufficient to identify defects and problems and appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting materials with a hand-held chainsaw
- Organisational and site standards, requirements, policies and procedures for cutting materials with a hand-held chainsaw; organisational communication channels and protocols; and procedures for the recording and reporting of workplace documentation and information
- Environmental protection requirements including the safe disposal of waste material
- Operation and maintenance requirements of a hand-held chainsaw including consequences of blunt or damaged saws
- Effects of defects on recovery
- Common industry terminology
- Communication and interpersonal techniques
- Industry standard length dimensions
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can use a hand-held chainsaw while demonstrating the correct procedures for cutting materials in line with organisational guidelines

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS and environmental, relevant to cutting materials with a hand-held chainsaw
- following organisational policies and procedures relevant to cutting materials with a hand-held chainsaw
- following applicable licensing or certification requirements
- effective communication and safe working practices
- safe cutting of materials using a hand-held chainsaw
- cutting materials to maximise volume and quality of recovery according to job requirements
- cleaning, maintaining and storing saw
- identifying and reporting faults, malfunctions or irregular operation of hand-held chainsaw
- appropriate recycling or disposal of waste materials

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

application of underpinning knowledge

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and

RANGE STATEMENT

may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- awareness of danger zone for kickback
- manual handling including shifting, lifting and carrying
- potential falling objects
- procedures for cutting on slopes
- location of other workers

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- Australian Standards
- OHS
- the environment
- equal opportunity
- relevant industry codes of practice
- award and enterprise agreements
- industrial relations
- confidentiality and privacy
- duty of care
- heritage and traditional land owner issues
- legal

Organisational requirements

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS
- emergency and evacuation procedures
- fire prevention procedures

RANGE STATEMENT

- recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
 - access and equity principles and practices
- Materials** may include:
- logs
 - packs of timber
 - individual pieces of timber
- Job requirements** relate to: information and instructions relevant to cutting operations including:
- processing location details
 - materials to be cut
 - environmental requirements and features
 - site plan
- and may be verbal
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Tools and equipment** may include:
- chainsaws
 - specific safety attire
 - maintenance tools
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - use of electronic devices
- Cleared** refers to work area and may include:
- clearing the work area of off-cuts and shorts
 - ensuring saw clearance around material
 - depositing off-cuts, shorts and debris in recognised areas
 - clearing surfaces of debris likely to cause saw damage in the cutting area
- Supports** are timber or mechanical apparatus that are put under material to stabilise and give clearance to ground and may include:

RANGE STATEMENT

- Cutting techniques** may relate to:
- timber bearers
 - specific frames/benches
 - timber/steel trolleys
 - cutting positions
 - work order requirements
 - industry standard lengths
 - cutting patterns
 - maximising volume and quality of recovery
 - securing the section on each side of the planned cut
 - cutting procedures to ensure saw clearance around the material to minimise capping and splitting of material
- Records and reports** may include:
- log book recording of maintenance outcomes, faults, malfunctions and damage, hazards and incidents
 - may be compiled using a computer-based system or other appropriate organisational communication system to record and report

Problems

may occur in relation to:

- defects in material
- performance of chainsaw
- communication
- hazards and risks at the work site
- capping and splitting of material
- danger zone for kickback

Maintained

refers to maintenance during operation to optimise saw performance and includes:

- refuelling
- bar checks and oil top up
- air filter check, clean and replacement
- cleaning of saw body, air intake vents and cooling fans
- fitting spare chain and tension chain

FPICOT2239A Trim and cut felled trees

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to trim and cut felled trees with a chainsaw. It is intended for use in situations where the production of timber is not the primary focus of the activity. The unit also includes equipment maintenance

General workplace legislative and regulatory requirements apply to this unit; specific licensing or certification requirements may apply in some states and territories

This unit replaces FPICOT2221A Trim and cross cut felled trees

Application of the Unit

Application of the unit

This unit involves trimming and cutting felled trees with a chainsaw in a variety of work settings including a forest, agriculture, domestic, local council and emergency services environment, as relevant to the unit

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for trimming and cutting	<p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational requirements</i> and manufacturer's specifications relevant to trimming and cutting felled <i>trees</i> are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> and enterprise environmental management systems are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Job requirements</i> are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.4. Trimming and cutting activities are planned in line with site procedures</p> <p>1.5. <i>Tools and equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with organisational procedures and manufacturer's recommendations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Visually assess felled trees	<p>2.1. Trees to be trimmed and cut are identified in line with job requirements</p> <p>2.2. <i>Environmental requirements</i> are identified and used</p>

ELEMENT	PERFORMANCE CRITERIA
	to plan the trimming and cutting activities
	2.3. Tree, location and stability are assessed for conditions likely to affect safety of trimming and cutting activities
	2.4. Tree is visually assessed for <i>defects</i>
	2.5. <i>Stresses</i> within the tree are identified
	2.6. Trees unable to be cut safely are identified and referred to appropriate personnel
3. Plan cutting	3.1. Tree is moved or stabilised for safe cutting in line with site standards and regulations
	3.2. <i>Cutting pattern</i> is selected to optimise time and manageable removal of the sections
	3.3. Options for utilisation of product are identified
	3.4. <i>Sequence of cuts</i> is planned to maintain control of cut sections and minimise cutting problems
	3.5. Cut location is determined with consideration of tree stresses
4. Conduct trimming and cutting	4.1. <i>Debris</i> is cleared from the work area to prevent saw damage or injury in line with OHS requirements
	4.2. <i>Pre start-up</i> checks are carried out on equipment in line with site requirements
	4.3. Movement and whereabouts of other personnel is monitored and work is modified in line with OHS regulations
	4.4. Tree section on each side of planned cut is secured and potential movement is assessed and planned
	4.5. Chainsaw is operated to cut tree and limbs with <i>cutting techniques</i> adjusted in response to movement and condition of the tree/limbs
	4.6. Trimming and cutting is completed in line with OHS and job requirements
	4.7. Trimming and cutting <i>records</i> are prepared and problems reported to the appropriate personnel
5. Conduct equipment <i>maintenance</i>	5.1. Equipment is inspected on completion of trimming and cutting activities
	5.2. Damaged saws and cutting attachments are identified for repair or replacement in line with

ELEMENT**PERFORMANCE CRITERIA**

organisational requirements and manufacturer's recommendations

5.3.Chain and other components are removed, cleaned, maintained, adjusted or replaced in line with manufacturer's recommendations

5.4.Tools and equipment are maintained in line with OHS requirements and manufacturer's recommendations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to select, use and maintain relevant equipment to safely trim and cut felled trees in a range of situations
- Ability to assess the implications related to identified stresses of the tree
- Communication skills sufficient to interact with colleagues and others
- Literacy skills sufficient to review and accurately identify work requirements and to locate, record and report information
- Numeracy skills sufficient to estimate and measure tolerances and minimum diameter, and calculate time to complete tasks
- Problem solving skills sufficient to identify problems, equipment faults and apply appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for trimming and cutting felled trees
- Industry, organisational and site standards, requirements, policies and procedures for trimming and cutting felled trees
- Environmental protection requirements, including the safe disposal of waste material
- Characteristics of trees and types of timber defects that may affect cutting
- Cutting patterns, sequences and techniques
- Chainsaw operation, safety and maintenance procedures
- Risk assessment processes
- Problem identification and resolution strategies and common fault finding

REQUIRED SKILLS AND KNOWLEDGE

techniques

- Types of tools and equipment and procedures for their use, operation and maintenance for trimming and cutting felled trees
- Procedures for reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently trim and cut felled trees and conduct equipment maintenance within industry and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS and environmental, relevant to trimming and cutting felled trees
- following industry and organisational policies and procedures relevant to trimming and cutting felled trees
- effective communication and safe working practices
- planning of trimming and cutting activities in line with site standards and regulations
- trimming and cutting of felled trees in line with job requirements in a range of workplace situations
- equipment maintenance
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing safety equipment
- first aid equipment
- fire fighting equipment
- communications equipment
- location of other workers
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe workplace practices including required actions relating to forest fire
- awareness of danger zone for kickback
- manual handling including shifting, lifting and carrying
- erection of warning signs
- potential falling objects
- procedures for cutting on slopes

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- Australian Standards
- OHS
- the environment
- equal opportunity
- relevant industry codes of practice

RANGE STATEMENT

Organisational requirements may include:

- award and enterprise agreements
- industrial relations
- confidentiality and privacy
- duty of care
- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS
- emergency and evacuation procedures
- fire prevention procedures
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- access and equity principles and practices
- hardwood trees
- softwood trees

Trees may include:

Environmental protection measures may include:

- action to limit the impact of noise, wind speed and direction, fallen trees, ground slope, ground hazards and obstacles, general forest lean
- action to limit the impact to ground growth, canopy, density of trees

and may relate to:

- soil and water protection
- contingencies for modifying operations during wet or other adverse weather conditions
- the safe disposal of waste material

Job requirements

refer to information and instructions relevant to trimming and cutting operations including:

- size
- length

RANGE STATEMENT

Appropriate personnel may include:

- quantity and grade
- removal status
- supervisors
- clients
- colleagues
- line management

Tools and equipment may include:

- chainsaws
- Personal Protective Equipment (PPE)
- maintenance tools
- fuel and oil containers

and ancillary equipment, which may include:

- hammer
- axe
- wedges
- cant hook or breaking bar
- first aid kit
- fire control equipment
- tool belt
- loggers tape
- warning signs
- chainsaw maintenance kit

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- use of electronic devices

Environmental requirements

may be assessed in relation to:

- ground growth
- ground slope
- ground hazards and obstacles

and may include environmental protection measures to:

- limit the impact of noise, fumes in enclosed spaces, waste, fire, disposal of fuel and oil
- limit the impact on flora, fauna and habitat

Defects may include:

- splits
- falling damage
- fire damage
- infestation

RANGE STATEMENT

- pipe
 - shake
 - twist
 - branch/knot locations
- Stresses** may include:
- tension (fibres being stretched)
 - compression (fibres being squashed)
 - neutral fibres
- Cutting pattern** refers to:
- the best direction or angle for making a cut
- Sequence of cuts** refers to:
- the plan of cuts to optimise time and recovery of logs
- Debris** may include:
- stones
 - rocks
 - loose branches
 - other timber
 - woody material
 - any loose hazards underfoot or in escape path
 - any material underfoot or in the cutting area which may impinge on safe cutting procedures
- Pre start-up checks** may include:
- checking that equipment is suitable for task and has been set up correctly
 - checking that systems are performing accurately
 - checking equipment is operating to optimum performance
- Cutting techniques** may include:
- bridging cuts
 - swinging cuts
 - side bind cuts
 - delimiting
 - boring
 - wedge cuts
 - ripping cuts
- Records** may include:
- quality outcomes; hazards, incident reports, equipment malfunctions and damage
- and may be compiled using a computer-based system or another appropriate organisational communication system to record and report
- Maintenance** must include:
- sharpening
- and may include:
- refuelling

RANGE STATEMENT

- inspection, identification and replacement of bar, chain, drive sprockets
- bar oil checks and top up
- air filter check, clean and replacement
- cleaning of saw body, air intake vents and cooling fans
- fitting spare chain and tension chain

FPICOT2240 Cut material with a pole saw

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit describes the outcomes required to cut materials at a distance reachable with a mechanical pole saw and to unblock components of machinery.

Application of the Unit

The unit involves operating a pole saw in a saw mill and timber/ply environment.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of endorsement.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Identify as within safe working limits type and quantity of <i>material</i> to be <i>cut</i></p> <p>1.2. Select <i>equipment</i> appropriate to work requirements and check for operational effectiveness in line with manufacturer recommendations</p> <p>1.3. Carry out <i>pre start-up checks</i> on equipment in line with site requirements</p> <p>1.4. Assess pole saw set-up and adjust to suit cutting conditions</p> <p>1.5. Establish and maintain <i>communication</i> with others in line with <i>occupational health and safety (OHS) requirements</i></p>
2. Assess materials	<p>2.1. Assess type and quantity of material to be cut and <i>environmental conditions</i> to plan cutting activities consistent with site procedures and <i>environmental requirements</i></p> <p>2.2. Monitor movement and location of other personnel and modify work in line with OHS regulations, where required</p> <p>2.3. Assess location and stability of materials for conditions likely to affect safety of cutting activities</p> <p>2.4. Identify materials unable to be cut safely and refer them to appropriate personnel</p>
3. Use pole saw to cut and unblock materials	<p>3.1. Operate <i>pole saw</i> to cut materials and unblock machinery components in line with safety regulations, <i>job specifications</i> and <i>workplace procedures</i>, and adjust cutting technique in response to equipment requirements and allowances</p> <p>3.2. Turn motor off before examining any blockages to the pole saw</p> <p>3.3. <i>Clear</i> waste and debris from the site in line with standard operating procedures and environmental requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Record and report cutting processes and equipment faults to appropriate personnel
4. Maintain equipment	4.1.Follow equipment lock-out procedures in line with site procedures 4.2.Check chain for blunt or damaged condition 4.3.Remove, sharpen, maintain, adjust and replace chain and other components in line with manufacturer recommendations 4.4. Deal with chain and other components that need replacing in line with site procedures, manufacturer recommendations and environmental requirements 4.5.Keep pole saw clear of dust, shavings and debris and check it to make sure it meets relevant standards

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills to:
 - use and maintain relevant tools, machinery and equipment
 - efficiently and safely cut materials
- Communication skills to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills to:
 - record and report workplace information
 - maintain documentation
- Numeracy skills to measure, estimate and calculate time required to complete a task
- Problem-solving skills to:
 - identify problems and equipment faults
 - demonstrate appropriate response procedures

Required knowledge

- Applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a pole saw

- Environmental protection requirements, including:
 - safe disposal of waste material
 - minimisation of carbon emissions
 - cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a pole saw, including safety procedures
- Workplace risks and hazards associated with cutting materials with a pole saw
- Procedures for using energy effectively and efficiently
- Cutting procedures for cutting at a distance
- Methods for assessing condition of pole saw chain
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault-finding techniques to unblock materials from machinery
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently operate a pole saw in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to operating a pole saw
- following organisational policies and procedures relevant to operating a pole saw
- identifying and correct use of personal protective equipment for the use of pole saw
- identifying workplace risks and hazards associated with cutting materials with a pole saw and take appropriate action

- identify limitations
- cutting a range of wood or wood-related products at a distance requiring the use of a pole saw in line with the work plan and within prescribed organisational tolerances
- procedures for pole saw lock-out
- maintaining a pole saw

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Material includes:

- wood
- wood-related products

Cutting must include:

- cutting wood or wood-related products at a distance requiring the use of a pole saw

Equipment must include:

- procedures for pole saw lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine
- pole saws
- specific safety attire
- maintenance tools and equipment

Pre start-up checks are conducted to ensure:

- equipment has been set up correctly
- equipment is operating to optimum

performance

- systems are performing accurately

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening and questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

OHS requirements:

- are to be in line with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - personal protective equipment (PPE) and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - techniques for manual handling, including shifting, lifting and carrying
 - vibration and engine heat issues associated with prolonged use
 - ergonomic requirements relating to issues, such as vibration and engine heat associated with prolonged use

Environmental conditions may include:

- work hazards
- obstacles
- location of blockage
- access to the required area of machinery

Environmental requirements

- legislation

may include:

- organisational policies and procedures
- workplace practices

Pole saw:

- is to include:
 - mechanised saw at the end of a long extension pole from the bottom of the pole
- may also include:
 - manual saws
 - non-mechanised saws

Job specifications include:

- OHS requirements
- environmental requirements
- legislative requirements
- organisational requirements

Workplace procedures may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines

Clearing may include:

- redirecting materials for energy recovery
- recycling waste materials

Records and reports:

- may include:
 - inspection information
 - storage locations
 - quality outcomes

- hazards
- incidents
- equipment malfunctions
- may be:
 - manual
 - computer-based system
 - other appropriate organisational communication system

Dealing with may include:

- recycling chain and other components that need replacing
- re-using chain and other components that need replacing
- sending chain and other components that need replacing to landfill

Components may include:

- conveyors
- chains
- roller drums
- pulleys

FPICOT2241 Apply wood and timber product knowledge

Modification History

Version	Code and title of equivalent unit of competency
2.0	Title corrected. No other changes
1.0	No equivalent unit

Unit Descriptor

Unit descriptor This unit describes the outcomes required to apply wood and timber product knowledge in the workplace and promote the benefits of wood and timber products to a range of customers and other stakeholders. It involves identifying products and providing accurate information to customers about products.

Application of the Unit

Application of the unit The unit applies in a variety of work settings, including warehousing and logistics and wholesale and retail sales.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit, however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

- | | |
|---|--|
| <p>1. Develop knowledge of wood and timber products</p> | <p>1.1 Information sources for wood and timber products are identified and evaluated for reliability, validity and currency in line with organisational policies and procedures</p> <p>1.2 Wood and timber product certification bodies, schemes and their roles are researched</p> <p>1.3 Properties of wood and timber are identified</p> <p>1.4 Main features of timber products are identified</p> <p>1.5 Differences between imported wood and timber products and Australian wood and timber products are explored and clarified with relevant personnel</p> |
| <p>2. Relate wood and timber product knowledge to own workplace</p> | <p>2.1 Appropriate work/occupational health and safety (WHS/OHS), environmental and organisational policies and procedures relevant to applying wood and timber product knowledge are identified and followed</p> <p>2.2 Production process is identified and reviewed</p> <p>2.3 Advice is sought from supervisors and colleagues about current wood and timber product issues</p> <p>2.4 Common wood and timber treatment methods, preservatives and exposure hazards are identified and reviewed</p> <p>2.5 Organisation's position within the forest and forest products industry is identified</p> <p>2.6 Timber coatings and finishes are matched to a specific use</p> <p>2.7 Currency of wood and timber product knowledge is maintained</p> |
| <p>3. Promote wood and timber products</p> | <p>3.1 Characteristics of timber are promoted to stakeholders according to organisational procedures</p> |

ELEMENT**PERFORMANCE CRITERIA**

3.2 Information is provided to *stakeholders* about wood and timber products and their respective *advantages* in response to requests and questions and according to organisational procedures

3.3 Advice is given on *appropriate timber(s)* for specific *end uses*

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Communication and interpersonal skills to:
 - interact appropriately with colleagues and others in the workplace
 - source information on wood and timber products
 - communicate the features and characteristics of timber products to stakeholders
- Literacy skills to accurately locate, record and report information
- Problem-solving skills to establish opportunities for access to current information about wood and timber products
- Technical skills to use relevant technology to source information on wood and timber products

Required knowledge

- Organisational and site standards, requirements, policies and procedures relevant to sourcing and providing information on wood and timber products
- Established organisational communication channels and protocols
- Common timber species, their appearance, characteristics, origin and uses
- Life cycle of forests and forest products
- Methods, preservatives and exposure hazards relating to manufactured timber: engineered products, laminated veneer lumber (LVL), medium density fibreboard (MDF), plywood, and particle board
- Key features of a range of manufacturer product literature
- Certification and chain of custody schemes
- Timber grades and grading
- Wood preservatives and relevant regulations
- Problem identification and resolution strategies
- Procedures for recording and reporting workplace information
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can develop knowledge of wood and timber products and promote those products in the workplace.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to applying wood and timber product knowledge
- following organisational policies and procedures relevant to applying and communicating wood and timber product knowledge
- knowledge of products applicable to enterprise requirements
- benefits of common wood and timber types for different end uses
- suitable species and product types for a range of wood and timber applications
- ability to provide advice regarding wood and timber products to stakeholders.

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information sources may include:

- Australian standards
- National Construction Code
- manufacturer and supplier websites and literature
- industry organisation websites
- are to be in line with applicable commonwealth,

Organisational policies and

procedures:

state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- the environment
- relevant industry codes of practice
- organisational and site guidelines relating to developing and applying product knowledge
- policies and procedures relating to own role and responsibility
- procedure manuals
- quality and continuous improvement processes and standards
- recording and reporting requirements

Certification bodies and schemes may include:

- Australian Forestry Standard (AFS)
- Australian standards for forest management and chain of custody
- Forest Stewardship Council (FSC)
- environmental management systems
- Programme for the Endorsement of Forest Certification (PEFC)
- Australian Wood Packaging Certification Scheme

Properties of wood and timber may include

- durability
- density
- sawing orientation
- strength group
- shrinkage
- joint strength
- lyctus susceptibility
- fire rating
- hardness

Main features may include:

- carbon sequestration, capture and storage
- sustainability and renewability
- low energy/emissions
- cost to produce

Timber products may include:

- furniture
- paper products
- packaging
- timber
- wood panel products (plywood, MDF, particleboard)
- sawn timber
- round timber

- treated timber
 - glue laminated timber
 - wood composites
 - biofuels
- Relevant personnel** may include:
- supervisors
 - colleagues
 - industry associations
 - suppliers
- WHS/OHS requirements:**
- are to be in line with commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - safety equipment, including personal protective equipment and clothing
 - first-aid equipment
 - fire-fighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - manual handling, including shifting, lifting and carrying
- Environmental requirements** may include:
- organisational policies and procedures
 - workplace practices
 - sustainability and environmental management requirements, including waste minimisation and disposal, recycling and reuse guidelines
 - energy efficiency measures
- Production process** may include:
- sawmilling
 - preservation
 - panel production
 - glue lamination
 - fabrication (trusses)
- Timber coatings and finishes** may include:
- oils
 - paints
 - stains
 - brush or spray-on preservative
 - weather protection
- Maintaining currency** may include:
- asking appropriate questions of supervisors and managers
 - sourcing information about new wood products to provide to stakeholders

Characteristics may include:

- moisture content
- stability in service
- grade
- colour
- strength to weight ratio
- strength rating
- treated timber
- wood types

Stakeholders may include:

- architects
- builders
- craft workers
- furniture makers
- do-it-yourself (DIY) home handy person
- wood workers

Advantages may include:

- appearance
- certification
- durability
- structural performance and efficiency sustainability:
 - insulation properties
 - environmentally attractive
 - ease of modification
 - thermal performance

Appropriate timber(s) may include:

- hazard level
- wood product type
- sustainability criteria
- timber grading (structural and aesthetic)
- wood species

End uses may include:

- artist works
- craft making
- construction, including framing
- fire rated applications
- flooring
- indoor furniture
- indoor applications, such as doorframe and architraves
- outdoor furniture
- outdoor applications, such as decking, fencing, verandahs, balconies and stairs
- toys

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sharpening	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to hand sharpening knives and blades are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Types of <i>knives and blades</i> to be <i>sharpened</i> are removed from designated machinery</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Sharpening process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess condition and set up knives and assemblies	<p>2.1. <i>Cutting performance</i> of knife is assessed for sharpening requirements</p> <p>2.2. <i>Knife holders</i> are cleaned to enterprise standards</p> <p>2.3. Knife holder is assessed for condition and defects are corrected</p> <p>2.4. Jig setting is selected for knife assembly</p> <p>2.5. Knife assembly is separated and reassembled in line with manufacturer recommendations</p>
3. Sharpen knives and blades	<p>3.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>3.2. Knives or blades are cleaned of excess build-up and inspected for <i>defects</i>, with those unable to be</p>

ELEMENT**PERFORMANCE CRITERIA**

- repaired by sharpening replaced and *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
- 3.3. *Geometry* for knives or blades is selected from manufacturer's instructions
- 3.4. *Manual sharpening equipment* is selected with suitable *attachment* for holding the knife or blade
- 3.5. Sharpening equipment is fed across and into cutting edge to obtain clean cutting edge to conform to geometric requirements without defects and burns
- 3.6. Blade or knife is inspected after sharpening for accuracy, and remaining *burrs* are *honed* to obtain a sharp cutting edge
- 3.7. Sharpening and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; carry out pre-startup checks; efficiently and safely hand sharpen knives and blades
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for hand sharpening knives and blades; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for hand sharpening knives and blades
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

material, the cleaning of plant, tools and equipment, and the minimisation of carbon emissions

- Organisational and site standards, requirements, policies and procedures for hand sharpening knives and blades
- Environmental risks and hazards
- Characteristics of metal, knives and blades
- Sharpening methods and geometry
- Manual sharpening equipment
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently hand sharpen knives and blades in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to hand sharpening knives and blades
- following organisational policies and procedures relevant to hand sharpening knives and blades
- hand sharpening knives and blades in line with the work order and prescribed organisational

EVIDENCE GUIDE

- requirements
- removing and replacing knives and blades from equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the hand sharpening of knives and blades in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Knives and blades may include:

- saw blades

RANGE STATEMENT

- planer blades
- thickneser blades
- spindle moulder knives
- all other production equipment with knives or blades

Sharpening is to include:

- pitch
- depth of cut
- speed the knife or blade is sharpened at to obtain a sharp edge

Equipment is to include:

- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

Communication may include:

- manual sharpening equipment
- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Cutting performance

is how sharp the knife or blade is relevant to the material being cut

Knife holders

are the assemblies that house the knives in a cutting head or similar device

Pre-startup checks

are conducted to ensure:

- machine has been set up correctly
- systems are performing accurately
- machine is operating to optimum performance

Defects may include cutting edges with:

- burrs
- burns
- chips
- splits
- dents

RANGE STATEMENT

Dealing with may include:

- recycling knives or blades unable to be repaired by sharpening
- sending knives or blades unable to be repaired by sharpening to landfill

Geometry

is the pitch and angle that a knife or blade is sharpened at, allowing for the device that the knife or blade is in and the material it will be cutting

Manual sharpening equipment may include:

- files (round, triangular, square and flat)
- honing tools
- saw sets

Attachments may include:

- blade holders with or without clamps
- saw vices

Burrs

are fine raised flaps of metal curling backwards as a result of the sharpening process

Honing:

- involves using a flat emery stone to remove burrs and to achieve a crisp sharp cutting edge

Records and reports may include:

- knife or blade type and size
- inspection and work outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for navigation	<p>1.1.Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to navigating in a remote or trackless areas are identified and followed</p> <p>1.2.<i>Information</i> is gathered and <i>relevant factors</i> are identified and checked with <i>appropriate personnel</i></p> <p>1.3.Suitable <i>maps, equipment</i> and <i>navigation aids</i> are selected and checked for accuracy, currency and operational effectiveness in line with manufacturer recommendations</p> <p>1.4.Faults or errors in maps and equipment are detected and corrected</p> <p>1.5.<i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plan the route	<p>2.1.Route is planned in line with assignment instructions and OHS requirements</p> <p>2.2.Maps are examined to identify relevant <i>symbols, information, navigation data and environmental requirements</i></p> <p>2.3.Accurate grid and magnetic bearings are calculated using maps and equipment in line with assignment instructions</p> <p>2.4.Emergency or contingency exit routes are planned</p>

ELEMENT	PERFORMANCE CRITERIA
3. Conduct navigation	<p>and other <i>risks</i> are planned for</p> <p>2.5. <i>Limitations</i> in planning are specified and assistance is sought in line with organisational requirements</p> <p>3.1. Navigation is undertaken in line with planned route and schedule</p> <p>3.2. Maps are correctly orientated to <i>surroundings</i> in line with planned route</p> <p>3.3. Equipment and navigation aids are used in line with manufacturer recommendations</p> <p>3.4. Alternative routes are navigated to bypass <i>obstacles</i> and improve efficiency of route or course</p> <p>3.5. Impact on the environment as a result of navigation is minimised</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for navigating in remote or trackless areas; record and report workplace information; maintain documentation
- Numeracy skills sufficient to calculate bearings using maps and compass correctly
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures; interpret maps, charts, distances, grid references, relevant symbols, map meaning and line types; estimate resource and equipment requirements; solve problems and bypass obstacles; locate own position on a map

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for navigating in a remote or trackless area
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition

REQUIRED SKILLS AND KNOWLEDGE

on completion of activity

- Organisational and site standards, requirements, policies and procedures for navigating in a remote or trackless areas
- Environmental risks and hazards
- Types of maps and charts, and their uses
- Representation of topographic features on maps and plans
- Common scales used on maps and plans
- Features and use of a compass and factors that affect its accuracy
- Advantages and disadvantages of different map and chart types and sources of error
- Techniques for estimating distance travelled within a particular activity context
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently navigate in a remote or trackless area, demonstrating the correct orientation and use of maps, plans and compass

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to navigating in a remote or

EVIDENCE GUIDE

trackless area

- following organisational policies and procedures relevant to navigating in a remote or trackless area
- selecting, interpreting, and applying maps and other relevant information in written, diagrammatic and verbal form
- using maps, compass and navigation aids to navigate in remote or trackless area, confirming factors affecting the use of navigation equipment
- planning and conducting an efficient navigation, effectively bypassing obstacles within designated timeframes

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements may include:**
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

- Information may relate to:**
- local inhabitants
 - type of terrain or features of the route
 - access and exit routes
 - natural protection or shelter
 - land management and legislative requirements
 - guide books

RANGE STATEMENT

- Relevant factors** may relate to:
- types of terrain and gradient
 - weather conditions
 - obstacles
 - hazards and access to required resources and facilities
 - distance
 - estimated travelling time
 - magnetic bearings
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Maps** may include:
- cadastral and topographic maps
 - charts
 - guide books
 - aerial photographs
 - sketches and cave maps
 - diagrams
- Equipment** may include:
- compass
 - track and survey markers
 - beacons
 - personal protective equipment and clothing
 - global positioning system (GPS) units
- Navigation aids** may include:
- track and creek junctions and crossings
 - survey markers
 - beacons
 - track markers
 - cairns
 - paths
 - signs
 - arrows
 - compass
 - man-made objects or features
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language

RANGE STATEMENT

- Symbols and information** may include:
- use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - grid lines and numbers
 - contour lines
 - magnetic variation
 - scale
 - map legend
 - topographic features
 - markers and beacons
 - water depth
- Navigation data** may include:
- grid reference points
 - grid and magnetic bearings
 - distances
 - estimated travelling times
 - height gain and loss
 - gradient
 - identifiable features
 - exit routes
- Risks** may include:
- weather
 - obstacles
 - availability of resources, such as:
 - water
 - camp sites
 - rest stops
 - type of terrain
 - access and exit routes
 - natural protection or shelter
- Limitations** may relate to:
- job role and responsibilities
 - own competency level
 - industry requirements
 - own understanding of risk identification processes
 - own interpretation of maps
 - legislation
 - regulations and procedures
 - legal responsibilities
 - OHS and environmental requirements
- Surroundings** may include:
- ground/terrain
 - bodies of water

RANGE STATEMENT

Obstacles may include:

- beacons and markers
- natural formations
- landmarks
- man-made features
- thick vegetation
- drops and climbs
- marshes and bogs
- fog
- rivers
- lakes and dams
- tides
- hazards, such as rocks

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------------|--|
| 1. Prepare for weighing | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to weighing loads are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Material acceptable for despatch or delivery is identified and checked with work order</p> <p>1.4. Vehicles delivering or collecting loads are identified, and documents and loads are checked</p> <p>1.5. Load height and stability are checked to make sure they follow regulatory and site requirements</p> <p>1.6. Weighing operations are assessed and checked for safe working conditions, and planned in line with site procedures and environmental requirements</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Check, weigh and record loads | <p>2.1. Weighing operations are conducted in line with work order, and environmental and OHS requirements</p> <p>2.2. Gross and vehicle tare weights are identified or <i>measured</i> in line with regulatory and site procedures</p> <p>2.3. Net weight is correctly calculated and recorded with other required delivery and despatch information</p> <p>2.4. Confirmation of delivery and despatch records is obtained from driver</p> <p>2.5. <i>Documentation</i> is accurately recorded and maintained in line with workplace procedures</p> |
| 3. Direct vehicles for | <p>3.1. Loading and unloading information and instructions</p> |

ELEMENT	PERFORMANCE CRITERIA
loading and unloading	<p>are identified and checked with work order</p> <p>3.2.Potential and existing risks and hazards associated with directing vehicles are identified and controlled</p> <p>3.3.Vehicles are clearly and accurately directed to loading and unloading areas</p> <p>3.4.Despatch and delivery personnel are promptly notified of deliveries requiring loading and unloading</p> <p>3.5.Vehicle movements are monitored to identify presence on site and attend as required to driver needs</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment; safely, efficiently and accurately weigh loads
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for producing weighing loads; locate, interpret and apply workplace information and instructions; record and report workplace information; maintain documentation
- Numeracy skills sufficient to select appropriate mathematical processes to calculate weight and measure dimensions
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for weighing loads
- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for weighing loads
- Environmental risks and hazards

REQUIRED SKILLS AND KNOWLEDGE

- Site compliance requirements regarding vehicle load height, stability and weight
- Functions and operational principles of weighbridges
- Functions of truck scales
- Site layout, including loading and unloading areas
- Full range of material received or supplied
- Relevant site and external packing regulations
- Established communication channels and protocols
- Problem identification and resolution, strategies and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for calculating load weight and measuring dimensions
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can accurately check, weigh and record vehicle loads in line with applicable regulatory, industry and site requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to weighing loads
- following organisational policies and procedures relevant to weighing loads
- applying mathematical procedures to calculate load weight and measure dimensions
- safely and efficiently implementing the correct procedures to weigh loads

EVIDENCE GUIDE

Context of and specific resources for assessment

- clearly and accurately recording and maintaining delivery and despatch documentation
- safely and effectively directing and monitoring vehicles for loading and unloading
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any

relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- details of loads to be weighed, including:
 - companies
 - personnel
 - vehicles delivering or collecting material

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- clients
- colleagues

Organisational requirements may include:

Work order is to include:

Appropriate personnel may include:

RANGE STATEMENT

- Communication** may include:
- line managers
 - verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Measuring** may include:
- weighbridge
 - truck scales
- Documentation** may include:
- weighbridge dockets
 - order dockets
 - tally sheets
 - delivery records

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Identify and select correct sketch or drawing | 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to preparing and interpreting <i>sketches and drawings</i> are identified and followed
1.2. Sketches or drawings are <i>obtained</i> and confirmed in line with job requirements and site procedures
1.3. Notes and sketches or drawings are interpreted, <i>checked</i> and validated for correct application and omissions are determined in line with site procedures
1.4. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Interpret sketch or drawing detail | 2.1. Sketches or drawing <i>features</i> are accurately identified and <i>interpreted</i> to provide a three-dimensional picture of components, assemblies or structures
2.2. Sketches or drawings are used to orientate and fit components or assemblies as required
2.3. Dimensions and tolerances are interpreted to correctly measure, select, mark or set up items or equipment
2.4. Areas of insufficient detail are identified and reported in line with site procedures |
| 3. Prepare sketch or drawing | 3.1. Items to be drawn are identified to ensure clear communication of requirements in line with site procedures
3.2. Drawing views are selected to present required information with minimal drawing complexity in line |

ELEMENT**PERFORMANCE CRITERIA**

- with site standards
- 3.3. Sketches or drawings are correctly and clearly *drawn* in line with customer expectations, site and industry conventions and standards
- 3.4. Sketch and drawing preparation and interpretation activities are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment; interpret the detail and features of sketches or drawings; use sketches and drawings to measure, select, mark or set up production requirements
- Communication skills sufficient to interpret and convey information in written, sketch or verbal form; use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; identify omissions and areas of insufficient detail; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing and interpreting sketches and drawings
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for preparing and interpreting sketches and drawings
- Environmental risks and hazards
- Problem identification and resolution strategies, including methods for identifying omissions or areas of insufficient detail in sketches and drawings
- Types of tools and equipment, and procedures for their safe use and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- Drawing systems and conventions, including computerised design where appropriate
- Standard industry and site conventions for views, notes, dimensions and tolerances
- Types of drawings and sketches and dimensioning systems
- Procedures for recording, reporting and maintaining workplace records and information
- Established communication channels and protocols

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently identify, select and interpret sketches and drawings following industry and site conventions

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to preparing and interpreting sketches and drawings
- following organisational policies and procedures relevant to preparing and interpreting sketches and drawings
- communicating with others in the work area to convey information relating to sketching and drawing detail and items to be drawn
- interpreting sketch and drawing details to determine material requirements and providing a three-dimensional picture of components, assemblies or structures
- determining areas of insufficient detail or omissions from sketch and drawing detail

EVIDENCE GUIDE

- Context of and specific resources for assessment**
- preparing a sketch or drawing that correctly represents intended items and follows industry and site conventions
 - Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Sketches and drawings may:

- be computer-assisted, freehand or completed with simple drawing instruments
- present one, two or three projections
- involve timber, assemblies, structures and hardware items within the individual's field of work and with which the individual is familiar
- be used as a basis for selecting, preparing or assembling components or products

Obtained may be from:

- order documentation
- file systems
- local sources

Checked may include:

- pictorially checking to present all necessary items

RANGE STATEMENT

Communication may relate to:

- drawing version
- dates
- application of the drawing or sketch
- omissions
- areas of insufficient information

Features may include:

- individual components or items
- base lines
- datum points
- views and projections
- dimensions and tolerances
- instructions and notes
- elementary drawing
- product and production symbols

Interpreted

may be for the purposes of determining:

- material requirements
- areas of insufficient detail or omissions
- item, component, assembly and structure

Drawn may include:

- views, placement and projection, correct representation of items
- use of clear lines, dimensions, and tolerances
- notes to fully define requirements

Records and reports may include:

- sketches and drawings
- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

and relate to:

- production details
- computer problems
- interruptions to production

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan dressing process	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to dressing boards using multi-headed machines are identified and followed</p> <p>1.2. Dressed <i>board requirements</i> are identified and selected from work orders, schedules and site procedures in line with job requirements</p> <p>1.3. Available sawn <i>boards are assessed</i> and material removal rates estimated in line with site procedures</p> <p>1.4. <i>Equipment</i> is selected, checked, adjusted where necessary and started in line with manufacturer's recommendations and site procedures</p> <p>1.5. Volume <i>recovery</i> and efficient use of equipment are maximised through equipment use and workplace practices, in line with site standards</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set cutters and dress boards	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Cutters, feeders, guides and conveyors are selected, checked, prepared and set to suit required dressed product dimensions and available sawn material</p> <p>2.3. Dressing operation and processing sizes are planned</p>

ELEMENT	PERFORMANCE CRITERIA
	in line with site procedures
	2.4. Trial boards are dressed, by operating dressing equipment checked and equipment adjusted to correct faults in line with site standards
	2.5. Trial boards that achieve the desired dimensions within tolerances are added to the process
	2.6. Trial boards that do not achieve the desired dimensions within tolerances are disposed of in line with site procedures and environmental requirements
	2.7. Dressing conditions are commenced, regularly assessed and adjusted to ensure product quality and sizing, continuity of supply and processing in line with site standards
	2.8. Dressing feed rate and finish are evaluated to determine board size, material removal, timber species and condition in line with site standards
	2.9. Sub-standard boards are disposed of in line with site procedures and environmental requirements
	2.10. Records and reports are accurately completed, processed and maintained in line with workplace procedures
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Cutter is checked for blunt or damaged condition in line with site procedures
	3.3. Blunt or damaged cutter is identified and dealt with in line with site procedures, manufacturer's recommendations and environmental requirements
	3.4. Machine area is kept clear of dust and debris in line with OHS and environmental requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant cutters, tools, machinery and equipment, including to carry out lock-out procedures; efficiently and safely

REQUIRED SKILLS AND KNOWLEDGE

- plan, set and operate materials and equipment for a board dressing operation
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
 - Literacy skills sufficient to record and report workplace information; maintain documentation
 - Numeracy skills sufficient to apply mathematical processes to measure finished dimensions and profiles with accuracy appropriate to tolerances
 - Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for dressing boards using multi-headed machines
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for dressing boards using multi-headed machines
- Environmental risks and hazards
- Criteria for recycling and re-using trial boards that do not achieve the desired dimensions within tolerances/sub-standard boards
- Using energy effectively and efficiently
- Types of cutters, tools and equipment, and procedures for their safe use and maintenance
- Typical timber defects and dressing problems which require action to be taken
- Industry standard cross section and length dimensions, profiles, tolerances, terminology and their application
- Dressing techniques and material removal rates and quantities relevant to available equipment
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dress boards, and set cutters and maintain equipment in line with site procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to dressing boards using multi-headed machines
- following organisational policies and procedures relevant to dressing boards using multi-headed machines
- planning for, evaluating and maintaining board dressing processes and conditions
- accurately setting, adjusting, operating and maintaining cutters and equipment to suit required dimensions, cutting sequence, feed rates and finish

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

EVIDENCE GUIDE

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth,

RANGE STATEMENT

state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards

RANGE STATEMENT

- recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Board requirements** may relate to:
- profile
 - cross section dimensions
 - lengths and quantities
 - selection
 - ordering of suitable sawn timber sizes
- Boards assessed** may include:
- species
 - size
 - defects
 - moisture content
 - sawn finish
 - type of preservative treatment
- Equipment** may include:
- single or multi-headed machines
 - machines cutting on one side of board only
 - machines cutting two or more sides of board simultaneously
 - machines incorporating grooving or splitting saws
- Recovery:**
- is the volume of timber dressed from a resource compared to the volume of that resource
 - is expressed as a percentage - $\text{sawn timber volume} / \text{initial log volume} \times 100$
 - maximises the value of the resource
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Pre-startup checks** are conducted to ensure:
- machine has been set up correctly

RANGE STATEMENT

- cutters are installed accurately
- machine is operating to optimum performance

Trial boards

are test pieces to trial the setting for the purpose of achieving the desired dimensions within tolerances

Disposing of may include:

- recycling trial boards that do not achieve the desired dimensions within tolerances/sub-standard boards
- re-using trial boards that do not achieve the desired dimensions within tolerances/sub-standard boards
- redirecting trial boards that do not achieve the desired dimensions within tolerances/sub-standard boards for energy recovery

Dressing conditions may relate to:

- feed rate and finish
- board size
- material removal
- timber species and condition
- cross section dimensions and profiles
- adjustments to maintain accurate sizing

Feed rates are to include:

- rate of speed the material is passed through the machine affecting the sharpness of the cutters
- finish of the material
- production output

Records and reports may include:

- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

and may relate to:

- production details
- maintenance details
- breakdowns or equipment faults
- computer problems
- interruptions to production

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

RANGE STATEMENT**Cutter** may include:

- jointing cutter
- saw and/or head

Dealing with may include:

- repairing or sending for repair blunt or damaged cutters
- recycling cutters that cannot be repaired
- sending cutters to landfill

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and cut material to differing lengths and angles using computer programmable optimising equipment. It requires the ability to select and load programs and cutting sequences, assess problems and determine appropriate responses

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT3206A Cut material using high speed optimiser

Application of the Unit

Application of the unit

The unit involves cutting material using a high speed optimiser in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to cutting material using high speed optimiser are identified and followed</p> <p>1.2. <i>Job requirements</i> are obtained from work order or computer download in line with site procedures</p> <p>1.3. <i>Materials</i> suitable for cutting to length and angles are obtained from pre-selected order or identified from available stock</p> <p>1.4. <i>Program requirements</i> are selected and loaded, and machine cycle is checked in line with site procedures</p> <p>1.5. Material cutting patterns and saw setup sequences are identified to enable loading of boards for cutting</p> <p>1.6. <i>Cutting equipment</i> is checked, adjustments made where necessary, and started in line with manufacturer recommendations and site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Operate programmed machinery	<p>2.1. Materials are loaded and machinery is operated in line with planned cutting sequence, specifications and OHS requirements</p> <p>2.2. First board cut after setup is checked for length and angle to site or order tolerances, and setup is adjusted</p>

ELEMENT	PERFORMANCE CRITERIA
	as required
	2.3. Equipment lock-out procedures are applied in line with OHS requirements and site procedures
	2.4. Off-cuts and rejected boards are identified, segregated and <i>disposed of</i> in line with site procedures and environmental requirements
	2.5. <i>Problems</i> are identified, assessed and resolved or promptly reported in line with site procedures
3. Monitor and adjust processing	3.1. Processing is regularly <i>monitored</i> and minor problems are resolved in line with OHS requirements, site procedures and tolerances
	3.2. <i>Equipment is maintained</i> in line with OHS requirements, site procedures and manufacturer recommendations
	3.3. Major problems and equipment faults are promptly reported in line with site procedures
	3.4. Work area is regularly cleared of off-cuts and sawdust in line with site standards, and environmental and OHS requirements
	3.5. Production and quality <i>records and reports</i> are processed in line with site procedures and organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; load and run machinery programs in line with cutting requirements and specifications; visually assess a variety of board samples; safely carry out minor equipment maintenance, including removing and replacing saw blades
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults;

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for cutting material using high speed optimisers
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting material using high speed optimisers
- Environmental risks and hazards
- Criteria for recycling and re-using off-cuts and reject boards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Cutting sequences and patterns
- Standard cross sections, length dimensions and tolerances
- Basic principles governing operation of computer-programmed equipment, including lock-out procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently prepare and undertake cutting processes using computer programmable high speed optimising equipment, and resolve problems and faults in line with site procedures

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to cutting material using high speed optimiser
- following organisational policies and procedures relevant to cutting material using high speed optimiser
- preparing optimising machinery for cutting, including selecting and loading programs
- operating programmed machinery, including maintaining equipment and cutters, and assessing and resolving problems

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related

EVIDENCE GUIDE

conditions (real or simulated) and require evidence of process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and

RANGE STATEMENT

- substances
- manual handling including shifting, lifting and carrying
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Job requirements may include:**
- required quantities
 - sizes
 - lengths
 - angles
 - timber cross sections to be finger jointed

RANGE STATEMENT

- finger joint profiles
 - required/acceptable cleat lengths
 - finished product grades
 - quantities to be produced
 - changeover times
- Materials** may include:
- all products handled by the enterprise
 - timber types, including laminated veneer
 - plywood
 - chipboard
 - MDF
 - dressed timber
 - preservative treated and finger jointed
 - end condition
 - position and size of knots and other faults
 - industry and site standards for allowable wane
 - applicable grading standards
 - visual assessment for timber species and characteristics
- Program requirements** may be selected from a range of available programs or a computer download, identifying and reporting the need for new programs
- Cutting equipment** may include:
- computer-controlled docking
 - optimising and trimming saws to which boards are mechanically fed
 - single or multiple saw positions
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Disposing of** may include:
- recycling off-cuts and reject boards
 - re-using off-cuts and reject boards
 - redirecting off-cuts and reject boards for energy recovery
- Problems** may be minor or major and relate to:

RANGE STATEMENT

- equipment and machinery faults and malfunctions
- programming
- suitability of materials
- loading of programs
- machine cycles
- material cutting patterns
- saw setup sequences
- loading of boards for cutting
- quality of product
- interruptions to production schedule
- processing faults

Monitored may include:

- regular checking dimensions and finish of cut materials
- feed systems
- material flow
- equipment function
- clearance of off-cuts and sawdust around saw

Equipment maintenance may include:

- recognising characteristics of blunt and damaged saws
- removing and replacing saw blades
- reporting equipment faults

Faults may include:

- blunt or damaged cutters
- inadequate supply of materials
- disruption to continuity of flow
- sub-optimal production rate and finish

Records and reports may include:

- equipment logs
- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

and may relate to:

- production details
- maintenance details
- breakdowns or equipment faults
- computer problems
- interruptions to production

and may be:

- manual
- a computer-based system

RANGE STATEMENT

- other appropriate organisational communication system

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------|---|
| 1. Plan production parameters | <p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to setting up, operating and maintaining finger jointing operations are identified and followed</p> <p>1.2. <i>Finger jointing requirements</i> are monitored in line with work orders and site procedures</p> <p>1.3. <i>Schedules</i> are developed and communicated to <i>relevant personnel</i></p> <p>1.4. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Set up jointing operation | <p>2.1. <i>Equipment</i> is checked and adjusted where necessary, and started in line with manufacturer recommendations</p> <p>2.2. Cutters are selected, checked and prepared to suit finger profile and timber cross section in line with site procedures</p> <p>2.3. Trial joints are cut and finger profiles checked in line with site procedures</p> <p>2.4. Trial joints that achieve the desired outcomes are added to the process</p> <p>2.5. Trial boards that do not achieve the desired outcomes are <i>disposed of</i> in line with site procedures</p> |

ELEMENT**PERFORMANCE CRITERIA**

- and environmental requirements
- 2.6. Jointing operation is *prepared* to suit finger profile, timber cross section characteristics and glue requirements
- 2.7. Jointing process is commenced in line with site standards and procedures, and OHS requirements
- 2.8. Trial cleats are machined, joined and tested and *problems* resolved in line with site procedures
- 2.9. Sub-standard joints are disposed of in line with site procedures and environmental requirements
3. Maintain and complete jointing process
- 3.1. Equipment lock-out procedures are applied in line with OHS legislation and site procedures
- 3.2. Routine maintenance of finger jointing equipment is planned and conducted in line with OHS requirements and site procedures
- 3.3. Processing and equipment *faults* are recognised and resolved in line with site procedures
- 3.4. Assistance is provided to maintenance personnel to identify equipment faults and resolve problems in line with site procedures
- 3.5. Finger jointing operations are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely carry out simple grinding and sharpening procedures on cutters; plan and set up finger jointing equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults;

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for setting up, operating and maintaining finger jointing operations
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for setting up, operating and maintaining finger jointing operations
- Environmental risks and hazards
- Criteria for recycling and re-using trial boards that do not achieve the desired outcomes/sub-standard joints
- Equipment lock-out procedures
- Methods used to monitor and schedule production
- Industry standard cross sections, strength and tolerances
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for testing	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to testing the strength of <i>joints</i> are identified and followed</p> <p>1.2. <i>Test</i> specifications and equipment are identified, obtained and <i>checked</i> in line with work orders, site standards and procedures</p> <p>1.3. Test samples are collected, <i>prepared</i> and recorded in line with quality assurance procedures</p> <p>1.4. Potential <i>problems</i> are identified and resolved in line with site procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Test samples	<p>2.1. Samples are tested in line with industry and site procedures</p> <p>2.2. Test results are obtained and interpreted in line with industry and site procedures</p> <p>2.3. Test reports are completed in line with site procedures</p> <p>2.4. Samples are stored in line with customer, test authority and site requirements</p>
3. Complete testing	<p>3.1. Test results are reported and communicated in line with site standards</p>

ELEMENT**PERFORMANCE CRITERIA**

- 3.2. Potential faulty material is *identified* and *controlled* in conjunction with relevant personnel
- 3.3. Identified faults are reported and used to assist identification of production problems
- 3.4. Test sampling process is modified in response to identified problems and production changes
- 3.5. Testing outcomes are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely collect and test samples; operate testing equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to apply mathematical and estimation processes
- Problem solving skills sufficient to identify problems and faults in production processes; demonstrate appropriate response procedures; apply test results to assist production efficiency

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for testing strength of joints
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for testing strength of joints
- Environmental risks and hazards
- Criteria for recycling and re-using faulty material
- Types of testing equipment and procedures for their safe use and maintenance
- Industry and enterprise standard tests and strength specifications

REQUIRED SKILLS AND KNOWLEDGE

- Adhesives and nailed systems
- Typical production problems and resulting joint characteristics
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently test the strength of joints in line with site standards and procedures, and strength specifications

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to testing strength of joints
- following organisational policies and procedures relevant to testing strength of joints
- preparing for testing, including sample collection and identifying any potential problems likely to affect test results

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than

EVIDENCE GUIDE

confirmatory questions, will usually be conducted in an off-site context

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:**Legislative requirements:**

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

- legal
- organisational and site guidelines

RANGE STATEMENT

may include:

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Joints may be:

- glued
- formed with nail plates

Test may include:

- bending test
- wet or dry cleavage chisel test
- block shear test
- nail plate pull out test

Checked may relate to:

- appropriateness and accuracy of equipment
- test specifications, locations and methods

Prepared relates to:

- preparing test sample without adversely affecting sample quality

Problems may include:

- situations likely to affect test results and production processes
- test accuracy
- sample quality
- faulty material
- defects

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

RANGE STATEMENT

Identified may be:

indicated by:

- failed test
- test variations
- disposing of faulty material by:
 - recycling
 - re-using
 - redirecting for energy recovery

Controlled may include:

Records and reports may include:

- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

and may relate to:

- production details
- maintenance details
- breakdowns or equipment faults
- computer problems
- interruptions to production

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan production parameters	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to setting up, operating and maintaining <i>end matching</i> operations are identified and followed</p> <p>1.2. Work order is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Cross sections, grades and quantities of timber requiring rework are monitored</p> <p>1.4. Order requirements including cross sections and end use are monitored</p> <p>1.5. <i>Schedules</i> are developed for end matching operations and details are communicated to relevant personnel</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up end matching operation	<p>2.1. <i>Equipment checks</i> and pre-startup checks are carried out on all end matching processes in line with manufacturer recommendations</p> <p>2.2. Suitable personal protective equipment and clothing are selected, used and maintained</p> <p>2.3. Potential and existing risks and hazards in the work area are identified and controlled</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|----------------------------------|--|
| 3. Maintain end matching process | <p>2.4. Trial joints are cut, end profiles checked, and trial boards joined and tested in line with site procedures</p> <p>2.5. Trial joints that achieve the desired outcomes are added to the process</p> <p>2.6. Trial joints that do not achieve the desired outcomes are <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.7. Faults in end matching operations are identified and adjustments made as required to maintain workflow</p> <p>2.8. Sub-standard joints are disposed of in line with site procedures and environmental requirements</p> <p>3.1. End matching production is monitored and maintained in line with site procedures</p> <p>3.2. Routine <i>maintenance</i> of end matching equipment is planned and conducted in line with maintenance schedules and manufacturer recommendations</p> <p>3.3. Equipment faults are recognised through monitoring equipment operation and finished product, and are corrected or repaired when within own role and competence to do so</p> <p>3.4. Assistance is sought as required to identify equipment faults and resolve problems</p> <p>3.5. Production and workplace records are completed and maintained in line with site procedures</p> |
|----------------------------------|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely perform end matching operations; maintain board production at optimum rate and finish quality
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation; locate, interpret and apply relevant information and specifications in written, diagrammatic or verbal form; interpret technical or grammatical

REQUIRED SKILLS AND KNOWLEDGE

information; apply common industry terminology

- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for setting up, operating and maintaining end matching operations
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for setting up, operating and maintaining end matching operations
- Environmental risks and hazards
- Procedures for recycling and re-using trial joints that do not achieve the desired outcomes/sub-standard joints
- Methods to monitor and schedule end matching production
- Industry cross sections and tolerances
- Operational principles and limitations of end matching equipment
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and develop production schedules, set up and maintain equipment, and monitor end matching

EVIDENCE GUIDE

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>operations to produce finished timber products</p> <p>The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all of the requirements of the elements of this unit and include demonstration of:</p>
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to setting up, operating and maintaining end matching operations • following organisational policies and procedures relevant to setting up, operating and maintaining end matching operations • planning production parameters, including developing and disseminating schedules • setting up, operating and maintaining end matching operations, including maintaining equipment and cutters, and resolving problems
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to follow relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills • Assessment methods must confirm the ability to

EVIDENCE GUIDE

access and correctly interpret and apply the required knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
- fatigue management
- safe forest practices, including required actions relating to forest fire
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

End matching may include:

- timber
- butt joints
- structural joints
- hardware

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management

Schedules may include:

- timber cross sections to be end matched
- end matching profiles
- finished product grades
- quantities to be produced
- changeover times

and may be communicated to:

- docking area
- end matching section
- material handling personnel

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Equipment checks may include:

- checking and installing cutters
- setting feed rates to suit end profile
- timber cross section and characteristics
- setting guides and conveyers to suit timber cross section

Disposing of may include:

- recycling trial joints that do not achieve the desired outcomes/sub-standard joints
- re-using trial joints that do not achieve the desired outcomes/sub-standard joints
- redirecting trial joints that do not achieve the desired outcomes/sub-standard joints for energy recovery

Maintenance of cutters may

- grinding

RANGE STATEMENT

include inspecting:

- sharpening
- set adjustment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Determine required cutting tool dimensions | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sharpening <i>cutting tools</i> are identified and followed</p> <p>1.2. Work order is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Site documentation and drawings are obtained and reviewed to verify <i>cutting tool dimensions</i></p> <p>1.4. Cutter angles are checked to improve efficiency by minimising expended cutting energy in mill operations</p> <p>1.5. Cutting tool condition is checked against required dimensions, angles and finish</p> <p>1.6. Additional cutting processes are assessed and documented in line with workplace procedures</p> |
| 2. Select and set up grinder | <p>2.1. Work is conducted using prescribed safe operating practices and in line with workplace procedures</p> <p>2.2. Suitable personal protective equipment and clothing are used and maintained</p> <p>2.3. Potential and existing risks and hazards in the work area are identified and controlled</p> <p>2.4. <i>Grinder and attachments</i> are selected and <i>set up</i> to suit required operations on cutting tool and final dimensions</p> <p>2.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Sharpen cutting tool	<p>3.1. <i>Grinder operations</i> are conducted efficiently and safely in line with manufacturer recommendations</p> <p>3.2. Grinder is monitored for operational effectiveness and coolant is applied as required in line with manufacturer recommendations</p> <p>3.3. Cutting angles are maintained and cutting edges are ground until nicks, lands and other imperfections are removed in line with workplace procedures</p> <p>3.4. Cutting tool teeth are systematically checked for consistent measurements to specifications</p> <p>3.5. Cutting tool is removed and stored to maintain cutting edges in line with workplace procedures</p> <p>3.6. Cutting tools that cannot be sharpened or are damaged during the process and cannot be repaired are <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.7. Faults, malfunctions and problems are recognised, recorded and reported in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; use safe workplace practices and procedures to sharpen cutting tools; sharpen a range of cutters, routers and tooling to enterprise required surface, finish and texture
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to locate, interpret and apply relevant information and specifications in written, diagrammatic and verbal form; interpret and apply common industry terminology; convey information in written, sketch and verbal form; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults;

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sharpening cutting tools
- Environmental protection requirements, including the safe disposal of waste material, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sharpening cutting tools
- Environmental risks and hazards
- Using energy effectively and efficiently
- Operational principles and limitations of cutting tools, grinders and attachments
- Types of rotary cutting tools
- Alternative grinding processes and equipment for sharpening cutting tools, including wheel selection
- Abrasive wheel technology, including wheel types, safe use and storage, cutting speeds, special applications, selection, specifications and design limitations
- Procedures for determining cutting tool dimensions
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can accurately determine cutting tool dimensions and select and set up appropriate grinding equipment to sharpen cutting tools using safe workplace practices and procedures

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to sharpening cutting tools
- following organisational policies and procedures relevant to sharpening cutting tools
- determining cutting tool dimensions
- selecting and setting up grinder and attachments
- safely sharpening cutting tools

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required

RANGE STATEMENT

- actions relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements may include:**
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Cutting tools may include:**
- cutters
 - profile cutters
 - routers
 - other rotary cutting tools

RANGE STATEMENT

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management

Cutting tool dimensions include:

- diameter
- profiles
- angles
- tolerances

Grinders and attachments may include:

- tool and cutter grinders
- surface grinders
- pedestal or bench grinders
- mounted grinders and other specialist grinding equipment
- slicers
- mincer plates
- chucks
- collets
- clamps
- motorised or non-motorised attachments
- dividing heads
- stationary abrasive wheel dressing attachments
- dial indicators
- templates
- air or manually-operated attachments, such as those used in helical grinding
- drill bit holders
- automatic feed systems
- vices
- resting brackets

Set up may include:

- selecting and mounting grinding wheel on grinder
- dressing grinding wheel to maintain cutting surface and suit cutting tool dimensions
- configuring grinder attachments to suit cutting tool dimensions and profile

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Grinder operations** may include:
- selecting grinding speeds and feeds to suit grinding wheel material and configuration, and cutting tool material
 - adjusting grinder to tool surfaces to ensure material removal remains within grinder and wheel capacities
- Dealing with** may include:
- recycling cutting tools that cannot be sharpened or are damaged during the process and cannot be repaired
 - sending cutting tools that cannot be sharpened or are damaged during the process and cannot be repaired to landfill

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for maintenance	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to maintaining sawdoctoring tools are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Sawdoctoring tools to be reconditioned are removed from the designated machinery</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Maintenance process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Recondition straight edge	<p>2.1. <i>Straight edge</i> damage and wear are assessed in line with site procedures</p> <p>2.2. <i>Grinder</i> or other accepted method is used to remove damage or wear in line with site procedures</p> <p>2.3. Correct work angle for re-surfacing or removal of wear is determined in line with site procedures</p> <p>2.4. Straight edge is clamped at the correct angle to</p>

ELEMENT**PERFORMANCE CRITERIA**

- prevent movement, vibration and slippage during the re-surfacing process
- 2.5. Abrasive wheel or cutting tool is inspected and if required, cleaned or changed to suit work material removal, *tolerance* and *surface texture* requirements
- 2.6. Straight edge is reconditioned to required accuracy and tolerance without being subjected to overheating or methods that cause distortion, and all signs of wear or damage are removed
- 2.7. Straight edge is cleaned and edges deburred in line with site procedures
- 2.8. Sawdoctoring tools distorted during the process are *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
3. Recondition tension gauge
- 3.1. Grinder or other appropriate enterprise method for *reconditioning tension gauges* is selected in line with site procedures
- 3.2. Grinder is set to produce the *radius or circle diameter* required for the tension gauge
- 3.3. Tension gauge is positioned and securely clamped in grinder to ensure chord height is central to gauge length and arc is ground square to the plane of the gauge body
- 3.4. Grinding wheel is inspected, *dressed* and changed to suit work, material and required tolerance
- 3.5. Gauge is reconditioned by grinding to required accuracy and profile until all visible edge and face wear has been removed
- 3.6. Grinding is done at *speeds and feeds* that avoid overheating, distortion and burn marks
- 3.7. Tension gauges distorted during the process are dealt with in line with site procedures, manufacturer recommendations and environmental requirements
- 3.8. Reconditioning process and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely maintain sawdoctoring tools
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for maintaining sawdoctoring tools
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for maintaining sawdoctoring tools
- Environmental risks and hazards
- Using energy effectively and efficiently
- Characteristics of sawdoctoring tools
- Grinding procedures
- Tolerances, speeds and feeds
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently maintain sawdoctoring tools according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to maintaining sawdoctoring tools
- following organisational policies and procedures relevant to maintaining sawdoctoring tools
- maintaining sawdoctoring tools in line with prescribed organisational requirements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks,

EVIDENCE GUIDE

with questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements

RANGE STATEMENT

- Work order** is to include:
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - instructions for the reconditioning of sawdoctoring tools
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** is to include:
- grinders and grinding attachments
 - straight edges
 - feeler gauges
 - templates
 - hand files
 - oil stones
 - vernier callipers
 - micrometers
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Straight edge** may include:
- checking level and flatness of saw blades
 - machine alignment
 - alignment of mechanical parts
 - timber
 - any other surface required to be flat or level
- Grinder** may include:
- bench and pedestal grinders with holding, clamping or profiling attachments

RANGE STATEMENT

- automatic feed
- Tolerance** is the enterprise-accepted curvature of the radius on tension gauges and ratio to perfect flatness and straightness from 0 degrees for both tension gauges and straight edges
- Surface texture:**
- is the measured roughness value of the freshly ground or filed surface on a straight edge or tension gauge
 - of ground or filed surfaces requires a high quality machined surface finish with edges free of any burrs, nicks or dents that may interfere with accuracy of light readings
- Dealing with** may include:
- recycling distorted tools/gauges
 - sending distorted tools/gauges to landfill
- Reconditioning** is to include:
- grinding, machining or filing the straight edge or tension gauge edges to maintain edge straightness and flatness
 - removing all signs of wear from reference surfaces
 - removing all types of distortions from tension gauge and straight edge bodies to achieve required flatness and straightness of tolerances
- Tension gauge** is used to measure tension drop or curvature in wide band and circular saw blades
- Radius or circle diameter** is the arc ground onto the tension gauge suited to the amount of curvature required in the blade
- Dressing** is to include:
- cleaning or shaving the top surface of the grinding wheel to remove the build-up of old sharpening metal and coolant
- Speeds and feeds** is:
- the cutting speed (in m/min or m/sec of the abrasive wheel) at which grinding passes are made across surfaces
 - the amount of material removed in a single pass by the abrasive wheel
- Records and reports** may include:
- product type and size
 - inspection information
 - maintenance outcomes
 - common and recurring faults
 - malfunctions and damage
 - hazards and incidents

RANGE STATEMENT

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Employability skills

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------------|--|
| 1. Prepare for replacement | <ul style="list-style-type: none"> 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to replacing saws, blades and guides are identified and followed 1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i> 1.3. <i>Saws, blades and guides</i> to be <i>replaced</i> are <i>transported</i> to designated machinery in line with site procedures and OHS requirements 1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations 1.5. Replacement process is planned in line with site procedures and environmental requirements 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Replace saws, blades and guides | <ul style="list-style-type: none"> 2.1. <i>Change over procedure</i> is followed in line with OHS requirements and site procedures 2.2. <i>Mechanical lifting aids</i> are used in line with safety and site requirements 2.3. Mechanical and safety <i>components</i> are removed to provide access to saws or blades and guides without damage to components 2.4. Components are removed and temporarily stored in a safe location 2.5. Saw, blade or guide is removed and replacement |

ELEMENT**PERFORMANCE CRITERIA**

- parts are installed in line with manufacturer recommendations and site procedures
- 2.6. Mechanical and safety components are replaced and secured in line with manufacturer recommendations and site procedures
- 2.7. Serviced equipment is checked for correct alignment, position and overall free operational performance
- 2.8. Equipment faults and problems associated with the changing procedure are **recorded and reported** to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely replace saws, blades and guides; efficiently and safely remove, replace, or adjust mechanical components on designated machines and equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for replacing saws, blades and guides
- Environmental protection requirements, including the safe disposal of waste material, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for replacing saws, blades and guides
- Environmental risks and hazards

REQUIRED SKILLS AND KNOWLEDGE

- Using energy effectively and efficiently
- Characteristics of saws, blades and guides
- Removal and replacement procedures
- Equipment components and their positioning and tolerance specifications in relation to other components
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently replace saws, blades and guides in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to replacing saws, blades and guides
- following organisational policies and procedures relevant to replacing saws, blades and guides
- replacing saws, blades and guides in line with the work order and prescribed organisational requirements

Context of and specific resources for

- Competency is to be assessed in the workplace or realistically simulated workplace

EVIDENCE GUIDE

assessment

- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment

EVIDENCE GUIDE

task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards

RANGE STATEMENT

- confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the removal of saws, blades and guides in designated equipment
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Saws, blades and guides** may include:
- circular saws
 - canter or chipper head blades and knives
 - narrow and wide band saw blades
 - guides for various types of sawing machines
- Replacement** is the process of removal and installation of

RANGE STATEMENT

reconditioned or new saws, blades and guides in various types of cutting equipment

Transport is to include:

- mechanical aids, such as mobile trolleys used to convey:
 - saws
 - knives
 - guides
 - tools
- other required equipment to the work area

Equipment is to include:

- spanners, wrenches and sockets for removing parts
- any other equipment used for holding, lifting or shifting mechanical components

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- isolation of the equipment
- removal of the components, saws, blades or guides and the replacement of all these parts

Changeover procedure is to include:

Mechanical lifting aids may include:

- block and chain
- pedestrian-operated crane
- pulley system

Components include:

- mechanical and safety components, such as:
 - electrical motors
 - riving knives
 - access covers
 - saw guards
 - extraction equipment

Records and reports may include:

- product type and size
- inspection information
- maintenance outcomes
- common and recurring faults

RANGE STATEMENT

- malfunctions and damage
- hazards and incidents

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

profiles	<p>preparation for machining of tooth profiles</p> <p>3.2. Setups are performed in line with job requirements and site procedures</p> <p>3.3. Machining procedures are followed to ensure each tooth profile and dimension meets required dimensions and tolerance in line with site procedures and job requirements</p> <p>3.4. Checking procedures are performed on profile surface finish and dimensions to ensure job requirements are met</p> <p>3.5. Sub-standard cutting tools are <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.6. Routine checks and maintenance procedures are conducted on cutting tools in line with manufacturer recommendations and site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; operate equipment and material over the full range of processes for manufacturing cutting tools; machine tool profiles and blanks using safe workplace practices and procedures; machine blanks to technical requirements
- Communication skills sufficient to use appropriate interpersonal techniques and communication methods with colleagues and others
- Literacy skills sufficient to locate, interpret and apply relevant information and specifications in written, diagrammatic and verbal form; interpret and apply common industry terminology; convey information in written, sketch and verbal form; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards,

REQUIRED SKILLS AND KNOWLEDGE

codes of practice and established safe practices relevant to the full range of processes for manufacturing cutting tools

- Environmental protection requirements, including the safe disposal of waste material, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for manufacturing cutting tools
- Operational principles and limitations of relevant machinery and equipment
- Environmental risks and hazards
- Using energy effectively and efficiently
- Machining processes
- Procedures for determining cutting tool dimensions
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manufacture cutting tools demonstrating the correct selection of material and equipment, and determine and perform the necessary processes in machining blanks and profiles

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to manufacturing cutting

EVIDENCE GUIDE

- tools
- following organisational policies and procedures relevant to manufacturing cutting tools
 - safely manufacturing cutting tools that meet industry standards and technical requirements
 - applying communication techniques and safe work practices in the work area
 - interpreting and applying specifications in written, diagrammatic and verbal form
 - applying mathematical procedures, such as estimation and measurement
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements may include:**
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Communication may include:**
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative

RANGE STATEMENT

- language
- use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Work order** may include:
- drawings
 - plans
 - technical diagrams
 - references
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Cutting tools** may include a range of:
- diameters
 - profiles
 - angles
 - tolerances
- Information** may include:
- timber characteristics such as:
 - splits
 - bows
 - knots
 - twists
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
 - equipment data, such as:
 - organisation terminology
 - fault reports
 - consumption reports
 - internal memos
 - production records
 - stock records
 - machine data outputs
 - time sheets
 - accident and incident reports

RANGE STATEMENT

Material

may be selected from stock or procured to minimise wastage and machining operations

Processes may include:

- manufacturing from long blank lengths and are determined in line with:

- available machinery
- materials
- tools
- equipment
- diameters
- widths
- lengths
- angles
- inter-tooth variations

Tolerances may include:**Setups may include:**

- feeds and speeds set appropriate to material, equipment, blank, attachments and tooth profiles
- material temperatures kept within specified limits through appropriate use of machining coolants

Checking procedures may include:

- use of measuring equipment, such as:
 - vernier callipers
 - micrometers
 - rules

Dealing with may include:

- recycling sub-standard cutting tools
- sending sub-standard cutting tools to landfill

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare and itemise materials	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>take off</i> material quantities are identified and followed</p> <p>1.2. <i>Documentation</i> and <i>specifications</i> are obtained and interpreted to determine <i>material types</i> and job requirements</p> <p>1.3. Components to be listed are identified and general <i>detailing and dimensioning systems</i> integrated</p> <p>1.4. Tables for listing are prepared and required items are listed and categorised in line with industry standards</p> <p>1.5. Materials are detailed in <i>lists</i> in line with customer requirements and site procedures</p> <p>1.6. Common industry materials are selected where no specific information is provided and material is not critical to design</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Detail material sizes and quantities	<p>2.1. Physical dimensions for components are read, calculated, scaled or extracted from tables, in line with industry, site and job requirements</p> <p>2.2. Material quantities are estimated in line with site procedures and expressed as industry <i>standard</i></p>

ELEMENT	PERFORMANCE CRITERIA
3. Calculate quantities and prices	<p>lengths or sheet sizes</p> <p>2.3. <i>Wastage</i> is allowed for in estimated quantities</p> <p>2.4. Multiple requirements for identical material are accumulated and total quantities are given</p> <p>2.5. Notes and <i>records</i> are maintained and completed in line with detail of material usage, and cutting and machining requirements</p> <p>3.1. Total requirements for each line item in take off are calculated and documented in line with customer requirements and site procedures</p> <p>3.2. Quantities are expressed in <i>measurement units</i> that match item type, customer requirements and site procedures</p> <p>3.3. Costs are calculated from item rate and presented in line with specific job requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely take off material quantities
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for taking off material quantities
- Environmental protection requirements, including the safe disposal of waste material

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for taking off material quantities
- Environmental risks and hazards
- Using material effectively and efficiently
- Estimating and quantifying
- Products and materials related to take off items
- Pricing arrangements
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently estimate and calculate cost and quantities of take off material

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to taking off material quantities
- following organisational policies and procedures relevant to taking off material quantities
- preparing detail and organising material types in line with organisational requirements
- calculating quantities and costing of take off

EVIDENCE GUIDE

Context of and specific resources for assessment

materials in line with organisational requirements

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

EVIDENCE GUIDE

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Take off** may include:
- timber-based constructed items where designs have been completed and detailed requirements for item dimensions and individual component materials and sizes are provided
- Documentation** may include:
- drawings and drawing notes
 - sketches
 - customer requirements
 - site instructions
 - information from work colleagues
 - other documentation relating to design of timber construction
 - components listing
 - dimensional and detailing data
- Specifications** may include:
- take off requirements
 - purpose

RANGE STATEMENT

- Material types** may include:
- overall design of timber construction
 - panels of common manufactured types and surface treatments
 - sawn timber with a range of finishes
 - laminated timber
 - timber of varying species
 - other common building materials and hardware
- Detailing and dimensioning systems** may be by:
- manual techniques
 - with the aid of suitable computer software, such as computer-based retrieval systems
- Lists:**
- are laid out so that the size, type and end use of materials are separated
 - conform to industry terminology and provide sufficient detail to fully specify the material
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Standards** are to include:
- industry set sizes for timber and their quality levels
- Wastage** may include:
- edge or end trimming
 - scarf losses
 - cutting angle losses
- Records** may include:
- product type and size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- Measurement units** may include:
- lineal metres
 - cubic metres
 - unit numbers

Competency field Common Technical

FPICOT3215B Swage and shape saw blades

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to widen then press into shape through a cold forming process, the cutting points of saw teeth to create a block that has the required hook, back, tangential and radial clearance angles needed to provide clearance in the cut for the saw blade to enable sawing efficiency

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT3215A Swage and shape saw blades

Application of the Unit

Application of the unit

The unit involves swaging and shaping saw blades in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up equipment	<p>1.1.Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to swaging and shaping saw blades are identified and followed</p> <p>1.2.Required <i>swage</i> shape and thickness are acquired from existing <i>saws</i> and relevant <i>information</i></p> <p>1.3.Saw, swage and shaping equipment are set up in line with enterprise requirements</p> <p>1.4.<i>Die</i> or <i>swage clamp/vice</i> shape is checked against the required shape, clearances and <i>kerf</i>, and changed where necessary to suit</p> <p>1.5.Saw is secured in a swage clamp/vice or <i>swager</i> with teeth aligned to the swager or vice shape</p> <p>1.6.Anti-scuffing paste is applied to the areas of the saw that will be swaged</p> <p>1.7.<i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Swage teeth	<p>2.1.<i>Trial</i> swage is completed and swaging setup checked</p> <p>2.2.Successful trial swage is included in the process and unsuccessful trial swage is dealt with in line with site procedures and environmental requirements</p> <p>2.3.Swage shape and thickness are inspected and <i>measuring equipment</i> is used for tangential and</p>

ELEMENT	PERFORMANCE CRITERIA
	radial, clearance and kerf
	2.4.Swaging operation is adjusted in line with manufacturer recommendations and job specifications
	2.5.Dies are checked for wear and adjusted in line with manufacturer recommendations and site procedures
	2.6.Remaining teeth are swaged in line with job specifications
3. Shape teeth	3.1.Excess material resulting from swaging process is filed and shaped
	3.2.Trial <i>shape</i> is completed and tooth <i>tolerances</i> are checked and adjusted where necessary
	3.3.Successful trial shape is included in the process and unsuccessful trial shape is <i>dealt with</i> in line with site procedures and environmental requirements
	3.4.Shape is assessed and adjustments are made to meet site procedures
	3.5.Remaining teeth are shaped in line with job specifications and tooth alignment is checked
	3.6.Swaging process and equipment faults are <i>recorded and reported</i> to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely swage and shape saw blades
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for swaging and shaping saw blades
- Environmental protection requirements, including the safe disposal of waste material, and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for swaging and shaping saw blades
- Environmental risks and hazards
- Saw characteristics
- Swaging and shaping procedures
- Tolerances
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently swage and shape the teeth on band, circular or frame saws in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to swaging and shaping

EVIDENCE GUIDE

- saw blades
- following organisational policies and procedures relevant to swaging and shaping saw blades
 - inspecting kerf and swage block to assess both as part of the setup procedures for swaging and shaping
 - swaging and shaping teeth in line with organisational requirements and specifications
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Swage

is the process of cold forming the upper portion of the tooth to leave a concave but broader tooth point

Saws may include:

- circular saws
- band saws
- gang saws

Information may include:

- organisational terminology
- fault reports
- site records
- manufacturer recommendations

RANGE STATEMENT

- internal memos
- production records
- stock records
- machine data outputs
- accident and incident reports

Die is the eccentric specially hardened rod that is turned against the tooth face under pressure to spread tooth steel sideways

Swage clamp/vice is the mechanical support responsible for setting saw blade height and holding the blade in position during the swaging and shaping processes

Kerf is the width of the uppermost part of a tooth responsible for maintaining clearance for the blade during the sawing process

Swager is the machine or hand-held mechanical item of equipment that produces a swage on the tooth point

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Trial is the process of testing the tooth specifications after it has been swaged

Measuring equipment may include:

- wire gauge
- test bar
- rule
- micrometer
- vernier callipers

Shape is the act of compressing the excess steel formed during swaging to produce the swage block that incorporates the radial and tangential angles

RANGE STATEMENT

Tolerance is the allowable upper limit of width for the swage block

Dealing with may include:

- recycling unsuccessful trials
- sending unsuccessful trials to landfill

Records and reports may include:

- saw type
- size
- inspection information
- maintenance outcomes
- common and recurring faults
- malfunctions and damage
- hazards and incidents

and may be:

- manual
- using a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---------------------------------------|---|
| 1. Inspect and test saw and equipment | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to assessing and maintaining saw performance are identified and followed</p> <p>1.2. Information relating to current and past performance problems is obtained and reviewed to assess process problems</p> <p>1.3. <i>Saw</i> and equipment are observed under a range of operating conditions to determine the extent of the problems</p> <p>1.4. <i>Timber</i> fed through saw is examined to determine potential causes of cutting problem</p> <p>1.5. Saw and equipment are inspected to identify worn, broken and loose components in line with manufacturer instructions and recommendations</p> <p>1.6. <i>Equipment lock-out procedures</i> are applied in line with OHS and workplace procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Assess technical performance | <p>2.1. <i>Technical performance</i> of sawing operation is assessed to identify future improvements in line with site procedures</p> <p>2.2. Technical performance is compared against other equipment to determine possible efficiencies</p> <p>2.3. Options for new equipment are assessed to determine feasibility of improvements in performance</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Rectify saw problems	<p>2.4. Endorsement from appropriate personnel of identified improvements is obtained as required</p> <p>3.1. Potential causes are diagnosed through the occurring problem and its characteristics</p> <p>3.2. Assessed causes are validated by reference to other trades and by operations personnel</p> <p>3.3. Multiple causes are assessed and action is planned, with alternative courses of action canvassed with relevant personnel to identify and agree on preferred option</p> <p>3.4. Selected course of action is implemented and cutting results are re-examined and reviewed</p> <p>3.5. Action and results are communicated to appropriate personnel</p> <p>3.6. Causes of cutting problems and actions taken are accurately recorded and reported in line with site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely assess and maintain saw performance
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for assessing and maintaining saw performance

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for assessing and maintaining saw performance
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Characteristics of saws and related equipment, and causes of problems and solutions
- Assessment and rectification procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently assess and maintain saw performance

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to assessing and maintaining saw performance
- following organisational policies and procedures relevant to assessing and maintaining saw performance

EVIDENCE GUIDE

- assessing saw problems through information gathering, testing and inspecting equipment, and assessing possible causes
 - selecting and implementing the correct course of action to rectify saw problems
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth,

RANGE STATEMENT

state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements may include:

Saws may include:

- individual items of wood cutting machinery, including:
 - band saws
 - circular saws
 - gang saws
 - chippers
 - canters

Timber may include:

- hardwoods
- softwoods
- native
- imported species

RANGE STATEMENT

Equipment lock-out procedures are to include:

- protecting operators and co-workers from accidental injury by isolating the equipment from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Technical performance may relate to:

- rectification methods to solve sawing problems
- methods to improve saw performance
- comparison against other equipment to identify efficiencies
- potential application to other machinery

Causes may include:

- forcing timber through the equipment
- damage from foreign matter
- incorrect operating speeds
- oversized material removal
- incorrect setting of equipment
- poor sharpening or setting of saw blades

Action usually includes:

- reversal
- education relating to the causes or development of alternative strategies

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Records and reports may include:

- equipment type
- size
- inspection information
- maintenance outcomes
- common and recurring faults
- malfunctions and damage
- hazards and incidents

RANGE STATEMENT

and may be:

- manual
- using a computer-based system
- other appropriate organisational communication system

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Cutter may include:

- cutters for individual items of wood cutting machinery, including:
 - routers
 - moulders
 - planers
 - chippers
 - canters

RANGE STATEMENT

Timber may include:

- hardwoods
- softwoods
- native species
- imported species

Equipment lock-out procedures are to include:

- protecting operators and co-workers from accidental injury by isolating the equipment from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Technical performance may relate to:

- rectification methods to solve cutter problems
- methods to improve cutter performance
- comparison against other equipment to identify efficiencies
- potential application to other machinery

Causes may include:

- forcing timber through the equipment
- damage from foreign matter
- incorrect operating speeds
- oversized material removal
- incorrect setting of equipment
- poor sharpening or setting of saw blades

Action usually includes:

- reversal
- education relating to the causes or development of alternative strategies

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Records and reports may include:

- equipment type
- size
- inspection information
- maintenance outcomes

RANGE STATEMENT

- common and recurring faults
- malfunctions and damage
- hazards and incidents

and may be:

- manual
- using a computer-based system
- another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Interpret plans and loading conditions | <p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to the manual preparation of quotes for simple <i>trusses</i> and/or frames and/or floors are identified and followed</p> <p>1.2. Plans and <i>work requirements</i> are identified, interpreted and <i>assessed</i></p> <p>1.3. Drawing views and notes are interpreted and other design requirements and restrictions are identified and followed</p> <p>1.4. Additional information and data is obtained from <i>appropriate personnel</i> and <i>other sources</i></p> <p>1.5. Functional and pictorial images of structure, simple trusses and/or frames and/or floors are created based on work requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p> |
| 2. Undertake manual quote of roof and floor trusses | <p>2.1. Roof truss types are selected to meet work requirements and common industry spacings of trusses and their components are imposed on the plan to define structure</p> |

ELEMENT**PERFORMANCE CRITERIA**

- 2.2. *Layouts*, spacing and sizing of individual structural members are progressively determined in line with work requirements
- 2.3. Quantities for bracing and ancillaries for roof trusses are *calculated* and documented
- 2.4. *Floor truss information* and details are interpreted from plan documentation
- 2.5. Appropriate floor trusses are selected from the range of certified standard designs
- 2.6. Quotation for roof and floor trusses is prepared, checked and recorded in line with workplace procedures
3. Undertake manual detailing of roof and floor trusses
- 3.1. *Design details* are reviewed and revised without compromising truss or structure strength
- 3.2. Structure layout drawings and truss *assembly drawings* are produced in line with work requirements and manufacturing requirements
- 3.3. Component cutting detail is produced in line with manufacturing requirements and schedules
- 3.4. Design records are reviewed for design integrity, completeness and consistency in line with workplace and applicable certifying authority standards
- 3.5. Roof and floor truss *installation package* is assembled in line with workplace procedures and *industry standards*
4. Undertake manual quote and detailing of wall frames
- 4.1. Lengths of wall frames are measured from plans and dimensions calculated appropriate to timber sizes
- 4.2. Quotation for wall frames including costing per unit length is prepared, checked and recorded in line with workplace procedures
- 4.3. Timber type and species for wall frames is selected appropriate to *material* availability and work requirements
- 4.4. Design of wall frames for fabrication is calculated from plans and specifications, and assembly drawings are produced in line with work order and manufacturing requirements

ELEMENT

PERFORMANCE CRITERIA

- 4.5. Component cutting detail is produced in line with manufacturing requirements and schedules
- 4.6. Design records are reviewed for design integrity, completeness and consistency in line with workplace and applicable certifying authority standards
- 4.7. Wall frames installation package is assembled in line with workplace procedures and industry standards
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.
- 11.
- 12.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level required for this unit.

Required skills

- The ability to comply with applicable legislation, regulations, standards, codes of practice and established safe practices and procedures for quoting and interpreting from manufactured timber product plans
- Technical skills sufficient to locate, interpret and apply relevant information and specifications in written, diagrammatic and/or verbal form; to produce realistic quotes and practical designs suitable for manufacture, and to safely quote and detail trusses and frames using manual methods
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; to accurately record and report

REQUIRED SKILLS AND KNOWLEDGE

workplace information and maintain documentation

- Literacy skills sufficient to interpret and apply common industry terminology and convey information in written, sketch and/or verbal form
- Numeracy skills sufficient to select appropriate mathematical processes to calculate dimensions and measure lengths and spans
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for quoting and interpreting from manufactured timber product plans
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for quoting and interpreting from manufactured timber product plans
- Applications of building and structural regulations and site policies and procedures
- Procedures for preparing design, detailing and quotations for trusses and/or frames and/or floors
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment relevant to quoting and interpreting from manufactured timber product plans, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for the use of scientific calculators, scale rules and tables; and for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can accurately interpret plans to accurately quote and detail trusses

EVIDENCE GUIDE

and/or frames and/or floors using manual methods in line with industry and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to quoting and interpreting from manufactured timber product plans
- following organisational policies and procedures relevant to quoting and interpreting from manufactured timber product plans
- applying effective communication techniques and safe work practices in the work area
- interpreting plans, specifications and loading conditions
- quoting and detailing trusses and/or frames and/or floors
- producing realistic estimates and practical designs suitable for manufacture

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to quoting and interpreting from timber manufactured product plans
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

RANGE STATEMENT

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements including waste disposal, recycling and re-use guidelines

RANGE STATEMENT

Trusses may include

- roof trusses
- floor trusses

Work requirements may include:

- loading requirements
- applicable codes
- common industry practices
- specific customer preferences
- transport regulations
- fabricating limitations

Assessment may include

assessment of:

- concentrated loads and externally applied loads (wind, surround structures, common or special building usage)
- requirements for columns, beams and lintels
- dimensions defining geometry and loading of individual trusses and frames

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management
- software support engineers

Other sources may include:

- suppliers
- manufacturers
- architect
- builder
- local council

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Layouts

- of roof trusses are carried out manually (tables and scientific calculator)

Calculations may include:

- quantities of timber for trusses and/or frames and/or floors
- quantities of ancillaries and bracing

RANGE STATEMENT

Floor truss information may include:

- costing of materials and labour
- span
- spacing
- cantilever
- floor loading
- end support

Design details may include:

- timber component species
- type
- cross-section
- grade
- length and cutting angles
- nail plate and other joining hardware sizes
- marking requirements

Assemblies

quoted and detailed may be:

- wooden roof and floor trusses and wall frames and beams for solid brick, brick veneer and timber frame domestic houses and light commercial structures, structural and non structural

Assembly drawing

- details for truss and frame may include design assumptions regarding supporting and tying components

Installation packages may include:

- roof and floor truss assembly drawings, design information, site and certifying authority standards
- wall frame assembly drawings, design information, installation information guides

Industry standards may include:

- Australian standards
- international standards
- nail plate provider standards

Material may include:

- timber of available species and solid or laminated types
- may include timber of available species and solid or laminated types

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select software	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to drawing and detailing trusses or frames using computerised systems are identified and followed</p> <p>1.2. <i>Software</i> options are reviewed and evaluated against specified work requirements</p> <p>1.3. Appropriate software program is selected and referred to for direction</p>
2. Interpret plans and loading conditions	<p>2.1. Plans and work requirements are identified, interpreted and <i>assessed</i></p> <p>2.2. Drawing views and notes are interpreted, and other design requirements and restrictions are identified</p> <p>2.3. Additional information and data are obtained from <i>appropriate personnel</i> and other sources</p> <p>2.4. Functional and pictorial <i>image</i> of <i>structures</i>, trusses or frames is created</p> <p>2.5. Design requirements outside normal software limitations are specified and referred to appropriate personnel</p> <p>2.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
3. Test design options	<p>3.1. Fixed <i>design details</i> are transferred to layout data in</p>

ELEMENT	PERFORMANCE CRITERIA
and select optimum	<p>line with software requirements</p> <p>3.2.Frame or truss types are specified and timber type and species selected in line with material suitability and availability</p> <p>3.3.Common industry spacing of frames, trusses and their components are set to the defined design structure in line with industry standards</p> <p>3.4.Component sizes are fixed to clarify and confirm design options</p> <p>3.5.Layouts, spacing and sizing of individual structural members are progressively selected in line with software requirements</p> <p>3.6.Design details are selected, reviewed and revised in line with work order</p>
4. Produce layouts and cutting requirements	<p>4.1.Design records are reviewed for design integrity, completeness and consistency in line with workplace and applicable certifying authority standards</p> <p>4.2.Structure layout drawings and truss or frame assembly drawings are produced using software in line with workplace and software requirements</p> <p>4.3.Component cutting detail is produced in line with manufacturing requirements and schedules</p> <p>4.4.Installation package is assembled in line with workplace procedures and industry standards</p> <p>4.5.Design records and documentation are completed and maintained in line with workplace procedures</p>
5. Assist in production and construction	<p>5.1.Questions regarding designs and assembly decisions are answered and explained in a clear and concise manner</p> <p>5.2.Effective communication techniques are used to assist and develop production personnel</p> <p>5.3.Alternative materials or sizes for components are provided within the scope of the design and work requirements</p> <p>5.4.Common site problems are discussed and prevention strategies examined and adopted to ensure future site practice meets design requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level required for this unit.

Required skills include:

- Technical skills sufficient to safely and accurately design and detail timber trusses or frames using computerised methods; produce drawings and cutting lists suitable for manufacture; locate, interpret and apply relevant information and specifications in written, diagrammatic and verbal form; interpret and apply common industry terminology; convey information in written, sketch and verbal form
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to select appropriate mathematical and estimation processes
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

Required knowledge includes:

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing standard truss or frame plans and details using computers
- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for producing standard truss or frame plans and details using computers
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Relevant organisational and site standards, requirements, policies and procedures
- Established communication channels and protocols
- Application of building and structural regulations and site policy
- Range, types and uses of computer software
- Common industry terminology for all component types
- Relationship between component loads, supports and spans and component loads, species, type, dimensions and grade
- Industry standard cross section sizes and profiles, length and spacing dimensions
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including

REQUIRED SKILLS AND KNOWLEDGE

- calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently select and use computerised systems to accurately produce and detail simple truss or frame plans, including fabrication and installation requirements in line with industry and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following organisational policies and procedures relevant to producing standard truss or frame plans and details using computers
- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice, including OHS, environmental and organisational policies and procedures, relevant to producing standard truss or frame plans and details using computers
- applying communication techniques and safe work practices in the work area
- detailing trusses or frames using computerised systems and producing drawings and cutting lists suitable for manufacture
- producing computerised drawings, layouts and cutting requirements
- applying mathematical procedures, such as estimation and measurement
- developing and selecting framing layout options and

EVIDENCE GUIDE

Context of and specific resources for assessment

- detailing framing design
- providing assistance in production and construction
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - lifts and cranes, scaffolding, building codes and regulations
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Software** is a commercial package running on suitable computer hardware and producing designs using specific truss and frame assembly hardware requirements
- Assessment** may include:
- for concentrated loads
 - requirements for columns, beams and lintels
 - dimensions defining geometry and loading of individual trusses and frames
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
 - software support engineers
- Image** includes details of:
- load support
 - loading transfer mechanisms

RANGE STATEMENT

- Structures** may include:
- tying positions
 - timber roofs
 - wall frames and floors of solid brick
 - brick veneer and timber frame domestic houses
 - free-standing or attached timber structures, such as pergolas
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Design details** may include:
- timber component species, type, cross section, grade, length and cutting angles, nail plate and other joining hardware sizes and marking requirements
- and may be:
- selected from options on the basis of fabrication feasibility, ease of erection, cost, material availability, customer preference, and site standards
 - revised without compromising truss, frame or structure strength
- Assembly drawing** details may include:
- design assumptions regarding supporting and tying components
- and may be:
- simple wooden roof trusses, floor trusses, wall frames and beams for solid brick, brick veneer and timber frame simple domestic houses and light commercial structures
- Installation package** may include:
- truss and frame assembly drawings
 - detailing information
 - installation information guides
- Explanations** may be provided to:
- certifying authorities and builders

RANGE STATEMENT

Problems may include:

- detailing errors
- fabrication errors
- site errors

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Select software | 1.1. Applicable <i>Occupational Health and Safety (OHS)</i> , environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to drawing and detailing trusses and/or frames and/or floors using computerised systems are identified and followed |
| | 1.2. <i>Software</i> options are reviewed and evaluated against specified <i>work requirements</i> |
| | 1.3. Appropriate software program is selected appropriate to work requirements |
| 2. Interpret plans and loading conditions | 2.1. Plans and work order documentation are obtained and interpreted |
| | 2.2. Plans are interpreted and work requirements specified, <i>assessed</i> and referred to engineers for calculations |
| | 2.3. Additional information and data required to estimate <i>assemblies</i> is obtained from <i>appropriate personnel</i> or <i>other sources</i> |
| | 2.4. Functional and pictorial <i>images</i> of structures, trusses and/or frames and/or floors are created |
| | 2.5. Design requirements outside software limitations are identified and referred to appropriate personnel |

ELEMENT

PERFORMANCE CRITERIA

3. Use computer programs to estimate trusses and/or frames and/or floors
- 2.6. **Communication** with others is established and maintained in line with OHS and organisational requirements
- 3.1. Fixed design details are transferred to layout data in line with software requirements
- 3.2. Truss and/or frame and/or floor types are identified and timber type and species selected in line with material suitability and availability
- 3.3. Design structure is defined by common industry spacing of trusses or frames or floors and their components in line with *industry standards*
- 3.4. Component sizes are fixed to clarify and firm design options
- 3.5. Layouts, spacing and sizing of individual structural members are progressively selected in line with software requirements
- 3.6. Design details are produced in line with software and work order requirements
- 3.7. Design options are selected on the basis of feasibility, ease of erection, cost, material availability, customer preference and site standards
- 3.8. Design details are reviewed and revised in line with site and customer standards without compromising truss, frame or structure strength
4. Prepare quotation
- 4.1. Estimations are *calculated* and quotation is produced in the designated format using recommended software and computer program
- 4.2. Quotation is reviewed and checked for completeness and accuracy in line with organisational requirements
- 4.3. Modifications are made to computer design to meet work order requirements, if required
- 4.4. Computer records are completed and quotation is prepared for presentation in line with workplace procedures
- 5.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to quote and detail trusses and/or frames and/or floors using computerised systems and software and to interpret design and detail of timber trusses and/or frames and/or floors using available materials and meeting the required standards
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to locate, interpret and apply relevant information, industry terminology and specifications in written, diagrammatic and/or verbal form; ability to accurately record and report workplace information and maintain documentation
- Numeracy skills sufficient to select appropriate mathematical and estimation processes
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for estimating trusses and/or frames and/or floors using computerised systems
- Organisational and site standards, requirements, policies and procedures for estimating trusses and/or frames and/or floors using computerised systems
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

material

- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment relevant to quoting and interpreting from computerised timber manufactured product plans and procedures for their use, operation and maintenance
- Procedures for recording, reporting and maintaining workplace information
- Appropriate mathematical procedures for estimation and measurement
- Application of building and structural regulations and site policy
- Range, types and uses of computer programs and software including estimation software
- Common industry terminology for all component types
- Relationship between component loads, supports and spans and component loads, species, type, dimensions and grade
- Industry standard cross-section sizes and profiles, length and spacing dimensions

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can select and use computerised systems to accurately interpret trusses and/or frames and/or floors and prepare a quotation in line with industry and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to the full range of processes for estimating trusses and/or frames and/or floors using computerised systems

EVIDENCE GUIDE

- following organisational policies and procedures relevant to the full range of processes for estimating trusses and/or frames and/or floors using computerised systems
- effective communication techniques and safe work practices in the work area
- interpreting plans, loading conditions and technical information and conveying information in written, sketch and oral form
- using a scientific calculator and appropriate computer software to estimate truss, beam and frame materials and quantities
- producing quotations within designated timeframes
- applying mathematical procedures such as estimation and measurement

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related

EVIDENCE GUIDE

conditions (real or simulated) and require evidence of process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and

RANGE STATEMENT

substances

- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- lifts and cranes, scaffolding, building codes and regulations

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Software

- will be a commercial package running on suitable computer hardware and producing designs using specific trusses and/or frames and/or floors assembly hardware requirements

Work requirements may include:

- loading requirements
- applicable codes

RANGE STATEMENT

- common industry practices
- specific customer preferences
- transport regulations
- fabricating limitations

Assessment may include

assessment of:

- concentrated loads
- dimensions defining geometry and loading of individual trusses and/or frames and/or floors
- drawing views and notes to identify additional design requirements and restrictions

Assemblies may include:

- wooden roof trusses
- floor trusses and wall frames for solid brick, brick veneer and timber frame domestic houses and light commercial structures

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- line management
- software support engineers

Other sources may include:

- suppliers
- manufacturers
- architect
- builder
- local council

Images may include:

details of:

- load support
- loading transfer mechanisms
- tying positions

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Industry standards may include:

- Australian standards

RANGE STATEMENT

Calculations may include:

- international standards
- nail plate provider standards
- quantities of timber for trusses and/or frames and/or floors
- quantities of ancillaries and bracing
- costing of materials and labour

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to establish rehabilitation requirements of tracks, quarries and landings and plan and carry out renovation operations. It also requires the establishment of run-off and drainage channels

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions

This unit replaces FPICOT3221A Rehabilitate tracks, quarries and landings

Application of the Unit

Application of the unit

The unit involves rehabilitating tracks, quarries and landings in a forest environment setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify rehabilitation requirements	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>rehabilitating tracks, quarries and landings</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Relevant information</i> is obtained and reviewed, and restoration and revegetation requirements are identified</p> <p>1.4. Site is <i>inspected</i> and specific rehabilitation requirements are identified</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plan rehabilitation operations	<p>2.1. Site <i>environmental protection measures</i> are followed in line with applicable legislation and regulations</p> <p>2.2. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>2.3. Site hazards are identified, assessed and controlled in line with OHS and site requirements</p> <p>2.4. Sequence of <i>rehabilitation operations</i> is determined</p>

ELEMENT**PERFORMANCE CRITERIA**

- to ensure that time is used efficiently and residual equipment damage is minimised
- 2.5.Rehabilitation operations are checked for safe working conditions and planned in line with OHS, environmental care principles and site procedures
3. Rehabilitate tracks, quarries and landings
- 3.1.Nearby personnel are advised of impending equipment operation in line with OHS requirements and site procedures
- 3.2.Equipment is operated in line with manufacturer recommendations and performance is monitored to ensure efficiency and safety of operations
- 3.3.Materials no longer required and recoverable timber and equipment are identified and *removed* in line with site procedures
- 3.4.Tracks, quarries and landings are *renovated* in line with rehabilitation plan, work order and site procedures
- 3.5.Run-off and drainage channels are established to approximate natural drain lines in line with rehabilitation plan
- 3.6.Renovation outcomes are recorded and reported in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment; recognise common diseases, pests and nutritional deficiencies; rehabilitate tracks, quarries and landings over the required range of site and weather conditions, terrain and restoration requirements
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and bodies/groups external to the organisation
- Literacy skills sufficient to record and report workplace information; maintain documentation; read and interpret written material and complex information, including charts, tables and weather maps

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for rehabilitating tracks, quarries and landings
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for rehabilitating tracks, quarries and landings
- Environmental risks and hazards
- Using material effectively and efficiently
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and effectively establish rehabilitation requirements and plan and carry out the renovation of tracks, quarries and landings within applicable regulatory and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include

EVIDENCE GUIDE

demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to rehabilitating tracks, quarries and landings
- following organisational policies and procedures relevant to rehabilitating tracks, quarries and landings
- establishing restoration and revegetation requirements and planning rehabilitation operations of tracks, quarries and landings
- safely and efficiently using equipment to renovate tracks, quarries and landings and establish run-off drainage channels

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required

RANGE STATEMENT

- actions relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements may include:**
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Rehabilitating tracks, quarries and landings:**
- may be conducted at forest harvesting site after logging is completed
 - includes rehabilitation of both landing and tracks over a range of designs and conditions typical of logging requirements in the local

RANGE STATEMENT

- area
- will be carried out over the full range of operational weather conditions
 - instructions for the rehabilitation of tracks, quarries and landings
- Work order** is to include:
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - managers
 - external authorities
- Relevant information** may include:
- harvesting plans
 - environmental requirements
 - applicable forest practices, codes and management/site instructions
- Inspection** of site includes:
- determining impacts of harvesting or other operations
 - identifying natural water flow/water courses
 - checking for recoverable logs and equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Environmental protection measures** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope

RANGE STATEMENT

- Equipment** may include:
- soil and water protection
 - ground hazards and obstacles
 - wheeled or tracked
- and may be:
- dozer
 - front end loader
 - skidder
 - grader using bucket or blade attachments
- Rehabilitation operations include:**
- returning the environment to its original or near to original condition
 - minimising the impact on the environment through the rehabilitation process
- Removed** may include:
- recycling materials and recoverable timber no longer required
 - re-using materials and recoverable timber no longer required
 - redirecting materials no longer required for energy recovery
- Renovated** may include:
- pulling out and removing construction materials
 - breaking up ramps and constructions
 - filling and ripping surfaces
 - breaking up and burying crushed rock, sand and other stabilising materials
 - spreading and compacting top soil over base materials

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan information and interpretations programs	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to presenting forestry <i>information and interpretations programs</i> are identified and followed</p> <p>1.2. Suitable <i>activities</i> are identified and assessed against existing programs and organisational priorities</p> <p>1.3. Necessary approvals are obtained from <i>appropriate personnel</i> and <i>resources</i> are organised in line with organisational procedures</p> <p>1.4. Promotional material is developed in a format suitable for dissemination to target <i>participants</i> in line with program timeframes</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Conduct information and interpretations programs	<p>2.1. Information and interpretations programs are conducted to meet identified objectives that are suitable to the size and nature of target participants</p> <p>2.2. Particular needs of participants are catered for in the design and delivery of programs in line with organisational procedures</p> <p>2.3. Appropriate presentation <i>methods</i>, equipment and materials are used to enhance participant interest and</p>

ELEMENT	PERFORMANCE CRITERIA
3. Evaluate presentations	<p>involvement</p> <p>2.4. Problems are identified and resolved promptly in line with organisational procedures</p> <p>3.1. Program presentation is monitored and evaluated in line with organisational procedures</p> <p>3.2. Feedback is collected and analysed against program objectives in line with organisational procedures</p> <p>3.3. Materials and format used are evaluated and results documented in line with organisational procedures</p> <p>3.4. Program processes are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use a range of presentation equipment and materials
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others; negotiate and liaise with internal and external bodies and groups; research and present information orally and in writing to a wide range of individuals and groups
- Literacy skills sufficient to record and report workplace information; maintain documentation; collate and assess information against specified criteria; prepare and edit explanatory material for the general public
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for presenting forestry information and interpretations programs
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals, the minimisation of carbon emissions, the cleaning of plant, tools and equipment, and returning the environment to its original or near to original

REQUIRED SKILLS AND KNOWLEDGE

condition on completion of activity

- Organisational and site standards, requirements, policies and procedures for presenting forestry information and interpretations programs
- Environmental risks and hazards
- Criteria for recycling and re-using timber or material with defects or sub-standard timber or material
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Media relations and marketing principles and processes
- Recognition of participant characteristics, including language and literacy and numeracy skills, cultural background, and previous experience
- Appropriate training locations within a workplace
- Computer-based presentation techniques and tools
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently identify suitable activities and deliver information and interpretations programs to a wide range of clients

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or

EVIDENCE GUIDE

territory legislative and regulatory requirements and codes of practice relevant to presenting forestry information and interpretations programs

- following organisational policies and procedures relevant to presenting forestry information and interpretations programs
- identifying suitable activities and delivering information and interpretations programs suitable to participant needs and program objectives
- evaluating and promoting information and interpretations programs and introducing improvements where necessary

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements may include:**
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Information and interpretations programs:**
- aim to enhance the understanding and skills of a range of clients for a range of purposes
 - reflect a wide knowledge of forest growing and management resources and practices
- Activities may include:**
- seminars
 - talks

RANGE STATEMENT

- lectures
 - information in in-house publications
 - exhibitions
 - media releases
 - technology-based training
 - skills-based training
 - marketing and promotional programs
 - senior management representatives
 - client group representatives
 - technical specialists within the organisation
 - internal education
 - training and development staff
 - outside experts
- Appropriate personnel** may include:
- venue
 - equipment
 - materials
 - tools
- Resources** may include:
- people at any level in the organisation who operate within or for the forest
 - people outside the organisation who operate within or for the forest
 - people affected by organisational decisions or actions
 - people to whom the organisation should provide such a service to meet public and social accountability requirements
 - school children
 - people with an interest in the forest
- Participants** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Communication** may include:
- formal or informal
 - on-the-job or off-the-job, and may include incorporation in induction programs and
- Methods** may be:

RANGE STATEMENT

Records and reports may relate to:

- documentation
- training in the use of forest growing and management services and tools
- advertising in newsletters
- briefing sessions and seminars
- leaflets, booklets and 'how to' guides
- computer-based presentations
- technology-based training
- presentation notes
- participant attendance
- venue hire and catering
- equipment
- budget

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to evaluate logs	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>grading and marking</i> logs are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.4. Standards, specifications and lengths of <i>timber products</i> are identified and assessed for potential usage purposes</p> <p>1.5. Log and wood <i>characteristics</i> are checked and logs to be graded and recovered are identified</p> <p>1.6. Log grading and marking operations are checked for <i>safe working conditions</i> and planned in line with site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Evaluate and mark logs	<p>2.1. Grading and marking operations are conducted in line with work order, and environmental and OHS requirements</p> <p>2.2. Log species is identified and <i>assessed</i> for suitability against standard industry specifications</p> <p>2.3. Defects are identified and assessed for suitability against product specifications</p> <p>2.4. Log is evaluated, graded and directed to best end use in line with specifications and site segregation code</p> <p>2.5. Log is clearly and accurately marked for grading or</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete grading and marking of logs	<p><i>cutting</i> in line with site segregation code</p> <p>2.6.Logs that cannot be safely processed by own personal skill are marked and reported in line with site procedures</p> <p>3.1.Logs are <i>measured</i> and data recorded clearly and accurately in line with industry standards</p> <p>3.2.Feedback on grading outcomes is received from appropriate personnel and queries are resolved using suitable interpersonal skills</p> <p>3.3.Grading and marking results are <i>recorded and reported</i> in line with site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to select, use and maintain appropriate tools and equipment; efficiently and safely grade and mark logs for segregation; grade and segregate logs on the basis of species, size and characteristics across the full range required; identify and calculate log defects; optimise recovery to grade
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to select appropriate mathematical processes to accurately measure logs
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grading and marking logs
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for grading and marking logs

REQUIRED SKILLS AND KNOWLEDGE

- Environmental risks and hazards
- Criteria for recycling and re-using timber with defects
- Using material effectively and efficiently
- Appropriate mathematical procedures for estimation and measurement
- Industry standards for log species, size and characteristics across the full range, and defects and length dimensions
- Procedures to grade and mark logs for segregation, including segregation codes
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently evaluate, grade and mark logs for segregation in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to grading and marking logs
- following organisational policies and procedures relevant to grading and marking logs
- safely and efficiently evaluating, grading and marking logs for segregation

EVIDENCE GUIDE

Context of and specific resources for assessment

- estimating and measuring logs and log defects
- identifying requirements for log usage and grade, and determining log grade or potential grade
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- specific grading requirements
- circumference
- weight
- diameter and volume of logs
- cutting and de-peeling logs
- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection

Organisational requirements may include:

Grading and marking may include:

Environmental protection measures may include:

RANGE STATEMENT

- Work order** is to include:
- ground hazards
 - obstacles
 - details of logs to be:
 - evaluated
 - graded
 - marked
- and may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** is limited to:
- log graders
- and may include:
- supervisors
 - clients
 - colleagues
 - managers
- Timber products** may include:
- logs
 - debarked logs
 - poles
 - piles
 - girders
 - veneer
 - graded sawlog
 - fencing products
 - non-graded sawlog
 - pulp
- Characteristics** may include:
- species
 - pipe
 - open pipe
 - discontinuous and irregular shaped pipes
 - loose gum veins
 - gum pockets and rings
 - termites and grubs
 - hearts out of centre
 - brown stain
 - rot
 - punk
 - cork or pith

RANGE STATEMENT

- black borer
 - black heart
 - straight shakes
 - shakes in spiral grain
 - overgrowth and doze pockets
 - small log pipe allowance
 - length
 - non-allowable length defects
- Safe working conditions** will include:
- control of potential and existing risks and hazards
 - ensuring log stability during evaluation, grading and marking processes
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Assessment:**
- is for the purpose of determining the best end use for logs
 - of defects may include determining allowable length defects involving limbs, multiple length defects, burn scars, bumps, swellings, kinks and bends, straight splits, spiral grain, and associated splits
 - of defects in sawlogs may include pipe and determining calculation using aids, including formulas, data tables, and hand-held programmable computers
- Cutting** may include:
- cross cutting to clarify grading decisions
- Measurement may include:**
- using callipers
 - using a measuring tool
- Records and reports** may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--------------------------------|--|
| 1. Plan routine maintenance | <ul style="list-style-type: none"> 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to planning and monitoring <i>equipment maintenance</i> are identified and followed 1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations 1.3. Servicing requirements of all site equipment are reviewed and maintenance schedules prepared 1.4. Tools, equipment and material requirements for maintenance work are determined and organised 1.5. <i>Maintenance procedures</i> are planned, scheduled and communicated to <i>appropriate personnel</i> 1.6. Roles and responsibilities are assigned to personnel in line with individual competence 1.7. Mentoring and training to support the maintenance plan are provided as required to ensure procedures are correctly carried out 1.8. Maintenance processes are <i>planned</i> in line with site procedures and environmental requirements, and modified as required in response to equipment, personnel and site condition changes 1.9. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Monitor equipment operation | <ul style="list-style-type: none"> 2.1. Work is conducted in line with work order, and environmental and OHS requirements 2.2. Site servicing and maintenance records are routinely checked and reviewed for completeness and |

ELEMENT**PERFORMANCE CRITERIA**

- abnormal activity
- 2.3. Stock levels of *routine service items* and minor repair components are maintained to maximise availability and optimum operational performance of equipment
- 2.4. Equipment operation is systematically monitored, operating faults are identified and appropriate *action is taken*
- 2.5. Abnormal operation or frequent and recurring breakdowns are identified and investigated, and maintenance is organised as required
- 2.6. Situations requiring expert advice are identified and specialist assistance is sought in line with site procedures
- 2.7. Equipment condition is routinely reviewed to ensure and maintain efficient operations
3. Facilitate equipment repair
- 3.1. Visual inspection and fault finding procedures are conducted in line with manufacturer recommendations
- 3.2. Faults, malfunctions or problems with equipment are diagnosed and reported in line with site procedures
- 3.3. *Equipment breakdowns are assessed* and *repair option* is selected and organised in line with site procedures
- 3.4. Movement of equipment to suitable repair site is organised in line with site procedures
- 3.5. Repair activity is monitored and modified as required in line with site procedures
- 3.6. Maintenance schedule is periodically reviewed and revised to maintain operational integrity
- 3.7. Equipment that cannot be repaired is *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
- 3.8. Maintenance *records and reports* are completed accurately and maintained in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, equipment and materials; maximise equipment availability and minimise maintenance and repair costs
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation; interpret, apply and convey information in written, diagrammatic and verbal form
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to develop, modify and assign suitable checking and maintenance procedures; identify problems, equipment faults and breakdown causes; arrange appropriate repair options

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and monitoring equipment maintenance
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and monitoring equipment maintenance
- Environmental risks and hazards
- Using energy effectively and efficiently
- Problem identification and resolution strategies, including typical breakdown situations and available options for correction
- Types of tools and equipment, and procedures for their safe use and maintenance
- Range of site equipment and respective technical capabilities and limitations
- Routine maintenance requirements for range of site equipment
- Established communication channels and protocols
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently:

- plan and monitor maintenance requirements of a range of site equipment
- facilitate repairs in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planning and monitoring equipment maintenance
- following organisational policies and procedures relevant to planning and monitoring equipment maintenance
- planning and monitoring equipment operation and establishing a routine maintenance and servicing plan
- efficiently performing or directing maintenance activities and facilitating the repair of equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Equipment** may include:
- sawmilling equipment
- Equipment maintenance:**
- covers stationary and mobile equipment typically used for forest harvesting operations
 - may be performed in a forest or workshop environment
- Environmental protection measures** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
- Maintenance procedures** include:
- visual inspections
 - pre-start checks
 - shutdown checks
 - filling procedures
 - service procedures
 - changing bearings, shafts and pulleys
 - removing and replacing parts or components
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - managers
 - equipment manufacturers
 - service agents
- Plans** include:
- equipment maintenance and repair needs
 - current operational conditions
 - current work patterns

RANGE STATEMENT

Communication may include:

- disposal of contaminants and waste
- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Routine service items may include:

- equipment structural features and attachments
- drive lines
- engine
- transmission
- final drives
- tracks
- wheels and tyres
- winch
- grapple systems
- electronics
- computer and cutting systems
- fuel
- engine oil
- coolant
- brake fluid
- hydraulic fluid
- transmission fluid

Action taken may include:

- stopping equipment immediately
- checking operational concerns in line with seriousness and site standards

Equipment breakdown assessment includes:

- nature
- cause
- seriousness
- likely repair requirements

Repair options

take account of:

- likely repair times
- access to service personnel
- permanency of repairs
- potential for further damage and personal

RANGE STATEMENT

- Dealing with** may include:
- injury
 - equipment demand
 - availability of alternatives
- Records and reports may be:**
- recycling equipment that cannot be repaired
 - sending equipment that cannot be repaired to landfill
 - manual
 - a computer-based system
 - another appropriate organisational communication system

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------|--|
| 1. Prepare for stress-grading | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to mechanically stress-grading timber are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>timber</i> to be <i>stress graded</i> is assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Stress-grading process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Stress grade timber | <p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Spray guns or branding rolls</i> are set up for use in line with site procedures and environmental requirements</p> <p>2.3. <i>Calibration</i> procedure is performed using <i>verification boards</i> and <i>grade thresholds</i> are set in</p> |

ELEMENT**PERFORMANCE CRITERIA**

- line with industry standards and site procedures
- 2.4. Grading process is performed automatically and material flow to the machine is monitored and adjusted
- 2.5. Machinery is monitored to ensure consistent grade marking and that appearance of boards meets industry standards
- 2.6. Samples for *independent testing* are withdrawn and prepared in line with testing procedures
- 2.7. Stress-grading process and equipment faults are *recorded and reported* to the appropriate personnel
3. Conduct operator maintenance
- 3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 3.2. *Photo-electric cells and reflectors* are regularly checked and cleaned
- 3.3. Spray guns or branding rolls are checked and refilled
- 3.4. Mechanical stress grade rollers, auto-feed and load pressure are adjusted and maintained
- 3.5. Stress-grading area is kept clear of dust, shavings and debris in line with OHS requirements and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely mechanically stress grade timber
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for mechanically stress-grading timber
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for mechanically stress-grading timber
- Environmental risks and hazards
- Mechanical stress-grading techniques
- Grading markings and standards
- Methods of visual inspection
- Characteristics of timber
- Stress-grading equipment calibration and grade thresholds
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently mechanically stress grade timber in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to mechanically stress-grading timber
 - following organisational policies and procedures relevant to mechanically stress-grading timber
 - mechanically stress-grading timber in readiness for storage and/or processing
 - setting stress-grading equipment calibrations and grade thresholds
 - conducting operator maintenance on mechanical stress-grading equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements may include:**
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order is to include:**
- instructions for the mechanical stress-grading of material
- and may include:
- type
 - width

RANGE STATEMENT

- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Timber may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- preservative treated timber

Stress-grading includes:

- mechanical methods of testing board strength and durability
- marking and classifying timber to a grade of quality

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

RANGE STATEMENT

Equipment is to include:

- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- mechanical stress-graders or high speed mechanical graders
- spray guns
- branding rolls

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Spray guns and branding rolls

are used to mark timber automatically with grade-related dyes

Calibration

is the setting of the machine to the desired stress grade level using verification boards in line with industry standards

Verification boards

- are used to ensure the calibration is correct
- have been previously assessed as being accurate

Grade thresholds

are the variations between one grade level and another determining if a board is considered in the higher or lower grade

Independent testing

is the process of randomly selecting stress graded boards for independent testing, ensuring that enterprise calibrations and grade thresholds are

RANGE STATEMENT

accurate and that grades follow industry standards

Records and reports may include:

- stress-grading requirements
- product type
- size
- inspection information
- grading and marking outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Photo-electric cells and reflectors are sensory devices that calculate stress levels of boards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan log movement	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to shifting forestry logs using trucks are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type of <i>truck</i>, <i>ancillary equipment</i>, <i>accessories</i> and <i>configuration</i> to be operated are checked for serviceability in line with manufacturer specifications and statutory regulations</p> <p>1.4. Logging sites and <i>logs</i> to be transported are identified from schedules, work orders and harvesting site personnel</p> <p>1.5. Truck loads, transport routes and timing with harvesting personnel are planned and permits obtained to follow statutory road regulations and road conditions</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Load and unload truck	<p>2.1. Access is identified and manoeuvring approach planned for loading and unloading sites</p> <p>2.2. Condition of roads and tracks are monitored and unexpected ground, water, vegetation or other <i>environmental conditions</i> are reported to appropriate</p>

ELEMENT**PERFORMANCE CRITERIA**

- personnel
- 2.3.Truck and trailer are positioned to maintain load safety and security while loading occurs
 - 2.4.Logs are assessed for weight, diameter, length and grade
 - 2.5.**Log positioning equipment** is placed and checked or reset for planned loading
 - 2.6.Log loading is undertaken to ensure **load build** meets specifications, follows sequence and locations to minimise handling, stabilises the load and meets transport requirements
 - 2.7.Logs are secured with sufficient **securing devices** to satisfy safety, job and regulatory requirements
 - 2.8.Load is inspected after transport for log movement and logs only supported by binders or chains
 - 2.9.Safe unloading sequence is assessed and provisions are made to support logs that cannot be controlled when released
 - 2.10. Binders and chains are released in correct sequence for truck, trailer and load configuration
3. Transport logs
- 3.1.Load is checked and **trimmed** to ensure safe transport with overhang warning devices fitted to follow road regulations
 - 3.2.Engine is started with instruments and gauges monitored to ensure equipment operation is safe, in line with manufacturer specifications and safety rules
 - 3.3.Truck is operated and driven to manufacturer specifications and legislative requirements using **primary and subsidiary controls** as appropriate to conditions
 - 3.4.Logs are transported following planned or modified route with consideration for road surfaces and conditions
 - 3.5.Periodic load safety checks are conducted and load is **re-tensioned** in line with statutory requirements and road conditions
 - 3.6.Truck is monitored using gauges, warning devices and observation of performance to detect operating faults
 - 3.7.Log shifting process and truck operations, including faults, are **recorded and reported**
 - 3.8.Truck is parked to avoid site and equipment hazards, engine is shutdown and truck is secured in line with

ELEMENT	PERFORMANCE CRITERIA
	manufacturer specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely shift forestry logs using trucks
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for shifting forestry logs using trucks
- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for shifting forestry logs using trucks
- Environmental risks and hazards
- Using energy effectively and efficiently
- Applicable fall from heights regulations and compliance requirements
- Log shifting equipment and techniques
- Scheduling and routing procedures
- Truck and equipment capabilities and capacities
- Statutory road regulations
- Log loading and unloading methods
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently shift forestry logs using trucks in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to shifting forestry logs using trucks
- following organisational policies and procedures relevant to shifting forestry logs using trucks
- shifting forestry logs using trucks for production and output activities in line with enterprise requirements
- coordinating personnel to follow procedures for shifting forestry logs using trucks

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements

EVIDENCE GUIDE

Method of assessment

- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal

Organisational requirements

RANGE STATEMENT

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for equipment allocation and usage
- location
- intended activity to designated personnel

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Truck may include:

- rigid or articulated timber trucks, including:
 - semi-trailers
 - jinkers
 - quad-dogs
 - B doubles
 - two-bay skeletal trucks

Ancillary equipment may include:

- safety fittings
- headache boards
- cab guards

Accessories may include:

- tools
- records

RANGE STATEMENT

- first aid kits
 - fire extinguishers
 - binders
 - chains
 - personal protective equipment
 - truck and trailer combination
- Configuration** is to include:
- Logs** are to include: assessment of:
- diameter range
 - curvature
 - faults
 - length
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Environmental conditions** may include:
- ground growth
 - canopy
 - general forest lean
 - fallen trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
- Log positioning equipment** may include:
- bolsters
 - slippers
 - stanchions
 - chocks
- Load build** is to include:
- positioning of logs on truck so as to avoid:
 - uneven weight distribution
 - instability or uncontrolled collapse of the load during loading or unloading
 - overhang
 - requirements for trailer rigidity
 - turning clearance

RANGE STATEMENT

- projection above stanchions
 - crowning
 - weight distribution on truck and trailer axles
 - contact with bolsters, stanchions and other logs
- Securing devices** are to include:
- chains
 - binders
 - other tensioning devices
- Trimming** is the process of preparing the truck and load for safe transport
- Primary controls** may include:
- power
 - brakes
 - steering
 - speed
 - position
 - load reaction
 - gear selection
- Subsidiary controls** may include:
- differential lock
 - centre tyre inflation (CTI)
 - power dividers
- Re-tensioning** is to include:
- re-tightening of the chains, binders and other tensioning devices
- Records and reports** may include:
- scheduling and coordination outcomes
 - log movement
 - despatch outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

FPICOT3227B Receive and measure logs

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to measure logs for length and diameter, as well as estimate and calculate log weight and volume. The unit includes weighing trucks, and receiving and recording log deliveries

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT3227A Receive and measure logs

Application of the Unit

Application of the unit The unit involves receiving and measuring logs in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Estimate log weights and volumes	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to <i>receiving</i> and <i>measuring logs</i> are identified and followed</p> <p>1.2. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> <p>1.3. Type and quantity of material to be received is inspected and checked for potential hazards, obstructions and spillage in line with site procedures</p> <p>1.4. Length and average diameter of logs are measured</p> <p>1.5. Estimated log weights and volumes are calculated in line with <i>organisation formulas</i></p>
2. Check, estimate and record loads	<p>2.1. Trucks delivering loads are stopped, and <i>documents</i> and delivery records are checked</p> <p>2.2. Load height and stability are checked for compliance with OHS regulations</p> <p>2.3. Log species, size and quality acceptable for delivery are assessed</p> <p>2.4. Weight and volume of each log are calculated and recorded</p> <p>2.5. Processing of documentation and equipment faults are <i>recorded and reported</i> to the <i>appropriate personnel</i></p>

ELEMENT	PERFORMANCE CRITERIA
3. Weigh trucks	<p>3.1. <i>Gross weight</i> is measured using the <i>weighbridge</i> in line with statutory regulations</p> <p>3.2. Truck <i>tare</i> weight is obtained from existing records or need for weighing is noted</p> <p>3.3. Truck tare weight is measured on departure using the weighbridge in line with statutory regulations</p> <p>3.4. <i>Net weight</i> is calculated and recorded with type of logs delivered in line with site requirements</p>
4. Direct trucks for unloading	<p>4.1. Log yard personnel are notified of impending delivery and unloading requirements</p> <p>4.2. Trucks are directed to unloading area in line with log classification</p> <p>4.3. Truck movement is monitored and coordinated to ensure a safe operating environment</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely receive and measure logs
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and maintain information relating to receiving and measuring logs
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for receiving and measuring logs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planing and sanding	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to planing and sanding panels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be <i>planed or sanded</i> are acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Planing or sanding process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plane/sand panels	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Planing or sanding thickness and <i>feed rate</i> are set for optimal recovery of product</p> <p>2.3. Panel is positioned and fed at rate appropriate to the machine speed, capacity, <i>board</i> or <i>veneer</i> panel thickness and condition</p> <p>2.4. <i>Dust extraction</i> equipment is regularly checked and cleaned to avoid blockages</p> <p>2.5. Panels are <i>visually assessed</i> to ensure specified outcome has been achieved</p> <p>2.6. <i>Outfeed</i> is coordinated to ensure efficient <i>recovery</i></p>

ELEMENT	PERFORMANCE CRITERIA
	of planed or sanded material
	2.7. Planing or sanding process and equipment faults are recorded and reported to the appropriate personnel
3. Redistribute material	3.1. Panels are regraded in line with site requirements and industry standards
	3.2. Material is directed and moved to storage or processing operations in line with site requirements
	3.3. Sub-standard material is rejected and disposed of in line with site requirements
	3.4. Work area is cleaned in line with site requirements
4. Conduct operator maintenance	4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	4.2. Planer blades or sanding belts are checked for blunt or damaged condition in line with site procedures
	4.3. Planer blades or sanding belts are removed and replaced in line with manufacturer recommendations
	4.4. Machine area is kept clear of dust, shavings and debris in line with OHS and environmental requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely plane and sand panels
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planing and sanding panels
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for planing and sanding panels
- Environmental risks and hazards
- Procedures for recycling and re-using sub-standard material
- Planing or sanding techniques
- Methods of visual inspection
- Characteristics of timber and veneer
- Distribution processes
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plane and sand panels in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant planing and sanding panels
 - following organisational policies and procedures relevant to planing and sanding panels
 - planing and sanding panels in readiness for application to panel products or for interim storage
 - redistributing material on site using designated equipment
 - conducting operator maintenance on planing and sanding equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- carrying
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order is to include:**
- instructions for planing or sanding boards or veneer panels
- and may include:
- species
 - colour
 - type

RANGE STATEMENT

- width
 - length
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Panel** is to include:
- any manufactured panel product with a timber veneer
 - any solid timber panels (single board or glue joined boards)
- Planing** is the process of dressing solid timber panels to a specified thickness, removing the rough surfaces and any imperfections
- Sanding** is the process of finishing a panel and removing any machine marks or imperfections to an acceptable standard of smoothness or surface texture, which will allow coating
- Equipment** is to include:
- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source
- and may include:
- panel planers or thicknessers
 - surface planers or buzzers
 - drum sanders
 - panel sanders
 - veneer sanders
 - stroke sanders
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- machine has been set up correctly
- systems are performing accurately
- machine is operating to optimum performance

Feed rate is to include:

- rate of speed the board or veneered panel is passed through the planing/sanding machine
- impact on equipment
- finish and production output

Board refers to:

- solid timber panels

Veneer

- is the thin sheet of timber (approximately 0.5 mm thick or to organisational requirement for sliced veneer and varying thickness for rotary) used to cover medium density fibreboard, chipboard, fibreboard, plywood and other manufactured board products with a natural timber coating
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Dust extraction may include:

- machine specific dust extraction systems with collection bags
- hopper-based extraction systems that link all machines to the one extractor source through a series of connected pipes

Visually assessed is to include:

- assessment of boards or veneer boards to determine:
 - thickness
 - finish quality
 - veneer faults

Outfeed

is the process of producing panels from the machining operation and handling them in such a way that prevents damage to the planed or sanded surfaces

Recovery

- is the volume of timber planed or sanded from a resource compared to the volume of that resource

RANGE STATEMENT

Records and reports may include:

- is expressed as a percentage - $\frac{\text{planed/sanded timber volume}}{\text{initial timber volume}} \times 100$
- maximises the value of the resource
- planing or sanding requirements
- product type
- size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Regrading

is the process of visually inspecting panels to re-classify quality and use after planing/sanding has taken effect

On-site movement may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment, such as:
 - fork lifts
 - slings
 - trolley jacks
- gantry cranes
- loaders

assistance with lifting, such as:

- involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

- storage racks
- storage bays
- bins
- stacks

RANGE STATEMENT

- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material
- redirecting sub-standard material for energy recovery

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for stress-grading	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to mechanically stress-grading panels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be <i>stress graded</i> are assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Stress-grading process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Stress grade panels	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Spray guns or branding rolls</i> are set up for use in line with site procedures and environmental requirements</p> <p>2.3. <i>Calibration</i> procedure is performed using <i>verification panels</i> and <i>grade thresholds</i> set in line</p>

ELEMENT	PERFORMANCE CRITERIA
	with industry standards and site procedures
	2.4. Grading process is performed automatically and material flow to the machine is monitored and adjusted
	2.5. Machinery is monitored to ensure consistent grade marking and that appearance on panels meets industry standards
	2.6. Samples for <i>independent testing</i> are withdrawn and prepared in line with testing procedures
	2.7. Stress-grading process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. <i>Photo-electric cells and reflectors</i> are regularly checked and cleaned
	3.3. Spray guns or branding rolls are checked and refilled in line with site procedures
	3.4. Mechanical stress grade rollers, auto-feed and load pressure are adjusted and maintained
	3.5. Stress-grading area is kept clear of dust, shavings and debris in line with OHS and environmental requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently perform calibration procedures; prepare samples for testing
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for mechanically stress-grading panels
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for mechanically stress-grading panels
- Environmental risks and hazards
- Mechanical stress-grading techniques
- Grading markings and standards
- Methods of visual inspection
- Characteristics of panels
- Stress-grading equipment calibration and grade thresholds
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently mechanically stress grade panels in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all, of the requirements of the elements of this unit and include

EVIDENCE GUIDE

competency in this unit

demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to mechanically stress-grading panels
- following organisational policies and procedures relevant to mechanically stress-grading panels
- mechanically stress-grading panels in readiness for storage and/or processing
- setting stress grade equipment calibrations and grade thresholds
- conducting operator maintenance on mechanical stress-grading equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required

RANGE STATEMENT

- actions relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements may include:**
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order is to include:**
- instructions for the mechanical stress-grading of material
- and may include:
- type

RANGE STATEMENT

- width
 - length
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Panels** may include:
- laminated veneer
 - medium density fibreboard
 - chipboard
 - fibreboard
 - plywood
- Stress-grading** includes:
- mechanical methods of testing panel strength and durability
 - marking and classifying panels to a grade of quality
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position

RANGE STATEMENT

Equipment is to include:

- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- mechanical stress graders or high speed mechanical graders
- spray guns
- branding rolls

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Spray guns or branding rolls

are used to mark panels automatically with grade-related dyes

Calibration

is the setting of the machine to the desired stress grade level using verification panels in line with industry standards

Verification panels:

- are used to ensure the calibration is correct
- have been previously assessed as being accurate

Grade thresholds

are the variations between one grade level and another determining if a panel is considered in the higher or lower grade

Independent testing

is the process of randomly selecting stress graded panels for independent testing, ensuring that enterprise calibrations and grade thresholds are

RANGE STATEMENT

accurate and that grades follow industry standards

Records and reports may include:

- stress-grading requirements
- product type
- size
- inspection information
- grading and marking outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system
- other appropriate organisational communication system

Photo-electric cells and reflectors are sensory devices that calculate stress levels of panels

Type and quantity of <i>timber products</i> to be <i>stacked</i> are assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Stacking process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Automatically stack timber products | <p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Stacking machine is set up to produce planned pack sizes in line with manufacturer's specifications</p> <p>2.3. <i>Packs</i> are built using consistent material type, size and thickness</p> <p>2.4. <i>Bearers and protective strips</i> appropriate to pack</p> |

ELEMENT**PERFORMANCE CRITERIA**

- type are checked for consistent thickness and damage, and then placed squarely, evenly and consistently
- 2.5. Stacked material is monitored for grade and quality, with unacceptable components removed and reprocessed
- 2.6. Unacceptable components that cannot be reprocessed are *disposed of* in line with site procedures and environmental requirements
- 2.7. Packs are stacked to correct material count or dimension and checked to be safely stacked in line with site requirements
- 2.8. Packs are *strapped, wrapped and tagged or labelled*
- 2.9. Strapping, wrapping, tagging and labelling waste material is minimised and *dealt with* in line with site procedures and environmental requirements
- 2.10. Stacking process and equipment faults are *recorded and reported* to the appropriate personnel
3. Conduct operator maintenance
- 3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 3.2. Automatic stacking machine mechanisms are checked, maintained and cleaned
- 3.3. Stacking area is kept clear of dust, off-cuts and debris in line with OHS and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate automatic stacking equipment; efficiently and safely build packs
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating automatic stacking equipment
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), and the minimisation of carbon emissions
- Organisational and site standards, requirements, policies and procedures for operating automatic stacking equipment
- Environmental risks and hazards
- Using energy effectively and efficiently
- Automatic stacking techniques
- Procedures for building and stacking packs safely and to requirement
- Grading markings and quality standards
- Pack weight and dimensions
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently operate automatic stacking equipment in line

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Work order is to include:

- instructions for the automatic stacking of material

and may include:

- type
- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Timber products may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber and preservative treated timber
- laminated veneer
- chipboard
- fibreboard, including medium density fibreboard
- plywood

Stacking

is the process of building up a pack of timber products from the ground up, to the specified number of products or pack dimensions

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

RANGE STATEMENT

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- automatic and semi-automatic stacking machines

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks are conducted to ensure:

- equipment has been set up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Packs

are the completed sets of timber or timber products, which have been stacked and strapped to meet work order requirements and are ready for despatch

Bearers and protective strips:

- are used to set the timber products on
- provide spacing where necessary
- provide protection from strapping

Disposing of may include:

- recycling unacceptable components that cannot be reprocessed

RANGE STATEMENT

- Strapping** may include:
- re-using unacceptable components that cannot be reprocessed
 - redirecting unacceptable components that cannot be reprocessed for energy recovery
 - securing bundles with metal or plastic straps
 - tightening and tensioning, using hand-held equipment to prevent slippage, strap breakage and damage to products

Wrapping is the process of placing plastic sheeting over packs of material to protect them from weather and transport damage

- Tagging and labelling** may include:
- client identification
 - destination
 - address
 - contents
 - special instructions
 - handling instructions

- Dealing with** may include:
- recycling strapping, wrapping, tagging and labelling waste material
 - sending strapping, wrapping, tagging and labelling waste material to waste

- Records and reports** may include:
- automatic stacking requirements
 - product type
 - size
 - inspection information
 - grading and marking outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate a steam boiler
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a steam boiler
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a steam boiler
- Environmental risks and hazards
- Using energy effectively and efficiently
- Steam boiler operating procedures
- Characteristics and dangers of steam
- Procedures for assessing, diagnosing and testing boilers
- Startup and shutdown procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently operate a steam boiler in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to operating a steam boiler
 - following organisational policies and procedures relevant to operating a steam boiler
 - starting, operating, monitoring and shutting down a steam boiler in line with statutory requirements and standard operating procedures
 - handing over operation of a steam boiler to other personnel
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred

EVIDENCE GUIDE

to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

instructions for:

- steam generation
- quantity
- time-span

and may include:

- instructions for the environmental monitoring

RANGE STATEMENT

- Appropriate personnel** may include:
- of work and procedures
 - environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Steam** is energy derived from boiling water creating expansion within the boiler and therefore pressure
- Equipment** is to include:
- steam-generating boilers, including:
 - liquid or vapour restricted to water or steam
 - fuel and fuel supply system
 - boiler operations in conjunction with other plant
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Pre-startup checks** are conducted to ensure:
- equipment has been set up correctly
 - systems are performing accurately
 - equipment is operating to optimum performance
- Diagnosis** is to include:
- use of:
- audio
 - visual
 - written information
- together with:
- water quality
 - chemical testing

RANGE STATEMENT

- Boiler house** is normally the isolated room or building where the boiler is located
- Emergency shut down** is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product
- Records and reports** may include:
- fuel efficiency recordings
 - calculations
 - operating logs
 - storage location
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system
- Storage** is to include:
- close down time the boiler is inactive
 - procedures for shutdown

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------------|---|
| 1. Prepare for operation | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to operating a heat plant are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Quantity of <i>energy</i> to be generated is assessed and set for the allocated process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Heat generation is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Operate and monitor heat plant | <p>2.1. Pre-operational safety and <i>pre-startup checks</i> are carried out on equipment in line with statutory requirements, manufacturer recommendations and plant operating procedures</p> <p>2.2. Plant is started and brought safely on line and recent heat plant performance is clearly communicated to other personnel</p> <p>2.3. Continued operation of heat plant is assessed against pre-operational checks, maintenance requirements and operating conditions</p> <p>2.4. Heat plant operation and status are monitored and</p> |

ELEMENT**PERFORMANCE CRITERIA**

- diagnosed* and adjustments conducted to maintain safe and efficient operation
- 2.5. *Emergency shutdown* procedures are followed in case of a fire or likelihood of fire
- 2.6. Fuel efficiency recordings, calculations, operating log, plant operation and equipment faults are *recorded and reported* to the appropriate personnel
3. Shut down and store heat plant
- 3.1. Shutdown and lock-out procedures are followed in line with OHS legislation and statutory regulations
- 3.2. Condition of heat plant is checked and maintenance requirements are recorded and reported
- 3.3. Heat plant is prepared for inspection process, with valves and fittings removed, in line with statutory requirements
- 3.4. Heat plant is cleaned internally and externally in line with statutory and environmental requirements
- 3.5. Mode of *storage* is selected and plant is stored in line with statutory requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate a heat plant
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of

REQUIRED SKILLS AND KNOWLEDGE

processes for operating a heat plant

- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a heat plant
- Environmental risks and hazards
- Using energy effectively and efficiently
- Heat plant operating procedures
- Characteristics and dangers of heat and energy
- Assessing, diagnosing and testing heat plants
- Startup and shutdown procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently operate a heat plant in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to operating a heat plant

EVIDENCE GUIDE

- following organisational policies and procedures relevant to operating a heat plant
 - starting, operating, monitoring and shutting down a heat plant in line with statutory requirements and standard operating procedures
 - handing over operation of a heat plant to other personnel
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for heat generation, quantity and time-span

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients

RANGE STATEMENT

- colleagues
- managers

Energy

is derived from boiling water, creating heat and expansion within the plant and therefore pressure or energy

Equipment is to include:

- energy generating heat plants

and may include:

- thermal oil heating systems
- gas burners
- dust systems, including extraction
- solid fuel systems
- steam generators
- fuel intake
- water intake
- oil flow (pump operation)
- hydraulic systems
- blowing down steam generators

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare blades and knives for sharpening	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to sharpening and aligning <i>blades and knives</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type of blade or knife to be <i>sharpened</i> is removed from the designated machinery</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Sharpening and <i>aligning</i> process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess condition and set up blades or knives and assemblies	<p>2.1. <i>Cutting performance</i> of blade or knife is assessed to determine sharpening requirements</p> <p>2.2. Condition of <i>knife holder</i>, jig and chuck is assessed and defects are corrected</p> <p>2.3. Knife holder is cleaned and secured to the chuck to enterprise standards</p> <p>2.4. Jig type and setting are selected for required blade or</p>

ELEMENT	PERFORMANCE CRITERIA
3. Sharpen blades and knives	<p data-bbox="620 293 762 329">knife setup</p> <p data-bbox="576 344 1286 416">3.1. Pre-startup checks are carried out on equipment in line with site requirements</p> <p data-bbox="576 432 1294 539">3.2. Blades or knives are cleaned of excess build-up and babbitts and inspected for defects, with those unable to be repaired by sharpening replaced</p> <p data-bbox="576 555 1230 618">3.3. Geometry for blades or knives is selected from manufacturer's instructions</p> <p data-bbox="576 633 1238 741">3.4. Grinder is set up with suitable attachment for holding the knife or blade and grinding wheel is examined and dressed</p> <p data-bbox="576 757 1286 819">3.5. Grinding wheel speed and feeds are selected to suit the wheel and the blade or knife</p> <p data-bbox="576 835 1311 943">3.6. Grinding wheel is fed across and into cutting edge to obtain clean cutting edge to conform to geometric requirements without defects and burns</p> <p data-bbox="576 958 1193 1021">3.7. Coolant is applied in line with manufacturer specifications</p> <p data-bbox="576 1037 1286 1144">3.8. Blade or knife is inspected after sharpening for accuracy and remaining burrs are honed to obtain a sharp cutting edge</p> <p data-bbox="576 1160 1294 1290">3.9. Blades and knives that cannot be sharpened or are damaged in the sharpening process are dealt with in line with site procedures, manufacturer recommendations and environmental requirements</p> <p data-bbox="576 1305 1278 1368">3.10. Sharpening and equipment faults are recorded and reported to the appropriate personnel</p>
4. Align blades and knives	<p data-bbox="576 1391 1286 1462">4.1. Babbitts are inspected to assess the requirement for reconditioning</p> <p data-bbox="576 1478 1222 1541">4.2. Babbitt material is heated to required pouring temperature</p> <p data-bbox="576 1556 1302 1664">4.3. Blade or knife is set up in pouring jig to required dimensions and babbitt is poured without excessive material wastage and avoiding cavities and shrinkage</p> <p data-bbox="576 1680 1294 1742">4.4. Assembly is cooled and excess material removed to allow correct positioning in machinery</p> <p data-bbox="576 1758 1294 1865">4.5. Set screws are inspected in line with standard operating procedures, and bent or broken screws are replaced</p> <p data-bbox="576 1881 1294 1944">4.6. Set screws are adjusted to position knife or blade at the correct depth</p> <p data-bbox="576 1960 1302 1986">4.7. Set screws are locked into position to avoid knife or</p>

ELEMENT **PERFORMANCE CRITERIA**

blade movement

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; set up grinder and all attachments to suit knife or blade type; efficiently and safely sharpen blades and knives to enterprise requirements
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sharpening and aligning blades and knives
- Environmental protection requirements, including the safe disposal of waste material, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sharpening and aligning blades and knives
- Environmental risks and hazards
- Characteristics of metal, blades and knives
- Sharpening methods and geometry
- Aligning methods and settings
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently sharpen and align blades and knives in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to sharpening and aligning blades and knives
- following organisational policies and procedures relevant to sharpening and aligning blades and knives
- removing and replacing babbitts and set screws in line with standard operating procedures and machine settings
- pouring babbitts to site procedures and finishing standard
- removing and replacing set screws in line with site procedures and machine requirements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role

RANGE STATEMENT

and responsibility

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Blades and knives may include:

- chipper and canter/reducer knives
- planer and thicknesser blades
- spindle moulder knives
- guillotine blades
- all other types of blades or knives that can be sharpened through a parallel grinding process

Work order is to include:

- instructions for sharpening and aligning blades and knives in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Sharpening

is the angle, depth of cut, and speed that the knife or blade passes over the grinding wheel to obtain a sharp edge and required surface finish

Equipment is to include:

- procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- grinding machines and babbitt making

RANGE STATEMENT

equipment, such as melting pots

Alignment

is the process of setting blades or knives so that all blades and knives sit at the same angle and height in relation to the abrasive wheel

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Cutting performance

is how the knife or blade performs in relation to production expectations

Knife holder

is the assembly that houses the knife when positioned on the machine chuck during sharpening

Pre-startup checks

are conducted to ensure:

- machine has been set up correctly
- systems are performing accurately
- machine is operating to optimum performance

Babbitts

are the spacers that extend from the backs of knives and blades to determine knife extension and position in relation to the disc or knife holder in the machine

Defects may include cutting edges with:

- burrs
- burns
- chips
- splits
- dents

Geometry is to include:

- angle that a knife or blade is sharpened at allowing for the device the knives or blades are in and the material they will be cutting

Grinder attachments are to include:

- grinder mounted tables or blade holders:
 - with or without clamps
 - with or without automatic feed

RANGE STATEMENT

Wheel speed	is the speed at which the grinding wheel rotates - too fast and it may burn the metal, too slow and it may produce a rough finish or grab the knife or blade
Coolant	is used in conjunction with grinding operations to cool the metal blade or knife as it generates heat from the sharpening process
Burrs	<ul style="list-style-type: none">• are thin raised sections of metal that extend from the cutting edge• must be removed through a honing process before the knife or blade commences cutting
Dealing with may include:	<ul style="list-style-type: none">• recycling blades and knives that cannot be sharpened or are damaged in the process and cannot be repaired• sending blades and knives that cannot be sharpened or are damaged in the process and cannot be repaired to waste
Records and reports may include:	<ul style="list-style-type: none">• knife or blade type and size• inspection information• grading and labelling outcomes• storage locations• quality outcomes• hazards• incidents• equipment malfunctions and may be: <ul style="list-style-type: none">• manual• a computer-based system• other appropriate organisational communication system
Reconditioning	is the process of removing, melting and re-pouring babbitt material to the correct width, length and thickness
Pouring temperature	is the temperature at which the molten babbitt metal can be poured into a mould without solidifying at an early stage of the babbitt forming process
Set screws	are the spacers that extend from the backs of knives and blades to determine knife and blade

RANGE STATEMENT

extension and position in relation to the disc or
knife holder in the machine

ELEMENT**PERFORMANCE CRITERIA**

- safe and effective operation
- 2.5. Trial runs are conducted to check machine operation, accuracy and quality of finished work
- 2.6. Final adjustments are made to the CNC programs and equipment in line with workplace procedures
- 2.7. Successful trial runs are included in the process and unsuccessful trial runs are *disposed of* in line with site procedures and environmental requirements
3. Operate machine
- 3.1. *Pre-startup checks* are carried out on equipment in line with site requirements
- 3.2. Material is fed into machine in line with manufacturer's instructions, safe handling procedures and standard workplace operating procedures
- 3.3. Machine is operated in line with its designed capacity and purpose, tooling requirements and manufacturer recommendations
- 3.4. Machine operation is monitored to ensure product quality and *output*
- 3.5. *Waste* quantities are checked and minimised
- 3.6. Items that do not meet quality requirements are repaired or disposed of in line with workplace procedures
- 3.7. Cutting process and equipment faults are *recorded and reported* to the appropriate personnel
4. Conduct operator maintenance
- 4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 4.2. Blades are checked for blunt or damaged condition in line with site procedures
- 4.3. Blades are removed and replaced in line with manufacturer recommendations
- 4.4. Removed blades are *dealt with* in line with site procedures, manufacturer recommendations and environmental requirements
- 4.5. Cutting area is kept clear of dust, off-cuts and debris in line with OHS and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely use CNC sizing machines to cut material
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting material using CNC sizing machines
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting material using CNC sizing machines
- Environmental risks and hazards
- Criteria for recycling and re-using unsuccessful trial runs/items that do not meet quality requirements
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Characteristics of timber, timber products and defects
- Setup and operation of CNC equipment
- Cutting patterns and sequences
- Methods for assessing condition of blades
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut materials using CNC sizing machines according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to cutting material using CNC sizing machines
- following organisational policies and procedures relevant to cutting material using CNC sizing machines
- cutting materials using CNC equipment in line with the work order and within prescribed organisational tolerances
- setting computer programs for the CNC equipment to follow
- conducting operator maintenance on CNC equipment
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Context of and specific resources for assessment

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the cutting and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams, including laminated beams

RANGE STATEMENT

Cutting is to include:

- sawing operations with CNC equipment

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- CNC beam saws
- procedures for lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- CNC double end profiling machines

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

CNC program

is the computer-generated program selected by the operator (sub-programs, parametric performance of CAM functions, downloading and storage of

RANGE STATEMENT

data), which translates into the CNC equipment operating automatically to fulfil its programmed instructions

Machine settings may include:

- measuring and setting equipment to:
 - stops
 - fences
 - angles
 - depths
 - feeds
 - speeds

Disposing of may include:

- recycling unsuccessful trial runs/items that do not meet quality requirements
- re-using unsuccessful trial runs/items that do not meet quality requirements
- redirecting unsuccessful trial runs/items that do not meet quality requirements for energy recovery

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly
- blades are installed accurately
- machinery is operating to optimum performance

Output is to include:

- the speed or rate at which material is cut

Waste may include:

- off-cuts
- shavings
- sawdust

Records and reports may include:

- cutting method
- product type
- size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual

RANGE STATEMENT

- Dealing with** may include:
- computer-based system
 - other appropriate organisational communication system
 - repairing or sending removed blades for repair
 - recycling removed blades that cannot be repaired
 - sending removed blades that cannot be repaired to waste

- Characteristics of timber, timber products and defects
- Setup and operation of CNC equipment
- Cutting patterns and sequences
- Methods for assessing condition of cutting tool
- Industry standard cross sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently machine materials using CNC sizing machines according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to machining material using CNC sizing machines
- following organisational policies and procedures relevant to machining material using CNC sizing machines
- machining materials using CNC equipment in line with the work order and within prescribed organisational tolerances
- setting computer programs for the CNC equipment to follow
- conducting operator maintenance on CNC equipment
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

Context of and specific resources for assessment

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role

RANGE STATEMENT

and responsibility

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the machining and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board

RANGE STATEMENT

- Machining** is to include:
- products
 - coated and/or treated timber products
 - beams, including laminated beams
 - boring
 - routing
 - mortising operations with CNC equipment
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** is to include:
- CNC machining and processing centres, including three axis machining centres
 - procedures for lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source
- and may include:
- multi-tasking machining centres
 - flat-bed routers and mortisers
 - dust extraction equipment
- Machining process** may include:
- selecting and adjusting templates suitable for marking
 - checking profile cutters and finished product
 - selecting and checking necessary adjustments to cutters

RANGE STATEMENT

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

CNC program

is the computer-generated program selected by the operator (sub-programs, parametrics performance of CAM functions, downloading and storage of data), which translates into the CNC equipment operating automatically to fulfil its programmed instructions

Machine settings may include:

- measuring and setting equipment to:
 - stops
 - fences
 - angles
 - depths
 - feeds
 - speeds

Cutting tools may include:

- router bits
- boring or drilling bits
- mortising bits

Jigs may include:

- shaped templates for routing

Disposing of may include:

- recycling unsuccessful trial runs/items that do not meet quality requirements
- re-using unsuccessful trial runs/items that do not meet quality requirements
- redirecting unsuccessful trial runs/items that do not meet quality requirements for energy recovery

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly
- cutting tools are installed accurately
- machinery operates to optimum performance

RANGE STATEMENT

Output is to include:

- the speed or rate at which material is machined

Waste may include:

- off-cuts
- shavings
- sawdust

Records and reports may include:

- machining method
- product type and size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Dealing with may include:

- repairing or sending removed cutting tools for repair
- recycling removed cutting tools that cannot be repaired
- sending removed cutting tools that cannot be repaired to waste

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Monitor stock control | <p>1.1.Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to coordinating <i>stock control</i> procedures are identified and followed</p> <p>1.2.<i>Communication</i> with others is established and maintained in line with OHS requirements</p> <p>1.3.<i>Product group</i> recording is delegated to the <i>appropriate personnel</i></p> <p>1.4.Stock levels are monitored and maintained at optimum level in line with site policies and procedures</p> <p>1.5.Stock re-order <i>cycles</i> are monitored and adjusted to maintain consistent supply</p> <p>1.6.Management <i>inventory</i> reports are analysed and corrective action is taken</p> <p>1.7.Buyers are notified of stock levels in line with site policies and procedures and customer requirements</p> |
| 2. Monitor receipt and despatch of products | <p>2.1.<i>Receipt and despatch</i> of products are delegated to the appropriate personnel</p> <p>2.2.Receipt and despatch procedures including <i>documentation processes</i> are implemented</p> <p>2.3.<i>Product distribution</i> within the site is actioned in line with site procedures and client requirements</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.4. Products received and for despatch are securely stored in the correct location in line with <i>safe handling techniques</i>
	2.5. Anomalies in quantity or quality of products are reported
	2.6. Stock <i>damage and losses</i> are inspected, assessed and reported against loss forecasts, with unacceptable cases investigated
	2.7. Advice is provided about the most appropriate way of <i>dealing with</i> damaged stock
3. Monitor and maintain site security policies	3.1. <i>Site security procedures</i> are monitored and feedback is provided to management
	3.2. Staff are advised of store security procedures in line with site policies and procedures
	3.3. Management are advised of policy development and training requirements for site security

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; implement stock control procedures; use safe handling techniques; assess stock condition
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for coordinating stock control procedures

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for coordinating stock control procedures
- Environmental risks and hazards
- Stock control procedures
- Inventory levels and re-ordering systems
- Site security policies
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Stock control may include:

- variations in product quality
- non-availability of product backup
- recall of products
- emergency withdrawal of products
- stock clear-outs
- stock records on manual or computerised systems
- documented or not documented site policies and procedures
- size of site
- multi-skilling of staff
- loss forecasts
- product range

RANGE STATEMENT

- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Product groups** are the break-up of the product range into distinct common groupings which are matched to job sizing
- Appropriate personnel** may include:
- delegated employees trained (or in training) to undertake stock control
- Cycles** generally refer to re-order processes for renewing stock at financially viable quantities or when products become available from the manufacturing process
- Inventory** generally refers to products available immediately for purchase and despatch
- Receipt and despatch** are to include:
- receiving and despatching products or goods:
- via various forms of transportation
 - through an organised and documented recording and checking system
- Documentation processes** may include:
- receipt and despatch orders
 - product type and size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality and quantity outcomes
 - loss
 - damage
 - hazards
 - incidents
 - equipment malfunctions
- Product distribution** may include:
- the movement of products or goods around a site (with minimal disruption to customer)

RANGE STATEMENT

- activity):
- to a designated storage location
 - for display purposes
- Safe handling techniques** are to include:
- OHS regulations for shifting loads
 - may include the use of:
 - fork lifts, slings, trolley jacks, gantry cranes, elevated work platforms and loaders
 - assistance with lifting, such as involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Damage and losses** may include:
- products or goods damaged during transportation
 - distribution
 - accidents
 - staff error or loss through negligence
 - theft
 - incorrect allocation
- Dealing with** may include:
- recycling damaged stock
 - re-using damaged stock
 - sending damaged stock to waste
- Site security procedures** may include:
- site surveillance
 - store theft
 - staff theft
 - fraudulent credit card transactions
 - site security policies and procedures

FPICOT3237B Produce templates

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to develop and produce templates to suit various production activities associated with static machines and computer numerically controlled (CNC) equipment

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT3237A Produce templates

Application of the Unit

Application of the unit

The unit involves producing templates in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------|---|
| 1. Prepare for production | <p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to producing templates are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>templates</i> to be <i>produced</i> are identified and <i>materials</i> are obtained</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Template production process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Plan template production | <p>2.1. Material for template is selected for appropriate size and <i>characteristics</i></p> <p>2.2. Drawings and related specifications are interpreted in line with template requirements and equipment application</p> <p>2.3. Dimensions are measured and plotted, maintaining correct angles, arcs and curves</p> <p>2.4. Visual inspection and measurements are made to check template dimensions and shape against drawings and specifications</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Produce templates	<p>3.1. Template is constructed using <i>hardware</i> that will not affect operation or use</p> <p>3.2. Template <i>patterns</i> are dated and signed, and notations are made regarding their use</p> <p>3.3. Rejected templates and off-cuts are <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.4. Plans are stored in line with workplace procedures</p> <p>3.5. Template production process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely produce templates
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing templates
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for producing templates
- Environmental risks and hazards
- Using material effectively and efficiently

REQUIRED SKILLS AND KNOWLEDGE

- Characteristics of timber and timber defects
- Templates and their use
- Assembly sequences and dimensions
- Assembly componentry and construction standards
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently produce templates according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to producing templates
- following organisational policies and procedures relevant to producing templates
- producing templates in line with the work order and product requirements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and

EVIDENCE GUIDE

environmental constraints

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination

RANGE STATEMENT

Organisational requirements may include:

- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the production of templates for the work site

and may include:

- type
- size
- length
- angle
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Templates may include:

- devices that assist with the operation of a piece of equipment (CNC or static) to produce shaped, tapered or moulded products

Production may include:

- using plans, dimensions and patterns to produce templates with timber or timber products using adhesives and hardware, made

RANGE STATEMENT

as a proforma which allows the desired shape, taper or mould to be achieved

Material may include:

- native timber species
- imported timber species
- dressed timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard
- other manufactured board products and hardware products

Equipment may include:

- measuring equipment
- patterns
- assembly equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Characteristics may include:

- strength
- direction of grain
- hardness
- wear
- flexibility

Hardware may include:

- nails or screws placed so that they cannot be struck by cutters, or hit or bump the operating parts of the equipment in a way that would affect the outcome of the product

Patterns may include:

- flat metal patterns cut to a shape matching the product requirements
- ply patterns cut to a shape matching the product requirements

Disposing of may include:

- recycling rejected templates and off-cuts
- re-using rejected templates and off-cuts
- redirecting rejected templates and off-cuts for energy recovery

RANGE STATEMENT

Records and reports may include:

- product type and size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

PERFORMANCE CRITERIA

- | | |
|-------------------------|---|
| 1. Prepare for trimming | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to operating a pole saw are identified and followed</p> <p>1.2. <i>Work plan</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>trees</i> to be <i>trimmed</i> are identified and assessed for safe working conditions</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>1.6. Trimming activities are planned in line with site procedures and environmental requirements</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Assess trees | <p>2.1. <i>Environmental conditions</i> are assessed and used to plan the trimming of each tree</p> <p>2.2. Movement and whereabouts of other personnel are monitored and work is modified in line with OHS regulations</p> <p>2.3. Tree, location and stability are assessed for <i>conditions</i> likely to affect safety of trimming activities</p> <p>2.4. Trees unable to be trimmed safely are identified and</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Trim trees	<p>referred to appropriate personnel</p> <p>3.1. Accessible branches and knots are trimmed to specifications in line with maximum height allowances and manufacturer recommendations</p> <p>3.2. <i>Pole saw</i> is operated to trim tree in line with safety regulations and cutting technique is adjusted in response to condition of the tree</p> <p>3.3. Unexpected characteristics of a tree are diagnosed and planning is reviewed</p> <p>3.4. Cut is completed once initiated, minimising <i>splitting</i> and in line with the work plan</p> <p>3.5. Cut branches are <i>cleared</i> from the site in line with standard operating procedures and environmental requirements</p> <p>3.6. Trimming processes and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
4. Conduct operator maintenance	<p>4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2. <i>Chain</i> is checked for blunt or damaged condition</p> <p>4.3. Chain and other components are removed, sharpened, maintained, adjusted and replaced in line with manufacturer recommendations</p> <p>4.4. Chain and other components that need replacing are <i>dealt with</i> in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>4.5. Pole saw setup is assessed and adjusted to suit cutting conditions</p> <p>4.6. Pole saw is kept clear of dust, shavings and debris and checked to make sure it meets relevant standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely trim trees

REQUIRED SKILLS AND KNOWLEDGE

- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a pole saw
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a pole saw, including safety procedures
- Environmental risks and hazards
- Using energy effectively and efficiently
- Characteristics of trees and timber defects
- Trimming procedures for cutting overhead
- Methods for assessing condition of pole saw chain
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must

EVIDENCE GUIDE

be able to provide evidence that they can safely and efficiently operate a pole saw in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to operating a pole saw
- following organisational policies and procedures relevant to operating a pole saw
- trimming trees with a pole saw in line with the work plan and within prescribed organisational tolerances
- conducting operator maintenance on a pole saw
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Context of and specific resources for assessment

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge

EVIDENCE GUIDE

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management

RANGE STATEMENT

- elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work plan is to include:**
- instructions for the trimming and despatch of felled branches from the work site

RANGE STATEMENT

and may include:

- type
- size
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Trees may include:

- native species
- imported species
- plantation trees
- non-plantation trees

Trimming is to include:

- cutting off branches, burls and other small growths at a height requiring the use of a pole saw

Equipment is to include:

- procedures for pole saw lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine

and may include:

- pole saws
- specific safety attire
- maintenance tools and equipment

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Environmental conditions** may include:
- ground growth
 - ground slope
 - ground hazards
 - obstacles
- Conditions** may include:
- location of the tree in determining safety for trimming conditions
 - stability of the tree in determining safety for trimming conditions
- Pole saw** is to include:
- mechanised saw at the end of a long extension pole from the bottom of the pole
- and may also include:
- manual saws
 - non-mechanised saws
- Splitting** is the branch tearing away part of the tree bark beneath the branch, once the branch releases from the result of cutting
- Clearing** may include:
- recycling cut branches
 - redirecting cut branches for energy recovery
- Records and reports** may include:
- tree type
 - size
 - length
 - diameter
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

RANGE STATEMENT

Chain

is the fast moving component surrounding the pole saw blade, containing many linked teeth

Dealing with may include:

- recycling chain and other components that need replacing
- re-using chain and other components that need replacing
- sending chain and other components that need replacing to landfill

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for drawing	<p>1.1. Applicable occupational health and safety (OHS), environmental, legislative and organisational requirements relevant to creating drawings electronically are identified and followed</p> <p>1.2. Types of drawings to be created with CAD systems are identified and clarified with appropriate personnel</p> <p>1.3. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. CAD process is planned in line with site procedures</p> <p>1.5. Communication with others is established and maintained in line with OHS requirements</p>
2. Set up CAD environment	<p>2.1. System variables are customised to suit standard operating procedure</p> <p>2.2. Menus are customised to suit standard operating procedure</p> <p>2.3. Drawing defaults are customised to standard operating procedure</p> <p>2.4. Macros are developed to standard operating procedure</p>
3. Create 2D drawings	<p>3.1. Drawings are created using the full capability of the</p>

ELEMENT**PERFORMANCE CRITERIA**

- available software system
- 3.2. Drawing *entities* are linked to database *attributes* to suit job requirements
- 3.3. *Detailed views* are created using various *scales* to meet job requirements
- 3.4. *Files* are saved in various formats in line with standard operating procedures
- 3.5. Linked entities are formatted as *materials lists* to meet job requirements
- 3.6. *Supplementary data* is extracted from drawings to meet job requirements
- 3.7. Drawing process and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level required for this unit.

Required skills include:

- Technical skills sufficient to use relevant tools, machinery and equipment; create drawings using CAD systems
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge include:

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for creating drawings using CAD systems
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for creating drawings using CAD systems
- Environmental risks and hazards

REQUIRED SKILLS AND KNOWLEDGE

- Using energy effectively and efficiently
- Using material effectively and efficiently
- Characteristics of timber, timber products and defects
- Setup of CAD programs
- Building products
- Drawing techniques and principles
- Computer operation
- Standard material sizes
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

RANGE STATEMENT

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Drawings** may include:
- plans
 - diagrams
 - charts
 - elevations
- CAD systems** are proprietary software programs
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** is to include:
- computers
 - CAD software programs
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

System variables may include: variations in:

- computer operating systems
- versions of software used

Menus are to include:

- software program task bar options and pull down menus for various functions in a computer application

Drawing defaults

are standard or customised default settings previously set which the CAD system automatically applies during operation

Macros

are series of abbreviated instructions expanded automatically when required

Entities are to include:

any single item created on the screen, such as:

- lines
- arcs
- circles
- text
- hatch
- dimensions

Attributes may include:

- properties associated with an entity

and include:

- layer or level
- line type
- line width
- colour and text

Detailed views may include:

- plan
- elevation
- section
- exploded views

Scale

is the ratio between units in a numerical system, such as 1:5, 1:10, 1:100 and so on, using standard

RANGE STATEMENT

construction drawing decimal scales

Files may include:

- IGES
- DXF
- HPGL

Materials lists

are various components determined by the drawing which need to be cut and prepared for the assembly process

Supplementary data may include:

- areas
- lengths
- angles
- perimeters

Records and reports may include:

- specified drawings
- product type and size
- quality outcomes

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for grading	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to grading heavy structural or engineered products are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>engineered products</i> to be <i>graded</i> are acquired from the <i>storage</i> location</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Grading process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Grade heavy structural or engineered products	<p>2.1. Timber requirements for storage or subsequent processing operations are selected</p> <p>2.2. Timber characteristics and <i>defects</i> of each piece of timber are evaluated against industry standards for grade type</p> <p>2.3. <i>Moisture content</i> is measured, recorded and reported</p> <p>2.4. Defects are clearly marked for docking in line with site requirements</p> <p>2.5. Timber is marked and sorted in line with its grade classification, using markers or stickers that are clearly understood</p> <p>2.6. Grading outcomes and distribution problems are</p>

ELEMENT	PERFORMANCE CRITERIA
	<i>recorded and reported</i> in line with workplace procedures
3. Distribute material	3.1. Material is directed and moved to storage or processing operations in line with site requirements 3.2. Sub-standard material is rejected and <i>disposed of</i> in line with site requirements 3.3. <i>On-site movement of material</i> is monitored to ensure intended flow is achieved 3.4. Storage locations are labelled in line with site systems

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately grade heavy structural or engineered products; evaluate timber characteristics
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure moisture content, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grading heavy structural or engineered products
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for grading heavy structural or engineered products
- Environmental risks and hazards
- Criteria for recycling and re-using timber or material with defects and sub-standard

REQUIRED SKILLS AND KNOWLEDGE

timber or material

- Methods of visual estimation, grading, colour identification and tagging
- Heavy structural or engineered products and their use
- Sorting, marking and distribution processes
- Industry standard cross sections and lengths
- Storage systems and labelling procedures
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently grade heavy structural or engineered products according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to grading heavy structural or engineered products
- following organisational policies and procedures relevant to grading heavy structural or engineered products
- communicating and working safely with others in the work area
- grading heavy structural or engineered products to the appropriate standard
- measuring moisture content and identifying defects and characteristics in timber

EVIDENCE GUIDE

Context of and specific resources for assessment

- distributing material on site using designated equipment
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other

EVIDENCE GUIDE

than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

RANGE STATEMENT

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements
may include:

Work order is to include:

instructions for:

- receiving, despatching and grading
- sorting and marking heavy structural or engineered products to and from the designated storage location or processing

and may include:

- type
- size
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors

Appropriate personnel may

RANGE STATEMENT

include:

- suppliers
- clients
- colleagues
- managers

Engineered products may include:

- sleepers, crossings, mine guides, piles and cross arms for overhead lines
- decking for wharves and bridges
- poles
- other heavy structural or engineered products

Grading

is visually evaluating timber characteristics and defects for classification into various strength and appearance grades

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- moisture meters
- lifting equipment for the movement of material

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language

RANGE STATEMENT

- Defects may include:**
- use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Moisture content** is the amount of moisture maintained in timber or timber products after kiln drying or panel production to avoid cracking and deforming
- Records and reports may include:**
- product type and size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system
- Disposing of may include:**
- recycling sub-standard material
 - re-using sub-standard material
 - redirecting sub-standard material for energy recovery
- On-site movement of material may include:** the use of:
- conveyor belt systems
 - track systems
 - lifting equipment
- lifting equipment, such as:
- fork lifts
 - slings
 - trolley jacks

RANGE STATEMENT

- gantry cranes
- loaders

assistance with lifting, such as:

- involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements

RANGE STATEMENT

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Timber wall frames** may include:
- wall components such as:
 - studs
 - top and bottom plates
 - lintels
 - trimmers
 - nogging
 - bracing
- Work order** is to include:
- instructions for the assembly and despatch of timber and timber products from the work site
- and may include:
- construction plans or drawings
 - type of product
 - size
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Material** may include:
- native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - coated and/or treated timber products
 - beams, including laminated beams
- Assembly hardware** may include:
- nailing plates
 - gang nails
 - nail gun nails
 - staples

RANGE STATEMENT

Equipment may include:

- measuring equipment
- circular saws
- docking saws
- drills
- assembly jigs
- nail plate presses
- staple guns
- nail guns
- compressor or compressed air supply
- marking equipment
- strapping equipment

Setup jigs

are enterprise manufactured templates that assist in the positioning of components during the assembly process

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Timber components

are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut to follow the construction plans and cutting list

Defective components may include:

components with an unacceptable level of:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling defective components
- re-using defective components
- redirecting defective components for energy

RANGE STATEMENT

recovery

Temporary bracing

may be fixed to secure the assembled wall frames in alignment and square during transportation, moving and positioning on site

Assembly faults may include:

- incorrectly positioned joints
- timber splits from nailing
- incorrectly positioned hardware

Stacking may include:

- preparing for transport
- categorising in common size and shape
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Strapping may include:

- securing bundles with metal or plastic strap
- tightening and tensioning using hand-held equipment, to prevent slippage, strap breakage and damage to products

Pre-slung is to include:

- use of wire slings to assist in transporting product
- use of other slinging devices to assist in transporting product

Dealing with may include:

- recycling bracing and strapping waste material
- re-using bracing and strapping waste material
- redirecting bracing and strapping waste for energy recovery
- sending bracing and strapping waste to landfill

Equipment faults may include:

- damaged equipment components
- electrical faults

Records and reports may include:

- product type and size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational

ELEMENT**PERFORMANCE CRITERIA**

- table is adjusted to suit
- 2.4. Components are positioned and clamped in jigs ready for joining with allowable faults, joints and grain in line with construction standards and grading rules
- 2.5. Components are set to include camber adjustments, overhang and other design requirements
- 2.6. **Defective components** are rejected and **disposed of** in line with site procedures and environmental requirements
- 2.7. Components are nailed to maintain temporary alignment during assembly
3. Control pressing operations
- 3.1. Assembly hardware is located and selected in line with construction plans and standards
- 3.2. Hardware is positioned on joints and installed in line with design specifications
- 3.3. Truss-pressing operations are coordinated to ensure finished product meets customer orders
- 3.4. **Assembly faults** are corrected in line with site procedures
4. Prepare products for despatch and report
- 4.1. Finished product is assessed for quality against construction standards and labelled in line with work order
- 4.2. Components are removed from jigs and safely **stacked** in a designated location in line with work order
- 4.3. Finished products are **strapped**, packed and labelled ready for transportation
- 4.4. Strapping waste material is minimised and **dealt with** in line with site procedures, manufacturer recommendations and environmental requirements
- 4.5. **Equipment faults** are recognised and reported in line with site procedures
- 4.6. **Records and reports** are accurately completed, processed and maintained in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; lay up timber roof trusses
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for laying up timber roof trusses
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber)
- Organisational and site standards, requirements, policies and procedures for laying up timber roof trusses
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Characteristics of timber and timber defects
- Assembly sequences and jigs
- Assembly componentry and construction standards
- Quality requirements of national building codes and standards
- Industry standard cross sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently lay up timber roof trusses in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to laying up timber roof trusses
- following organisational policies and procedures relevant to laying up timber roof trusses
- laying up timber roof trusses in line with the work order, construction plans, construction standards and engineering specifications
- stacking and strapping bundles of completed products in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

EVIDENCE GUIDE

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth,

RANGE STATEMENT

state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Timber roof trusses:**
- are frames or jointed structures designed to act as a beam of long span, while each member is usually subjected to longitudinal stress only, either tension or compression
 - may include joists, rafters, purlins, chords and beams
- Work order** is to include:
- instructions for the assembly and despatch of timber and timber products from the work site
- and may include:
- construction plans or drawings
 - type of product
 - size
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Material** may include:
- native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - laminated veneer
 - coated and/or treated timber products
 - beams, including laminated beams
- Assembly hardware** may include:
- nailing plates
 - gang nails

RANGE STATEMENT

Equipment may include:	<ul style="list-style-type: none">• nail gun nails• staples• measuring equipment• circular saws• docking saws• drills• assembly jigs• nail plate presses• staple guns• nail guns• compressor or compressed air supply• marking equipment• strapping equipment
Setup jigs	are enterprise manufactured templates that assist in the positioning of components during the assembly process
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice
Timber components	are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut to follow the construction plans and cutting list
Defective components may include:	components with an unacceptable level of: <ul style="list-style-type: none">• warp• wane• cupping• shakes• insect defects• knots• resin pockets
Disposing of may include:	<ul style="list-style-type: none">• recycling defective components

RANGE STATEMENT

- re-using defective components
 - redirecting defective components for energy recovery
- Assembly faults** may include:
- incorrectly positioned joints
 - timber splits from nailing
 - incorrectly positioned hardware
- Stacking** may include:
- preparing for transport
 - categorising in common size and shape
 - marking lots in line with work order and site requirements
 - locating so as not to block access or passage
- Strapping** may include:
- securing bundles with metal or plastic strap
 - tightening and tensioning using hand-held equipment, to prevent slippage, strap breakage and damage to products
- Dealing with** may include:
- recycling strapping waste material
 - re-using strapping waste material
 - sending strapping waste to landfill
- Equipment faults** may include:
- damaged equipment components
 - electrical faults
- Records and reports** may include:
- product type and size
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|--|
| 1. Prepare for pressing | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to operating a <i>truss</i> press are identified and followed</p> <p>1.2. <i>Work order</i> and construction plans are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> and <i>assembly hardware</i> to be pressed are collected</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Set up components | <p>2.1. <i>Timber components</i> are selected from pre-cut material in line with the cutting list</p> <p>2.2. Components are positioned and clamped in the press ready for joining with allowable faults, joints and grain in line with construction standards and grading rules</p> <p>2.3. Components are set to include camber adjustments, overhang and other design requirements</p> <p>2.4. <i>Defective components</i> are rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.5. Components are temporarily fastened to maintain alignment during setup procedure</p> |

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---|--|
| 3. Press trusses | <p>2.6. Assembly hardware is located and selected in line with the construction plans and standards</p> <p>2.7. Hardware is positioned on joints and installed ready for pressing</p> <p>3.1. Pre-startup checks are carried out on equipment in line with site requirements</p> <p>3.2. Press cycle times and pressures are set and adjusted for production requirements</p> <p>3.3. Pressed trusses are checked for abnormalities and assembly faults are corrected in line with site procedures</p> <p>3.4. Unload and reload cycles are performed</p> <p>3.5. Pressed and finished trusses are regularly assessed and necessary changes to assembly and pressing processes are actioned</p> <p>3.6. Pressed trusses with abnormalities are dealt with in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.7. Pressing process and equipment faults are recorded and reported to the appropriate personnel</p> |
| 4. Prepare products for despatch and report | <p>4.1. Finished product is checked and labelled in line with the work order</p> <p>4.2. Components are removed from jigs and safely stacked in a designated location in line with work order requirements</p> <p>4.3. Finished product is removed from press and safely strapped and stacked ready for transportation</p> <p>4.4. Strapping waste is minimised and dealt with in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>4.5. Equipment faults are recognised and reported in line with site procedures</p> <p>4.6. Records and reports are accurately completed, processed and maintained in line with workplace procedures</p> |

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; press trusses
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults, and demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a truss press
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber)
- Organisational and site standards, requirements, policies and procedures for operating a truss press
- Environmental risks and hazards
- Criteria for recycling and re-using defective components and pressed trusses with abnormalities
- Characteristics of timber and timber defects
- Pressing techniques and equipment
- Truss types and their uses
- Assembly sequences and jigs, assembly componentry and construction standards
- Industry standard cross sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently press trusses in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to operating a truss press
- following organisational policies and procedures relevant to operating a truss press
- pressing trusses in line with the work order, construction plans, construction standards and engineering specifications
- stacking and strapping bundles of completed products in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Trusses may include:

- floor trusses
- roof trusses

Work order is to include:

- instructions for the assembly and despatch of timber and timber products from the work site

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- laminated veneer
- coated and/or treated timber products
- beams, including laminated beams

Assembly hardware may include:

- nailing plates
- gang nails
- nail gun nails
- staples

RANGE STATEMENT

Equipment may include:

- roller presses
- platen presses
- C-clamp presses
- computer-automated presses
- measuring equipment
- assembly jigs
- staple guns
- nail guns
- compressor or compressed air supply
- marking equipment
- strapping equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Timber components

are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut to follow the construction plans and cutting list

Defective components may include:

components with an unacceptable level of:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling defective components
- re-using defective components
- redirecting defective components for energy recovery

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly

RANGE STATEMENT

- systems are performing accurately
- machinery is operating to optimum performance

Cycle

is the process of:

- pressing trusses until structurally ready
- unloading the press and restarting the process
- commencing another cycle

and includes:

- time considerations
- pressure considerations
- incorrectly positioned joints
- timber splits from nailing
- incorrectly positioned hardware

Assembly faults may include:

Dealing with may include:

- recycling pressed trusses with abnormalities/strapping waste
- re-using pressed trusses with abnormalities/strapping waste
- redirecting pressed trusses with abnormalities for energy recovery
- sending pressed trusses with abnormalities/strapping waste to landfill

Stacking may include:

- preparing for transport
- categorising in common size and shape
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Equipment faults may include:

- damaged equipment components
- electrical faults

Records and reports may include:

- product type and size
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system

RANGE STATEMENT

- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for profiling	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to cutting material to <i>profile</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be profiled is selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Profile to be cut is identified and cutting blades are selected</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up profiling equipment	<p>2.1. <i>Pre-startup checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Machine guides</i> are selected and attached to the machinery</p> <p>2.3. Cutting blades are installed in the selected machinery</p> <p>2.4. Depth of cut and profile are set in line with the required profile and minimisation of waste</p> <p>2.5. Material stack is positioned in close proximity to maximise ease of machine feeding</p> <p>2.6. Equipment setup is checked and adjusted by running a piece of timber through the machine to set depth</p>

ELEMENT	PERFORMANCE CRITERIA
3. Cut material to profile	<p>and profile</p> <p>3.1. Material is fed into the machine at the <i>feed rate</i> prescribed by organisational requirements</p> <p>3.2. Cutting sequence is followed, maintained and adjusted to produce the required quantity and maximise the feed rate</p> <p>3.3. Profiling process is regularly checked and adjusted to maintain the desired depth and profile</p> <p>3.4. Material with <i>features</i> is rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.5. Processing and equipment faults are reported to the appropriate personnel</p> <p>3.6. Material is safely <i>stacked</i> in a designated location in line with work order</p> <p>3.7. <i>Records and reports</i> are accurately completed, processed and maintained in line with workplace procedures</p>
4. Conduct operator maintenance	<p>4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2. Cutting blades are checked for blunt or damaged condition in line with site procedures</p> <p>4.3. Cutting blades are removed, <i>dealt with</i> and replaced in line with manufacturer recommendations</p> <p>4.4. Machine area is kept clear of dust and debris in line with OHS and environmental requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut material to profile
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain

REQUIRED SKILLS AND KNOWLEDGE

documentation

- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting material to profile
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber)
- Organisational and site standards, requirements, policies and procedures for cutting material to profile
- Environmental risks and hazards
- Criteria for recycling and re-using material with features
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Characteristics of timber and timber features
- Cutting profiles, feed rates and finish
- Methods for assessing condition of cutting blade
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and

EVIDENCE GUIDE

efficiently cut material to profile in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to cutting material to profile
- following organisational policies and procedures relevant to cutting material to profile
- cutting material to profile in line with the work order and prescribed organisational specifications
- conducting operator maintenance
- stacking batches of cut material in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration employability skills
- Assessment methods must confirm the ability to

EVIDENCE GUIDE

access and correctly interpret and apply the required knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Profile may include:

various shapes and patterns into which steel cutting blades can be shaped that will in turn shape the timber or timber product to achieve the desired profile outcome and may include:

- quad
- beading
- mouldings
- shaped beams
- architraves
- skirting boards
- scotia

Work order is to include:

instructions for the cutting and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- profile
- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board

RANGE STATEMENT

- Storage locations** may include:
- products
 - coated and/or treated timber products
 - beams, including laminated beams
 - storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** is to include:
- procedures for machine lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

and may include:

- measuring equipment
 - multi-head planing machines (four siders)
 - spindle moulders
 - routing machines
 - shaping machines
 - profile cutting blades in various shapes and sizes
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language

RANGE STATEMENT

- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- machine has been set up correctly
- cutters are installed accurately
- machine is operating to optimum performance

Machine guides may include:

- machine manufacturer produced guides located strategically on the machine to maintain timber in straight feed and ensure consistency of profile cut
- enterprise produced guides/jigs to maintain consistency of timber against cutting blades

Feed rate

is the rate of speed the material is passed through the machine affecting the sharpness of the cutting blades, the finish of the material, and the production output

Features may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling material with features
- re-using material with features
- redirecting material with features for energy recovery

Stacking may include:

- preparing for transport
- categorising in common size, length and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Records and reports may include:

- product type and size
- profile
- inspection information
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards

RANGE STATEMENT

- incidents
- equipment malfunctions

and may be:

- manual
 - a computer-based system
 - other appropriate organisational communication system
- Dealing with** may include:
- repairing or sending for repair blunt or damaged cutting blades
 - recycling blunt or damaged cutting blades
 - re-using blunt or damaged cutting blades
 - sending cutting blades that cannot be repaired to landfill

FPICOT3245B Grade, sort and mark material

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to visually evaluate material characteristics and features for classification into various strength or appearance grades. It includes sorting material into classifications, marking material in line with grade and distributing material on site

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT3245A Grade, sort and mark material

Application of the Unit

Application of the unit

The unit involves grading, sorting and marking material in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for grading, sorting and marking	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to grading, sorting and marking <i>material</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of material to be graded, sorted and marked is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. <i>Grading, sorting and marking</i> process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Grade, sort and mark material	<p>2.1. Requirements for material storage and subsequent processing operations are identified</p> <p>2.2. Material characteristics and <i>features</i> of each piece are evaluated against industry standards for grade type</p> <p>2.3. <i>Moisture content</i> is measured, recorded and reported in line with site procedures as required by the</p>

ELEMENT	PERFORMANCE CRITERIA
	enterprise
	2.4.Features are clearly marked for docking in line with site requirements
	2.5.Material is graded, marked and sorted in line with grade classification, using markers or stickers that are clearly understood
	2.6.Grading outcomes and distribution problems are recorded and reported in line with workplace procedures
3. Distribute material	3.1.Material is directed and moved to storage or processing operations in line with site requirements
	3.2.Sub-standard material is rejected and disposed of in line with site requirements
	3.3. On-site movement of material is monitored to ensure intended flow is achieved
	3.4.Storage locations are labelled in line with site systems

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; grade, sort and mark material
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grading, sorting and marking material

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for grading, sorting and marking material
- Environmental risks and hazards
- Criteria for recycling and re-using sub-standard material
- Using material effectively and efficiently
- Methods of visual estimation, grading, colour identification and tagging
- Sorting, marking and distribution processes
- Industry standard cross sections and lengths
- Storage systems and labelling procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently grade, sort and mark material in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to grading, sorting and marking material

EVIDENCE GUIDE

- following organisational policies and procedures relevant to grading, sorting and marking material
 - grading, sorting and marking a range of materials in readiness for storage and/or processing
 - distributing material on site using designated equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- plywood
- fibreboard and other manufactured board

RANGE STATEMENT

- Work order** is to include:
- products
 - coated and/or treated timber products
 - debarked logs
 - instructions for receiving, despatching, grading, sorting and marking materials to and from the designated storage location or processing
- and may include:
- type
 - size
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** may include:
- moisture meters
 - lifting equipment for the movement of

RANGE STATEMENT

- Grading, sorting and marking** may include:
- material
 - assessment of material for number and frequency of defects
 - requirements for grade and disposition
 - strength grades or appearance grades
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Features** may include:
- warp
 - wane
 - cupping
 - shakes
 - insect defects
 - loose or missing knots
 - resin pockets
 - dents
 - loose surface
 - lifting coatings
 - poor adhesion
 - thin or missing coatings
 - chipped edges
 - surface bubbles
 - splits
 - voids
 - splintered or missing edges
 - pin holes
- Moisture content** is the amount of moisture maintained in timber or timber products after kiln drying or panel production to avoid cracking and deforming
- Records and reports** may include:
- product type and size
 - inspection information
 - grading and labelling outcomes
 - storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material
- redirecting sub-standard material for energy recovery

On-site movement of material may include:

assistance with lifting, such as:

- involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment

the use of:

- conveyor belt systems
- track systems
- lifting equipment, such as fork lifts, slings, trolley jacks, gantry cranes and loaders

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for testing	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>testing heavy structural and engineered products</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of products to be tested are acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Testing <i>process</i> is planned in line with workplace procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Test heavy structural and engineered products	<p>2.1. Appropriate heavy structural and engineered products are selected for testing in line with work order and workplace procedures</p> <p>2.2. Test is conducted in line with established test methods, quality assurance procedures and OHS requirements</p> <p>2.3. Testing problems are identified and resolved or</p>

ELEMENT	PERFORMANCE CRITERIA
	reported in line with workplace procedures
	2.4. Test results are obtained and comparisons of collected data are made against product specifications in line with workplace procedures
3. Report findings of test	3.1. Potential or existing problems are identified and appropriate recommendations on product quality are made in line with workplace procedures
	3.2. Testing outcomes are <i>recorded and reported</i> in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; operate testing equipment to test products
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to apply mathematical and estimation processes
- Problem solving skills sufficient to identify problems and faults in testing methods; demonstrate appropriate response procedures; identify problems and faults with the products tested

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for testing heavy structural and engineered products
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for testing heavy structural and engineered products
- Environmental risks and hazards
- Problem identification and resolution
- Types of testing equipment and methods
- Industry and enterprise standard tests and strength specifications

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---------------------------------|--|
| 1. Prepare for timber selection | 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to selecting <i>timber</i> for forestry operations are identified and followed
1.2. <i>Quality system</i> procedures that apply to work are implemented and adhered to
1.3. Products are <i>visually inspected</i> before processing and completion
1.4. <i>Product specifications</i> are checked and followed
1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Evaluate selected timber | 2.1. <i>Growth</i> and <i>durability</i> of the timber are assessed in line with site procedures
2.2. <i>Species, timber structure, features and characteristics</i> are assessed and reported
2.3. <i>Moisture content</i> of selected timber is identified to ensure it meets production requirements
2.4. <i>Density</i> and <i>working properties</i> of timber are identified to ensure they meet production requirements
2.5. <i>Faults and features</i> in the timber are identified and strategies suggested to overcome or maximise them
2.6. <i>Sawing patterns</i> that best suit the selected timber are identified |
| 3. Report on timber selection | 3.1. Timber is assessed for quality and specification requirements |

ELEMENT	PERFORMANCE CRITERIA
	3.2. Timber is prepared for <i>despatch</i> in a manner that prevents or minimises further damage
	3.3. Timber assessment outcomes are documented in line with organisational procedures
	3.4. Timber selection procedures are <i>recorded and reported</i> in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; select timber for forestry operations
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; locate, record and report information
- Literacy skills sufficient to follow legislation, regulations, standards, codes of practice and established safe practices and procedures for selecting timber for forestry operations
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for selecting timber for forestry operations
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for selecting and optimising timber for forestry operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Quality systems and supply coordination
- Timber technology

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently select timber for forestry operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to selecting timber for forestry operations
- following organisational policies and procedures relevant to selecting timber for forestry operations
- selecting timber for forestry operations in line with environmental legislation and workplace procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context

EVIDENCE GUIDE

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Timber may include:

- trees
- logs
- planks
- panels
- board
- chips
- flake
- flitches
- cants

and may be:

- native or imported timber
- hardwood or softwood
- enterprise-based systems
- second-party certification
- third-party certification
- ISO9000 series
- other regulatory systems

Quality systems may include:

- enterprise-based systems
- second-party certification
- third-party certification
- ISO9000 series
- other regulatory systems

Visual inspection may include:

assessing the appropriateness of:

- defects
- contamination
- timber colours
- insect attack
- surface finishes

RANGE STATEMENT

- loose surfaces
 - bubbles
 - holes
 - breakages
 - machine caused defects
 - available resources
 - customer requirements
 - industry standard cross sections and lengths
 - enterprise standards
- Product specifications** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Communication** may include:
- growth patterns
 - make-up of a tree, including bark (cortex)
 - phloem
 - cambium layer
 - sapwood (xylem)
 - heartwood (truewood)
 - pith (medulla)
 - medullary rays
 - earlywood
 - latewood
 - growth rings
 - cellulose
 - hemicelluloses
 - lignin
 - extractives
- Growth** may include:
- strength
 - hardness and rating for use
 - classification and measurement
- Durability** may include:
- native species
 - imported species
- Species** may include:

RANGE STATEMENT

- Timber structures** may include:
- hardwood (pored wood) or softwood (non-pored wood)
 - cell structured timber, including:
 - vessels
 - fibres
 - ray cells
 - pits
 - tracheids
 - texture
 - seasoning methods
- Characteristics** may include:
- colour
 - density
 - texture
 - grain
 - figure
 - qualities
 - uses
- Moisture content:**
- is the amount of moisture maintained in timber or timber products after kiln drying or to avoid cracking and deforming
 - in Australia, generally ranges between 10% in warmer, more humid climates to 14% in cooler climates
 - includes the consideration of free water, bound water and water vapour
- Density** may include:
- closeness and size of the timber cells
 - green density
 - air dried density
 - basic density
 - strength and durability
 - swell pressures
- Working properties** may include:
- timber shrinkage
 - effects of light
 - moisture content
 - density and deterioration of the timber
 - compressive and tensile stresses
 - modulus of elasticity
 - modulus of rupture
 - deformation
 - creep

RANGE STATEMENT

- Faults and features** may include:
- surface hardness
 - bow
 - spring
 - twist
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - fungi
 - knots
 - resin pockets
 - wild grain
 - sloping grain
- Sawing patterns** may include:
- live-sawn
 - back sawn
 - quarter sawn
- Despatch** is to include:
- sending out products relating to a customer order via various means of transport
- and may include:
- stacking
 - stripping
 - strapping
 - storing and despatching product
- Records and reports** may include:
- conducting visual inspection and timber selection
 - risks
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

FPICOT3248A Dry timber in solar assisted kilns

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to dry timber in solar assisted kilns to appropriate moisture contents and stress levels whilst keeping degrade to a minimum, including evaluation of energy savings and sustainable use principles

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit

The unit involves drying hardwood and softwood timber in a range of solar assisted kilns in timber and wood products production enterprises of all sizes

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------|--|
| 1. Prepare for drying | <ul style="list-style-type: none"> 1.1. Applicable Occupational Health and Safety (OHS), environmental, legislative and organisational requirements relevant to drying timber are identified and followed 1.2. Work order is reviewed and checked with appropriate personnel 1.3. Type and quantity of timber to be dried is determined and acquired from the conversion process 1.4. Racks to be dried are visually assessed for consistent drying characteristics and adjusted to meet site requirements 1.5. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.6. Oven sections and sample boards are selected and cut in line with standard operating procedures and initial moisture content is established 1.7. Drying process is planned in line with site procedures 1.8. Communication with others is established and maintained in line with OHS requirements |
|-----------------------|--|

ELEMENT	PERFORMANCE CRITERIA
2. Load kiln and control kiln conditions	2.1. Pre start-up checks are carried out on equipment in line with site requirements 2.2. Emergency shutdown procedures are followed in the case of alarm being triggered 2.3. Kiln is loaded with racks selected for processing and loading is completed and reported 2.4. Baffles and/or blankets are positioned in line with standard operating procedures
3. Monitor kiln conditions	3.1. Moisture content is measured, monitored and routinely compared with anticipated levels in line with the drying plan, whilst observing standard operating procedures 3.2. Kiln control settings are regularly adjusted and routinely checked to site drying schedules 3.3. Kiln charge is monitored for drying degrade and reconditioning or high humidity treatment conducted as required
4. Check timber quality on completion of drying	4.1. Drying end point is identified and kiln made safe for entry 4.2. Kiln is opened and moisture content of processed timber checked in line with anticipated target moisture content 4.3. Drying stresses samples are prepared and measured as suitable for target use 4.4. Unsuitable drying stresses are rectified 4.5. Drying quality is visually assessed and sub-standard material is rejected and disposed of in line with site and environmental requirements
5. Unload kiln and move or store timber	5.1. Moisture probes and baffles and/or blankets are removed from timber in line with standard operating procedures 5.2. Timber is directed and moved to storage or processing operations and packs are labelled in line with site requirements 5.3. Work area is cleaned in line with site requirements 5.4. Records and reports are completed for appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to dry timber, use and maintain relevant tools, machinery and equipment, including using moisture measuring techniques
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to calculate moisture content; estimate timber volumes and weights and analyse statistical data
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislative, regulatory or certification requirements and codes of practice relevant to the full range of processes for drying timber
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for drying timber
- Energy efficiency and savings obtained from various types of solar kilns
- Established communication channels and protocols
- Problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Species identification for a range of timbers likely to be encountered
- Drying techniques including development and relief of drying stresses
- Operation of solar assisted kilns
- Types of timber degrades and how it develops
- Basic knowledge of wood-water relationships in the drying process
- Methods of visual inspection
- Characteristics of timber
- Quality and distribution processes
- Storage systems and labelling
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dry timber in solar assisted kilns to appropriate moisture contents and stress levels whilst keeping degrade to a minimum

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to drying timber in solar assisted kilns
- following organisational policies and procedures relevant to drying timber in solar assisted kilns
- consistently achieving target end moisture contents with acceptable levels of drying degrade
- selecting appropriate timber drying schedules for a range of species and products

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard identification and risk control
- fatigue management
- elimination of hazardous materials and substances
- knowledge of biohazards applicable to drying timber in solar kilns
- manual handling including shifting, lifting and carrying
- kiln entry requirements
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- sustainability certification schemes
- procedural manuals
- quality and continuous improvement processes and standards

RANGE STATEMENT

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Timber may include:

- native timber species
- imported timber species
- preservative treated timber

Work order is to include:

- instructions for the drying of timber

and may include:

- species
- colour
- type
- width
- length
- thickness
- quantity
- target moisture content
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- suppliers
- clients
- colleagues
- managers

Appropriate personnel may include:

Drying

is the process of removing water from timber whilst minimising degrade until it reaches a target moisture content suitable for intended use

Conversion process may include:

- sawing process
- yard storage
- shed or other kiln storage
- delivery of material to the kiln site

Racks

are packets of timber with racking sticks between each row of boards to facilitate evaporation of

RANGE STATEMENT

	water from the timber
Visual assessment is to include:	<ul style="list-style-type: none">• the assessment of materials to determine stacking quality and faults
	and may include:
	<ul style="list-style-type: none">• stability• squareness of ends• spacing of strips• support to minimise warping
Equipment must include:	<ul style="list-style-type: none">• solar assisted kilns• procedures for equipment lock-out and safe entry, i.e. protecting operators and co-workers from accidental injury by isolating the machinery from the power source
	and may include:
	<ul style="list-style-type: none">• supplementary heat plant• forklift or loader• traverser and trolley
Sample Boards	are boards selected to be used to monitor moisture loss during the drying process
Moisture content	is the amount of moisture in timber at any given time
	and must include:
	<ul style="list-style-type: none">• assessment via capacitance, resistance and oven-dry methods
Drying plan	is the anticipated process the timber will undergo to remove moisture to target moisture content
	and may include:
	<ul style="list-style-type: none">• air drying• sheltered air drying• pre-drying• reconditioning• high humidity treatments• final kiln drying• equalising• conditioning
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- electronic alarm, alert and notification systems associated with the kiln control software

Pre start-up checks

are conducted to ensure equipment has been set-up correctly, the systems are performing accurately and equipment is operating to optimum performance

Emergency shutdown

is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product

Kiln

See *equipment*

Baffles and/or blankets

are to assist in the drying process by directing air flow

Drying schedule

is the drying set points based on moisture content, moisture loss or time

Drying degrade may include:

- surface checks
- internal checks
- end splits
- collapse
- excessive distortion
- bow
- spring
- twist
- cup
- case Hardening

Drying end point

is the point in time when the drying process will be completed and the target moisture content achieved

Target moisture content

is the moisture content the kiln operator is trying to obtain from any given batch of timber

Drying stresses

are stress levels that develop through the drying process likely to affect timber performance in

RANGE STATEMENT

	service
Rectified	refers to the amelioration of excessive drying stresses and may include: <ul style="list-style-type: none">• high humidity treatments• conditioning• re-drying• letting timber equalise• See <i>drying degrade</i>
Sub-standard material	<ul style="list-style-type: none">• processing to a lower grade of product• recovery of heat value• recovery as ungraded product
Disposal may include:	
Moisture probes	are probes pierced into representative boards which provide moisture readings to assist in monitoring the drying schedule and may include <ul style="list-style-type: none">• resistance or electromagnetic property probes
Movement of material may include:	the use of: <ul style="list-style-type: none">• conveyor belt systems• track systems or lifting equipment lifting equipment may include: <ul style="list-style-type: none">• fork lifts• slings• trolley jacks• gantry cranes and loaders• cross transfer trucks assistance with lifting may include the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
Storage may include:	the use of: <ul style="list-style-type: none">• storage racks• storage bays• stacks• modularised storage components

RANGE STATEMENT

- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size, dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Cleaning

- sweeping
- removing debris
- removing rust build up

Records and reports may include:

- moisture content achieved
- drying schedule used
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents or equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to select timber preservation techniques taking into account the principles of environmental suitability and sustainability

General workplace legislative and regulatory requirements apply to this unit. Subject to enterprise requirements specific licences/certification may be required in the following areas: forest sustainability certification, chain of custody certification, TUMA and the NSW Timber Marketing Act, Environmental Protection Authority certification

Application of the Unit

Application of the unit

The unit involves selecting timber preservation techniques in a variety of settings including

- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Determine preservation requirements for timber | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to selecting timber preservation techniques are identified and followed
1.2. <i>Environmental legislative requirements</i> relevant to timber preservation are ascertained and followed
1.3. <i>Service requirements</i> for timber are established and followed
1.4. Required <i>chemical retention rates</i> are identified and suitable solution strengths calculated
1.5. Required <i>penetration patterns</i> are recognised |
| 2. Decide on appropriate | 2.1. <i>Preservation techniques</i> are investigated to determine available options that would be consistent |

ELEMENT	PERFORMANCE CRITERIA
preservation technique/s for timber	with job requirements and the principles of environmental suitability and sustainability
	2.2. Options are reviewed and compared for suitability and value
	2.3. Appropriate preservation technique/s are selected for use
	2.4. <i>Water management procedures</i> are identified and followed
	2.5. <i>Contingency management plans</i> are developed
	2.6. <i>Quality assurance procedures</i> are implemented and communicated to operators
	2.7. <i>Environmental monitoring requirements</i> are determined and established

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to identify a range of suitable chemicals and assess their environmental impact
- Communication skills sufficient to establish and communicate contingency plans for operations
- Literacy skills sufficient to research literature and compare techniques
- Numeracy skills sufficient to calculate chemical solution strengths, timber and fluid volumes; measure chemical salt retention rates
- Problem solving skills sufficient to evaluate a range of timber preservation techniques and select the most appropriate technique for the end application

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice and established safe practices relevant to the full range of processes for selecting timber preservation techniques
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), environmental monitoring required for preservation equipment, the safe use and storage of chemicals and minimising

REQUIRED SKILLS AND KNOWLEDGE

carbon emissions

- Organisational and site standards, requirements, policies and procedures for preserving timber and selecting timber preservation techniques
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Wood technology
- Range of timber preservation chemicals
- Range of timber preservation techniques
- Appropriate timber preservation Australian Standards and market requirements, particularly Australian Standard (AS) 1604.1-2010 Specification for preservative treatment - Sawn and round timber and in Queensland, the Queensland Timber Utilisation and Marketing Act
- Appropriate timber hazard levels in service
- Range of timber preservation plants and their operating techniques
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating chemical solution strengths and retention rates
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently select timber preservation techniques suitable for timber requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include

EVIDENCE GUIDE

demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to selecting timber preservation techniques
- following organisational policies and procedures relevant to selecting timber preservation techniques
- following environmental requirements for operating preservation equipment
- determining preservation requirements for timber
- selecting appropriate preservation techniques for timber
- identifying relevant water management procedures
- developing a contingency management plan
- implementing quality assurance procedures
- establishing environmental monitoring requirements
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Context of and specific resources for assessment

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required

EVIDENCE GUIDE

knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- handling and storage of appropriate dangerous goods and hazardous substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling)

RANGE STATEMENT

	and re-use guidelines)
Environmental legislative requirements may include:	<ul style="list-style-type: none"> • Environmental Protection Authority requirements • water monitoring requirements • plant design requirements
Service requirements must include	<ul style="list-style-type: none"> • treated timber hazard ratings • marine borer hazard ratings • timber durability ratings
Chemical retention rate/s	is the amount of preservative retained in a piece of timber after treatment and fixation have taken place expressed as either weight for volume or weight for weight
Penetration pattern/s	is the distribution of preservative within the cross section of a treated piece of timber
Preservation techniques:	<ul style="list-style-type: none"> • are the range of pressure and non-pressure techniques used to preserve timber <p>and must include:</p> <ul style="list-style-type: none"> • full cell (Bethel) process • empty cell process • rueping process • double treatment • boultonising • discussion of research into emerging techniques
Water management procedures may include:	<ul style="list-style-type: none"> • ground water monitoring • bund storages • contaminated water containment • contaminated water reuse • drip pads
Contingency management plans may include:	<ul style="list-style-type: none"> • chemical handling and spill procedures • groundwater leakage procedures • fire suppression procedures • emergency evacuation procedures
Quality assurance procedures may include:	<ul style="list-style-type: none"> • quality assurance manual • process documentation • training documentation • emergency documentation
Environmental monitoring	<ul style="list-style-type: none"> • groundwater monitoring • chemical disposal

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Review regulatory requirements for import/export of timber | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>legislative, environmental</i> and <i>organisational requirements</i> relevant to preparing timber to meet import/export compliance requirements are identified and followed
1.2. <i>AQIS requirements</i> relevant to timber import/export are identified
1.3. Specific <i>environmental legislative requirements</i> relevant to timber import/export are identified
1.4. Compliance requirements are interpreted and confirmed
1.5. Compliance requirements for the organisation are examined in terms of critical implications, risks and consequences of possible breaches |
| 2. Ensure timber | 2.1. Timber for import/export is identified and <i>wood</i> |

ELEMENT	PERFORMANCE CRITERIA
compliance for import/export	<p><i>properties</i> are recognised</p> <p>2.2. Timber is examined, <i>biohazards</i> associated with the particular species identified and a risk assessment undertaken</p> <p>2.3. Need for <i>timber treatment</i> is determined and arrangements made for treatment to ensure compliance</p> <p>2.4. Need for <i>phytosanitary certificates</i> is established and arrangements made for procurement</p>
3. Document compliance requirements	<p>3.1. <i>Branding</i> of timber is completed and checked in line with regulatory requirements</p> <p>3.2. <i>Forest certification</i> records are obtained and forwarded to relevant authorities</p> <p>3.3. <i>Records and reports</i> of compliance requirements are prepared and submitted to appropriate internal and external personnel</p> <p>3.4. Breaches of compliance requirements are reported to those with sufficient authority to correct them</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to identify timber species, wood properties and a range of timber biohazards
- Communication skills sufficient to complete process documentation; liaise with AQIS and customs officials; liaise with customers and suppliers, sometimes from different countries and cultures
- Literacy skills sufficient to read and interpret import/export requirements
- Numeracy skills sufficient to calculate timber volumes, costs and treatment strengths
- Problem identification and resolution skills sufficient to negotiate outcomes with officials and customers

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice and established safe practices relevant to the full range of

REQUIRED SKILLS AND KNOWLEDGE

processes for identifying timber import and export requirements including knowledge of customs and AQIS requirements

- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for identifying timber import and export requirements
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Timber species identification techniques
- Wood properties and how these relate to fungal and insect risks associated with importing/exporting timber
- Range of timber treatments meeting AQIS requirements
- Branding and labelling requirements to ensure compliance
- Forest certification systems and chain of custody procedures
- Established communication channels and protocols
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting records and information

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and

EVIDENCE GUIDE

<p>Context of and specific resources for assessment</p>	<p>codes of practice relevant to importing/exporting timber</p> <ul style="list-style-type: none"> • following organisational policies and procedures relevant to importing/exporting timber • interpreting regulatory requirements for importing/exporting timber in Australia • determining compliance requirements for the organisation in relation to importing/exporting timber, and the risks and consequences of breaches • examining timber and determining the appropriate requirements for compliance • ensuring appropriate arrangements are made for compliance • completing all documentation related to compliance • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to follow relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies • Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge • Assessment may be applied under project-related conditions (real or simulated) and require evidence of

EVIDENCE GUIDE

process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances

RANGE STATEMENT

- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

AQIS requirements may include:

- various treatments of the timber
- issuing of phytosanitary certificates
- chain of custody records

RANGE STATEMENT

Environmental legislative requirements may include:

- identification of biohazards
- forest certification system
- identification of hazardous chemicals
- risk assessment of material to be imported or exported

Wood properties may include:

- strength
- durability
- hardness
- shrinkage
- moisture content
- grain
- texture
- presence of susceptible sapwood
- extractives
- fibre length and orientation

Biohazards may include:

- pests and diseases with potential for immediate and long-term threats to health or ecosystems

Timber treatment may include:

- heat treatment
- chemical treatment
- fumigation
- irradiation
- sterilisation

Phytosanitary certificates

are certificates issued certifying absence of active insect and fungal attack in timber to be imported or exported

Branding

is the process of labelling treated timber to assure customers of treatment

Forest certification

- is certification that material is from sustainably managed forests

and may include:

- Australian Forestry Standard
- Forest Stewardship Council
- chain of custody records

Records and reports may include:

- AQIS records
- Customs records
- import/export documentation
- chain of custody documentation

RANGE STATEMENT

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Unit Descriptor

Unit descriptor This unit describes the outcomes required to apply knowledge of carbon capture and storage to promote the carbon benefits of wood products to customers in a timber merchandising environment

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit The unit involves identifying and promoting the carbon benefits of wood products in a timber merchandising environment including:

- forest environment
- hardwood and softwood plantation environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production
- timber and wood products sales and service

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Recommend the carbon benefits of wood products | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to promoting the carbon benefits of wood products are identified and followed</p> <p>1.2. Range of <i>wood products</i> is identified using common industry terminology</p> <p>1.3. <i>Process of carbon capture and storage</i> in wood products is outlined</p> <p>1.4. Approximate <i>carbon storage</i> figures for a range of wood products are compared</p> <p>1.5. Knowledge of carbon capture and storage in wood products is used to provide advice to customers on available product range and their carbon storage figures</p> |
|---|--|

ELEMENT	PERFORMANCE CRITERIA
	1.6.Product information is provided to customers to assist them in their purchasing decisions
2. Produce and install merchandise for a promotion on the carbon benefits of wood products	2.1.Targets for a promotional campaign on the carbon benefits of wood products are identified
	2.2.Merchandising plan is produced for the campaign using sales information that will strategically target customer buying habits
	2.3.Range of <i>promotional elements</i> are designed for use in the campaign
	2.4.Promotional elements and installation concepts are presented for approval
	2.5.Materials are constructed to match the designed elements
	2.6.Promotion is installed and dismantled at the work site
	2.7. <i>Customer feedback</i> checks are developed and implemented to measure the effectiveness of the promotional campaign and gauge customer response

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to understand how trees capture and store carbon
- Communication skills sufficient to explain carbon capture and storage to customers
- Literacy skills sufficient to help write a promotional campaign and evaluation documentation
- Numeracy skills sufficient to understand input and output figures, and calculate potential carbon storage of wood products
- Problem solving skills sufficient to apply the promotional campaign and identify improvement opportunities

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for promoting the carbon benefits of wood products
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

material

- Organisational and site standards, requirements, policies and procedures for promoting the carbon benefits of wood products
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- How trees capture and store carbon
- Principles of developing a promotional campaign
- Continuous improvement processes and systems
- Established communication channels and protocols
- Problem identification and resolution strategies; common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for calculating approximate carbon storage of wood products
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can promote the carbon benefits of wood products to customers in a timber merchandising environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to promoting the carbon benefits of wood products
- following organisational policies and procedures relevant to promoting the carbon benefits of wood

EVIDENCE GUIDE

Context of and specific resources for assessment	<p>products</p> <ul style="list-style-type: none"> • providing advice to customers on available product range and their carbon storage figures • recommending wood products to customers • preparing a campaign to promote the carbon benefits of wood products <ul style="list-style-type: none"> • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to follow relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies • Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency • The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

RANGE STATEMENT

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Wood products: describe any wood or wood composite material and may include:

- hardwood logs, poles, piles, stringers, other round products
- softwood logs, poles, piles, roundwood products
- sawn timber
- structural timber
- non-structural timber
- treated timber

RANGE STATEMENT

- plywood and veneer
- particle board and MDF
- flooring
- wood panelling
- mouldings
- glulamated beams
- engineered timber

Process of carbon capture and storage is the process trees use to capture and fix carbon from the atmosphere into wood

Carbon storage is the amount of carbon stored in a timber product

Promotional elements may include:

- visual display
- product information

Customer feedback may include:

- verbal
- questionnaire

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify environmental care requirements	<p>1.1. Applicable Occupational Health and Safety (OHS), environmental, legislative and organisational requirements relevant to following environmental care practices in completing fire salvage operations are identified and followed</p> <p>1.2. Work order is reviewed and environmental care requirements are identified and clarified with appropriate personnel</p> <p>1.3. Existing and potential environmental risks and hazards are identified and reported to relevant personnel</p>
2. Prepare for fire salvage operations	<p>2.1. Schedule for salvaging is reviewed and confirmed with appropriate personnel</p> <p>2.2. Operational activities are identified</p> <p>2.3. Preliminary site work is confirmed</p> <p>2.4. Tree location and stability are assessed for conditions likely to effect safety and merchandising priorities</p> <p>2.5. Equipment is selected appropriate to work and environmental care requirements in line with workplace procedures</p> <p>2.6. Equipment is checked for effectiveness in line with manufacturer's specifications</p> <p>2.7. Planning permits and access permission are confirmed</p> <p>2.8. Communication with others is established and</p>

ELEMENT	PERFORMANCE CRITERIA
	maintained in line with OHS requirements
3. Perform fire salvage operations in line with environmental care requirements	3.1.Movement and whereabouts of personnel are monitored 3.2.Pre-harvesting environmental care requirements are undertaken 3.3.Designated trees are salvaged in line with salvage plan 3.4.Heads and non-merchantable stems are dispersed or otherwise handled in line with work order 3.5.Logs are hauled to log landings and landscape left in safe condition suitable for regeneration
4. Complete documentation	4.1.Product volumes are tallied and recorded in departing salvage site 4.2.Variations are reported in line with workplace procedures 4.3.Environmental care procedures are recorded and reported in line with workplace procedures 4.4.Breaches or potential breaches of relevant environmental regulations are reported in line with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use harvesting plant and equipment; undertake advanced chainsaw harvesting techniques; undertake advanced 4WD operations
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation; use standard VHF&UHF radios, GPS systems; read topographic maps; effectively assess salvage operation requirements including fire damage
- Problem solving skills sufficient to identify problems and faults in plant and equipment; demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for using environmental care procedures to undertake fire salvage operations

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, the cleaning of plant, tools and equipment, returning the environment to its original or near to original condition on completion of activity and minimising noise
- Organisational and site standards, requirements, policies and procedures for using environmental care procedures to undertake fire salvage operations
- Environmental risks and hazards
- Minimising environmental impact
- Using material effectively and efficiently
- Principles of ecological sustainability as they pertain to the specific forest type, landscape and fire regime to which the coupe or forest is exposed
- Characteristics of trees and timber defects
- Assessment of fire damaged trees
- Fire salvage operations and strategies
- Harvesting and extraction methods
- Established communication channels and protocols including notification of authorities
- Problem identification and resolution strategies in relation to plant and equipment used in salvage operations
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimation and measurement
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently use environmental care procedures to undertake fire salvage operations

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:
- following applicable Commonwealth, State or Territory legislative and regulatory requirements and

EVIDENCE GUIDE

	<ul style="list-style-type: none">codes of practice relevant to fire salvage operationsfollowing organisational policies and procedures relevant to environmental care requirementsassessing salvage operation requirements including fire damagepreparing for fire salvage operationsperforming a fire salvage operation in line with environmental care requirementsrecording and reporting all information and data related to the fire salvage operationusing safe work practicessafely using plant and equipment associated with fire salvage operations, including:<ul style="list-style-type: none">harvesting plant and equipmentadvanced chainsaw harvesting techniquesadvanced 4WD skills
Context of and specific resources for assessment	<ul style="list-style-type: none">Competency is to be assessed in the workplace or realistically simulated workplaceAssessment is to occur under standard and authorised work practices, safety requirements and environmental constraintsAssessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site contextAssessment is to comply with relevant regulatory or Australian Standards requirementsThe following resources should be made available:<ul style="list-style-type: none">workplace location or simulated workplacematerials and equipment relevant to undertaking work applicable to this unitspecifications and work instructions
Method of assessment	<ul style="list-style-type: none">Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training PackageAssessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledgeAssessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competenciesAssessment methods must confirm the ability to access and correctly interpret and apply the required knowledge

EVIDENCE GUIDE

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
 - use of tools and plant appropriate to a task and used to safe working procedures
- Environmental requirements may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:
- are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - procedural manuals
 - continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards

RANGE STATEMENT

Work order must include:

- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- instructions for the trimming, felling and despatching of salvaged trees, including merchandising
- directions on the treatment of non-merchantable trees and debris for the purpose of environmental care and site rehabilitation
- prescriptions for maintenance of soil and water
- wet weather restrictions

and may include:

Environmental care requirements may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- any activities and directives prescribed under legislation or required for standard certification requirements or as a management priority such as:
 - soil erosion mitigation
 - track, road, drainage and crossing maintenance
 - weed management
 - rehabilitation prescriptions
 - watercourse protection
 - flora and fauna management
 - run-off minimisation
 - buffer zone and filter strip maintenance
 - protection of remnant habitat
 - identification of cultural sites

RANGE STATEMENT

Appropriate personnel may include:

- managers
- supervisors
- foremen
- operational staff
- administrative staff
- sub contractors
- clients

Environmental risks and hazards may include:

- spills
- leaks
- pollution
- planned and unplanned emissions
- soil compaction
- disturbance and erosion
- accidents
- disposal of waste
- damage or disruption to ecosystems
- displacement of plant or animals
- changes in land use
- fire risks and threats
- damage to habitats
- illegal vegetation clearing
- seed collection
- firewood gathering

Schedule is to include:

- plan
- timeline
- list of events to take place in conducting fire salvage operations

Operational activities may include:

- coupe mapping exercises
- site preparation
- establishment of stream or water course buffers, filter strips, contours, gullies, crossing and other landscape protection
- habitat, plant community, forest type protection
- fauna and flora protection
- timber dump
- snig track
- forwarding tracks
- temporary and permanent road

RANGE STATEMENT

- construction, use or maintenance
- fire management
- wet weather restrictions

and may be modified according to:

- weather conditions
- seasonal activity
- time frames
- condition of fire affected coup
- accessibility

Stability must include:

assessment of a tree to determine:

- whether or not it is safe to leave standing
- its merchantability
- how it should be felled

Equipment may include:

- chainsaws
- VHF&UHF radios
- GPS systems
- safety attire
- 4WD
- harvesting plant and equipment

Communication may include:

- verbal or non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices
- radio communication
- signals used under fire management conditions

Salvage

is the process of removing from a site, commercially viable trees that have been damaged by fire in such a way that leaves the site in a state of protection against further loss or damage to natural resources and in a state that rehabilitation can occur

RANGE STATEMENT

Regeneration must include:

- return of the area to a revegetated state
- protection of all environmental assets

Records and reports may include:

- OHS policies and procedures
- quality outcomes
- hazards
- incidents
- equipment malfunctions
- and may be:
- manual
- computer based, or another appropriate organisational communication system

FPICOT3253A Convert timber residue into products for further use

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to convert timber residue from a process into products designed for further use

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit The unit involves converting timber residue in a variety of settings including:

- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for residue conversion processing operation

- 1.1. Applicable ***Occupational Health and Safety*** (OHS), ***environmental, legislative*** and ***organisational requirements*** relevant to operating machinery, grading ***residue*** and handling material are identified and followed
- 1.2. Timber residue product outcome is identified and conversion process determined
- 1.3. ***Work order*** is reviewed and confirmed with appropriate staff
- 1.4. Timber residue is graded in line with conversion process requirements
- 1.5. ***Equipment*** is selected appropriate to work requirements and checked for effectiveness in line with manufacturer's specifications
- 1.6. Timber residue is ***transferred*** and ***stored*** in line with material handling specifications and chain of custody priorities
- 1.7. ***Communication*** with others is established and maintained in line with OHS requirements

ELEMENT	PERFORMANCE CRITERIA
2. Undertake conversion process to produce timber products	2.1. Work procedures are followed in line with OHS, environmental, legislative and residue output obligations and specifications 2.2. Product specifications and quality standards are confirmed, and plant and equipment set to ensure outputs are compliant with product specifications and environmental standards 2.3. Plant and equipment is operated in line with OHS standards, environmental requirements and manufacturer's specifications 2.4. Process is monitored, ensuring inputs and outputs are compliant with product specifications and environmental requirements 2.5. Waste is monitored, contained and <i>disposed of</i> in line with environmental and legislative requirements and organisational protocols 2.6. Products are inspected to ensure they meet work order 2.7. Products are transferred and stored in line with material handling specifications and chain of custody priorities
3. Record outputs	3.1. Product volumes and any associated additives required for conversion to a marketable product are tallied and quantity surveyed 3.2. Outputs for quality control and certification purposes are <i>recorded and reported</i> 3.3. <i>Variations are reported in line with organisational requirements</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely grade and process wood and timber residue
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE
