- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation; read work orders; follow legislation, regulations, standards, codes of practice and established safe practices and procedures, for screening wood or timber residue
- Numeracy skills sufficient to accurately tally and quantity-survey wood and timber residue products
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for converting timber residue for further use
- Environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for grading and handling wood and timber residue
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Product grading techniques and assessment
- Characteristics of wood chips and stock levels
- Chip production process
- Timber production processes
- Storage systems and labelling
- Alternative products for timber residue
- Established communication channels and protocols
- Problem identification and resolution
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

EVIDENCE GUIDE

Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently convert timber residue for further use

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to converting timber residue
- following organisational policies and procedures relevant to converting timber residue
- reading work order to establish conversion process requirements
- converting timber residue into marketable products in line with product specifications and environmental requirements
- monitoring, containing and disposing of waste in line with environmental legislation and organisational protocols
- transferring and storing timber residue and products in line with chain of custody priorities
- reporting and recording information relevant to the conversion process

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard identification and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards

RANGE STATEMENT

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Residue may include:

- bark
- green chip and sawdust
- dry chip and sawdust
- resin and tannin extractives
- log peeler cores and veneer off-cuts
- particle board and MDF off-cuts
- treated boards
- treatment solution

Work order must include:

- machine operating procedures specific to product and product quality standards
- product quality guidelines
- product processing guidelines
- packaging and/or shipping requirements

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Equipment may include:

- processing plant
- hand tools
- transfer systems
- chippers
- washing plants
- aggregate sorters

Transfer may include:

- initial production process
- conversion process
- chemical alteration

Storage may include:

- hopper
- pallets
- yard
- warehouse
- dumps

RANGE STATEMENT

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Disposing of may include:

- recycling waste
- re-using waste
- redirecting waste for energy recovery

Records and reports may include:

- product type
- size
- profile
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- incidents
- hazards
- equipment malfunctions

and may be:

- manual
- or by using a computer-based system or other appropriate organisational communication system

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to consider the environmentally sustainable work practices of the work site or work area, to identify opportunities for improvement, and gain support to put them into action

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit

The unit involves implementing and monitoring environmentally sustainable work practices, including developing processes and tools in operations of all sizes in a variety of work settings, including:

- forest environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plant
- downstream processing of timber
- forest products factory
- forest products sales and service
- horticultural setting
- local council
- emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Examine work site/work area in relation to environmentally sustainable work practices | 1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to implementing environmentally sustainable work practices in the work site/work area are identified and followed |
| | 1.2. Information on environmental and resource efficiency systems and procedures is sourced |
| | 1.3. Current resource usage is measured and documented |
| | 1.4. Current <i>purchasing strategies</i> are investigated and documented |
| | 1.5. Current work processes are examined to assist in |

ELEMENT

PERFORMANCE CRITERIA

- identifying areas for improvement
2. Set targets for improvement
 - 2.1. Input from *stakeholders, appropriate personnel and specialists* is sought in providing solutions for work site/work area environmental issues
 - 2.2. Alternative solutions to work site/work area environmental issues are considered and communicated to appropriate personnel
 - 2.3. Environmental and resource efficiency targets are set
 - 2.4. *Environmental and resource efficiency improvement plan* for work site/work area is developed
 3. Implement environmental and resource efficiency improvement plan
 - 3.1. Appropriate techniques and tools to assist in achieving efficiency targets are sourced
 - 3.2. Environmental and resource efficiency improvement plan is integrated and implemented with other operational activities
 - 3.3. Suggestions and ideas about environmental and resource efficiency management are sought from appropriate personnel and stakeholders, and acted upon where appropriate
 4. Monitor performance
 - 4.1. Outcomes to report on efficiency targets are documented and communicated to appropriate personnel and stakeholders
 - 4.2. Targets and environmental and resource efficiency improvement plan are reviewed
 - 4.3. New efficiency targets are set, and new tools and strategies applied where appropriate
 - 4.4. Successful strategies are promoted and where possible, participants rewarded

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use software systems for recording and filing documentation; use word processing and other software for interpreting charts,

REQUIRED SKILLS AND KNOWLEDGE

flowcharts, graphs and other visual data and information

- Communication skills and interpersonal techniques sufficient to interact appropriately with stakeholders, colleagues and others in the workplace
- Literacy skills sufficient to analyse, document, report and maintain workplace information and data
- Numeracy skills sufficient to access and analyse workplace information and data
- Problem solving skills sufficient to identify and analyse problems; demonstrate appropriate response procedures
- Planning and organising skills sufficient to implement environmental and resource efficiency improvement plan to own work site/work area

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for implementing and monitoring environmentally sustainable work practices in the work site or work area
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions and noise, the cleaning of plant, tools and equipment, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures associated with environmentally sustainable work practices
- Environmental risks and hazards
- Procedures for minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Relevant environmental and resource efficiency issues specific to industry practices
- Workplace communication channels, protocols and procedures
- Organisational structure and reporting channels
- Workplace safety and emergency procedures
- Strategies to maximise opportunities and minimise impacts relevant to own work area
- Problem identification and resolution strategies; common fault finding techniques
- Types of tools and equipment, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can implement and monitor environmentally sustainable work practices in the forest and forest products industry

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to implementing environmentally sustainable work practices in the work site/work area
- following organisational policies and procedures relevant to implementing and monitoring environmentally sustainable work practices in the work site/work area
- developing environmental and resource efficiency improvement plans to meet efficiency targets
- implementing new approaches to work, in an effort to resolve and improve environmental and resource efficiency issues
- monitoring targets and improvements for environmental and resource efficiency relative to work site/work area

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal

Organisational requirements

RANGE STATEMENT

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting
- equipment use, maintenance and storage
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Purchasing strategies may include:

- influencing suppliers to take up environmental sustainability approaches
- researching and participating in programs, such as a supply chain program to purchase environmentally sustainable products

Stakeholders, appropriate personnel and specialists may include:

- individuals and groups both inside and outside the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, including:
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
 - safety officers
 - government
 - investors
 - local community
 - other organisations

Environmental and resource efficiency improvement plans may include:

- specialists outside the organisation who may have particular technical expertise
- addressing environmental and resource sustainability initiatives, such as:
 - environmental management systems
 - action plans
 - surveys
 - audits

RANGE STATEMENT

- determining organisation's most appropriate waste treatment, including:
 - waste to landfill
 - recycling
 - re-use
 - recoverable resources
 - wastewater treatment
- initiating or maintaining appropriate organisational procedures for operational energy consumption, including stationary energy and non-stationary energy (transport)
- reducing use of non-renewable resources
- reference to standards, guidelines and approaches, such as:
 - ecological footprinting
 - Global Reporting Initiative
 - ISO14001 Environmental Management System
 - life cycle analyses
 - product stewardship
 - supply chain management
 - triple bottom line reporting

FPICOT3255 Apply silviculture principles

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit describes the outcomes required to access, interpret and apply sustainable silvicultural principles to native forests.

Application of the Unit

This unit involves following legislation, an appropriate management regime, and industry-acceptable criteria to identify target species, and the selection and retention of merchantable trees during native forest operations.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge section and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

1 Access and interpret silvicultural principles in legislation and organisational procedures	<p>1.1 Identify and review information on <i>occupational health and safety</i> (OHS), environmental, <i>regulatory requirements</i> and <i>organisational requirements</i> relevant to sustainable native forest operations for <i>various forest types</i></p> <p>1.2 Identify and interpret key principles and requirements that apply to sustainable <i>silvicultural methods and techniques</i></p> <p>1.3 Identify target species in line with approved forest operational plan and organisational procedures</p>
2 Assess forest condition	<p>2.1 Review work order and identify and clarify sustainable native forest requirements with <i>appropriate personnel</i></p> <p>2.2 Select and use appropriate techniques and tools to measure tree and stand height</p> <p>2.3 Calculate basal area and assess tree dominance and crown vigour using an approved industry process</p> <p>2.4 Determine and record standing tree defects</p> <p>2.5 Identify and mark merchantable trees in line with organisational procedures</p>
3 Implement silvicultural practices	<p>3.1 Calculate and apply tree retention and stocking criteria according to legislative requirements and operational plan</p> <p>3.2 Select appropriate silvicultural methods and techniques to meet environmental and production requirements</p> <p>3.3 Identify situations requiring specialist advice and seek assistance in line with organisational requirements</p>
4 Monitor work practices to ensure compliance with legislation	<p>4.1 Monitor and adjust work practices to meet <i>changing conditions</i></p> <p>4.2 Monitor and maintain sustainable native forest practices in line with relevant legislation, codes of practice and organisational requirements</p> <p>4.3 Identify and report non-compliant work practices to appropriate personnel</p> <p>4.4 Identify improved work practices and recommend improvements in line with organisational continuous improvement procedures</p>
5 Maintain records	<p>5.1 Revise and update forest operational plan and organisational procedures as required</p>

5.2 Complete relevant *documentation and reporting* processes according to relevant legislation, codes and organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills:

- Literacy skills to:
 - locate, read, interpret and convey information in written, diagrammatic and/or verbal form
 - complete and maintain workplace documentation and reports
- Technical skills to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques to interact appropriately with colleagues and others in the workplace
- Numeracy skills to measure, calculate and estimate material quantities and time required to complete a task
- Problem-solving skills to:
 - identify problems and equipment faults and demonstrate appropriate response procedures
 - review and interpret work requirements

Required knowledge:

- Federal, state and territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of practising sustainable silviculture in a native forest
- Environmental protection requirements and minimal impact strategies to support the implementation of silviculture practices
- Organisational and site standards, requirements, policies and procedures relevant to environmental care procedures
- Environmental policies and practices, risks and hazard identification relevant to silviculture
- Growth habits of specific species under a range of soil and environmental conditions
- Regeneration requirements of plant species being managed
- Soil conservation and erosion mitigation techniques and their advantages and disadvantages for specific sites and habitats
- Communication procedures and protocols
- Problem identification and common fault-finding techniques
- Procedures for recording and reporting workplace data and information

•

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment A person who demonstrates competency in this unit must be able to provide evidence that they can apply and monitor sustainable silvicultural principles in a native forest

Critical aspects for assessment and evidence required to demonstrate competency in this unit The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable federal, state or territory, and local government regulatory, environmental and OHS requirements, codes of practice and industry standards relevant to applying sustainable silvicultural principles
- following organisational policies and procedures relevant to implementing and monitoring sustainable silvicultural principles
- effective communication and safe work practices
- implementing best practice and industry-acceptable silvicultural practices
- monitoring and maintaining sustainable silvicultural procedures
- identifying and reporting non-compliant work practices
- completing relevant workplace documentation and reporting processes

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be made available:

- workplace location or simulated workplace
- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

OHS requirements:

- are to be in line with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - safety management systems

- safe work procedures
- site safety plans and emergency evacuations
- the use of personal protective equipment (PPE) and clothing
- safety equipment
- first aid equipment
- firefighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- techniques for manual handling, including shifting, lifting and carrying
- machine guarding

- Regulatory requirements:**
- are to be in line with applicable legislation from all levels of government that affect sustainable silvicultural operations and may include:
 - environment protection and biodiversity conservation
 - silviculture codes and guidelines
 - ecological sustainability
 - environmental planning and assessment
 - threatened species conservation
 - critical habitat register
 - native vegetation
 - federal, state or territory forestry legislation and local government regulations
 - native forest legislation
 - forest operational plans
 - specific site environmental management plans
 - relevant codes of practice, including Safe Work Australia code of practice 'Managing Risks in Forest Operations'

- water catchment management
- surface and ground water conservation requirements
- relevant Australian and industry standards
- hazard reduction policy and procedures
- reforestation codes
- fisheries and fish passage
- National Parks and Wildlife legislation
- good neighbour policies
- duty of care
- heritage and traditional landowner requirements

Organisational

requirements may include:

- legal compliance documentation
- recording and reporting
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines
- operational plan, including organisation and site guidelines

Various forest types may include:

- coast and tableland native forests
- inland native forests and woodlands
- River Red Gum and river flood plain native forests
- tropical forests
- exotic plantations
- native plantations

Silvicultural methods and techniques may include:

- slash or harvesting residue burning
- scarification
- enhancement planting or supplementary planting
- fertilisation
- thinning
- pruning
- waste thinning and non-commercial thinning

- commercial thinning
- harvesting
- gapping

Appropriate personnel
may include:

- colleague
- leading hand
- bush boss
- foreman
- supervisor
- manager
- safety officer
- environmental officer

Changing conditions:

- are those conditions that can alter or change and therefore require different work strategies or practices to protect the native forest environment from an increased risk of harm and may include:
 - recently declared or potentially rare and endangered species identified
 - unexpected flora or fauna encountered
 - new or potential habitat
 - ecology or ecosystem changes
 - tree size, condition and species
 - undergrowth and ground cover
 - canopy
 - environmental features
 - operational conditions
 - ground conditions
 - weather conditions
 - wind
 - dust
 - smoke
 - fire
 - cultural sensitivity
 - forest type
 - land tenure
 - code of practice
 - quality of roads and tracks

Documentation and reporting may include:

- specific organisational records, reports and forms
- update of forest operational plan
- legislative compliance
- non-compliance reports
- operational inspection reports
- environmental audits
- environmental incident or accident reports
- reports on any threatened or endangered species of plant, animal or other organisms
- presence of unexpected flora and fauna
- information on habitats or landscape features
- exclusion zone amendments
- notifiable species list
- risk and hazard or potential hazard control measure reports
- timber felling and extraction records
- certification requirements
- incident or accident reports
- landing and snig track design
- road and crossing design
- on-site mill waste disposal
- drainage line and buffer zone specifications
- development operations
- heritage and traditional landowner reports
- work practice improvement recommendations, which may be manual or computer-based

FPICOT3256 Apply biodiversity protection principles

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit describes the outcomes required to access, interpret and apply biodiversity principles and requirements in a forest environment, including monitoring work practices for compliance with the principles, and maintaining forest documentation and records.

Application of the Unit

This unit involves following ecological and biodiversity protection principles when identifying and protecting forest habitats, threatened species, microclimates and landscape features; or while conducting hazard-reduction procedures in an operational forest environment.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements may apply to this unit.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge section and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

1 Access and interpret ecological and biodiversity protection legislation and organisational procedures	<p>1.1 Identify and review information on <i>occupational health and safety</i> (OHS), environmental, <i>regulatory</i> and <i>organisational requirements</i> relevant to the application of ecological and biodiversity protection principles for <i>various forest types</i></p> <p>1.2 Identify and interpret key principles and requirements that apply to ecological and biodiversity protection</p> <p>1.3 Identify sensitive ecological and biodiversity sites, <i>habitats</i>, <i>landscape features</i> and <i>protection zones</i> in the forest <i>operational plan</i> and maps</p>
2 Implement biodiversity protection principles	<p>2.1 Review work order and identify and clarify ecological and biodiversity requirements with <i>appropriate personnel</i></p> <p>2.2 Identify endangered communities, <i>threatened species</i>, ecological habitats, sensitive landscape features and protection zones in the field</p> <p>2.3 Identify and report existing and potential ecological risks and hazards</p> <p>2.4 Apply protection measures for endangered communities, threatened species, ecological habitats and sensitive landscape features and protection zones in line with codes of practice and operational plan</p> <p>2.5 Select, apply and verify protection zone methods and materials with appropriate personnel</p> <p>2.6 Identify situations requiring specialist advice and seek assistance in line with organisational requirements</p>
3 Monitor work practices to ensure compliance with legislation	<p>3.1 Monitor and adjust work practices to meet <i>changing conditions</i></p> <p>3.2 Monitor and maintain ecological and biodiversity protection work practices in line with codes of practice and operational plan</p> <p>3.3 Identify and report non-compliant work practices to appropriate personnel</p> <p>3.4 Identify improved work practices and make recommendations in line with organisational continuous improvement procedures</p>
4 Maintain records	<p>4.1 Update operational plans as required with any new threatened species or habitat protection <i>prescriptions</i></p> <p>4.2 Complete relevant <i>documentation and reporting</i> processes</p>

in line with codes of practice and organisational requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills:

- Literacy skills to:
 - locate, read, interpret and convey information in written, diagrammatic and/or verbal form
 - complete and maintain workplace documentation and reports
- Technical skills to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques to interact appropriately with colleagues and others in the workplace.
- Numeracy skills to measure, calculate and estimate material quantities and time required to complete a task
- Problem-solving skills to:
 - identify problems and equipment faults and demonstrate appropriate response procedures
 - review, identify and interpret work requirements

Required knowledge:

- Federal, state and territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for ecological and biodiversity protection
- Environmental protection requirements, including the safe disposal of products and waste material
- Organisational and site standards, requirements, policies and procedures relevant to environmental care
- Environmental policies and practices, risks and hazard identification relevant to biodiversity protection
- Established communication channels and protocols
- Problem identification and fault-finding techniques
- Mathematical procedures for measuring and estimating, including calculating quantities and time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can implement and monitor ecological and biodiversity protection principles

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable federal, state or territory regulatory or local government ordinance requirements, codes of practice, and OHS and environmental policies relevant to ecological and biodiversity protection
- following organisational policies and procedures relevant to implementing and monitoring ecological and biodiversity protection principles
- effective communication and safe work practices
- implementing best practice and industry-acceptable ecological and biodiversity protection principles
- monitoring and maintaining ecological and biodiversity protection principles
- identifying and reporting non-compliant work practices
- completing relevant workplace documentation and reporting processes

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other

than confirmatory questions, will usually be conducted in an off-site context

- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or

- language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

- are to be in line with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - safe work procedures
 - hazard and risk control
 - elimination of hazardous materials and substances
 - techniques for manual handling, including shifting, lifting and carrying

Regulatory requirements:

- are to be in line with applicable legislation from all levels of government that affect forest operations in relation to ecological and biodiversity protection and may include:
 - federal, state or territory legislation
 - Environment Protection and Biodiversity Conservation Act 1999 (the EPBC Act)
 - Threatened Species Conservation Act
 - Native Vegetation Act
 - native forest legislation
 - private native forest codes

- forest operational plans
- environmental legislation, policy and procedures
- environmental planning and assessment
- specific site environmental management plans
- relevant codes of practice
- water catchment management
- surface and ground water conservation requirements
- relevant Australian standards and industry standards
- hazard reduction policy and procedures
- plantation legislation
- plantation and reforestation code
- fisheries and fish passage
- national parks and wildlife legislation
- good neighbour policies
- award and organisational agreements
- heritage and traditional landowner
- forest certification, such as Forest Stewardship Council (FSC) or Australian Forestry Standard (AFS) certification

Organisational

requirements may include:

- legal compliance documentation
- recording and reporting
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines
- operational plan, including organisation and site guidelines

Various forest types may include:

- Callitris forest
- closed low eucalypt forest
- open low eucalypt forest
- low eucalypt woodland
- open eucalypt mallee forest
- eucalypt mallee woodland

- closed medium eucalypt forest
- open medium eucalypt forest
- medium eucalypt woodland
- closed tall eucalypt forest
- open tall eucalypt forest
- tall eucalypt woodland
- River Red Gum and river flood plains
- melaleuca forest
- tropical rainforest
- subtropical rainforest
- warm and cool temperate rainforest

Habitats:

- are any area or region where local animals, plants or organisms may live or rely upon for food, water, shelter or breeding purposes and may include:
 - habitat plants and trees, including:
 - specific species
 - burrow
 - food
 - roost
 - nest
 - recruitment trees
 - hollow logs
 - rocky outcrops
 - rock overhangs
 - caves
 - soil mounds
 - creek or river banks
 - sheltered valleys or canyons
 - any other site, feature or zone listed as habitat or potential habitat

Landscape features:

- are any topographical or ecological feature that could serve as a habitat to sensitive or endangered local animals, plants or organisms and may include:
 - wetlands
 - steep slopes
 - sheltered valleys or canyons

- rocky outcrops and overhang
- caves
- waterfalls and courses
- vegetation community
- sites of cultural or heritage significance

Protection zones:

- are areas or zones where operational conditions are varied by prescriptions for the management of ecological and biodiversity values, and may include:
 - buffer zones
 - filter strips
 - riparian protection areas
 - exclusion zones
 - conservation management plan

Operational plan may include:

- forest operations plan
- harvesting plan
- plantation establishment plan
- coupe plan
- roading plan
- drainage plan
- sediment and erosion control plan

Appropriate personnel may include:

- colleague
- leading hand
- bush boss
- foreman
- supervisor
- manager
- environmental officer
- other authorised personnel

Threatened species may include:

- animals and plants listed in the Environment Protection and Biodiversity Conservation Act 1999 (the EPBC Act) and any amendments
- animals and plants listed in state or territory legislation, such as NSW

Threatened Species Conservation Act (1995)

- Changing conditions:**
- are those conditions that can alter or change and therefore require different work strategies or practices to maximise forest soil and water protection from an increased risk of pollution and may include:
 - land tenure
 - topography
 - machinery and operation type
 - forest type
 - soil type and erodibility
 - rainfall intensity
 - soil moisture
 - ground cover
 - code of practice
 - quality of roads and tracks
- Prescriptions** may include:
- any temporary or permanent measure or action aimed at protecting the ecology and biodiversity before, during or on completion of forest operations
 - modified silviculture
 - exclusion of an activity
 - modified access, including:
 - cordons or barricades
 - signage
 - written instruction
 - verbal instruction
 - code of practice directives or requirements
 - legislative compliance
 - local ordinances
- Documentation and reporting** may include:
- specific organisational records, reports and forms
 - update of forest operational plans
 - operational inspection report

- non-compliance report
- road and crossing designs
- drainage line and buffer zone specifications

Unit Sector(s)

Competency field

Competency field n/a

FPICOT3257 Follow cultural heritage requirements

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit describes the outcomes required to identify and protect Indigenous, historical and natural heritage sites in line with relevant legislation.

Application of the Unit

This unit involves identifying cultural heritage sites, applying protective measures, and monitoring work practices with the aim of improving cultural heritage awareness and care in a variety of work settings, including a forest or private native forest, horticultural, domestic, local council or emergency services environment.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge section and/or the Range Statement. Assessment of performance is to

be consistent with the Evidence Guide..

Elements and Performance Criteria

- | | |
|--|--|
| 1 Access and interpret cultural heritage legislation and organisational procedures | <p>1.1 Identify and review information on <i>occupational health and safety</i> (OHS), <i>legislative</i> and <i>organisational requirements</i> relevant to recognising and following cultural heritage protection, maintenance and recording</p> <p>1.2 Identify and interpret key principles and requirements that apply to cultural heritage protection and preservation</p> <p>1.3 Identify partnership arrangements and relationships with appropriate <i>government departments, agencies</i> and other relevant community organisations</p> <p>1.4 Identify <i>Indigenous, historical and natural heritage</i> sites and/or objects in the forest <i>operational plan</i> and maps</p> |
| 2 Apply cultural heritage legislative procedures | <p>2.1 Review work order and identify and clarify the potential impact on cultural heritage with <i>appropriate personnel</i></p> <p>2.2 Locate and identify Indigenous, historical and natural heritage sites and/or objects in the field</p> <p>2.3 Assess and report risks and hazards to cultural heritage sites</p> <p>2.4 Apply relevant requirements for the selection and use of <i>protection zones</i>, signage, field markings and equipment and verify them with appropriate personnel</p> <p>2.5 Carry out cultural heritage protection measures in line with legislative requirements</p> <p>2.6 Identify situations requiring specialist advice and the need to seek assistance, in line with organisational requirements</p> |
| 3 Monitor work practices to comply with legislation | <p>3.1 Monitor and adjust work practices to meet <i>changing conditions</i></p> <p>3.2 Monitor and maintain cultural heritage</p> |

- protection measures
- 3.3 Identify and report non-compliant work practices to appropriate personnel
- 3.4 Identify improved work practices and make recommendations in line with organisational continuous improvement procedures
- 4 Maintain records
 - 4.1 Revise and update forest operational plans in line with legislative and organisational requirements
 - 4.2 Complete relevant *documentation and reporting* processes in line with legislative and organisational requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills:

- Literacy skills to:
 - locate, read, interpret and convey information in written, diagrammatic and/or verbal form
 - complete and maintain documentation to support legislation and organisational requirements
- Communication skills and interpersonal techniques to interact appropriately with a range of stakeholders
- Problem-solving skills to:
 - identify problems that impact the site and make appropriate adjustments
 - review, identify and interpret work requirements

Required knowledge:

- Federal, state and territory legislation, regulations, standards, codes of practice and established safe practices relevant to the processes for implementing and monitoring cultural heritage protection procedures
- Organisational and site standards, requirements, policies and procedures associated with cultural heritage protection
- Importance of Indigenous, historical and natural heritage conservation
- Procedures for preventing harm to cultural heritage sites and objects
- Established communication channels and protocols
- Problem identification and common fault-finding techniques

- Types of tools, equipment and procedures for their safe use and maintenance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment A person who demonstrates competency in this unit must be able to provide evidence that they can implement and monitor cultural heritage identification and protection principles in a workplace environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following federal, state or territory legislative and regulatory requirements and codes of practice relevant to implementing cultural heritage protection principles
- following organisational policies and procedures relevant to implementing and monitoring cultural heritage protection principles
- effective communication and safe work practices
- applying best practice and industry-acceptable cultural heritage protection procedures
- monitoring and maintaining cultural heritage protection procedures
- identifying and reporting non-compliant work practices
- completing relevant workplace documentation and reporting procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred

to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

- are to be in line with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures and may include:
 - safe work procedures
 - hazard and risk control
 - elimination of hazardous materials and substances
 - techniques for manual handling, including shifting, lifting and carrying

Legislative requirements:

- are to be in line with applicable legislation from all levels of government that affect forest operations in relation to cultural heritage protection and may include:

- specific site environmental management plans
- relevant codes of practice
- Safe Work Australia code of practice ‘Managing Risks in Forest Operations’
- relevant Australian and industry standards
- forest operational plans
- hazard reduction policy and procedures
- plantation legislation
- reforestation codes
- duty of care

Organisational

requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS emergency and evacuation procedures
- ethical standards
- recording and reporting
- equipment use, maintenance and storage
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines
- supervision requirements
- training and licensing

Government departments and agencies:

- are those federal, state or territory and local departments, authorities, commissions or offices responsible for and administering cultural heritage legislation, codes, guidelines and policy and procedures, and may include:
 - Indigenous affairs and culture
 - heritage and history
 - environment

- sustainability
- forestry
- parks and wildlife
- water

Indigenous heritage:

- consists of any place or object of significance to Indigenous people because of their traditions, observances, lore, customs, beliefs and history, and may include:
 - sacred sites
 - ceremonial sites
 - burial sites
 - rock art and engravings
 - ochre pits
 - scatter sites
 - scarred or carved trees
 - stone arrangements or bora rings
 - stone tool manufacture and grinding sites
 - artefacts
 - massacre sites

Historical heritage:

- is the legacy of physical artefacts inherited from past generations, maintained in the present and bestowed for the benefit of future generations, and may include:
 - buildings
 - constructions
 - mining ruins
 - roadways
 - landscape features, including:
 - convict markings or carvings
 - blazed trees
 - historic locations and sites
 - monuments
 - historic artefacts and objects

- Natural heritage:**
- designates outstanding physical, biological and geological features, which may include:
 - physiological feature
 - paleontological feature
 - biological formation
 - habitat of protected, rare or endangered species
 - specific species management area
 - scientific site
 - educational significant site
 - spiritual site
 - nature reserve
 - wilderness area
- Operational plan:**
- may include:
 - harvesting plan
 - coupe plan
 - road plan
 - drainage plan
 - maps
 - aerial photographs
 - generally includes information and instructions relevant to:
 - general coupe/compartments requirements
 - forest inventory
 - trees to be felled and retained
 - site plan and environmental features
 - environmental requirements
 - exclusion zone data and details
 - sensitive habitat locations
- Appropriate personnel may include:**
- colleagues
 - supervisors
 - managers
 - regulatory agency personnel
- Protection zones:**
- are areas or zones where operational

conditions are varied by prescriptions for the management and protection of cultural heritage sites, and may include:

- sites of cultural or heritage significance
- Indigenous sacred sites
- protected areas or features
- sites containing danger or risk
- exclusion zones

Changing conditions:

- are those conditions that can alter or change and therefore require different work strategies or practices to maximise cultural heritage protection from an increased risk of harm and may include:
 - unexpected discovery of an Indigenous site
 - changing cultural sensitivity
 - unexpected discovery of a heritage or historic site
 - environmental features, changing ecology or ecosystem or habitat
 - protected, rare or endangered species encountered
 - operational conditions, such as:
 - adverse weather conditions
 - wind
 - light
 - ground conditions
 - fire

Documentation and reporting may include:

- notifiable Indigenous heritage information requirements
- archaeological or historic finds
- legislative compliance
- environmental compliance
- information on appropriate habitats or landscape features
- exclusion zones
- hazards or potential cultural heritage hazards and risks
- quality outcome requirements and records

- certification requirements
- maintenance schedules and records
- verbal, manual or computer-based system

Unit Sector(s)

FPICOT3258 Comply with soil and water protection

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit describes the outcomes required to protect soil, water and water catchments from erosion, sediment and other pollutants.

Application of the Unit

This unit involves following erosion, sediment control and pollution prevention measures in a variety of work settings, including a forest environment; portable saw mill; portable woodchip mill; or horticultural, domestic, local council and emergency services environment.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge section and/or the Range

Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

- | | |
|---|---|
| 1. Access and interpret soil and water protection legislation and organisational procedures | <p>1.1 Identify and review information on <i>occupational health and safety (OHS)</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to soil and water protection procedures for <i>various forest types</i></p> <p>1.2 Identify and interpret key principles and requirements that apply to <i>erosion mitigation, sediment</i> and other pollutant control, surface/ground water protection and catchment</p> <p>1.3 Identify relevant work practices and procedures that comply with regulatory requirements, codes of practice and <i>operational plans</i></p> |
| 2 Conduct erosion and other pollutant control measures | <p>2.1 Clarify and confirm operator responsibilities and duties with <i>appropriate personnel</i></p> <p>2.2 Identify <i>soil</i> erodibility, adverse weather, <i>environmental features</i> and <i>other factors</i> likely to influence soil and water protection measures</p> <p>2.3 Select and use materials, equipment and machinery in line with regulatory requirements, and verify them with appropriate personnel</p> <p>2.4 Apply erosion, sediment and <i>other pollution control measures</i> in line with forest operational plans and/or manufacturer recommendations</p> <p>2.5 Identify situations requiring specialist advice and seek assistance in line with organisational requirements</p> |
| 3. Monitor work practices to ensure compliance with legislation | <p>3.1 Monitor and adjust work practices to meet <i>changing conditions</i></p> <p>3.2 Monitor and maintain erosion, sediment and other pollutant control measures in line</p> |

with relevant legislation, codes of practice and organisational requirements

3.3 Identify and report non-compliant work practices to appropriate personnel

3.4 Identify improved work practices and make recommendations in line with organisational continuous improvement procedures

4. Maintain records

4.1 Revise and update forest operational plan and organisational procedures as required

4.2 Complete relevant *documentation and reporting* processes in line with codes of practice and organisational requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills:

- Literacy skills to:
 - locate, read, interpret and convey information in written, diagrammatic and/or verbal form
 - complete and maintain workplace documentation and reports
- Technical skills to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques to interact appropriately with colleagues and others in the workplace
- Numeracy skills to measure, calculate and estimate material quantities and time required to complete a task
- Problem-solving skills to:
 - identify problems and equipment faults and demonstrate appropriate response procedures
 - review, identify and interpret work requirements

Required knowledge:

- Applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for soil and water protection procedures
- Environmental protection requirements, including the safe disposal of products and waste material
- Organisational and site standards, requirements, policies and procedures relevant to environmental care
- Environmental policies and practices, risks and hazard identification relevant to soil and water protection
- Established communication channels and protocols
- Problem identification and common fault-finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Mathematical procedures for measuring and estimating, including calculating quantities and time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can implement and monitor soil and water protection procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable federal, state or territory regulatory or local government ordinance requirements, codes of practice, OHS and environmental policies relevant to the protection of soil, water and water catchments
- following organisational policies and

procedures, relevant to the protection of soil, water and water catchments

- applying effective communication and safe work practices
- implementing effective erosion mitigation, sediment and pollutant control, surface and ground water protection measures
- monitoring and maintaining erosion mitigation and sediment control processes and water catchment protection measures
- identifying and reporting non-compliant work practices
- completing relevant workplace documentation and reporting processes

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance

- (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access, interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- OHS requirements:**
- are to be in line with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures and may include:
 - safe work procedures
 - hazard and risk control
 - elimination of hazardous materials and substances
 - techniques for manual handling, including shifting, lifting and carrying
- Legislative requirements:**
- are to be in line with applicable legislation from all levels of government that affect forest operations in relation to soil and water protection and may include:
 - federal, state or territory forestry and environmental legislation
 - regional forest agreements
 - relevant codes of practice
 - forest operational plans
- Organisational requirements** may include:
- organisational procedural manuals
 - communication protocols
 - quality assurance
- Various forest types** may include:
- coast and tableland native forests
 - inland native forests and woodlands
 - River Red Gum and river flood plain native forests
 - tropical forests
 - exotic plantations
 - native plantations
- Erosion mitigation** may include:
- walk-over techniques
 - minimal disturbance techniques
 - crown and cross fall drainage
 - cross bank drainage
 - relief culverts on roads
 - mitre and table drains on roads
 - armouring/gravelling of roads
 - crossing and draining surfaces
 - batter stabilisation
 - contour banks and channels
 - gabions

- sediment basins
 - riparian buffer zones
 - outlet protection structures
 - revegetation
- Sediment control measures** may include:
- slash management
 - sediment traps, basins and filters
 - geotextile fabric fences
 - vegetated filter strips
- Operational plans** may include:
- forest operational plan
 - plantation establishment plan
 - harvesting plan
 - operational inspection report
 - roading plan
 - sediment and erosion control plan
 - revegetation plan
 - chemical and fertiliser plan
- Appropriate personnel** may include:
- colleagues
 - leading hands
 - supervisors
 - managers
 - safety officers
- Soil** may include:
- dispersible soil
 - clay, silt, sand and gravel soil
 - loam soil
 - organic material
 - topsoil and subsoil
- Environmental features:**
- are those sensitive features that can be adversely effected if soil erosion occurs, or if inundated with sediment or other pollutants, and may include:
 - drainage lines and drainage depressions
 - water course, creeks and rivers
 - lakes, swamps and wetlands
 - aquatic species
 - steep slopes

- caves
- historic and cultural heritage sites
- road and water supply infrastructure

Other factors may include:

- track and road maintenance
- drainage structures
- setting of contour lines
- slope measurement techniques
- boundaries and survey markers
- site preparation techniques
- site cultivation techniques
- disposal of logging waste materials
- windrowing placement and techniques
- tree selection and felling techniques
- log dump locations and techniques
- log extraction and haulage techniques
- clearing techniques

Other pollution control measures may include:

- fuel containment barriers
- chemical spillage barriers
- containment and removal of waste, including rubbish litter and human waste

Changing conditions:

- are those conditions that can alter or change and therefore require different work strategies or practices to maximise forest soil and water protection from an increased risk of pollution and may include:
 - land tenure
 - topography
 - machinery and operation type
 - forest type
 - soil type and erodibility
 - rainfall intensity
 - soil moisture
 - ground cover
 - quality of roads and tracks

Documentation and reporting may include:

- specific organisational records, reports and forms
- update of forest operational plan

- operational inspection report
- non-compliance report
- road and crossing designs
- drainage line and buffer zone specifications

FPICOT3259 Operate a four wheel drive on unsealed roads

Modification History

Version	Detail
1	Unit replaces FPICOT2234B Operate 4x4 vehicle

Unit Descriptor

This unit describes the outcomes required to safely operate a four wheel drive (4x4) vehicle on unsealed roads and tracks.

Application of the Unit

The unit involves operating a 4x4 vehicle in a variety of work settings

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

Element	Performance Criteria
1 Identify four-wheel drive specific terms and terminology	<p>1.1 Access, interpret and apply <i>documentation</i> relevant to the work activity</p> <p>1.2 Identify the <i>structural</i> and handling differences between a conventional two-wheel drive vehicle and a four-wheel drive vehicle</p> <p>1.3 Use terminology specific to operating a <i>four-wheel drive vehicle</i></p> <p>1.4 Identify four-wheel drive techniques</p>
2 Conduct checks of 4x4 vehicle and equipment	<p>2.1 Perform <i>pre-start checks</i></p> <p>2.2 Secure loads in line with organisational and legislative requirements</p> <p>2.3 Select suitable navigation equipment where necessary</p> <p>2.4 Advise passengers of any special safety precautions to be taken when traversing rough terrain</p> <p>2.5 Check that tyre pressure is suitable for terrain and that it is changed as required in line with organisational procedures</p> <p>2.6 Select and access <i>maintenance equipment</i> prior to departure after considering the contextual issues</p>
3 Prepare for 4x4 operations	<p>3.1 Identify and follow <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to operating a 4x4 vehicle</p> <p>3.2 Determine type of operation and ensure <i>safe operating conditions</i></p> <p>3.3 Establish <i>communication</i> with others and choose the required safety <i>mechanisms</i> in line with organisational requirements</p>
4 Operate 4x4 vehicle on a range of terrain types	<p>4.1 Continually monitor the track to identify <i>hazards</i>, assess <i>risks</i>, and select the best route in line with OHS and environmental requirements</p> <p>4.2 Identify situations where the engagement of four-wheel drive is required and engage front <i>hubs</i> or centre differential lock where fitted</p> <p>4.3 Use appropriate range, gear, speed, driving and braking technique to negotiate a <i>range of terrain</i> types while maintaining control of vehicle at all times</p> <p>4.4 Check brakes and undercarriage after negotiating varying terrain</p> <p>4.5 Park and shut down 4x4 vehicle in line with</p>

- manufacturer specifications* and organisational requirements
- 5 Operate 4x4 vehicle on a steep slope
- 5.1 Inspect intended 4x4 vehicle path prior to negotiation of slope
 - 5.2 Use appropriate range, gear, speed, driving and braking technique to negotiate a steep slope, while maintaining control of vehicle
 - 5.3 Use control braking to ascend and descend, and avoid skidding
 - 5.4 Maintain traction in line with requirements of 4x4 vehicle
 - 5.5 Apply appropriate *automatic and manual techniques* when 4x4 vehicle cannot proceed any further on a steep slope due to traction problems
 - 5.6 Park and shut down 4x4 vehicle in line with manufacturer specifications and organisational requirements
- 6 Perform maintenance and minor repairs on 4x4 vehicles
- 6.1 Perform *routine maintenance* and repair tasks and report defects to the appropriate person
 - 6.2 Demonstrate safe use of a jack to support a four-wheel drive vehicle on uneven ground while changing a tyre
 - 6.3 Clean and store 4x4 vehicle and equipment after use in line with manufacturer specifications and organisational procedures
 - 6.4 Document maintenance and minor repairs in line with organisational procedures

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit

Required skills:

- Technical skills to:
 - apply four-wheel driving techniques in different terrain to safely operate a 4x4 vehicle
 - use and maintain relevant tools, machinery and equipment
 - safely negotiate steep slopes
 - clean and store 4x4 vehicle and equipment
 - attach required equipment to a 4x4 vehicle
 - operate a jack
- Communication skills to use appropriate communication and interpersonal techniques

- with colleagues and others
- Literacy skills to:
 - record and report workplace information in line with organisational requirements
 - maintain documentation
 - interpret written directions
 - use the vehicle manual for information
 - Numeracy skills to measure, estimate and calculate:
 - water depth, journey time and fuel consumption
 - time required to complete a journey
 - Problem-solving skills to:
 - identify problems and equipment faults
 - demonstrate appropriate response procedures
 - identify potential hazards and operational faults
 - conserve vehicle energy with appropriate throttle use

Required knowledge:

- Applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a 4x4 vehicle
- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of carbon emissions
- Environmental risks and hazards associated with operating a 4x4 vehicle on unsealed roads
- 4x4 driving techniques and handling characteristics in different terrain
- Operational knowledge of a 4x4 vehicle, including controls, instruments, indicators and their use
- Tyre management principles
- Road rules, regulations, permit and licence requirements of the relevant state or territory
- Established communication channels and protocols
- Techniques for travelling in convoy
- Problem identification and resolution strategies, and common fault-finding techniques
- Types of tools and equipment relating to a 4x4 vehicle, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to provide evidence that they can operate a 4x4 vehicle on unsealed roads safely and in line with organisational requirements
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:</p> <ul style="list-style-type: none">• following applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to operating a 4x4 vehicle• following organisational policies and procedures relevant to operating a 4x4 vehicle• communicating and working safely with others in rough terrain• performing pre-start checks of vehicle and equipment• safely operating a 4x4 vehicle in a range of unsealed road conditions, including negotiating steep slopes
Context of and specific resources for assessment	<ul style="list-style-type: none">• Competency is to be assessed in the workplace or a realistically simulated workplace• Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints• Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context• Assessment is to follow relevant regulatory requirements and Australian standards• The following resources should be made available:<ul style="list-style-type: none">• workplace location or simulated workplace• materials and equipment relevant to undertaking work applicable to this unit• specifications and work instructions• 4x4 vehicle
Method of assessment	<ul style="list-style-type: none">• Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package• Assessment methods must confirm consistency and accuracy of together with application of required knowledge• Assessment must be by direct observation of tasks, with

questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

Documentation must include:

- owner's manual
- manufacturer guidelines and specifications

Structural must include:

- recovery hooks and mounting features
- purpose and use of front wheel hubs if fitted
- factors affecting tyre size, fitment, rating and pressure

Four-wheel drive vehicles may include:

- manual and automatic four-wheel drive
- all-wheel drive

Pre-start checks must include:

- fuel, including diesel, gas and petrol
- water
- oil
- brake and transmission fluid levels
- battery water levels and electrolyte checks
- tyres
- belts
- leads
- hydraulic lines and connections
- air cleaners
- air conditioners
- brakes
- off-road safety equipment
- fitting of traction devices

Maintenance equipment may include:

- spares
- fluids

OHS requirements:

- are to be in line with federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - personal protective equipment (PPE) and clothing
 - safety equipment
 - current first aid equipment in vehicle
 - current vehicle firefighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - techniques for manual handling, including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

- are to be in line with applicable federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care

Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines

Safe operating conditions must include:

- interpreting weather conditions to determine suitability for driving
- determining food, water, PPE (sunglasses, high-visibility vest, etc.)

- and clothing requirements for journey
- selecting routes to minimise damage to the environment
- on and off-road conditions
- traffic pattern and density
- visibility
- loading of four-wheel drive, including techniques to reduce overloading

Communication may include:

- verbal and non-verbal language
- radio protocols

Mechanisms may include:

- personal location beacon (PLB)
- flares
- markers
- phone
- radio
- V-Sheet

Hazards and risks may include:

- rocks and other unexpected obstacles
- damage to vehicle
- tidal influences
- fire in vehicle
- faulty brakes
- leaking fuel
- faulty steering mechanism on vehicle
- animals and objects in vehicle path
- crocodiles and snakes in some areas
- windy or foggy sections of terrain
- steep slopes
- side slopes
- slippery surfaces
- land slides
- overhead tree limbs
- black ice
- towing trailers
- other vehicles
- fallen trees, limbs and logs
- icy terrain
- flooded terrain

- oil on road
- parked vehicles on road
- pedestrians on or near the road
- poor visibility

Hubs may include:

- manual
- electronic

Range of terrain types may include:

- smooth
- rough
- uneven
- slippery
- wet
- boggy
- sandy
- steep or hilly
- rock
- icy
- snow
- mud, including:
 - brown clay
 - black silt
 - salt pan mud
 - red
- hard ground
- water

Manufacturer specifications may include:

- engine characteristics
- system warning function
- four-wheel drive operation
- radius of turning circle
- safety procedures

Automatic and manual techniques may include:

- manual gear box stall stop
- appropriate automatic transmission safety

Routine maintenance may include:

- changing wheels in uneven terrain
- fluid top-up

FPICOT3260 Recover four wheel drive vehicles

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit covers the use of a variety of recovery equipment and advanced skills to recover four-wheel drive (4x4) vehicles in difficult terrain conditions.

Application of the Unit

This unit involves the recovery of 4x4 vehicles in a variety of work settings. The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan 4x4 recovery	<p>1.1 Identify and follow <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to 4x4 recovery</p> <p>1.2 Survey site to identify hazards, assess risks and select suitable strategy</p> <p>1.3 Select <i>personal protective equipment</i> (PPE) appropriate to type of recovery operation</p> <p>1.4 <i>Inform</i> appropriate personnel of your location</p> <p>1.5 Determine potential environmental impact of recovery</p>
2. Operate in a safe manner	<p>2.1 Consider <i>operating variables</i>, define danger zone and <i>apply strategies</i> to reduce risk and environmental impact during recovery</p> <p>2.2 Use rated <i>recovery equipment</i> correctly</p> <p>2.3 Use appropriate <i>communication</i> during recovery operations</p> <p>2.4 Repair environmental damage where possible</p>
3. Apply recovery method appropriate for the desired outcome	<p>3.1 Determine recovery method based on the <i>terrain conditions</i> and <i>pulling techniques</i> required of the situation</p> <p>3.2 Determine the <i>resources</i> required and their availability</p> <p>3.3 Communicate the recovery method selected and inform supervisor of your decision if appropriate</p> <p>3.4 Set up an exclusion zone</p> <p>3.5 Maintain communication with others to explain progress in recovery</p>
4. Demonstrate the safe use of jacks	<p>4.1 Identify hazards with the safe positioning of <i>jacks</i></p> <p>4.2 Use <i>safe operating procedures while using a jack</i> to lift a vehicle</p> <p>4.3 Demonstrate safe recovery of a vehicle using a jack</p>
5. Maintain vehicle recovery equipment	<p>5.1 Apply correct <i>maintenance</i> procedures for recovery equipment</p> <p>5.2 Document equipment maintenance according to</p>

ELEMENT	PERFORMANCE CRITERIA
	organisational procedures

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Technical skills to:
 - use and maintain relevant tools, machinery and equipment
 - perform minor routine servicing of own vehicle
 - use a snatch strap, winch or jack and other recovery equipment to recover a 4x4 vehicle
 - conserve vehicle energy with appropriate throttle use
- Communication skills to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills to:
 - record and report workplace information
 - maintain documentation
- Numeracy skills to:
 - estimate, measure and calculate time required to perform 4x4 drive recovery
 - estimate and measure water depths, fuel consumption and other variables
- Problem-solving skills to:
 - identify problems and equipment faults
 - demonstrate appropriate response procedures

Required knowledge:

- Applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for recovering a 4x4 vehicle
- Environmental protection requirements, including the safe disposal of waste material and the minimisation of carbon emissions and environmental impact
- Environmental risks and hazards relevant to recovering 4x4 vehicles in difficult terrain conditions
- Techniques to use jacks and other recovery equipment
- Factors affecting choice of recovery equipment and mode of recovery
- Issues to consider when defining danger zones

- Effect of suction on vehicles to identify mass weight needed for cable and winch capacity
- Hazards and safety issues associated with the use of jacks and recovery equipment
- Environmental impacts of 4x4 operation
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can recover 4x4 vehicles in difficult terrain conditions

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- using different vehicle jacks in different terrains and environmental conditions
- using a winch and a snatch block (2:1) in difficult terrain, using ground anchor points for both hard ground and soft sand
- using other types of recovery equipment in a safe and efficient manner

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow regulatory requirements and Australian standards
- The following resources should be made available:

- workplace location or simulated workplace
- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions
- 4x4 vehicle
- Assessment of this competency requires access to:
 - appropriate 4x4 vehicle
 - a suitable outdoor environment with difficult terrain where four-wheel drive skills may be demonstrated
 - maintenance and repair resources
 - vehicle recovery equipment
 - food and water resources

Method of assessment

- Due to issues such as the variation in terrain and possible recovery scenarios, this unit must be assessed over a minimum of two different occasions and two different techniques, in order to ensure consistency of performance over the range statement variables and applicable contexts
- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with

- assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- OHS requirements:**
- are to be in line with federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - PPE and clothing
 - safety equipment
 - current first aid equipment in vehicle
 - current vehicle firefighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - techniques for manual handling, including shifting, lifting and carrying

- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices

- Legislative requirements:**
- are to be in line with federal, state or territory legislation,

regulations, certification requirements and codes of practice and may include:

- award and organisational agreements
- industrial relations
- Australian standards
- confidentiality and privacy
- OHS
- the environment
- equal employment opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines

Personal protective equipment may include:

- boots
- gloves
- eye protection
- long pants

Informed may include:

- verbal or written
- emergency positioning
- personal location beacon (PLB)
- flares
- markers
- phone
- radio

- Operating variables** may include:
- type of recovery equipment used and associated risks, e.g. possibility of cable or rope failure
 - direction of recovery
 - suitable protection
 - potential for vehicle roll or fall
 - effect of suction on cable/winch capacity
- Applied strategies** may include:
- defining a danger zone
 - safely using equipment
 - using rated equipment where practicable
 - safe operating procedures
 - risk assessment practices
 - ensuring only appropriate personnel are in danger zone
- Recovery equipment** may include:
- cables
 - jacks
 - tow ropes
 - tree protectors
 - shackles
 - chains
 - recovery straps
 - snatch straps
 - winch and snatch block
- Communication** may include:
- verbal and non-verbal language
 - radio protocols
- Terrain conditions** may include:
- smooth
 - rough
 - uneven
 - slippery
 - wet
 - boggy
 - sandy
 - steep or hilly
 - rock
 - icy
 - snow

- mud, including:
 - brown clay
 - black silt
 - salt pan mud
 - red
- hard ground
- water

Pulling technique may include:

- complex and multi-line
- straight pull
- double pull
- starting vehicle
- taking towed object to a location
- using a snap strap
- using a winch

Resources may include:

- winch:
 - electric
 - hydraulic
 - manual
 - pull along
- jacks
- recovery points
- rated recovery hooks
- assorted cables, including steel cables
- plasma ropes
- snatch straps
- snatch blocks
- chains or shackles
- tree trunk protectors
- cable dampeners
- tyre deadman or buried anchor
- log deadman
- Spanish windless
- A-frame

Jacks may include:

- jack points
- bottle jack
- exhaust jack

- high-lift jack (Wallaby jack)

Safe operating procedures while using a jack may include:

- regard for personal safety
- regard for vehicle stability
- awareness of soft footing

Maintenance may include:

- cleaning
- cable rolling
- greasing and oiling

FPICOT3261 Transport forestry logs using trucks

Modification History

Replaces FPICOT3226B, Not Equivalent

Unit Descriptor

Unit descriptor This unit describes the outcomes required to drive log trucks to or from a forestry harvesting site, facilitate log loading and unloading, and deliver logs to their intended destination according to organisational procedures and regulations.

General workplace legislative and regulatory requirements apply to this unit. Specific licences and certification may be required, subject to enterprise requirements.

Application of the Unit

Application of the unit The unit involves transporting forestry logs using trucks in a variety of work settings, including forest environments, landings, log dumps, saw mills, wood chip mills, veneer mills, board/plywood mills and other settings, such as farms and agriculture.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

1. Prepare to transport logs

- 1.1. Appropriate ***work/occupational health and safety (WHS/OHS), environmental and organisational policies and procedures*** relevant to transporting forestry logs using trucks are identified and followed
- 1.2 Logging sites and logs to be transported are identified from schedules, ***work orders*** or harvesting site personnel
- 1.3. Coupe map is located and examined for truck access areas
- 1.4. Work order and/or schedules are reviewed and clarified with ***appropriate personnel***, as required
- 1.5. ***Truck, ancillary equipment, accessories and/or configuration*** requirements relevant to work order and ***load build*** are located and availability is confirmed
- 1.6. ***Transportation documentation*** required to comply with legislation related to driving hours, load limits and dimensions is received and checked

2. Establish route for log truck

- 2.1. Route is selected and its suitability to enter and exit coupe is confirmed with appropriate personnel to ensure minimal environmental impact and site protection
- 2.2. Transport routes are ***communicated*** and confirmed with appropriate personnel to ensure the most efficient, safe, secure and legal movement of forestry logs
- 2.3. Information on height, width and load limits of ***road infrastructure, environmental constraints and other restrictions*** are adhered to, where necessary
- 2.4. Time required to transport logs is estimated and confirmed with relevant personnel accounting for fatigue management legislation and guidelines

3. Facilitate log truck loading

- 3.1. Access is identified and manoeuvring approach established with worksite personnel for loading areas
- 3.2. Truck and/or configuration are positioned to avoid site and equipment hazards and to maximise load safety and security

ELEMENT**PERFORMANCE CRITERIA**

- while loading
- 3.3. **Log positioning equipment** is placed and checked for planned loading, and is reset if necessary
- 3.4. Safe loading procedures are agreed to with relevant worksite personnel and monitored to ensure load meets transport regulatory requirements
- 3.5. Communication between driver and machine operators is established and maintained to determine safe location when loading logs
- 3.6. Load is checked and feedback provided to loader operator, as required, to ensure safe transport
4. Secure logs prior to transport
- 4.1. Load is secured with sufficient number and type of **securing devices** as per loading guidelines and transport regulatory requirements
- 4.2. Logs are re-tensioned as required
- 4.3. **Overhang warning devices** and signage are fitted to load to comply with transport regulatory requirements
5. Transport logs
- 5.1. Logs are transported following planned or modified route with consideration for road surfaces, conditions and fatigue management legislation and guidelines
- 5.2. Condition of roads and tracks is monitored, and unexpected ground, water, vegetation or other **environmental conditions** are reported to appropriate personnel
- 5.3. Truck is operated and driven to manufacturer specifications and legislative requirements using **primary and subsidiary controls** as appropriate to conditions
- 5.4. Truck **gauges and warning devices** are monitored through observation of performance to detect operating faults
- 5.5. Operating faults are identified, **recorded and reported**, and responded to as necessary according to organisational requirements to ensure equipment is safely operated within manufacturer specifications and safety regulations
- 5.6. Periodic load safety checks are conducted and load is **re-tensioned** according to statutory requirements and road conditions
- 5.7. **Communication methods** with other drivers and road users are established and operated during log transport to inform location of truck and possible hazards
- 5.8. Communication channels are kept open in line with organisational arrangements to ensure location is known at all times so that timely emergency assistance can be provided if required

ELEMENT	PERFORMANCE CRITERIA
6. Complete log transport operations for unloading	<ol style="list-style-type: none">6.1. Site procedures for unloading are established with appropriate personnel and site inductions are completed6.2. Truck is directed to and manoeuvred into planned position for unloading6.3. Truck is parked in designated area as instructed by appropriate personnel to avoid site and equipment hazards6.4. Truck and trailer are shut down and truck is secured according to manufacturer specifications and site requirements6.5. Load is inspected for log movement and provision is made to support logs that cannot be controlled when released6.6. Safe location and safe unloading zones are identified and adhered to when removing logs according to site unloading procedures6.7. Securing devices for load restraint are released in correct sequence for truck, trailer and/or load configuration6.8. Log shifting process and truck operations, including faults, are recorded and reported to appropriate personnel6.9. Workplace records and documentation are completed and maintained according to workplace procedures6.10. Truck and trailer are made safe for return journey to coupe

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills to:
 - use and maintain relevant tools, machinery and equipment
 - efficiently and safely transport forestry logs using trucks
- Communication skills to:
 - use appropriate communication and interpersonal techniques with colleagues and others
 - use skills, including questioning, active listening, asking for clarification, and seeking advice when required
- Literacy skills to:
 - record and report workplace information, including log books, incident reports, and transport routes
 - maintain documentation
- Numeracy skills to:
 - calculate load sizes

- record and estimate weights
- calculate work and rest times
- calculate load restraint requirements
- Problem-solving skills to:
- identify problems and equipment faults
- demonstrate appropriate response procedures
- determine appropriate haulage routes
- Map reading skills to interpret coupe and road transport maps

Required knowledge

- WHS/OHS, environmental, and organisational policies, procedures and established safe practices relevant to the full range of processes for the transport of forestry logs using trucks
- Environmental protection requirements, including noise levels, emissions, damage to habitat, safe disposal of waste material, and minimisation of carbon emissions
- Environmental risks and hazards associated with the transport of forestry logs using trucks
- Energy efficient practices, including minimising fuel consumption
- Scheduling and routing procedures
- Transport regulatory requirements relating to the transport of forestry logs
- Truck capabilities and capacities
- Statutory road regulations
- Load restraint standards and techniques
- Safe log loading and unloading methods and techniques, including load restraint
- Established communication channels and protocols
- Fatigue management legislation and guidelines
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment used for the transport of forestry logs, and procedures for their safe use, operation and maintenance
- Safe manual handling techniques and/or equipment
- Applicable fall from heights regulations and compliance requirements
- Appropriate mathematical procedures for calculating load sizes, estimating and recording weights, load restraint requirements, and work and rest times
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely transport forestry logs using trucks according to organisational requirements.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following appropriate WHS/OHS, environmental and organisational policies and procedures relevant to transporting forestry logs using trucks
- planning forestry log movement in line with organisational requirements
- observing and facilitating loading and unloading log truck to organisational requirements
- securing forestry logs prior to transport according to legislative and organisational requirements
- following legal requirements as well as organisational policies and procedures relevant to transporting forestry logs
- completing documentation required by workplace personnel to complete the movement of forestry logs.

Context of and specific resources for assessment

- Competency is to be assessed in the workplace
- Assessment is to occur under standard and authorised work practices, safety and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
- workplace location
- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and at least one other type of evidence i.e. third party report and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required

knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency relevant to the industry sector, workplace and job role
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Work/occupational health and safety (WHS/OHS) requirements:

are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first-aid equipment
- fire-fighting equipment
- fatigue management
- hazard and risk control

RANGE STATEMENT

- elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling, including shifting, lifting and carrying
 - chain of responsibility
 - legislation
 - organisational policies and procedures
 - energy efficiency
 - workplace practices
- Environmental requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - WHS/OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and reuse guidelines)
- Organisational requirements** may include:
- instructions for equipment allocation and usage, location and intended activity to designated personnel
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
 - schedulers
- Work orders** may include:
- rigid or articulated log trucks
- Truck** may include:
- the following:
- semi-trailers
 - jinkers
 - quad-dogs
 - B doubles

RANGE STATEMENT

- Ancillary equipment** may include:
- two-bay skeletal trucks
 - safety fittings
 - load restraint devices
 - head boards
 - cab guards
- Accessories** may include:
- tools
 - records
 - first aid kits
 - fire extinguishers
 - binders
 - chains
 - personal protective equipment
- Configuration** is to include:
- a truck and trailer combination
- Load build:** is to include positioning of logs on truck so as to avoid:
- uneven weight distribution
 - instability or uncontrolled collapse of the load during loading or unloading
- must also take into account:
- requirements for trailer rigidity
 - turning clearance
 - overhang
 - projection above stanchions
 - crowning
 - weight distribution on truck and trailer axles
 - contact with bolsters, stanchions and other logs
- Transportation documentation may include:**
- transport permits
 - gazette notices
 - information booklets
 - maps
- Communication** may include:
- verbal and non-verbal language
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Road infrastructure** may include:
- sealed or unsealed roads

RANGE STATEMENT

- Environmental constraints** may include:
- established tracks
 - soil type
 - access
 - slope
 - weather conditions
- Other restrictions** may include:
- load height
 - weight
 - overhang
- Log positioning equipment** may include:
- bolsters
 - slippers
 - stanchions
 - chocks
- Securing devices** may include:
- dogs and chains
 - binders/straps
 - webbing
 - lashings and winches
 - auto-tensioning devices
- Overhang warning devices** may include:
- flags
 - lights
 - reflectors
 - signs
- Environmental conditions** may include:
- soil and water protection
 - ground hazards and obstacles
 - wind and dust
 - fog and rain
- Primary controls** may include:
- power
 - brakes
 - steering
 - speed
 - position
 - load reaction
 - gear selection
- Subsidiary controls** may include:
- differential lock
 - centre tyre inflation (CTI) power dividers
- Gauges and warning devices** may include:
- alarms
 - lights
 - buzzers
- Records and reports:** may include:
- scheduling and coordination outcomes

RANGE STATEMENT

- log movement
- despatch outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

may be:

- manual
- work diary
- computer-based system
- other appropriate organisational communication system

Re-tensioning is to include:

- re-tightening of the chains, binders and other load restraint devices

Communication methods may include:

- two-way radio
- hands-free mobile phones

FPICOT3262 Transport forestry produce using trucks

Modification History

New unit, no equivalent unit.

Unit Descriptor

Unit descriptor This unit describes the outcomes required to drive trucks carrying forestry produce from a forestry harvesting site and deliver it to its intended destination according to organisational procedures and regulations.

General workplace legislative and regulatory requirements apply to this unit. Specific licences and certification may be required subject to enterprise requirements.

Application of the Unit

Application of the unit The unit involves transporting forestry produce using trucks from a forestry harvesting site to a variety of work settings, including log dumps, saw mills, wood chip mills, veneer mills, board/plywood mills and other settings, such as farms and agriculture.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

1. Prepare to transport forestry produce

- 1.1. Appropriate *work/occupational health and safety (WHS/OHS), environmental* and *organisational policies and procedures* relevant to transporting *forestry produce* using trucks are identified and followed
- 1.2. *Work order*, schedules and other relevant *transportation documentation* are obtained, reviewed and clarified with *appropriate personnel, as required*
- 1.3. Coupe map is located and examined for truck access areas
- 1.4. Routes to enter and exit coupe are planned to ensure minimal environmental impact and site protection
- 1.5. *Truck, ancillary equipment, accessories* and *configuration* are checked for serviceability according to manufacturer specifications and statutory regulations

2. Load and unload forestry produce

- 2.1. Access is identified and manoeuvring approach established with site personnel for loading and unloading sites
- 2.2. Safe loading and unloading procedures are agreed to with relevant worksite personnel
- 2.3. *Communication* between driver and machine operators is established and maintained to determine safe location during loading and unloading of forestry produce
- 2.4. Load is checked to ensure it meets load requirements and complies with transport regulatory requirements
- 2.5. Load is secured with appropriate *securing devices* as per loading guidelines and transport regulatory requirements
- 2.6. Suitable transport routes are planned to ensure the most efficient, safe, secure and legal movement of forestry produce

3. Transport forestry produce

- 3.1. Truck and/or configuration is operated and driven to manufacturer specifications and legislative requirements using *primary and subsidiary controls* as appropriate to road and weather conditions

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|--|---|
| 4. Unload forestry produce and complete log transport operations | <p>3.2. Truck <i>gauges and warning devices</i> are monitored through observation of performance to detect operating faults</p> <p>3.3. Forestry produce is transported following planned or modified route with consideration for road surfaces and conditions and fatigue management legislation and guidelines</p> <p>3.4. <i>Communication methods</i> with other drivers and road users are established and operated during transport of forestry produce to inform location of truck and possible hazards</p> <p>3.5. Communication channels are kept open in line with organisational arrangements to ensure location is known at all times so that timely emergency assistance can be provided if required</p> <p>3.6. Regular load safety checks are conducted according to statutory requirements and road conditions, as required</p> <p>3.7. Operating faults are identified, <i>recorded and reported</i>, and responded to as necessary according to organisational requirements</p> <p>4.1. Site procedures for unloading are established with appropriate personnel and site inductions are completed</p> <p>4.2. Truck is parked in designated area or unloading point as instructed by appropriate personnel to maintain site, equipment and operator safety</p> <p>4.3. Engine is shut down and truck secured according to manufacturer specifications and site requirements</p> <p>4.4. Site unloading procedures are followed to ensure safe unloading of forestry produce</p> <p>4.5. Forestry produce shifting process and truck operations, including faults, are <i>recorded and reported</i> to appropriate personnel</p> |
|--|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills to:
 - use and maintain relevant tools, machinery and equipment
 - efficiently and safely transport forestry produce using trucks
- Communication skills to:

- use appropriate communication and interpersonal techniques with colleagues and others
- use oral communication skills, including questioning, active listening, asking for clarification and seeking advice when required
- Literacy skills to:
 - record and report workplace information
 - maintain documentation
- Numeracy skills to:
 - record and estimate weights
 - calculate work and rest times
 - record hours in work diary
- Problem solving skills to:
 - identify problems and equipment faults
 - demonstrate appropriate response procedures
 - determine appropriate transport routes
- Map reading skills to interpret coupe and road transport maps

Required knowledge

- WHS/OHS, environmental, and organisational policies, procedures and established safe practices relevant to the full range of processes for the transport of forestry produce using trucks
- Environmental protection requirements, including noise, emissions, damage to habitat, safe disposal of waste material and the minimisation of carbon emissions
- Environmental risks and hazards associated with the transport of forestry produce using trucks
- Energy efficient practices, including minimising fuel consumption
- Scheduling and routing procedures
- Transport regulatory requirements relating to the transport of forestry produce
- Truck capabilities and capacities
- Statutory road regulations
- Techniques for load construction, including types of load restraints for forestry produce
- Established communication channels and protocols
- Fatigue management legislation and guidelines
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment used for the transport of forestry produce and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for measuring load sizes, estimating and recording weights, and calculating time to complete tasks
- Applicable fall from heights regulations and compliance requirements
- Procedures for recording and reporting workplace information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely transport forestry produce using trucks according to organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following appropriate WHS/OHS, environmental and organisational policies and procedures relevant to transporting forestry produce using trucks
- following organisational policies and procedures relevant to loading and unloading forestry produce using trucks
- transporting and securing forestry produce according to legislative and organisational requirements.
- Competency is to be assessed in the workplace
Assessment is to occur under standard and authorised work practices, safety and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Context of and specific resources for assessment

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and at least one other type of evidence i.e. third party report, and it must also reinforce the integration of employability

skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency relevant to the industry sector, workplace and job role
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Work/occupational health and safety (WHS/OHS) requirements:

- are to be in line with Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - personal protective equipment and clothing
 - safety equipment
 - first-aid equipment
 - fire-fighting equipment

RANGE STATEMENT

- fatigue management
 - hazard and risk control
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling, including shifting, lifting and carrying
 - chain of responsibility
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - energy efficiency
 - workplace practices
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - WHS/OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and reuse guidelines)
- Forestry produce may include:**
- bark
 - wood shavings
 - wood chips
 - biofuel materials
- Work order** may include:
- instructions for equipment allocation and usage, location and intended activity to designated personnel
- Transportation documentation** may include:
- transport permits
 - gazette notices
 - information booklets
 - maps
- Appropriate personnel** may include:
- supervisors

RANGE STATEMENT

- suppliers
 - clients
 - colleagues
 - managers
 - schedulers
- Truck** may include:
- rigid or articulated trucks
 - the following:
 - semi-trailers
 - jinkers
 - quad-dogs
 - B doubles
 - two-bay skeletal trucks
 - pocket road trains
- Ancillary equipment** may include:
- safety fittings
 - head boards
 - cab guards
- Accessories** may include:
- tools
 - records
 - first aid kits
 - fire extinguishers
 - binders
 - chains
 - personal protective equipment
- Configuration** is to include:
- a truck and trailer combination
- Communication** may include:
- verbal and non-verbal language
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Securing devices** may include:
- tarpaulins and load covers
 - dogs and chains
 - binders/straps
 - webbing
 - lashings and winches
 - auto-tensioning devices

RANGE STATEMENT

Primary controls may include:

- power
- brakes
- steering
- speed
- position
- load reaction
- gear selection

Subsidiary controls may include:

- differential lock
- centre tyre inflation (CTI) power dividers

Gauges and warning devices may include:

- alarms
- lights
- buzzers

Communication methods may include:

- two-way radio
- hands-free mobile phones

Records and reports:

- may include:
 - scheduling and coordination outcomes
 - log movement
 - despatch outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents or equipment malfunctions
- may be:
 - manual
 - using a computer-based system or other appropriate organisational communication system

Not applicable.

FPICOT3263 Maintain and contribute to energy efficiency

Modification History

Version 1.0 No equivalent unit.

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to maintain energy efficient work practices and contribute to systems improvement with regard to energy efficiency in the forest and timber products industry.

It also includes developing an understanding of the positive benefits of the forest and wood products industry in reducing greenhouse emissions, and promoting them to stakeholders.

These work functions would be carried out under routine supervision and within organisational guidelines.

Application of the Unit

Application of the unit

The unit involves maintaining and contributing to energy efficient work practices in the forest and forest products industry across a range of operations and work settings.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

Nil.

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

NEW ELEMENT

NEW PERFORMANCE CRITERIA

NEW ELEMENT

regard to energy efficiency

NEW PERFORMANCE CRITERIA

3.2 Opportunities for efficiencies in consumption of raw materials are identified and progressed through *appropriate personnel*

3.3 Opportunities for innovation in energy efficiency are identified and progressed through established channels

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills to use relevant equipment
- Communication and interpersonal skills to interact appropriately with colleagues and others in the workplace
- Numeracy skills to estimate, measure and calculate various factors relating to energy usage and efficiency improvements

Required knowledge

- Organisational and site standards, requirements, policies and procedures relevant to maintaining and contributing to energy efficiency
- Environmental protection requirements, including the safe disposal of waste material and site recycling, recovery and waste management procedures
- Workplace communication channels, protocols and procedures
- Role of forests, forestry and forest products in carbon capture and storage
- Role of the forest and timber products industry in minimising greenhouse emissions
- Life cycle analysis of forests and forest products in comparison to other building materials

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can maintain and contribute to energy efficient work practices

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following organisational policies and procedures relevant to maintaining and contributing to energy efficiency
- the safe use of relevant equipment to complete work tasks while optimising energy efficiency
- participating in processes to improve energy efficiency.
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - organisational policies and procedures that contribute to energy efficient work practices

Context of and specific resources for assessment

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS/OHS policies and procedures:

- are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - personal protective equipment and clothing
 - safety equipment
 - first-aid equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - machine guarding

Environmental policies and procedures must include:

- workplace practices
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational policies and procedures:

- are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - Australian standards
 - processes and standards
 - WHS/OHS, emergency and evacuation procedures
 - relevant industry codes of practice
 - duty of care
 - heritage and traditional land owner issues
 - organisational and site guidelines regarding energy efficiency
 - policies and procedures relating to own role and responsibility
 - quality and continuous improvement
 - recording and reporting requirements

RANGE STATEMENT

- Equipment:**
- equipment use, maintenance and storage requirements
 - is to include:
 - equipment necessary to complete work tasks
 - and may include:
 - telephones or communications equipment
 - tools
 - machinery
 - vehicles
 - instruments
 - computers and printers
 - facsimile machines and photocopiers
 - lighting and air conditioning
- Energy efficiency may include:**
- maximising resource use
 - minimising waste
 - maximising recycling
 - reducing landfill
- Work practices may include:**
- equipment use
 - energy use
 - reduced carbon emissions
 - use of non-renewable resources
 - re-using and recycling
 - reduced waste generation and material consumption
 - the use of hazardous and toxic materials
 - chemical use
- Positive aspects may include:**
- carbon sequestration in trees
 - storage of carbon in trees, wood, timber and paper products
 - neutral or positive carbon footprints
- Appropriate personnel may include:**
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers

FPICOT3264 Build and maintain timber stacks

Modification History

Version	Code and title of equivalent unit of competency
1.0	No equivalent unit

Unit Descriptor

This unit describes the outcomes required to safely build and maintain timber stacks in a variety of workplace settings, according to regulations and site procedures.

Application of the Unit

The unit involves stacking timber within the scope of the person's job role and authority and in a variety of work settings, such as saw mills, veneer mills, board/plywood mills, frame and truss plants, timber product manufacturers, timber treatment plants, and other settings such as timber warehouses and timber drying/kiln operations.

Licensing/Regulatory Information

Commonwealth, state or territory legislative and regulatory requirements, including mobile plant licensing, apply to this unit.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

1. Prepare to stack timber

- 1.1 Appropriate ***work/occupational health and safety (WHS/OHS), environmental and organisational policies and procedures*** relevant to building and maintaining timber stacks are identified and followed
- 1.2 Work order is reviewed to identify potential timber stack site
- 1.3 ***Risk assessment*** is undertaken and measures adopted in line with site requirements to address hazards and faults and to ensure safety of self, others and proposed timber stack, taking ***avoidable loss*** into account
- 1.4 ***Traffic management plan*** is followed
- 1.5 Required ***safety equipment*** is obtained and used in line with site requirements
- 1.6 ***Communication*** with others is established and maintained according to WHS/OHS and site requirements for stacking timber
- 1.7 ***Limitations*** associated with building a timber stack are identified and assistance is sought as required, in line with site procedures

2. Build timber stack

- 2.1 Timber is checked to ensure it meets labelled or expected content and non-compliant material is reported to supervisor, in line with site and safety requirements
- 2.2 Appropriate ***bearers*** are chosen to create required space for powered mobile plant to lift the stack
- 2.3 Stack is created, bearers are checked, and timber is restrained in line with site requirements
- 2.4 Maximum height of stack is managed to suit environment and weather conditions, in line with industry safety standards and site requirements
- 2.5 Problems and faults are identified and reported to supervisor in line with site procedures

3. Maintain timber stack

- 3.1 ***Routine checks*** are performed as stack is built and for life of stack, and defects are reported to appropriate personnel in line with site requirements
- 3.2 ***Repairs*** are conducted as required to timber stack, in line with site

ELEMENT	PERFORMANCE CRITERIA
	procedures and scope of own job role
	3.3 Waste material is stored, reused, recycled or disposed of in line with site procedures and environmental requirements
	3.4 <i>Workplace records and documentation</i> are completed and maintained in accordance with site requirements

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills to:
 - use timber stacking tools, machinery and equipment
 - identify and manage the impacts of fatigue according to enterprise policy and procedures
- Communication skills to:
 - interact appropriately with colleagues and others
 - report to supervisor and other appropriate personnel in line with site procedures
- Literacy skills to:
 - record and report workplace information in line with site requirements
 - interpret written directions, such as work orders, site requirements and organisational policies and procedures
 - refer to powered mobile machinery manual
- Numeracy skills to:
 - measure length of bearers
 - assess width, length, height and weight of packs and stack
 - visually estimate stack ratios
- Problem solving skills to identify problems, faults and potential hazards

Required knowledge

- Organisational and site standards, requirements, policies and procedures for building and maintaining timber stacks
- Environmental protection requirements, including criteria for recycling and reusing material with faults and safely disposing of waste material
- Risks and hazards (including environmental) of building and maintaining timber stacks

- Criteria for site surface stability and building a stack
- Factors contributing to avoidable loss
- Key components of a traffic management plan
- Procedures for conducting a risk assessment
- Methods to visually estimate length of bearers and ratio, grading, colour identification and tagging of stacked timber
- Length, dimensions, tolerances, profiles and names of industry standard cross-sections
- Established communication channels and protocols
- Problem identification and common fault-finding techniques
- Strategies for resolving timber stack faults
- Types of timber stacking tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information
- 'Fit for work' requirements, the impact of fatigue, and enterprise policy and procedures for fatigue management
- Standards for height of a timber stack inside, under cover and in the open

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	<p>A person who demonstrates competency in this unit must be able to provide evidence that they can stack timber and maintain timber stacks in line with site standards, guidelines and organisational requirements.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:</p> <ul style="list-style-type: none">• following organisational policies and procedures relevant to building and maintaining a timber stack• use of safety equipment relevant to building and maintaining a timber stack, in line with site requirements• communicating and working safely with others in the workplace• performing risk and site assessments to build a timber stack• safely building at least one timber stack appropriate to the needs of the workplace• reporting and documenting required timber stack and fault information in line with site requirements• safely repairing a timber stack with a range of varying faults.
Context of and specific resources for assessment	<ul style="list-style-type: none">• Competency is to be assessed in the workplace or realistically simulated workplace• Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints• Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context• Assessment is to follow relevant regulatory or Australian standards requirements• The following resources should be made available:<ul style="list-style-type: none">• workplace location or simulated workplace• materials and equipment relevant to undertaking work applicable to this unit• specifications and work instructions for powered mobile machinery
Method of assessment	<ul style="list-style-type: none">• Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package• Assessment methods must confirm consistency and accuracy, together with the application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- WHS/OHS requirements:**
- are to be in line with commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - safety equipment, including personal protective equipment and clothing
 - first-aid equipment
 - fire-fighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances

- manual handling procedures, including shifting, lifting and carrying
 - material safety data sheets (MSDS)
- Environmental requirements must include:**
- organisational policies and procedures
 - workplace practices
 - sustainability and environmental management requirements, including waste minimisation and disposal, recycling and reuse guidelines
 - energy efficiency measures
- Organisational policies and procedures:**
- are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and enterprise agreements
 - industrial relations
 - Australian standards
 - WHS/OHS emergency and evacuation procedures
 - the environment
 - physical impairment (due to drugs, alcohol, fatigue, etc.)
 - relevant industry codes of practice
 - organisational and site guidelines regarding timber stacking and maintenance
 - policies and procedures relating to own role and responsibility
 - procedure manuals
 - provision of training to and supervision of employees
 - quality and continuous improvement processes and standards
 - recording and reporting requirements
- Risk assessment:**
- must include:
 - level and stability of individual packs
 - type of bearers
 - width, length and height of stack
 - weight of packs and stacks
 - duration of storage
 - type and strength of timber
 - type of lifting equipment
 - ground condition and stability in terms of slope, evenness, contamination and drainage
 - air-drying structure
 - unexpected obstacles
 - slippery or uneven surfaces

- pedestrians on or near the timber stack
- visibility
- powered mobile machinery equipment faults or damage
- ground strength to withstand the load of stacks and machinery
- hazards and risks
- location of walkways, pathways and stores
- top surface of ground
- location of stack:
 - inside
 - outside under cover
 - in the open
- involves consideration of:
 - monitoring and inspection procedures
 - storage area organisation
 - injury due to lifting, bending or crushing
 - machinery and equipment requirements
 - weather conditions

Avoidable loss may include:

- inadequate stack support
- packs that are not level
- exposing the stack to adverse drying conditions
- inadequate stack conditions (poor drainage, stacks close to ground, etc.)
- inappropriate site layout
- inadequate stack protection
- pack damage
- unstable stacking (e.g. large heavy packs on top of small light packs)
- timber that is stacked too high

Traffic management plan must:

- ensure pedestrians are separated from powered mobile plants
- allow safe entry and exit of mobile equipment and pedestrians
- where reasonably practicable, eliminate any identified risk
- identify the most efficient route of travel
- facilitate traffic flows
- reduce the frequency of interaction with powered mobile plant
- substitute a forklift with other suitable load shifting equipment

Safety equipment may include:

- PPE, such as gloves, glasses, high-visibility gear
- seatbelt on powered mobile plant
- mobile communication devices, such as telephone and two-way radio
- fire-fighting equipment

- Communication** may include:
- first-aid equipment
 - verbal and non-verbal language
 - active listening
 - use of positive, confident and cooperative language
 - questioning to clarify and confirm understanding
 - use of language and concepts appropriate to individual, social and cultural differences
 - control of voice
 - mobile communication protocols
- Limitations** may include:
- own competency level, including with regard to identifying risks
 - industry requirements
 - own interpretation of procedures
- Bearers** must:
- be straight and not have knots
 - be identical in length in cross-section
 - not protrude from the stack
 - not be shorter than the stack
 - be laid flat
 - be in good condition
 - be able to withstand the environment
 - be checked for consistent thickness and shape
 - be correctly positioned
- Routine checks** must include:
- inspecting stability of stack
 - ensuring stacks are not leaning or supported by other stacks
 - ensuring ground conditions are stable
 - ensuring no damage to rack sticks, bearers or restraints
 - eliminating effects of external forces, such as high winds
 - checking all stacks after high winds
 - yard maintenance, including removing waste
 - ensuring top of stack is within tolerances, in line with site requirements
- Repairs** must include:
- cordoning off area from pedestrian access
 - installing danger warning signage
 - replacing damaged racking sticks, bearers or restraints
 - stabilising ground conditions, including top surface
 - stabilising packs and stacks
 - partially or fully rebuilding packs and stacks
 - assessing need for additional restraints
 - tightening loose restraints
- Workplace records and documentation:**
- may include:
 - product type, size and quantity
 - inspection information, including date, issues, timelines,

- consultation conducted and authorised personnel
- grading and labelling
- quality outcomes
- storage locations
- despatch locations
- hazards and hazard control
- incidents
- equipment malfunctions
- date of creation
- and may be:
 - manual
 - computer-based system
 - other appropriate organisational communications systems

Unit Sector(s)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Interpret plans and loading conditions | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to detailing truss or frame plans using advanced computerised systems are followed</p> <p>1.2. Drawings and documentation are obtained and work requirements interpreted and checked</p> <p>1.3. Plans are reviewed and <i>loading information</i> is interpreted</p> <p>1.4. Drawing views and notes are reviewed and additional design requirements and restrictions are identified and followed</p> <p>1.5. Additional information and data are obtained from <i>appropriate personnel</i> or sources</p> <p>1.6. Functional and pictorial <i>image of structure</i>, trusses or frames is created based on design requirements</p> <p>1.7. Design requirements outside normal <i>software</i> limitations are specified and appropriate assistance is sought</p> <p>1.8. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Test design options and select best option | <p>2.1. Fixed <i>design details</i> are transferred to layout data in line with software requirements</p> |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|----|--|---|
| 3. | Produce layouts and cutting requirements | <p>2.2. Frame or truss design types are specified and timber type and species are selected in line with <i>material</i> suitability and availability</p> <p>2.3. Common industry spacing of frames, trusses and their components are set to the defined design structure in line with industry standards</p> <p>2.4. Component sizes are fixed to clarify and firm design options</p> <p>2.5. Layouts, spacing and sizing of individual structural members are progressively selected in line with software requirements</p> <p>2.6. Design options are produced and design details selected, reviewed and revised in line with software and work order</p> |
| 3. | Produce layouts and cutting requirements | <p>3.1. Design records are reviewed for design integrity, completeness and consistency in line with applicable certifying authority standards</p> <p>3.2. Structure layout drawings and truss or frame <i>assembly drawings</i> are produced using software in line with workplace and software requirements</p> <p>3.3. Component cutting detail is produced in line with manufacturing requirements and schedules</p> <p>3.4. Design records and documentation are completed and maintained in line with workplace procedures</p> |
| 4. | Provide advice on design and production issues | <p>4.1. <i>Questions</i> regarding design and assembly requirements are answered and explained comprehensively in a clear and concise manner</p> <p>4.2. Effective communication techniques are used to assist and develop production personnel</p> <p>4.3. Alternative materials and sizes for components are provided within the scope of the design and work requirements</p> <p>4.4. Common site problems are discussed and prevention strategies are examined and adopted to ensure future site practice meets design requirements</p> |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills include:

- Technical skills sufficient to safely and accurately produce complex truss or frame plans and details using computerised systems and provided software; design and detail timber trusses or frames that use available material and meet the required standards; produce drawings and cutting lists suitable for manufacture
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; complete, record and maintain information
- Literacy skills sufficient to interpret and apply relevant information, common industry terminology and specifications in written, diagrammatic and verbal form
- Numeracy skills sufficient to select appropriate mathematical and estimation processes
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures

Required knowledge include:

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing complex truss or frame plans and details using computers
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for producing complex truss or frame plans and details using computers
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Procedures for recording, reporting and maintaining workplace records and information
- Procedures for applying building and structural regulations and site policy
- Range, types and uses of computer programs and software, including estimation software
- Common industry terminology for all component types
- Relationship between component loads, supports and spans and component loads, species, type, dimensions and grade
- Industry standard cross section sizes and profiles, length and spacing dimensions
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including

REQUIRED SKILLS AND KNOWLEDGE

calculating time to complete tasks

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can select and use computerised systems to accurately produce complex plans and details of trusses or frames; and provide advice on design and production issues

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to producing complex truss or frame plans and details
- following organisational policies and procedures relevant to producing complex truss or frame plans and details
- applying communication techniques and safe work practices in the work area
- interpreting plans, loading conditions and technical information and conveying information in written, sketch and verbal form
- using appropriate computer software, systems and techniques to accurately produce complex plans and details of trusses or frames
- testing design options, selecting best option and producing timely and accurate designs for manufacture and construction
- applying mathematical procedures, such as estimation and measurement
- providing design and production advice

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- lifts and cranes, scaffolding, building codes and regulations
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Loading information** may include:
- details defining mass loads and externally applied loads (wind, surrounding structures, common or special building usage)
 - dimensions defining geometry and loading of individual structural members
- Appropriate personnel** may include:
- clients
 - colleagues
 - line management
 - software support engineers
- Image of structure** may include:
- load support
 - loading transfer mechanisms
 - tying positions
- Software** is a commercial package running on suitable computer hardware and producing designs using specific truss or frame assembly hardware requirements

RANGE STATEMENT

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Design detail may include:

- timber component species, type, cross section, grade, length and cutting angles
- nail plate and other joining hardware sizes and marking requirements

and may be selected from options on the basis of:

- construction feasibility
- cost
- material availability
- customer preference and site standards
- material efficiency
- energy efficiency

Material:

- is selected with regard to exposure and weathering

and may include:

- timber of available species
- solid types
- laminated types

Assembly drawings may include:

- design assumptions regarding supporting and tying components
- and may be designed as wooden roof and floor trusses and wall frames for solid brick, brick veneer and timber frame domestic houses

Questions may include:

- certifying authority requirements
- building code requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Interpret plans and loading conditions | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to designing timber structures are identified and followed</p> <p>1.2. <i>Drawings</i> and documentation are obtained and interpreted and <i>work requirements</i> are identified and complied with</p> <p>1.3. Plans are reviewed and interpreted and <i>loading information</i> is specified</p> <p>1.4. Drawing views and notes are interpreted and other design requirements and restrictions are specified</p> <p>1.5. Additional information and data is obtained from <i>appropriate personnel</i> and <i>other sources</i></p> <p>1.6. Functional and pictorial image of <i>structure</i> is created based on specified design requirements and constraints</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p> |
| 2. Develop and select truss and/or frame and/or floor layout options | <p>2.1. Fixed design details are transferred to truss and/or frame and/or floor layout drawings</p> <p>2.2. Engineered or pre-assembled trusses and/or frames and/or floors are nominated in line with budgetary</p> |

ELEMENT**PERFORMANCE CRITERIA**

- constraints
- 2.3. Component sizes and spacing details are defined in the design structure in line with *industry standards*
- 2.4. *Layouts* and spacing of individual structural members are progressively selected to meet design requirements
- 2.5. Component sizes are fixed to clarify and firm design options
3. Detail truss and/or frame and/or floor design
- 3.1. Physical dimensions for components are calculated, scaled or extracted from tables of *applicable codes*
- 3.2. Effective lengths and spans for individual components are interpreted from layout, and cross-sections are selected in line with applicable codes
- 3.3. Selected *material options* are checked for suitability, availability, cost effectiveness and are consistently used throughout the design
- 3.4. Component placement and spacing are detailed to site and customer standards
- 3.5. Design specifications are provided for engineered or pre-assembled trusses and/or frames and/or floors in line with manufacturer's recommendations
- 3.6. Production information, dimensions and notes are presented in *detail*, clearly and accurately within drawing views
- 3.7. Design records and documentation are completed and maintained in line with workplace procedures
4. Provide design and production advice
- 4.1. Questions regarding designs and design decisions are answered and *explained* in a clear and concise manner
- 4.2. Effective communication techniques are used to assist and develop production personnel
- 4.3. Alternative materials and sizes for components are provided within the scope of the design and work requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to safely detail and design timber structures which meet required standards and budgetary constraints and to produce design drawings suitable for use on construction sites
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately complete, record and maintain information
- Numeracy skills sufficient to select appropriate mathematical processes to calculate design dimensions and measure lengths and spans
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for designing timber structures
- Organisational and site standards, requirements, policies and procedures
- Environmental protection requirements, including the safe disposal of waste material
- Quantitative relationship between component loads, supports and gains, and species, type, dimensions and grade
- Common industry terminology for all component types and timber cuts, all structure types and construction methods
- Industry standard cross-section sizes and profiles, length and spacing dimensions
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment relevant to designing timber structures and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can accurately interpret plans to develop and design timber structures in line with industry and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to designing timber structures
- following organisational policies and procedures relevant to designing timber structures
- communication techniques and safe work practices in the work area
- interpreting drawings and loading conditions
- interpreting and applying technical information and conveying information in written, sketch and oral form
- applying mathematical procedures such as estimation and measurement
- developing and selecting truss and/or frame and/or floor layout options and detailing framing design
- providing design and production advice
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

Context of and specific resources for assessment

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- lifts and cranes, scaffolding, building codes and regulations

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes

RANGE STATEMENT

- and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Drawings** may be:
- direct to paper
 - using computer software
- Work requirements** may include:
- loading requirements
 - applicable codes
 - common industry practices
 - specific customer preferences
 - transport regulations
 - fabricating limitations
- Loading information** may include:
- details defining mass loads and externally applied loads (wind, surrounding structures, common/special building usage)
 - dimensions defining geometry and loading of individual structural members
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
 - software support engineers
- Other sources** may include:
- suppliers
 - manufacturers
 - architect
 - builder
 - local council
- Structures** may include:
- timber roofs
 - wall frames and floors of solid brick, brick veneer and timber frame domestic houses
 - free-standing or attached timber structures such as pergolas
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm

RANGE STATEMENT

- understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Industry standards** may include:
- Australian standards
 - international standards
 - nail plate provider standards
- Layouts**
- are selected to meet space and construction/assembly constraints and the most economical timber sizes and quantities
- Applicable codes** may include:
- AS1684 and supplementary tables
 - CSIRO supplementary tables
 - those from regulatory bodies and associations
 - the Building Code of Australia
- Material options**
- are selected with regard to exposure and weathering and may include timber of available species and solid or laminated types
- Detail**
- is in line with industry requirements for placement, projection and dimensions
- Explanations** may be provided to:
- customers
 - builders
 - councils
 - certifying authorities

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures

Environmental requirements

RANGE STATEMENT**may include:**

- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements**may include:**

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Production order is to include:

- instructions for the assembly and despatch of timber and timber products from the work site

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade

RANGE STATEMENT

Assembly schedules	are estimated output and number of products to be assembled in a set time period, based on customer and production orders
Construction plans	are drafted or computer-generated product plans complete with dimensions, component requirements and material specifications
Jigs	are enterprise manufactured templates that assist in the positioning of components during the assembly process
Products may include:	<ul style="list-style-type: none">• pallets• crates• trellises• trusses• stairs• doors• windows• frames• beams
Componentry	is sections of timber or timber product that have been pre-cut in readiness for assembly and have been cut to follow the construction plans and cutting list
Material may include:	hardware such as: <ul style="list-style-type: none">• nailing plates• gang nails• nail gun nails• staples
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice
Output is to include:	<ul style="list-style-type: none">• type

RANGE STATEMENT

- speed
- finish
- dimensional consistency
- quality

Records and reports may include:

- planning and monitoring outcomes
- operating logs
- production records
- material movement
- despatch outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Transportation may include:

- trucks
- vans

RANGE STATEMENT

- ships
- trains

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1. Prepare for scheduling and coordination | 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to scheduling and coordinating load shifting are identified and followed
1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i>
1.3. Type of <i>load shifting equipment</i> to be <i>scheduled</i> and <i>coordinated</i> is assessed
1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations
1.5. Scheduling and coordination process is planned in line with site procedures
1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Schedule load shifting | 2.1. Material handling requirements for loads are determined and <i>movement frequencies</i> are identified and followed
2.2. Variations in material handling requirements are assessed in line with site operations and despatch of products
2.3. Equipment operations for all sections of the organisation are assessed
2.4. Material handling schedules are altered to maintain optimal production and output |
| 3. Coordinate load | 3.1. Shifting of load arrangements are made with |

ELEMENT	PERFORMANCE CRITERIA
shifting	<p>designated personnel to maintain efficient use of load shifting equipment in line with OHS requirements</p> <p>3.2.Safety of yard, production area or other operating area is maintained through assessment of unsafe conditions, unsafe acts and congested areas</p> <p>3.3.Load movement is organised to limit multiple loads being moved at the same time in the same area</p> <p>3.4.Difficult load shifting situations and incidents are resolved safely in line with operating procedures</p> <p>3.5.Scheduling process and load shifting equipment faults are <i>recorded and reported</i></p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; schedule and coordinate load shifting; assess movement frequencies
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults, and demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for scheduling and coordinating load shifting
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for scheduling and coordinating load shifting

REQUIRED SKILLS AND KNOWLEDGE

- Environmental risks and hazards
- Using energy effectively and efficiently
- Applicable fall from heights regulations and compliance requirements
- Load shifting equipment and techniques
- Scheduling and coordinating methods
- Equipment allocation and personnel rostering
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently schedule and coordinate load shifting in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to scheduling and coordinating load shifting
- following organisational policies and procedures relevant to scheduling and coordinating load shifting
- scheduling and coordinating load shifting activities for the enterprise
- scheduling load shifting equipment or plant in line

EVIDENCE GUIDE

- Context of and specific resources for assessment**
- with production and output activities
 - coordinating personnel to follow scheduling and to use load shifting equipment or plant
 - Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- instructions to designated personnel for equipment allocation and usage, location and intended activity

Work order is to include:

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- suppliers
- clients
- colleagues
- managers

Appropriate personnel may include:

RANGE STATEMENT

Load shifting equipment may include:

- fork lifts
- loaders
- skid steer loaders
- dozers
- cranes
- truck-mounted loading cranes
- gantry cranes
- any other load shifting equipment or plant

Scheduling is to include:

- planned procedures for equipment and personnel to undertake activities that optimise production and output
- adjustments to this process when necessary

Coordinating

is the process of overseeing personnel to provide direction and instruction on activities and schedules

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Movement frequencies

are the amount of times or loads a piece of plant or equipment performs one task

Records and reports may include:

- scheduling and coordination outcomes
- material movement
- despatch outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements may include:

Operators

are the personnel who operate the debarking plant and equipment to debark logs to prescribed diameters

Debarking

is the process of forcing a log through a debarking machine which strips the log bare of its bark, making the log available for further downstream processing, and outfeeding the bark for landscaping supplies

Log management is to include:

- assessing individual logs to include assessment of diameter range, curvature, faults, species and moisture content

and includes:

RANGE STATEMENT

Diameters and lengths are to include:

- handling of the log
- standard diameters and lengths that the debarking equipment can strip before becoming jammed or shuddering

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Output is to include:

- size
- quality
- quantity

Records and reports may include:

- planning and monitoring outcomes
- operating logs
- debarking records
- material movement
- despatch outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

RANGE STATEMENT

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Transfer may include:

the use of:

- conveyor belt systems
- track systems

lifting equipment such as:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting, such as:

- involving two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan boiler operation	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and coordinating <i>boiler</i> operations are identified and followed</p> <p>1.2. Boiler startup, operation and shutdown are planned in line with site requirements</p> <p>1.3. <i>Operation orders</i> and <i>schedules</i> are set and communicated to personnel</p> <p>1.4. <i>Generation levels</i> are calculated and communicated to operators</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Coordinate boiler startup and operation	<p>2.1. Pre-operational safety and <i>pre-startup checks</i> and procedures are checked with the operators</p> <p>2.2. Boiler startup is monitored for correct running conditions and is signed on</p> <p>2.3. Continued operation of boiler and its condition are routinely checked with operating personnel</p> <p>2.4. Problematic boiler operations are <i>diagnosed</i>, with adjustments calculated and communicated to operators</p> <p>2.5. <i>Boiler house</i> chemicals are checked for correct labelling in line with statutory and environmental</p>

ELEMENT	PERFORMANCE CRITERIA
3. Coordinate boiler shutdown and storage	<p>requirements</p> <p>2.6. Emergency shutdown procedures are followed in case of a fire</p> <p>2.7. Fuel efficiency recordings, calculations, operating log, boiler operation and equipment faults are recorded and reported</p> <p>2.8. Assistance is provided to personnel with the evaluation of boiler data and performance details</p> <p>2.9. Boiler management and output are monitored to record possible process improvements</p> <p>3.1. Shutdown and lock-out procedures are directed in line with OHS legislation and statutory and environmental regulations</p> <p>3.2. Condition of boiler is assessed and personnel are directed to undertake cleaning and maintenance requirements in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.3. Boiler is inspected, with valves and fittings removed, in line with statutory and environmental requirements</p> <p>3.4. Mode of storage is selected and personnel are directed to store boiler in line with statutory requirements</p> <p>3.5. Modifications are made to generation levels or schedules to ensure optimum performance, which are then communicated to personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; plan and coordinate boiler operations; monitor boiler output
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain

REQUIRED SKILLS AND KNOWLEDGE

documentation

- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and coordinating boiler operations
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and coordinating boiler operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Procedures for boiler startup, operation, shutdown and storage
- Energy generation levels
- Boiler scheduling and planning
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and coordinate boiler operations in line with organisational requirements

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements may include:**
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements may include:**
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

- Boiler** is to include:
- steam-generating boilers, including liquid or vapour restricted to water or steam
 - fuel and fuel supply system
 - boiler operations in conjunction with other plant
- Operation order** is to include:
- instructions for the safe startup, operation, shutdown and storage of a steam boiler
- Schedules** are itineraries setting startup and shutdown times in line with steam plant generation requirements
- Generation levels** are to include:
- amount of steam produced
 - subsequent amount of energy generated as a result of the pressure
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Pre-startup checks** are conducted to ensure:
- equipment has been set up correctly
 - systems are performing accurately
 - equipment is operating to optimum performance
- Diagnosis** is to include:
- use of audio, visual and written information
 - water quality
 - chemical testing
- Boiler house** is normally the isolated room or building where the boiler is located
- Emergency shutdown** is the immediate shutting off of the equipment to prevent an accident or damage to the plant
- Records and reports** may include:
- fuel efficiency recordings and environmental impact
 - calculations
 - operating logs
 - storage location

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Boiler data may include:

- steam levels
- pressure levels
- energy generation levels
- heat build-up
- system overload information

Output

is the amount of energy produced to provide power to site operations

Shutdown

is the process of winding down the boiler and reducing pressure and steam until the system is cold and ready for cleaning and maintenance

Storage is to include:

- close down time the boiler is inactive
- procedures for shutdown

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to plan the operation of a heat plant and coordinate heat plant operating procedures and the startup, shutdown and storing of the heat plant

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT4207A Plan and coordinate heat plant operations

Application of the Unit

Application of the unit

The unit involves planning and coordinating heat plant operations in a variety of work settings, including saw mills, wood chip mills, veneer mills, board/plywood mills and timber treatment plants

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan heat plant operation	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and coordinating heat plant operations are identified and followed</p> <p>1.2. Recent heat plant performance is assessed for unusual signs of performance</p> <p>1.3. <i>Heat plant</i> startup, operation and shutdown are planned in line with site requirements</p> <p>1.4. <i>Operation orders</i> and <i>schedules</i> are set and communicated to personnel</p> <p>1.5. <i>Generation levels</i> are calculated and communicated to operators</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Coordinate heat plant startup and operation	<p>2.1. Pre-operational safety and <i>pre-startup checks</i> and procedures are checked with operators</p> <p>2.2. Heat plant startup is monitored for correct running conditions and is signed on</p> <p>2.3. Continued operation of heat plant and its condition are routinely checked with operating personnel</p> <p>2.4. Problematic heat plant operations are <i>diagnosed</i>, with adjustments calculated and communicated to operators</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---|--|
| 3. Coordinate heat plant shutdown and storage | <p>2.5. Heat plant chemicals are checked for correct labelling in line with statutory and environmental requirements</p> <p>2.6. <i>Emergency shutdown</i> procedures are followed in case of a fire</p> <p>2.7. Fuel efficiency recordings, calculations, operating log, heat plant operation and equipment faults are <i>recorded and reported</i></p> <p>2.8. Assistance is provided to personnel with the evaluation of <i>heat plant data</i> and performance details</p> <p>2.9. Heat plant management and <i>output</i> are monitored to record possible process improvements</p> <p>3.1. <i>Shutdown</i> and lock-out procedures are directed in line with OHS legislation, and statutory and environmental regulations</p> <p>3.2. Condition of heat plant is assessed and personnel are directed to undertake cleaning and maintenance requirements in line with site procedures, manufacturer recommendations and environmental requirements</p> <p>3.3. Mode of <i>storage</i> is selected and personnel are directed to store heat plant in line with statutory requirements</p> <p>3.4. Modifications are made to generation levels or schedules to ensure optimum performance, which are then communicated to personnel</p> |
|---|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely plan and coordinate heat plant operations; monitor heat plant output
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and coordinating heat plant operations
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and coordinating heat plant operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Procedures for heat plant startup, operation, shutdown and storage
- Energy generation levels
- Heat plant scheduling and planning
- Past performance analysis
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and coordinate heat plant operations in

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>line with organisational requirements</p> <p>The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:</p> <ul style="list-style-type: none"> • following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planning and coordinating heat plant operations • following organisational policies and procedures relevant to planning and coordinating heat plant operations • planning and coordinating heat plant operations for the enterprise • modifying production and schedules for heat plant operations within the enterprise • coordinating personnel to follow planning, communications and scheduling for heat plant operations
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to follow relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment must be by direct observation of tasks, with questioning on required knowledge and it must

EVIDENCE GUIDE

also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment

RANGE STATEMENT

- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation and disposal, recycling and re-use guidelines)

Heat plant is to include:

- energy generating heat plants

and may include:

- thermal oil heating systems
- gas burners
- dust systems, including extraction
- solid fuel systems
- steam generators
- fuel intake
- water intake
- oil flow (pump operation)
- hydraulic systems
- blowing down steam generators

Operation order is to include:

- instructions for the safe startup, operation, shutdown and storage of a heat plant

Schedules

are itineraries setting startup and shutdown times in line with heat plant generation requirements

Generation levels are to include:

- amount of heat produced
- subsequent amount of energy generated as a result of the pressure

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Pre-startup checks

are conducted to ensure:

- equipment has been set up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Diagnosis is to include:

- use of audio, visual and written information
- water quality
- chemical testing

RANGE STATEMENT

Emergency shutdown	is the immediate shutting off of the equipment to prevent an accident or damage to the plant
Records and reports may include:	<ul style="list-style-type: none"> • fuel efficiency recordings and environmental impact • calculations • operating logs • storage location • quality outcomes • hazards • incidents • equipment malfunctions <p>and may be:</p> <ul style="list-style-type: none"> • manual • a computer-based system • other appropriate organisational communication system
Heat plant data may include:	<ul style="list-style-type: none"> • heat levels • pressure levels • energy generation levels • heat build-up • system overload information
Output	is the amount of energy produced to provide power to site operations
Shutdown	is the process of winding down the heat plant and reducing heat until the system is cold and ready for cleaning and maintenance
Storage is to include:	<ul style="list-style-type: none"> • close down time the heat plant is inactive • procedures for shutdown

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for and implement sustainable forestry strategies	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to implementing <i>sustainable forestry practices</i> are identified and followed</p> <p>1.2. Environmental management strategies are developed and implemented using available resources in line with organisational guidelines</p> <p>1.3. <i>Consultative processes</i> are used to negotiate and agree strategy processes, objectives and timelines</p> <p>1.4. Strategies are assessed for effectiveness in reducing waste disposal in line with organisational environmental management policies</p> <p>1.5. Strategies are revised to ensure ongoing <i>improvement</i> in line with organisational requirements</p>
2. Manage integrity of water bodies	<p>2.1. Water is sourced and used from locations other than mains water, as required in line with organisational and legislative guidelines</p> <p>2.2. Run-off water is managed to optimise use and minimise <i>pollutants</i> in line with organisational environmental management practice</p> <p>2.3. Planting strategies are developed to efficiently and appropriately use available water supply and manage</p>

ELEMENT	PERFORMANCE CRITERIA
3. Manage integrity of soil	<p>run-off</p> <p>2.4. <i>Irrigation/watering strategies</i> are developed in line with organisational guidelines</p> <p>3.1. Wind and water erosion is minimised by planting patterns and species</p> <p>3.2. Nutrients and texture of the soil are managed to maintain soil productivity</p> <p>3.3. Irrigation/watering strategies are developed in line with organisational guidelines</p>
4. Undertake an environmental audit	<p>4.1. Need for environmental audit is determined and audit is conducted in line with organisational policies and procedures</p> <p>4.2. Environmental <i>considerations</i> are covered in the audit, in line with organisational policies and legislative requirements</p> <p>4.3. Recommendations are developed that are verifiable and sufficiently detailed to meet audit and organisational requirements</p> <p>4.4. Business equipment and technology are used to access, analyse and organise information in line with organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to recognise common diseases, pests and nutrition deficiencies
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to prepare a range of reports, documentation and submissions where precise meaning is required
- Numeracy skills sufficient to analyse qualitative and quantitative information and data
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for implementing sustainable forestry practices
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for implementing sustainable forestry practices
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Procedures for developing and implementing a range of environmental management strategies
- Energy flow and food web frameworks
- Stages of nutrient cycling
- Principles of sustainable agriculture systems
- Principles of composting and waste management
- Soil testing processes and procedures and results interpretation
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently implement sustainable forestry practices in line with organisational and legislative guidelines

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to implementing sustainable forestry practices
- following organisational policies and procedures relevant to implementing sustainable forestry practices
- communicating and consulting with colleagues and stakeholders to obtain feedback and negotiate strategic processes, objectives and timelines in order to implement sustainable forestry practices
- using business equipment and technology to prepare and implement environmental management strategies using available resources and incorporating sound environmental management practices
- auditing and evaluating environmental management strategies and implementing identified changes and improved practices

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements

RANGE STATEMENT

- Sustainable forestry practices** may include:

 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - management of fire and weeds
 - soils, including tropical soils
 - tropical forestry practices
- Consultative processes** may include:

 - face-to-face meetings
 - telephone
 - facsimile
 - written and email communication
- Improvement** may include:

 - ongoing waste reduction
 - energy and water efficiency
 - taking advantage of newly available technologies
- Pollutants** may enter the river and drainage systems
- Irrigation/watering strategies** may include:

 - minimising evaporation
 - run-off
 - accurate delivery of water
- Considerations** may include:

 - topography
 - water use
 - current policies and practices
 - waste emissions and materials
 - energy use
 - characteristics of area
 - legal obligations
 - sustainable forestry management

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify information and interpretations programs strategies	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to managing forestry information and interpretations programs are identified and followed</p> <p>1.2. Additional information relevant to <i>information and interpretations programs</i> is sought and obtained as required</p> <p>1.3. <i>Strategies</i> for information and interpretations programs are determined in line with <i>client groups</i> and organisational requirements</p> <p>1.4. Mechanisms are established to monitor <i>trends and developments</i> in order to provide effective information and interpretations programs</p> <p>1.5. Information on accurate evaluation of industry trends, client needs, community issues and organisational practices is gathered</p>
2. Plan information and interpretations programs	<p>2.1. Topics of information and interpretations programs are determined and developed in consultation with <i>appropriate personnel</i></p> <p>2.2. Information and interpretations programs are integrated with other relevant organisational programs and <i>activities</i></p> <p>2.3. Measurable performance indicators and mechanisms</p>

ELEMENT	PERFORMANCE CRITERIA
	are determined and documented
	2.4. Plan and its performance indicators are clearly documented and communicated to appropriate personnel
	2.5. Communication with others is established and maintained in line with OHS requirements
3. Promote information and interpretations programs	3.1. Information and interpretations programs are promoted in line with documented plan and workplace procedures
	3.2. Mechanisms are established, implemented and monitored to promote information and interpretations programs to appropriate personnel
	3.3. Information on planned information and interpretations programs is made widely available to appropriate client groups
	3.4. Promotional activities are monitored for effectiveness in consultation with client groups and appropriate personnel
4. Evaluate information and interpretations programs	4.1. Information and interpretations programs are evaluated against documented plan and objectives
	4.2. Programs are analysed to verify effectiveness in meeting objectives and to identify improvements to future information and interpretations programs
	4.3. Recommendations for future programs are prepared, based on consultation conducted and findings of analysis
	4.4. Program processes are recorded and reported to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others; negotiate and

REQUIRED SKILLS AND KNOWLEDGE

liaise with internal and external bodies and groups; prepare and manage effective exhibitions; research and present information orally and in writing to a wide range of individuals and groups, including conveying complex concepts and ideas

- Literacy skills sufficient to record and maintain information relating to forestry information and interpretations programs; collate and assess information against specified criteria; prepare and edit explanatory material for the general public
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures; manage staff, projects and budgets to achieve specified outcomes

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing forestry information and interpretations programs
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for managing forestry information and interpretations programs
- Environmental risks and hazards
- Criteria for recycling and re-using timber/material with defects
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Potential community issues in relation to forests and forests products
- Media relations and marketing principles and processes
- Recognition of trainee, participant or client characteristics, including language, literacy and numeracy skills, cultural background, and previous experience and knowledge
- Appropriate training locations within a workplace
- Computer-based presentation techniques and tools
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can determine effective strategies for information and interpretations programs; and plan, monitor and promote information and interpretations programs to meet client and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- followed applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing forestry information and interpretations programs
- followed organisational policies and procedures relevant to managing forestry information and interpretations programs
- undertaking consultation to assess and determine strategies for information and interpretations programs
- verifying topics and measurable performance indicators for information and interpretations programs
- implementing, evaluating and promoting information and interpretations programs and introducing improvements where necessary

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE

- workplace location or simulated workplace
- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines

Organisational requirements may include:

RANGE STATEMENT

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Information and interpretations programs

aim to enhance the understanding and skills of a range of clients for a range of purposes and reflect a wide knowledge of forest growing and management resources and practices

Strategies may reflect:

- organisational strategies and plans
- priorities and budget requirements
- in-depth knowledge of client groups and awareness of their changing information needs, requirements and expectations
- awareness of current practice in similar organisations
- innovative ways to provide information and interpretations programs

Client groups may include:

- people at any level in the organisation who operate within or for the forest
- people outside the organisation who operate within or for the forest
- people affected by organisational decisions or actions
- people to whom the organisation should provide such a service to meet public and social accountability requirements
- school children
- people with an interest in the forest

Trends and developments may be:

- theoretical
- practical

Appropriate personnel may

- senior management representatives

RANGE STATEMENT

include:

- client group representatives
- technical specialists within the organisation
- internal education, training and development staff
- outside experts

Activities may include:

- seminars
- talks
- lectures
- information in in-house publications
- exhibitions
- media releases
- technology-based training
- skills-based training
- marketing and promotional programs

Plan may include:

- incorporating measurable objectives and mechanisms to evaluate information and interpretations programs
- reflecting strategies that are determined and developed through consultation
- taking account of staff competencies and ways to develop and improve such competencies
- documenting promotional activities

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Records and reports may include:

- scheduling and coordination outcomes
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- a computer-based system
- other appropriate organisational

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to managing the installation and commissioning of equipment are identified and followed</p> <p>1.2. <i>Equipment</i> items to be included in work plan and specification document are specified and checked</p> <p>1.3. <i>Work plan for installation and commissioning</i> of equipment and systems is drawn up, including management and reporting procedures</p> <p>1.4. <i>Specifications</i> are checked for intended operating conditions</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Coordinate and monitor installation compliance	<p>2.1. Arrangements for installing and commissioning equipment including necessary legal, insurance, safety and environmental requirements are coordinated in line with workplace and legislative procedures</p> <p>2.2. <i>Contract arrangements</i> for the installation and commissioning of equipment and systems are coordinated in line with workplace procedures</p> <p>2.3. Installation process, including <i>testing</i>, is monitored</p>

ELEMENT	PERFORMANCE CRITERIA
	to ensure compliance with contractual requirements
	2.4. Variations are dealt with to ensure installation meets specification requirements
3. Manage installation schedules, legalities and budgets	3.1. Installation process is monitored to ensure compliance with installation specifications, schedule and budget
	3.2. Scheduling and budgeting processes are adjusted in line with variations or alternative plans
	3.3. Deviations are documented and reported
	3.4. Formal organisational processes are used to document the administration of regulatory requirements
	3.5. Legal, environmental and OHS requirements related to installing and commissioning equipment and systems are identified and followed
	3.6. Monitoring of the process is carried out to ensure compliance with legal, environmental and OHS requirements related to installing and commissioning equipment and systems
4. Conduct trials to confirm operating status of equipment	4.1. Equipment operations are evaluated in a trial run and results are checked against requirements
	4.2. Equipment is adjusted to achieve performance outcome specifications
	4.3. Employee duties are communicated to match equipment operating requirements
	4.4. Maintenance documentation is completed and processed
	4.5. Process and machine specification documentation is completed and appropriate records are maintained
	4.6. Completed work is assessed to confirm required specifications have been met
	4.7. Records and reports on work completed are prepared in line with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely manage the installation and commissioning of equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing the installation and commissioning of equipment
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for managing the installation and commissioning of equipment
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Equipment operations and installation procedures
- Commissioning procedures
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manage the installation and commissioning of equipment in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing the installation and commissioning of equipment
- following organisational policies and procedures relevant to managing the installation and commissioning of equipment
- managing the installation and commissioning of equipment within the enterprise

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements

RANGE STATEMENT

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Equipment** is to include:
- all machinery and equipment available for production purposes
 - subsequent maintenance within the enterprise
- Work plan** is to include:
- the installation and commissioning sequence
 - use of equipment
 - labour requirements
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Installation** is the process of setting equipment to undertake the sequence of work and output required
- Commissioning** is the process of verifying that the equipment is operating safely and in line with its intended purpose
- Specifications** are to include:
- size of equipment
 - capacity
 - output
 - power
 - maintenance requirements
 - safety details
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Contract arrangements** may include:
- installation
 - alignment and adjustment
 - operator training
 - testing

RANGE STATEMENT

	<ul style="list-style-type: none">• backup support
Testing	is operation in production mode to trial all aspects of the equipment to ensure accuracy and safety of the equipment
Schedule may include:	<ul style="list-style-type: none">• work schedules for personnel• scheduling of processing work• scheduling of equipment downtime
Trial run	see testing
Maintenance is to include:	<ul style="list-style-type: none">• proactive and reactive approaches to maintenance• scheduled and emergency maintenance activities• shutting down of equipment• stripping equipment• checking, repairing or replacing parts or consumables
Records and reports may include:	<ul style="list-style-type: none">• installation and commissioning outcomes• operating logs• performance records• quality outcomes• hazards• incidents• equipment malfunctions and may be: <ul style="list-style-type: none">• manual• a computer-based system• other appropriate organisational communication system

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Verify maintenance requirements	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to organising enterprise maintenance programs are identified and followed</p> <p>1.2. <i>Equipment</i> specifications, service requirements and workplace procedures are checked for recommended <i>maintenance</i> intervals and processes</p> <p>1.3. Special requirements for maintenance are separated from normal lubrication, adjustment and day-to-day maintenance schedules</p> <p>1.4. Comparisons with previous maintenance, intended equipment use, production requirements and standard operating procedures are made</p> <p>1.5. Outline <i>plan</i> for maintenance and related work <i>schedule</i> are developed and specified</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Establish maintenance systems	<p>2.1. Costs for process are identified and followed, based on work schedule, equipment manufacturer recommendations, and charges for materials, equipment, consumables and labour</p> <p>2.2. Production interruptions, processes and procedures are documented and recorded</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.3. Internal and external *maintenance providers* are specified
- 2.4. Maintenance system options are analysed and recommendations are reported to the *appropriate personnel*
- 2.5. Approvals for maintenance system concepts and resources are obtained
3. Organise maintenance activities
- 3.1. Production schedules and staff rosters are checked to verify time when the maintenance process may be scheduled, including optimal timing for *shutdown*
- 3.2. Permission from appropriate personnel is obtained for timing of maintenance to optimise the maintenance process and production
- 3.3. Detailed work plans are developed in line with production schedules, availability of expertise, scheduling of resource availability, and environmental requirements
- 3.4. Employees with the required competencies are allocated to maintenance activities
- 3.5. Approvals for production schedule, employee work pattern and maintenance schedule adjustments are obtained
- 3.6. Work plan is refined to ensure the maintenance program will maintain workplace outputs in line with organisational and environmental requirements
- 3.7. *Consumables*, equipment and *expertise* are located and coordinated to meet maintenance work schedule
- 3.8. Externally sourced equipment, consumables and expertise are located and procured
4. Complete maintenance procedures
- 4.1. Maintenance work schedule is completed in line with the work plan
- 4.2. Appropriate readings, measurements and recordings are made and compared to equipment, product and other relevant specifications
- 4.3. Areas requiring further testing are identified and monitored and appropriate procedures for testing are recommended to appropriate personnel
- 4.4. Adjustments to the work schedule and plan are made based on experience, and documentation is completed
- 4.5. Maintenance *records and reports* are completed and forwarded to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely organise enterprise maintenance programs
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and maintain information relating to organising enterprise maintenance programs
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for organising enterprise maintenance programs
- Environmental protection requirements, including the safe disposal of waste material, the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for organising enterprise maintenance programs
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Costs of material, consumables and labour
- Maintenance procedures and methodologies
- Enterprise work schedules
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards

 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Equipment** is to include:
- all machinery and equipment available for production purposes
 - subsequent maintenance within the enterprise
- Maintenance** is to include:
- proactive and reactive approaches to maintenance
 - scheduled and emergency maintenance activities
 - shutting down of equipment
 - stripping equipment
 - checking, repairing or replacing parts or consumables
- Plan** is to include:
- maintenance sequence
 - use of consumables
 - labour requirements
- Schedule** may include:
- work schedules for personnel
 - scheduling of processing work
 - scheduling of equipment downtime
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Maintenance providers** may include:
- internal personnel, including either dedicated maintenance personnel or equipment operators allocated to routine maintenance activities
 - external specialist providers hired by the

RANGE STATEMENT

- Appropriate personnel** may include:
- enterprise
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Shutdown** is to include:
- procedures for equipment lock-out, such as:
 - protecting operators and co-workers from accidental injury by isolating equipment from the power source
 - taking equipment off-line from normal production activities
- Consumables** are to include:
- regular replacement parts
 - lubricants and fluids associated with equipment
- Expertise** may include:
- specialist maintenance organisations
 - maintenance consultants
 - environmental issues
- Records and reports** may include:
- equipment type and size
 - inspection outcomes
 - quality outcomes
 - hazards
 - incidents
 - malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

FPICOT5205A Develop biohazard contingency plans

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to develop a contingency plan in the event of a biohazard infestation of forests, plantations or timber products

General workplace legislative and regulatory requirements apply to this unit. Specific requirements apply to environmental requirements and are referred to in State, Territory and federal environmental control regulations

Application of the Unit

Application of the unit The unit involves developing biohazard contingency plans in a variety of work settings including:

- forest environment
- hardwood and softwood plantation environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production
- timber and wood products sales and service
- other settings such as farms, agriculture, workshops, domestic, nursery, local council applications, as applicable to the unit

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review legal and system requirements	1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to developing biohazard contingency plans are identified and followed 1.2. Documentation requirements for <i>traceability chain</i> is reviewed for implementation to meet appropriate standards 1.3. Organisational requirements and contingency possibilities are evaluated 1.4. <i>Communication protocols</i> are identified for inclusion in the contingency plan
2. Prepare a contingency plan	2.1. Range of <i>potential biohazards</i> are evaluated for potential environmental impact and economic damage 2.2. <i>Risk assessment</i> is completed for relevant

ELEMENT	PERFORMANCE CRITERIA
	biohazards
	2.3. <i>Economic damage potential</i> is estimated for relevant biohazards
	2.4. <i>Infestation treatments</i> are identified and action plans included in the contingency plan
	2.5. <i>Controls</i> to limit the spread of infestation are developed and action plans included in the contingency plan
	2.6. Operational procedures are reviewed to ensure adequate risk safeguards and contingency plans are in place
	2.7. Communication protocols are incorporated in the contingency plan
	2.8. <i>Training and induction processes</i> for workforce involved with implementation of the contingency plan are documented
3. Ensure effectiveness of contingency plan	3.1. <i>Support and resources</i> are provided to enable the ongoing functionality of the contingency plan
	3.2. <i>Continuous improvement processes</i> appropriate to the enterprise are implemented to ensure the plan remains effective and required changes are agreed
	3.3. Activities are monitored on an ongoing basis to identify potential biohazards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to understand how the requirements of pest and disease legislation apply to the workplace
- Communication skills sufficient to explain the contingency plan and its requirements to all elements of the workforce
- Literacy skills sufficient to write a contingency plan and subsequent documentation
- Numeracy skills sufficient to understand input and output figures and calculate potential economic damage
- Problem solving skills sufficient to apply the requirements of the contingency plan to the particular scenario in which it may be implemented

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for developing biohazard contingency plans
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for developing biohazard contingency plans
- Environmental risks and hazards
- Minimising environmental impact
- Principles behind the development of a contingency plan
- Continuous improvement processes and systems
- Established communication channels and protocols including notification of authorities
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for assessing economic impact and calculating disease impact
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they understand what is required to develop a biohazard contingency plan

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to developing biohazard

EVIDENCE GUIDE

- contingency plans
- following organisational policies and procedures relevant to developing biohazard contingency plans
 - preparing a contingency plan to control biohazards for an organisation
 - reviewing the effectiveness of the contingency plan in controlling biohazards in the organisation
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:

- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Traceability chain

is a register of documents used for certification, audit and quality purposes, and may include:

- timber source documents
- processing records
- quality records
- numbering/labelling systems

Communication protocols

are established communication channels and may include:

- notification of pest and/or disease infestation to authorities

RANGE STATEMENT

Potential biohazards must include:

- fungal hazards
- viral hazards
- bacterial hazards
- insect hazards
- vertebrate hazards

Risk assessment

is an evaluation of the likelihood and the consequences of a biohazard infestation including potential social and environmental impact

Economic damage potential

is an estimate of the economic consequences of the biohazard infestation and may include:

- loss of forest values
- loss of current markets
- loss of potential markets
- damage to trading status

Infestation treatments

are the range of potential treatments to control the biohazard and may include:

- eradication
- quarantine
- fumigation
- use of pesticides
- use of biological controls
- culling of infected plants

Controls

are methods used to control the infestation and limit the spread, and may include:

- quarantine
- isolation
- elimination

Training and induction processes

are the processes required to induct personnel into the contingency plan and may include:

- staff meetings
- training manuals
- questioning of personnel to ensure understanding
- assessment

Support and resources may include:

- allocation of staff duties
- capability to develop and produce relevant documents

Continuous improvement

- quality circles

RANGE STATEMENT

processes may include:

- after action reviews
- improvement plans

FPICOT5206B Implement forestry chain of custody certification system

Modification History

Version	Comments
Version 1.1	Released with FPI11 Training Package Version 2. Reference added to specific legislation in required knowledge item. Equivalent to FPICOT5206A Implement Forestry Chain of Custody certification system.
Version 1	First released with FPI11 Training Package Version 1.

Unit Descriptor

Unit descriptor This unit describes the outcomes required to implement a forestry chain of custody certification system.

Application of the Unit

Application of the unit The unit involves implementing forestry chain of custody certification system/s in a variety of work settings including:

- forest environment (native and plantation)
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production
- timber and wood products sales and service
- other settings such as farms, agriculture, workshops, domestic, nursery, local council applications, as applicable to the unit

The skills and knowledge required for competent workplace performance are to be used within the scope of

the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit. Subject to enterprise requirements specific licences/certification may be required in the following areas: all occupational health and safety and environmental requirements that are raised in the Australian Standard (AS) 47072006 Chain of custody for certified wood and forest products.

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Confirm system requirements

- 1.1. Applicable ***Occupational Health and Safety (OHS), environmental, legislative and organisational requirements*** relevant to implementing a forestry chain of custody certification system are identified and followed
- 1.2. Key requirements of the legislation are clarified to confirm understanding and ensure consistency of interpretation and application

ELEMENT	PERFORMANCE CRITERIA
2. Comply with system requirements	<p>1.3. Relationship between chain of custody certification and <i>forestry certification systems</i> is clarified to ensure integration and compatibility of both systems</p> <p>1.4. Documentation requirements for <i>traceability chain</i> are reviewed to ensure effective workplace implementation to appropriate standards</p> <p>2.1. <i>Systems manual</i> is reviewed for applicability to work areas within the organisation</p> <p>2.2. <i>Internal auditors</i> of the chain of custody system are appointed and appropriate training conducted</p> <p>2.3. Traceability chain records are distributed and appropriate personnel instructed on how to enter relevant information</p> <p>2.4. Training and induction on systems manual is conducted for work areas covered by the chain of custody system</p> <p>2.5. Chain of custody activities are managed across work areas so that non-compliance is minimised</p> <p>2.6. Incidents of non-compliance are reported in line with legislative and workplace requirements</p> <p>2.7. Traceability chain records are completed and stored in line with systems manual requirements</p> <p>2.8. Inadequacies in systems manual which may contribute to non-compliance are raised in line with workplace procedures</p>
3. Provide system support	<p>3.1. <i>Audit recommendations</i> are incorporated into <i>improvement plans</i> to rectify non-compliance or improve processes</p> <p>3.2. Contributions are made to the <i>continuous improvement process</i> to ensure the system remains effective</p>
4. Document the operation and monitoring of the system	<p>4.1. Information on the operation of the system is prepared and disseminated to relevant internal and external personnel in line with the system communication plan</p> <p>4.2. Periodic reports on the operation of the system identifying any operational problems are prepared and disseminated to relevant internal and external personnel</p> <p>4.3. Reports on any identified breaches of compliance are prepared and disseminated to relevant internal and external personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to implement the requirements of the chain of custody system in the workplace
- Communication skills sufficient to explain the chain of custody system and its requirements to all elements of the workforce; conduct training/information sessions for internal and external personnel on the requirements of the system
- Literacy skills sufficient to prepare the appropriate information and reports for the chain of custody system
- Numeracy skills sufficient to understand the number of personnel that are required in the implementation of the chain of custody system
- Problem solving skills sufficient to implement the chain of custody system as required in the workplace, minimising non-compliance

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for implementing forestry chain of custody certification system, including the Illegal Logging Prohibition Act 2012 and related or superseding legislation
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for implementing forestry chain of custody certification system
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Ability to implement the workplace chain of custody system
- All stages of the workplace flow and its likely impact on the chain of custody system
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can understand what is required to implement a chain of custody system in their workplace to meet AS 47072006 Chain of custody for certified wood and forest products

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to implementing a forestry chain of custody certification system
- following organisational policies and procedures relevant to implementing a forestry chain of custody certification system
- an understanding of the key legislative requirements for implementing a forestry chain of custody system in their workplace
- reviewing the system manual for applicability to work areas
- providing training and induction on the chain of custody system to internal auditors and other personnel in the workplace
- managing chain of custody activities across work areas so that non-compliance is minimised
- reporting incidents of non-compliance in line with legislative and workplace requirements
- providing support to the chain of custody system to ensure that it remains effective
- preparing reports on the operation and monitoring of the chain of custody system for internal and external

EVIDENCE GUIDE

- personnel
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to comply with relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

EVIDENCE GUIDE

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

<p>Organisational requirements may include:</p>	<ul style="list-style-type: none"> • Australian Standards • confidentiality and privacy • OHS • the environment • equal opportunity • anti-discrimination • relevant industry codes of practice • duty of care • legal • organisational and site guidelines • AS 47072006 Chain of custody for certified wood and forest products • policies and procedures relating to own role and responsibility • procedural manuals • continuous improvement processes and standards • OHS, emergency and evacuation procedures • ethical standards • recording and reporting requirements • equipment use and maintenance and storage requirements • environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
<p>Forestry certification systems must include:</p>	<ul style="list-style-type: none"> • Australian Forestry Standard • Forestry Stewardship Council
<p>Traceability chain</p>	<p>is a register of documents used for certification, audit and quality purposes, and may include:</p> <ul style="list-style-type: none"> • timber source documents • processing records • quality records • numbering/labelling systems
<p>Systems manual</p>	<p>is a manual detailing the chain of custody certification system and its application to the workforce including processes and procedures</p>
<p>Internal auditors</p>	<p>are people identified within an organisation to conduct auditing to ensure compliance with the system</p>

RANGE STATEMENT

Audit recommendations

are recommendations or rectifications made by internal or external auditors to ensure compliance with the chain of custody system

Improvement plans

are internal documents written to ensure a process for implementing audit recommendations

Continuous improvement process may include:

- quality circles
- after action reviews
- improvement plans

Unit Descriptor

Unit descriptor This unit describes the outcomes required to manage the implementation of sustainability in the workplace

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit The unit involves managing the implementation of sustainability in the workplace in operations of all sizes in a variety of work settings, including:

- forest environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- forest products factory
- forest products sales and service
- horticultural
- domestic
- local council
- emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

ELEMENT	PERFORMANCE CRITERIA
	<i>personnel</i>
	1.5. Feedback on draft policy and strategies to effectively integrate sustainability within operational areas is provided to appropriate personnel
2. Prepare for implementation	2.1. Sustainability policy and implementation strategies are evaluated in consultation with appropriate personnel
	2.2. Targets and indicators are assessed in consultation with appropriate personnel
	2.3. Resource requirements and timelines are determined in consultation with appropriate personnel
	2.4. Procedures and processes to facilitate the implementation are established in consultation with appropriate personnel
	2.5. Sustainability in the workplace policy and procedures including expected targets and outcomes are communicated to relevant staff
	2.6. Action plans are developed with relevant responsibilities and timelines
3. Manage the implementation process	3.1. Implications for the management of sustainability and proposed changes in the workplace are determined in consultation with appropriate personnel
	3.2. Support is provided to staff to meet sustainability in the workplace responsibilities and to implement action plans
	3.3. Achievements against action plans are monitored and plans are updated as appropriate
	3.4. Processes are developed to ensure that an integrated ongoing review is part of the organisation's policy and procedures for sustainability in the workplace
4. Evaluate the implementation of sustainability in the workplace	4.1. Targets and indicators are evaluated and assessed on an ongoing basis
	4.2. Recommendations are made for improvements as a result of evaluation findings
	4.3. Changing trends and opportunities relevant to the enterprise are evaluated and taken into consideration for ongoing improvements
	4.4. Reports are provided to stakeholders and appropriate personnel on the outcomes of the evaluation and recommendations are made for

ELEMENT**PERFORMANCE CRITERIA**

- further development and improvement
- 4.5. Feedback is sought from stakeholders and appropriate personnel and an action plan is developed for ongoing improvements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use software and communication systems to analyse, create and present reports to manage implementation systems and procedures to aid in the achievement of sustainability in the workplace
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to read and evaluate complex and formal documents, such as policy and legislation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify work requirements; identify problems; develop and implement appropriate response procedures
- Planning and organisational skills sufficient to plan the implementation process

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing sustainability in the workplace
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the cleaning of plant, tools and equipment, returning the environment to its original or near to original condition on completion of activity, and the minimisation of carbon emissions and noise
- Organisational and site standards, requirements, policies and procedures for managing sustainability in the workplace
- Principles, practices and available tools and techniques of implementing sustainability in the workplace
- Quality assurance systems
- Environmental risks and hazards
- Using energy effectively and efficiently

REQUIRED SKILLS AND KNOWLEDGE

- Using material effectively and efficiently
- Sustainability principles and concepts
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Sustainability may include:

- reduction, recycling or elimination of waste and ecologically incompatible by-products
- elimination of chemical substances or physical agents and conditions that present hazards to human health or the environment
- conservation of energy and materials
- use of forms of energy and materials that are most appropriate to the desired ends
- design of work spaces to minimise or eliminate chemical, ergonomic and physical hazards

Scope of sustainability requirements may include:

- an integrated approach to sustainability which includes environmental, economic and social aspects or a narrower approach which focuses on each aspect individually
- parts of the enterprise to which sustainability is to apply, including whether the focus is on the

RANGE STATEMENT

whole enterprise, one work site, one work area, or a number of work sites or work areas

- an investigation of the particular business and market context of the industry or enterprise
- addressing sustainability initiatives through reference to standards, guidelines and approaches, such as:
 - federal government standards, including five-star rating for all new homes
 - ecological footprinting
 - Energy Efficiency Opportunities Bill
 - Global Report Initiative
 - Green Office Program
 - green purchasing
 - greenhouse challenge
 - environmental management systems
 - life cycle analyses
 - product stewardship
 - supply chain management
 - sustainability covenants/compacts
 - triple bottom line reporting
 - Australian Forest Certification Scheme (AFCS)
 - Forest Stewardship Council (FSC)

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Resource requirements may include:

- people
- materials
- equipment

Processes may include:

- communication
- monitoring
- reporting
- feedback
- evaluation
- ongoing review

Stakeholders may include:

- individuals and groups both inside and outside the organisation who have some direct interest

RANGE STATEMENT

in the organisation's conduct, actions, products and services, including:

- customers
- employees at all levels of the organisation
- government
- investors
- key personnel within the organisation and specialists outside it who may have particular technical expertise
- local community
- other organisations
- regulators
- suppliers

4. Document and report on community relationships or partnerships	<p>4.1. Outcomes of community relationships or partnerships are reported to relevant stakeholders</p> <p>4.2. Feedback on how the outcomes have informed planning or decision making is provided to all participants</p> <p>4.3. Community engagement capacity is reviewed in light of outcomes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to apply workplace safety procedures to building and maintaining community relationships
- Communication skills and interpersonal techniques sufficient to interact appropriately with a variety of community partners to explain complex and formal policies; establish and foster transparent, trusting relationships or partnerships with individuals and communities; work with diverse communities using a range of communication styles to suit different audiences and purposes
- Literacy skills sufficient to detail requirements; write recommendations and prepare community engagement reports requiring complex language structures and precision of expression; prepare community engagement information requiring the presentation of complex information, using simple language structures and precision of expression
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to mediate, negotiate and attempt to obtain consensus between parties; apply lateral thinking to provide solutions and overcome barriers to community engagement
- Planning and organising skills sufficient to facilitate community engagement, including relationship building, networking, negotiation, conflict management and risk management; maintain multiple and potentially conflicting relationships or partnerships

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for building and maintaining community relationships
- Organisational requirements, policies and procedures for building and maintaining community relationships
- Community engagement theory, principles, practices and techniques
- Community development principles and practices
- Leadership principles and the management of expectations in the context of community engagement
- Local factors affecting community development and consultation processes
- Strategies for community consultation
- Processes of individual advocacy and group advocacy
- Cultural awareness
- Characteristics contributing to community diversity
- Organisational policies related to communication and the media
- Workplace safety procedures relating to community engagement activities
- Established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Problem identification and resolution strategies
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can build and maintain community relationships

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all the requirements of, the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to building and maintaining community relationships
- following organisational policies and procedures relevant to building and maintaining community relationships
- planning a consultation strategy to build and maintain community relationships
- developing and practising key consultation skills to engage the community
- implementing strategies to build the capacity of the community
- engaging the community in the decision making process by informing, involving and consulting
- capturing community input on forest, wood, paper and timber industry issues
- building and maintaining community relationships in a range of contexts
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
 - community information, case studies or scenarios, including current journals and international case studies
 - community engagement theory, principles, practices and techniques
 - procedures and protocols for community engagement, including OHS
 - policy and legislation related to community engagement

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate

EVIDENCE GUIDE

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification

RANGE STATEMENT

requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Contextual framework** may include:
- dynamics of community
 - community power structures
 - big politics versus community politics (big 'P' v little 'p')
 - collaborations
 - networks
 - formal or informal partnerships
 - timelines for relationship building
 - purpose of relationship or partnership building and therefore type of relationship or partnership to be developed
 - level of agency support
- Relationships or partnerships** may
- individuals
 - community groups

RANGE STATEMENT

be with:

- ethnic communities
- local residents, through place-based initiatives
- non-government organisations
- private sector organisations
- public sector agencies
- media organisations
- business community

Constraints may include:

lack of or limited:

- knowledge
- understanding
- decision-making powers
- time and resources

and may also include:

- geographic location
- previous experience with engagement processes
- community angst or lack of trust
- organisational capacity to respond to community
- external factors, including non-negotiable factors
- perceived status of organisation in the community
- community expectations of the relationship or partnership
- cost of the community to be involved, such as transport, time off work, and childcare

Resources may include:

- people
- materials
- equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- negotiation
- team building
- stakeholder engagement
- internal and external
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Opportunities for community

- 'whole of community' projects as part of

RANGE STATEMENT

involvement may include:

organisation or site-based strategies

- policy development
- program or service delivery planning or decision making
- review or evaluation of existing policies, programs or services

involvement through:

- community-based information
- consultations
- direct participation
- employment of local community members
- focus groups
- information flows
- media campaigns
- one-on-one meetings
- participations in local events
- public meetings and forums
- response to questionnaires
- scenario planning
- think tanks
- visioning
- workshops

Diversity may include differences in:

- age
- cultural background
- educational level
- English language proficiency
- ethnicity
- expertise
- family responsibilities
- gender
- household structure (couple, singles, single parents, same sex partners, children)
- interests
- interpersonal approach
- language
- length of residence
- life experience
- marital status
- mobility
- physical ability

RANGE STATEMENT

- political orientation
 - religious belief
 - sexual orientation
 - socioeconomic background
 - thinking and learning styles
 - work experience
- Opportunities for individuals and communities to develop their capacity** may include:
- access to resources and information to build knowledge
 - community visioning
 - community development
 - attendance at workshops
 - participation opportunities
 - formal learning opportunities
 - community building networks
 - formal and informal:
 - leadership programs
 - mentoring and coaching programs
- Informal and formal community networks** may include:
- interest groups
 - clubs
 - associations
 - leadership structures
 - community leaders and elders (place-based)
 - word-of-mouth
 - web-based information networks
 - electronic communication
 - virtual learning communities
 - reference groups
 - church groups
 - service clubs
 - existing multi-agency reference groups
 - school networks
 - community organisations
 - community services
 - non-government organisations
 - religious and cultural networks
- Barriers to community engagement** may include:
- access constraints
 - community perception that nothing ever comes from engagement with organisations
 - cultural barriers
 - diversity variables

RANGE STATEMENT

- geographical isolation
- inappropriate timing, venues and strategies
- lack of awareness of the full range of organisational products or services
- lack of clear branding in organisational communications
- language issues
- little access to effective information in first language
- little access to traditional ethnic media channels, such as print, radio or an integrated mix
- mobility issues
- over-reliance on or sole use of electronic media and internet
- poor integration of information strategies
- poor monitoring and feedback loops
- poor past experience with engagement processes
- previous over-consultation
- social capital gate keepers - residents who lock broad participation
- socioeconomic levels
- terminology and style of copy used in organisational information
- time constraints
- unequal access to information, participation and influence on decision making
- lack of confidence or trust in the organisation
- lack of or limited:
 - follow-up within community engagement strategies
 - information at the local level through resources such as community newspapers
 - interest in or commitment to the issues
 - openness and transparency
 - understanding or clarity about the engagement process
 - access to effective information in first language
- local solutions to a range of local issues
- new or improved services or products
- infrastructure
- strategic planning

Issues may include:

RANGE STATEMENT

- community development

FPICOT5209B Manage tree harvesting to minimise environmental impact

Modification History

Version	Comments
Version 1.1	Released with FPI11 Training Package Version 2. Minor amendment to application. Equivalent to FPICOT5209A Manage tree harvesting to minimise environmental impact.
Version 1	First released with FPI11 Training Package Version 1.

Unit Descriptor

Unit descriptor

This unit specifies the outcomes required to plan and manage tree harvesting to minimise environmental impact and by-product while maximising yields using harvest planning systems.

Application of the Unit

Application of the unit

The unit involves managing tree harvesting to minimise environmental impact in a variety of settings, including:

- forest environment (native and plantation)
- agroforestry
- farm forestry.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit. Subject to enterprise requirements specific licences/certification may be required in the following areas:

- Forest Sustainability Certification
- Chain of Custody Certification
-

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop tree harvesting plan	1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to managing tree harvesting while minimising environmental impact are identified and followed 1.2. Tree harvesting requirements are researched and analysed 1.3. Consultation processes are undertaken as an integral part of the planning process 1.4. Available timber is identified and calculated 1.5. <i>Tree harvesting plan</i> is developed to ensure

ELEMENT	PERFORMANCE CRITERIA
2. Initiate pre-harvesting activities	<p>maximum yields while minimising environmental impact and by-product</p> <p>1.6. Approval for plan is gained and work teams are informed</p> <p>2.1. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with the manufacturer's specifications and OHS requirements</p> <p>2.2. Buffer zones, protected areas and erosion control measures are installed or identified</p> <p>2.3. Resources are acquired in line with plan requirements, and equipment and resource requirements estimated</p> <p>2.4. Planning permits and access permission are applied for and gained</p> <p>2.5. Communication with stakeholders is established and maintained in line with OHS, environmental and organisational requirements</p>
3. Manage tree harvesting operations	<p>3.1. Harvesting operational activities are managed for compliance with environmental and organisational requirements</p> <p>3.2. Sustainability indicators are monitored for compliance with sustainability plan</p> <p>3.3. Reported exceptions to work order and tree harvesting plan are rectified within legislative and planned timeframes</p>
4. Review tree harvesting operations	<p>4.1. Sustainability indicators are reported for all harvesting stages, including pre- and post-harvesting, in line with organisational and contractual requirements</p> <p>4.2. Performance indicators are reported to appropriate stakeholders in line with legislative and contractual requirements</p> <p>4.3. Sufficient feedback is reported to provide data for assistance with planning of future harvesting</p>
5. Review tree harvesting plan	<p>5.1. Data from tree harvesting operations is analysed to assist with planning future harvesting operations</p> <p>5.2. Techniques to review effectiveness of harvesting operations in maximising yields and minimising environmental impact and by-product are implemented</p> <p>5.3. Information is used to change harvesting plan as</p>

ELEMENT **PERFORMANCE CRITERIA**

required

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to manage tree harvesting while minimising environmental impact
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation; read and interpret maps; follow legislation, regulations, standards, codes of practice and safe working procedures involved in harvesting operations
- Numeracy skills sufficient to estimate and calculate volume, gross and net areas; calculate available timber
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures
- Planning and organisational skills sufficient to organise and obtain required permits and to manage harvesting operation while minimising environmental impact; prepare and review a tree harvesting plan; implement a tree harvesting plan
- Managerial skills sufficient to manage harvesting operations
- Research skills sufficient to obtain information on tree harvesting requirements to maximise yields and minimise environmental impact and by-product

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing tree harvesting to minimise environmental impact
- Environmental protection requirements, including the safe disposal of waste material
- Organisational, site and management standards, requirements, policies and processes for implementing harvesting plans
- Environmental risks and hazards
- OHS in relation to harvesting operations
- OHS monitoring systems
- Applicable certification schemes such as Forest Stewardship Council, Australian Forestry Standard, ISO standards for environmental and other management

REQUIRED SKILLS AND KNOWLEDGE

- systems, other identified industry standards
- Chain of custody principles and applicable systems
- Database management and document control systems
- Mathematic theory and application for calculating volume and scheduling flow
- Tree harvesting plans
- Sustainability indicators
- Coupe size (gross area estimate, net area estimate and volume estimate)
- Buffer zones, protected areas and erosion control
- Planning permits and access permission
- Performance indicators
- Established communication channels and protocols
- Problem identification and resolution
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for the recording, reporting and maintenance of workplace information
-
-

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manage tree harvesting in line with organisational requirements while minimising environmental impact

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including, environmental, OHS and organisational policies and procedures relevant to managing tree harvesting
- following organisational policies and procedures relevant to managing tree harvesting to minimise environmental impact

EVIDENCE GUIDE

- Context of and specific resources for assessment
- using harvest planning systems to develop and review a tree harvesting plan
 - managing harvesting operations in line with the tree harvesting plan
 - rectifying exceptions to work order and environmental plans
 - using data and performance indicators to review harvesting operations
 - Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of

EVIDENCE GUIDE

other units of competency

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures

Environmental requirements

RANGE STATEMENT

may include:

- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements

may include:

- legal
- organisational and site guidelines
- fire management principles
- waste management principles
- wet weather controls
- soil erosion control
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Tree harvesting plan may include:

- sustainability indicators
- sustainability plan
- OHS monitoring systems
- applicable certification schemes

RANGE STATEMENT

- coupe size
 - calculation of available timber
 - key performance indicators
 - human resource requirements, equipment and resource requirement estimates
 - planning permits and access permission requirements
 - staff and contract work orders
 - permits granted by:
 - government
 - local authority
 - other entitled entities for access and harvesting operations to take place
- Planning permits and access permission** may include:
- Communication* may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Stakeholders** may include:
- management
 - staff
 - contractors
 - environmental authorities
 - public
 - Commonwealth, State/Territory and local government
 - product processors
 - customers
 - destination markets
- Harvesting operational activities* may include:
- surveying and mapping site details
 - marking stream buffers, filter strips, contours, gullies, roads, bridges and other watercourse crossings
 - other site preparation
 - habitat protection
 - landscape protection
 - buffer establishment

RANGE STATEMENT

- related construction
- fire management
- harvesting
- regeneration
- machinery operations
- site preparation silvicultural exercises associated with harvesting
- road work, including the construction of roads, tracks, watercourse crossings and bridges, building drains and silt traps
- waste removal
- chipping
- transportation
- wet weather activities and operation adjustments
- pest management prescriptions
- water quality
- soil condition
- appropriate native flora and fauna protection
- maintenance of any culturally significant landscapes, natural or anthropogenic formations and constructions

Sustainability indicators should include:

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to design and implement strategies that involve the community in decision making. It includes analysing, scoping, designing, implementing, reporting and evaluating on community engagement activities.

Application of the Unit

Application of the unit

The unit involves managing community engagement in a variety of work settings, including:

- forest environment (native and plantation)
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- forest products production
- forest sales and service
- horticultural

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

|---|--|
| <p>1. Scope the need for community engagement</p> | <p>1.1.Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to managing community engagement are identified and followed</p> <p>1.2.Benefits for community involvement in the engagement process are evaluated for the organisation and for the community</p> <p>1.3.Framework is designed to assist in analysing issues that require community engagement</p> <p>1.4.<i>Key stakeholders</i> are identified and consulted in line with organisational policy and procedures</p> <p>1.5.Target community is defined in line with the purpose, objectives and <i>issues</i></p> <p>1.6.Range of <i>community engagement strategies</i> are</p> |
|---|--|

ELEMENT	PERFORMANCE CRITERIA
2. Develop community engagement plan	<p>assessed for suitability in engaging the community in the issues</p> <p>2.1.Purpose and objectives of community engagement are established in consultation with key stakeholders</p> <p>2.2.Community engagement strategies are designed that are relevant, achievable, measurable and flexible enough to allow for the emergence of new ideas and options</p> <p>2.3.Likely <i>barriers to community involvement</i> are explored and strategies to address them are developed</p> <p>2.4.Relevant commitment to/approval of the community engagement plan is obtained in line with organisational policy and procedures</p> <p>2.5.<i>Community diversity</i> is acknowledged and respected throughout the development of the plan</p> <p>2.6.Communication, monitoring, reporting, feedback and evaluation processes are embedded in the plan</p>
3. Implement community engagement plan	<p>3.1.<i>Resources</i> and time are allocated to the implementation of the plan</p> <p>3.2.Implementation is managed in line with the plan design</p> <p>3.3.Objectives and constraints of the engagement are <i>communicated</i> to designated personnel</p> <p>3.4.Clarity is established around the roles and responsibilities of all participants</p> <p>3.5.Expectations of participants are identified and managed, and the community is provided with relevant information throughout the engagement process</p> <p>3.6.Plan is implemented flexibly enough to allow the community to raise new ideas or options</p> <p>3.7.Community is provided with opportunities to develop its <i>engagement capacity</i> and barriers to involvement are addressed</p> <p>3.8.Feedback mechanisms are implemented in line with the plan and community requirements are addressed to maximise participation</p>
4. Evaluate community engagement plan	<p>4.1.All components of the community plan are evaluated in line with the plan's purpose and objectives</p> <p>4.2.Feedback on the quality of the strategies used is</p>

ELEMENT	PERFORMANCE CRITERIA
5. Report on the outcomes of community engagement	<p>obtained from relevant personnel and stakeholders</p> <p>4.3.Outcomes from the engagement are recorded, shared and used across the organisation and with the community, in line with organisational policy and procedures</p> <p>5.1.Outcomes of community engagement are reported to relevant stakeholders</p> <p>5.2.Feedback on how outcomes may inform current and future planning or decision making is provided to all participants</p> <p>5.3.Community engagement plan is reviewed in light of outcomes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to apply workplace safety procedures to community engagement strategies; evaluate community engagement strategies
- Communication skills sufficient to use a range of communication styles to suit different audiences and purposes; explain complex and formal policies and concepts to a variety of audiences
- Literacy skills sufficient to detail requirements; write recommendations and prepare community engagement reports requiring complex language structures and precision of expression
- Problem solving skills sufficient to mediate, negotiate and attempt to obtain consensus between parties; apply lateral thinking to provide solutions and overcome barriers to community engagement
- Planning and organisational skills sufficient to develop policies and procedures; manage expectations; scope, design and implement community engagement plans, including project, time and budget management; facilitate community engagement, including relationship building, networking, negotiation, conflict management and risk management

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, policies, standards, codes of practice and established safe practices relevant to the full range of processes for developing and implementing community engagement strategies
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

material

- Organisational and site standards, requirements, policies and procedures for developing and implementing community engagement strategies
- Community engagement theory, principles and techniques
- Facilitation/process management in the context of community engagement
- Principles of working within an ethical framework
- Community consultation and decision-making processes
- Power structures and relationships in the community
- Processes of both individual advocacy and group advocacy
- Models of negotiation
- Complex cultural awareness
- Community development principles
- Diversity in the community
- National and state or territory reporting requirements in relation to community engagement
- Social justice principles
- Organisational policies related to communication and the media
- Workplace safety procedures relating to community engagement strategies
- Established communication channels and protocols
- Problem identification and resolution strategies
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can manage community engagement

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing community

EVIDENCE GUIDE

engagement

- following organisational policies and procedures relevant to managing community engagement
- planning, designing and implementing community engagement strategies that follow legislative requirements
- documenting an implementation strategy for community engagement, as part of a plan, that has been designed, implemented and reviewed, showing a measurable outcome using the chosen indicators
- communicating with stakeholders to discuss possible approaches to community engagement
- reviewing and improving strategies by identifying improvements and benchmarking against plan objectives

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
 - community information, case studies or scenarios, including current journals and international case studies
 - community engagement theory, principles, practices and techniques
 - procedures and protocols for community engagement, including OHS
 - policy and legislation related to community engagement

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE

workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and

RANGE STATEMENT

may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice such as:
 - chain of custody (COC)
 - Programme for the Endorsement of Forest Certification (PEFC) schemes
 - Forest Stewardship Council (FSC)
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

Organisational requirements may include:

RANGE STATEMENT

- quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Key stakeholders** may include:
- all those who may be directly affected or may have a significant issue in the engagement process, including:
 - individuals
 - local residents
 - community leaders
 - community groups
 - ethnic communities
 - non-government organisations
 - public sector officers
 - private sector organisations/business community
 - public sector agencies
 - elected public officials who may need to be briefed or provide approval throughout the process
 - public land committees of management
- Community engagement strategies** may include:
- alliances
 - partnerships
 - education and awareness campaigns
 - on-line consultation and interaction
 - deliberative processes
 - public meetings
 - consultation with stakeholders
 - media campaigns
 - community-based information
 - direct participation
 - scenario planning
 - advisory bodies and steering committees
 - events
 - celebrations

RANGE STATEMENT

- launches
 - awareness activities or programs
 - public forums
 - workshops
 - face-to-face meetings and interviews
 - focus groups
 - questionnaires (email, internet or hard copy)
 - surveys
 - negotiation tables
 - formal partnerships
 - telephone interviews
 - written submissions
- Barriers to community involvement** may include:
- access constraints
 - mobility issues
 - poor past experiences with engagement processes
 - time constraints
 - previous over-consultation
 - geographical isolation
 - socioeconomic levels
 - diversity variables
 - social capital gate keepers - residents who block broad participation
 - lack of or limited:
 - interest in or commitment to the issue
 - understanding about the actual issue
 - understanding or clarity about the engagement process
- Community diversity** may include difference in:
- age
 - cultural background
 - disability
 - educational level
 - English language proficiency
 - ethnicity
 - experience
 - expertise
 - family responsibilities
 - gender
 - intellectual difference
 - interests

 - work experiences
 - working styles
- Resources** may include:
- people
 - materials
 - equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - negotiation
 - team building
 - stakeholder engagement
 - internal and external
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Engagement capacity** may include:
- information - a one-way relationship in which appropriate and relevant information is disseminated to the community
 - consultation - a two-way relationship in which the views of individuals or communities on issues that affect them directly or in which they may have a significant interest, are asked for, received and taken into consideration

RANGE STATEMENT

- active participation - opportunities for individuals and communities to propose options and be involved in planning and decision making

FPICOT6202B Develop and manage a forestry chain of custody certification process for the workplace

Modification History

Version	Comments
Version 1.1	Released with FPI11 Training Package Version 2. Reference added to specific legislation in required knowledge, and minor change to application. Equivalent to FPICOT6202A Develop and manage a Forestry Chain of Custody certification process for the workplace.
Version 1	First released with FPI11 Training Package Version 1.

Unit Descriptor

Unit descriptor This unit describes the outcomes required to develop and manage an appropriate system for chain of custody certification which will enable the organisation to fulfil its obligations and responsibilities under applicable certification requirements.

Application of the Unit

Application of the unit The unit involves developing and managing a process for forestry chain of custody certification in a variety of work settings including:

- forest environment (native and plantation)
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production
- timber and wood products sales and service
- other applicable settings such as farms, agriculture,

workshops, domestic, nursery, local council applications

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit. Specific requirements apply to OHS and environmental requirements and are referred to in Australian Standard (AS) 47072006 Chain of custody for certified wood and forest products.

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- 4.4. Periodic reviews of the certification system are conducted in collaboration with assigned staff in line with the approved plan
- 4.5. Reports are prepared on the operation and review of the certification system in line with established procedures and regulatory and compliance obligations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to relate how the requirements of AS 47072006 Chain of custody for certified wood and forest products apply to an organisation
- Communication skills sufficient to explain AS 47072006 Chain of custody for certified wood and forest products and its requirements to all personnel within the workforce; conduct periodic reviews of the chain of custody certification management system
- Literacy skills sufficient to write a values statement and systems manual for the chain of custody certification process and subsequent documentation; prepare reports for management on the review of the chain of custody certification management system
- Numeracy skills sufficient to prepare a budget for the implementation of the chain of custody certification management system

REQUIRED SKILLS AND KNOWLEDGE

- Problem solving skills sufficient to apply the requirements of AS 47072006 Chain of custody for certified wood and forest products to a specific workplace/s

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice and established safe practices relevant to the full range of processes for developing forestry chain of custody certification management system, including the Illegal Logging Prohibition Act 2012 and related or superseding legislation
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for developing and managing a process for forestry chain of custody certification
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- All stages of the work flow and its likely impact on a chain of custody process
- Principles of auditing to a standard
- AS 47072006 Chain of custody for certified wood and forest products
- Continuous improvement processes and systems
- How a chain of custody process fits into forestry certification systems
- How the chain of custody process and a traceability chain operates in the workplace to meet the requirements of the appropriate standard
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for budgeting and calculating rolling percentage averages
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can develop and

EVIDENCE GUIDE

manage a process for chain of custody certification for their workplace to meet AS 47072006 Chain of custody for certified wood and forest products

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to developing and managing a process for forestry chain of custody certification
 - following organisational policies and procedures relevant to developing and managing a process for forestry chain of custody certification
 - comprehensive understanding of AS 47072006 Chain of custody for certified wood and forest products and the requirements for developing and managing a process for chain of custody certification in the workplace that meets the requirements of this standard
 - planning for and setting up a chain of custody certification management system for an actual workplace or simulated workplace in collaboration with relevant personnel
 - preparing documentation for a chain of custody certification management system
 - writing a values statement in consultation with relevant personnel covering the necessary elements of the chain of custody certification management system
 - monitoring and reviewing a chain of custody certification management system in collaboration with relevant personnel
 - preparing reports for management on the chain of custody certification management system
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
 - access to relevant information on chain of custody certification requirements

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Environmental requirements

may include:

- legislation
- organisational policies and procedures
- workplace practices

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Certification requirements may include:

- internal and external authorities
- risks involved
- ways of ensuring compliance
- penalties for non-compliance
- areas and operations most affected

Forestry certification systems must include:

- Australian Forestry Standard
- Forestry Stewardship Council

Traceability chain

- is a register of documents used for certification, audit and quality purposes

and may include:

- timber source documents
- processing records
- quality records
- numbering/labelling systems

Values statement

is a summary of the organisation's values in relation to forest and forest product certification

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to research and develop engineered timber products to meet the requirements of energy efficient design within residential buildings. It requires thorough knowledge of residential building design and building codes, and high level knowledge of engineered timber design and practice

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit

The unit involves the development of engineered timber products in a timber and wood products production setting at a senior project management or senior design level

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

ELEMENT

PERFORMANCE CRITERIA

- appropriate *documentation methods* to produce preliminary representation of the product/s
- 2.3. Design concepts are critiqued and reviewed with stakeholders
- 2.4. Design concepts are reviewed to ensure energy efficiency is proven to sufficient level to progress project
- 2.5. *Business case* that includes a full cost benefit analysis and an appropriate risk assessment is undertaken
- 2.6. *Approval is sought for the project from all relevant stakeholders*
3. Develop the product
- 3.1. *Product development* is undertaken in line with design and production requirements
- 3.2. Product development outcomes and energy efficiency are reviewed and aligned with market analysis and organisational priorities
- 3.3. *Certification* processes and compliance of the engineered product and production system are initiated and/or achieved
- 3.4. Detailed implementation *specifications* are developed and presented to relevant stakeholders for approval and funding
4. Develop product concept to an operational level
- 4.1. Organisational procedures for product development and marketing product are followed
- 4.2. Production resources are selected and organised in line with design and production requirements
- 4.3. *Quality assurance* system is designed
- 4.4. Safe operating procedures for handling and operating of plant, tools and process involved in production are developed and documented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to develop engineered timber products; use and

REQUIRED SKILLS AND KNOWLEDGE

understand house energy rating software; use quality management systems; undertake risk analysis; undertake material analysis in relation to wood and associated products used in manufacturing of composites and engineered products; determine thermal capacity of materials and generate an R-value for products; apply principles of energy efficient design to building and developing building products

- Communication skills sufficient to use appropriate communication and interpersonal techniques with stakeholders, colleagues and others; utilise technical and theoretical concepts in operational applications
- Literacy skills sufficient to interpret legislation, standards and codes of practice; document control records; undertake market research and analysis

Project management skills in relation to engineering, product development, manufacturing and marketing operations

- Problem solving skills sufficient to identify problems and faults; demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for developing engineered timber products to meet energy efficient building design needs
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for developing engineered timber products to meet energy efficient building design needs
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Theory underpinning the development of R-values
- Standards associated with timber products
- Standards and certification schemes and chain of custody systems relating to forest products
- Timber engineering design applied to residential constructions and the application of energy use efficiency
- Timber species characteristics as they relate to engineering design and serviceability
- Other materials involved in composite products and their characteristics in relation to engineering design and serviceability
- Processes involved in developing, manufacturing and supplying wood products used in residential buildings
- House energy rating software and associated protocols for use

REQUIRED SKILLS AND KNOWLEDGE

- Project management tools
- Quality management systems
- Risk assessment systems
- Cost benefit analysis tools, including discounting
- Market issues relating to products, zones and applications
- Established communication channels and protocols including notification of authorities
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures associated with structural engineering and wood products
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently research and develop engineered timber products

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to developing engineered timber products
- following organisational policies and procedures relevant to engineered timber products
- developing engineered timber products to production stage
- identifying commercial opportunities for engineered timber products
- formulating and designing concepts for engineered

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- use of tools and plant appropriate to a task and used to safe working procedures
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements may include:

Building Codes of Australia must include:

codes relevant to:

- sustainability
- climate zones
- thermal rating
- durability
- fire safety
- span tables

Standards may include:

- BCA
- all AS/NZ Standards associated with engineered wood products and associated design and construction
- industry practices for operating
- Forest Certification and Chain of Custody

RANGE STATEMENT

Standards

- material handling
- environmental monitoring and waste management
- engineering design parameters
- other serviceability minimum requirements in relation to durability and in serviceability of wood based products

Climate zones

are based on climate characteristics and local authority borders, and may include:

- any of zones 1-8

Energy efficiency measures may include:

- lifecycle factors
- thermal characteristics

Information may include:

- discussions with industry practitioners
- electronic/print media
- industry events
- government bodies and associated publications
- industry associations
- internet
- libraries and archives
- lifestyle and contemporary issues magazines
- museums/galleries/studios
- journals
- personal observations and experience
- retail/wholesale suppliers of products and services
- technical publications/reference books
- training programs/seminars and professional development activities

Engineered timber products may include:

- laminated beams
- laminated veneer lumber (LVL)
- plywood
- chipboard
- hardboard
- medium density fibre board (MDF)
- oriented strand board (OSB)
- laminated or engineered flooring

Concept may include:

- an abstract idea
- patent
- existing product

RANGE STATEMENT

Market analysis should include: identification of:

- need
- placement
- financial certainty
- volume

Stakeholders may include:

- clients
- commissioning body/organisation
- competitors
- design team
- management staff
- manufacturers
- material importers and suppliers
- mentors
- peers
- production staff
- sales staff
- suppliers
- target market

Documentation methods may include:

- diagrams
- drawings or sketches
- electronic presentations
- illustrations
- layouts
- mock-ups
- models
- plans
- prototypes
- samples
- verbal presentations
- written notes

Business case must include:

a review of all associated costs such as:

- capital cost
- material
- labour
- design expenses
- overheads
- margin
- running cost
- lifecycle analysis

RANGE STATEMENT

- Product development** may include:
- market uptake
 - discount and internal rate of return on investment
 - other opportunity cost analysis
 - prototyping
 - testing
 - acquiring/commencing certification
 - gaining approval for developing infrastructure
 - developing plant and infrastructure
 - establishing methods and procedures
- Certification** may include:
- all AS/NZ Standards associated with engineered wood products and associated design and construction
 - industry practices for operating
 - Forest Certification and Chain of Custody Standards
 - environmental monitoring and waste management
- Specifications** may include:
- purpose
 - audience
 - budget
 - resources - human, plant and equipment
 - ownership of final product
 - operational plan
- Quality assurance** involves benchmarks and standards which may be set by:
- BCA
 - AS/NZ Standards
 - organisational and market criteria
 - federal, State or Territory and council legislation
- and may use:
- forms completed by operators and supervisors
 - digital or remote methods of monitoring and reporting

FPICOT6204A Use carbon accounting to estimate emissions in the workplace

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to account the carbon emissions released over a defined period of time for a forestry-related organisation

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit

The unit involves the identification and application of carbon accounting methodologies to develop and analyse a carbon inventory for the workplace. The unit can be applied in a variety of work settings including:

- forest environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- forest products factory
- forest products sales and service
- horticultural, local council, emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Evaluate the context for instigating carbon accounting in the workplace | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to carbon accounting are identified and followed</p> <p>1.2. Need to quantify the stocks, sources and sinks of carbon and other greenhouse gas (GHG) emissions in the context of anthropogenic impacts on the global climate is examined</p> <p>1.3. Mandatory and voluntary obligations for carbon accounting under <i>international conventions and protocols</i> and national context are investigated</p> <p>1.4. <i>Supplementary principles</i> of carbon accounting are examined</p> <p>1.5. Role of the forestry sector in the global balance of GHG emissions is assessed</p> |
|--|---|

ELEMENT	PERFORMANCE CRITERIA
2. Identify carbon accounting methodologies and define the appropriate approach	<p>1.6. <i>Objective</i> of conducting an accounting of carbon emissions is established</p> <p>2.1. Methodologies for carbon accounting are explored</p> <p>2.2. Carbon accounting frameworks and methods are examined</p> <p>2.3. Protocols for carbon <i>biomass pools</i> including harvested wood products and <i>non CO₂ emissions</i> are identified</p> <p>2.4. Approach for developing a carbon inventory in line with the nationally agreed standards is established</p>
3. Establish the accounting area	<p>3.1. Organisational and operational <i>boundary/ies</i> for the carbon inventory are defined</p> <p>3.2. Time period over which carbon emissions are to be assessed is determined</p>
4. Collect data	<p>4.1. <i>Emissions and offset sources</i> are identified</p> <p>4.2. Collection of activity/consumption and offset data is determined based on availability of data, analytical capacity and available resources</p> <p>4.3. Carbon inventory summary table is constructed listing and separating the emission sources into the correct scopes</p> <p>4.4. Carbon offset sources are included in the carbon inventory summary table outside the scopes</p> <p>4.5. Available data is recorded in separate spreadsheet tabs</p> <p>4.6. Existing <i>secondary data</i> is researched</p> <p>4.7. Field data is gathered for carbon storage sources</p>
5. Apply calculation methodology	<p>5.1. Calculations for carbon dioxide equivalent emissions consistent with GHG protocol are conducted within the spreadsheets for each emissions source included in the inventory</p> <p>5.2. Calculations for carbon storage, consistent with a <i>standardised methodology</i> are conducted within the spreadsheets for each carbon offset source included in the inventory</p> <p>5.3. Carbon inventory summary is populated with calculated emissions/offsets in descending order</p> <p>5.4. Total emissions for each scope and for the removals/offsets are calculated</p> <p>5.5. Sum total of all emissions and offsets for the inventory are calculated</p>

ELEMENT**PERFORMANCE CRITERIA**

- 5.6. Change in carbon stocks is estimated if a baseline exists
- 5.7. Charts and/or graphs are prepared to display the emissions by scope and source
- 5.8. Suitable ratio indicator for the organisation is formulated and its value is calculated based on the total carbon emissions in the summary
- 5.9. Value of the ratio indicator is reported in the carbon inventory summary

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to select and apply a methodology to calculate emissions; examine carbon accounting frameworks and methods; develop a carbon inventory for the workplace
- Communication skills sufficient to gather primary data from field surveys; use appropriate communication and interpersonal techniques with stakeholders, colleagues and others
- Literacy skills sufficient to interpret legislation, standards and codes of practice; document control records; research relevant information to collect secondary data; record data in separate spreadsheet tabs
- Numeracy skills sufficient to collect and analyse data; calculate emissions using an equation; conduct carbon storage calculations; prepare charts and graphs
- Problem solving skills sufficient to estimate total uncertainty

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for carbon accounting
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures for carbon accounting
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently

REQUIRED SKILLS AND KNOWLEDGE

- Using material effectively and efficiently
- International and national GHG emission standards, guidance and frameworks, such as:
 - GHG protocol
 - ISO 14064-1 2006 Greenhouse gases -- Part 1: Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals
 - National Greenhouse Accounts (NGA) Factors Workbook
- Carbon cycle
- Influences on the carbon cycle
- Anthropogenic influences
- Greenhouse effect
- Trends in carbon emissions
- Impacts of climate change
- Drivers behind carbon accounting
- Carbon accounting terminology
- Carbon accounting frameworks and methods
- Organisational and operational boundaries
- Categorising carbon reductions, removals offsets
- Emissions sources in the workplace
- Collecting data
- Selecting emissions factors
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and

EVIDENCE GUIDE

efficiently use carbon accounting to estimate emissions in the workplace

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to carbon accounting
- following organisational policies and procedures relevant to carbon accounting
- researching information to establish an objective for conducting carbon accounting in the workplace
- identifying boundary/ies to be covered
- identifying emission sources to be covered
- selecting an emissions calculation approach
- collecting activity data
- applying a calculation tool to estimate emissions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

International conventions and protocols may include:

- Kyoto Protocol
- ISO 14000 essentials

RANGE STATEMENT

- GHG protocol
 - Copenhagen Agreement
- Supplementary principles** may include:
- baseline scenario
 - leakage
 - permanence
- Objectives** may include
- providing information on which to build an effective strategy to manage GHG emissions
 - prerequisite for participating in GHG trading markets
 - demonstrating compliance with government regulations
- Biomass pools** may include:
- above ground biomass
 - below ground biomass
 - dead organic matter - wood, litter
 - soil organic matter
- Non-CO₂ emissions** may include:
- soil disturbance
 - fertilisation
 - biomass combustion
- Boundary/ies** may include:
- global
 - national, organisational
 - operational
 - geographical
 - project based
- Emissions and offset sources** may include:
- direct GHG emissions
 - indirect GHG emissions
 - on-site and off-site emissions (geographical)
 - upstream emissions
 - downstream emissions
 - full cycle accounting
- Secondary data** may include:
- information from national statistical agencies
 - information from research institutes
 - information from sectoral experts
- Standardised methodology** may include:
- legislated carbon farming initiatives

FPICOT6205A Prepare an enterprise carbon management report

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to write a carbon management report for an organisation in a suitable format for dissemination to internal personnel and/or external authorities

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit The unit involves reviewing an enterprise carbon inventory, developing a carbon report and reviewing carbon reporting procedures in a variety of work settings including:

- forest environment
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- forest products factory
- forest products sales and service
- horticultural, local council, emergency services environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare to write report

- 1.1. Applicable *Occupational Health and Safety* (OHS), *environmental*, *legislative* and *organisational requirements* relevant to developing a carbon management report are identified and followed
- 1.2. Carbon reporting procedures as outlined in the Greenhouse Gas (GHG) Protocol Corporate Standard are reviewed
- 1.3. Scope of carbon reporting and relevant audience are determined
- 1.4. Structure and specific objectives for each heading in the report are established in line with the carbon reporting procedures and *regulatory bodies* requirements
- 1.5. Report format and style are developed in line with industry standards and organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	1.6. Carbon inventory data is reviewed and assessed for completeness, relevance and accuracy 1.7. Information management system is established and maintained to manage information and data effectively and efficiently over the reporting period
2. Compile draft report	2.1. Report content is developed in line with the structure and objectives 2.2. Evidence is gathered to generate <i>specific findings and recommendations</i> that are relevant to carbon management principles 2.3. Report is written using appropriate language and contains information required to meet report objectives
3. Complete report	3.1. Draft report is presented to relevant personnel for review 3.2. Report is amended based on feedback 3.3. Final draft is presented to relevant personnel for executive sign-off and distribution 3.4. Documents are named and stored in line with organisational requirements and the application exited without information loss/damage

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Research, technical, planning and organisational skills sufficient to prepare, compile and review a carbon management report
- Technical skills sufficient to review an enterprise carbon inventory; develop a carbon report; establish and review carbon reporting procedures as outlined in the GHG Protocol Corporate Standard
- Communication skills sufficient to use appropriate communication and interpersonal techniques with stakeholders, colleagues and others
- Literacy skills sufficient to write a carbon management report for an organisation in a suitable format
- Numeracy and analytical skills sufficient to collect and analyse data; estimate and measure, including calculate time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Problem solving skills sufficient to identify problems; implement appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for carbon reporting
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for carbon reporting
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Carbon cycle
- Influences on the carbon cycle
- Anthropogenic influences
- Greenhouse gas effect
- Trends in carbon emissions
- Impacts of climate change
- Drivers behind carbon accounting
- Carbon accounting terminology
- Carbon accounting frameworks and methods
- Organisational and operational boundaries
- Categorising carbon reductions, removals offsets
- Emissions sources in the enterprise
- Collecting data
- Selecting emissions factors
- Mandatory reporting of emissions
- Voluntary reporting of emissions
- Carbon management principles and practices
- Carbon reporting standards
- Best practice in carbon reporting
- Indicators
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting enterprise records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can develop a carbon management report for the enterprise

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to carbon reporting
- following organisational policies and procedures relevant to carbon reporting
- selecting a suitable format for use by internal personnel and/or external authorities
- preparing relevant information and data for inclusion in the report
- preparing a carbon management report for sign-off and distribution

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Regulatory bodies** may include:
- International Organization for Standardization (ISO)
 - federal government departments
 - State/Territory government departments
 - local government departments and authorities
- Information and data** may include:
- diagram of organisational and operational boundaries
 - emissions sources and their scopes
 - reasons/justifications for decisions/selections
 - summary carbon inventory table
 - all carbon or energy reporting regulations applicable to the organisation
 - reporting thresholds
- Specific findings and recommendations** may include:
- comment on the inventory with regard to the organisation's original drivers
 - financial implications and risks for the organisation of various carbon price signals
 - whether or not the organisation's total carbon emissions breach any reporting thresholds
 - requirements of the voluntary reporting scheme or format with regard to the organisation's inventory
 - setting of carbon reduction targets and objectives for the organisation
 - options for the introduction of carbon management principles
 - identifying and recommending actions by which the organisation can reduce its GHG emissions
 - barriers experienced when developing the inventory and report
 - opportunities for improvement

RANGE STATEMENT

- suggesting improvements to the organisation's carbon reporting procedures

Unit Descriptor

Unit descriptor This unit describes the outcomes required to develop, plan and implement systems to manage environmentally sustainable practices in forestry environments. It supports the establishment of a sound forestry management system necessary to produce outcomes that meet international treaties, conventions and initiatives; and commonwealth, state or territory legislation and policies

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit The unit involves designing and managing systems for forestry management within workplaces, including developing and implementing processes in operations of all sizes in a variety of work settings, such as:

- native forests
- plantations
- agroforestry
- farm forestry

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Quantify and qualify factors to be included in the organisational forest management system | 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to developing forest management systems and processes are identified and followed
1.2. <i>Strategic factors</i> impacting on organisational compliance with <i>legislation and policies</i> are identified and quantified
1.3. Range and scope of activities being undertaken by the organisation within legislative and policy guidelines are quantified
1.4. <i>Information</i> is monitored to identify and maintain knowledge of forestry management issues
1.5. Qualifying strategic and operational factors impinging on organisational forestry management processes are measured |
| 2. Establish forestry management plan and system | 2.1. Strategic priorities are identified and planned that support overall legislative and policy guidelines
2.2. Design of the organisational forestry management |

ELEMENT	PERFORMANCE CRITERIA
	system is directed and managed
	2.3. Criteria for implementing and maintaining systems concerned with managing forests are developed
	2.4. Methods are developed to gather and monitor forest management information
	2.5. <i>Forest management plans</i> and system are regularly evaluated to ensure accuracy and compliance with legislation and policies
3. Facilitate the introduction of the forest management system	3.1. <i>Processes</i> for forestry management are developed and introduced
	3.2. Processes are circulated within the organisation and sign-off by staff, employees and contractors is obtained
	3.3. Compliance of staff, employees and contractors is monitored
	3.4. <i>Feedback systems</i> are developed, circulated and maintained to ensure all stakeholders can support the forestry management process
4. Implement forest management system	4.1. Methods for determining effectiveness of the major elements of the forest management system are introduced
	4.2. <i>Resources</i> are allocated to the implementation process in line with timelines and budget
	4.3. Those involved in implementing the system are informed of expected outcomes, and responsibility for designated roles is assigned
	4.4. <i>Operational controls</i> for implementing plans are established
	4.5. Staff are trained to ensure that quality assurance practices are applied to the forestry management process on a daily basis
5. Monitor and evaluate forest management system	5.1. Routine monitoring of forestry management plans and programs is conducted
	5.2. Information on the condition of forests is evaluated and considered for ongoing improvements
	5.3. Reports are monitored for compliance with regulations and controls
	5.4. Corrective action is taken to ensure compliance
	5.5. System is regularly evaluated and modified to reflect ongoing improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use software and communication systems to research, analyse, create and present documents and reports; develop and implement systems and processes to manage forests
- Communication skills sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to read and evaluate complex and formal documents, such as policy and legislation
- Numeracy skills sufficient to analyse data for compliance with regulations and controls
- Problem solving skills sufficient to review and identify system requirements; identify problems; develop and implement appropriate response processes
- Planning and organisational skills sufficient to plan the forestry management system and process

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to developing forest management systems and processes
- International treaties, conventions and initiatives relevant to developing forest management systems and processes
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for managing forests
- Environmental risks and hazards
- Procedures for minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Forestry management issues that impact on the organisation and its practices
- Financial and business administration principles relevant to organisational needs
- Factors to be considered in assessing forestry management issues inherent in different types of forests
- Key factors that influence decisions on forestry management issues and decision making
- Established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Problem identification and resolution strategies; common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete implementation programs
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can develop forest management systems and processes

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to developing forestry management systems and processes
- following organisational policies and procedures relevant to developing forestry management systems and processes
- quantifying and qualifying the factors to be included in the forest management system
- facilitating the implementation of a forest management system for an organisation
- establishing and implementing a forest management system for an organisation
- monitoring and evaluating a forest management system

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and

EVIDENCE GUIDE

environmental constraints

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements

may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination

RANGE STATEMENT

Organisational requirements may include:

- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Strategic factors may include:

- international treaties, conventions and initiatives
- commonwealth government legislation
- national policies
- state or territory legislation and policies
- local authority by-laws, Acts or regulations affecting environmental issues
- location and nature of sites
- scope of operations and activities of the organisation
- management commitment to forest management systems
- organisational policy and operational guidelines
- public liabilities and exposure to risk
- risk-management strategies and policies
- structure of the management team and apportionment of responsibilities

Legislation and policies must include:

- international treaties, conventions and initiatives
- commonwealth government legislation
- national policies
- state or territory legislation and policies

Information may include:

- international publications

RANGE STATEMENT

Forest management plans may include:

- government publications
- local government publications
- strategic planning
- forest management planning, including:
 - public land
 - park planning
 - private land
- fire management planning
- flora and fauna planning
- cultural values
- exploration and mining
- quality plans
- environmental and safety

Processes may include:

- communication
- monitoring
- reporting
- feedback
- evaluation
- ongoing review

Feedback systems may include:

- emergency or process-breakdown communication channels
- formal meetings between staff, employees and contractors on a regular basis
- programmed appraisals of compliance with forestry management and environmental policy involving staff, employees and contractors
- programmed reporting and environmental conformance statements and timetables

Resources must include:

- people
- materials
- equipment

Operational controls may include:

- timber harvesting
- fire management operations
- other activities in state or territory forests
- operations in national parks
- other operations on public land
- activities on private land

FPIFGM2201B Collect seed

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to collect, treat and store seed

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions

This unit replaces FPIFGM2201A Collect seed

Application of the Unit

Application of the unit The unit involves collecting seed in a forest environment setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to collect seed	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to collecting seed are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3. Site <i>environmental protection measures</i> are followed in line with relevant legislation and regulations</p> <p>1.4. Potential locations for the collection of required seeds are identified and required <i>approvals</i> are sought and obtained from <i>relevant authorities</i></p> <p>1.5. <i>Equipment and resources</i> appropriate to work requirements are selected and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.6. Seed collecting operations are checked to ensure safe working conditions and <i>planned</i> in line with site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Select and assess seed	<p>2.1. Plant species and condition are visually assessed and checked to ensure the collection of healthy seeds</p> <p>2.2. Method of seed collection is selected and applied without causing damage to <i>health of parent plant</i></p> <p>2.3. Seed is collected from a range of plants and from different areas of plants to maintain genetic diversity</p> <p>2.4. Seed is placed in clean containers and accurately</p>

ELEMENT	PERFORMANCE CRITERIA
3. Clean and store seed	<p data-bbox="619 293 1307 365"><i>labelled</i> in line with industry, site and organisational requirements</p> <p data-bbox="619 383 1307 495">3.1. Seed is <i>separated</i> from other materials, weighed and stored in line with species requirements and site procedures</p> <p data-bbox="619 506 1307 577">3.2. <i>Seed treatment</i> is applied to prevent deterioration in line with seed species and site procedures</p> <p data-bbox="619 589 1307 660">3.3. <i>Seed information</i> is accurately recorded in line with site procedures</p> <p data-bbox="619 672 1307 743">3.4. Seed is <i>packaged</i> for storage in line with industry, legislative and organisational requirements</p> <p data-bbox="619 754 1307 819">3.5. Seed collection information and results are <i>recorded and reported</i> in line with site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant equipment and resources; efficiently and safely carry out seed collecting procedures; identify a range of seed species and apply accurate identifying information; use a range of seed collection methods and related equipment
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and maintain information, including details of seed species, weight and place of origin
- Numeracy skills sufficient to apply appropriate mathematical techniques to calculate seed weights and quantities
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for collecting seed
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition

REQUIRED SKILLS AND KNOWLEDGE

on completion of activity

- Organisational and site standards, requirements, policies and procedures for collecting seed
- Environmental risks and hazards
- Procedures for minimising environmental impact
- Range of seed species and appropriate collection, treatment and packaging processes, including storage requirements for different seed species
- Types of diseases and pests likely to infect a range of seed species
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can apply safe and efficient techniques to collect, treat and store a range of seed species in line with species requirements and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to collecting seed
- following organisational policies and procedures relevant to collecting seed
- safely and efficiently using and maintaining seed collecting equipment and resources

EVIDENCE GUIDE

Context of and specific resources for assessment

- treating and storing seed in line with site and industry specifications
- recording seed collection information and results, and maintaining workplace information
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any

EVIDENCE GUIDE

relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- information and instructions for collecting, treating and storing seed

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

RANGE STATEMENT

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles

Approvals may include:

- licences and permits required for commercial and non-commercial seed collection
- government permits
- landholder permits

Relevant authorities may include:

- local governments
- parks and reserves managers
- forestry managers
- relevant government departments and agencies/ authorities, such as those involved in sustainability and environmental issues
- relevant Indigenous organisations and agencies

Equipment and resources may include:

- personnel
- vehicles
- pruning and shaking equipment
- sheets
- tarpaulins
- clean containers for holding seeds
- vacuum seed collecting machines
- ladders or elevated work platforms
- personal protective equipment

Planning includes:

consideration of:

- seed collection seasons
- when the required species have fruit at optimal condition

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - collecting after falling or felling
 - using ladders
 - climbing
 - shaking
 - high-powered rifles
 - cherry-pickers
 - hand picking
 - careful and selective pruning
- Method of seed collection** may include:
- Health of parent plant** may require:
- Labelling** may include:
- Separation** methods may include:
- seed location
 - genetic identity
 - hand selection
 - wind separation/winnowing
 - sieving
 - vibrating
 - flotation
 - drying
 - crumbling of husks
- Seed treatment** may include:
- heat
 - mechanical
 - chemical protection against pests
- Seed information** may include:
- time and date of harvest
 - time and date of receipt into store
 - weight
 - species
 - place or origin of seed
 - container identifier
- Packaging** may include:
- vacuum sealing
 - use of inert atmospheres, such as nitrogen and carbon dioxide
 - control of packing environment, including temperature, light and moisture
- Records and reports** may be maintained by:
- electronic database
 - card index

RANGE STATEMENT

- data sheets
- filing systems

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

PERFORMANCE CRITERIA

- | | |
|---------------------------------------|---|
| 1. Select site preparation techniques | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to preparing seedbeds are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked as required with <i>appropriate personnel</i></p> <p>1.4. <i>Range of appropriate seedbed preparation techniques</i> is <i>evaluated</i> and preferred technique is selected and recommended</p> <p>1.5. Analysis and recommendations are documented and prepared in an appropriate format for approval</p> <p>1.6. Required approvals are identified, sought and obtained from appropriate personnel</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Plan and prepare site | <p>2.1. Site preparation plan is determined and developed in line with work order and environmental requirements</p> <p>2.2. Potential and existing risks and hazards in the work area are identified and controlled</p> <p>2.3. <i>Site plan</i> is documented and prepared in the appropriate style and format</p> <p>2.4. Seedbed is prepared using appropriate techniques in line with site plan</p> <p>2.5. Seedbed preparation is monitored and adjustments are made as required to accommodate contingencies</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Survey and review seedbed	<p data-bbox="619 293 1182 360">in line with site plan and organisational and environmental requirements</p> <p data-bbox="571 376 1307 450">2.6. <i>Limitations</i> are identified and assistance is sought as required in line with workplace procedures</p> <p data-bbox="571 465 1182 539">3.1. Seedbed is surveyed in line with workplace procedures and organisational guidelines</p> <p data-bbox="571 555 1206 629">3.2. Survey results are collated and reviewed, and remedial action is undertaken as required</p> <p data-bbox="571 645 1307 741">3.3. Site preparation is assessed and evaluated to confirm that techniques, methodologies and budgets are in line with site plan and work order</p> <p data-bbox="571 757 1294 831">3.4. <i>Recommendations</i> for improving methods and techniques used to prepare seedbeds are documented</p> <p data-bbox="571 846 1206 898">3.5. Seedbed preparation process is <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment; plan and prepare a seedbed
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to collate and review information against specified criteria; locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing seedbeds
- Environmental protection requirements, including the safe disposal of waste material

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for preparing seedbed
- Environmental risks and hazards
- Techniques for seedbed preparation
- Site preparation requirements for particular seed species
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess, plan and select suitable techniques to implement seedbed preparation processes, and review and report outcomes

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to preparing seedbed
- following organisational policies and procedures relevant to preparing seedbed
- coordinating and scheduling resources and managing the work of others to achieve specific outcomes
- developing a site preparation plan and conducting a risk analysis identifying mitigating methods for potential risks
- implementing and monitoring seedbed preparation

EVIDENCE GUIDE

- using appropriate site preparation techniques
- reviewing, evaluating and reporting survey results of seedbed preparation
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of essential required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the essential required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements
may include:

Environmental protection
measures:

may relate to:

- hygiene of the area
- relevant commonwealth, state, territory and local legislation and regulations

may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection

RANGE STATEMENT

- ground hazards
- obstacles

measures may also include:

- contingencies for modifying operations during wet or other adverse weather conditions
- details of organisational terminology
- guidelines
- plans
- budgets
- policies and timelines
- internal memos
- resources, including people, plant, equipment and consumables
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Work order may include:

- supervisors
- clients
- colleagues
- line management
- relevant external authorities and agencies, including:
 - local, state, territory and federal agencies
 - utility providers, such as gas, water, power and telecommunications
 - environmental protection
 - private owners
 - fire services

Appropriate personnel may include:

Range of seedbed preparation techniques may include:

- herbicides
- burning
- clearing
- rough-heaping
- cultivation
- ripping
- post-raking

Evaluation may involve:

- consideration of the species
- range of species to be sown or planted
- season
- topography of the area

RANGE STATEMENT

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Site plan may include:

- information detailing the forest area to be prepared
- particular preparation techniques to be used
- scheduling
- resource requirements
- responsibilities

Limitations may relate to:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation
- regulations and procedures
- OHS and environmental requirements

Recommendations may come from:

- staff or contractors undertaking the work
- external bodies
- clients
- client groups

Records and reports may document:

- techniques used
- resources used
- timeframes
- results
- recommendations

and may include:

- collation of information or documentation
- interpretation of information in a way relevant to workplace requirements
- accurate organisation and maintenance of records
- use of a full range of information media,

RANGE STATEMENT

including written and printed, verbal, electronic, visual display units and personal computers

may be:

- manual
- computer-based system
- other appropriate organisational communication system

PERFORMANCE CRITERIA

- | | |
|------------------------------------|--|
| 1. Prepare for planting operations | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planting trees by hand are identified and followed</p> <p>1.2. <i>Planting requirements</i> and <i>factors</i> are identified from work order and applied in line with site and quality control requirements</p> <p>1.3. <i>Equipment</i> appropriate to work requirements is selected and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. Potential and existing risks, hazards and site conditions are identified and assessed in line with OHS and environmental requirements</p> <p>1.5. Planting stock is appropriately stored in line with operational requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Plant forest trees | <p>2.1. Plant site is <i>assessed</i> for suitability and <i>prepared</i> in line with tree stock and work order</p> <p>2.2. Tree stock is selected and <i>planted</i> in line with production target, quality, safety and specific job requirements</p> <p>2.3. Work methods and patterns are selected to suit particular operation and make efficient use of equipment and available time and resources</p> <p>2.4. <i>Problems</i> are identified and resolved in line with site procedures and environmental requirements</p> |

ELEMENT**PERFORMANCE CRITERIA**

- 2.5. Equipment is maintained and stored in line with manufacturer recommendations and workplace procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant planting equipment; recognise common diseases, pests and nutrition deficiencies; efficiently and safely select and handle tree stock
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for planting trees by hand
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for planting trees by hand
- Environmental risks and hazards
- Typical stock defects, including pests, diseases and nutrition deficiencies
- Techniques for operating in forest settings
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plant trees by hand

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planting trees by hand
- following with organisational policies and procedures relevant to planting trees by hand
- planting tree stock by hand with minimal handling while adapting work methods or patterns to suit particular operation
- identifying and resolving problems, including potential site or equipment hazards, unsuitable planting stock, pests, disease and nutrition deficiencies

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit

EVIDENCE GUIDE

Method of assessment

- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements

may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance

RANGE STATEMENT

- procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting
 - equipment use, maintenance and storage
 - environmental management (waste minimisation and disposal, recycling and re-use guidelines)
- Planting requirements** may include:
- planting site and environmental requirements
 - examining stock sampling
 - examination and assessment criteria
- Factors** may include:
- planting depth
 - spacing
 - root placement
 - firmed vertical and undamaged
- Equipment** may include:
- spade
 - planting frame
 - harness
 - box seedlings
 - auger
 - personal protective equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Assessment** may include:
- checking for appropriate atmosphere, moisture content and season
 - appropriate spacing and growth suitability for each tree
- Preparation** may include:
- hole depth
 - hole width
 - cultivation
 - tube planter

RANGE STATEMENT**Planted** may include:

- planting bag
- minimal handling of tree stock to minimise foliage and root damage

Problems may include:

- monitoring planting to ensure quality
- equipment faults and malfunctions
- unsuitability of stock
- common diseases and pests
- nutrition deficiencies
- communication misunderstandings
- environmental issues or damage
- production quality
- safety

ELEMENT**PERFORMANCE CRITERIA**

- 2.5. Equipment is maintained and stored in line with manufacturer recommendations and workplace procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant planting equipment; recognise common diseases, pests and nutrition deficiencies; efficiently and safely select and handle tree stock
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planting trees mechanically
- Environmental protection requirements, including the safe disposal of waste material, returning the environment to its original or near to original condition on completion of activity and minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures for planting trees mechanically
- Environmental risks and hazards
- Role of wood or waste products in generating renewable energy through biomass
- Typical stock defects, including pests, diseases and nutrition deficiencies
- Techniques for operating in forest settings
- Procedures for pre-operational checks on equipment
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plant trees mechanically in line with job and environmental requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planting trees mechanically
- following organisational policies and procedures relevant to planting trees mechanically
- planting tree stock mechanically with minimal handling, while adapting work methods or patterns to suit particular operation
- identifying and resolving problems, including potential site or equipment hazards, unsuitable planting stock, pests, disease and nutrition deficiencies

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in

EVIDENCE GUIDE

an off-site context

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Planting requirements may include:

- planting site and environmental requirements
- examination of stock sampling
- examination and assessment criteria

Factors may include:

- planting depth
- spacing
- root placement
- firmed vertical and undamaged
- position of seedling in row

Equipment may include:

- planting machine
- tube planter
- planting frame
- harness
- box seedlings
- auger
- personal protective equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

RANGE STATEMENT

Preparation may include:

- hole depth
- hole width
- cultivation

Planted may include:

- minimal handling of tree stock to minimise foliage and root damage
- monitoring planting to ensure quality

Methods may include:

- feeding tree stock into the planting machine where required

Problems may include:

- equipment faults and malfunctions
- unsuitability of stock
- common diseases, pests and nutrition deficiencies
- communication misunderstandings
- environmental issues or damage
- production quality
- safety

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to carry out the work involved in selecting appropriate trees and preparing them for pruning, and performing and assessing the pruning process

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM2205A Prune trees

Application of the Unit

Application of the unit

The unit involves pruning trees in a variety of work settings, including:

- forest environment
- farms
- agriculture
- workshops
- domestic
- nurseries
- local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---------------------------|---|
| 1. Prepare for pruning | 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to pruning trees are identified and followed
1.2. Site <i>environmental protection measures</i> are identified and adhered to in line with relevant legislation and regulations
1.3. Pruning requirements are determined from <i>work order</i> and checked with <i>appropriate personnel</i>
1.4. <i>Equipment</i> appropriate to work requirements is selected and checked for operational effectiveness in line with manufacturer recommendations
1.5. <i>Hazards</i> and site conditions are inspected and assessed in line with regulations, site procedures and environmental requirements
1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Select and prune trees | 2.1. Trees are <i>selected</i> in line with work order to meet production target and quality requirements |

ELEMENT	PERFORMANCE CRITERIA
3. Assess pruning quality	<p>2.2. Trees are <i>pruned</i> in line with work order to meet production target and quality requirements</p> <p>2.3. Suitable personal protective clothing and equipment are selected, used and maintained in line with site procedures</p> <p>2.4. Ladder handling and pruning techniques are used in line with site standards and OHS requirements</p> <p>2.5. Problems and equipment faults are identified and reported in line with site procedures</p> <p>3.1. Trees are assessed to ensure appropriate selection, pruning quality and pruned stock level in line with work order and environmental requirements</p> <p>3.2. Incorrect pruning is rectified in line with site procedures</p> <p>3.3. Pruned material is <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.4. Pruning process is <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; identify and select crop trees; efficiently and safely apply pruning techniques; recognise common diseases, pests and nutritional deficiencies
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others, including landholders and internal and external bodies and groups
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards,

REQUIRED SKILLS AND KNOWLEDGE

codes of practice and established safe practices relevant to the full range of processes for pruning trees

- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for pruning trees
- Environmental risks and hazards
- Using material effectively and efficiently
- Form pruning techniques
- Hazards associated with pruning trees
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently identify appropriate trees and apply accurate pruning techniques to crop trees

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to pruning trees
- following organisational policies and procedures relevant to pruning trees

EVIDENCE GUIDE

- pruning trees in line with work order and organisational requirements
 - selecting, using, transporting and storing pruning equipment
 - assessing pruned trees against work order and rectifying incorrect pruning outcomes
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions

RANGE STATEMENT

- hygiene of the area
 - relevant commonwealth, state or territory, and local legislation and regulations
- Work order** may include:
- tree species
 - required safety clothing and equipment
 - required pruning equipment
 - tree selection
 - production target
 - required pruning quality
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Equipment** may include:
- pruners
 - jacksaw
 - pouch
 - steps
 - epicormic remover
 - pole saw
 - ladder
 - climbing gear
 - elevated work platform
 - cherry picker
- Hazards** may include:
- slope
 - water
 - rock
 - undergrowth
 - slash
 - depressions and holes
 - falling or fallen branches
 - ladder placement or instability
 - climbing ladders
 - loss of balance
 - damp conditions
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback

RANGE STATEMENT

- active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Selected** may include:
- dominance and vigour
 - leader defects
 - straightness
 - lean
 - size
 - angle
 - number of branches
 - overall tree health
 - stocking
 - green crowns
 - spacing and quality requirements
- Pruned** is the process of removing branches, epicormics and green shoots to ensure quality requirements
- Disposing of** may include:
- recycling pruned material where appropriate
 - sending pruned material to landfill where it cannot be recycled
 - redirecting pruned material for energy recovery
- Records and reports** may include:
- pruning outcomes and processes
 - production and quality
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Completed records are submitted for further assessment in line with organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to review and identify work requirements
- Communication skills sufficient to use appropriate communication and interpersonal techniques; locate, record and report information
- Literacy skills sufficient to read, interpret and use site plans and maps
- Numeracy skills sufficient to apply appropriate mathematical processes to mark sample area and boundaries; take and read measurements; use measuring and marking equipment
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for collecting data or samples
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for collecting data or samples
- Environmental risks and hazards
- Common trees and plants
- Correct safety equipment
- Local topography and hazards

REQUIRED SKILLS AND KNOWLEDGE

- Typical common diseases, pests and nutrition deficiencies
- Methods for moving through the forest environment safely
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of equipment and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently collect data or samples for assessment, including demonstrating appropriate marking and measuring procedures in line with site standards

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to collecting data or samples
- following organisational policies and procedures relevant to collecting data or samples
- communicating and working safely with others in the work area
- identifying and marking sample area and boundaries from maps and site plans, including identifying potential hazards
- collecting samples and taking measurements using suitable equipment

EVIDENCE GUIDE

Context of and specific resources for assessment

- accurately and clearly recording results of data or sampling collection in a format suitable for analysis and interpretation
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Samples may include:

- foliage
- wood
- soil
- seeds
- pollen
- weeds
- insects

Sample area may include:

- permanent areas
- for a single calculation
- boundaries and corners

Purpose may include:

- calculating the volume of timber
- calculating residue
- inventory control

RANGE STATEMENT

- stock count
 - plotting on site plans or maps
 - assisting with trials
 - damage assessment (e.g. insect, wind)
 - conducting pest and disease surveys
 - documenting site factors
- Requirements** may include:
- identifying:
 - locations
 - boundaries
 - starting point for measurement or sample
- Work order** may include:
- supervisor instructions
 - details of data or sample collection or measurement requirements
 - details of equipment to be used
 - details of existing markings or previous measurements
 - maps or site plans
 - purpose of assessment or measurement
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Relationship of sample area to the whole** may be identified as a:
- percentage
 - fraction
 - ratio
- Equipment** may include:
- personal protective equipment, such as boots and hard hat
 - measuring equipment, such as tools or instruments, including measuring tape, calliper, measuring pole, labels for samples, chainsaw and rifle
 - marking equipment, such as tools or instruments, including pruning shears, paint, purpose-specific balloons, flags, pegs and mallet
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative

RANGE STATEMENT

language

- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Marked

relates to boundaries and corners and may include:

- pegging
- spraying
- pruning
- placing flags
- placing balloons

Measurements may include:

- numbers
- measuring girth
- measuring lengths
- measuring diameter
- measuring circumference
- counting
- estimating cover/metre

Problems may include:

- hazards
- data or sample quality
- faulty equipment
- interpreting maps and site plans
- measuring and marking processes
- common diseases, pests and nutrition deficiencies
- local topography

Records and reports may include:

- notes
- completed proformas
- results of data or sample collection
- handwritten material

and may be:

- manual
- using a computer-based system
- other appropriate organisational communication system

Checked may include:

- re-checking for visual clues in:
 - measurements
 - actual sample area

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for brushcutting	1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i> , <i>legislative</i> and <i>organisational requirements</i> relevant to undertaking brushcutting operations are identified and followed 1.2. Work order is reviewed and checked as required with <i>appropriate personnel</i> 1.3. <i>Tools and equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations 1.4. Blunt or damaged brushcutter blades are identified, <i>rectified</i> and reported in line with workplace procedures 1.5. Operational effectiveness of brushcutter blades is monitored to <i>maintain</i> cutting safety and productivity 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements
2. Assess vegetation and plan brushcutting	2.1. Site environmental concerns are identified and monitored in line with relevant commonwealth, state or territory and local legislation and regulations 2.2. <i>Environmental conditions</i> are identified and assessed in line with work order

ELEMENT	PERFORMANCE CRITERIA
3. Operate brushcutter	<p>2.3. <i>Limitations</i> are identified and assistance is sought as required in line with workplace procedures</p> <p>2.4. Potential and existing risks and hazards in the work area are identified and controlled</p> <p>2.5. Appropriate cutting methods for identified types of vegetation and situations are determined and planned to optimise time and safety</p> <p>3.1. Work is undertaken using established safe operating practices in line with workplace procedures, manufacturer recommendations and environmental requirements</p> <p>3.2. Brushcutter safety harness and handles are adjusted to provide the operator with the correct ergonomic position</p> <p>3.3. <i>Brushcutting</i> operations are undertaken appropriate to site conditions and at a safe distance from other personnel in the work area</p> <p>3.4. Brushcutter is monitored for operational effectiveness and is refuelled as required in line with manufacturer recommendations</p> <p>3.5. Cut vegetation is <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.6. Operational faults, malfunctions or problems are identified and reported in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to select, operate and maintain relevant tools, machinery and equipment; safely operate and maintain a brushcutter; assess, plan and carry out brushcutting operations appropriate to the vegetation and site conditions; recognise common diseases, pests and nutritional deficiencies
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others; use hand signals with other operators to maintain effective and safe felling

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to read and interpret written material; calculate slopes and weights in the metric system
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for undertaking brushcutting operations
- Environmental protection requirements, including the safe disposal of waste material, and the minimisation of environmental impact, including carbon emissions and noise
- Organisational and site standards, requirements, policies and procedures for undertaking brushcutting operations
- Environmental risks and hazards
- Established communication channels and protocols
- Methods of navigating and geographically orienting in the field
- Hazards of operating brushcutter, including kickback and flying objects
- Operational principles and limitations of brushcutters
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently assess, plan and conduct brushcutting operations in line with environmental and organisational requirements

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to undertaking brushcutting operations
- following organisational policies and procedures relevant to undertaking brushcutting operations
- assessing, planning and safely conducting brushcutting operations within the range of variables, vegetation and conditions
- selecting, using and maintaining appropriate tools and equipment
- safely operating and maintaining a brushcutter and its components

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required

EVIDENCE GUIDE

knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Appropriate personnel** may
- supervisors

RANGE STATEMENT

include:

- clients
- colleagues
- line management

Tools and equipment may include:

- brushcutter and components
- fire equipment
- personal protective equipment and clothing
- first aid equipment
- maintenance requirements
- fuel

Rectify may include:

- repairing or sending for repair, blunt or damaged brushcutter blades
- recycling blunt or damaged brushcutter blades that cannot be repaired
- sending blunt or damaged brushcutter blades that cannot be repaired to landfill

Maintenance includes:

- safely sharpening blades
- changing components as required

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Environmental conditions may include:

- ground growth
- ground slope
- ground hazards
- noise
- weather

Limitations may include:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation, regulations and procedures
- OHS and environmental requirements

RANGE STATEMENT

- Brushcutting:**
- will be undertaken in all conditions for which it is safe, including slopes up to the maximum allowed by applicable regulations
- Disposing of** may include:
- recycling cut vegetation
 - redirecting cut vegetation for energy recovery

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to cut, sort and set cuttings. The unit includes preparing cuttings and the growing environment

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM2209A Cut, sort and set cuttings

Application of the Unit

Application of the unit

The unit involves cutting, sorting and setting cuttings in a variety of work settings, including:

- farms
- agriculture
- workshop
- domestic
- nurseries
- local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------|--|
| 1. Prepare cuttings | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to cutting, sorting and setting cuttings are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked as required with <i>appropriate personnel</i></p> <p>1.4. Parent plant is prepared and suitable method applied to take cutting appropriate to the species</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Sort and select cuttings | <p>2.1. Work area is cleared and cleaned to eliminate contamination in line with hygiene practices, and organisational and environmental requirements</p> <p>2.2. Cuttings are visually assessed and selected for propagation in line with work order requirements</p> <p>2.3. Correct <i>conditioning and storage</i> procedures</p> |

ELEMENT**PERFORMANCE CRITERIA**

- appropriate to species requirements are identified and followed to maintain maximum viability of cuttings
- 2.4. Discarded cutting material is **disposed of** in line with workplace waste disposal guidelines, and organisational and environmental requirements
3. Prepare growing site
- 3.1. **Growing environment** and **weed retardants** are prepared and applied in line with work order, and organisational and environmental requirements
- 3.2. **Equipment** appropriate to work requirements is selected and checked for operational effectiveness in line with manufacturer recommendations
- 3.3. **Remedial action** is taken as required to control pests and diseases in line with specified planting program and environmental requirements
- 3.4. Outcomes from cutting, sorting and setting cuttings are **recorded and reported** to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to review and identify work requirements; use and maintain relevant tools, machinery and equipment; prepare and maintain a clean and hygienic work environment; apply correct preparation methods; recognise common diseases, pests and nutritional deficiencies
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others, including landholders, and internal and external bodies and groups
- Literacy skills sufficient to read and interpret information from tables and charts; locate, record and report information
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task; calculate space required for successful propagation
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards and

REQUIRED SKILLS AND KNOWLEDGE

codes of practice relevant to the full range of processes for cutting, sorting and setting cuttings

- Environmental protection requirements, including the safe disposal of waste material and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for cutting, sorting and setting cuttings
- Environmental risks and hazards
- Types and species of cuttings
- Media mixing, conditioning and storage procedures
- Growing environments and weed retardants that are suitable to plant and cutting species
- Pre-planting treatments, water and nutrients that are suitable to plant and cutting species
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently prepare cuttings and growth site, and sort and set correct cuttings by following specific guidelines, criteria and procedures

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- follow applicable commonwealth, state or territory legislative and regulatory requirements and codes of

EVIDENCE GUIDE

practice relevant to cutting, sorting and setting cuttings

- follow organisational policies and procedures relevant to cutting, sorting and setting cuttings
- using appropriate tools and equipment and maintaining a hygienic work environment
- efficiently and hygienically selecting, sorting and storing cuttings

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment

EVIDENCE GUIDE

of other units of competency

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures

Environmental requirements

RANGE STATEMENT

may include:

- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Environmental protection

measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles

RANGE STATEMENT

- contingencies for modifying operations during wet or other adverse weather conditions
 - hygiene of the area
 - relevant commonwealth, state or territory, and local legislation and regulations
- Work order** may include:
- plant species
 - required safety clothing and equipment
 - quality standard
 - stock
 - required height
 - species characteristics and requirements
 - nutrients
 - watering quantities and method
 - growing environment
 - weed retardants
 - cutting selection methodology
 - written instructions
 - diagrams
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Conditioning and storage** are in line with required species to allow for maximum viability
- Disposing of** may include:
- recycling discarded cutting material
 - re-using discarded cutting material

RANGE STATEMENT

Growing environment may include:

- heat
- light
- humidity
- wind
- sun
- moisture
- topography
- rainfall

Weed retardants may include:

- weed-mat
- slatted benches
- chemical solutions

Equipment may include:

- motorised or electrically-powered automated systems
- manually-operated equipment and tools

Remedial action may include:

- removal of infected material
- treatment of growing site with chemicals

Records and reports may include:

- tally sheets
- quality sheets and forms
- production sheets and downtime sheets

relate to:

- production details
- maintenance details
- breakdowns or equipment faults
- computer problems
- interruptions to production

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------|---|
| 1. Prepare to control pests | 1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to implementing animal <i>pest</i> control procedures are identified and followed
1.2. Work order is reviewed and checked as required with <i>appropriate personnel</i>
1.3. Pests to be controlled are <i>identified</i> and <i>control method selected</i> and checked
1.4. Required permits or licences are identified, obtained and retained in line with organisational and regulatory requirements
1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Control pests | 2.1. Work is undertaken using established safe operating practices in line with site procedures and environmental requirements
2.2. Neighbouring landholders are notified of pest control operation and appropriate signage is erected in line with site procedures and environmental |

ELEMENT	PERFORMANCE CRITERIA
3. Complete pest control operation	<p>requirements</p> <p>2.3. Control methods are applied in line with local conditions, safety guidelines, environmental and legal requirements, and workplace procedures</p> <p>2.4. <i>Limitations</i> are identified and assistance is sought as required in line with workplace procedures</p> <p>3.1. Pests are disposed of in line with work order, and organisational, OHS and environmental management procedures and requirements</p> <p>3.2. Temporary signage is removed and stored in line with site procedures and environmental requirements</p> <p>3.3. Relevant records are completed and maintained in line with site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely handle and store chemicals; place and set traps; carry out procedures to control pests with minimal animal distress
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to calculate and measure quantities and rates for bait distribution
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for implementing animal pest control procedures
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and minimising environmental impact
- Organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

implementing animal pest control procedures

- Environmental risks and hazards
- Established communication channels and protocols
- Hazards of handling traps and chemical baits
- Chemical bait uses and dose rates
- Animal-handling techniques to minimise animal distress
- Appropriate control methods for specific target species
- Legally approved animal pest control methods
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can correctly interpret and select the pest control method appropriate to the target species, and safely and efficiently carry out animal pest control operations within environmental and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to implementing animal pest control procedures
- following organisational policies and procedures relevant to implementing animal pest control procedures

EVIDENCE GUIDE

- communicating and working safely with others in the work area, including providing local notification of pest control operations
 - identifying and locating target species and selecting the appropriate pest control method
 - carrying out pest control operations with minimal animal distress
 - calculating dosage and rates of chemical baits for target species and using safe handling procedures
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation

Environmental requirements

RANGE STATEMENT

may include:

- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Pests may include:

- rats
- rabbits
- foxes
- kangaroos
- wallabies
- dogs

Appropriate personnel may include:

- supervisors
- clients

RANGE STATEMENT

- colleagues
 - line management
- Identification** may include:
- visual observation of tracks and/or faeces
 - work order
- Control method** may include:
- all legally approved forms of trapping pests
 - all legally approved baits and methods of distribution
 - legally approved shooting
- Selection** may include:
- forest type
 - species
 - organisational procedures
 - work order
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Limitations** may include:
- job role and responsibilities
 - own competency level
 - industry requirements
 - own understanding of risk identification processes
 - own interpretation of legislation, regulations and procedures
 - OHS and environmental requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate position in the field	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>detecting fires</i> are identified and followed</p> <p>1.2. <i>Smoke</i> and current position in the field are identified using landmarks and key geographical features</p> <p>1.3. Current position in the field is located on a map or plan in line with site procedures</p> <p>1.4. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Record smoke and other sightings	<p>2.1. Smoke and other sightings are noted and reported promptly in line with organisational procedures</p> <p>2.2. <i>Sighting details</i> are recorded in line with required formats, conventions and site procedures</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---|--|
| 3. Communicate with fire command or control | <p>2.3. Accurate chronological log is maintained in line with required formats, conventions and site procedures</p> <p>2.4. Situations requiring <i>specialist advice</i> are identified and assistance is sought as required in line with site procedures</p> <p>3.1. <i>Communications equipment</i> is used to relay information accurately and clearly in line with <i>safe work practices, training</i> and site procedures</p> <p>3.2. Location of own position and sightings are accurately and clearly relayed to fire command or control using conventional descriptions</p> <p>3.3. <i>Relevant information</i> and conditions are accurately recorded and relayed using required formats and conventions in line with instructions</p> <p>3.4. Fire detecting processes and outcomes are <i>recorded and reported</i> to the <i>appropriate personnel</i></p> |
|---|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use landmarks and geographical features to locate position; effectively and safely climb fire towers; interpret map details and features; read a compass and estimate distances
- Communication skills sufficient to use appropriate communication methods, equipment and interpersonal techniques with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to apply mathematical processes to measure and record meteorological data
- Problem solving skills sufficient to review and identify work requirements; identify problems and hazards; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for detecting fires

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for detecting fires
- Organisational and fire command or control conventions for recording and reporting fire sightings in an emergency situation
- Environmental risks and hazards
- Precautions to be taken in a range of extreme weather conditions
- Smoke types, colour and meaning
- Terrain and features visible from a tower or aircraft
- Map types and features, including common scales used on maps and plans, and procedures for their use and manipulation
- Procedures for measuring and recording meteorological data
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and accurately detect fires and accurately report and record details of sightings

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and

EVIDENCE GUIDE

- codes of practice relevant to detecting fires
 - following organisational policies and procedures relevant to detecting fires
 - locating and identifying on a map or plan the current position of a fire from the field or air
 - noting and reporting sighting details, including estimated distances, in the required formats and conventions
 - accurately and clearly recording information, including a chronological log of sightings and meteorological measurements and readings
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Detecting fires** may be from:
- all types and locations commonly found in forested and grassland country
 - towers
 - aircraft

RANGE STATEMENT

Smoke may include:

assessing for:

- colour
- type
- meaning

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Sighting details may include:

- locations
- bearings
- estimated distances

Specialist advice may include:

- supervisor
- fire command or control
- colleagues
- local fire brigade

Communications equipment may include:

- public radio
- telephone networks or those used by the organisation
- local fire brigades
- emergency management organisations

Safe work practices may include:

- evacuation procedures when threatened by fire
- appropriate clothing
- hydration and nutrition requirements

Training may include:

- fire command or control
- supervisor
- colleagues

Relevant information may include:

- meteorological readings
- satellite imagery

Records and reports may include:

chronological log of sightings and noteworthy events, such as:

- significant changes in smoke column colour or size
- locations and bearings of sightings

RANGE STATEMENT

- estimated distances to sightings
- meteorological readings and conditions

and may be:

Appropriate personnel may include:

- manual
- a computer-based system
- other appropriate organisational communication system
- supervisors
- fire command or control
- colleagues
- managers

FPIFGM2212B Graft cuttings

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to prepare and graft cuttings on to a mature plant. The unit includes application of pre-planting treatments and nutritional care

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM2212A Graft cuttings

Application of the Unit

Application of the unit The unit involves grafting cuttings in a variety of work settings, including:

- forest environments
- farms
- agriculture
- workshops
- domestic
- nurseries
- local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare cuttings

- 1.1. Applicable ***occupational health and safety*** (OHS), ***environmental, legislative*** and ***organisational requirements*** relevant to grafting cuttings are identified and followed
- 1.2. Site ***environmental protection measures*** are identified and adhered to in line with relevant legislation and regulations
- 1.3. Work order is reviewed and checked as required with ***appropriate personnel***
- 1.4. ***Equipment*** appropriate to work requirements is selected and checked for operational effectiveness in line with manufacturer recommendations
- 1.5. Parent plant is prepared and suitable method is applied to take the cutting appropriate to the species
- 1.6. Correct conditioning and storage procedures appropriate to species requirements are identified and provided to maintain maximum viability of cuttings
- 1.7. ***Communication*** with others is established and maintained in line with OHS requirements

ELEMENT	PERFORMANCE CRITERIA
2. Sort and select cuttings	2.1.Organisational hygiene practices and procedures are identified and followed to maintain a contamination-free work area 2.2.Work is undertaken using established safe operating practices in line with workplace procedures and environmental requirements 2.3.Cuttings are visually assessed and selected for propagation in line with work order requirements 2.4.Discarded cutting material is <i>disposed of</i> in line with workplace waste disposal guidelines and organisational requirements
3. Graft cuttings on to mature plant	3.1.Mature plant is prepared for grafting and pre-planting treatment is applied using methods suitable to the species 3.2.Handling methods are used that prevent damage to cuttings 3.3.Grafting type is checked as appropriate to species type and identifying labels are applied in line with workplace procedures 3.4. <i>Nutrients</i> and <i>growing environment</i> for grafted cuttings are provided and maintained appropriate to the species requirements 3.5. <i>Remedial action</i> is taken as required to control pests and diseases in line with specified planting program 3.6.Grafting process is <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; take cuttings using suitable methods; prepare mature plants for grafting; prepare and apply accurate and clear labels; maintain a clean and hygienic work environment to prevent contamination
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others, including landholders and

REQUIRED SKILLS AND KNOWLEDGE

internal and external bodies and groups

- Literacy skills sufficient to read and interpret information from tables and charts; locate, record and report information
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grafting cuttings
- Environmental protection requirements, including the safe disposal of waste material and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for grafting cuttings
- Environmental risks and hazards
- Types and species of cuttings
- Grafting methods
- Pre-planting treatments
- Water and nutrient requirements for cuttings
- Techniques of taking cuttings
- Conditioning and storage requirements for cuttings
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must

EVIDENCE GUIDE

be able to provide evidence that they can safely and efficiently take cuttings and prepare mature plants for grafting, graft cuttings, and maintain nutrient and growing environment requirements suitable to the plant species

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to grafting cuttings
- following organisational policies and procedures relevant to grafting cuttings
- using appropriate tools and equipment and maintaining a hygienic work environment
- using appropriate methods and techniques to graft cuttings onto a mature plant and maintaining a growing environment suitable to the plant species
- applying remedial treatments to plants as required

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks,

EVIDENCE GUIDE

with questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements

RANGE STATEMENT

- Environmental protection measures** may include:
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
 - contingencies for modifying operations during wet or other adverse weather conditions
 - hygiene of the area
 - relevant commonwealth, state or territory, and local legislation and regulations
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Equipment** may include:
- hand-held tools, such as grafting or budding knife
 - secateurs
 - grafting tape
- Communication may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Disposing of** may include:
- recycling discarded cutting material
 - sending discarded cutting material that cannot be recycled to landfill
- Nutrients** may include:
- chemicals
 - fertilisers
 - organic material

RANGE STATEMENT

Growing environment may include:

- heat
- light
- humidity
- wind
- sun
- moisture
- topography
- rainfall

Remedial action may include:

- removal of infected material
- treatment with chemicals

Records and reports may include:

- techniques used
- resources used
- timeframes
- results
- recommendations

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to process seed	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to processing seed are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Site <i>environmental protection measures</i> are followed in line with relevant legislation and regulations</p> <p>1.4. <i>Equipment</i> appropriate to work requirements is selected and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Seed processing operations are checked for safe working conditions and planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Treat and store seed	<p>2.1. Seeds are <i>separated</i> from other materials, weighed and stored in line with species requirements and site procedures</p> <p>2.2. <i>Seed treatment</i> is applied to prevent deterioration in line with seed species and site procedures</p> <p>2.3. <i>Seed information</i> is accurately recorded in line with</p>

ELEMENT	PERFORMANCE CRITERIA
3. Prepare seed sample for viability testing	<p>site procedures</p> <p>2.4. Seed is <i>packaged</i> for storage in line with industry, legislative and organisational requirements</p> <p>3.1. Seed sample for testing is identified and checked in line with work order</p> <p>3.2. Seed sample is removed from lot and prepared for testing in line with site procedures, and industry, organisational and environmental requirements</p> <p>3.3. Representative seed sample is clearly labelled and packaged for despatch to testing body in line with site procedures</p> <p>3.4. Seed sample information is accurately recorded in line with site procedures</p>
4. Despatch seed	<p>4.1. Seed <i>request specifications</i> are interpreted and checked with appropriate personnel</p> <p>4.2. Seed is retrieved from storage, and quantity and species of seed are calculated to meet request specifications</p> <p>4.3. Each seed species is weighed, documented and placed in an <i>appropriate container</i> in line with request requirements and site procedures</p> <p>4.4. Multiple seed lots are thoroughly mixed as required in line with request specifications</p> <p>4.5. Seed and seed mixtures are accurately and clearly labelled in line with industry requirements and site procedures</p> <p>4.6. Despatch of seed is organised and undertaken in line with request specifications and site procedures</p> <p>4.7. Seed processing results are recorded and reported in line with industry requirements, site procedures and environmental requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant equipment; efficiently and

REQUIRED SKILLS AND KNOWLEDGE

safely carry out seed processing procedures; identify a range of seed species and apply accurate identifying information

- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to apply appropriate mathematical techniques to calculate seed weights and quantities
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for processing seed
- Environmental protection requirements, including the safe disposal of waste material and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for processing seed
- Environmental risks and hazards
- Using seed material effectively and efficiently
- Role of wood or waste products in generating renewable energy through biomass
- Established communication channels and protocols
- Types of seed processing equipment, and procedures for its safe use and maintenance
- Hazards associated with the storage, treatment and despatch of seed
- Range of seed species and treating, packaging and storage processes
- Range of seed treatments and storage requirements for different seed species
- Types of diseases and pests likely to infect a range of species
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can apply safe and efficient techniques to treat, store and despatch a range of seed species in line with species requirements and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to processing seed
- following organisational policies and procedures relevant to processing seed
- applying effective methods to treat, package and store a range of seed species in line with work order instructions and within prescribed organisational tolerances
- operating and maintaining seed processing equipment
- despatching seed in line with seed request specifications
- recording seed processing information and results, and maintaining workplace information

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment

EVIDENCE GUIDE

Guidelines of the FPI11 Training Package

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement

RANGE STATEMENT

processes and standards

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- information and instructions for treating, storing and despatching seed

Work order is to include:

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles

Equipment may include:

- electric and manual scales
- various packaging materials and containers
- seed cleaning machine
- seed lot mixing device
- lifting device, such as overhead gantry and fork lift

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening

RANGE STATEMENT

- questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Separation** methods may include:
- hand selection
 - wind separation and winnowing
 - sieving
 - vibrating
 - flotation
 - drying
 - crumbling of husks
- Seed treatment** may include:
- fungicides
 - cleaning
- Seed information** includes: details of:
- species
 - time and date of harvest
 - time and date of receipt into store
 - place or origin of seed
 - container identifier
- Packaging** may include:
- vacuum sealing
 - use of inert atmospheres, such as nitrogen and carbon dioxide
 - control of packing environment, including temperature, light and moisture
- Request specifications** may include:
- seed species
 - percentage of seed mix
 - pure graded seed
 - rate of sowing
 - area to be sown
 - despatch container
 - method of despatch
 - sowing equipment to be used
- Appropriate container** criteria may include:
- length of time seed will be stored
 - method to be used to transport seed
 - equipment to be used for sowing seed
 - quantity of seed
 - size of individual seeds

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for site maintenance

- 1.1. Applicable ***occupational health and safety (OHS), environmental, legislative and organisational requirements*** relevant to ***maintaining visitor sites*** are identified and followed
- 1.2. ***Maintenance requirements*** are identified from work order and supervisor instructions in line with organisational requirements
- 1.3. ***Supplies*** are identified and obtained in line with work order and organisational procedures
- 1.4. ***Equipment*** is selected, transported and stored in line with organisational requirements
- 1.5. Potential and existing site ***hazards*** are identified and assessed in line with OHS and environmental requirements, and organisational procedures
- 1.6. ***Communication*** with others is established and maintained in line with OHS requirements

2. Maintain site

- 2.1. Visitor site is inspected to determine maintenance and cleaning requirements in line with organisational procedures and environmental requirements
- 2.2. Visitor site is maintained in line with organisational and environmental requirements
- 2.3. ***Waste materials*** are handled and removed according to environmental, OHS and organisational requirements
- 2.4. ***Problems*** are identified, noted and reported in line with organisational procedures
- 2.5. Visitor site maintenance is ***recorded and reported*** to

ELEMENT **PERFORMANCE CRITERIA***appropriate personnel***Required Skills and Knowledge****REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely handle contaminated waste; identify hazardous or unsafe facilities; identify and order supplies of consumables for cleaning
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for maintaining visitor sites
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of environmental impact, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for maintaining visitor sites
- Environmental risks and hazards
- Types of cleaning and maintenance equipment, and procedures for their safe use and maintenance
- Types of maintenance supplies and consumables
- Procedures for handling and removing waste material
- Operation of septic tanks and other plumbing associated with visitor use facilities
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently maintain visitor sites according to work and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to maintaining visitor sites
- following organisational policies and procedures relevant to maintaining visitor sites
- maintaining visitor sites ensuring efficient and safe selection and use of equipment and supplies with no damage to equipment, property, environment, colleagues or the public
- identifying site hazards and problems and demonstrating an appropriate response, including reporting to supervisor
- handling and removing waste or contaminated material

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context

EVIDENCE GUIDE

Method of assessment

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Maintaining visitor sites may include:

- lawn mowing and edging
- raking leaves
- cleaning toilets, shower blocks and other structures
- supplying firewood
- repainting and other minor repairs
- removing rubbish

Visitor site may include:

- camp grounds
- toilet and shower blocks
- natural features

Maintenance requirements may include:

- selecting appropriate cleaning and maintenance equipment
- checking and ordering supplies of consumable items
- transporting and storing equipment

Supplies may include:

- toilet paper
- cleaning chemicals
- lawn mower fuel
- paint

Equipment may include:

- manual cleaning tools
- power tools
- petrol-driven lawn mowers
- whipper snipper and edger

Hazards may include:

- contaminated waste material
- visitors moving around adjacent to

RANGE STATEMENT

- maintenance activities
 - unsafe structures
 - deteriorated structures
 - natural features or facilities
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Waste material** may include:
- blood
 - bandages
 - sanitary bins
 - effluent
 - garbage
 - sharps
- Problems** may include:
- deteriorated or vandalised structures
 - natural features and facilities that do not meet enterprise acceptable standards
- Records and reports** may include:
- maintenance outcomes
 - hazards and incidents
 - equipment malfunctions and damage
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify tree measuring requirements	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to measuring <i>trees</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked as required with <i>appropriate personnel</i></p> <p>1.3. <i>Tools</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.4. <i>Measurements</i> are obtained and checked</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Measure trees	<p>2.1. Work is undertaken using established safe operating practices in line with site procedures and environmental requirements</p> <p>2.2. Suitable personal protective equipment and clothing are selected, used and maintained</p> <p>2.3. Site environmental concerns are identified and followed in line with relevant commonwealth, state or territory, and local legislation and regulations</p> <p>2.4. Forest area to be worked within is identified from work order and located on the ground</p> <p>2.5. <i>Tree measurements</i> are accurately taken and recorded in the appropriate style and format in line with organisational and environmental requirements</p> <p>2.6. <i>Tree abnormalities</i> are identified, assessed and recorded in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to select, use and maintain relevant tools, machinery and equipment; identify tree form and abnormalities; locate forest or plot area in the field from a map or plan
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others
- Literacy skills sufficient to locate, record and report information
- Numeracy skills sufficient to use appropriate mathematical techniques to calculate stand height and measure dimension and volume
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for measuring trees
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of environmental impact, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for measuring trees
- Environmental risks and hazards
- Tree measuring techniques, including relevant mathematical calculations and basic trigonometry
- Species and characteristics of vegetation to be measured
- Types of measuring tools, and procedures for their safe use and maintenance
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can interpret written and verbal instructions to locate specified forest area to accurately carry out tree measurements within environmental and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to measuring trees
- following organisational policies and procedures relevant to measuring trees
- using and maintaining appropriate measuring tools
- locating forest or plot area from map or plan and carrying out a range of tree measuring procedures without causing damage to tree, environment, equipment or personnel

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Trees** may include:
- plantation trees of a variety of species and ages
 - native forest trees of a variety of species and ages
- Work order** may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - line management
- Tools** may include:
- diameter tapes
 - length tapes
 - optical wedges
 - clinometers
- Measurements** include:
- tolerances, allowances, calibration requirements and special procedures
 - tree diameter and girth (over or under bark at breast height or ground level)
 - tree height
 - log length
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Tree measurements** include:
- calculating stand height in line with sampling technique

RANGE STATEMENT

- Tree abnormalities** may include:
- measuring log volume
 - classifying stem form or crown class
 - butt swell
 - double leaders
 - heavy branching
 - ramicorns

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Plan seed collection

- 1.1. Applicable ***occupational health and safety*** (OHS), ***environmental, legislative*** and ***organisational requirements*** relevant to managing ***seed collection*** are identified and followed
- 1.2. Site ***environmental protection measures*** are identified and adhered to in line with relevant legislation and regulations
- 1.3. Seeding and/or planting program is analysed and required ***seed characteristics*** and ***implementation issues*** are identified
- 1.4. Seed collection ***opportunities*** are identified and a suitable area for seed collection is determined and documented
- 1.5. ***Method of seed collection*** is selected and quantity, cost and ***impacts*** on provenances and species to be collected are determined and documented
- 1.6. Required ***approvals*** are identified, sought and obtained from relevant authorities
- 1.7. Measurable performance indicators, specifications

ELEMENT**PERFORMANCE CRITERIA**

- and targets are determined and documented
- 1.8. Seed collection *plan* and its performance indicators are clearly documented and communicated to *appropriate personnel*
2. Implement and monitor seed collection
- 2.1. *Resources* required for seed collection are coordinated and scheduled and required *documentation* is completed clearly and accurately
- 2.2. Relevant *individuals, bodies and groups* are consulted as required using appropriate interpersonal techniques
- 2.3. Seed collection plan is implemented and monitored in line with quality standards for seed collection
- 2.4. Systematic *checks* are carried out to ensure compliance requirements relevant to seed collection activities are adhered to
- 2.5. Adjustments to seed collection activities are made as required and communicated to appropriate personnel
- 2.6. *Communication* with others is established and maintained in line with OHS requirements
- 2.7. *Limitations* are identified and assistance is sought as required in line with workplace procedures
3. Review seed collection
- 3.1. Data and documentation from seed collection are assessed and evaluated to confirm techniques, methodologies and budgets are in line with plan
- 3.2. Issues and impediments to seed collection activities and program costs are identified and documented
- 3.3. Cost benefit analysis is prepared and recommendations are made, based on the analysis of data and identified issues
- 3.4. Results of seed collection are clearly communicated and disseminated to appropriate personnel
- 3.5. Seed collection process is *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; collate and assess information against specified criteria; supervise operational staff and contractors to achieve specific outcomes; recognise common diseases, pests and nutritional deficiencies; efficiently and safely manage the extraction of collected material
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others, including landholders, and internal and external bodies and groups
- Literacy skills sufficient to record and report workplace information; maintain documentation; write reports and submissions in appropriate style and format
- Numeracy skills sufficient to interpret numerical data; identify quantities and costings
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing seed collection
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for managing seed collection
- Environmental risks and hazards
- Flowering biology of the target species
- Biological signs that indicate that the seed crop is ready to be collected
- Procedures to extract and handle seed from collected material, including handling procedures of the seed crop after picking
- Treatment and documentation requirements of extracted seed
- Seed collection methods
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and supervise the implementation of seed collection activities within applicable environmental, legislative and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing seed collection
- following organisational policies and procedures relevant to managing seed collection
- developing measurable performance indicators, specifications and targets and a seed collection plan within specified budgetary guidelines
- coordinating and scheduling resources, and managing the work of others to achieve specific outcomes
- monitoring seed collection operations, ensuring that relevant quality standards are followed
- documenting results from seed collection activities and preparing a report for dissemination to relevant personnel

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role

RANGE STATEMENT

and responsibility

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Seed may include:

- native species
- non-native species

Seed collection may include:

- seed orchards
- forests
- softwoods and hardwoods
- rainforest
- understorey plants

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions
- hygiene of the area
- relevant commonwealth, state or territory, and local legislation and regulations

Seed characteristics may include:

- provenance
- potential growth characteristics
- forest types
- optimum time to collect
- physiology and biology
- dormancy
- species

RANGE STATEMENT

Implementation issues may include:

- scheduling
- people and skills involved
- materials
- hazards
- seed quantities
- selection

Opportunities may include:

- field observation
- organisational and other relevant information

Method of seed collection may include:

- climbing
- removal of branches with rifle
- elevated platform vehicles

consideration of the:

- geography of the local area
- size and type of trees
- available resources
- organisational guidelines

and may also include:

- collecting after falling or felling
- ladders
- shaking
- high-powered rifles
- cherry pickers

Impacts may include:

- requirements for genetic diversity
- frost
- heat
- salt hardiness
- potential growth characteristics

Approvals may include:

- heritage requirements
- environmental sustainability requirements
- other issues applying to seed collection operation

Plan may include:

- organisational terminology
- guidelines
- budgets
- policies and timelines
- internal memos
- resources, including people, material and equipment

Appropriate personnel may

- clients

RANGE STATEMENT

include:

- colleagues
- line management

those collecting the seed, such as:

- organisational employees
- contractors
- community groups

Resources may include:

- people
- material
- equipment

Documentation may include:

- provenance
- seed species and location
- identity of collector
- weight of seed collected

Individuals, bodies and groups may include:

- landholders
- commonwealth, state or territory, and local government authorities
- private individuals

Checks may include:

ensuring:

- relevant organisational OHS procedures, practices, policies and precautions are observed and followed
- site environmental requirements follow relevant commonwealth, state or territory, and local legislation and regulations
- performance indicators, targets and specifications are met
- quantity, cost and provenances collected are in line with plan specifications
- required organisational documentation is completed clearly and accurately

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

RANGE STATEMENT

Limitations may include:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation, regulations and procedures
- OHS and environmental requirements
- difficulties or issues faced
- recommendations for future work, results and costs
- collation of information or documentation
- interpreting information in a way relevant to workplace requirements
- organising and maintaining records accurately
- using a full range of information media, including written, printed, verbal, electronic, visual display units and personal computers

Records and reports may include:

and may be:

- manual
- computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive seed-bearing material into store	<p>1.1.Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to extracting <i>seed</i> are identified and followed</p> <p>1.2.<i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3.Seed bearing material is received, visually assessed, and species are identified and checked with container label</p> <p>1.4.Received containers are <i>weighed</i> and <i>identified</i> in line with site procedures</p> <p>1.5.Material is stored in dry and well-ventilated <i>conditions</i> in line with site procedures</p> <p>1.6.<i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Extract seed	<p>2.1.Seed is extracted in line with work order, and environmental and OHS requirements</p> <p>2.2.Seed extraction processes are planned and checked for safe working conditions</p> <p>2.3.<i>Extraction units and equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer recommendations</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Seed extraction <i>systems</i> are operated and monitored in line with manufacturer recommendations
	2.5. Seed-bearing material is placed in or on extraction unit and agitation is undertaken as required to maximise yield
	2.6. Seed capsules are inspected and unextracted seed is reprocessed as required to ensure maximum yield
3. Clean and store seed	3.1. Seed is separated from other material, weighed and stored in line with species requirements and site procedures
	3.2. <i>Seed information</i> is accurately recorded in line with site procedures
	3.3. Seed is <i>packaged</i> for storage in line with industry, legislative, organisational and environmental requirements
4. Clean and maintain extraction unit	4.1. Residue and other waste material is disposed of in line with site environmental management guidelines
	4.2. Extraction units and equipment are cleaned, maintained and calibrated in line with manufacturer recommendations, site procedures and environmental requirements
	4.3. Abnormal operation or faults with extraction units and equipment are reported for corrective action in line with site procedures
	4.4. Work areas are cleaned and maintained in line with site procedures, and organisational and environmental requirements
	4.5. Seed extraction information and results are <i>recorded and reported</i> in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain seed extraction units; efficiently and safely carry out seed extraction techniques; identify a range of seed species from capsules and apply accurate identifying information

REQUIRED SKILLS AND KNOWLEDGE

- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to apply appropriate mathematical techniques to calculate seed weights
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for extracting seed
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of environmental impact, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for extracting seed
- Environmental risks and hazards
- Hazards associated with seed extraction, processing and storage
- Range of seed species, including native and non-native
- Seed extraction processes for native and non-native species
- Storage procedures and requirements for different seed species
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must

EVIDENCE GUIDE

be able to provide evidence that they can apply safe and efficient techniques to identify, extract, clean and store seed in line with species requirements and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to extracting seed
- following organisational policies and procedures relevant to extracting seed
- applying seed extraction and storage techniques in line with work order instructions and within prescribed organisational tolerances
- operating, cleaning and maintaining seed extraction units and equipment
- recording seed species information and extraction results, and maintaining workplace information

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks,

EVIDENCE GUIDE

with questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements

RANGE STATEMENT

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Seed** may include:
- native species
 - non-native species
- Work order** is to include:
- information and instructions on material to be extracted
 - site seed extraction requirements
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Weight** may include:
- properly calibrating and maintaining scales
 - using scales for weighing under licence from the weights and measures authority
- Identifiers** may include:
- alphanumeric
 - bar codes
 - colour codes
 - symbols
- Conditions** for storage of material must be free of humidity or wetness to protect against incidence of fungus
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Extraction units and equipment** may include:
- kilns operated by gas, solar energy, oil or electricity
 - sieves of various sizes

RANGE STATEMENT

- air-drying racks and trays
 - lifting devices, such as overhead gantry, fork lift and conveyor belt
 - electronic and manual scales
- Systems** may include:
- electronic
 - manual
- Seed information** includes details of:
- species
 - weight
 - place or origin
 - container identifier
- Packaging** must:
- ensure protection of seeds
 - maintain traceability to collection source
- Records and reports may include:**
- seed species information
 - seed extraction processes and results
 - storage procedures
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Permit or licence requirements are identified and organised in line with organisational requirements</p> <p>1.7. Survey method/s is <i>selected</i> and instrument survey is planned, scheduled and communicated to appropriate personnel</p> <p>1.8. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Implement and monitor instrument survey | <p>2.1. Instrument survey is conducted in line with work order, and environmental and OHS requirements</p> <p>2.2. Individuals, bodies and groups are consulted as</p> |

ELEMENT**PERFORMANCE CRITERIA**

	required during survey activity
	2.3. Survey procedures are systematically monitored to ensure survey specifications are being met in line with survey plan
	2.4. Survey plan is modified as required in response to equipment, personnel, site condition changes and environmental requirements
	2.5. Routine checks are conducted to ensure survey documentation and data are accurately and continuously recorded and completed
	2.6. Regular communication with survey personnel is maintained to ensure continuous workflow and progress
	2.7. Survey progress is routinely reviewed to ensure and maintain efficient options, and hazards or impediments to the survey are promptly rectified
3. Review instrument survey	3.1. Survey documentation and data are compiled and organised for review
	3.2. Map or plan is prepared in line with survey purpose requirements
	3.3. <i>Survey report</i> is prepared in appropriate format and processed in line with organisational guidelines
	3.4. Evaluation of survey plan and processes is undertaken and documented for use in reviewing and revising future instrument surveys
	3.5. Instrument survey outcomes are <i>recorded and reported</i> in line with site procedures and organisational requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, equipment and materials; develop, modify and assign suitable checking and maintenance procedures; read and interpret maps and undertake geographical orientation in the field; plan, coordinate and schedule tools, equipment and personnel requirements

REQUIRED SKILLS AND KNOWLEDGE

appropriate to work requirements

- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and people external to the organisation
- Literacy skills sufficient to record and report workplace information; maintain documentation; interpret, apply and convey information in written, diagrammatic and verbal form; read and interpret survey documentation and data
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task; interpret numerical data
- Problem solving skills sufficient to identify problems and arrange appropriate corrective action

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting an instrument survey
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for conducting an instrument survey
- Environmental risks and hazards
- Role of wood or waste products in generating renewable energy through biomass
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Survey techniques and tools
- Safety issues and hazards associated with undertaking boundary surveys
- Methods of navigating and geographically orienting in the field
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan, implement and monitor an instrument survey in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to conducting an instrument survey
- following organisational policies and procedures relevant to conducting an instrument survey
- communicating and following safe work practices
- planning and coordinating instrument survey processes and implementing an instrument plan
- monitoring the collection of survey documentation and data, and preparing a survey report

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

RANGE STATEMENT

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage

RANGE STATEMENT

- Environmental protection measures** may include:
- requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards
 - obstacles
- Survey purpose** may be:
- to lay out a road line
 - to mark boundaries, such as establishment boundaries and forest area boundaries
 - for assessment
 - to lay out planting rows
 - for site design
 - for drainage design
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
 - neighbouring landholders
 - local authorities
 - environmental agencies/authorities
- Relevant information** may include:
- details of survey location
 - licence or permit requirements
 - previous site and boundary surveys
 - plans and maps
- Survey tools** may include:
- tape
 - hammer
 - pegs and pins
 - chain
 - measuring wheel
 - global positioning system (GPS)

RANGE STATEMENT

- Selection** of survey method/s is based on consideration of:
- site
 - area to be surveyed
 - survey purpose
 - accuracy requirements
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Survey report** may include:
- difficulties or issues faced
 - recommendations for future work results
 - costs
 - data analysis
- Records and reports may include:**
- survey purpose
 - survey techniques
 - survey processes
 - evaluation outcomes
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

FPIFGM3206B Plan and implement non-commercial thinning operations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to control non-commercially thin species growing on site and stocking rate to ensure maximum vigour and optimum product outcome. The unit includes treatment with chemicals and the use of mechanical equipment

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM3206A Plan and implement non-commercial thinning operations

Application of the Unit

Application of the unit

The unit involves planning and implementing non-commercial thinning operations in a variety of work settings, including:

- forest environments
- farms
- agriculture
- nurseries
- local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Plan thinning operations

- 1.1. Applicable *occupational health and safety* (OHS), *environmental*, *legislative* and *organisational requirements* relevant to planning and implementing non-commercial *thinning operations* are identified and followed
- 1.2. Site *environmental protection measures* are identified and adhered to in line with relevant legislation and regulations
- 1.3. Thinning operation *parameters* and *method* of operation are identified and checked with *appropriate personnel*
- 1.4. *Relevant plans*, legislation and regulations are reviewed and assessed to identify impact on thinning operations
- 1.5. Sample area is identified and trees are *measured* in

ELEMENT	PERFORMANCE CRITERIA
2. Implement thinning operations	<p>line with organisational procedures</p> <p>1.6. Level of <i>overwood treatment</i> is recommended, accounting for habitat or seed tree considerations in line with organisational procedures</p> <p>1.7. Necessary <i>approvals</i> are sought and obtained in line with organisational procedures</p> <p>2.1. Thinning operations are implemented in line with plans, budget, OHS, environmental and legislative requirements</p> <p>2.2. <i>Communication</i> with others is established and maintained in line with plans and OHS requirements</p> <p>2.3. Required <i>resources, equipment</i> and <i>authorisations</i> are coordinated and obtained in line with organisational and legislative requirements</p> <p>2.4. Schedule for operations is organised with appropriate personnel in line with organisational requirements</p> <p>2.5. Trees are marked for treatment in line with plan and organisational procedures</p> <p>2.6. <i>Documentation requirements</i> are identified and completed in line with OHS requirements</p>
3. Monitor thinning operations	<p>3.1. <i>Monitoring points</i> are identified and adhered to in line with organisational procedures</p> <p>3.2. Operation is <i>checked</i> to ensure compliance with environmental, OHS, organisational and legislative requirements</p> <p>3.3. Communication with coordinating personnel is maintained in line with OHS requirements</p> <p>3.4. Operations are amended as required to ensure specifications, quality and performance targets are met</p>
4. Review thinning operations	<p>4.1. Operation is reviewed against inventory program and organisational and environmental requirements</p> <p>4.2. <i>Information</i> and data are analysed to determine effectiveness of thinning operations and improvements to future operations</p> <p>4.3. Recommendations for future operations are prepared, based on assessment of information collected</p> <p>4.4. Operation processes are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to analyse qualitative and quantitative information and data; handle retained stems without causing damage; protect stand from subsequent wind damage; collate and assess information against specified criteria; undertake treatments for overwood trees; recognise common diseases, pests and nutritional deficiencies
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to prepare a range of reports, documentation and submissions where precise meaning is required; assess and extract critical information from sources, such as legislation and forest biology; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and implementing non-commercial thinning operations
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the minimisation of noise and environmental impact
- Organisational and site standards, requirements, policies and procedures for planning and implementing non-commercial thinning operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Available products for thinning operations
- Available thinning methods
- Environmental imperatives for forest area
- Hazards associated with treatments
- Pests, diseases, tree form and nutritional defects
- Possible causes of damage to the stand
- Relevant biology and stand dynamics for the species
- Stand parameters for forest type

REQUIRED SKILLS AND KNOWLEDGE

- Treatments available for overwood trees
- Weed species and herbicide interactions
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan, implement and review non-commercial thinning operations

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planning and implementing non-commercial thinning operations
- following organisational policies and procedures relevant to planning and implementing non-commercial thinning operations
- planning non-commercial thinning operations in consultation with management to obtain inputs, and ensure efficient and safe processes and timelines
- safely conducting a non-commercial thinning operation in line with documented plan and budget, including marking trees for appropriate treatment
- reviewing operations and using findings to document

EVIDENCE GUIDE

- improvements to future operations
- Context of and specific resources for assessment**
- preparing and presenting a detailed report, including costs, processes and assessment of the operation
 - Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements
may include:

Thinning operations

may be designed to:

- maintain the health of the stand
- improve productivity and long-term sustainability
- provide for end product mix requirements
- manage notifiable weeds

and may impact:

- organisation's public relations
- ground growth
- canopy
- general forest lean
- wind speed and direction

Environmental protection measures may relate to:

RANGE STATEMENT

- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions
- hygiene of the area
- relevant commonwealth, state or territory, and local legislation and regulations, including issues related to notification of neighbours

Parameters

may affect treatment recommendations and include:

- forest type
- size and geography of treatment area
- equipment and personnel available
- budget available
- local environmental conditions
- age and size of trees and stand parameters, including DBH distribution, basal area, crown health, tree size, species and tree bark characteristics

Method

may be in line with:

- sampling undertaken
- forest type
- species
- stand history
- organisational requirements or procedures

Appropriate personnel may include:

- supervisors
- management
- colleagues
- clients
- relevant groups
- contractors

Relevant plans may include:

- tending plans
- harvesting plans
- organisational marketing and strategic plans
- plans or regulations relating to chemical use and environmental requirements

RANGE STATEMENT

Measured may include:

- girth
- height
- number
- spread

Overwood treatment may be:

- expressed as a number of trees per hectare removed

and may include:

- felling
- poisoning
- sapringing
- ringbarking

Approvals

may be required by:

- environmental bodies
- local, state or territory, and federal government bodies and agencies
- long-term budget processes

Communication *may include:*

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Resources may include:

- time
- people
- materials
- chemicals

Equipment may include:

- geographic information systems
- aerial photography
- hand tools
- mechanical equipment, such as chainsaw and harvesting equipment

Authorisations may include:

- permits
- approvals
- licences relating to neighbouring sites or properties

RANGE STATEMENT

- Documentation requirements:**
- hours of operation
 - use and application of chemicals
 - the environment
- may be required where chemical agents are used for treatment
- and may include changes to:
- prescriptions
 - supplementary notifications and approvals
 - reports
 - amendments to maps and plans
- Monitoring points:**
- may be time-based and frequency-based
- and may include:
- stream monitoring
 - mechanical damage to trees
- Checked may include:**
- following OHS, organisational, legislative and environmental regulations, procedures, practices and precautions
 - adherence to site environmental imperatives
 - specifications, quality and performance targets
 - documentation completed and submitted as required
- Information**
- may be:
- written
 - printed
 - verbal
 - electronic
 - visually displayed
- may include:
- aerial photographs
 - history of forest
 - visual observation
 - local regulations and by-laws
- Records and reports may include:**
- difficulties or issues faced during planning and implementing the program
 - forest assessments
 - recommendations for future work
 - results
 - costs

RANGE STATEMENT

- data analysis

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Plan stem improvements

- 1.1. Applicable ***occupational health and safety (OHS), environmental, legislative and organisational requirements*** relevant to coordinating ***stem improvement*** are identified and followed
- 1.2. Site ***environmental requirements*** are identified and followed
- 1.3. Relevant ***information*** is obtained, reviewed and analysed for impact on stem improvement planning
- 1.4. ***Methods*** of intervention are identified and selected in line with required product
- 1.5. Measurable performance indicators, specifications and targets are determined and documented
- 1.6. Required ***approvals*** are identified, sought and obtained from relevant authorities
- 1.7. Stem improvement ***plan*** and its performance indicators are clearly documented and communicated to ***appropriate personnel***

2. Implement and monitor stem improvement

- 2.1. Resources required for stem improvement activities are coordinated and scheduled, and required ***documentation*** is completed clearly and accurately
- 2.2. Schedule for the site is organised and relevant ***individuals, bodies and groups*** are consulted as required using appropriate interpersonal techniques

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|----------------------------|--|
| 3. Review stem improvement | <p>2.3. Stem improvement plan is implemented and monitored to ensure stem health and growth are maintained</p> <p>2.4. Systematic <i>checks</i> are carried out to ensure compliance requirements relevant to stem improvement activities are adhered to</p> <p>2.5. Adjustments to stem improvement activities are made as required and communicated to appropriate personnel</p> <p>2.6. Potential and existing risks and <i>hazards</i> in the work area are identified and controlled</p> <p>2.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> <p>2.8. <i>Limitations</i> are identified and assistance is sought as required in line with workplace procedures</p> <p>3.1. Data and documentation from stem improvement are assessed and evaluated to confirm techniques, methodologies and budgets are in line with the plan</p> <p>3.2. Issues and impediments to stem improvement activities and program costs are identified and documented</p> <p>3.3. Cost benefit analysis is prepared and recommendations are made, based on the analysis of data and identified issues</p> <p>3.4. Results of stem improvement are clearly communicated and disseminated to appropriate personnel</p> <p>3.5. Stem improvement processes are <i>recorded and reported</i> to appropriate personnel</p> |
|----------------------------|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; supervise operational staff and contractors to achieve specific outcomes; recognise common diseases, pests and nutritional deficiencies; schedule

REQUIRED SKILLS AND KNOWLEDGE

forest operations; prune target species appropriately

- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others; present information orally and in writing to a wide range of individuals and groups
- Literacy skills sufficient to record and report workplace information; maintain documentation; interpret, assess and extract critical information from sources; collate and assess information against specified criteria; interpret and act on written information, including maps, plans, reports and numerical data
- Numeracy skills sufficient to evaluate numerical and financial data
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for coordinating stem improvement
- Environmental protection requirements, including the safe disposal of waste material and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for coordinating stem improvement
- Environmental risks and hazards
- Pruning techniques for target species
- Recognition and identification of a range of species
- Plant identification sources
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and supervise the implementation of stem improvement activities within applicable environmental, legislative and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to coordinating stem improvement
- following organisational policies and procedures relevant to coordinating stem improvement
- identifying measurable performance indicators, specifications and targets and developing a stem improvement plan within specified budgetary guidelines
- identifying and recommending methods and strategies to manage stem quality and growth
- monitoring stem improvement operation, ensuring relevant legal, OHS and environmental requirements are followed
- documenting results from stem improvement activities and preparing a report for dissemination to relevant personnel

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Stem improvement

may be used to encourage tree growth to suit marketing requirements

Environmental requirements

may include:

- hygiene of the area
- relevant commonwealth, state or territory and local legislation and regulations

Information

may include:

- organisational strategic and tending plans
- appropriate regulations

Methods

may include:

- pruning using mechanical or hand tools
- using chemicals or biological agents
- recycling pruned material
- disposing of pruned material that cannot be recycled due to chemicals or biological agents used

Approvals

may be required where:

- use of chemicals or biological agents is intended
- browsing control techniques may impact on neighbouring properties

Plan

may detail:

- organisational terminology
- guidelines and budgets
- policies and timelines
- internal memos
- resources (people, material and equipment)
- tools (chainsaws)

Appropriate personnel

may include:

- operational personnel
- colleagues
- clients
- line management
- external authorities
- agencies

RANGE STATEMENT

Documentation

may be required where:

- there is use of chemical or biological agents
- operation is to be contracted out
- contractors
- clients
- peers
- local, federal, state or territory government agencies/bodies

Individuals, bodies and groups

may include:

Checks may include:

ensuring:

- relevant organisational OHS procedures, practices, policies and precautions are observed and followed
- site environmental requirements follow relevant commonwealth, state or territory and local legislation and regulations
- performance indicators, targets and specifications are met
- quantity, cost and provenances collected are in line with plan specifications
- required organisational documentation is completed clearly and accurately

Hazards may include:

- use of machinery
- use of chemicals or biological agents
- adverse weather conditions
- adverse terrain conditions

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Limitations may relate to:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes

RANGE STATEMENT

Records and reports may include:

- own interpretation of legislation, regulations and procedures
- OHS and environmental requirements
- difficulties or issues faced
- results
- costs
- data analysis
- recommendations for future work

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Plan road or track

- 1.1. Applicable *occupational health and safety* (OHS), *environmental*, *legislative* and *organisational requirements* relevant to constructing and maintaining forest roads and tracks are identified and followed
- 1.2. *Topography* details are obtained and assessed in relation to *environmental management considerations*
- 1.3. *Construction requirements* are identified and checked with *appropriate personnel*
- 1.4. Track and road entry points are located to planned construction requirements and provide vehicle and equipment access, turning and loading space
- 1.5. Road line is *established* and *obstacles* are removed in line with plans, site procedures and environmental requirements
- 1.6. *Extraction* methods and *resources* are identified and obtained in line with site procedures
- 1.7. Forest road or track construction and maintenance plan is prepared in line with site procedures and environmental requirements
- 1.8. *Communication* with others is established and maintained in line with OHS requirements

ELEMENT	PERFORMANCE CRITERIA
2. Construct road or track	<p>2.1. Soil is removed to establish base of suitable width, slope and stability in line with OHS and environmental requirements and site procedures</p> <p>2.2. Water crossing points and drains are established and provided in line with environmental requirements and site procedures</p> <p>2.3. Intersection points are prepared to provide suitable entry and exit levels and control water flow</p> <p>2.4. Pipes or cords are placed and correctly backfilled and compacted in line with predicted water volume and site procedures</p> <p>2.5. Road or track base and surface material is transferred, spread and compacted to meet planned road or track design</p> <p>2.6. Equipment is stabilised, controlled and manoeuvred to compact and stabilise adjacent soil during construction</p> <p>2.7. Road or track surface is cut and prepared suitable for support, effects of tree or log movement, manoeuvring and traction of equipment</p>
3. Maintain road or track	<p>3.1. Condition of road or track is monitored in relation to volume of traffic and expected future requirements in line with OHS and environmental requirements</p> <p>3.2. Specific damage likely to lead to safety or environmental issues is identified and repaired or reported immediately</p> <p>3.3. Maintenance is planned and carried out with minimal disruption to other work activities</p> <p>3.4. Areas of consistent damage are redesigned and remade with assistance from appropriate personnel</p> <p>3.5. Road or track construction and maintenance processes are recorded and reported to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; identify and extract logs and other obstacles; use extraction methods
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for constructing and maintaining forest roads and tracks
- Environmental protection requirements, including the safe disposal of waste material, the cleaning of plant, tools and equipment, and the minimisation of environmental impact, carbon emissions and noise
- Organisational and site standards, requirements, policies and procedures for constructing and maintaining forest roads and tracks
- Environmental risks and hazards
- Using energy effectively and efficiently
- Logging and harvesting operations
- Log extraction methods
- Road transport equipment requirements and capabilities in forest operations
- Ground water behaviour
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently construct and maintain forest roads and tracks in line with set plans and budget

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to constructing and maintaining forest roads and tracks
- following organisational policies and procedures relevant to constructing and maintaining forest roads and tracks
- constructing and maintaining forest roads and tracks in line with the work order and within prescribed organisational tolerances
- establishing water crossings and drains, including pipes, cords and culverts as required
- coordinating the maintenance of forest roads and tracks, including assessing damage and reporting hazards or areas requiring redesign

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Topography

is a map of the designated area showing terrain levels

Environmental management considerations may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles

Construction requirements may include:

- data relating to road requirements and restrictions
- lifting equipment
- transport equipment
- maximum road loads
- likely weather conditions
- expected timeframes
- survey locations and requirements
- water courses
- location of log landings
- road entry points
- crossing or entry points for other roads and tracks
- budget

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues and managers

RANGE STATEMENT

- Established** may include:
 - contractors
 - line-of-site
 - pegging and marking trees
 - clearing and removing trees and obstacles
- Obstacles** may include:
 - stumps
 - unrecoverable trees
- Extraction** is to include:
 - methods of removing log from the work site with mechanical equipment and cables, considering site conditions and specific log location
 - an order that minimises downtime and risk of snags, breakages and hang ups
- Resources** may include:
 - equipment
 - personnel
 - budget
 - time
- Communication** may include:
 - verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Removed** may include:
 - removing, dumping and storing soil
 - considering environmental requirements and consequences in relation to removing, dumping and storing soil
- Water crossing points:**
 - may be established where depth of drainage becomes excessive or natural water courses occur
 - may include use of a culvert or cording in line with volume of predicted crossing water
- Base and surface material** may include:
 - crushed rock and sand over a range of sizes and materials typically used for road and track construction
- Equipment** may be wheeled or tracked and include:
 - dozer
 - front end loader

RANGE STATEMENT

- skidder or grader using bucket or blade attachments
- Records and reports** may include:
- landing and snig track design and development operations
 - extraction methods
 - hazards and incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for patrol	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to patrolling a forest are identified and followed</p> <p>1.2. <i>Patrol requirements</i> are identified in line with work instructions</p> <p>1.3. Necessary <i>equipment</i> is accessed, prepared and stored in patrol vehicle in line with work instructions and organisational requirements</p> <p>1.4. <i>Communication links</i> are established and <i>appropriate personnel</i> notified of intended activities</p> <p>1.5. <i>Contingency plans</i> are made and communicated to appropriate personnel in line with organisational environmental requirements</p>
2. Carry out patrol	<p>2.1. Patrol is conducted in line with work instructions, and environmental, heritage and OHS requirements</p> <p>2.2. Risks and potential consequences to staff, the public and <i>forest estate</i> are identified and assessed</p> <p>2.3. Control measures are promptly implemented in line with OHS requirements and organisational procedures</p> <p>2.4. Appropriate follow-up action is implemented and documented in line with organisational procedures</p>
3. Respond to complaints or breaches	<p>3.1. Complaints or <i>breaches of legislation</i> are assessed for further action in line with OHS, environmental, heritage and organisational requirements</p> <p>3.2. <i>Evidence</i> is collected and documented in line with organisational and legislative requirements and</p>

ELEMENT**PERFORMANCE CRITERIA**

formats

3.3. Appropriate follow-up action is taken in line with organisational requirements

3.4. Forest patrol outcomes are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, including communications equipment; assess risks and hazardous situations; demonstrate time and project management
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others; use appropriate questioning techniques to gather verbal evidence
- Literacy skills sufficient to collect and document evidence; prepare a range of reports, documentation and submissions where precise meaning is required; read and interpret maps; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for patrolling a forest
- Environmental protection requirements, including the safe disposal of waste material, minimising environmental impact, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for patrolling a forest
- Environmental risks and hazards
- Types, use and maintenance of communications equipment
- Types of maps

REQUIRED SKILLS AND KNOWLEDGE

- Geography of patrol area
- Formats, procedures and legislative requirements for collecting and documenting evidence
- Typical complaints and breaches, and appropriate response procedures and follow-up actions
- Organisational public relations guidelines
- Role and interrelationship of government agencies controlling patrol area
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently carry out a patrol and respond to complaints and breaches of legislation

Critical aspects for assessment and evidence required to demonstrate competency in this unit

the evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to patrolling a forest
- following organisational policies and procedures relevant to patrolling a forest
- following applicable licensing or certification requirements
- preparing for a patrol ensuring communication links are established, appropriate notification of intended

EVIDENCE GUIDE

- patrol route, and area and contingency plans
 - carrying out a patrol, identifying and assessing risks and hazards, and demonstrating appropriate response procedures
 - responding to complaints and breaches of legislation using appropriate questioning techniques, and documentation procedures and formats to collect evidence
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment

EVIDENCE GUIDE

of other units of competency

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures

Environmental requirements

RANGE STATEMENT

may include:

- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Patrol requirements may include:

- defining routes and patrol area
- determining and minimising potential impact on the environment

Equipment may include:

- maps
- forms and documents
- communications equipment, such as telephones and radios (hand-held or installed in vehicles)

Communication links may

- base and other work centres

RANGE STATEMENT

include:

- supervisors
- co-workers
- appropriate authorities

Appropriate personnel may include:

- supervisors
- co-workers
- appropriate authorities

Contingency plans may include:

- search and rescue of lost members of the public and colleagues
- recovery of vehicles
- clearing of roads
- evacuation plans
- bush fire control assistance to emergency services or other government agencies
- administration of first aid

Forest estate may include:

- all areas within and immediately adjacent to the forest boundaries
- enterprise assets, such as offices and accommodation
- structures, such as fences, roads and forest products
- visitor sites, including developed and undeveloped camping
- bush camping areas
- day use areas
- other recreational activity areas

Breaches of legislation may include:

- unauthorised use of roads to which public access is restricted
- unauthorised use of firearms by members of the public
- damage or theft of the forest estate by members of the public
- illegal activities by members of the public, particularly in campsites

Evidence may include:

- physical
- written
- verbal

Records and reports may include:

- evidence collected and clearly written
- accurate and complete reports in a format that may be presented in court

and may be:

- manual

FPIFGM3211B Manage coppice stems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to manage coppice stem development in the regeneration of broadleaf forests by allowing coppice stems to grow from ground level stumps (stools). The unit includes thinning to promote growth of stronger stems and to achieve a higher yield rate

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM3211A Manage coppice stems

Application of the Unit

Application of the unit

The unit involves managing coppice stems in a forest environment setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for coppice management	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to managing coppice stems are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>stumps</i> to grow <i>coppice</i> are identified and assessed for safe working conditions</p> <p>1.4. <i>Equipment</i> appropriate to work requirements is selected and checked for operational effectiveness in line with manufacturer recommendations</p> <p>1.5. Coppice activities are planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Develop coppice stems	<p>2.1. <i>Environmental conditions</i> are assessed and used to plan the coppice development of each tree stump</p> <p>2.2. Chainsaw operators are directed to cut tree stumps at ground level to form <i>stools</i></p> <p>2.3. Stools are cleared of <i>debris</i> and allowed to rest and sprout coppice</p> <p>2.4. Debris is recycled in line with site procedures and environmental requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	2.5. Coupe is protected from wildlife and grazing animals during coppice development
	2.6. <i>Standard seedlings</i> are removed or left in line with the <i>coppice management plan</i> used
	2.7. Stools are regularly assessed to measure and gauge the amount of coppice growth
3. Undertake thinning	3.1. Coppice stems are assessed in line with the coppice management plan to identify stronger stems and how many stems to leave
	3.2. Weaker or smaller coppice stems are removed by hand or mechanically
	3.3. <i>Thinning</i> is regularly undertaken to control regrowth and promote the growth of retained coppice stems
	3.4. Thinning of more mature coppice forests is directed to prepare for <i>harvesting</i> activities
	3.5. Thinned material is recycled in line with site procedures and environmental requirements
	3.6. Coppice management process is <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely manage coppice stems
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing coppice stems
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for managing coppice stems
- Environmental risks and hazards
- Procedures for minimising environmental impact
- Characteristics of trees and timber defects
- Coppice stem development
- Regeneration methods
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manage coppice stems in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing coppice stems

EVIDENCE GUIDE

Context of and specific resources for assessment

- following organisational policies and procedures relevant to managing coppice stems
- managing coppice stems to promote forest regeneration and bring about high volume yields
- conducting thinning operations of coppice stems
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate

EVIDENCE GUIDE

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable commonwealth,

RANGE STATEMENT

state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements may include:

Work order is to include:

- instructions for coppice stem management for the work site and may include:
 - type
 - size
 - length
 - quantity and grade

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

RANGE STATEMENT

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Stumps

are the remaining stumps after felling has occurred in harvesting operations; stump height varies between half a metre and two metres

Coppice:

- is the new growth that shoots from a stump or stool after harvesting has occurred
- is used as an alternative to seeding or seedling propagation to provide short rotation for pulpwood of existing species
- forests are renowned for providing a fast return to a flora and fauna friendly biodiversity

Equipment may include:

- thinning equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Environmental conditions may include:

- ground growth
- ground slope
- gullies
- water courses
- seed trees
- habitat trees
- ground hazards and obstacles

Stools

are stumps after they have been cut down to height equivalent or as close as is practical to ground level

Debris is to include:

- forest waste
- branches

RANGE STATEMENT

- bracken or rubbish
- Standard seedlings** are to include:
- new growth that sprouts as a result of natural seeding or planted seedlings
- Coppice management plan** may include:
- coppice plans that only manage coppice growth
 - coppice and standard plans, which include regulated growth of standard seedlings to complement the coppice growth
- Thinning** is the process of removing weak, small or surplus coppice stems to promote the growth of the remaining stems
- Harvesting** is the method of cutting and extracting trees and timber from designated areas
- Records and reports** may include:
- tree type
 - size
 - height
 - diameter
 - inspection information
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Competency field Forest Growing and Management

FPIFGM3212 Fall trees manually (intermediate)

Modification History

Version	Detail
1	Unit replaces FPIFGM3204A Fall trees manually (intermediate)

Unit Descriptor

This unit describes the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw in a non-production environment. This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills. Persons competent in this unit should be able to effectively fell most trees with the exception of the very large and those that have significant defects and/or characteristics causing excessive complexity.

Techniques for trees with a diameter greater than the bar length would generally be regarded as within the scope of this unit.

Application of the Unit

This unit involves felling trees in a non-production environment. It applies to a forest, rural and community environment.

These skills and knowledge are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply in various jurisdictions.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for felling	<p>1.1 Identify and comply with applicable <i>occupational health and safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to felling trees</p> <p>1.2 Identify and adhere to site <i>environmental protection measures</i> according to relevant legislation and regulations</p> <p>1.3 Review and check <i>job requirements</i> with <i>appropriate personnel</i> as required</p> <p>1.4 Sharpen and adjust chainsaw or change components according to manufacturer recommendations</p> <p>1.5 Assess tree and determine felling requirements</p> <p>1.6 Identify and control potential and existing risks and <i>hazards</i> in the work area</p> <p>1.7 Identify trees to be retained and felled</p> <p>1.8 Establish and maintain <i>communication</i> with others according to OHS requirements</p>
2. Visually assess site conditions and surroundings	<p>2.1 Identify and comply with site environmental concerns according to relevant federal, state or territory legislation and local regulations</p> <p>2.2 Review terrain and slope to determine if they add complexity to the operation</p> <p>2.3 Maintain awareness of <i>environmental conditions</i> and other personnel activity in the work area and modify felling activity where required</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4 Assess general factors affecting felling requirements and detect and control specific forest or site risks and hazards
3. Assess tree and plan felling	<p>3.1 Visually assess tree for felling characteristics</p> <p>3.2 Select <i>tools and equipment</i> appropriate to work requirements and check them for operational effectiveness according to manufacturer recommendations</p> <p>3.3 Identify trees to be felled for size, significant defects and any characteristics causing excessive complexity</p> <p>3.4 Assess and progressively plan tree-felling sequence for individual trees</p> <p>3.5 Assess and check required falling direction and possible deviation</p> <p>3.6 Plan sequence of cuts to fell tree according to standard felling procedures</p> <p>3.7 Select suitable escape route</p> <p>3.8 Assess <i>limitations</i> of own skills in safely felling trees, identify <i>trees considered outside own skill level</i> and seek assistance from appropriate personnel where required</p> <p>3.9 Monitor and exclude location and activity of other personnel on the work site</p>
4. Apply tree-felling techniques	<p>4.1 Select suitable escape route and clear of growth and other obstacles according to environmental care principles and statutory requirements</p> <p>4.2 Fell individual trees using planned <i>techniques</i> according to site requirements, at a safe distance from other personnel in the work area</p> <p>4.3 Adjust cutting technique in response to movement and condition of tree</p> <p>4.4 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable</p> <p>4.5 Identify procedures for removal of trees that are hung-up</p> <p>4.6 Detect, rectify and report blunt or damaged saw chain according to workplace procedures</p> <p>4.7 Monitor chainsaw for operational effectiveness and record and report faults, malfunctions and problems</p>

ELEMENT	PERFORMANCE CRITERIA
	according to workplace procedures

Required Skills and Knowledge

Required skills:

- Technical skills to:
 - use and maintain relevant tools and equipment
 - safely operate and maintain a chainsaw
 - assess, plan and carry out tree-felling operations appropriate to site conditions
- Communication skills to:
 - use appropriate communication and interpersonal techniques and methods with colleagues and others
 - use hand signals with other operators to maintain effective and safe tree felling
- Literacy skills to:
 - locate and report information
 - interpret, apply and convey information in written, diagrammatic and/or verbal form
- Numeracy skills to:
 - estimate tree height
 - calculate product mass and determine tree fall zone
 - measure tree length and diameter
- Problem-solving skills to:
 - review and identify work requirements
 - recognise own limitations in conditions and trees for felling
 - identify problems and equipment faults and demonstrate appropriate response procedures
 - apply safe work practices, including using personal protective equipment (PPE) and controlling hazards
 - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for felling trees manually
- Planning and organising skills to plan work to site requirements

Required knowledge:

- Basic knowledge of applicable federal, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for felling trees manually
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for felling trees manually
- Types of tools and equipment for felling trees manually, and the procedures for their safe use, operation and maintenance
- Problem identification and resolution strategies and common fault-finding techniques
- Established communication channels and protocols
- Procedures for identifying and evaluating structural defects and stresses in trees
- Types and purposes of a range of cuts to fell trees
- Operational principles and limitations of a chainsaw
- Procedures for recording and reporting workplace information
- Chainsaw product specifications

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess, plan and safely and efficiently operate chainsaw equipment to manually fell trees at the intermediate level in a forest environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to felling trees manually at an intermediate level
- compliance with organisational policies and procedures relevant to felling trees manually at an intermediate level
- compliance with applicable licensing and certification

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

requirements

- communicating effectively and working safely with others in the work area
- Identifying and describe key features of structural defects and stresses in trees and the impact on
 - conducting an assessment of a range of intermediate trees, and planning and safely felling trees without damage to personnel, equipment and surrounding environment
 - planning felling sequence and preparing surroundings including escape route
- felling a range of intermediate trees using a range of cuts safely without damage to personnel, equipment and surrounding environment
- preparing, operating and maintaining chainsaw equipment and other felling equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the essential underpinning knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

- OHS requirements:**
- are to be in accordance with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - PPE and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control

- fatigue management
- appropriate signage
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to fire
- techniques for manual handling, including shifting, lifting and carrying

- Legislative requirements:**
- are to be in accordance with applicable federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - native vegetation
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care

Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste disposal, recycling and re-use guidelines

Trees typical to the scope of this unit may include the

- lean and weight distribution, which can be assessed and readily adapted to falling direction with the use

following characteristics:

- of wedges and/or control with hinge-wood
- various dimensions relative to local forest size distribution
- limited visible damage or defect
- species prone to free splitting and adverse reactions during felling
- a crown that contains dead or broken material, entanglement or malformation and is visible for assessment and monitoring
- single or multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add complexity to the operation

Environmental protection measures may include action to limit the impact to:

- native vegetation
- soil and water
- heritage and archeological artefacts
- flora and fauna
- geomorphologic features
- landscape
- external site pollution
- recreational opportunities
- regeneration opportunities

Job requirements may include:

- information and instructions relevant to tree-felling operations, including processing location details and trees to be felled and retained
- general environmental requirements
- site plan and environmental features

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- managers

Hazards may include:

- uneven or unstable terrain
- unsafe trees
- fires
- overhead and underground services
- excavations

- traffic
- structures
- hazardous materials
- insects and animals
- other personnel and machinery

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening and questioning to clarify and confirm understanding
- electronic communication devices

Environmental conditions may relate to:

- ground growth
- canopy
- general tree lean
- ground slope
- ground hazards
- wind speed and direction

Tools and equipment may include:

- warning signs
- chainsaw and components
- PPE and clothing
- first aid equipment
- maintenance requirements
- support tools

Limitations may relate to:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation, regulations and procedures
- complying with OHS requirements

Trees considered outside own skill level include:

- trees that contain hazards and are deemed unsafe
- trees that are considered to be in the advanced category
- trees where cuts made may lead to loss of control of

tree in falling

Techniques:

- will include:
 - scarf cutting
 - back cutting to provide hinge-wood and maintain control of tree
- may include:
 - use of wedges to assist in controlling falling direction

FPIFGM3213 Fall trees manually (advanced)

Modification History

Version	Detail
1	Unit replaces FPIFGM3205A Fall trees manually (advanced)

Unit Descriptor

This unit describes the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw in a non-production environment. The unit covers the procedures for felling trees of any size, species and condition that the faller has deemed safe to fell.

Application of the Unit

This unit involves felling trees in a non-production environment, including forest, rural and community environments.

These skills and knowledge are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply in various jurisdictions.

Pre-Requisites

Not Applicable

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for felling

1.1 Identify and comply with *applicable occupational health and safety* (OHS), environmental, *legislative* and *organisational requirements* relevant to felling trees

1.2 Identify and adhere to site *environmental protection measures* according to relevant legislation and regulations

1.3 Review *job requirements* and check as required with *appropriate personnel*

1.4 Select *tools and equipment* appropriate to work requirements and check them for operational effectiveness according to manufacturer recommendations

1.5 Sharpen and adjust chainsaw or change components according to manufacturer recommendations

1.6 Identify and control potential and existing risks and *hazards* in the work area

1.7 Identify trees to be felled as being safe to fell

1.8 Assess and progressively plan tree-felling sequence for individual trees

1.9 Establish and maintain *communication* with others according to OHS requirements

2. Visually assess site conditions and surroundings

2.1 Identify and comply with site environmental concerns according to relevant federal, state or territory legislation and local regulations

2.2 Review terrain and slope to determine if they add significant complexity to the operation

2.3 Maintain awareness of *environmental conditions* and

ELEMENT	PERFORMANCE CRITERIA
	<p>other personnel activity in the work area and modify felling activity where required</p> <p>2.4 Assess general factors affecting felling requirements and detect and control specific forest or site risks and hazards</p>
3. Assess tree and plan felling	<p>3.1 Locate and visually assess tree for felling characteristics</p> <p>3.2 Assess and check required falling direction and possible deviation</p> <p>3.3 Plan sequence of cuts to fell tree according to standard felling procedures</p> <p>3.4 Identify <i>limitations</i> in own skills in safely felling trees, assess <i>trees considered outside own skill</i> level and seek assistance from appropriate personnel where required</p> <p>3.5 Monitor and exclude location and activity of other personnel on the work site</p>
4. Apply tree-felling techniques	<p>4.1 Select suitable escape route and clear it of growth and other obstacles according to environmental care principles and statutory requirements</p> <p>4.2 Fell individual trees using planned <i>techniques</i> according to site requirements, at a safe distance from other personnel in the work area</p> <p>4.3 Adjust cutting technique in response to movement and condition of tree</p> <p>4.4 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable</p> <p>4.5 Identify procedures for removal of trees that are hung-up</p> <p>4.6 Detect, rectify and report blunt or damaged saw chain according to workplace procedures</p> <p>4.7 Monitor chainsaw for operational effectiveness and record and report faults, malfunctions and problems according to workplace procedures</p>

Required Skills and Knowledge

Required skills:

- Technical skills to:
 - use and maintain relevant tools and equipment
 - safely operate and maintain a chainsaw
 - assess, plan and carry out tree-felling operations appropriate to site conditions
- Communication skills to:
 - use appropriate communication and interpersonal techniques and methods with colleagues and others
 - use hand signals with other operators to maintain effective and safe tree felling
- Literacy skills to:
 - locate and report information
 - interpret, apply and convey information in written, diagrammatic and/or verbal form
- Numeracy skills to:
 - estimate tree height
 - calculate product mass and determine tree fall zone
 - measure tree length and diameter
- Problem-solving skills to:
 - review and identify work requirements
 - recognise own limitations in conditions and trees for felling
 - identify problems and equipment faults and demonstrate appropriate response procedures
 - apply safe work practices, including using personal protective equipment (PPE) and controlling hazards
 - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for felling trees manually
- Planning and organising skills to work to site requirements

Required knowledge:

- Basic knowledge of applicable federal, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for felling trees manually
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for felling trees manually
- Types of tools and equipment for felling trees manually, and the procedures for their safe use, operation and maintenance
- Problem identification and resolution strategies and common fault-finding techniques

- Established communication channels and protocols
- Procedures for identifying and evaluating structural defects in trees
- Types and purposes of a range of cuts to fell trees
- Operational principles and limitations of a chainsaw
- Procedures for recording and reporting workplace information
- Fire protocols
- Chainsaw product specifications

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess, plan and safely and efficiently operate chainsaw equipment to manually fell trees at an advanced level in a forest environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to felling trees manually at an advanced level
- compliance with applicable licensing or certification requirements relevant to felling trees manually at an advanced level
- effective communication and safe working practices, including maintaining an awareness of other personnel activity in the work area
- Identifying and describe key features of structural defects and stresses in trees and the impact on
 - conducting a tree assessment, and planning and undertaking advanced tree felling within the range of variables for trees and conditions
 - planning felling sequence for individual trees and preparing surroundings including escape route
- felling a range of advanced trees using a range of cuts safely without damage to personnel, equipment and surrounding environment
- selecting, preparing and maintaining appropriate tools and

equipment and recognising faults, problems and malfunctions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory requirements and Australian standards
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the essential underpinning knowledge
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task

should not be higher than those of the work role

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

- OHS requirements:**
- are to be in accordance with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - PPE and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control
 - fatigue management
 - appropriate signage
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to fire
 - techniques for manual handling, including shifting, lifting and carrying
- Legislative requirements:**
- are to be in accordance with applicable federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - native vegetation
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care

- heritage and traditional landowner issues

Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste disposal, recycling and re-use guidelines

Trees typical to the scope of this unit may include the following characteristics:

- lean and weight distribution that adds significant complexity yet can be assessed and adapted to site requirements
- larger dimensions relative to local forest size distribution
- substantial lean
- damage or defect that requires complex felling techniques
- multi-legged, hollow butts, culls and stags
- species prone to free splitting and adverse reactions during felling
- a crown that contains dead or broken material, entanglement or malformation and presents a hazardous and difficult situation for assessment, monitoring and safe felling
- single or complex multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add significant complexity to the operation

Environmental protection measures may include:

- action to limit the impact to:
 - native vegetation
 - soil and water
 - heritage and archeological artefacts

- flora and fauna
- geomorphologic features
- landscape
- external site pollution
- recreational opportunities
- regeneration opportunities

Job requirements may include:

- information and instructions relevant to tree-felling operations, including processing location details and trees to be felled and retained
- general environmental requirements
- site plan and environmental features

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- managers

Tools and equipment may include:

- warning signs
- chainsaw and components
- PPE and clothing
- first aid equipment
- maintenance requirements
- support tools

Hazards may include:

- uneven and unstable terrain
- unsafe trees
- fires
- overhead and underground services
- excavations
- traffic
- structures
- hazardous materials
- insects and animals
- other personnel and machinery

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel

- active listening and questioning to clarify and confirm understanding
- electronic communication devices

Environmental conditions may relate to:

- ground growth
- canopy
- general tree lean
- ground slope
- ground hazards
- wind speed and direction

Limitations may relate to:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation, regulations and procedures
- complying with OHS requirements

Trees considered outside own skill level include:

- trees that contain hazards and are deemed unsafe
- trees where cuts made may lead to loss of control of tree in felling

Techniques:

will include:

- scarf cutting
- back cutting to provide hinge-wood and maintain control of tree

may include:

- use of wedges to assist in controlling falling direction

FPIFGM3214 Operate a four wheel drive in a towing situation

Modification History

Version	Detail
1	New unit

Unit Descriptor

This unit covers the techniques for towing and moving an object using a four-wheel drive (4x4) vehicle on roads and varied terrain. This may include towing a trailer, vehicle or equipment as well as moving logs or other loads.

Application of the Unit

This unit involves the operation of a 4x4 vehicle in a towing situation. The skills and knowledge required for competent workplace performance of towing are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply in various jurisdictions.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare 4x4 for towing
 - 1.1 Identify and follow *occupational health and safety* (OHS), environmental, legislative and *organisational requirements* relevant to operating in a towing situation
 - 1.2 Identify *type of object* to be towed and determine a suitable towing arrangement
 - 1.3 Identify equipment requirements and techniques to carry out the towing job
 - 1.4 Identify potential *hazards* that may be experienced at the towing site and during the towing operation
 - 1.5 Assess the towing activity for safety and security of persons, vehicles and property
 - 1.6 Check the *4x4 vehicle* to ensure equipment is appropriate to conditions and operationally effective in line with *manufacturer specifications*
2. Drive 4x4 towing a trailer
 - 2.1 Identify hazards and risk-management strategies associated with towing a trailer
 - 2.2 Safely couple and uncouple the trailer
 - 2.3 Secure load onto trailer
 - 2.4 Apply *risk-management strategies* while 4x4 vehicle is in operation and towing a trailer
 - 2.5 Demonstrate reversing a trailer uphill, around corners and in a straight line
 - 2.6 Use correct jack technique to change a trailer wheel
 - 2.7 Park and shut down 4x4 vehicle in line with manufacturer specifications and organisational requirements
3. Drive 4x4 moving an attached object
 - 3.1 Secure vehicle, equipment or object to be towed using appropriate *recovery devices*
 - 3.2 Apply risk-management strategies to a 4x4 vehicle operating in a towing situation
 - 3.3 Park and shut down 4x4 vehicle in line with manufacturer specifications and organisational requirements

- 4. Perform post-towing tasks
 - 4.1 Notify relevant personnel of trip completion
 - 4.2 Document activity in line with organisational procedures
 - 4.3 Apply maintenance procedures for allocated vehicle

Required Skills and Knowledge

Required skills:

- Technical skills to:
 - use and maintain relevant tools, machinery and equipment
 - perform minor routine servicing of vehicle
 - operate 4x4 vehicle in a towing situation
 - tow a trailer and move an attached object safely and according to organisational requirements
 - conserve energy with appropriate throttle use
- Communication skills to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills to:
 - record and report workplace information
 - complete documentation relating to towing a trailer or object
- Numeracy skills to measure, estimate and calculate:
 - time required to complete the task
 - force of the recovery operation
 - journey time, fuel consumption and other variables
- Problem-solving skills to identify problems and equipment faults
- Teamwork skills to work safely and collaboratively with others when towing a trailer or object
- Initiative and enterprise skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use personal protective equipment (PPE) in line with OHS requirements

Required knowledge:

- Applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes when towing a trailer or object
- Environmental protection requirements, including the safe disposal of waste material and the minimisation of carbon emissions and

environmental impact

- Environmental risks and hazards, organisational and site standards, requirements, policies and procedures for towing a trailer or object
- Road rules, regulations, permit and licence requirements of the relevant state or territory
- Operational knowledge of 4x4 vehicle, including controls, instruments and indicators, and their use
- 4x4 techniques
- Vehicle maintenance requirements
- Established communication channels and protocols
- Vehicle problem identification and resolution strategies, and common vehicle fault-finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information
- Characteristics, applications, capabilities and limitations of a 4x4 vehicle while towing a trailer or object
- Tools and equipment used when setting up and securing an object for towing
- Problems that may occur when setting up and securing an object for towing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment A person who demonstrates competency in this unit must be able to provide evidence that they can tow a trailer or move an object using a 4x4 vehicle safely and in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:

- following applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to operating a 4x4 vehicle towing a trailer or object
- following organisational policies and procedures relevant to operating a 4x4 in a towing situation
- assessing the safety of towing a trailer or object
- operating a 4x4 over a range of towing situations

Context of and specific resources for assessment

- Competency is assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an offsite context
- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be in place:
 - 4x4 vehicle
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other

circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

- are to be in line with federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - PPE and clothing
 - safety equipment
 - current first aid equipment in vehicle
 - current vehicle firefighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - techniques for manual handling, including shifting, lifting and carrying

Environmental

requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

- Legislative requirements:**
- are to be in line with federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care

- Organisational requirements** may include:
- legal compliance documentation
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines

- Type of object** may include:
- vehicle
 - water tank
 - log
 - rock
 - other object

- Hazards** may include:
- damage to vehicle
 - wet and iced terrain
 - flooded terrain
 - fire in vehicle

- fire at the scene
- faulty brakes
- leaking fuel
- faulty steering mechanism on vehicle
- animals and objects in vehicle path
- crocodiles and snakes in some areas
- windy or foggy sections of terrain
- steep slopes
- land slides
- tree limbs
- black ice
- trailers
- logs, rocks and other unexpected obstacles
- weather conditions
- slippery surfaces
- unsafe or damaged equipment
- spilt or leaking fuel or dangerous or hazardous goods or substances
- unsafe manual-lifting procedures

4x4 vehicle may include:

- manual and automatic four-wheel drive
- all-wheel drive

Manufacturer specifications may include:

- engine characteristics, including:
 - towing capacity of the vehicle
 - system's warning functions
 - four-wheel drive operation
 - radius of turning circle
 - safety procedures
 - instructions relating to engine air intake

Risk-management strategies may include:

- appropriate vehicle and trailer clearance
- appropriate approach and departure angles
- correct load management
- controlled braking methods using:
 - electric brakes
 - no brakes
 - override brakes
- adequate movement of the tow system
- making adjustment for extra length and width of

trailers, and their tendency to 'cut in' on corners and curves

- making appropriate adjustment in braking distance to compensate for the combined extra weight of vehicle and trailer
- driving vehicle to minimise trailer sway
- engaging a lower gear when travelling downhill with a trailer to give greater vehicle control and reduce load on brakes
- ensuring mirrors on both sides of towing vehicle are properly adjusted to give a clear view of vehicles approaching from the rear

Recovery devices may include:

- winches
- ropes
- cables
- slings
- pullers

Forest Growing and Management

FPIFGM3215 Perform complex 4x4 operations

Modification History

Version	Detail
1	Unit replaces FPIFGM3208B Perform complex 4x4 operations

Unit Descriptor

This unit describes the outcomes required to perform complex four-wheel drive (4x4) vehicle operations, including operations over rugged terrain and water crossings.

Application of the Unit

The unit involves performing complex 4x4 operations in a variety of work settings. The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

Pre-Requisites

Not Applicable

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the

unit of competency. required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1) 1. Prepare for 4x4 operations	<p>1.1 Identify and follow <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to performing complex 4x4 operations</p> <p>1.2 Identify and assess types of <i>water crossings</i> and <i>terrain</i> being accessed for safe operating conditions</p> <p>1.3 Check that <i>4x4 vehicle</i> being used is appropriate to conditions and operationally effective in line with manufacturer specifications</p> <p>1.4 Identify appropriate range of <i>personal protective equipment</i> (PPE) to be carried for the trip conditions</p> <p>1.5 Establish <i>communication</i> with others and choose required safety <i>mechanisms</i> in line with organisational requirements</p>
2. Prepare 4x4 vehicle for water crossing	<p>2.1 Place <i>cover</i> securely across the front of the vehicle when required by water depth</p> <p>2.2 Spray water repellent on electrical connectors, battery terminals and electrical components</p> <p>2.3 Check wheel hubs to engage/lock position</p> <p>2.4 Select appropriate gear for water crossing</p> <p>2.5 Allow vehicle to cool down before entering water to reduce ingress of water through seals</p>
3 Negotiate water crossing	<p>3.1 Assess <i>hazards and risks</i> associated with water crossings</p> <p>3.2 Determine safety of water crossing</p> <p>3.3 Establish and select <i>entry and exit points</i> for crossing in line with current flow and risk assessment</p> <p>3.4 Access water crossing to determine <i>depth of water</i> at intended crossing point</p> <p>3.5 Monitor the track continually to identify hazards and assess risks</p> <p>3.6 Perform water crossing by maintaining a constant bow wave</p>

ELEMENT	PERFORMANCE CRITERIA
4 Perform check of vehicle operations on completion of water crossing	<ul style="list-style-type: none">4.1 Drain water from 4x4 vehicle back into the water crossing4.2 Dry brakes off by gentle application while moving4.3 Check engine oils for contamination4.4 Check air cleaner elements for water intrusion and assess air intake operational effectiveness4.5 Check differential and gear box oils after prolonged periods in the water
5 Operate vehicle in rugged terrain	<ul style="list-style-type: none">5.1 Determine intended route prior to departure5.2 Inspect intended vehicle path prior to negotiation of rugged terrain5.3 Put contingency plan in place to deal with unexpected hazards5.4 Inspect, position and secure vehicle load to maximise traction for 4x4 driving5.5 Set <i>vehicle controls</i> in line with <i>manufacturer specifications</i> and for operation in the rugged terrain5.6 Negotiate terrain in line with requirements for <i>specific driving conditions</i>
6. Recover vehicle from loss of traction while ascending	<ul style="list-style-type: none">6.1 Determine intended route backwards6.2 Use correct brake and engine techniques to reverse vehicle6.3 Ensure vehicle comes to a safe stop
7. Perform post-trip tasks	<ul style="list-style-type: none">7.1 Notify relevant personnel of trip completion7.2 Document trip in line with organisational procedures7.3 Apply maintenance procedures for allocated vehicle

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Technical skills to:
 - use and maintain relevant tools, machinery and equipment
 - assess depth and speed of water for safe crossing
 - safely perform water crossings
 - safely negotiate steep and uneven terrain
 - conserve vehicle energy with appropriate throttle use

- perform minor emergency repair of vehicle
- use correct techniques to safely stop and start on steep terrain
- Communication skills to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills to:
 - record and report workplace information
 - maintain documentation
- Numeracy skills to measure, estimate and calculate journey time, water depths, fuel consumption and other variables required to complete task
- Problem-solving skills to identify problems and equipment faults

Required knowledge:

- Applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for performing complex 4x4 operations
- Environmental protection requirements relating to 4x4 operation, speed, acceleration, and exiting water crossings that minimise carbon emissions and environmental impact
- Environmental risks and hazards relevant to complex 4x4 operations
- Organisational and site standards, requirements, policies and procedures for performing complex 4x4 operations
- Road rules, regulations, permit and licence requirements of the relevant state or territory
- Operational knowledge of 4x4 vehicle, including controls, instruments and indicators and their use
- Four-wheel drive techniques, including to safely cross water and operate 4x4 vehicle in rugged terrain
- Water-crossing methods, including associated hazards and risks
- Vehicle maintenance requirements following water crossings
- Established communication channels and protocols
- Vehicle problem identification and resolution strategies, and common vehicle fault-finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Organisational procedures for fleet management

Evidence Guide

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can perform 4x4 operations over water crossings and rugged terrain safely and in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to performing complex 4x4 operations
- following organisational policies and procedures relevant to performing complex 4x4 operations
- assessing the safety of planned water and rugged terrain crossings
- performing 4x4 operations over a range of rugged terrain and water crossings in line with the circumstances and 4x4 OHS operating regulations
- selecting correct gear/range to negotiate terrain
- engaging and disengaging freewheel hubs in line with driving conditions
- identifying safe locations for entry into and out of a waterway
- identifying and preparing supplies and resources appropriate to the journey

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory requirements and Australian standards
- The following resources should be in place:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit

- specifications and work instructions
- 4x4 vehicle

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on

the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

- are to be in line with federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - PPE and clothing
 - safety equipment
 - current first aid equipment in vehicle
 - current vehicle firefighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - techniques for manual handling, including shifting, lifting and carrying

Environmental requirements
may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

- are to be in line with federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care

Organisational requirements

- legal compliance documentation

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste minimisation and disposal, recycling and re-use guidelines

Assessed may include:

- using local knowledge relating to types of water crossings, terrain or environmental issues
- estimation of water depth in the waterway by indicators
- local markings
- wading activities by a colleague or operator with suitable precautions taken that may include the ability to swim and use flotation devices or rope
- throwing rock into water to indicate depth

Water crossings may include:

- rivers
- streams
- creeks
- fords
- channels
- wash outs
- causeways
- flooded roads and terrain
- other shallow water bodies

Terrain may include:

- rough
- uneven
- slippery
- wet
- boggy

- sandy
- steep or hilly
- rock
- icy
- snow
- mud, including:
 - brown clay
 - black silt
 - salt pan mud
 - red
- hard ground
- water

4x4 vehicle may include:

- manual and automatic four-wheel drive
- all-wheel drive

Personal protective equipment may include:

- boots
- gloves
- eye protection
- long pants

Communication may include:

- verbal and non-verbal language
- radio protocols

Mechanisms may include:

- personal location beacon (PLB)
- flares
- markers
- phone
- radio
- V-Sheet

Cover may include:

- tarp
- blind
- plastic sheet
- fitted covers

Hazards and risks may include:

- speed of flowing water (moving at greater than one metre a second)
- underwater hazards

- debris in water
- rocks and other unexpected obstacles
- variable water depth and width of crossing
- risk of vehicle being swept down the waterway
- tidal influences
- wet and iced terrain
- flooded terrain
- fire in vehicle
- faulty brakes
- leaking fuel
- faulty steering mechanism on vehicle
- animals and objects in vehicle path
- crocodiles and snakes in some areas
- windy or foggy sections of terrain
- steep slopes
- slippery surfaces
- land slides
- tree limbs
- black ice
- trailers
- poor visibility

Entry and exit points must include:

- safe locations for entry into and out of a waterway, with shallow run-ins and exits and a firm base
- locations that minimise the impact on the environment

Depth of water is:

- the maximum height that may be crossed safely in line with vehicle manufacturer specifications

Vehicle controls must include:

- selecting correct gear/range to negotiate terrain
- engaging and disengaging freewheel hubs in line with driving conditions

and may include:

- where used, fitting traction aids to vehicle in line with manufacturer specifications as required by terrain

Manufacturer specifications

may include:

- engine characteristics
- system's warning functions
- four-wheel drive operation
- radius of turning circle
- safety procedures
- instructions relating to engine air intake

Specific driving conditions may include:

- ascent
- descent
- cross-slope operation

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Prepare for establishment | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to implementing a <i>forest establishment plan</i> are identified and followed</p> <p>1.2. <i>Local authority</i> coverage, <i>land owning</i> and boundaries, and <i>forest design</i> plan are identified and assessed</p> <p>1.3. Forest location including map and grid references are identified</p> <p>1.4. Land use <i>zoning</i> is identified and <i>planning permits</i> are checked for approval status</p> <p>1.5. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Implement forest establishment plan | <p>2.1. Method of establishment is selected in line with the requirements of the forest type, and environmental and organisational guidelines</p> <p>2.2. Forest type and available <i>species</i> are selected for establishment</p> <p>2.3. <i>Topography</i> is identified</p> <p>2.4. <i>Operational activities</i> are directed and scheduled, including required people, material and equipment, in line with organisational guidelines</p> <p>2.5. <i>Forest design</i> plan and <i>planting strategy</i> are coordinated to establish the forest</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Monitor and review establishment plan	3.1.Environmental protection measures for the landscape, soil and drainage are inspected for correct implementation 3.2.Operational staff, clients and contractors are regularly communicated with during the establishment phase to ensure smooth operation and progress 3.3.Operational activities are monitored and reviewed for potential improvements 3.4.Establishment method is reviewed and diagnosed for potential improvements 3.5.Forest establishment plan implementation results are <i>recorded and reported</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to coordinate relevant tools, equipment and resources; obtain approved planning permits; implement a forest establishment plan; follow identified environmental protection requirements
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to record and report workplace information; maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for implementing a forest establishment plan
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of carbon emissions, and the cleaning of plant, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for implementing a forest establishment plan
- Environmental risks and hazards
- Role of wood or waste products in generating renewable energy through biomass
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Forest establishment and planning procedures
- Forest design and planting strategies
- Regeneration principles and methods
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types and availability of resources, tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently implement a forest establishment plan in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to implementing a forest establishment plan
- following organisational policies and procedures

EVIDENCE GUIDE

- relevant to implementing a forest establishment plan
- implementing a forest establishment plan in line with regulations and organisational requirements
 - coordinating personnel to follow planning, communications and scheduling for forest establishment activities
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Forest establishment plan** is to include:
- research and implementation strategies for the establishment or re-establishment of a native or plantation forest on designated land
- Local authorities** are to include:
- local government councils or shires with local planning and zoning authority for a given region
- Land owning** is the process of notifying and obtaining owner approval to commence establishment operations
- Forest design** may include:
- forest layout
 - protected areas

RANGE STATEMENT

- access
- harvesting considerations
- environmental sustainability issues
- minimising environmental impact

Zoning is to include:

designated land with boundaries that fall within survey pegs for the land allocated for forest growing operations under local authority allocation owned:

- privately
- by government
- by the forestry organisation

Planning permits

- are granted by local authorities for forest growing operations to take place
- based on approved plans submitted to local government, following required regulations

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles
- drainage

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Species may include:

- native species of one or more type
- imported species

Topography is to include:

- map of the designated area showing:
 - terrain levels

RANGE STATEMENT

- soil types
 - contours
 - elevations
 - slopes
 - gullies
 - adjoining land parcels
- Operational activities** may include:
- forest design and map details
 - site preparation
 - access considerations
- planting for forest or streamside:
- buffers
 - filter strips
 - contours
 - gullies
 - crossing points
- environmental considerations, such as protection of:
- habitat
 - rainforest
 - flora and fauna
 - landscape
 - excluded areas
 - rubbish removal
- may include preparation of:
- permanent roads
 - temporary roads
 - landings
 - dumps
 - snig tracks
 - forwarding tracks
 - adjoining land
 - wet weather restrictions
 - fire protection requirements
- Planting strategy** is to include:
- procedures for optimising time and safety during the establishment phase
 - planting to a structured plan that minimises damage to planted stock and the environment
- Records and reports** may producing detailed records and reports outlining

RANGE STATEMENT

include:

the planning of forest establishment and regeneration processes, including:

- difficulties
- costs
- data analysis
- efficiency and effectiveness
- results
- recommendations for future work

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Plan stand health program | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to managing <i>stand health</i> are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are monitored and adhered to in line with relevant legislation and regulations</p> <p>1.3. Relevant <i>information</i> is obtained, analysed and assessed for impacts on stand health planning</p> <p>1.4. <i>Methods</i> of encouraging stand health are identified and selected</p> <p>1.5. Measurable performance indicators, specifications and targets are developed and documented</p> <p>1.6. Required <i>approvals</i> are identified, sought and obtained from relevant authorities</p> <p>1.7. Stand health <i>program</i> and its performance indicators are clearly documented and communicated to <i>appropriate personnel</i></p> |
| 2. Implement and monitor stand health program | <p>2.1. Resources required for the stand health program are coordinated and scheduled and <i>required documentation</i> is completed clearly and accurately</p> <p>2.2. Schedule for the site is organised and relevant <i>individuals, groups</i> and bodies are consulted as required using appropriate interpersonal techniques</p> <p>2.3. Stand health program is implemented and monitored to ensure health and protection of stand</p> <p>2.4. Systematic <i>checks</i> are carried out to ensure that</p> |

ELEMENT**PERFORMANCE CRITERIA**

	compliance requirements relevant to stand health activities are followed
	2.5. Adjustments to the stand health program are made as required and communicated to appropriate personnel
	2.6. Potential and existing risks and hazards in the work area are identified and controlled
	2.7. Communication with others is established and maintained in line with OHS requirements
	2.8. Limitations are identified and assistance is sought as required in line with workplace procedures
3. Review stand health program	3.1. Information from stand health operation is assessed and evaluated to confirm that techniques, methodologies and budgets are in line with program
	3.2. Issues and impediments to stand health activities and program costs are identified and documented
	3.3. Cost benefit analysis is prepared and recommendations are made, based on the analysis of data and identified issues
	3.4. Results of stand health program are clearly communicated and disseminated to appropriate personnel
	3.5. Stand health management process is recorded and reported to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use relevant tools, equipment and resources; supervise operational staff and contractors to achieve specific outcomes; recognise common diseases, pests and nutritional deficiencies
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others, including landholders, and internal and external bodies and groups; present information orally and in writing to a wide range of individuals and groups
- Literacy skills sufficient to collate and assess information against specified criteria; interpret and act on written information, including maps, plans and reports;

REQUIRED SKILLS AND KNOWLEDGE

complete data and quality control; write reports and submissions in appropriate style and format; record and report workplace information; maintain documentation

- Numeracy skills sufficient to interpret numerical data; identify quantities and costings
- Problem solving skills sufficient to identify problems and equipment faults; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing stand health
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of environmental impact, and the safe use and storage of chemicals
- Environmental risks and hazards
- Organisational and site standards, requirements, policies and procedures for managing stand health
- Health requirements of the target species
- Procedures for identifying and evaluating structural defects in trees
- Principles of identifying pests, diseases and physiological damage to trees
- Methods of attacking tree pests and diseases
- Methods of analysing the nutritional status of trees
- Methods for recognising and identifying a range of species
- Methods of collecting and storing specimens for identification
- Plant identification sources
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

EVIDENCE GUIDE

Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and supervise the implementation of a stand health program within applicable environmental, legislative and organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing stand health
- following organisational policies and procedures relevant to managing stand health
- developing a stand health program within specified budgetary guidelines, incorporating measurable performance indicators, specifications and targets
- identifying and recommending methods and strategies to manage health and protection of stand
- monitoring implementation of the stand health program and ensuring relevant legal, OHS and environmental requirements are followed
- documenting results from stand health program and preparing a report for dissemination to relevant personnel

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Stand health may include:

- stress problems
- pests and diseases, such as insects, fungal, bacterial, viral, birds and animals
- structural
- storm damage
- root damage
- gassing
- compaction
- incineration
- nutrient deficiencies
- chemical
- changes in levels
- competition
- poor draining
- vandalism
- salt
- drought

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions
- hygiene of the area
- relevant commonwealth, state or territory, and local legislation and regulations

RANGE STATEMENT

- Information** may include:
- organisational strategic and tending plans
 - appropriate regulations
- Methods** may include:
- application of fertilisers
 - application of pesticides and herbicides
 - pruning techniques
 - competition management techniques
 - browsing control techniques
 - consideration of environmental sustainability issues
- Approvals** may be required:
- where the use of chemicals or biological agents is intended
 - where browsing control techniques may impact on neighbouring properties
 - where consideration of environmental sustainability issues applies
- Program** may include:
- organisational terminology
 - guidelines
 - plans
 - budgets
 - policies and timelines
 - internal memos
 - resources, including people, material and equipment
 - disposal methods, such as burning, burying and chemical destruction
- Appropriate personnel** may include:
- operational staff and contractors
 - clients
 - colleagues
 - line management
 - relevant external authorities and agencies
- Required documentation** may include:
- maps
 - plans
 - reports
- Individuals and groups** may include:
- neighbouring landholders
- Checks** may include:
- ensuring:
- relevant organisational OHS procedures, practices, policies and precautions are observed and followed
 - site environmental requirements and relevant

RANGE STATEMENT

commonwealth, state or territory, and local legislation and regulations are followed

- performance indicators, targets and specifications are met
- quantity, cost and provenances collected are in line with plan specifications
- required organisational documentation is completed clearly and accurately

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Limitations may include:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation, regulations and procedures
- OHS and environmental requirements
- difficulties or issues faced
- costs
- data analysis
- results
- recommendations for future work

Records and reports may include:

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

FPIFGM4203C Design plantations

Modification History

Version	Comments
Version 1.1	Released with FPI11 Training Package Version 2. Addition of item in required knowledge section. Equivalent to FPIFGM4203B Design plantations.
Version 1	First released with FPI11 Training Package Version 1.

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to design a plantation or monoculture. The unit also applies to an area that is to be used for multiple uses, such as farm forestry.

Application of the Unit

Application of the unit

The unit involves designing plantations in a variety of work settings, including:

- forest environments
- farms
- agriculture
- workshops
- domestic
- nurseries
- local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare plantation design	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>plantation design</i> are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Relevant plans</i> are reviewed and analysed to assess impacts on plantation planning</p> <p>1.4. <i>Consultative processes</i> are used to obtain input into the design in line with site requirements</p> <p>1.5. <i>Plantation requirements</i> and location are identified from organisational maps, plans and strategies in line with site procedures and environmental requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	1.6.Measurable performance indicators, specifications and targets are developed and documented in line with organisational procedures
2. Design components of plantation	2.1.Necessary surveys are specified and tolerances determined in line with organisational procedures and environmental requirements 2.2.Site preparation techniques are identified in line with site parameters and organisational procedures 2.3.Design <i>components</i> are identified and <i>approvals</i> obtained in line with organisational plans, policies and parameters of site, and environmental requirements 2.4.Design plan and performance indicators are clearly communicated to <i>appropriate personnel</i>
3. Review plantation design	3.1.Plantation data and documentation are analysed against plans and adjacent plantations in line with organisational procedures 3.2.Recommendations are prepared and design improvements implemented in line with organisational procedures and environmental requirements 3.3.Plantation design processes are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to analyse qualitative and quantitative information and data; prepare a range of reports, documentation and submissions where precise meaning is required; present written and oral information to a wide range of individuals and groups; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to assess and modify plans to achieve specified

REQUIRED SKILLS AND KNOWLEDGE

outcomes; identify problems and equipment faults; demonstrate appropriate response procedures; demonstrate effective time and project management

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for designing plantations
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of environmental impact, carbon emissions and noise, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for designing plantations
- Environmental risks and hazards
- Recycling and re-use guidelines
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Interpretation of aerial photography
- Common diseases, pests and nutritional deficiencies
- Relevant species characteristics and selection information
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently design a plantation, based on specific organisational plans and objectives

Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy all of the

EVIDENCE GUIDE

competency in this unit

requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to designing plantations
- following organisational policies and procedures relevant to designing plantations
- designing a plantation using consultative processes with colleagues and stakeholders to obtain inputs, and ensure efficient use of resources
- reviewing plantation design against determined performance indicators, specifications and targets
- developing recommendations for design improvements based on results of analysis and review of design and feedback received

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related

EVIDENCE GUIDE

conditions (real or simulated) and require evidence of process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances

RANGE STATEMENT

- Environmental requirements** may include:
- safe forest practices, including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Plantation design will be in line with organisational marketing plan and local environmental imperatives

- Environmental protection**
- ground growth

RANGE STATEMENT

measures may include:

- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions
- hygiene of the area
- relevant commonwealth, state or territory, and local legislation and regulations

Relevant plans may include:

- tending plans
- harvesting plans
- organisational marketing and strategic plans
- plans or regulations relating to chemical use and environmental requirements

Consultative processes may include:

- face-to-face meetings
- telephone
- facsimile
- written and email communication

may be with:

- clients
- technical operators
- marketing groups
- operations supervisor
- colleagues
- relevant groups or bodies, such as environmental bodies
- local, state or territory, and federal government bodies and agencies
- internal policy groups
- labour force

Plantation requirements may include:

- appropriate species
- provenance
- distribution and hardiness of trees to be sown or planted to suit the area to be planted

Components may include:

- roads
- fences

RANGE STATEMENT

- Approvals** may include:
- drainage channels
 - forest area boundaries
 - environmental bodies
 - local, state or territory, and federal government bodies and agencies
 - long-term budget approvals
- Appropriate personnel** may include:
- contractors
 - technical experts
 - management
 - colleagues
 - clients
 - relevant groups
- Records and reports** may include:
- difficulties or issues faced during design processes
 - recommendations for future work
 - results
 - costs
 - data analysis
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Prepare for assessment | <p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to conducting pest and disease assessment are identified and followed</p> <p>1.2. Frequency of <i>assessment</i> for particular forest areas and size of sample areas are calculated from inventory programs, budgets and organisational guidelines</p> <p>1.3. <i>Pests and diseases</i> are researched and recorded for the location to be assessed</p> <p>1.4. Methods of pest and disease <i>measurement</i> are selected in line with the forest management plan</p> <p>1.5. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Implement pest and disease assessment | <p>2.1. Method of assessment is selected in line with the forest type, and local, environmental and organisational guidelines</p> <p>2.2. People, materials and equipment for the assessment are coordinated and scheduled in line with organisational guidelines</p> |

ELEMENT	PERFORMANCE CRITERIA
3. Monitor and review assessment	<p>2.3. <i>Schedule</i> for the site is organised in conjunction with other relevant forest operations personnel</p> <p>2.4. Permits or licences required for the assessment are obtained</p> <p>2.5. Personnel are directed to undertake the assessment and collect the data on pests and diseases</p> <p>2.6. Data retrieved from the assessment is <i>translated</i> and reported</p> <p>3.1. Environmental protection measures are checked to ensure compliance with relevant legislation and regulations</p> <p>3.2. Operational staff and contractors are regularly communicated with during the assessment phase to ensure smooth operation and progress</p> <p>3.3. Operational activities are monitored and reviewed for potential improvements</p> <p>3.4. Assessment method is reviewed and <i>diagnosed</i> for potential improvements</p> <p>3.5. Assessment results are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to organise and obtain required permits or licences; efficiently and safely conduct pest and disease assessment
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to coordinate and schedule resources, materials and equipment appropriate for assessment requirements; translate assessment data and report workplace information, such as results, in appropriate style and format; present written and oral information to a wide range of individuals and groups; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to review and identify work requirements; identify

REQUIRED SKILLS AND KNOWLEDGE

problems and equipment faults; demonstrate appropriate response procedures; demonstrate effective time and project management

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting pest and disease assessment
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of environmental impact, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for conducting pest and disease assessment
- Environmental risks and hazards
- Types of pests and diseases
- Methods and techniques to assess animal populations, diseases, pests and weeds
- Methods of measurement and collecting data on pests and diseases
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct a pests and diseases assessment in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include

EVIDENCE GUIDE

demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to conducting a pests and diseases assessment
- following organisational policies and procedures relevant to conducting a pests and diseases assessment
- conducting a pests and diseases assessment in line with regulations and organisational requirements
- coordinating personnel to follow planning, communications and scheduling for conducting a pests and diseases assessment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required

RANGE STATEMENT

- actions relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Assessment** is to include: analysing the impact on the forest area of:
- animal populations
 - diseases
 - pests

RANGE STATEMENT

- weeds
- Pests and diseases** may include: animals, such as:
- rodents
 - birds
 - feral cats
 - wild dogs
 - insects
 - diseases that affect plants
 - weeds and creeping plants
- Measurement** is to include:
- how many pests or diseases of each type exist per designated area based on size of area
- Environmental protection measures** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Schedule** is to include:
- division of areas into a roster for undertaking assessment
- Translated** is the process of converting measurement details and data of pests and diseases into useable information
- Diagnosis** is to include:
- analysis of the assessment process and operational procedures to explore improvement potential
- Records and reports** may detailed records and reports outlining the planning

RANGE STATEMENT

include:

of pest and disease assessment, including:

- difficulties
- costs
- data analysis
- recommendations for future work
- results

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Forest Growing and Management

FPIFGM4205B Monitor regeneration rates

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to monitor and coordinate the assessment of new plant stocks within a forestry area. The unit includes the assessment of germination, survival, regeneration and basal area surveys

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM4205A Monitor regeneration rates

Application of the Unit

Application of the unit

The unit involves monitoring regeneration rates in a forest environment setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Prepare for monitoring | <p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to monitoring regeneration rates are identified and followed</p> <p>1.2. Frequency of <i>assessment</i> for particular forest areas and size of sample areas are calculated from inventory programs, budgets and organisational guidelines</p> <p>1.3. <i>Regeneration types</i> are researched and recorded for the location to be assessed</p> <p>1.4. Methods of regeneration <i>measurement</i> are selected in line with the forest management plan</p> <p>1.5. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Implement assessment of regeneration rates | <p>2.1. Method of assessment is selected in line with the forest type, and local, environmental and organisational guidelines</p> <p>2.2. People, materials and equipment for the assessment are coordinated and scheduled in line with organisational guidelines</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.3. <i>Schedule</i> for the site is organised in conjunction with other relevant forest operations personnel
	2.4. Permits or licences required for the assessment are obtained
	2.5. Personnel are directed to undertake the assessment and collect the data on regeneration rates
	2.6. Data retrieved from the assessment is <i>translated</i> and reported
3. Monitor and review assessment	3.1. Environmental protection measures are checked to ensure compliance with relevant legislation and regulations
	3.2. Operational staff and contractors are regularly communicated with during the assessment phase to ensure smooth operation and progress
	3.3. <i>Operational activities</i> are monitored and reviewed for potential improvements
	3.4. Assessment method is reviewed and <i>diagnosed</i> for potential improvements
	3.5. Assessment results are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to coordinate relevant tools, equipment and resources; monitor regeneration rates
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to organise and obtain required permits or licences; translate, record and report workplace information, such as collected data and results, in appropriate style and format; present written and oral information to a wide range of individuals and groups; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time required to complete a task
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures; demonstrate effective time and project management

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for monitoring regeneration rates
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of environmental impact and carbon emissions, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for monitoring regeneration rates
- Environmental risks and hazards
- Using material effectively and efficiently
- Types and rates of regeneration
- Assessment techniques for regeneration rates
- Measurement and data collection methods
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently monitor regeneration rates in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to monitoring regeneration rates
 - following organisational policies and procedures relevant to monitoring regeneration rates
 - monitoring regeneration rates in line with regulations and organisational requirements
 - coordinating personnel to follow planning, communications and scheduling for monitoring regeneration rates
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Assessment** is to include:
- monitoring germination and survival rates
 - observing the effects of browsing, the distribution of new growth in square metres and regeneration rates
 - calculating basal areas
- Regeneration types** may include:
- seeding
 - seedlings

RANGE STATEMENT

- Measurement** is to include:
- coppice
 - standard sprouts
 - quantity of each type in existence per designated area based on size of area
- Environmental protection measures** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to coordinate and schedule resources, materials and equipment appropriate for assessment requirements; organise and obtain required permits or licences; assess wood volume and yield assessment requirements
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to translate, record and report workplace information, such as assessment data and results, in appropriate style and format; present written and oral information to a wide range of individuals and groups; maintain documentation
- Numeracy skills sufficient to implement program planning and budgeting
- Problem solving skills sufficient to demonstrate effective time and project management

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting a wood volume and yield assessment
- Environmental protection requirements, including the safe disposal of waste material and the minimisation of environmental impacts
- Organisational and site standards, requirements, policies and procedures for conducting a wood volume and yield assessment
- Environmental risks and hazards
- Using material effectively and efficiently
- Range of wood volumes and yields
- Assessment techniques for wood volume and yield
- Measurement and data collection methods for wood volume and yield
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire

RANGE STATEMENT

Environmental requirements
may include:

- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Assessment is to include:

analysing:

- timber volume by size classes
- timber quality
- timber damage
- form and rates of growth

RANGE STATEMENT

Wood volume and yield may include:

- quantity (gross volume) of timber per square kilometre
- estimated yield (net volume) of useable timber per square kilometre

Measurement is to include:

- how many trees of each type and size exist per designated area based on size of area

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- division of areas into a roster for undertaking assessment

Schedule is to include:

Translated

is the process of converting measurement details and data of wood volume and yield into useable information

Diagnosis is to include:

- analysis of the assessment process and operational procedures to explore improvement potential

Records and reports may include:

producing detailed records and reports outlining the planning of wood volume and yield assessment, including:

- difficulties
- costs
- data analysis
- efficiency and effectiveness

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to assess a forest site
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to coordinate and schedule resources, materials and equipment appropriate for assessment requirements; organise and obtain required permits or licences; translate assessment data and report results in appropriate style and format; present written and oral information to a wide range of individuals and groups; record and report workplace information; maintain documentation
- Numeracy skills sufficient to implement program planning and budgeting
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures; demonstrate effective time and project management

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting a forest site assessment
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of environmental impact and carbon emissions, and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for conducting a forest site assessment
- Environmental risks and hazards
- Role of wood or waste products in generating renewable energy through biomass
- Using material effectively and efficiently
- Forest site analysis techniques
- Assessment techniques for forest site assessments
- Measurement and data collection methods
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Assessment** is to include: analysing:
- soils
 - terrain
 - slope

RANGE STATEMENT

- rainfall
- environmental specifications
- cultural aspects of a forest area

Measurement is to include: number and size of terrain and environment factors that exist per designated area based on size of area

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Topography is to include:

map of the designated area showing:

- terrain levels
- contours
- elevations
- slopes
- gullies
- adjoining land parcels
- rainfall
- soil type

Schedule is to include:

- division of areas into a roster for undertaking assessment

Translated

is the process of converting measurement details and data of forest site into useable information

RANGE STATEMENT

Diagnosis is to include:

- analysis of the assessment process and operational procedures to explore improvement potential

Records and reports may include:

producing detailed records and reports outlining the conduct of a forest site assessment, including:

- difficulties
- costs
- data analysis
- efficiency and effectiveness
- results
- recommendations for future work

and may be:

- manual
- a computer-based system
- other appropriate organisational communication system

Employability Skills Information

Employability skills

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for quarry operation	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to planning a quarry are identified and followed</p> <p>1.2. <i>Relevant parties</i> are consulted regarding land tenure and plans are reviewed and analysed prior to locating the quarry</p> <p>1.3. Proposed location for quarry is inspected and the quality and extent of quarry material <i>visually assessed</i> for suitability</p> <p>1.4. <i>End use</i> of quarry material and annual envisaged total quantities are researched, sampled and <i>tested</i> for suitability</p> <p>1.5. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.6. Operational staff and contractors are regularly communicated with during the planning process to ensure smooth operation and progress</p> <p>1.7. Quarry management plan is prepared for approval in line with site procedures</p> <p>1.8. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Implement quarry operation plan	<p>2.1. Quantities required and <i>methods of extracting</i> material from the quarry are selected, based on research and organisational plan</p> <p>2.2. Cost benefit analysis is conducted to assess <i>viability</i></p>

ELEMENT	PERFORMANCE CRITERIA
	<p><i>and lifespan</i> of the quarry</p> <p>2.3. Licences or permits required for quarry development are obtained</p> <p>2.4. People, materials and equipment for quarry development are coordinated and scheduled in line with organisational guidelines</p> <p>2.5. <i>Schedule</i> for the site is organised in conjunction with adjacent work plans and road maintenance or construction plans</p> <p>2.6. Processes are established to liaise with relevant parties during the quarry development process</p> <p>2.7. Schedule for the quarry and <i>other documentation</i> are produced and completed in line with OHS guidelines</p>
3. Monitor and review quarry planning	<p>3.1. Environmental protection measures are checked to ensure compliance with relevant legislation and regulations</p> <p>3.2. <i>Planning activities</i> are monitored and reviewed for potential improvements</p> <p>3.3. Planning method is reviewed and <i>diagnosed</i> for potential improvements</p> <p>3.4. Planning process and results are <i>recorded and reported</i> to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to coordinate and schedule resources, materials and equipment to meet planning requirements; plan a quarry
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to prepare a quarry management plan; organise and obtain required licences or permits; record and report workplace information; maintain documentation
- Numeracy skills sufficient to conduct a cost benefit analysis
- Problem solving skills sufficient to identify problems; demonstrate appropriate

REQUIRED SKILLS AND KNOWLEDGE

response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning a quarry
- Environmental protection requirements, including the minimisation of environmental impact and safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for planning a quarry
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Quarry planning processes
- Range of quarry operations
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan a quarry in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or

EVIDENCE GUIDE

- territory legislative and regulatory requirements and codes of practice relevant to planning a quarry
- following organisational policies and procedures relevant to planning a quarry
 - planning a quarry in line with regulations and organisational requirements
 - coordinating personnel to follow planning, communications and scheduling for planning a quarry
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures

Environmental requirements

RANGE STATEMENT

may include:

- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Relevant parties may include:

- individuals, groups or bodies involved with tenure
- community or official organisational representatives
- environmental agencies/authorities
- neighbouring landholders
- local authorities
- relevant government departments and agencies/authorities

RANGE STATEMENT

- Visual assessment** is to include:
- visual estimation of the quality and quantity of quarry material available for end use purposes
- End use** may include:
- road construction
 - road maintenance
 - track rehabilitation
 - snig tracks
 - landings
- Testing** is to include:
- laboratory testing of the material conducted by testing experts to gauge suitability
- Environmental protection measures** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Methods of extraction** may include:
- with plant and equipment
 - using blasting methods
- Viability and lifespan** are to include:
- an analysis of the quarry financial viability, based on:
- cost-effectiveness
 - continued quality of the material
 - longevity of the quarry
- Schedule** is to include:
- development plan for the quarry site
 - point at which operations occur
- Other documentation** may include:
- maps
 - topography

RANGE STATEMENT

- plans
 - reports
- Planning activities** are to include:
- processes for planning, locating, establishing and operating the quarry
- Diagnosis** is to include:
- analysis of the planning process and development procedures to explore improvement potential
- Records and reports** may include:
- producing detailed records and reports outlining the quarry planning process, including:
- difficulties
 - costs
 - data analysis
 - efficiency and effectiveness
 - recommendations for future work
 - results
- and may be:
- manual
 - a computer-based system
 - other appropriate organisational communication system

	environmental requirements
	2.4. Photomapping standards are interpreted and applied for consistent data-gathering
	2.5. <i>Forest attributes</i> are identified and required <i>forest management information</i> is derived and <i>interpreted</i> in line with interpretation convention and <i>guidelines</i>
	2.6. Aerial photographs are interpreted and mapped in line with organisational guidelines
	2.7. <i>Field</i> observations, <i>verification</i> and validation are recorded and reported in appropriate formats in line with organisational guidelines
3. Update maps and plans from aerial photographs	3.1. <i>Maps and plans</i> are assessed and <i>updated</i> as required, using appropriate symbols, colours and conventions, to meet forest management project requirements
	3.2. Appropriate <i>tools</i> are used to <i>transfer data</i> in line with manufacturer recommendations
	3.3. Documentation is completed, processed and maintained in line with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant equipment and materials; interpret forest area detail from a map; identify disease symptoms in trees and forest areas using aerial photographs; identify vegetation characteristics on an aerial photograph; locate required photographs from appropriate records (flight plan map)
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record, report and maintain information, including details of forest attributes and topographic information; read and interpret complex information, including charts, tables, maps and flight plans; identify and interpret title panel information on an aerial photograph; maintain documentation
- Numeracy skills sufficient to apply appropriate mathematical techniques to calculate scale of an aerial photograph, scale distances for a map, and calculate and

REQUIRED SKILLS AND KNOWLEDGE

manipulate height and area information; identify map type and map features, including topographic map features

- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures; follow procedures in interpreting forest management information

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for interpreting and using aerial photographs for forest management
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for interpreting and using aerial photographs for forest management
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Common scales used on maps and plans, and procedures for their use and manipulation
- Forest types and structures
- Representation of topographic features on maps and plans
- Range of photographic film, and photo types
- Care and storage of aerial photographs
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must

EVIDENCE GUIDE

be able to provide evidence that they can derive and interpret information from an aerial photograph for forest management purposes according to organisational guidelines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to interpreting and using aerial photographs for forest management
- following organisational policies and procedures relevant to interpreting and using aerial photographs for forest management
- sourcing and obtaining suitable aerial photographs appropriate to forest management project requirements
- establishing key aspects of aerial photographs
- deriving and interpreting information from forest topographic features
- documenting and maintaining data and information
- interpreting forest area detail from a map and scale distances, and calculating height and area information

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

EVIDENCE GUIDE

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

Available aerial photographs may include:	<ul style="list-style-type: none">• ethical standards• recording and reporting requirements• equipment use, maintenance and storage requirements• environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)• photographs, which may be:<ul style="list-style-type: none">• held by the organisation• required to be purchased• borrowed from another organisation
Standards and requirements include:	<ul style="list-style-type: none">• scale• flying height and focal length• required percent endlap and sidelap• orientation• location and number of flight lines required• total number of photographs required• allowable drift, crab, tilt and image motion• camera characteristics, including format, lens quality, shutter speed and aperture, film and filter characteristics• acceptable seasons of the year, time of day, allowable present cloud cover and hot spots
Factors:	to be considered when selecting photography for a project are: <ul style="list-style-type: none">• colour or black and white• date of acquisition• scale• minimum mappable area• actual smallest operational unit area• scale of mapping relative to scale of presentation
Types may include:	project, mapsheet, spot and stratigraphic: <ul style="list-style-type: none">• of photographic classes, including terrestrial, vertical and oblique• of aerial photographic film, including black and white, black and white infra-red, colour, colour infra-red
Applications	of aerial photographs to natural resource

RANGE STATEMENT

management include:

- road or plantation design
- field navigation and interpretation of forest types
- forest structure
- environmental processes, such as salinity discharge
- ecological vegetation communities, such as coastal heathlands
- land capability classes
- remnant vegetation (roadside vegetation)
- diseased vegetation classes, such as *Eucalyptus* dieback from *Phytophthora*
- orienting and aligning a pair of overlapping aerial photographs for stereoscopic viewing
- determining north and flight line path

Positioning may include:

Key aspects include:

and may include:

- mapsheet
- flight orientation
- photography type
- focal length
- film number
- run number
- frame number
- height above sea level
- photography date

Forest attributes may include:

topographic features, such as:

- roads and tracks
- watercourses
- ridges and spurs
- saddles
- peaks and knobs

Forest management information:

derived from photo may include:

- area
- height
- species
- crown cover
- crown form
- disturbance

RANGE STATEMENT

- aspects to be considered as part of the environmental management process
- Interpretation** may include: basic principles, such as:
- absolute and relative size and shape
 - shadow
 - tone or colour
 - texture
 - pattern and location
 - association and convergence of evidence
- Guidelines** may include:
- predetermined classes
 - stratification
- Field verification** includes:
- accuracy of all mapped topographic information
 - measure of accuracy of associated base topographic or digital base map
 - spatial accuracy of strata
 - measure of accuracy of content of strata
- Maps and plans** may include:
- cadastral plans
 - topographic maps
 - locality plans
 - site plans
 - maps and plans generated through the use of geographic information systems (GIS)
- Updating** of maps and plans may be:
- manual
 - electronic (digital)
 - using data transfer technology
- Tools** may include:
- electronic data transfer technology
 - manual light tables
 - mechanical light tables, including Omnigraph, Kartoflex, Zoom Transfer Scope, Artiscopes and Sketchmaster
- Transferring data** may include:
- rescaling from one source to another
 - transferring from map to map
 - transferring from photograph to map or diapositive to map

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify tender requirements	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to preparing a <i>tender</i> are identified and followed</p> <p>1.2. <i>Relevant information</i> and protocols are obtained in line with organisational procedures</p> <p>1.3. Project specifications are identified and job scope defined in line with organisational procedures and environmental requirements</p> <p>1.4. Required <i>resources</i> and <i>capacity</i> are identified and documented in line with organisational procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with organisational requirements</p>
2. Complete tender documentation	<p>2.1. Tender is prepared in line with project specifications and timeline</p> <p>2.2. Tender information is collated and documented in required format</p> <p>2.3. Tender document is promptly disseminated to <i>appropriate personnel</i> for review and modification in line with organisational procedures</p> <p>2.4. Areas of insufficient detail are identified and corrected in line with organisational procedures</p>
3. Undertake bid estimation	<p>3.1. Bid <i>estimations</i> are detailed in the required format in line with organisational procedures</p> <p>3.2. Work is sequenced in line with project timelines, organisational procedures and environmental requirements</p> <p>3.3. Contingency plans are developed in line with</p>

ELEMENT**PERFORMANCE CRITERIA**

- organisational procedures
- 3.4. Budget approval is obtained for appropriate personnel in line with organisational requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment; interpret and evaluate tender specifications
- Communication skills sufficient to use appropriate communication and interpersonal techniques and methods with colleagues and others; interpret and convey information in written or verbal form
- Literacy skills sufficient to prepare a tender, based on the accurate assessment of tender requirements; prepare written tenders in appropriate style and format; record and report workplace information; maintain documentation
- Numeracy skills sufficient to measure, estimate and calculate time, cost, quality and quantity
- Problem solving skills sufficient to review and identify work requirements; identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing a tender
- Environmental protection requirements, including the minimisation of environmental impact and the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for preparing a tender
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Problem identification and resolution strategies, including methods for identifying omissions or areas of insufficient detail in tender documentation
- Risk assessment procedures
- Organisational workflow
- Tender formats and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can efficiently prepare a tender in line with specifications and timeframes

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to preparing a tender
- following organisational policies and procedures relevant to preparing a tender
- interpreting tender specifications to identify resource requirements and organisational capacity
- preparing tender documentation in the required format
- determining areas of insufficient detail or omissions from tender documentation and making necessary improvements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Tender may include:

- in-house
- negotiated
- open
- selective

Relevant information:

- may be from the tender supplier

and may include:

- specifications
- performance measures
- due date
- number of copies required
- format of information
- protocols

Resources may include:

- work
- time
- personnel
- equipment

Capacity may include:

- resources
- time
- other priorities
- competition
- facilities
- expertise of staff

Communication may include:

- verbal and non-verbal language
- constructive feedback

RANGE STATEMENT

- active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
- Appropriate personnel** may include:
- managers
 - supervisors
 - colleagues
 - clients
- Estimations** may be:
- verbal or written
- and may include:
- time
 - cost
 - quality
 - quantity

FPIFGM5201B Plan and manage an inventory program

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to plan and manage forest assessments, based on an inventory program. The unit includes conducting consultative processes, and monitoring and analysing the effectiveness of the program

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM5201A Plan and manage an inventory program

Application of the Unit

Application of the unit

The unit involves planning and managing an inventory program in a forest environment at a managerial level

These skills and knowledge are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan inventory program	<p>1.1. Applicable <i>occupational health and safety (OHS), environmental, legislative and organisational requirements</i> relevant to planning and managing an <i>inventory program</i> are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Timeline</i> and budget are identified and checked with <i>appropriate personnel</i></p> <p>1.4. Organisational strategic and marketing plans are reviewed and analysed to check impact on tree breeding operation</p> <p>1.5. <i>Methods</i> of measurement and frequency of assessment are identified and documented in line with site requirements</p> <p>1.6. <i>Consultative processes</i> are used to obtain input to the plan in line with site requirements</p> <p>1.7. Inventory program is planned, documented and communicated in line with site requirements</p> <p>1.8. Necessary <i>approvals</i> are sought and obtained in line with site requirements</p>
2. Implement inventory program	<p>2.1. Inventory program is implemented in line with methods, schedule, budget and legislative</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements
	2.2. Required <i>resources</i> and <i>authorisations</i> are coordinated and obtained in line with organisational and legislative requirements
	2.3. Schedule for assessment is communicated to coordinating personnel in line with organisational requirements
	2.4. <i>Communication</i> with others is established and maintained in line with OHS requirements
	2.5. <i>Documentation requirements</i> are identified and communicated in line with OHS requirements
3. Monitor assessment	3.1. <i>Monitoring points</i> are identified and adhered to in line with organisational procedures
	3.2. Assessment is <i>checked</i> to ensure compliance with environmental, OHS, organisational and legislative requirements
	3.3. Communication with coordinating personnel is maintained in line with OHS requirements
	3.4. Inventory program and assessment processes are amended as required to ensure specifications, quality and performance targets are met
4. Review assessment	4.1. Assessment is reviewed against inventory program and organisational requirements
	4.2. <i>Information</i> and data are analysed to determine effectiveness of assessment and improvements to future programs
	4.3. Recommendations for future programs are prepared, based on findings of analysis and consultation conducted
	4.4. Assessment processes are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to select sampling techniques; create sampling designs;

REQUIRED SKILLS AND KNOWLEDGE

identify species growing in the target area; identify vegetation in reference texts; recognise common diseases, pests and nutritional deficiencies

- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others; present written and verbal information to a wide range of individuals and groups
- Literacy skills sufficient to analyse qualitative and quantitative information and data; prepare a range of reports, documentation and submissions where precise meaning is required; prepare site maps and plans; use and adapt complex maps and diagrams
- Problem solving skills sufficient to demonstrate effective time and project management

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and managing an inventory program
- Environmental protection requirements, including the safe disposal of waste material, the minimisation of environmental impact, and the safe use and storage of chemicals
- Organisational and site standards, requirements, policies and procedures for planning and managing an inventory program
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Procedures for the development and implementation of a range of environmental management strategies
- Data collection and analysis methods
- Map and plan preparation techniques
- Characteristics and growth habits of local vegetation
- Identification of plant species and their ecological interactions with the environment
- Soil characteristics and topography of local area
- Use and application of appropriate survey and assessment equipment
- Statistical analysis techniques
- Sampling techniques applicable to forest assessments
- Problem identification and resolution strategies, and common fault finding techniques
- Principles of hydrology and the interaction/implications between forests/plantations and water use
- Established communication channels and protocols
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can plan and manage an inventory program

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planning and managing an inventory program
- following organisational policies and procedures relevant to planning and managing an inventory program
- planning an inventory program and forest assessment using consultative processes with colleagues and stakeholders to obtain inputs, and ensuring efficient and safe processes and timelines
- implementing an inventory program in line with documented plan and budget, and making adjustments to plan or program
- reviewing and analysing an inventory program and using findings to document improvements to future assessments
- preparing and presenting a detailed report, including costs, processes and analysis of findings of the program

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and

EVIDENCE GUIDE

environmental constraints

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements

may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination

RANGE STATEMENT

Organisational requirements may include:

- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Inventory program may be to:

- calculate the current and expected wood volume and yield within a forest
- set a monitoring process in place to enable reporting against marketing, strategic and business plans

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions
- hygiene of the area
- relevant commonwealth, state or territory, and local legislation and regulations

Timeline may be:

- critical to the productivity of the forest
- critical to the success of the program and assessment activities

Appropriate personnel may

- coordinating or operational personnel

RANGE STATEMENT

include:

- management
- colleagues
- clients
- relevant groups

Methods relate to:

- measurement and survey

and may include:

- use of geographic information systems (GIS)
- interpretation of aerial photography
- range of sampling techniques
- face-to-face meetings
- telephone
- facsimile
- written and email communication

Consultative processes may include:

and may be with:

- clients
- technical operators
- marketing groups
- coordinating or operational personnel
- colleagues
- relevant groups or bodies, such as environmental bodies; local, state or territory, and federal government bodies and agencies; internal policy groups; and labour force

Approvals:

may be required by:

- environmental bodies
- local, state or territory, and federal government bodies and agencies

and may include:

- long-term budget approvals

Resources may include:

- people
- material
- equipment and tools, including GIS and aerial photography

Authorisations may include:

- permits
- approvals
- licences relating to neighbouring sites or properties

and may relate to:

RANGE STATEMENT

- hours of operation
 - use and application of chemicals
 - the environment
- Communication** may include:
- regular communication with the operations and coordinating personnel to ensure smooth assessment processes and progress
- Documentation requirements** must be:
- clear and accurate and include:
- changes to the program or assessment process
 - performance criteria
 - supplementary approvals
 - supplementary notifications, which may involve creating or amending maps, plans, reports or forms
- Monitoring points** may be:
- time-based
 - frequency-based
- Checked** may include:
- following OHS, organisational, legislative and environmental regulations, procedures, practices and precautions
 - adherence to site environmental imperatives, specifications, quality, and performance targets
- Information** may relate to:
- and may include:
- the sample area
 - previous surveys and assessments
 - aerial photography
 - GIS data
 - previous reports
 - management information systems data
 - marketing
 - strategic and business plans and associated implementation plans
- Records and reports** may include:
- difficulties or issues faced during planning and implementing the inventory program or conducting forest assessments
 - recommendations for future work
 - results
 - costs
 - data analysis
- and may be:

RANGE STATEMENT

- manual
- a computer-based system
- other appropriate organisational communication system

FPIFGM5208B Manage road construction and maintenance

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to plan for and implement road construction and maintenance procedures. Roads may include heavy duty, all weather logging roads through to unsurfaced earth roads

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIFGM5208A Manage road construction and maintenance

Application of the Unit

Application of the unit The unit involves managing road construction and maintenance in a variety of work settings, including:

- forest environments
- agriculture
- workshops
- domestic
- nurseries
- local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan road construction and maintenance	<p>1.1. Applicable <i>occupational health and safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to managing road construction and maintenance are identified and followed</p> <p>1.2. <i>Logging</i> and <i>topography</i> details are obtained and assessed while applying <i>environmental management considerations</i></p> <p>1.3. <i>Road location</i>, design and <i>construction</i> requirements are identified and inspected to analyse costs, benefits and impact on the forest</p> <p>1.4. Timeframe for use of the road and likely weather conditions are checked</p> <p>1.5. Timber <i>extraction</i> methods and storage requirements for roads, tracks, equipment placement, falling and recovery rates, and delivery schedules are calculated and documented</p> <p>1.6. <i>Authorities</i> are consulted and approvals obtained for road development</p> <p>1.7. Formal road construction/maintenance plan is</p>

ELEMENT	PERFORMANCE CRITERIA
2. Implement road construction	<p>prepared for approval in line with site procedures and environmental requirements</p> <p>1.8. Communication with others is established and maintained in line with OHS requirements</p> <p>2.1. Road and track design and construction plan is clearly communicated to site personnel to enable preparation</p> <p>2.2. Personnel, material and equipment required for the construction are coordinated and scheduled in line with organisational guidelines</p> <p>2.3. Operational procedures for roads are planned with site personnel in line with design plan and environmental requirements</p> <p>2.4. Construction of roads and tracks is monitored and unexpected ground, water, vegetation or other environmental conditions are reported to appropriate personnel</p> <p>2.5. Technical assistance is provided to site personnel in preparing roads and tracks</p>
3. Maintain roads	<p>3.1. Roads and tracks are assessed for maintenance requirements and outcomes are recorded</p> <p>3.2. Personnel, material and equipment required for maintenance are coordinated and scheduled in line with organisational guidelines</p> <p>3.3. Site environmental conditions are adhered to in line with regulations</p> <p>3.4. Maintenance schedule for the site is organised in conjunction with operational personnel and source of equipment, taking seasonal weather conditions into consideration</p> <p>3.5. Operational staff, clients and contractors are communicated with throughout maintenance activities to ensure smooth operations</p>
4. Monitor and review road construction and maintenance	<p>4.1. Monitoring schedule is developed and adhered to in line with organisational policy and environmental requirements</p> <p>4.2. Checks are made to ensure OHS procedures are observed and followed and site environmental conditions are adhered to in line with regulations</p> <p>4.3. Checks are made in line with organisational policy to ensure that performance indicators, targets and specifications are being met and process or methods</p>

ELEMENT**PERFORMANCE CRITERIA**

are amended as required

4.4.Data and documentation from construction or maintenance activities are analysed against the plan in line with organisational guidelines

4.5.Recommendations are prepared, based on the analysis of data and feedback collected during the construction and maintenance process

4.6.Road construction and maintenance process is *recorded and reported to appropriate personnel*

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to manage road construction and maintenance
- Communication skills sufficient to obtain relevant approvals for road development; use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to coordinate and schedule resources, equipment and material; record and report workplace information; maintain documentation
- Numeracy skills sufficient to determine cost benefit analysis and environmental impact on proposed location, design and construction requirements
- Problem solving skills sufficient to identify problems; demonstrate appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing road construction and maintenance
- Environmental protection requirements, including the safe disposal of waste material, the cleaning of plant, tools and equipment, and the minimisation of environmental impact and noise
- Organisational and site standards, requirements, policies and procedures for managing road construction and maintenance
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently

REQUIRED SKILLS AND KNOWLEDGE

- Details of logging operations
- Log extraction methods
- Road construction and maintenance procedures
- Key features of road design and development
- Established communication channels and protocols
- Problem identification and resolution strategies, and common fault finding techniques
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manage road construction and maintenance in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing road construction and maintenance
- following organisational policies and procedures relevant to managing road construction and maintenance
- managing road construction and maintenance in line with work order and within prescribed organisational tolerances
- coordinating development of roads in line with organisational requirements

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Logging** may include:
- activities covering a full range of species, log sizes, falling and retention densities
 - slope and other environmental conditions
 - cable systems usage, including:
 - high lead (no skyline)
 - standing skyline and a running skyline with hauling both uphill and downhill
 - logs attached to optimise payload without exceeding the lift or haul capacity of the system
- Topography** is to include:
- map of the designated area showing terrain levels
- Environmental management considerations** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees

RANGE STATEMENT

- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles

Road location is to include:

where roads are constructed, taking into account:

- site requirements
- topographic information
- environmental considerations

Construction is to include:

development method chosen to construct roads with:

- control points
- required grades
- water crossing points and structures

Extraction is to include:

methods of removing logs from the work site with mechanical equipment and cables, considering site conditions and specific log location, in an order that minimises downtime and risk of snags, breakages and hang-ups

Authorities are to include:

- local government councils
- shires with local planning and zoning authority for a given region

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

Material may include:

- road base
- gravel
- crushed rock
- sand and bluestone
- cords and pipes for water crossings

Equipment may include:

- earthmoving equipment

Maintenance

is the process of assessing road defects and

RANGE STATEMENT

Records and reports may include:

undertaking the necessary rectification work

- road construction and maintenance operations
- difficulties or issues faced
- environmental issues
- costs
- hazards
- incidents
- equipment malfunctions
- recommendations for future work
- results

and may be:

Appropriate personnel may include:

- manual
- a computer-based system
- other appropriate organisational communication system
- supervisors
- suppliers
- clients
- colleagues
- managers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan tending operation	<p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to <i>tending operations</i> are identified and followed</p> <p>1.2. <i>Timeline</i> and budget are identified and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Environmental protection requirements</i> are identified and implemented</p> <p>1.4. <i>Operation requirements</i> are reviewed and analysed for inputs and <i>impact</i> on the overall plan in accordance with site requirements</p> <p>1.5. <i>Consultative processes</i> are used to obtain <i>input</i> to the plan in accordance with site requirements</p> <p>1.6. Tending plan is developed, documented and communicated in accordance with site requirements</p> <p>1.7. Necessary <i>approvals</i> are sought and obtained in accordance with site requirements</p>
2. Implement tending operation	<p>2.1. Tending operation is implemented in accordance with operation requirements, schedule, budget and legislative requirements</p> <p>2.2. Required resources and <i>authorisations</i> are coordinated and obtained in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	organisational and legislative requirements
	2.3. Emergency treatments and <i>hazard</i> notification procedures are implemented in accordance with legislative requirements
	2.4. Schedule for site is organised in conjunction with technical operators in accordance with organisational requirements
	2.5. <i>Communication</i> with others is established and maintained in accordance with OHS and organisational requirements
	2.6. <i>Documentation requirements</i> are identified and communicated in accordance with OHS requirements
3. Monitor tending operation	3.1. <i>Monitoring points</i> are identified and adhered to in accordance with organisational procedures
	3.2. Tending operation is checked to ensure environmental, OHS, organisational and legislative <i>compliance requirements</i> are met and documentation is completed and submitted as required
	3.3. Communication with operations supervisor is maintained in accordance with OHS and organisational requirements
	3.4. Tending operation plan and processes are amended as required to ensure specifications, quality and performance targets are met
4. Review tending operation	4.1. Tending operation is reviewed against tending operation plan and organisational requirements
	4.2. <i>Information</i> and data is analysed to determine effectiveness of tending operation and improvements to future plans
	4.3. Recommendations for future operations are prepared based on findings of analysis and consultation conducted
	4.4. Native forest tending operations are <i>recorded and reported</i> to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Communication skills sufficient to use consultative and interpersonal techniques and effectively present written and oral information to colleagues and a wide range of individuals and groups
- Literacy skills sufficient to accurately record and report workplace information and prepare a range of reports, documentation and submissions where precise meaning is required
- Numeracy skills sufficient to analyse qualitative and quantitative information and data
- Problem solving skills sufficient to demonstrate time and project management
- Planning and organisational skills to coordinate the acquisition of required resources, authorisations and approvals and to develop tending plans

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing tending operations in a native forest
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for managing tending operations in a native forest
- Impact of tending operations on forest productivity and various end products
- Biology of relevant forest health problems
- Tree growth and development
- Weed species and herbicide interactions
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Soil types and structure
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance relevant to managing tending operations in a native forest
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can manage tending operations in a native forest

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to managing tending operations in a native forest
- following organisational policies and procedures relevant to managing tending operations in a native forest
- following applicable licensing or certification requirements
- planning a tending operation using consultative processes with colleagues and stakeholders to obtain inputs, and ensure efficient and safe processes and timelines
- implementing a tending operation in line with documented plan and budget, and making adjustments to plan or operation
- reviewing and analysing the operation and use of findings to document improvements to future operations
- preparing and presenting a detailed report including costs, processes and analysis findings of the tending operation

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than

EVIDENCE GUIDE

confirmatory questions, will usually be conducted in an off-site context

- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment methods applicable to this unit may include direct observation of tasks with questioning of required knowledge and the completion of projects, assignments or written tests
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in accordance with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in accordance with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements

- legal
- organisational and site guidelines

RANGE STATEMENT

may include:

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- access and equity principles and practices
- may have the potential to impact on the organisation's public relations

Tending operations

and may be designed to:

- maintain the health of the stand
- improve productivity and long term sustainability
- provide for end product mix requirements
- manage notifiable weeds
- may be critical to the productivity of the forest, success of the operation, and on suitability for various forest products (e.g. pruning certification)

Timeline

Appropriate personnel may include:

- operations supervisor
- management
- colleagues
- clients
- relevant groups

Environmental protection requirements may include:

- soil disturbance measures
- retention tree damage
- fungal hygiene measures
- identification of habitat trees
- chemical handling and application procedures

Operation requirements may include:

- end product requirements
- stand treatment certification documentation
- contractual requirements and obligations
- environmental and public relations imperatives

RANGE STATEMENT

Impact may relate to:

- current state of the forest resource
- nature and size of the crop and non-crop species
- availability and skill level of the labour force
- face-to-face meetings
- telephone
- facsimile
- written
- email communication

Consultative processes may include:

and may be with:

- clients
- technical operators
- marketing groups
- operations supervisor
- colleagues

and relevant groups/bodies such as:

- environmental bodies
- local, State and federal government bodies and agencies
- internal policy groups
- labour force

Input may include:

- details of equipment
- methods and consumables to be used
- specifications for thinning
- weed/insect management
- stand health, pruning and tree selection
- necessary notifications of relevant groups/bodies
- specifications and quality parameters
- performance indicators

Approvals may be required by:

- environmental bodies
- local, State and federal government bodies and agencies

and may include:

- long-term budget approvals

Authorisations may include:

- permits
- approvals
- licences relating to neighbouring properties

RANGE STATEMENT

- and may relate to:
- hours of operation
 - use and application of chemicals
 - the environment
- Hazards** may refer to:
- use of chemicals
 - off-site effects
 - tools and equipment
 - dangers to the public
- Communication** will include:
- regular communication with the operations supervisor to ensure smooth operation and progress
- Documentation requirements** must be clear and accurate and may include:
- changes to the plan or process
 - supplementary approvals
 - supplementary notifications
- Monitoring points** may be time-based or frequency-based
- Compliance requirements** may include:
- OHS
 - organisational, legislative and environmental regulations procedures, practices and precautions
 - adherence to site environmental imperatives
 - specifications
 - quality
 - performance targets
- Information** may be from a variety of sources and include:
- legislation
 - forest biology
 - tree physiology
 - new technology
- Records and reports** may include:
- difficulties or issues faced during conduct of tending operation
 - recommendations for future work
 - results
 - costs
 - data analysis

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan stand nutrition	<p>1.1.Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to coordinating <i>stand nutrition</i> are identified and followed</p> <p>1.2.Site <i>environmental requirements</i> are identified and complied with</p> <p>1.3.Relevant <i>information</i> is obtained, analysed and assessed for impacts on stand nutrition planning</p> <p>1.4.<i>Method(s)</i> of ensuring adequate and appropriate level of stand nutrition is/are selected</p> <p>1.5.Measurable performance indicators, specifications and targets are determined and documented</p> <p>1.6.Required <i>approvals</i> are identified, sought and obtained from relevant authorities</p> <p>1.7.Stand nutrition <i>plan</i> and its performance indicators are clearly documented and communicated to <i>appropriate personnel</i></p>
2. Implement and monitor stand nutrition	<p>2.1.Resources required for fertiliser application are coordinated and scheduled and required <i>documentation</i> is clearly and accurately completed</p> <p>2.2.Schedule for the site is organised and liaison with relevant <i>individuals/bodies/groups</i> is conducted as required using appropriate interpersonal techniques</p> <p>2.3.Stand nutrition plan is implemented, monitored and issues are identified and addressed</p> <p>2.4.Systematic <i>checks</i> are carried out to ensure</p>

ELEMENT**PERFORMANCE CRITERIA**

- compliance requirements relevant to stand nutrition activities are adhered to
- 2.5. **Communication** with others is established and maintained in line with OHS and organisational requirements
- 2.6. Adjustments to the stand nutrition plan are made as required and communicated to appropriate personnel
- 2.7. Potential and existing risks and **hazards** in the work area are identified and controlled
- 2.8. **Limitations** are identified and assistance sought as required in line with workplace procedures
3. Monitor tending operation
- 3.1. Data/documentation from stand nutrition is assessed and evaluated to confirm techniques, methodologies and budgets are in line with the plan
- 3.2. Issues and impediments to stand nutrition activities and program costs are identified and documented
- 3.3. A cost/benefit analysis is prepared and recommendations made based on the analysis of data and identified issues
- 3.4. **Report** is prepared in the appropriate style and format and processed in line with workplace procedures
- 3.5. Results of stand nutrition are clearly communicated and/or disseminated to appropriate personnel
- 3.6. Workplace records and documentation are completed and **maintained** in line with workplace procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to interpret and act on written information including maps, plans, reports and aerial photography and to recognise common diseases, pests, and nutrition deficiencies

REQUIRED SKILLS AND KNOWLEDGE

- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues and others including landholders and internal/external bodies and groups and to supervise operational staff and/or contractors to achieve specific organisation outcomes
- Literacy skills sufficient to accurately complete data and write reports and submissions in appropriate style and format and to accurately record and maintain information
- Numeracy skills sufficient to provide and interpret data, costings and calculations relating to time, financial information, weights, volumes and lengths
- Problem solving skills sufficient to issues and limitations to stand activities and demonstrate appropriate response procedures and to assess and extract critical information from various sources (legislation, manufacturer's recommendations, standards, codes of practice)
- Planning and organisational skills sufficient to coordinate and schedule operations and to identify and acquire relevant approvals

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for coordinating stand nutrition
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for processes for coordinating stand nutrition
- Fertiliser technology and options
- Nutrition requirements of target species
- Biology of target species
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Soil types and structure
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance relevant to coordinating stand nutrition
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can coordinate stand nutrition

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS, environmental and organisational policies and procedures, relevant to coordinating stand nutrition
- following organisational policies and procedures relevant to coordinating stand nutrition
- effective communication and interpersonal techniques with colleagues and others
- determining measurable performance indicators, specifications and targets and developing a stand nutrition plan within specified budgetary guidelines
- coordinating and scheduling of resources and managing the work of others to achieve specific outcomes
- monitoring the provision of stand nutrition and ensuring relevant legal, OHS and environmental requirements are complied with
- documenting results from stand nutrition operation and reporting preparation for dissemination to relevant personnel

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or

EVIDENCE GUIDE

Australian Standards requirements

- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment methods applicable to this unit may include direct observation of tasks with questioning of required knowledge and the completion of projects, assignments or written tests
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may

- legal
- organisational and site guidelines

RANGE STATEMENT

include:

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- access and equity principles and practices
- used to improve the marketability of the stand

Stand nutrition may be:

Environmental requirements may relate to:

- hygiene of the area
- relevant national, State and local legislation and/or regulations

Information may include:

- aerial photo interpretation
- ground surveys

Method(s) may include:

- pruning using mechanical or hand tools
- the use of chemicals or biological agents

Approvals may be:

- required where the use of chemicals or biological agents is intended

Plan may detail:

- organisational terminology
- guidelines
- budgets
- policies and timelines
- internal memos
- resources (people, materials, equipment)

Appropriate personnel may include:

- operational personnel
- clients
- colleagues
- sub-contractors
- line management
- relevant external authorities and agencies

Documentation may include:

- maps
- plans

RANGE STATEMENT

- reports
 - forms
 - neighbouring landholders
- Individuals/bodies/groups** may include:
- Checks** may ensure that:
- relevant organisational OHS procedures, practices, policies and precautions are observed and followed
 - site environmental requirements comply with relevant national, State and local legislation and/or regulations
 - performance indicators, targets and specifications are met
 - the quantity, cost and provenances collected accord with plan specifications
 - required organisational documentation is completed clearly and accurately
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Hazards** may include:
- the use of chemicals and/or biological agents
 - infrastructure in the vicinity of stand, such as powerlines
- Limitations** may relate to:
- job role and responsibilities
 - own competency level
 - industry requirements
 - own understanding of risk identification processes
 - own interpretation of legislation, regulations and procedures
- Report** may document:
- difficulties or issues faced
 - recommendations for future work
 - results
 - costs
 - data analysis

RANGE STATEMENT**Maintenance** may include:

- collation (of information or documentation)
- interpreting information in a way relevant to workplace requirements
- organising and maintaining accurate records
- utilising a full range of information media (written/printed, oral, electronic, visual display units/personal computers)

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan propagation	<p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to managing <i>genetic resources</i> are identified and followed</p> <p>1.2. Genetic resource policies and marketing plans for the organisation are reviewed and analysed for impact on the <i>propagation</i> and <i>tending</i> planning process</p> <p>1.3. Quantities, timing, <i>provenances</i>, <i>species</i> and desirable <i>characteristics</i> are selected in line with organisational policies and guidelines</p> <p>1.4. Specifications and targets for production quantities, timing, provenances and species are specified and documented in line with organisation guidelines</p> <p>1.5. Site <i>environmental protection measures</i> are monitored in line with relevant legislation and regulations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p>
2. Implement genetic resource management	<p>2.1. Method of propagation is selected in line with local environment and organisation guidelines</p>

ELEMENT	PERFORMANCE CRITERIA
plan	<p>2.2. Permits or licences required for production, collection and management of genetic resources are obtained</p> <p>2.3. <i>Operational activities</i> including hygiene, propagation bed preparation and environmental considerations are directed</p> <p>2.4. People, materials, <i>tools and equipment</i> required for propagation are coordinated and scheduled in line with organisational guidelines</p> <p>2.5. Genetic resource management plan and propagation strategy are coordinated to establish the plant stock</p> <p>2.6. Nursery staff are informed of the plan, propagation methods and tending requirements</p>
3. Monitor and review genetic resource management plan	<p>3.1. Environmental protection measures for propagation, soil and drainage are inspected for correct implementation</p> <p>3.2. Regular communication is conducted with operational staff, clients and contractors during the propagation phase to ensure smooth operation and progress</p> <p>3.3. Operational activities are <i>monitored</i> and reviewed for potential improvements</p> <p>3.4. Propagation method is reviewed and diagnosed for potential improvements</p> <p>3.5. Genetic resource management results are <i>recorded and reported</i> in line with site and organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Plant propagation skills for a range of propagation techniques
- Communication skills and interpersonal techniques sufficient to interact

REQUIRED SKILLS AND KNOWLEDGE

appropriately with colleagues and others in the workplace

- Literacy skills sufficient to accurately record and maintain information relating to genetic resource management
- Numeracy skills sufficient to schedule resources, materials and equipment required for propagation
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures
- Planning and organisational skills sufficient to efficiently and safely implement a genetic resource management plan, and organise and obtain required permits or licences

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing genetic resources
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for managing genetic resources
- Propagation and planning
- Genetic resources and tending strategies
- Regeneration principles and methods
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Soil types and structure
- Nursery hygiene and sterilisation techniques
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance relevant to managing genetic resources
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can manage genetic resources within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to managing genetic resources
- following organisational policies and procedures relevant to managing genetic resources
- effective communication and safe work practices
- managing genetic resources in line with regulations and organisational requirements
- coordinating personnel to follow planning, communications and scheduling for genetic resource management activities

- equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Genetic resources** are to include:
- sexual and asexual plant species
- Propagation** is to include:
- the natural process of breeding new plants from the parent stock using seeds, cuttings, grafting, tissue cultures and layering
- Tending** is to include:
- the process of regularly checking the plants and the propagation method to aid and promote plant growth
- Provenances** are to include:
- the place of origin that the plant or propagation method comes from
- Species** may include:
- native species of one or more types
 - imported species
- Characteristics** may include:
- growth rate
 - branch angle
 - branch height
 - timber density
- Environmental protection measures** may include:
- fungal and insect control measures
- and action to limit impacts on:
- selected forest vegetation
 - habitat
 - soil and water features
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Operational activities** may include:
- propagation
 - planting and tending of the genetic resources
- Tools and equipment** may include:
- conveyors
 - mixing equipment

RANGE STATEMENT

- refrigeration units
- cool store, mobile beds
- elevated growing platforms
- automated seeding equipment
- fork lifts
- tractors
- spray equipment
- hand tools
- glasshouses
- covered beds
- irrigation systems
- hoses
- plumbing fittings
- trolleys
- seedling pots or trays
- artificial media
- potting mix
- soil
- sterilisation chamber
- personal protective equipment and clothing such as visibility vest, safety boots, spray masks, safety glasses
- should be performed at key stages of plant development

Monitored

and may include:

- health and condition of seedlings
- water
- nutrients
- weeds
- rate of development

Records and reports

may be detailed reports outlining the management of genetic resources and regeneration processes and outcomes including:

- difficulties
- recommendations for future work
- results
- costs
- data analysis
- evaluation of outcomes
- information on health and condition of

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan tending operation	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to plantation <i>tending operations</i> are identified and followed</p> <p>1.2. <i>Timeline</i> and budget are identified and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Operation requirements</i> are reviewed and analysed for inputs and <i>impact</i> on the overall plan in line with site requirements</p> <p>1.4. <i>Consultative processes</i> are used to obtain <i>input</i> to the plan in line with site requirements</p> <p>1.5. Tending plan is developed, documented and communicated in line with site requirements</p> <p>1.6. Necessary <i>approvals</i> are sought and obtained in line with site requirements</p>
2. Implement tending operation	<p>2.1. Tending operation is implemented in line with plan, schedule, budget and legislative requirements</p> <p>2.2. Required <i>resources</i> and <i>authorisations</i> are coordinated and obtained in line with site and legislative requirements</p> <p>2.3. Emergency treatments and <i>hazard</i> notification procedures are implemented in line with legislative</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements
	2.4. Schedule for site is organised in conjunction with technical operators in line with site requirements
	2.5. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements
	2.6. <i>Documentation requirements</i> are identified and communicated in line with OHS requirements
3. Monitor tending operation	3.1. <i>Monitoring points</i> are identified and adhered to in line with organisational procedures
	3.2. <i>Compliance requirements</i> are checked to ensure tending operation is compliant with environmental, OHS, organisational and legislative requirements and documentation is completed and submitted as required
	3.3. Communication with operations supervisor is maintained in line with OHS and organisational requirements
	3.4. Tending operation plan and processes are amended as required to ensure specifications, quality and performance targets are met
4. Review tending operation	4.1. Tending operation is reviewed against documented plan and site requirements
	4.2. <i>Information</i> and data is analysed to check effectiveness of tending operation and improvements to future plans
	4.3. Recommendations for future operations are prepared based on findings of analysis and consultation conducted
	4.4. Plantation tending operations are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to accurately prepare a range of reports, documentation and submissions where precise meaning is required
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to present written and oral information to a wide range of individuals and groups
- Numeracy skills sufficient to analyse qualitative and quantitative information and data
- Problem solving skills sufficient to demonstrate time and project management
- Planning and organisational skills sufficient to coordinate and schedule operations and to coordinate required resources and authorisations

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for coordinating tending operations in a plantation
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for coordinating tending operations in a plantation
- Problem identification and resolution
- Procedures for the development and implementation of a range of environmental management strategies
- Impact of tending operations on forest productivity and various end products
- Biology of relevant forest health problems
- Tree growth and development
- Weed species and herbicide interactions
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Soil types and structure
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance relevant to coordinating plantation tending operations
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can coordinate plantation tending operations

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to coordinating tending operations
- following organisational policies and procedures relevant to coordinating tending operations
- planning a tending operation using consultative processes with colleagues and stakeholders to obtain inputs, and ensuring efficient and safe processes
- safely implementing a tending operation in line with documented plan and budget, and making adjustments to plan or operation
- reviewing and analysing operation and use of findings to document improvements to future operations
- preparing and presenting a detailed report including costs, processes and analysis findings of the tending operation

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements

EVIDENCE GUIDE

- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment methods applicable to this unit may include direct observation of tasks with questioning of required knowledge and the completion of projects, assignments or written tests
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- Codes of Practice
- environmental management requirements including waste disposal, recycling and re-use guidelines

Environmental requirements

may include:

and may be related to:

- road, river/stream reserves

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity

RANGE STATEMENT

Organisational requirements may include:

- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Tending operations

- may have the potential to impact on the site's public relations

and may be designed to:

- maintain the health of the stand
- improve productivity and long-term sustainability
- provide for end product mix requirements
- manage notifiable weeds

Timeline may be critical to:

- the productivity of the forest
- success of the operation
- suitability for various forest products (e.g. pruning certification)

Appropriate personnel may include:

- operations supervisor
- management
- colleagues
- clients
- relevant groups

Operation requirements may include:

- end product requirements
- stand treatment certification documentation
- contractual requirements and obligations

RANGE STATEMENT

Impact may relate to:

- environmental and public relations imperatives
- current state of the forest resource
- nature and size of the crop and non-crop species
- availability and skill level of the labour force
- face-to-face meetings
- telephone
- facsimile
- written and email communication

Consultative processes may include:

and may be with:

- clients
- neighbours
- technical operators
- marketing groups
- operations supervisor
- colleagues
- relevant groups/bodies such as environmental bodies
- local, State and federal government bodies and agencies
- internal policy groups
- labour force

Input may include:

- details of equipment
- methods and consumables to be used
- specifications for thinning
- weed/insect management
- stand health, pruning and tree selection
- necessary notifications of relevant groups/bodies
- specifications and quality parameters
- performance indicators

Approvals may be required by:

- environmental bodies
- local, State and federal government bodies and agencies

and may relate to:

- long-term budget

Resources may include:

- people
- materials and equipment

Authorisations may include:

- permits

RANGE STATEMENT

- approvals
- licences relating to neighbouring properties

and may relate to:

- hours of operation
- use and application of chemicals
- the environment

Hazards may include:

- use of chemicals
- off-site effects
- tools and equipment
- dangers to the public

Communication may include:

- regular communication with the operations supervisor to ensure smooth operation and progress

Documentation requirements

must be clear and accurate and may include:

- changes to the plan or process
- supplementary approvals
- supplementary notifications

Monitoring points

- should be performed at key stages of the process

Compliance requirements may include:

- OHS
- organisational
- legislative and environmental regulations
- procedures
- practices and precautions
- adherence to site environmental imperatives
- specifications
- quality
- performance targets

Information

may be from numerous sources and include:

- legislation
- forest biology
- tree physiology
- new technology

Records and reports may relate to:

- difficulties or issues faced during conduct of tending operation
- recommendations for future work
- results
- costs

RANGE STATEMENT

- data analysis

and may be:

- manual
- using a computer-based system
- other appropriate organisational system

FPIFGM5214A Develop a native forest regeneration plan

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to plan and implement the regeneration or revegetation of an area of native forest for timber production. It includes conducting consultative processes and evaluation of the effectiveness of the regeneration plan against organisational marketing, strategic and business objectives

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions

There may be Codes of Practice to be followed in different forest types and forest areas

This unit replaces FPIFGM5206A Develop a native forest regeneration plan

Application of the Unit

Application of the unit

This unit involves developing a native forest regeneration plan in a forest environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--------------------------------|--|
| 1. Prepare regeneration plan | <p>1.1. Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to <i>native forest regeneration</i> are identified and followed</p> <p>1.2. <i>Relevant plans</i> and budgets are reviewed, analysed and considered for impact on regeneration planning</p> <p>1.3. <i>Method of regeneration</i> and trees are selected in line with broad policies and site requirements</p> <p>1.4. <i>Consultative processes</i> are used to obtain input to the plan in line with site requirements</p> <p>1.5. Regeneration plan is developed, documented and communicated in line with site requirements</p> <p>1.6. Necessary <i>approvals</i> are sought and obtained in line with site requirements</p> |
| 2. Implement regeneration plan | <p>2.1. Regeneration plan is implemented in line with schedule, budget and legislative requirements</p> <p>2.2. Required <i>resources</i> and <i>authorisations</i> are coordinated and obtained in line with site and legislative requirements</p> <p>2.3. Schedule for site is organised in conjunction with</p> |

ELEMENT**PERFORMANCE CRITERIA**

- operational personnel in line with site requirements
- 2.4. **Communication** with others is established and maintained in line with OHS and organisational requirements
- 2.5. **Documentation** is completed in a format suitable for analysis in line with OHS requirements
3. Monitor forest regeneration
- 3.1. **Monitoring points** and processes are determined and adhered to in line with site procedures
- 3.2. Forest regeneration is checked to ensure environmental, OHS, organisational and legislative **compliance requirements** are met, and documentation is completed and submitted as required
- 3.3. Regeneration plan and processes are amended as required to ensure performance indicators, targets and specifications are met
4. Review forest regeneration
- 4.1. Forest regeneration is reviewed against regeneration plan and site requirements
- 4.2. **Information** and data is analysed to determine effectiveness of forest regeneration and improvements to future plans
- 4.3. Recommendations for future regeneration are prepared based on findings of analysis and consultation
- 4.4. Regeneration planning processes are **recorded and reported** to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to accurately interpret aerial photography and to accurately identify common diseases, pests and nutritional deficiencies
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately prepare a range of reports, documentation and submissions where precise meaning is required
- Numeracy skills sufficient to efficiently analyse qualitative and quantitative information and data
- Problem solving skills sufficient to demonstrate effective time and project planning and management
- Planning and organisational skills sufficient to coordinate and obtain required resources and authorisations and coordinate and schedule regeneration plans

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for developing a native forest regeneration plan
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for developing a native forest regeneration plan
- Biology of the target species
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Seed collecting and distribution seasons for the target species
- Organisational marketing, business and strategic plans
- Original and potential ecosystems for the target area
- Common diseases, pests and nutritional deficiencies
- Soil types and structure
- A range of forest regeneration techniques
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance relevant to developing a native forest regeneration plan
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence and demonstrate that they can safely and efficiently plan, implement and review a native forest regeneration operation

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to native forest regeneration and compliance with organisational policies and procedures relevant to forest regeneration
- planning a native forest regeneration operation using consultative processes with colleagues and stakeholders to determine performance criteria, specifications and targets, and ensure efficient and safe processes and timelines
- safely implementing forest regeneration activities in line with documented plan and budget, and making adjustments to the plan or operation
- reviewing and analysing operation and using findings to document improvements to future operations
- preparing a detailed report including costs, processes and analysing findings of the regeneration operation

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to

EVIDENCE GUIDE

Method of assessment

- undertaking work applicable to this unit
- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment methods applicable to this unit may include direct observation of tasks with questioning of required knowledge and the completion of projects, assignments or written tests
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal

Organisational requirements may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance

RANGE STATEMENT

- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Native forest regeneration

- will be in line with organisational marketing plan and local environmental imperatives

Relevant plans may include:

- marketing plans
- strategic plans
- business plans

Method of regeneration may include:

- prescription burning
- infill planting to support directional natural regeneration
- pathways (such as after gap harvesting)
- direct seeding
- crop tree retention

Consultative processes may include:

- face-to-face meetings
- telephone
- facsimile
- written and email communication

and may be with:

- clients
- neighbours
- relevant groups/bodies such as environmental bodies
- local, State and federal government bodies and agencies
- local interest/lobby groups
- friends' groups
- representatives of industry bodies

Approvals may be required by:

- environmental bodies
- local, State and federal government bodies and agencies

and may refer to:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to implement pollination techniques and to recognise common diseases, pests and nutrition deficiencies
- Communication skills sufficient to use appropriate consultative and interpersonal techniques with colleagues and others, and to effectively present written and oral information to a wide range of individuals and groups
- Literacy skills sufficient to prepare a range of reports, documentation and submissions where precise meaning is required
- Numeracy skills sufficient to analyse qualitative and quantitative information and data
- Problem solving skills sufficient to demonstrate time and project management
- Planning and organisational skills sufficient to develop a breeding plan and to acquire necessary approvals, resources and authorisations

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for breeding trees
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for breeding trees
- Data collection and analysis methods
- Flowering times for target species
- Reproduction techniques for target species
- Pollination techniques
- Desirable features for selection of breeding stock
- Genetic characteristics of target species
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Soil types and structure
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance relevant to breeding trees
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Procedures for recording and reporting workplace records and information

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- heritage and traditional land owner issues

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal

Organisational requirements

RANGE STATEMENT

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Tree breeding

- may be to improve the yield and form of trees through improved breeding

Environmental protection measures may relate to:

- hygiene of the area
- relevant national, State and local legislation and regulations
- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles

and may include:

- contingencies for modifying operations during wet or other adverse weather conditions

Timeline may be critical to:

- the productivity of the forest
- success of the operation
- suitability for various forest products (e.g. pruning certification)

Appropriate personnel may include:

- operations supervisor
- management
- colleagues
- client
- relevant groups

RANGE STATEMENT

Consultative processes may include:

- face-to-face meetings
- telephone
- facsimile
- written and email communication

and may be with:

- clients
- technical operators
- marketing groups
- operations supervisor
- colleagues
- relevant groups/bodies such as environmental bodies
- local, State and federal government bodies and agencies
- internal policy groups
- labour force

Operational requirements may include:

- end product requirements
- stand treatment certification documentation
- contractual requirements and obligations
- environmental and public relations imperatives
- current state of the forest resource

Breeding characteristics may include:

- growth rate
- tree form
- branch angle
- fibre length
- fibre orientation
- extractive content
- salt tolerance
- drought tolerance
- density

Reproduction techniques may include:

- self and cross pollination
- cuttings
- grafting
- layering
- stolons
- suckers

Approvals may be required by:

- environmental bodies
- local, State and federal government bodies and agencies

RANGE STATEMENT

- and may refer to:
- long-term budget approvals
- Resources** may include:
- people
 - materials
 - equipment
- Authorisations** may include:
- permits
 - approvals
 - licences relating to neighbouring properties
- and may refer to:
- hours of operation
 - use and application of chemicals
 - the environment
- Communication** may include:
- regular communication with the operations supervisor to ensure smooth operation and progress
- Documentation requirements** must be clear and accurate and may include:
- changes to the plan or process
 - supplementary approvals
 - supplementary notifications
- Monitoring points**
- should be performed at key stages of the process
- Compliance requirements** may include:
- OHS
 - organisational, legislative and environmental regulations, procedures, practices and precautions
- and adherence to:
- site environmental imperatives
 - specifications
 - quality
 - performance targets
- Information** may be from numerous sources and include:
- legislation
 - forest biology
 - tree physiology
 - new technology
- Records and reports** may refer to:
- difficulties or issues faced during planning and implementation of tree breeding operation
 - recommendations for future work

RANGE STATEMENT

- results
- costs
- data analysis

and may be:

- manual
- using a computer-based system
- other appropriate organisational communication system

FPIFGM5216A Manage coupe planning

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to manage the planning of forest coupe establishment, harvesting and regeneration

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

There may be Codes of Practice applicable to coupe planning in some areas and for some forest types

This unit replaces FPIFGM5209A Manage coupe planning

Application of the Unit

Application of the unit This unit involves managing coupe planning in a forest environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan coupe establishment	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to coupe planning are identified and followed</p> <p>1.2. <i>Local authority</i> coverage, <i>land owning</i> and <i>boundaries</i> are established and assessed</p> <p>1.3. Coupe location including map and grid references is checked</p> <p>1.4. Land use <i>zoning</i> is identified or applied for</p> <p>1.5. <i>Planning permits</i> are applied for</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p>
2. Plan coupe harvesting	<p>2.1. Forest type, available <i>species</i> and <i>topography</i> are analysed and documented in line with plan and site procedures</p> <p>2.2. <i>Gross area</i> of coupe is calculated and <i>net area</i> to be <i>harvested</i> is established</p> <p>2.3. <i>Volume</i> estimates are calculated and reported</p>

ELEMENT	PERFORMANCE CRITERIA
3. Plan coupe regeneration	<p>2.4. <i>Operational activities</i> including site preparation, environmental considerations and access are planned</p> <p>2.5. Harvesting and <i>cartage</i> contracts are let for tender and issued and cartage routes are set</p> <p>2.6. Schedule for harvesting is produced, checked and communicated</p> <p>3.1. <i>Regeneration</i> method is selected to best suit the <i>site conditions</i></p> <p>3.2. <i>Environmental protection measures</i> for the landscape, soil and drainage are planned and instigated</p> <p>3.3. <i>Seeding process</i> or seedling planting regime is created and scheduled</p> <p>3.4. <i>Silviculture</i> systems are planned and scheduled</p> <p>3.5. Management of coupe planning is <i>recorded and reported</i> to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to select regeneration methods, create and schedule seeding processes or seedling regimes and planning silviculture systems
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to record and report workplace information, maintain documentation and read and interpret maps
- Numeracy skills sufficient to estimate and calculate volume, gross and net areas
- Problem solving skills sufficient to identify problems and demonstrate appropriate response procedures
- Planning and organisational skills sufficient to organise and obtain required permits and to plan and implement coupe establishment, harvesting and regeneration processes

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing coupe planning
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for managing coupe planning
- Coupe establishment and planning
- Harvesting methodologies
- Regeneration principles and methods
- Hydrology and hydrological principles
- Botany, including plant identification and classification skills
- Ecology and ecological interactions
- Soil types and structure
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance for coupe planning
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manage coupe planning within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS, environmental and organisational policies and procedures, relevant to managing coupe planning
 - following organisational policies and procedures relevant to managing coupe planning
 - effective communication and safe work practices
 - managing coupe planning in line with regulations and organisational requirements
 - planning for the establishment, harvest and regeneration of forest coupes in line with site conditions, regulations and organisational requirements
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to comply with relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment methods applicable to this unit may include direct observation of tasks with questioning of required knowledge and the completion of projects, assignments or written tests
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related

EVIDENCE GUIDE

conditions (real or simulated) and require evidence of process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and

RANGE STATEMENT

substances

- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Local authorities are to include:

- local government councils or shires with local planning and zoning authority for a given region

Land owning is to include:

- the process of notifying and obtaining owner approval to commence harvesting operations

RANGE STATEMENT

- Boundaries** are to include:
- designated forest allotments owned privately, by government or by the forestry organisation; boundaries fall within survey pegs for the land allocated
- Zoning** is to include:
- designated forest coupes owned privately, by government or by the forestry organisation with boundaries that fall within survey pegs for the land allocated for forest growing and harvesting operations under local authority allocation
- Planning permits** are to include:
- permits granted by local authorities for forest growing and harvesting operations to take place based on approved plans submitted to local government complying with all required regulations
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Species** may include:
- native species of one or more types
 - imported species
- Topography** is to include:
- a map of the designated area showing terrain levels
 - contours
 - elevations
 - slopes
 - gullies and adjoining land parcels
 - rainfall
 - soil type
- Gross area** is to include:
- the total area mass of the planned forest coupe
- Net area** is to include:
- the total area of forest available for harvesting excluding streamside
 - buffers
 - filter strips
 - habitat protection areas

RANGE STATEMENT

- rainforest protection
 - excluded areas
 - roads
 - tracks and landings
- Harvesting** is to include:
- the methods of cutting and extracting trees and logs from designated areas
- Volume** is to include:
- the estimated return of cubic metres or tonnes of timber for each of sawlogs, pulpwood or firewood
- Operational activities** may include:
- coupe map details
 - site preparation
 - streamside buffers
 - filter strips
 - contours
 - gullies
 - crossing points
 - habitat protection
 - rainforest protection
 - flora and fauna protection
 - landscape protection
 - excluded areas
 - rubbish removal
 - permanent roads
 - temporary roads
 - landings
 - dumps
 - snig tracks
 - forwarding tracks
 - adjoining land
 - wet weather restrictions
 - fire protection requirements
- Cartage** is to include:
- the use of log truck hauling operators to remove felled logs from the site
- Regeneration** is to include:
- the return of a coupe to a revegetated state
 - protecting its landscape
 - soil and drainage
- Site conditions** should include:
- rainfall
 - soil type
 - topography

RANGE STATEMENT

Environmental protection measures may include:

action to limit impacts on:

- selected forest vegetation
- fauna
- habitat
- soil and water features

Seeding process is to include:

- natural seed-fall following burning of log debris

Silviculture is to include:

- the growth management of a forest and tending to the trees to maximise growth

Records and reports may include:

- producing detailed records and reports outlining the planning of coupe establishment, harvesting and regeneration processes
- and may be manual, using a computer-based system or another appropriate organisational communication system

FPIFGM5217A Promote plantations as a sustainable form of land use

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to develop, implement monitor and review a program to promote to stakeholders and the general community, the environmental and sustainability benefits of plantations compared to other forms of land use

General workplace legislative and regulatory requirements apply to this unit. Compliance with licensing, regulatory or certification requirements including Chain of custody certification may be required in various jurisdictions

Application of the Unit

Application of the unit

The unit involves promoting plantations such as agroforestry for land rehabilitation to stakeholders and to the general community including landholders and local councils

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------|---|
| 1. Identify target markets | 1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to developing and managing a <i>promotions program</i> are identified and followed
1.2. Potential of program to appeal to <i>stakeholders</i> is identified in terms of benefits and costs
1.3. Potential audiences of programs are evaluated
1.4. Benefits of and needs for promotions program are clarified |
| 2. Plan a promotions program | 2.1. Program purpose and objectives are defined
2.2. Promotions program is developed with appropriate outcomes in consultation with key stakeholders
2.3. <i>Timeline</i> and budget are identified and checked with <i>appropriate personnel</i>
2.4. Range of <i>promotional modes and methods</i> to reach different target sectors are selected and documented in the plan
2.5. Range of tools and <i>resources</i> appropriate to program modes and methods are developed
2.6. Necessary <i>approvals</i> are sought and obtained |
| 3. Implement | 3.1. Promotions program is implemented in line with |

ELEMENT	PERFORMANCE CRITERIA
promotions program	<p>modes, methods, schedule, budget and legislative requirements</p> <p>3.2. Required resources and <i>authorisations</i> are obtained and coordinated in line with organisational requirements</p> <p>3.3. Schedule for program is communicated to coordinating personnel</p> <p>3.4. Tools and resources are provided to coordinating personnel</p> <p>3.5. Processes to monitor the quality of the program are established</p>
4. Monitor and review promotions program	<p>4.1. Program is <i>reviewed</i> to ensure compliance with organisational and legislative requirements</p> <p>4.2. <i>Communication</i> with coordinating personnel is maintained</p> <p>4.3. Program is amended as required, to ensure objectives, quality and performance targets are met</p> <p>4.4. <i>Information</i> and data from completed program are analysed to determine effectiveness of program</p> <p>4.5. Recommendations for future programs are prepared based on findings of analysis and consultation conducted</p> <p>4.6. Program processes are <i>recorded and reported</i> to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to identify species suitable for plantation establishment for a range of soil types and climates; determine appropriate establishment techniques for a range of conditions; determine appropriate silvicultural regimes for a range of plantation types
- Communication skills sufficient to use appropriate consultative, communication and interpersonal techniques with colleagues, stakeholders and community groups
- Literacy skills sufficient to accurately prepare a range of reports, documentation and submissions where precise meaning is required; present written and oral

REQUIRED SKILLS AND KNOWLEDGE

information to a wide range of individuals and groups; use and adapt complex maps and diagrams

- Numeracy skills sufficient to monitor and maintain timelines and budgets; analyse qualitative and quantitative information and data
- Problem solving skills sufficient to demonstrate time and project management
- Planning and organisational skills to coordinate the acquisition of required resources, authorisations and approvals and to develop a promotions program

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for promoting plantations as a sustainable form of land use
- Environmental protection requirements, including the safe disposal of waste material
- Organisational, site and management standards, requirements, policies and processes for developing and managing a plantation promotions program
- Environmental risks and hazards
- Role of wood or waste products in generating renewable energy through biomass
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Species suitable for plantation establishment for a range of soil types and climates
- Types of plantation design appropriate to achieve a range of objectives
- Plantation establishment techniques
- Silvicultural regimes suitable for a range of plantation types
- Effects of plantation on soils, water quality, water quantity and biodiversity compared to other land uses
- Levels of use of fertilisers, herbicides, insecticides and other chemicals compared to other land uses
- Socioeconomic impacts of plantations on rural communities
- Use and demand for plantation products nationally and internationally
- Market opportunities for plantation products, including carbon storage
- Harvesting methods suitable for a range of plantation types
- Economic benefits of plantations compared to other land uses
- Fire protection and suppression in plantations
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can develop, implement, monitor and review a plantation promotions program

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to developing, implementing, monitoring and reviewing a plantation promotions program
- following organisational policies and procedures relevant to developing, implementing, monitoring and reviewing a plantation promotions program
- developing a promotions program using consultative processes with colleagues and stakeholders to obtain inputs, and ensuring efficient and safe processes and timelines
- implementing a promotions program in line with documented plan and budget, and making adjustments to plan or program as required
- monitoring, reviewing and analysing promotions program and using findings to document improvements to future programs
- preparing and presenting a detailed report including costs, processes and analysing the findings of the program

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in

EVIDENCE GUIDE

an off-site context

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment methods applicable to this unit may include direct observation of tasks with questioning of required knowledge and the completion of projects, assignments or written tests and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- access and equity principles and practices

Promotions program:

must communicate the benefits of tree plantations as an alternative land use, to people including:

- landholders
- local government (councils)
- general public

and may be:

- used to provide advice on a range of matters relating to plantation management including:
 - objectives of plantation establishment
 - species selection
 - plantation designs
 - establishment techniques
 - silvicultural regimes
 - maintenance
 - fire protection
 - market opportunities

Stakeholders may include

- individuals and groups both inside and outside the organisation who have some direct interest in the organisation's conduct, actions, products and services, including:
 - customers

RANGE STATEMENT

- employees at all levels of the organisation
- government
- investors
- key personnel within the organisation, and specialists outside it who may have particular technical expertise
- local community
- other organisations
- regulators
- suppliers

Timelines may be:

- critical to the success of the program

Appropriate personnel may include:

- coordinating or operational personnel
- management
- colleagues
- clients
- relevant groups

Promotional modes and methods:

- relate to promotional activities

and may include:

- literature
- self-help material
- field demonstrations
- field inspections
- lectures
- workshops
- field days
- brochures
- information sessions
- individual consultations
- multimedia material

Resources may include:

- people
- materials
- equipment

Approvals may be:

required by:

- environmental bodies
- local, State/Territory and federal government bodies and agencies

and may include:

- long-term budget approvals

RANGE STATEMENT

- Authorisations** may include:
- permits, approvals and licences relating to use of resource material
- and may relate to:
- use of existing plantations for demonstration purposes
- Reviewing** may include:
- checking compliance with:
 - OHS, organisational, legislative and environmental regulations
 - specified procedures, practices and precautions
 - reporting on specifications, quality, performance targets
 - checking that documentation is completed and submitted as required
- Communication** may include:
- regular communication with the operations and coordinating personnel to ensure smooth progress of the promotions
- Information** may relate to:
- extent and methods of promotions used
 - numbers and categories of people exposed to the promotions
 - numbers of enquiries received about plantation establishment before and after the promotions program
 - numbers and types of new plantations established before and after the promotions program
 - direct feedback from people exposed to the promotions program
- Records and reports** may include:
- difficulties or issues faced during development and implementation of the promotions program
 - recommendations for future work
 - results
 - costs
 - data analysis
- and may be:
- manual
 - using a computer-based system or another appropriate communication system

FPIFGM5219 Undertake carbon stock sampling of forests and plantations

Modification History

Version	Code and title of equivalent unit of competency
1.0	FPIFGM5218A Undertake carbon storage sampling of forests and plantations. Equivalent

Unit Descriptor

Unit descriptor This unit describes the outcomes required to assess forests and plantations for current and future carbon stocks, including the use of growth modelling techniques to estimate future stocks.

Application of the Unit

Application of the unit The unit involves assessing forests and plantations for current and future carbon stocks in a variety of work settings, including:

- native forest environment
- hardwood or softwood plantation
- agroforestry and farm forestry.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit. Subject to enterprise requirements specific licences/certification may be required in the following areas:

- Forest sustainability certification
- Chain of custody certification.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for carbon stock sampling activities	<p>1.1. Applicable <i>work/occupational health and safety (WHS/OHS), environmental, legislative and organisational requirements</i> relevant to planning and managing a carbon stock sampling activity are identified and followed</p> <p>1.2. Purpose, objectives and scope of sample collection activity are confirmed from discussions with stakeholders</p> <p>1.3. Desktop study of existing forests and plantations is conducted</p> <p>1.4. <i>Measurement program</i> is designed</p> <p>1.5. Sampling site locations are confirmed and where required, <i>approval</i> is obtained for site access</p> <p>1.6. <i>Characteristics of sites</i> are evaluated for impact on sampling and testing method</p> <p>1.7. Human and physical <i>resource requirements</i> are determined and arranged</p>
2. Prepare for carbon stock sampling activities	<p>2.1. Surveying activity and contractors are arranged</p> <p>2.2. Forests and plantations are located using site maps</p>

ELEMENT	PERFORMANCE CRITERIA
	and plans
	2.3.Areas of forests and plantations for sampling are identified
	2.4.WHS/OHS hazards are identified, risks assessed, and the controls implemented are reported
	2.5.Administrative requirements are completed and approvals obtained
3. Conduct carbon stock sampling collection	3.1.Safe working environment is established and monitored throughout sampling activities
	3.2.Sampling activities are coordinated at sites prior to commencement of and during the work activity
	3.3.Sampling equipment is inspected and tested to ensure functionality, safety and compliance with manufacturer instructions
	3.4.Surveys and sampling are conducted in line with site, enterprise and legislative requirements
	3.5.Hazards and emergency situations are recognised and responded to in line with site and legislative requirements
	3.6.Results of samples and surveys are <i>recorded</i> in line with sampling plan
	3.7. <i>Sampling</i> activities are monitored on a regular basis against sampling plan and required modifications or improvements are implemented
4. Interpret results	4.1.Forest carbon stocks are estimated from data collected
	4.2. <i>Assessment</i> is reviewed against assessment program and organisational requirements
	4.3. <i>Information</i> and data are analysed to determine effectiveness of assessment and improvements to future programs
	4.4.Recommendations for future programs are prepared based on findings of analysis, and consultation is conducted
	4.5.Assessment processes are recorded and reported to appropriate personnel
5. Use growth models to predict biomass and carbon stocks	5.1.Appropriate growth model is selected
	5.2.Information and data from assessments are used in growth models to predict biomass growth and carbon stocks
	5.3.Data is analysed to determine if predicted forest carbon stocks are comparable to available data

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills to select sampling techniques and create sampling designs; identify species growing in the target area; and identify components of the forest/plantation that contain carbon stocks
- Communication skills to use appropriate consultative, communication and interpersonal techniques with colleagues and others; and present written and oral information to a wide range of individuals and groups
- Literacy skills to analyse qualitative and quantitative information and data; prepare site maps and plans; and accurately prepare a range of reports, documentation and submissions where precise meaning is required
- Numeracy skills to use growth models to predict growth; and use and adapt complex maps and diagrams
- Problem-solving skills to demonstrate time and project management

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for undertaking carbon stock sampling of forests and plantations
- Environmental protection requirements, including the safe disposal of waste material and minimising environmental impact
- Organisational, site and management standards, requirements, policies and processes for undertaking carbon stock sampling of forests and plantations
- Environmental risks and hazards associated with undertaking carbon stock sampling of forests and plantations
- Using energy effectively and efficiently
- Using materials effectively and efficiently
- Procedures for the development and implementation of a range of environmental management strategies
- Data collection and analysis methods
- Map and plan preparation techniques
- Characteristics and growth habits of local vegetation
- Soil characteristics and topography of local area
- Use and application of appropriate survey and assessment equipment
- Statistical analysis techniques applicable to biomass and carbon assessments
- Sampling techniques applicable to biomass and carbon assessments
- Use and application of growth models

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence and demonstrate that they can plan and oversee an assessment of forests and plantations for carbon stocks, and interpret the results for use in growth models to predict carbon stocks.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to planning, implementing, monitoring and reviewing an assessment of forests and plantations for carbon stocks, and using growth models to predict carbon stock growth
- following organisational policies and procedures relevant to planning, implementing, monitoring and reviewing an assessment of forests and plantations for carbon stocks, and using growth models to predict carbon stock growth
- planning an assessment program using consultative processes with colleagues and stakeholders to obtain inputs, and ensuring efficient and safe processes and timelines
- safely implementing an assessment program in line with documented plan and budget, and making adjustments to program as required

EVIDENCE GUIDE

- monitoring the conduct of the sampling collection
 - interpreting the results of the sampling program and preparing and providing an estimate of carbon stocks
 - using data from assessments to predict biomass growth and carbon stocks
 - checking predicted data against new assessment data to modify growth models to better represent the forests or plantations being assessed.
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be

EVIDENCE GUIDE

transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS/OHS requirements:

- are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - personal protective equipment and clothing
 - safety equipment
 - first aid equipment
 - fire fighting equipment
 - hazard and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices, including required actions relating to forest fire
 - manual handling, including shifting, lifting and carrying

RANGE STATEMENT

Environmental requirements:

- may relate to:
 - hygiene of the area
 - commonwealth, state or territory and local legislation and regulations
- may include consideration of:
 - ground growth
 - canopy
 - general forest health
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
 - contingencies for modifying operations during wet or other adverse weather conditions

Legislative requirements:

- are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - Australian standards
 - WHS/OHS procedures
 - the environment
 - relevant industry codes of practice
 - duty of care

Organisational requirements may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- WHS/OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling)

RANGE STATEMENT

- and re-use guidelines)
- Measurement program:**
- is used to calculate current and expected biomass and carbon stocks of:
 - trees (above and below ground)
 - other vegetation
 - litter layer
 - soil
 - wood products
 - may include:
 - putting a monitoring process in place to enable reporting against marketing, strategic and business plans
 - incorporating the use of growth models to predict biomass growth and carbon stock growth
- Approvals:**
- may be required by:
 - environmental bodies
 - local, state, territory and commonwealth government bodies and agencies
 - may include
 - long-term budget approvals
 - authorisations, such as:
 - permits
 - licences relating to neighbouring sites or properties, hours of operation, use and application of chemicals, the environment
- Characteristics of sites** may include:
- range of operations
 - conditions
 - hazards
 - difficult/sensitive environments
- Resource requirements** may include:
- people
 - materials and equipment
 - tools, including geographic information systems and aerial photography
- Records:**
- may include:
 - difficulties or issues faced during planning and implementation of the assessment program
 - recommendations for future work

RANGE STATEMENT

- results, costs, data analysis
 - may be:
 - manual
 - using a computer-based system or other appropriate communication system
- Sampling techniques:**
- relate to measurement and survey
 - may include:
 - use of geographic information systems
 - interpretation of aerial photography
- Assessment** may include checking:
- compliance with WHS/OHS, organisational, legislative and environmental regulations, procedures, practices and precautions
 - adherence to site environmental imperatives
 - specifications, quality, performance targets
 - documentation is completed and submitted as required
- Information:**
- relates to the sample area
 - may include:
 - previous surveys and assessments
 - aerial photography
 - geographic information systems data
 - previous reports
 - management information systems data
 - marketing, strategic data
 - business plans and associated implementation plans

FPIFGM6201B Plan a biochar storage system for carbon capture and storage

Modification History

Version	Comments
Version 1.1	Released with FPI11 Training Package Version 2. Minor amendment to application. Equivalent to FPIFGM6201A Plan a biochar storage system for carbon capture and storage.
Version 1	First released with FPI11 Training Package Version 1.

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to research requirements to confirm feasibility and design, and plan for a bio-char carbon storage system using forest or forestry related biomass.

Application of the Unit

Application of the unit

The unit involves implementing bio-char storage systems at senior management or project management levels in a variety of work settings including:

- forest environment (native and plantation environment)
- saw mill
- wood chip mill
- veneer mill
- board/plywood mill
- timber treatment plants
- downstream processing of timber
- timber and wood products production

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Assess bio-char carbon storage system feasibility

- 1.1. Applicable ***Occupational Health and Safety (OHS), environmental, legislative and organisational requirements*** relevant to planning a bio-char system for carbon capture and storage are identified and followed
- 1.2. Research into ***bio-char carbon storage systems*** is undertaken
- 1.3. Organisational need for a bio-char carbon storage system is explored
- 1.4. Context for the bio-char carbon storage system is investigated and clarified through consultation with

ELEMENT	PERFORMANCE CRITERIA
	<i>users</i>
	1.5. <i>User requirements</i> are identified and documented
	1.6. Environmental parameters are identified
	1.7. Bio-char carbon storage system options are investigated and installation, operation and maintenance requirements are identified
	1.8. Recommendations from the feasibility study are formulated
2. Determine facility requirements	2.1. <i>Feed stock</i> for the bio-char process is selected
	2.2. Amount of feed stock that can be obtained for <i>pyrolysis</i> is calculated
	2.3. <i>Method of pyrolysis</i> is selected based on feed stock and appropriate outputs
	2.4. Cost of transportation of liquid and solid by-products is estimated
	2.5. Amount of material to be processed is assessed
	2.6. Ability to feed into the power grid is considered
	2.7. <i>Process conditions</i> are determined
3. Design a bio-char carbon storage facility	3.1. Facility is designed to provide optimal conditions for carbon storage
	3.2. Legal requirements or government regulations impacting on the proposed facility are identified and addressed
	3.3. <i>Design specification</i> is documented and relevant information is communicated through plans, standard operating practice (SOP) manuals, records or reports
	3.4. Overall operation and output of the proposed facility is reviewed to ensure that it meets the long-term directions and purposes of the organisation and is economically sustainable
4. Plan implementation of bio-char carbon storage facility	4.1. <i>Construction plan</i> is developed according to accepted design principles, organisational requirements and commissioning or start-up SOP
	4.2. Work team's knowledge and skills are evaluated against the construction plan and works schedules, and the requirement for external expertise is determined and obtained
	4.3. Material, resource and supply provision requirements are determined and documented from work plans, schedules and design specifications
	4.4. Labour requirements are estimated based on work

ELEMENT**PERFORMANCE CRITERIA**

plans and schedules

4.5. Operating expense budget is determined indicating all input and output costs applicable to the proposed facility

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to implement a bio-char carbon storage system
- Communication skills sufficient to use appropriate communication and interpersonal techniques with stakeholders; utilise technical and theoretical concepts in operational applications
- Literacy skills sufficient to record and report workplace information; maintain documentation and collect data
- Numeracy analytical skills sufficient to analyse relevant workplace information and collect data
- Mathematical skills in relation to estimating volumes (gross and net area volumes), flow rate schedules and product ratios
- Problem solving skills sufficient to identify problems and appropriate response procedures in abstract and applied settings

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning a bio-char storage system for carbon capture and storage
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning a bio-char storage system for carbon capture and storage
- Environmental risks and hazards
- Minimising environmental impact
- Using energy effectively and efficiently
- Using material effectively and efficiently
- OHS standards for managing a bio-char facility
- Industry standards and codes of practice (including mandated and voluntary)

REQUIRED SKILLS AND KNOWLEDGE

- Carbon marketing principles
- Environmental protection monitoring systems associated with a bio-char facility
- Quality management systems designed for chemical production
- Fundamental principles of chemistry applied to the nature and stability of bio-char outputs
- Established communication channels and protocols including notification of authorities
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can design and plan for a bio-char carbon storage system

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to designing and planning for a bio-char carbon storage system
- following organisational policies and procedures relevant to designing and planning for a bio-char carbon storage system
- determining the feasibility of a bio-char carbon storage facility
- determining bio-char carbon storage facility requirements
- designing a bio-char carbon storage facility
- planning the implementation of a bio-char carbon storage facility

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in accordance with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in accordance with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Organisational requirements** may include:
- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - procedural manuals
 - continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use, maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Bio-char carbon storage system** will be based upon pyrolysis and may include requirements for:
- feed stock characteristics
 - input volumes
 - output characteristics
- Users** may include:
- harvesting operations
 - forest owners
 - sawmill operators
 - timber processing and manufacturing facilities
 - industries supplying feedstock
 - agriculturists
 - government land managers
 - energy consumers
 - participants in carbon market markets
 - other users of by-products
 - neighbours
 - government departments and councils

RANGE STATEMENT

- User requirements** may include:
- organisational staff and contractors
 - by-products of a pyrolysis system
 - waste management options
 - carbon sequestration priorities
 - land management priorities
 - development priorities
 - investor interests
 - financial returns
 - environmental outputs
 - social responsibility
 - sustainability
 - input usage
- Feed stock** may include:
- wood products, including:
 - harvesting residues
 - green mill residue
 - dry mill residue
 - residue from other wood fibre processing operations
 - agricultural waste
 - crops grown for the consumption of bio-char plants
 - manure and waste from intensive animal farming systems
 - municipal waste
- Pyrolysis** is the thermochemical decomposition of organic material at elevated temperatures in the absence of oxygen
- Method of pyrolysis** may include:
- slow pyrolysis
 - fast pyrolysis
 - intermediate pyrolysis
 - carbonisation
 - gasification
- Process conditions** may include:
- temperature
 - residence time
 - heating rate
 - feed stock preparation
- Design specifications** may include:
- designated component or system number
 - size, volume and footprint area
 - production requirements, including:

RANGE STATEMENT

- tonnage
 - timing
 - production characteristics
 - construction materials of the facility
 - construction method
 - equipment and resources
 - location
 - budget
 - environmental constraints
- Construction plan** may include:
- designated tasks
 - order of activities
 - specific structures or components
 - location
 - date and time tasks are to be undertaken
 - expected time required to completed activities
 - standard for completed activities
 - materials, supplies, tools, equipment or other resources required
 - person in charge
 - other members of work team and their roles, responsibilities and skills
 - preferred supplier list and resources required by external workers or tradespeople
 - non-conformance or incident/fault reporting procedures
 - contingency plan to address staffing and equipment supply problems
 - costs and budget details
 - manufacturers' guidelines or instructions
 - maintenance schedule for particular items of equipment
 - routine maintenance procedures
 - hazard identification, risk assessment and risk control measures
 - OHS procedures
 - environmental impact control measures
 - monitoring and reporting requirements and procedures

FPIFGM6203 Manage sustainable tree inventory

Modification History

Version	Code and title of equivalent unit of competency
1.0	Equivalent to FPIFGM6202A Manage tree inventory for sustainable tree management

Unit Descriptor

Unit descriptor This unit describes the outcomes required to develop a tree inventory plan to manage an inventory of forestry timber assets.

Application of the Unit

Application of the unit The unit mainly applies to people who manage forests for enterprises but may also apply to people who have responsibility for sustainable tree management in urban or rural enterprises.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

General workplace legislative and regulatory requirements apply to this unit, however there are no specific licensing or certification requirements at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct risk assessment for managing tree inventory	1.1. Applicable <i>work/occupational health and safety</i> (WHS/OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to managing tree inventory for sustainable tree management are identified and followed 1.2. Nature of <i>resource</i> and <i>site characteristics</i> are identified 1.3. <i>Enterprise requirements</i> and <i>enterprise outputs</i> are identified 1.4. <i>External influences</i> are researched and assessed 1.5. <i>Risk</i> and potential <i>outcomes</i> are identified
2. Use developed risk assessment to support development of a tree inventory plan	2.1. Sustainable tree management requirements are researched and analysed 2.2. Appropriate <i>stakeholders</i> are consulted and support obtained for the development of a tree inventory plan 2.3. Management approval is obtained for identified inventory management approach
3. Prepare tree inventory plan for sustainable forest management	3.1. <i>Administrative tools, physical resources</i> and <i>recording methodology</i> are identified 3.2. Forest estate is identified 3.3. Necessary human resources are identified 3.4. <i>Financial requirements</i> are forecast 3.5. <i>Quality assurance</i> system is established

ELEMENT	PERFORMANCE CRITERIA
4. Manage the implementation of tree inventory plan	<p>3.6. <i>Communication plan</i> is established</p> <p>4.1. Action is taken to ensure participating stakeholders are clear about their responsibilities and the plan requirements</p> <p>4.2. Support is provided to stakeholders to ensure the quality of expected outcomes and objectives are met</p> <p>4.3. Record keeping systems are maintained</p> <p>4.4. Plans for monitoring finances and resources are implemented and monitored</p> <p>4.5. Review of risk management is undertaken as required to ensure outcomes are met</p> <p>4.6. Review of plan outcomes and objectives is undertaken</p>
5. Review tree inventory plan	<p>5.1. Data is collected and analysed</p> <p>5.2. Variations from plan are identified and investigated</p> <p>5.3. Appropriate stakeholders are consulted about desired and actual outcomes</p> <p>5.4. Outcomes and processes are reviewed against tree inventory plan</p> <p>5.5. Lessons learned are documented and reported within the organisation</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Research, technical, planning and organisational skills to manage a sustainable tree inventory
- Technical skills to undertake surveys and map information; and interpret data generated from manual and electronic surveying and mensuration
- Management skills to manage databases, prepare a tree inventory plan, undertake appropriate consultation, and undertake risk assessment
- Communication skills to use appropriate communication and interpersonal techniques with stakeholders
- Literacy skills to record and report workplace information, maintain documentation, and collect data
- Numeracy analytical skills to analyse relevant workplace information and

REQUIRED SKILLS AND KNOWLEDGE

collected data

- Problem-solving skills to identify problems and appropriate response procedures

Required knowledge

- Applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for managing a sustainable tree inventory
- Environmental protection requirements, including the safe disposal of waste material and minimising environmental impact
- Organisational and site standards, requirements, policies and procedures for managing a sustainable tree inventory
- Environmental risks and hazards associated with managing a sustainable tree inventory
- Role of wood or waste products in generating renewable energy through biomass
- Using energy effectively and efficiently
- Using materials effectively and efficiently
- WHS/OHS in relation to operations
- Database management and document control systems
- Relevant species behavioural characteristics
- Silvicultural practices associated with management objectives
- Key sustainability indicators
- Mensuration theory
- Inventory tools and their application
- Trigonometry associated with surveying and tree measuring
- Established communication channels and protocols, including notification of authorities
- Problem identification and resolution strategies
- Types of tools and equipment, and procedures for their safe use and maintenance
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently manage a sustainable tree inventory.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to managing a sustainable tree inventory
- following organisational policies and procedures relevant to developing and managing a tree inventory plan in line with sustainable tree management principles
- gaining support for the development of a tree inventory plan in line with sustainable tree management principles
- preparing a tree inventory plan in line with sustainable tree management principles
- managing the implementation of a tree inventory plan
- reviewing a tree inventory plan in meeting organisational and sustainable tree management requirements
- communicating the plan to all stakeholders.

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

- application of required knowledge
- Assessment may be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS/OHS requirements:

- are to be in line with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices, including required actions relating to forest fire
- manual handling, including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

- are to be in line with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - Australian standards
 - WHS/OHS procedures
 - the environment
 - relevant industry codes of practice
 - duty of care

Organisational requirements may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- continuous improvement processes and standards
- WHS/OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Resource may include:

- species identification
- size
- age and class

RANGE STATEMENT

- condition
 - forest or land area
- Site characteristics** may include:
- elevation
 - slope
 - orientation
 - neighbouring estates
 - microclimate
 - rainfall
 - soil type
- Enterprise requirements** may include:
- quality policy
 - environmental policy
 - cost-benefit or net present value analyses
 - management objectives
- Enterprise outputs** may include:
- solid timber
 - chip
 - carbon storage
 - nature reserve
 - streetscapes
 - community forestry
 - recreational use
- External influences** may include:
- international forestry and environmental standards
 - Australian forestry and environmental standards
 - state, territory and local legislation and subordinate legislation
 - advisory standards and codes of practice
 - land tenure and access
 - neighbouring tenure and access
 - habitat
 - cultural and heritage sites
 - agriforestry arrangements
 - fire management
 - data availability
 - human resource skills and availability
- Risk** may include:
- biological
 - pests and diseases
 - weather/climate change
 - economic risk
 - erosion

RANGE STATEMENT

- fire
 - market failure
 - natural disaster
 - sabotage
 - water
 - structural failure
- Outcomes** may include:
- established growth rates
 - established volumes
 - forecasted outputs
 - forecasted sustainability
 - monitored sustainability
 - preserved forest sustainability
- Stakeholders** may include:
- shareholders or investors
 - customers
 - contractors
 - operational staff or contractors
 - administrative staff or contractors
 - technical staff or contractors
 - professional staff or contractors
 - government
 - community
- Administrative tools** may include:
- computer hardware and software
 - filing systems
 - field templates
 - operational manual
 - land access information
 - gantt charts
 - flow charts
- Physical resources** may include:
- measuring/diameter tapes
 - dataloggers and laptops
 - log sheets
 - compass
 - clinometer
 - height sticks
 - prisms
 - mobile GPS
 - maps
 - survey and title data
 - survey equipment
- Recording methodology** may
- dataloggers

RANGE STATEMENT

include:

- log sheets
- manual or electronic data transfer
- analytical techniques and formulae
- radio/UV/laser advanced technology
- digital dataloggers and laptop computers
- desk or field surveys
- testing and calibration records

Financial requirements may include:

- budget and forecast financials
- appropriate allocations to field and desk activities
- time-adjusted forecasts
- management overhead

Quality assurance may include:

- data collection and submission protocols
- data verification protocols
- documented analytical protocols
- documented and controlled system
- testing and calibration protocols

Communication plan may include:

- accessibility
- organisational chart
- consultation
- directives
- monitoring procedures
- recording and reporting procedures
- time management
- emergency procedures
- contingency procedures
- confidentiality

FPIHAR2203B Hook up felled logs using cables (choker)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to fasten choker cables around logs for yarding from the cutting area to the landing. The unit includes assisting with line shifts

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIHAR2203A Hook up felled logs using cable (choker)

Application of the Unit

Application of the unit The unit involves the hook up of felled logs using cables (choker) in a forest or farm forest environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for <i>choker setter</i> operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to hooking up felled logs using cables (choker) are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be extracted are identified and assessed for safe working conditions and <i>environmental protection measures</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Choker setter and <i>cable operations</i> activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Hook up logs	<p>2.1. Specific logs for next turn is attended prior to return of butt rigging in line with planned operation</p> <p>2.2. <i>Stability</i> of logs to be extracted is monitored and</p>

ELEMENT**PERFORMANCE CRITERIA**

- precautions are taken against movement in line with the logging code of practice
- 2.3. Position of logs to be extracted is assessed with regard to haul line, **hook up point** and likely movement
- 2.4. Positioning of **butt rigging** is directed and controlled using signals and strawlines to facilitate planned hook ups
- 2.5. Slack is pulled out for **chokers and grapple ropes** to allow safe hook up
- 2.6. Chokers or grapples are set close to the end of the logs
- 2.7. Area surrounding logs is vacated prior to extraction signal, clear of possible log release
- 2.8. Hook up process and equipment faults are **reported** to the **rigging slinger**
3. Assist with line shifts
- 3.1. All logs to be hauled with existing line position is cleared before **line shift** is initiated
- 3.2. **Stumps are notched** in line with code requirements for the rigging method to be used
- 3.3. Slack is pulled in on all lines prior to release of existing rigging
- 3.4. **Rigging components** are dismantled from the existing line, checked and set up on the new line
- 3.5. Obstructions which may cause binding or damage during hauling are moved as required
- 3.6. Rigging slinger is assisted with rigging of spars, tail trees and intermediate supports

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately notch stumps; effectively set up and dismantle rigging components

REQUIRED SKILLS AND KNOWLEDGE

- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for hooking up felled logs using cables (choker)
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for hooking up felled logs using cables (choker)
- Characteristics of trees
- Log extraction methods
- Cable operation techniques
- Rigging and choking techniques and signal systems
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently perform choker setter operations to recover

EVIDENCE GUIDE

felled logs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to hooking up felled logs using cables (choker)
- following organisational policies and procedures relevant to hooking up felled logs using cables (choker)
- the ability to perform choker setter operations to recover felled logs in line with the work order and within prescribed organisational tolerances
- the ability to assist in shifting lines in line with the hook tenders instructions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to

EVIDENCE GUIDE

access and correctly interpret and apply the required knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use)

RANGE STATEMENT

guidelines)

Choker setters

hook up the logs at the felling site

Work order is to include:

- instructions for the choker setter operations to recover felled logs from the work site

and may include:

- type
- size
- length
- quantity
- grade

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs is to include:

- the finished product or trunk of a tree after trimming and cross cutting has occurred

and may be:

- hardwood or softwood
- for production or non-production purposes

Environmental protection measures may include:

- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles
- contingencies for modifying operations during wet or other adverse weather conditions

Equipment may include:

- rigging equipment

RANGE STATEMENT

and is to include:

- Cable operations** may include:
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine
 - activities covering a full range of species, log sizes, falling and retention densities, slope, other environmental conditions
 - use of cable systems including high lead (no skyline), standing skyline and a running skyline with hauling both uphill and downhill
 - logs attached optimising payload without exceeding the lift or haul capacity of the system

- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices

Stability is the physical stability of the logs in-situ, that it is safe to hook up and not likely to roll off a rock, move on other logs or slide down the hillside

Hook up points are usually at the end of log whereby the choker setter secures the choker cable around the log and secures the end to a bell (sliding fastener) to form a noose

Butt rigging is the sliding rig or tow which the choker and grapple ropes connect to

Chokers and grapple ropes are the steel wire ropes used to hook up logs ready for cable extraction

- Reporting** may include:
- hook up methods or problems
 - tree type
 - size
 - length
 - diameter
 - inspection
 - quality outcomes
 - hazards

RANGE STATEMENT

- Rigging slinger** role includes:
- incidents or equipment malfunctions
 - deciding what logs to take out first and being responsible for getting the log to the landing without breaking it
 - directing the choker setter personnel in hooking up log
 - transmitting signals to and from the yarder

Line shifts are the moving of rigging lines from one area of operation to a new area

Stump notching is the process for securing rigging components, cables and ropes

- Rigging components** may include:
- strawlines
 - blocks
 - sheaves
 - ropes
 - shackles
 - pins
 - skyline
 - tail rope
 - lines
 - straps
 - mobile tail anchors
 - spars
 - intermediate supports
 - bridling

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for chaser operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to performing landing duties (<i>chaser</i>) are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be extracted are identified and assessed for safe working conditions and <i>environmental protection measures</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Chaser and <i>cable operations</i> activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Land and unhook logs	<p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. Logs entering <i>landing</i> area are monitored and the</p>

ELEMENT**PERFORMANCE CRITERIA**

- yarder* assisted to place them using signals in line with the cable logging code of practice
- 2.3. Logs are checked to have at least two thirds of their length on the landing before release
- 2.4. **Stability** of logs is checked and adjusted when **chokers or grapple ropes** are slackened
- 2.5. Chokers or grapples are removed, strawlines coiled and **butt rigging** checked and adjusted in line with directions from the yarder operator
- 2.6. Landing area is maintained within industry standards to enable safe and clear log, equipment and personnel movement
- 2.7. Chaser process and equipment faults are **reported** to the yarder in line with site procedures
3. Assist with line shifts
- 3.1. All logs to be hauled with existing line position are cleared before **line shift** is initiated
- 3.2. **Stumps are notched** in line with code requirements for the rigging method to be used
- 3.3. Slack is pulled in on all lines prior to release of existing rigging
- 3.4. **Rigging components** are dismantled from the existing line, checked and set up on the new line
- 3.5. Obstructions which may cause binding or damage during hauling are moved as required
- 3.6. **Rigging slinger** is assisted with rigging of spars, tail trees and intermediate supports

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately notch stumps; effectively set up and dismantle rigging components
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to estimate, measure and calculate log lengths and time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for performing landing duties (chaser)
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for performing landing duties (chaser)
- Characteristics of trees
- Log extraction methods
- Cable logging techniques
- Rigging and chasing techniques and signal systems
- Industry standard lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for splitting	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to conducting mobile splitting operations are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>blocks</i> to be <i>split</i> are identified and assessed for safe working conditions</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Splitting activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Split timber	<p>2.1. <i>Hydraulic splitter</i> is positioned and secured in line with site procedures</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Vertical or horizontal splitting operations are selected and tested</p> <p>2.4. Timber blocks pre-cut to fit within the hydraulic splitter are positioned and secured</p> <p>2.5. Timber is split into sizes which suit standard fireplaces in line with site procedures</p> <p>2.6. Split timber is stacked or loaded for <i>transportation</i></p> <p>2.7. Split timber that does not meet size requirements is set aside for recycling or re-use in line with site procedures</p> <p>2.8. Splitting processes and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
3. Conduct operator maintenance	<p>3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. Splitter is checked for blunt or damaged condition in line with site procedures</p> <p>3.3. Components are removed, maintained, adjusted and replaced in line with manufacturer's recommendations</p> <p>3.4. Hydraulic splitter set-up is assessed and adjusted to suit splitting conditions</p> <p>3.5. Splitter is kept clear of timber shards and debris and checked to ensure it meets relevant standards prior to use</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate a mobile splitter
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work

REQUIRED SKILLS AND KNOWLEDGE

requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for conducting mobile splitting operations
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting mobile splitting operations
- Characteristics of trees and timber defects
- Hydraulic splitting procedures, operation and safety and condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the splitting and despatch of split timber from the work site

and may include:

- type
- size
- length
- quantity
- grade

RANGE STATEMENT

- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Blocks** are timber which has been cross cut into disks or lengths which fit within the hydraulic splitter
- Split** is the process of using the mobile splitter in a horizontal or vertical splitting position to split timber blocks into two or more pieces with hydraulic pressure
- Equipment** may include:
- mobile hydraulic splitters
 - specific safety attire
 - maintenance tools and equipment
- and is to include:
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices
- Hydraulic splitter** is a mobile splitting machine which is towable behind a vehicle and is powered by hydraulics
- Pre start-up checks** are conducted to ensure:
- equipment has been set-up correctly
 - systems are performing accurately and operating to optimum performance
- Transportation** may include:
- trailers
 - utes
 - trucks

RANGE STATEMENT

- Records and reports** may include:
- timber type
 - size
 - length
 - diameter
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
 - and may be compiled manually or by using a computer-based system or another appropriate organisational communication system

FPIHAR2206B Operate a mobile chipper/mulcher

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to operate a mobile chipping/mulching unit to clean up after felling operations and chip excess branches and timber refuse

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIHAR2206A Operate a mobile chipper/mulcher

Application of the Unit

Application of the unit The unit involves operating a mobile chipper/mulcher in a forest and forest products setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for mobile chipping/mulching

- 1.1. Applicable *Occupational Health and Safety* (OHS), *environmental*, *legislative* and *organisational requirements* relevant to operating a mobile chipper/mulcher are identified and followed
- 1.2. *Work order* is reviewed and checked with *appropriate personnel*
- 1.3. Type and quantity of *timber refuse* to be *chipped/mulched* are identified and assessed for safe working conditions
- 1.4. Timber refuse assessed as not suitable for chipping/mulching is set aside for recycling or re-use in line with site procedures
- 1.5. *Equipment* is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations
- 1.6. Chipping/mulching activities are planned in line with site procedures, environmental requirements
- 1.7. *Communication* with others is established and maintained in line with OHS requirements

ELEMENT	PERFORMANCE CRITERIA
2. Chip/mulch timber	<p>2.1. Chipping/mulching unit is positioned, secured and set up in line with manufacturer's specifications</p> <p>2.2. Pre start-up checks are carried out on equipment in line with site requirements</p> <p>2.3. Timber refuse is fed into the chipper/mulcher at a rate applicable to the capacity of the machinery in line with applicable safe handling techniques</p> <p>2.4. Timber refuse is chipped to the chip sizes set on the chipping unit and in line with the work order</p> <p>2.5. Chipping/mulching processes and equipment faults are recorded and reported to the appropriate personnel</p>
3. Conduct operator maintenance	<p>3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. Chipper/mulcher is checked for blunt or damaged condition</p> <p>3.3. Components are removed, maintained, adjusted and replaced in line with manufacturer's recommendations</p> <p>3.4. Chipper/mulcher set-up is assessed and adjusted to suit chipping conditions</p> <p>3.5. Chipper/mulcher is kept clear of foreign matter and checked to ensure it meets relevant standards prior to use</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operating a mobile chipper/mulcher
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work

REQUIRED SKILLS AND KNOWLEDGE

requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a mobile chipper/mulcher
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a mobile chipper/mulcher
- Characteristics of trees and timber defects
- Chipping/mulching procedures
- Mobile chipper/mulcher operation and safety
- Chipper/mulcher condition assessment
- Social/community benefit of uses for chipped/mulched timber
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently operate a mobile chipper/mulcher within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include

EVIDENCE GUIDE

demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to operating a mobile chipper/mulcher
- following organisational policies and procedures relevant to operating a mobile chipper/mulcher
- operating a mobile chipper/mulcher in line with the work order and within prescribed organisational tolerances
- conducting operator maintenance on a mobile chipping unit

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements** may include:
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the chipping/mulching and despatch of chipped/mulched timber refuse from the work site
- and may include:
- type

RANGE STATEMENT

- size
- length
- quantity
- grade

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Timber refuse may include:

- branches
- tree heads
- bark
- other timber waste

Chipping/mulching

is the process of converting timber refuse into varying chip sizes using mechanised chipping/mulching units

Equipment may include:

- mobile chipping/mulching units
- specific safety attire
- maintenance tools and equipment

and is to include procedures for equipment lock-out, such as protecting operators and co-workers from accidental injury by isolating the machine

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Chipping/mulching unit may include:

- a truck mounted chipping/mulching unit or trailer mounted chipping/mulching unit feeding into a truck or other form of transportation

RANGE STATEMENT

and is usually petrol driven, with high powered spinning cutters which shred timber refuse into chips/mulch

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately and operating to optimum performance

Capacity may include:

- the capacity of the machinery to cope with certain size diameters of branch
- the speed by which waste is fed into the chipper/mulcher

Chip sizes

may vary in size, dependent on the customer or work order and the capability of the chipper/mulcher to set chip sizes

Records and reports may include:

- timber type
- size
- outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be compiled manually or by using a computer-based system or another appropriate organisational communication system

Foreign matter may include:

- contamination of chip
- stones
- rocks
- metal
- other foreign matter which may blunt the cutters or affect operation of the chipper/mulcher

FPIHAR2207A Trim and cut harvested trees

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to trim and cut harvested (felled) trees with a chainsaw for commercial production. The unit also includes equipment maintenance

General legislative, regulatory and workplace requirements apply to this unit; in some jurisdictions there may be licensing requirements related to the application of this unit

This unit replaces FPIHAR2201B Trim and cross cut harvested trees

Application of the Unit

Application of the unit

The unit involves trimming and cutting harvested (felled) trees with a chainsaw for commercial production, in a variety of work settings including a forest environment, as applicable to the unit

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for trimming and cutting	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative, organisational requirements</i> and manufacturer's specifications relevant to trimming and cutting harvested <i>trees</i> are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> and enterprise environmental management systems are identified and adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Job requirements</i> are reviewed and checked with appropriate personnel</p> <p>1.4. <i>Trimming</i> and cutting activities are planned in line with site procedures</p> <p>1.5. Cutting procedures to achieve optimum utilisation of tree to be cut are identified</p> <p>1.6. <i>Tools and equipment</i> are selected appropriate to job requirements and checked for operational effectiveness in line with organisational procedures and manufacturer's recommendations</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p>

ELEMENT	PERFORMANCE CRITERIA
2. Visually assess trees	<p>2.1. Environmental requirements are identified and used to plan the cutting of each tree</p> <p>2.2. Tree, location and stability are assessed for conditions likely to affect safety of trimming and cutting activities</p> <p>2.3. Tree is visually assessed for defects, grade and recovery status</p> <p>2.4. Trees are assessed for extraction and transport method suitability</p> <p>2.5. Trees unable to be cut safely are identified and referred to appropriate personnel</p>
3. Plan cutting	<p>3.1. Tree is moved or stabilised for safe cutting in line with site standards and regulations</p> <p>3.2. Cutting pattern is selected to optimise time, maximise volume and quality of recovery in line with assessment and finished tree specifications</p> <p>3.3. Sequence of cuts is planned to maintain control of cut sections and minimise cutting problems</p> <p>3.4. Cutting positions selected are measured and marked in line with job requirements and industry standard lengths</p> <p>3.5. Debris is cleared from the work area to allow safe access and prevent saw damage or injury in line with OHS requirements</p>
4. Conduct trimming and cutting	<p>4.1. Pre start-up checks are carried out on equipment in line with site requirements</p> <p>4.2. Movement and whereabouts of other personnel is monitored and work is modified to be in line with OHS regulations</p> <p>4.3. Tree section on each side of planned cut is secured and potential movement is assessed and planned</p> <p>4.4. Saw is operated to cut tree and cutting technique is adjusted in response to movement and condition of the tree</p> <p>4.5. Cut is completed once initiated, minimising capping and splitting, in line with job requirements</p> <p>4.6. Butts are square cut, accessible branches and knots trimmed, and head of tree removed in line with job requirements</p>

ELEMENT	PERFORMANCE CRITERIA
5. Conduct equipment <i>maintenance</i>	<p>4.7. Logs are prepared for extraction in line with site requirements</p> <p>4.8. Trimming and cutting <i>records</i> are prepared and problems reported to the appropriate personnel</p> <p>5.1. Equipment is inspected on completion of trimming and cutting activities</p> <p>5.2. Damaged saws and cutting attachments are identified and dealt with according to site procedures and manufacturer's recommendations</p> <p>5.3. Chain and other components are removed, cleaned, maintained, adjusted or replaced in line with manufacturer's recommendations</p> <p>5.4. Tools and equipment are maintained in line with OHS requirements and manufacturer's recommendations</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools and equipment and safely trim and cut harvested trees with a chainsaw
- Assessment skills sufficient to visually assess tree defects, grade and recovery status
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to review and accurately identify work requirements and to locate, record and report information
- Numeracy skills sufficient to estimate and measure tolerances and minimum diameter; and to calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of

REQUIRED SKILLS AND KNOWLEDGE

processes for trimming and cutting harvested trees

- Environmental protection requirements including the safe disposal of waste
- Organisational and site standards, requirements, policies and procedures for trimming and cutting harvested trees; organisational communication channels and protocols; and the recording and reporting of workplace information
- Characteristics of trees and types of timber defects that may affect cutting
- Cutting patterns, sequences and techniques
- Chainsaw operation, safety and maintenance procedures
- Chainsaw chain condition assessment
- Industry standard lengths and tolerances
- Log grades for timber grading
- Extraction methods
- Types of tools and equipment and procedures for their safe operation and maintenance
- Problem identification and resolution strategies

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely trim and cut harvested trees and conduct operator maintenance within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS and environmental, relevant to trimming and cutting harvested trees
- following organisational policies and procedures relevant to trimming and cutting harvested trees
- compliance with applicable licensing or certification requirements

EVIDENCE GUIDE

Context of and specific resources for assessment

- effective communication and safe working practices
- planning cutting to optimise volume, quality and recovery
- trimming and cutting of harvested trees in line with the job requirements and within prescribed organisational tolerances
- maintenance on a chainsaw
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment

EVIDENCE GUIDE

of other units of competency

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- communication systems
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- awareness of danger zone for kickback
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

- erection of warning signs
- potential falling objects
- procedures for cutting on slopes
- location of other workers

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- Australian Standards
- OHS
- the environment
- equal opportunity
- relevant industry codes of practice
- award and enterprise agreements
- industrial relations
- confidentiality and privacy
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS
- emergency and evacuation procedures
- fire prevention procedures
- communication systems
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- access and equity principles and practices
- hardwood trees
- softwood trees

Trees may include:

for production purposes

RANGE STATEMENT

Environmental protection measures may include:

- action to limit the impact of noise, wind speed and direction, fallen trees, ground slope, ground hazards and obstacles, general forest lean
- action to limit the impact to ground growth, canopy, density of trees

and may relate to:

- soil and water protection, contingencies for modifying operations during wet or other adverse weather conditions
- the safe disposal of waste material

Job requirements:

may be determined by a coupe plan, operation plan or cutting schedules and may include:

- environmental and safety
- silviculture
- instructions for the trimming, cutting and despatch of harvested trees from the work site
- type, size, length, quantity and grade of product
- planned standard tolerances for length and angle relative to the log centre line
- minimum diameter, damage, shape and known length requirements

Trimming may relate to:

- maintenance of sharpened equipment
- branches
- burls and other small growths
- delimiting
- chainsaws

Tools and equipment may include:

- Personal Protective Equipment (PPE)
- maintenance tools
- fuel and oil containers
- chainsaw maintenance kit

and may include ancillary equipment such as:

- hammer
- axe
- wedges
- cant hook or breaking bar
- first aid kit
- fire control equipment
- tool belt

RANGE STATEMENT

- Communication** may include:
- loggers tape
 - warning signs
 - chainsaw maintenance kit
 - verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - use of electronic devices
- Environmental requirements** may be assessed in relation to:
- ground growth
 - ground slope
 - ground hazards and obstacles
- Defects** may include:
- shakes
 - insect defects
 - knots and resin pockets
 - pipe
 - branches
 - lumps
 - bumps
 - drysides
- Grade** may include:
- an evaluation of the log for defects, quality and size of log return
- Extraction** refers to:
- methods of removing the log from the worksite with mechanical equipment and cables, considering site conditions and specific log location
- Cutting pattern** refers to:
- the plan of cuts to optimise time and recovery of product from the tree
- Sequence of cuts** refers to:
- the order in which individual cuts are made to address issues of compression and tension and product quality and may include single or multiple cuts
- Pre start-up checks** may include checking:
- equipment has been set up correctly
 - the systems are performing accurately
 - equipment is operating to optimum performance
- Cutting technique** may include:
- bridging cuts
 - swinging cuts
 - side bind cuts

RANGE STATEMENT

- delimiting
- boring
- wedge cut
- use of wedges

Capping and splitting refers to:

- defects caused by cutting activities

Head of tree refers to:

- the waste section of the tree containing the smaller branches and heavy foliage

Records may include:

- quality outcomes; hazards, incident reports, equipment malfunctions and damage
- may be compiled using a computer-based system or other appropriate organisational communication system to record and report

Maintenance must include:

- sharpening

and may include:

- refuelling
- inspection, identification and replacement of bar, chain, drive sprockets
- bar oil checks and top up
- air filter check, clean and replacement
- cleaning of saw body, air intake vents and cooling fans
- fitting spare chain and tension chain

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for <i>rigging slinger</i> operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to monitoring log recovery (rigging slinger) are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be extracted is identified and assessed for safe working conditions and <i>environmental protection measures</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Rigging slinger and <i>cable operation</i> activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plan breakout	<p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. Audible or visual <i>signal system</i> to be used is</p>

ELEMENT**PERFORMANCE CRITERIA**

- identified
- 2.3. *Site*, the rigged cable system and *landing* are assessed for slope, haul line, backline, lift capacity and landing chute
- 2.4. *Obstacles* to extraction operations are identified and avoidance plan is developed
- 2.5. Logs to be recovered using current and future haul lines are identified
- 2.6. *Extraction pattern* for the typical number and size of logs to be hauled on each turn is planned using assessment information
- 2.7. *Line shifts* are planned during hauling, future rigging points established and rigging is prepared
3. Direct hook up of logs
- 3.1. Specific logs for next turn are selected prior to return of butt rigging in line with planned operation
- 3.2. *Stability* of logs to be extracted is assessed and precautions are taken against movement in line with the logging code of practice
- 3.3. *Choker setters* are directed to prepare and hook up logs ready for extraction
- 3.4. Haul signals are given when all persons are clear from logs and bight of ropes using signalling systems in line with the cable logging code of practice
- 3.5. Log movement is monitored and stopped for corrective action when difficulties occur
- 3.6. Control of movement is maintained using signalling systems until payload is in clear sight of the *yarder* operator
- 3.7. Breakout processes and equipment faults are *recorded and reported* in line with site procedures
4. Assist with line shifts
- 4.1. All logs to be hauled with existing line position are cleared before line shift is initiated
- 4.2. *Stumps are notched* in line with code requirements for the rigging method to be used
- 4.3. Slack is pulled in on all lines prior to release of existing rigging
- 4.4. *Rigging components* are dismantled from the existing line, checked and set up on the new line
- 4.5. Obstructions which may cause binding or damage during hauling are moved as required
- 4.6. Spars, tail trees and intermediate supports are rigged in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately notch stumps; effectively set up and dismantle rigging components
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate measure and calculate including time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for monitoring log recovery (rigging slinger)
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for monitoring log recovery (rigging slinger)
- Characteristics of trees
- Log extraction methods
- Cable logging techniques
- Rigging techniques and signal systems
- Industry standard lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently monitor log recovery (rigging slinger) operations to recover felled logs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to monitor log recovery (rigging slinger)
- following organisational policies and procedures relevant to monitoring log recovery (rigging slinger)
- performing rigging slinger operations to recover felled logs in line with the work order and within prescribed organisational tolerances
- planning the breakout process in line with site conditions
- assisting in shifting lines in line with the hook tender's instructions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Rigging slinger** role includes:
- deciding what timber to take out first and being responsible for getting the timber to the landing without breaking it
 - directing the choker setter personnel in hooking up timber
 - transmitting signals to and from the yarder

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination

RANGE STATEMENT

Organisational requirements
may include:

- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the rigging slinger operations to recover felled logs from the work site

and may include:

- type
- size
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs are to include:

- the finished product or trunk of a tree after trimming and cross cutting has occurred

and may be:

- hardwood or softwood

RANGE STATEMENT

Environmental protection measures may include:

- for production or non-production purposes
- ground growth
- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions

Equipment may include:

- rigging equipment

Cable operations may include:

- activities covering a full range of species, log sizes, falling and retention densities, slope, other environmental conditions
- use of cable systems including high lead (no skyline), standing skyline and a running skyline with hauling both uphill and downhill
- logs attached optimising payload without exceeding the lift or haul capacity of the system

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Signal system may include:

- whistle signals
- visual signals
- two-way radio
- talk-e-tooter signals
- other audible signals

Site

is the location where tree felling activities have occurred

Landing

is the location where the yarder is positioned to receive the logs

Obstacles may include:

- standing trees

RANGE STATEMENT

- stumps
- rocks
- ground projections

Extraction pattern

is the method of removing the log from the work site with mechanical equipment and cables, considering site conditions and specific log location, in a way that minimises downtime and risk of snags, breakage and hang ups

Line shifts

is the moving of rigging lines from one area of operation to a new area

Stability

is the physical stability of the log in-situ, that it is safe to hook up and not likely to roll off a rock, move on another log or slide down the hillside

Choker setters

hook up the logs at the felling site

Yarder

is the crane-like vehicle which winches the logs from the felling site to the landing using a cable system

Records and reports may include:

- extraction methods
- tree type
- size
- length
- diameter
- inspection
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Stump notching

is the process for securing rigging components, cables and ropes

Rigging components may include:

- strawlines
- blocks
- sheaves

RANGE STATEMENT

- ropes
- shackles
- pins
- skyline
- tail rope
- lines
- straps
- mobile tail anchors
- spars
- intermediate supports
- bridling

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for <i>forwarder</i> operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to conducting forwarder operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Type and quantity of material to be moved with a forwarder is assessed and prepared</p> <p>1.5. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. Forwarder operations are assessed for <i>safe working conditions</i> and planned in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Operate forwarder	<p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in line with manufacturer's recommendations and site</p>

ELEMENT**PERFORMANCE CRITERIA**

- requirements
- 2.3.Forwarder controls and *functions*, including implements or other attachments, brakes and manoeuvrability are checked for serviceability and any faults are rectified or reported
 - 2.4.Forwarder is manoeuvred to maximise efficiency and ensure safety of other equipment and personnel
 - 2.5.Forwarder performance is monitored utilising appropriate indicators to aid efficient operations
 - 2.6.Site *hazards* associated with forwarder operations are detected and safe operating techniques are used to minimise risk
 - 2.7.Operating techniques for the forwarder are within recommended *capacities* and limitations in line with manufacturer's design specifications
 - 2.8.Forwarder is operated to work instructions in line with site operating procedures and *site conditions*
 - 2.9.*Emergency plan procedures are followed in line with OHS, environmental, legal and site requirements*
3. Segregate and stack logs
 - 3.1.Planned landing layout and *log* handling procedures are identified from site and work order instructions and checked with appropriate personnel
 - 3.2.Stacks are located to ensure appropriate space for access by site equipment and the safe conduct of other landing operations
 - 3.3.Log stacks are positioned and *maintained* in line with planned layout and site requirements
 - 3.4.Log stacks are constructed to provide stability and minimise problems from slippage and falling of logs
 - 3.5.Logs delivered to landing are *visually assessed* and directed/moved to appropriate location for further processing or stacking
 4. Load, transport and unload logs
 - 4.1.Forwarder is positioned for safe access to logs within equipment load reach and movement limits in line with manufacturer's recommendations
 - 4.2.Log weight is *estimated* and individual logs are selected and segregated by size and grade
 - 4.3.Logs unable to be determined for size or grade by own personal skill are marked and reported to appropriate personnel
 - 4.4.Logs are systematically *lifted* and placed in line with

ELEMENT	PERFORMANCE CRITERIA
5. Carry out machine operator maintenance	<p>recommended equipment operating procedures to achieve optimum log shape</p> <p>4.5. Placement of logs meets positioning and stability requirements and loads are safely and efficiently transported over planned route</p> <p>5.1. Forwarder is safely parked, shut-down and prepared for maintenance in line with manufacturer's manual and organisational requirements</p> <p>5.2. Visual inspection and fault finding processes are conducted in line with manufacturer's recommendations and organisational requirements</p> <p>5.3. Defective parts are removed and replaced safely and effectively in line with manufacturer's manual and organisational requirements</p> <p>5.4. Routine operational servicing is conducted in line with manufacturer's and organisational requirements</p> <p>5.5. Work area is cleared and waste materials are disposed of or recycled in line with site environmental management plan</p> <p>5.6. Plant, tools and equipment are cleaned, checked, maintained and stored in line with manufacturer's recommendations and standard work practices</p> <p>5.7. Forwarder operational records and reports are completed accurately and processed in line with site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and efficiently and safely use forwarder to segregate, stack, transport, load and unload logs
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to locate, interpret and apply relevant information in written, diagrammatic and/or oral form including plans, reports, maps,

REQUIRED SKILLS AND KNOWLEDGE

specifications; accurately record and report workplace information, and maintain documentation

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures, interpret ground conditions and identify hazards

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting forwarder operations including emergency and isolation procedures
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting forwarder operations
- Forwarder operations and operating techniques including lifting procedures
- Technical capability and limitations of forwarder and attachments
- Established communication channels and protocols
- Problem identification and resolution strategies
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Forwarders

may be wheeled or half track and attachments
may include blades

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use)

RANGE STATEMENT

guidelines)

Environmental protection measures

may include action to limit the impact to:

- ground growth and canopy
- soil and water

may include action to limit the impact of:

- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- ground hazards
- obstacles

Work order is to include:

- instructions for the operation of a forwarder and its respective tasks including logs to be handled

and may include:

- information about log placement and access requirements, loading regulations and site operating plans
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- suppliers
- clients
- colleagues
- managers

Appropriate personnel may include:**Safe working conditions**

is to ensure:

- minimal equipment and log movement during forwarder operations
- control of risks and hazards
- dust
- noise
- water
- flora and fauna
- heritage legislation
- culturally sensitive sites and artefacts
- plantations

Environmental and heritage concerns may include:

RANGE STATEMENT

Communication may include:

- native forest
- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Pre start-up checks

are specified by the manufacturer prior to operating the equipment and may include:

- visual and audio warning devices and lights
- engine and stop engine lights
- fluid levels
- cab display instrumentation and gauges and on-board computer systems

and relate to start-up, park and shutdown procedures which may involve:

- safety mechanisms
- operational (horn, operating lights)
- correct location of equipment
- vehicle security

Functions must include:

- segregating, stacking, loading, transporting and unloading of logs

and may include:

- loading and unloading of other materials
- uneven/unstable terrain
- trees
- fires
- overhead and underground services
- bridges
- buildings
- excavations
- traffic
- embankment
- cuttings
- structures and hazardous materials

Capacities of equipment may include:

- efficient and safe operating speed
- duration of operation
- type of activities performed

RANGE STATEMENT

	<ul style="list-style-type: none"> • weight and/or load limitations • operating limitations
Site conditions may include:	<ul style="list-style-type: none"> • wet, dry • day, night • stability of ground • broken ground • slope of working surface • location of water table
Emergency plan may include:	<ul style="list-style-type: none"> • notification of authorities • evacuation procedures • isolation procedures • equipment shutdown procedures • clean up • first aid • use of personal protective equipment and clothing • guarding • access and exit
Logs may include:	<ul style="list-style-type: none"> • full range of species, size • conditions to be encountered in local harvesting operations • softwood or hardwood
Maintenance of log stacks includes providing for:	<ul style="list-style-type: none"> • anticipated stock levels • stock rotation requirements • size • segregation of lengths, species and grades
Visual assessment of logs includes identifying and determining:	<ul style="list-style-type: none"> • species • diameter • length • grade • landing layout • stock rotation requirements
Estimation	of log weight is used to determine lifting requirements and compliance to load plate
Lifting	may be conducted on a trial basis when an issue with load size or stability or other unacceptable operational situation is determined
Placement	of slipper or chocks is made as required to support or compress logs

RANGE STATEMENT

Visual inspection and fault finding may include:

- vehicle number
- danger tags
- personnel proximity
- tyres and rim condition
- wheel nuts and studs
- light positioning and cleanliness
- radiator top up tank
- oil leaks, fuel leaks, water leaks
- no combustible material around exhaust
- damage to equipment
- portable fire extinguisher
- fire suppression system
- cab mounts
- windows
- engine oil to be checked before starting engine
- grease lines
- cab condition

Routine operational servicing may include:

- checking fluid levels
- greasing
- tightening loose fittings
- filter changing

Cleaning methods may include:

- water
- steam
- degreasing
- vacuum
- forced air

Records and reports may include:

- end of shift documentation
- work log
- supplies
- log
- computer readings

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operations	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to conducting <i>feller buncher</i> operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Tree or <i>log</i> extraction, placement and access requirements are identified and assessed for <i>safe working conditions</i></p> <p>1.6. Level and/or suitable surface for stability of equipment to be used is determined and confirmed</p> <p>1.7. <i>Feller buncher operations</i> are <i>planned</i> in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.8. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Operate equipment	<p>2.1. All work is conducted in line with work order,</p>

ELEMENT**PERFORMANCE CRITERIA**

- environmental and OHS requirements
- 2.2. Feller buncher is operated within equipment *capabilities* and limitations and manoeuvred to ensure safe and efficient operations
- 2.3. *Pre-operational checks* are carried out on equipment and *attachments* in line with manufacturer's recommendations and site procedures
- 2.4. Site *hazards* associated with feller buncher operations are detected and safe operating techniques are used to minimise risk
- 2.5. Operating techniques are selected and adjusted as required to meet work requirements and *site conditions*
- 2.6. Feller buncher performance is systematically monitored to ensure and maintain efficient operations
- 2.7. *Emergency plan* procedures are followed in line with OHS, environmental, legal and site requirements
3. Fall individual trees mechanically
- 3.1. Movement and whereabouts of other personnel is monitored and work modified to be in line with OHS requirements
- 3.2. Falling sequence for individual trees is progressively planned to minimise tree damage and maximise falling and extraction efficiency
- 3.3. *Cutting sequence* is planned and communicated to control direction of the fall and minimise damage to the tree and surrounding environment
- 3.4. Equipment is positioned for stable and safe access to tree and operated to clamp and cut tree in line with industry and site standards
- 3.5. Clamping and cutting techniques are adjusted as required in response to movement and condition of tree
- 3.6. Trees too dangerous to be felled safely are marked and referred to appropriate personnel
- 3.7. Unexpected characteristics of a tree are diagnosed and planning is reviewed
- 3.8. Controlled manipulation with equipment is used to free tree hang ups to ensure personnel safety and minimise damage to tree and surrounding environment
- 3.9. Equipment is operated to stack pre-bunched logs and stems to facilitate subsequent extraction operations
- 3.10. Personnel safety and minimal damage to the

ELEMENT**PERFORMANCE CRITERIA**

- timber and surrounding environment are ensured through method used to move timber and stems to pre-bunching site
- 3.11. Equipment is moved over pre-arranged routes with minimal damage to the environment
4. Carry out machine operator maintenance
- 4.1. Equipment lock-out procedures are followed in line with OHS requirements and site procedures
- 4.2. **Visual inspection and fault finding** procedures are conducted in line with manufacturer's recommendations and site procedures
- 4.3. **Routine operational servicing** is conducted to maintain optimum operational performance of equipment
- 4.4. Equipment, attachments and other ancillary equipment are **cleaned** and stored in line with manufacturer's recommendations and site procedures
- 4.5. Faults, malfunctions or problems with equipment are diagnosed and reported in line with site procedures
- 4.6. Feller buncher operation results are **recorded and reported** in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and efficiently and safely operate a feller buncher
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation and interpret, apply and convey information in written, diagrammatic and/or verbal form
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting feller buncher operations
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting feller buncher operations
- Equipment processes, technical capability and limitations
- Operational procedures and checks including start-up and shut-down procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct feller buncher operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting feller buncher operations

EVIDENCE GUIDE

- following organisational policies and procedures relevant to conducting feller buncher operations
 - following applicable licensing or certification requirements
 - communicating effectively and working safely with others in the work area
 - planning, preparing and carrying out feller buncher operations to safely and efficiently fall trees mechanically and pre-bunch logs and stems
 - conducting pre-operational checks and routine operational servicing of equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Feller buncher may be:

- wheeled
- tracked

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions

RANGE STATEMENT

	relating to forest fire location of other people, and potential falling objects
Environmental requirements may include:	<ul style="list-style-type: none"> • manual handling including shifting, lifting and carrying • legislation • organisational policies and procedures • workplace practices
Legislative requirements:	are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include: <ul style="list-style-type: none"> • award and enterprise agreements • industrial relations • Australian Standards • confidentiality and privacy • OHS • the environment • equal opportunity • anti-discrimination • relevant industry codes of practice • duty of care • heritage and traditional land owner issues
Organisational requirements may include:	<ul style="list-style-type: none"> • legal • organisational and site guidelines • policies and procedures relating to own role and responsibility • quality assurance • procedural manuals • quality and continuous improvement processes and standards • OHS, emergency and evacuation procedures • ethical standards • recording and reporting requirements • equipment use and maintenance and storage requirements • environmental management requirements (waste disposal, recycling and re-use guidelines)
Environmental protection measures	may include action to limit the impact to: <ul style="list-style-type: none"> • ground growth and canopy

RANGE STATEMENT

- soil and water

may include action to limit the impact of:

- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- ground hazards
- obstacles

Work order is to include:

- instructions for feller buncher operations including trees to be felled and retained, and logs to be bunched

and may include:

- information about tree markings, site plans, forest operational plans
- emergency procedures in case of fire and/or accident
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs may include:

- range of species
- size
- conditions to be encountered in local harvesting operations
- softwood or hardwood

Safe working conditions

may include identification of:

- risks and hazards
- unsafe ground
- fences
- holes, pot holes
- materials
- vehicles
- abandoned equipment

RANGE STATEMENT

- personnel
- adverse weather conditions (electrical storms, floods)
- fires

Feller buncher operations

must include:

- the mechanical felling of trees and pre-bunching of logs and stems

and may include:

- segregating and stacking logs
- snigging and skidding logs
- loading and unloading logs
- shovel logging

Planning

requires ensuring minimal equipment and log movement during operations including verifying level and stable surfaces for safely relocating logs on equipment

Environmental and heritage concerns may include:

- dust
- noise
- water
- flora and fauna
- heritage legislation
- culturally sensitive sites and artefacts
- plantations
- native forest

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Capabilities of equipment and/or attachments may include:

- efficient and safe operating speed
- duration of operation
- type of activities performed
- weight and/or load limitations
- operating limitations

Pre-operational checks

are conducted to ensure equipment and attachments have been set-up correctly, the systems are performing accurately and operating

RANGE STATEMENT

to optimum performance

and may relate to:

- visual and audio warning devices and lights
- engine and stop engine lights
- fluid levels
- cab display instrumentation and gauges
- on-board computer systems
- start-up, park and shutdown procedures including safety mechanisms operation (horn, operating lights)
- correct location of equipment
- vehicle security

Attachments may include:

- hydraulic chainsaws
- hydraulic sheer knives

Hazards may include:

- uneven/unstable terrain
- trees
- fires
- overhead and underground services
- bridges
- buildings
- excavations
- traffic
- embankment
- cuttings
- structures and hazardous materials

Site conditions may include:

- wet/dry
- day/night
- stability of ground
- broken ground
- slope of working surface
- location of water table

Emergency plan may include:

- notification of authorities
- evacuation procedures
- isolation procedures
- equipment shutdown procedures
- clean up
- first aid
- use of personal protective equipment and clothing
- guarding

RANGE STATEMENT

- Cutting sequence** is to include:
- access and exit
 - the best direction or angle for making cuts to facilitate achieving the fall direction
- Visual inspection and fault finding procedures** may include:
- vehicle number
 - danger tags
 - personnel proximity
 - tyres and rim condition
 - wheel nuts and studs
 - light positioning and cleanliness
 - radiator top up tank
 - oil leaks, fuel leaks
 - water leaks
 - no combustible material around exhaust
 - damage to equipment
 - portable fire extinguisher
 - fire suppression system
 - cab mounts
 - windows
 - engine oil to be checked before starting engine
 - grease lines
 - cab conditions
- Routine operational servicing** may include:
- checking fluid levels
 - greasing
 - tightening loose fittings
 - filter changing
- Cleaning methods** may include:
- water
 - steam
 - degreasing
 - vacuum
 - forced air
- Records and reports may include:**
- end of shift documentation
 - work log
 - supplies
 - log and computer readings
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to operate a boom delimeter in a forest environment. It requires the mandatory functions of mechanically delimiting trees and cutting to length. It may also require functions of segregating and stacking logs

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions

This unit replaces FPIHAR3208B Conduct boom delimeter operations

Application of the Unit

Application of the unit

The unit involves conducting boom delimeter operations in a forest environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Plan and prepare for boom delimber <i>operations</i> | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to conducting boom delimber operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Tree or <i>log</i> extraction, placement and access requirements are identified and assessed for <i>safe working conditions</i></p> <p>1.6. Boom delimber operations are <i>planned</i> in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Operate equipment | <p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. Boom delimber is operated and manoeuvred within</p> |

ELEMENT**PERFORMANCE CRITERIA**

- equipment *capabilities* and limitations to ensure safe and efficient operations
- 2.3. *Pre-operational checks* are carried out on equipment and *attachments* in line with manufacturer's recommendations and site procedures
- 2.4. Operating techniques are selected and adjusted as required to meet work requirements and *site conditions*
- 2.5. Boom delimber performance is systematically monitored to ensure and maintain efficient operations
- 2.6. Site *hazards* associated with boom delimber operations are detected and safe operating techniques are used to minimise risk
- 2.7. *Emergency plan* procedures are followed with in line with OHS, environmental, legal and site requirements
3. Delimb individual trees
- 3.1. Movement and whereabouts of other personnel is monitored and work is modified in line with OHS requirements
- 3.2. Access and delimiting characteristics of fallen trees are assessed and processing is planned to ensure minimal damage and maximum recovery
- 3.3. Equipment is *positioned* for stable and safe access to felled trees and loads are placed within rated load/reach capacity
- 3.4. Tree supply is coordinated with other site operations in line with site procedures
- 3.5. Equipment is safely and efficiently operated to clamp, lift and process trees through delimber with minimal damage to surrounding trees
- 3.6. Logs are placed to allow access for extraction within limitations of available clearance and separation for grade and size when possible
- 3.7. Processing techniques are adjusted as required in response to unexpected characteristics, movement or condition of trees
- 3.8. Equipment is moved over pre-arranged routes with minimal damage to the environment
4. Carry out machine operator maintenance
- 4.1. Equipment lock-out procedures are followed in line with OHS requirements and site procedures
- 4.2. *Visual inspection and fault finding* procedures are conducted in line with manufacturer's

ELEMENT**PERFORMANCE CRITERIA**

- recommendations and site procedures
- 4.3. **Routine operational servicing** is conducted to maintain optimum operational performance of equipment in line with manufacturer's recommendations
- 4.4. Equipment, attachments and other ancillary equipment are **cleaned** and stored in line with manufacturer's recommendations and site procedures
- 4.5. Faults, malfunctions or problems with equipment are diagnosed and reported in line with site procedures
- 4.6. Boom delimber operation results are **recorded and reported** in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate boom delimber and attachments to delimit trees and cut to length
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation and interpret, apply and convey information in written, diagrammatic and/or verbal form
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for boom delimber operations
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for boom delimber operations

REQUIRED SKILLS AND KNOWLEDGE

- Equipment processes, technical capability and limitations
- Operational procedures and checks including start-up and shut-down procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct boom delimeter operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting boom delimeter operations
- following organisational policies and procedures relevant to conducting boom delimeter operations
- communicating effectively and working safely with others in the work area
- planning, preparing and carrying out boom delimeter operations to safely and efficiently delimb trees mechanically
- conducting pre-operational checks and routine operational servicing of equipment

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Operations must include:

- the mechanical delimiting of trees and cutting to length

and may include:

- the segregating and stacking of timber

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Organisational requirements may include:

Environmental protection measures may include:

action to limit the impact to:

- ground growth and canopy

may include action to limit the impact of:

- soil and water
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- ground hazards

RANGE STATEMENT

Work order is to include:

- obstacles
- instructions for boom delimeter operations including trees/logs to be handled and cutting length requirements

and may include:

- information about site plans, forest operational plans and emergency procedures in case of fire and/or accident
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- clients
- colleagues
- managers

Logs may include:

- full range of species
- size and conditions to be encountered in local harvesting operations
- softwood or hardwood

Safe working conditions

may relate to:

- identification of risks and hazards
- unsafe ground
- fences
- holes, pot holes
- materials
- vehicles
- abandoned equipment
- personnel
- adverse weather conditions (electrical storms, floods)
- fires

Planning

requires ensuring minimal equipment and log movement during operations including determining level and stable surfaces for safely relocating loads

Environmental and heritage concerns may include:

- dust
- noise
- water

RANGE STATEMENT

- flora and fauna
 - heritage legislation
 - culturally sensitive sites and artefacts
 - plantations
 - native forest
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices
- Capabilities** of equipment and/or attachments may include:
- efficient and safe operating speed
 - duration of operation
 - type of activities performed
 - weight and/or load limitations
 - operating limitations
- Pre-operational checks** are conducted to ensure equipment and attachments have been set-up correctly, the systems are performing accurately and operating to optimum performance
- and may relate to:
- visual and audio warning devices and lights
 - engine and stop engine lights
 - fluid levels
 - cab display instrumentation and gauges
 - on-board computer systems
- and may also involve:
- start-up, park and shut-down procedures including safety mechanisms operation (horn, operating lights), correct location of equipment, vehicle security
- Attachments** may include:
- electronic measuring equipment
 - cut-off saws
- Site conditions** may include:
- wet, dry
 - day, night
 - stability of ground
 - broken ground
 - slope of working surface

RANGE STATEMENT

Hazards may include:

- location of water table
- uneven/unstable terrain
- trees
- fires
- overhead and underground services
- bridges
- buildings
- excavations
- traffic
- embankment
- cuttings
- structures and hazardous materials

Emergency plan may include:

- notification of authorities
- evacuation procedures
- isolation procedures
- equipment shut-down procedures
- clean up
- first aid
- use of personal protective equipment and clothing
- guarding
- access and exit

Positioning of equipment is to ensure:

- machine stability to minimise movement during and between delimiting operations
- safe access to felled trees
- safe processing and placement clearance
- vehicle number

Visual inspection and fault finding procedures may include:

- danger tags
- personnel proximity
- tyres and rim condition
- wheel nuts and studs
- light positioning and cleanliness
- radiator top up tank
- oil leaks, fuel leaks, water leaks
- no combustible material around exhaust
- damage to equipment
- portable fire extinguisher
- fire suppression system
- cab mounts
- windows

RANGE STATEMENT

- engine oil to be checked before starting engine,
 - grease lines
 - cab conditions
 - checking fluid levels
 - greasing
 - tightening loose fittings
 - filter changing
 - water
 - steam
 - degreasing
 - vacuum
 - forced air
 - end of shift documentation
 - work log
- and may be:
- compiled manually
 - using a computer-based system or other appropriate organisational communication

Routine operational servicing may include:

Cleaning methods may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to conducting <i>mechanical processor</i> operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work plan</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Tree or <i>log</i> load placement and access requirements are identified and assessed for <i>safe working conditions</i></p> <p>1.6. <i>Mechanical processor operations</i> are <i>planned</i> in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Operate equipment	<p>2.1. All work is conducted in line with work plan, environmental and OHS requirements</p> <p>2.2. Mechanical processor is operated within equipment <i>capabilities</i> and limitations, and manoeuvred to ensure safe and efficient operations</p> <p>2.3. <i>Pre-operational checks</i> are carried out on equipment</p>

ELEMENT	PERFORMANCE CRITERIA
	and attachments in line with manufacturer's recommendations and site procedures
	2.4. Operating techniques are selected and adjusted as required to meet work requirements and <i>site conditions</i>
	2.5. Mechanical processor performance is systematically monitored to ensure and maintain efficient operations
	2.6. Site <i>hazards</i> associated with crawler operations are detected and safe operating techniques are used to minimise risk
	2.7. <i>Emergency plan</i> procedures are followed in line with OHS, environmental, legal and site requirements
3. Process individual trees	3.1. Movement and whereabouts of other personnel is monitored and work modified to be in line with OHS requirements
	3.2. Access and processing characteristics of fallen trees are assessed and processing is planned to ensure minimal tree damage and maximum recovery
	3.3. Required length cutting patterns are programmed or modified on processing controller to meet work plan requirements
	3.4. Equipment is <i>positioned</i> for stable and safe access to felled tree and loads are placed within rated load/reach capacity
	3.5. Tree is processed to produce standard length and diameter of logs with optimal grade and length combination in line with work plan requirements
	3.6. Equipment is safely and efficiently operated to stack pre-bunched logs/stems to facilitate subsequent recovery operations
	3.7. Processing techniques are adjusted as required in response to unexpected characteristics, movement or condition of tree
	3.8. Personnel safety and minimal damage to the timber and surrounding environment are ensured through method used to move timber/stems to pre-bunching site
	3.9. Equipment is moved over pre-arranged routes with minimal damage to the environment
4. Segregate and stack logs	4.1. Planned landing layout and log handling procedures are identified from site and work plan instructions and checked with appropriate personnel as required
	4.2. Stacks are located to provide appropriate space for access by site equipment and to allow for the conduct of other landing operations

ELEMENT	PERFORMANCE CRITERIA
	4.3. Log stacks are positioned and <i>maintained</i> in line with planned layout and site requirements
	4.4. Log stacks are constructed to provide stability and minimise problems from slippage and falling of logs
	4.5. Delivered logs are <i>visually assessed</i> and directed/moved to appropriate location for further processing or stacking
5. Carry out machine operator maintenance	5.1. Equipment lock-out procedures are followed in line with OHS requirements and site procedures
	5.2. <i>Visual inspection and fault finding procedures</i> are conducted in line with manufacturer's recommendations and site procedures
	5.3. <i>Routine operational servicing</i> is conducted to maintain optimum operational performance of equipment in line with manufacturer's recommendations
	5.4. Equipment, attachments and other ancillary equipment is <i>cleaned</i> and stored in line with manufacturer's recommendations and site procedures
	5.5. Faults, malfunctions or problems with equipment are diagnosed and reported in line with site procedures
	5.6. Mechanical processor operation results are <i>recorded and reported</i> in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely process trees, segregate and stack logs
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace; interpret, apply and convey information in written, diagrammatic and/or verbal form
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for mechanical processor operations
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for mechanical processor operations
- Detailed range of products
- Operational procedures and checks including start-up and shut-down procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- the de-barking, pre-bunching and loading of logs

Planning

requires ensuring minimal equipment and product movement during operations including determining level and stable surfaces for safely relocating logs

Environmental and heritage concerns may include:

- dust
- noise
- water
- flora and fauna
- heritage legislation
- culturally sensitive sites and artefacts
- plantations
- native forest

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Capabilities

of equipment and/or attachments may include:

- efficient and safe operating speed
- duration of operation
- type of activities performed
- weight and/or load limitations
- operating limitations

Pre-operational checks

are conducted to ensure equipment and attachments have been set-up correctly, the systems are performing accurately and operating to optimum performance

and may be to:

- visual and audio warning devices and lights
- engine and stop engine lights
- fluid levels

RANGE STATEMENT

- cab display instrumentation and gauges
- on-board computer systems, if relevant

and may also involve:

- start-up, park and shut-down procedures including safety mechanisms operation (horn, operating lights), correct location of equipment, vehicle security

Site conditions may include:

- wet, dry
- day, night
- stability of ground
- broken ground
- slope of working surface
- location of water table

Hazards may include:

- uneven/unstable terrain
- trees
- fires
- overhead and underground services
- bridges
- buildings
- excavations
- traffic
- embankment
- cuttings
- structures and hazardous materials

Emergency plan may include:

- notification of authorities
- evacuation procedures
- isolation procedures
- equipment shut-down procedures
- clean up
- first aid
- use of personal protective equipment and guarding
- access and exit

Positioning

of equipment is to ensure:

- machine stability to minimise movement during and between processing operations
- safe access to felled tree
- safe processing and placement clearance for the efficient extraction of processed logs

RANGE STATEMENT

Maintenance

of log stacks includes:

- providing for anticipated stock levels
- stock rotation requirements
- size
- segregation of lengths
- species
- grades

Visual assessment

of logs includes:

- identifying and determining species
- diameter, length, grade
- landing layout
- stock rotation requirements
- vehicle number

Visual inspection and fault finding procedures may include:

- danger tag
- personnel proximity
- tyres and rim condition
- wheel nuts and studs
- light positioning and cleanliness
- radiator top up tank
- oil leaks, fuel leaks, water leaks
- no combustible material around exhaust
- damage to equipment
- portable fire extinguisher
- fire suppression system
- cab mounts
- windows
- engine oil to be checked before starting engine
- grease lines
- cab conditions
- checking fluid levels
- greasing
- tightening loose fittings
- filter changing

Routine operational servicing may include:

Cleaning methods may include:

- water
- steam
- degreasing
- vacuum
- forced air

RANGE STATEMENT

Records and reports may include:

- end of shift documentation
- work log
- supplies log
- computer readings

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for yarder operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to operating a yarder are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be extracted is identified and assessed for safe working conditions and <i>environmental protection measures</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Yarder</i> and <i>cable operation</i> activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up yarder	<p>2.1. Yarder is moved to the <i>landing</i> in line with the logging code of practice</p> <p>2.2. Yarder is positioned on landing in line with planned</p>

ELEMENT**PERFORMANCE CRITERIA**

- system design and stable, level support base is ensured for *outriggers*
- 2.3. *Tower or spar* is inspected, rigged to suit system design and raised in line with manufacturer's recommendations and the logging code of practice
- 2.4. *Line shifts* are conducted with other personnel and yarder is operated to provide required line slack and tension to facilitate movements
3. Inspect and maintain cable systems
- 3.1. *System components* are observed during normal operations, faults noted and corrective action taken
- 3.2. System components are routinely inspected, *maintained*, repaired or replaced in line with the logging code of practice
- 3.3. *Guylines* are routinely inspected and tension adjusted to equalise load in line with the logging code of practice
- 3.4. *Blocks* are lubricated to maintain operational condition
- 3.5. Repetitive damage is diagnosed and the system design or operational practices reviewed and amended
4. Haul logs
- 4.1. *Pre start-up checks* are carried out on equipment in line with site requirements
- 4.2. Yarder operations are only performed in response to breakout, landing *signals* or own transmitted signals
- 4.3. Yarder *mechanical systems* are monitored, managed and controlled to maintain log alignment and satisfy safe operating limits in line with manufacturer's specifications
- 4.4. *Tension* is controlled in running and standing lines to optimise the lift and deflection consistency with payload and rope capacities
- 4.5. *Hang ups* and *obstacles* are anticipated and haul is halted and cleared in cooperation with the *rigging slinger*
- 4.6. Haul speed, line swing and *bridling* are used to position logs on the landing and payloads are controlled in cooperation with the *chaser*
- 4.7. Rigging is returned to extraction point and positioned in line with signals from the rigging slinger
- 4.8. Yarding process and equipment faults are *recorded*

ELEMENT**PERFORMANCE CRITERIA**

and reported to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate a yarder
- Communication skills and interpersonal techniques sufficient to use appropriate signals interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for yarder operation
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Characteristics of trees
- Organisational and site standards, requirements, policies and procedures for yarder operation
- Log extraction methods
- Cable logging and yarder operating techniques
- Rigging techniques and signal systems
- Industry standard lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently perform yarder operations to recover felled logs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to yarder operations
- following organisational policies and procedures relevant to yarder operations
- conducting yarder operations to recover felled logs in line with the work order and within prescribed organisational tolerances
- setting up a yarder in line with site conditions
- assisting in shifting lines in line with the hook tender's instructions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE

- workplace location or simulated workplace
- materials and equipment relevant to undertaking work applicable to this unit
- specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines

RANGE STATEMENT

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the yarder operations to recover felled logs from the work site

and may include:

- type
- size
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs are to include:

- the finished product or trunk of a tree after trimming and cross cutting has occurred

and may be:

- hardwood or softwood
- for production or non-production purposes
- ground growth
- canopy
- general forest lean
- wind speed and direction

Environmental protection measures may include:

RANGE STATEMENT

- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards and obstacles
- contingencies for modifying operations during wet or other adverse weather conditions

Equipment may include:

- yarders (mobile and static, with one or more operational drums)
- rigging equipment

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine

Yarder

is the crane-like vehicle which winches the logs from the felling site to the landing using a cable system

methods include:

- inspecting and modifying rigging
- pulling logs from the cutting area to the landing
- controlling speed, braking, drums, positioning of chokers and manoeuvring of obstacles

Cable operations may include:

- activities covering a full range of species, log sizes, falling and retention densities, slope
- taking into consideration environmental requirements
- use of cable systems including high lead (no skyline), standing skyline and a running skyline with hauling both uphill and downhill
- logs attached optimising payload without exceeding the lift or haul capacity of the system

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

RANGE STATEMENT

Landing:	is the location where the yarder is positioned to receive the logs
Outriggers	are the hydraulic feet or pads put out by the yarder to level the operating base and securely set the yarder in place
Tower	is the crane like raised tower which the cables operate from to provide height for extraction of logs.
Spars	are the out-posted erections which provide elevation for the cables some distance from the yarder tower
Line shifts	are the moving of rigging lines from one area of operation to a new area
System components may include:	<ul style="list-style-type: none">• ropes• blocks• chains• shackles
Maintenance may include:	<ul style="list-style-type: none">• regular checks of the tower and components• diagnosis and repair of damaged components• maintenance of fluid levels and air pressures• refuelling and general maintenance
Guylines	support the tower or spar and other rigged erections to provide stability and strength during operation
Blocks	are pulleys cased in a block which aid in changing the direction of a force and to increase power or speed in conjunction with running cables
Pre start-up checks	are conducted to ensure: <ul style="list-style-type: none">• equipment has been set up correctly• the systems are performing accurately and operating to optimum performance
Signals may include:	<ul style="list-style-type: none">• whistle signals• air horns• visual signals• two-way radio• talk-e-tooter signals• other audible signals

RANGE STATEMENT

Mechanical systems are to include:

- haul speed and engine power
- yarder operational temperatures and pressures

Tension

is the level of strain or pressure upon cables and ropes

Hang ups

logs which are in the process of being extracted, become entangled or snagged with other objects, usually other standing trees

Obstacles may include:

- standing trees
- stumps
- rocks
- ground projections

Rigging slinger role includes:

- deciding what logs to take out first and being responsible for getting the logs to the landing without breaking them
- directing the choker setter personnel in hooking up logs
- transmitting signals to and from the yarder

Bridling

is the cable or chain extensions which assist with choker setting

Chasers

direct the landing of logs in conjunction with the yarder and unhook the logs at the landing site

Records and reports may include:

- yarder operations
- extraction methods
- tree type
- size
- length
- diameter
- inspection
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for <i>tree pushing or pulling</i>	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to conducting mechanically assisted tree falling operations are identified and followed</p> <p>1.2. <i>Work plan</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of trees to be pushed or pulled are identified and assessed for safe working conditions</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Tree pushing or pulling activities are planned in line with site procedures, taking into consideration environmental requirements where it is safe to do so</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess and plan tree pushing or pulling	<p>2.1. <i>Environmental conditions</i> are assessed and used to plan the felling of each tree</p> <p>2.2. Movement and whereabouts of other personnel is</p>

ELEMENT**PERFORMANCE CRITERIA**

- monitored and work modified to be in line with OHS regulations
- 2.3. Tree, location and *stability* are assessed for conditions likely to affect safety of tree pushing or pulling activities
- 2.4. Tree is visually assessed for *defects, grade* and recovery status
- 2.5. Growth around tree and escape route is selected and cleared either manually or mechanically
- 2.6. *Fall direction* and allowable degree of error are assessed, considering *hang ups*, damage and *extraction* constraints
- 2.7. *Cutting sequence* is planned to control direction of the fall and minimise damage to the tree and surrounding environment and communicated to other personnel
- 2.8. Trees too dangerous to be felled safely are marked and referred to appropriate personnel
3. Push or pull trees
- 3.1. *Pre start-up checks* are carried out on equipment in line with site requirements
- 3.2. *Leaders* are removed and cleared in line with the tree pushing or pulling plan
- 3.3. Unexpected characteristics of a tree are diagnosed and planning is reviewed
- 3.4. *Winches or cables or machinery* are secured and tensioned and scarf cut made in line with planned falling direction and OHS requirements
- 3.5. Appropriate cuts are made to assist the fall angle of the tree and should be placed below the scarf cut
- 3.6. Falling is completed once initiated and planned escape route used once the tree begins to fall
- 3.7. Movement of the tree on the ground is monitored until stable and trees which hang up are flagged and cleared immediately
- 3.8. Tree pushing or pulling process and equipment faults are *recorded and reported* to the appropriate personnel
4. Conduct operator maintenance
- 4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 4.2. *Chain* is checked for blunt or damaged condition
- 4.3. Chain and other components are removed, sharpened, maintained, adjusted and replaced in line

ELEMENT	PERFORMANCE CRITERIA
	with manufacturer's recommendations
	4.4. Tree pushing or pulling equipment is checked for operation and serviced
	4.5. Chainsaw set-up is assessed and adjusted to suit cutting conditions
	4.6. Chainsaw is kept in operational condition and checked to ensure it meets relevant standards prior to use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely apply tree pushing or pulling techniques
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and maintain information relating to tree pushing or pulling
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting mechanically assisted tree falling operations
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Characteristics of trees and timber defects
- Organisational and site standards, requirements, policies and procedures for conducting mechanically assisted tree falling operations
- Tree pushing or pulling methods
- Chainsaw operation, cutting sequences and safety
- Chainsaw chain and tree pushing or pulling equipment condition assessment
- Established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently apply tree pushing or pulling techniques mechanically within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting mechanically assisted tree falling operations
 - following organisational policies and procedures relevant to conducting mechanically assisted tree falling operations
 - applying tree pushing or pulling techniques in line with the work plan and within prescribed organisational tolerances
 - conducting operator maintenance on a chainsaw
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Trees** are those in positions where conventional cutting techniques will not facilitate desired fall direction
- Pushed or pulled** is the process of felling trees away from their natural direction of fall using machinery, winches or cables by pushing or pulling with winches or cables held in position by wrapping the cables around the tree to be cut
- OHS requirements:** are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:
- personal protective equipment and clothing
 - safety equipment
 - first aid equipment
 - fire fighting equipment
 - hazard and risk control
 - fatigue management
 - erection of signs
 - elimination of hazardous materials and substances
 - safe forest practices including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Work plan** is to include
- instructions for tree pushing or pulling for the work site
- and may include:
- type
 - size
 - length
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues

RANGE STATEMENT

- Equipment** may include:
- managers
 - machinery
 - excavators
 - winches
 - cables
 - chainsaws
 - specific safety attire
 - maintenance tools and equipment
- and is to include:
- procedures for chainsaw lock-out such as protecting operators and co-workers from accidental injury by isolating the machine
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices
- Environmental conditions** may include:
- ground growth
 - ground slope
 - gullies
 - water courses
 - seed trees
 - habitat trees
 - ground hazards
 - obstacles
- Stability:** is the physical stability of the tree in-situ, that it is safe to fell and not likely to contain wet or dry rot
- Defects** may include:
- shakes
 - insect defects
 - knots
 - resin pockets
- Grade** is to include:
- evaluation of the tree for defects
 - quality and size of log return
- Fall direction** is the natural direction the tree will fall considering its degree of natural lean or its ground position on a slope or in a gully

RANGE STATEMENT

Hang ups	are trees which become entangled or snagged with other objects, usually other standing trees and do not fall completely to the ground
Extraction	is the method of removing the log from the worksite with mechanical equipment and cables, considering site conditions and specific log location
Cutting sequence	is the best direction or angle for making cuts to facilitate achieving the required fall direction
Pre start-up checks	are conducted to ensure: <ul style="list-style-type: none">• equipment has been set-up correctly• the systems are performing accurately and operating to optimum performance
Leaders are to include:	<ul style="list-style-type: none">• new tree growth from the base or near the base of the tree
Winches or cables	are the equipment used to assist the tree falling in an opposing direction to its natural fall by wrapping the cables around the tree and another object, combined by the winch, pressure is brought on the tree to fall in an opposing direction
Machinery may include:	<ul style="list-style-type: none">• excavators
Records and reports may include:	<ul style="list-style-type: none">• tree type• size• length• diameter• inspection• grading and labelling outcomes• storage locations• quality outcomes• hazards• incidents• equipment malfunctions and may be: <ul style="list-style-type: none">• manual• using a computer-based system or another appropriate organisational communication system

RANGE STATEMENT

Chain

- is the fast moving component surrounding the chainsaw blade containing many linked teeth

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operation	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to operating a single grip harvester are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Type and quantity of material to be processed with a <i>single grip harvester</i> is assessed and prepared</p> <p>1.5. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. Single grip harvester operations are planned in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Operate a single grip harvester	<p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in line with manufacturer's recommendations and site</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements
	2.3. Single grip harvester controls and functions, including manoeuvrability are checked for serviceability and any faults are rectified or reported
	2.4. Site <i>hazards</i> associated with single grip harvester operations are detected and safe operating techniques are used to minimise risk
	2.5. Operating techniques for the single grip harvester are applied to achieve optimum efficiency in line with manufacturer's design specifications
	2.6. Single grip harvester is operated in line with operating procedures
	2.7. <i>Emergency plan procedures are followed in line with OHS, environmental, legal and site requirements</i>
3. Fell and process trees	3.1. Communication practices associated with processing of materials are conducted in line with site procedures and checked between parties
	3.2. <i>Single grip harvesting head</i> is used in line with safe working requirements and OHS legislation
	3.3. Machinery is positioned ensuring <i>stability</i> and located to effectively process felled trees in line with job specifications
	3.4. Felled trees are processed safely and effectively in line with industry safety standards and manufacturer's specifications
4. Select, remove and fit cutting attachments	4.1. <i>Cutting attachment</i> is selected for the <i>task</i>
	4.2. Cutting attachment is removed and fitted in line with manufacturer's recommendations and site requirements
	4.3. Cutting attachment is tested to ensure correct fitting and operation as specified in manufacturer's recommendations
	4.4. Cutting attachment is used in line with manufacturer's recommendations and design limits
	4.5. Removed attachments are cleaned and stored in designated location in line with manufacturer's recommendations
5. Carry out machine operator maintenance	5.1. Single grip harvester is safely parked, shut-down and prepared for maintenance in line with manufacturer's recommendations and organisational requirements
	5.2. Visual inspection and fault finding operations are

ELEMENT**PERFORMANCE CRITERIA**

- conducted in line with manufacturer's recommendations and organisational requirements
- 5.3. Defective parts are removed and replaced safely and effectively in line with manufacturer's recommendations and organisational requirements
- 5.4. Regular programmed maintenance tasks are carried out in line with manufacturer's recommendations and organisational requirements
- 5.5. Work area is cleared and materials disposed of or recycled in line with site environmental management plan
- 5.6. Plant, tools and equipment are cleaned, checked, maintained and stored in line with manufacturer's recommendations and standard work practices
- 5.7. Single grip harvester operational *records and reports* are completed accurately and processed in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment: efficiently and safely operate a single grip harvester
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a single grip harvester
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

- material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a single grip harvester
- Single grip harvester operations and operating techniques
- Single grip harvester capabilities and attachments
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently operate a single grip harvester in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to operating a single grip harvester
- following organisational policies and procedures relevant to operating a single grip harvester
- following applicable licensing or certification requirements
- communicating and working safely with others in the work area

EVIDENCE GUIDE

Context of and specific resources for assessment

- operating a single grip harvester to fell, delimb and cut trees to length in line with site requirements
- changing and fitting a single grip harvester cutting attachment in line with manufacturer's specifications
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any

EVIDENCE GUIDE

relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Organisational requirements
may include:

Environmental protection measures

may include action to limit the impact to:

- ground growth and canopy
- soil and water

may include action to limit the impact of:

- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- ground hazards
- obstacles

RANGE STATEMENT

Work order is to include:

- instructions for the operation of a single grip harvester and its respective tasks

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment is to include:

- single grip harvesters
- relevant maintenance equipment
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine

Environmental and heritage concerns may include:

- dust
- noise
- water
- flora and fauna
- heritage legislation
- culturally sensitive sites and artefacts
- plantations
- native forest

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- attachments are fitted accurately
- plant is operating to optimum performance

Hazards may include:

- uneven/unstable terrain
- trees
- fires

RANGE STATEMENT

- overhead and underground services
 - bridges
 - buildings
 - excavations
 - traffic
 - embankment
 - cuttings
 - structures and hazardous materials
- Emergency plan** may include:
- notification of authorities
 - evacuation procedures
 - isolation procedures
 - equipment shut-down procedures
 - clean up
 - first aid
 - use of personal protective equipment and clothing
 - guarding
 - access and exit
- Single grip harvesting head** is a piece of equipment capable of felling and processing trees, attached to a tracked or wheeled carrier
- Stability** is to ensure the single grip harvester is positioned and secured so as not to topple over during operations
- Cutting attachments** may include:
- sprocket
 - bar and chain components used for felling or docking trees
- Tasks** may include processing materials such as:
- felling
 - delimiting
 - measuring
 - bucking
 - cutting to length
 - topping
 - piling
- Records and reports** may include:
- cable recovery operations
 - extraction methods
 - hazards
 - incidents or equipment malfunctions

RANGE STATEMENT

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------------|--|
| 1. Plan and prepare for chipping | <p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to operating a heavy production mobile chipping unit are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Type and quantity of <i>timber</i> to be chipped is identified and assessed for safe working conditions</p> <p>1.5. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. <i>Chipping</i> activities are planned in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Chip timber | <p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. <i>Chipping unit</i> is positioned, secured and set up in line with manufacturer's specifications</p> <p>2.3. <i>Pre start-up checks</i> are carried out on equipment in line with manufacturer's recommendations and site requirements</p> |

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|----|--|---|
| 3. | Carry out machine operator maintenance | 2.4. Site <i>hazards</i> associated with heavy production mobile chipper operations are detected and safe operating techniques are used to minimise risk
2.5. Timber is fed into the chipper at a rate applicable to the <i>capacity</i> of the machinery and product quality
2.6. Timber is chipped to the <i>chip sizes</i> set on the chipping unit in line with the work order
2.7. Chipped timber is fed into the back of a truck or other modes of <i>transportation</i>
2.8. Communication with others is maintained in line with OHS requirements
2.9. <i>Emergency plan procedures</i> are followed <i>in line with OHS, environmental, legal and site requirements</i>
3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
3.2. Chipper is checked for blunt or damaged condition
3.3. Components are removed, maintained, adjusted and replaced in line with manufacturer's recommendations
3.4. Chipper set-up is assessed and adjusted to suit chipping conditions
3.5. Chipper is kept clear of <i>foreign matter</i> and checked to ensure it meets relevant standards prior to use
3.6. Chipping processes and equipment faults are <i>recorded and reported</i> to appropriate personnel |
|----|--|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate a heavy production mobile chipper, effectively assess condition of chipper
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and maintain workplace information,

REQUIRED SKILLS AND KNOWLEDGE

and documentation

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a heavy production mobile chipper
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a heavy production mobile chipper
- Characteristics of trees and timber defects
- Heavy production chipping procedures
- Heavy production mobile chipper operation and safety
- Chip types and quality
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

RANGE STATEMENT

- buildings
- excavations
- traffic
- embankment
- cuttings
- structures and hazardous materials

Capacity is the capacity of the machinery to cope with certain size diameters of log or branch or the speed by which timber is fed into the chipper

Chip sizes may vary, dependent on the customer or work order and the capability of the chipper

Transportation may include:

- high trailers
- trucks
- rail cars
- other applicable forms of transport

Emergency plan may include:

- notification of authorities
- evacuation procedures
- isolation procedures
- equipment shut-down procedures
- clean up
- first aid
- use of personal protective equipment and clothing
- guarding
- access and exit

Foreign matter is the contamination of chip, stones, rocks, metal and other foreign matter which may blunt the cutters or affect operation of the chipper

Records and reports may include:

- timber type, size
- quality outcomes
- storage locations
- quality outcome
- hazards
- incidents or equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

ELEMENT**PERFORMANCE CRITERIA**

- with manufacturer's recommendations and site requirements
- 2.3. Crawler controls and functions, including implements or other attachments, brakes and manoeuvrability are checked for serviceability and any faults are rectified or reported
- 2.4. Site *hazards* associated with crawler operations are detected and safe operating techniques are used to minimise risk
- 2.5. Operating techniques for the crawler are applied to achieve optimum efficiency in line with manufacturer's design specifications
- 2.6. Crawler is operated to work instructions in line with site operating procedures
- 2.7. *Emergency plan* procedures are followed in line with OHS, environmental, legal and site requirements
3. Carry out machine operator maintenance
- 3.1. Crawler is safely parked, shut-down and prepared for maintenance in line with manufacturer's manual and organisational requirements
- 3.2. Visual inspection and fault finding processes are conducted in line with manufacturer's recommendations and organisational requirements
- 3.3. Defective parts are removed and replaced safely and effectively in line with manufacturer's manual and organisational requirements
- 3.4. Regular programmed maintenance *tasks* are carried out in line with manufacturer's and organisational requirements
- 3.5. Work area is cleared and waste materials are disposed of or recycled in line with site environmental management plan
- 3.6. Plant, tools and equipment are cleaned, checked, maintained and stored in line with manufacturer's recommendations and standard work practices
- 3.7. Crawler operational *records and reports* are completed accurately and processed in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and efficiently and safely conduct forestry operations using crawler tractor
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting forestry operations using crawler tractor
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting forestry operations using crawler tractor
- Crawler operation techniques and capabilities
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct forestry operations using crawler tractor in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting forestry operations using crawler tractor
- following organisational policies and procedures relevant to conducting forestry operations using crawler tractor
- communicating effectively and working safely with others in the work area
- conducting crawler operations in line with site requirements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Crawler is a self-propelled tracked or wheeled purpose designed machine with an attachment mounted at the front end

OHS requirements: are to be in with applicable Commonwealth, State

RANGE STATEMENT

or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards

RANGE STATEMENT

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Environmental protection measures

may include action to limit the impact to:

- ground growth and canopy
- soil and water

may include action to limit the impact of:

- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- ground hazards
- obstacles

Work order is to include:

- instructions for the operation of a crawler and its respective tasks

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment is to include:

- crawlers and relevant maintenance equipment
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine

Environmental and heritage concerns may include:

- dust
- noise
- water
- flora and fauna

RANGE STATEMENT

- heritage legislation
 - culturally sensitive sites and artefacts
 - plantations
 - native forest
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices
- Pre start-up checks** are conducted to:
- ensure the equipment has been set-up correctly
 - plant operating to optimum performance
- Hazards** may include:
- uneven/unstable terrain
 - trees
 - fires
 - overhead and underground services
 - bridges
 - buildings
 - excavations
 - traffic
 - embankment
 - cuttings
 - structures and hazardous materials
- Emergency plan** may include:
- notification of authorities
 - evacuation procedures
 - isolation procedures
 - equipment shut-down procedures
 - clean up
 - first aid
 - use of personal protective equipment and clothing
 - guarding
 - access and exit
- Tasks** may include:
- tree removal
 - stripping
 - spreading materials
 - stockpiling

RANGE STATEMENT

- bulk excavation
- land clearing
- track rolling
- ripping
- push loading
- scrapers
- grapple operations for logging
- towing equipment
- working in tandem
- winching
- boxing
- constructing fire breaks
- end of shift documentation
- work log

Records and reports may include:

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

FPIHAR3217A Conduct skidder operations

Modification History

Release 2

Fixed formatting of Performance Criteria 2.7. No content change.

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to conduct skidder operations including planning and preparation for work, conducting operational checks, the safe and effective operation of the skidder for a range of mandatory tasks, the use of attachments and operator maintenance activities

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions

This unit replaces FPIHAR3204B Conduct skidder operations

Application of the Unit

Application of the unit

The unit involves conducting skidder operations in a forest environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Plan and prepare for <i>skidder</i> operations | <p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to conducting <i>skidder</i> operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Type and quantity of material to be moved with a skidder is assessed and prepared</p> <p>1.5. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. Skidder operations are planned in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Operate skidder | <p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in line with manufacturer's recommendations and site</p> |

ELEMENT**PERFORMANCE CRITERIA**

- requirements
- 2.3. Skidder controls and functions, including implements, brakes and manoeuvrability are checked for serviceability and any faults are rectified or reported
- 2.4. Site *hazards* associated with skidder operations are detected and safe operating techniques are used to minimise risk
- 2.5. Operating techniques for the skidder are applied to achieve optimum efficiency in line with manufacturer's' design specifications
- 2.6. Skidder is operated to work instructions in line with company operating procedures
- 2.7. *Emergency plan* procedures are followed in line with OHS, environmental, legal and site requirements
3. Attach, secure, lift, carry and place materials
- 3.1. Communication practices associated with transportation and lifting of materials are conducted in line with site procedures and continued between parties
- 3.2. *Log control* methods are established
- 3.3. *Lifting or towing gear* is selected, attached and used in line with safe working load requirements and OHS legislation
- 3.4. Machinery is positioned ensuring *stability* and located to effectively shift materials in line with job specifications
- 3.5. Load is shifted safely and effectively in line with industry safety standards and manufacturer's' specifications
- 3.6. Load is moved in line with conventional hand and audible signals that meet OHS legislation and/or site procedures
4. Carry out machine operator maintenance
- 4.1. Skidder is safely parked, shut-down and prepared for maintenance in line with manufacturer's manual and organisational requirements
- 4.2. Visual inspection and fault finding processes are conducted in line with manufacturer's recommendations and organisational requirements
- 4.3. Defective parts are removed and replaced safely and effectively in line with manufacturer's manual and organisational requirements
- 4.4. Regular programmed maintenance tasks are carried

ELEMENT**PERFORMANCE CRITERIA**

- out in line with manufacturer's and organisational requirements
- 4.5. Work area is cleared and waste materials are disposed of or recycled in line with site environmental management plan
- 4.6. Plant, tools and equipment are cleaned, checked, maintained and stored in line with manufacturer's recommendations and standard work practices
- 4.7. Skidder operational *records and reports* are completed accurately and processed in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and efficiently and safely operate a skidder
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting skidder operations
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting skidder operations
- Skidder operating techniques
- Skidder capabilities
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding

REQUIRED SKILLS AND KNOWLEDGE

techniques

- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct skidder operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting skidder operations
- following organisational policies and procedures relevant to conducting skidder operations
- following applicable licensing or certification requirements
- communicating effectively and working safely with others in the work area
- conducting skidder operations in line with site requirements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints

EVIDENCE GUIDE

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Skidder

is a self-propelled wheeled and articulated purpose designed machine used to haul timber over rough terrain. The skidder moves timber from the forest to the landing

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment

RANGE STATEMENT

Organisational requirements may include:

- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Environmental protection measures

may include action to limit the impact to:

- ground growth and canopy
- soil and water

may include action to limit the impact of:

- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- ground hazards
- obstacles

Work order is to include:

- instructions for the operation of a skidder and its respective tasks

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

RANGE STATEMENT

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment is to include:

- grapple or cable skidders
- relevant maintenance equipment
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine

Environmental and heritage concerns may include:

- dust
- noise
- water
- flora and fauna
- heritage legislation
- culturally sensitive sites and artefacts
- plantations
- native forest

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- plant is operating to optimum performance

Hazards may include:

- uneven/unstable terrain
- trees
- fires
- overhead and underground services
- bridges
- buildings
- excavations
- traffic
- embankments
- cuttings
- structures and hazardous materials

RANGE STATEMENT

Emergency plan may include:

- notification of authorities
- evacuation procedures
- isolation procedures
- equipment shut-down procedures
- clean up
- first aid
- use of personal protective equipment and clothing
- guarding
- access and exit

Log control

is the balance and control of logs while carrying or towing as prescribed by the manufacturer, not exceeding the allowable capacity of the skidder

Lifting or towing gear may include:

- grapples
- cables

Stability

is to ensure the skidder is positioned and operates so as not to topple over during operations

Tasks may include:

- extraction of logs to the landing
- ancillary forestry activities
- end of shift documentation
- work log

Records and reports may include:

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for <i>loader</i> operations	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to conducting loader operations are identified and followed</p> <p>1.2. Site <i>environmental protection measures</i> are adhered to in line with relevant legislation and regulations</p> <p>1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.4. Type and quantity of material to be moved with a <i>loader</i> is assessed and prepared</p> <p>1.5. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. Loader operations are planned in line with site procedures and <i>environmental and heritage concerns</i></p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Operate loader	<p>2.1. All work is conducted in line with work order, environmental and OHS requirements</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in line with manufacturer's recommendations and site</p>

ELEMENT**PERFORMANCE CRITERIA**

- requirements
- 2.3.Loader controls and functions, including implements or other attachments, brakes and manoeuvrability are checked for serviceability and any faults are rectified or reported
- 2.4.Site *hazards* associated with loader operations are detected and safe operating techniques are used to minimise risk
- 2.5.Operating techniques for the loader are applied to achieve optimum efficiency in line with manufacturer's design specifications
- 2.6.Loader is operated to work instructions in line with company operating procedures
- 2.7.*Emergency plan procedures are followed in line with OHS, environmental, legal and site requirements*
3. Attach, secure, lift, carry and place materials
- 3.1.Communication practices associated with transportation and lifting of materials are conducted in line with site procedures and continued between parties
- 3.2.*Weight of load* is established in line with site procedures
- 3.3.*Lifting gear* is selected, attached and used in line with safe working load requirements and OHS legislation
- 3.4.Machinery is positioned ensuring *stability* and located to effectively shift materials in line with job specifications
- 3.5.Load is shifted safely and effectively in line with industry safety standards and manufacturer's specifications
- 3.6.Load is moved in line with conventional hand and audible signals that meet OHS legislation and/or work site procedures
4. Segregate and stack logs
- 4.1.Planned landing layout and log handling procedures are identified from work order
- 4.2.Location of stacks provides space for other landing operations and access to all appropriate site equipment
- 4.3.Log stacks are positioned and maintained in accordance with planned layout to provide for anticipated stock levels, stock rotation requirements, size, segregation of lengths, species and grades

ELEMENT	PERFORMANCE CRITERIA
	4.4.Stacks are constructed to provide stability and minimise problems from slippage and falling of logs
	4.5.Logs delivered to landing are <i>visually assessed</i>
	4.6.Logs are directed or moved to appropriate location for further processing or stacking consistent with species, diameter, length, grade, landing layout and stock rotation requirements
	4.7.Logs are identified and records maintained in accordance with standard site procedures
5. Load and unload logs	5.1.Work is planned to minimise equipment and log movement and to load/unload logs safely in accordance with regulations and site operating plans and procedures
	5.2.Loader is positioned to enable access to the logs to be loaded/unloaded within load reach and movement limits
	5.3.Weight of logs is <i>estimated</i> to determine <i>lifting</i> requirement and compliance to load plate
	5.4.Logs are segregated or selected by size and grade in accordance with work requirements and logs suitable for base and side of load are selected, transferred and placed
	5.5.Individual logs are separated and rolled/lifted using all relevant movements in accordance with normal equipment operating procedures
	5.6.Logs are bunched using lifting gear to optimise loaded movements
	5.7.Trial lift is carried out when warranted by load size or stability and load is lowered for corrective action to be taken where unacceptable operational situation is revealed
	5.8.Loads are lifted, turned and placed using all relevant equipment movements in accordance with standards and regulations to achieve optimum load shape
	5.9.Logs which do not meet requirements for size or grade - within the scope of operator's knowledge - are rejected or referred to others for regrading
	5.10. Logs are supported or compressed to enable placement of slipper or chocks where necessary
	5.11. Placement of logs meets all requirements for positioning, ensuring stability of load and stack is maintained at all times
6. Carry out machine	6.1.Loader is safely parked, shut-down and prepared for

ELEMENT	PERFORMANCE CRITERIA
operator maintenance	<p>maintenance in line with manufacturer's manual and organisational requirements</p> <p>6.2. Inspection and fault finding processes are conducted in line with manufacturer's recommendations and organisational requirements</p> <p>6.3. Defective parts are removed and replaced safely and effectively in line with manufacturer's manual and organisational requirements</p> <p>6.4. Regular programmed maintenance tasks are carried out in line with manufacturer's and organisational requirements</p> <p>6.5. Work area is cleared and waste materials are disposed of or recycled in line with site environmental management plan</p> <p>6.6. Plant, tools and equipment are cleaned, checked, maintained and stored in line with manufacturer's recommendations and standard work practices</p> <p>6.7. Loader operational <i>records and reports</i> are completed accurately and processed in line with site procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and efficiently and safely operate a loader
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards,

REQUIRED SKILLS AND KNOWLEDGE

codes of practice and established safe practices relevant to the full range of processes for conducting loader operations

- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting loader operations
- Loader operating techniques
- Loader capabilities and attachments
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct loader operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting loader operations
- following organisational policies and procedures relevant to conducting loader operations
- communicating effectively and working safely with

EVIDENCE GUIDE

- others in the work area

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Loader

- is a self-propelled, tracked, wheeled, stationary or purpose designed machine
- can load or excavate through forward motion of the machine
- can lift, transport and discharge material

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation

Environmental requirements

RANGE STATEMENT**may include:**

- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements**may include:**

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Environmental protection measures

may include action to limit the impact to:

- ground growth and canopy
- soil and water

may include action to limit the impact of:

- general forest lean
- wind speed and direction

RANGE STATEMENT

- fallen trees
 - density of trees
 - ground slope
 - ground hazards
 - obstacles
- Work order** is to include:
- instructions for the operation of a loader and its respective tasks
- and may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** is to include:
- loaders
 - relevant maintenance equipment
 - procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine
- Environmental and heritage concerns** may include:
- dust
 - noise
 - water
 - flora and fauna
 - heritage legislation
 - culturally sensitive sites and artefacts
 - plantations
 - native forest

- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices
- Pre start-up checks** are conducted to ensure:
- equipment has been set-up correctly

RANGE STATEMENT

Hazards may include:	<ul style="list-style-type: none">• plant is operating to optimum performance• uneven/unstable terrain• trees• fires• overhead and underground services• bridges• buildings• excavations• traffic• embankment• cuttings• structures and hazardous materials
Emergency plan may include:	<ul style="list-style-type: none">• notification of authorities• evacuation procedures• isolation procedures• equipment shut-down procedures• clean up• first aid• use of personal protective equipment and clothing• guarding• access and exit
Weight of load	is that prescribed by the manufacturer as not exceeding the allowable capacity of the loader
Lifting gear may include:	<ul style="list-style-type: none">• slings• cables• grabs
Stability	is to ensure the loader is positioned and operates so as not to topple over during operations
Visual assessment of logs includes identifying and determining:	<ul style="list-style-type: none">• species• diameter• length• grade• landing layout• stock rotation requirements
Estimation	of timber weight is used to determine lifting requirements and compliance to load plate
Lifting	may be conducted on a trial basis when an issue

RANGE STATEMENT

with load size or stability or other unacceptable operational situation is determined

Tasks may include:

- tree removal
- stripping
- spreading materials
- stockpiling
- loading and unloading of trucks
- loading mill decks
- segregating and splitting of logs
- bulk excavation
- towing equipment
- working in tandem
- winching
- boxing
- end of shift documentation
- work log

Records and reports may include:

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

ELEMENT**PERFORMANCE CRITERIA**

- effectively in line with manufacturer's manual and organisational requirements
- 4.4.Regular programmed maintenance tasks are carried out in line with manufacturer's and organisational requirements
- 4.5.Work area is cleared and materials disposed of or recycled in line with site environmental management plan
- 4.6.Plant, tools and equipment are cleaned, checked, maintained and stored in line with manufacturer's recommendations and standard work practices
- 4.7.Excavator operational *records and reports* are completed accurately and processed in line with site procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate an excavator
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting excavator operations with grabs
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for conducting excavator operations with grabs

REQUIRED SKILLS AND KNOWLEDGE

- Excavator operations and operating techniques
- Excavator capabilities
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance including equipment safety requirements
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently conduct excavator operations with grabs in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to conducting excavator operations with grabs
- following organisational policies and procedures relevant to conducting excavator operations with grabs
- communicating and working safely with others in the work area
- conducting excavator operations with grabs in line with site requirements

Context of and specific resources for

- Competency is to be assessed in the workplace or realistically simulated workplace

EVIDENCE GUIDE

assessment

- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment

EVIDENCE GUIDE

task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards

RANGE STATEMENT

- confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - heritage and traditional land owner issues
 - legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Organisational requirements** may include:
- Environmental protection measures** may include action to limit the impact to:
- ground growth and canopy
- may include action to limit the impact of:
- soil and water
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - ground hazards
 - obstacles
- Work order** is to include:
- instructions for the operation of an excavator and its respective tasks
- and may include:
- instructions for the environmental monitoring

RANGE STATEMENT

- of work and procedures
- environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Appropriate personnel** may include:
- Excavator** is a self-propelled tracked or wheeled machine with an upper structure capable of a minimum of 360° rotation which lifts, elevates, swings and discharges material by the action of attachments fitted to the boom and arm or telescoping boom, without moving the chassis or undercarriage during any part of the working cycle of the machine
- Equipment** may include:
- excavators and relevant maintenance equipment
 - bucket
 - forks
 - grabs
 - procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine
- Environmental and heritage concerns** may include:
- dust
 - noise
 - water
 - flora and fauna
 - heritage legislation
 - culturally sensitive sites and artefacts
 - plantations
 - native forest
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening
 - questioning to clarify and confirm understanding
 - use of electronic communication devices
- Pre start-up checks** are conducted to ensure:

RANGE STATEMENT

Hazards may include:

- equipment has been set-up correctly
- plant is operating to optimum performance
- uneven/unstable terrain
- trees
- fires
- overhead and underground services
- bridges
- buildings
- excavations
- traffic
- embankments
- cuttings
- structures
- hazardous materials

Emergency plan may include:

- notification of authorities
- evacuation procedures
- isolation procedures
- equipment shut-down procedures
- clean up
- first aid
- use of personal protective equipment and clothing
- guarding
- access and egress

Weight of load

is that prescribed by the manufacturer as not exceeding the allowable capacity of the excavator

Lifting gear may include:

- slings
- cables
- grabs

Stability

is to ensure the excavator is positioned and secured so as not to topple over during operations

Tasks may include:

- lifting and moving materials
- tree removal
- stripping
- spreading materials
- stockpiling
- bulk excavation
- land clearing
- towing equipment

RANGE STATEMENT

Records and reports may include:

- working in tandem
- winching
- boxing
- constructing fire breaks
- end of shift documentation
- work log

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Unit Sector(s)

Not Applicable

Competency field

Competency field Harvesting and Haulage

FPIHAR3220 Harvest trees manually (intermediate)

Modification History

Version	Detail
1	Unit replaces FPIHAR3202A Harvest trees manually (intermediate)

Unit Descriptor

This unit specifies the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw in a commercial harvesting environment. This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills. Persons competent in this unit should be able to effectively fell most trees with the exception of the very large, and those with significant defects and/or characteristics causing excessive complexity. Techniques for trees with a diameter greater than the bar length would generally be regarded as within the scope of this unit.

Application of the Unit

This unit involves felling trees in a commercial harvesting operation in a forest environment producing forest products.

These skills and knowledge are to be used within the scope of the person's job and authority.

Licensing/Regulatory Information

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine harvesting requirements	<p>1.1 Identify and comply with applicable <i>occupational health and safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to harvesting <i>trees</i></p> <p>1.2 Identify and adhere to site <i>environmental protection measures</i> according to <i>harvesting plan</i> and relevant legislation and regulations</p> <p>1.3 Review <i>job requirements</i> and check as required with <i>appropriate personnel</i></p> <p>1.4 Identify <i>log extraction method</i> and requirements</p> <p>1.5 Identify <i>requirements for product quality</i></p> <p>1.6 Determine harvesting requirements, and plan tree felling sequence and general falling directions</p> <p>1.7 Establish and maintain <i>communication</i> with others according to OHS requirements</p>
2. Assess harvest site	<p>2.1 Assess location and stability of harvest site for conditions likely to affect harvesting activities</p> <p>2.2 Identify and assess <i>environmental conditions</i> according to harvest plan</p> <p>2.3 Identify trees to be felled according to harvest plan</p> <p>2.4 Assess factors affecting harvesting requirements and detect and control specific forest or site risks and <i>hazards</i></p> <p>2.5 Note and monitor other personnel working on the site</p>

ELEMENT	PERFORMANCE CRITERIA
	and modify activity where required
3. Visually assess trees and plan felling	<p>3.1 Locate and visually assess trees for felling characteristics</p> <p>3.2 Check planned falling direction and propose deviation if required</p> <p>3.3 Select cutting pattern to optimise time and manageable removal of sections</p> <p>3.4 Plan sequence of cuts to fell tree according to standard felling procedures and log quality requirements</p> <p>3.5 Identify <i>trees considered outside own skill</i> level and seek assistance from appropriate personnel</p> <p>3.6 Select suitable escape route</p> <p>3.7 Clear work site and escape route of growth and debris according to environmental care principles and statutory requirements</p>
4. Prepare equipment	<p>4.1 Select <i>tools and equipment</i> appropriate to work requirements and check them for operational effectiveness according to manufacturer recommendations</p> <p>4.2 Sharpen and adjust chainsaw or change components according to manufacturer recommendations</p> <p>4.3 Carry out pre start-up checks on equipment according to felling requirements</p>
5. Fell trees	<p>5.1 Fell individual trees using selected <i>cutting techniques</i> according to OHS and job requirements</p> <p>5.2 Adjust cutting technique in response to movement and condition of tree</p> <p>5.3 Use planned escape route when tree starts to fall</p> <p>5.4 Monitor fall and movement of tree on ground until determined stable</p>

ELEMENT	PERFORMANCE CRITERIA
	5.5 Fell trees to meet production levels, log extraction methods and site requirements
	5.6 Identify and implement procedures for removal of trees that are hung-up
6. Maintain equipment	6.1 Inspect equipment on completion of harvesting activities
	6.2 Identify damaged saws and cutting attachments for repair or replacement according to organisational requirements and manufacturer recommendations
	6.3 Remove, clean, adjust or replace chain and other components according to manufacturer recommendations
	6.4 Maintain tools and equipment according to OHS requirements and manufacturer recommendations

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- Technical skills to:
 - use and maintain relevant tools and equipment
 - safely operate and maintain a chainsaw
 - assess, plan and carry out tree-felling operations appropriate to site conditions
- Communication skills to:
 - use appropriate communication and interpersonal techniques and methods with colleagues and others
 - use hand signals with other operators to maintain effective and safe tree felling
- Literacy skills to:
 - locate and report information
 - interpret, apply and convey information in written, diagrammatic and/or verbal form
- Numeracy skills to:
 - estimate tree height
 - calculate product mass and determine tree fall zone
 - measure tree length and diameter
- Problem-solving skills to:
 - review and identify work requirements

- recognise own limitations in conditions and trees for felling
- identify problems and equipment faults and demonstrate appropriate response procedures
- apply safe work practices, including using personal protective equipment (PPE) and controlling hazards
- comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for felling trees manually
- Planning and organising skills to work to site requirements and extraction methods

Required knowledge:

- Basic knowledge of applicable federal, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for felling trees manually
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for harvesting trees manually
- Types of tools and equipment for harvesting trees manually, and the procedures for their safe use, operation and maintenance
- Problem identification and resolution strategies and common fault-finding techniques
- Established communication channels and protocols
- Identification and evaluation of structural defects in trees
- Types and purposes of a range of cuts to fell trees
- Operational principles and limitations of a chainsaw
- Procedures for recording and reporting workplace information
- Site production requirements
- Fire protocols

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess, plan and safely and efficiently operate chainsaw equipment to manually harvest trees at the intermediate level in a forest environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable federal, state or territory legislative and regulatory requirements and codes of practice including OHS, environmental and organisational policies and procedures relevant to harvesting trees at an intermediate level
- compliance with licensing or certification requirements relevant to harvesting trees at an intermediate level
- communicating and working safely with others in the work area
- assessing, planning and safely felling trees without damage to personnel, equipment and surrounding environment
- planning felling sequence and preparing surroundings for harvesting operations
- preparing, operating and maintaining chainsaw equipment and other felling equipment
- applying appropriate extraction methods
- applying specifications as outlined in harvesting plan

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory requirements and Australian standards

The following resources should be made available:

- workplace location or simulated workplace
- materials and equipment relevant to undertaking work applicable to this units
- work instructions specific to tree felling

Method of assessment

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

OHS requirements:

- are to be in accordance with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
 - PPE and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control
 - fatigue management
 - appropriate signage
 - elimination of hazardous materials and substances

- safe forest practices, including required actions relating to forest fire
- techniques for manual handling, including shifting, lifting and carrying

- Legislative requirements:**
- are to be in accordance with applicable federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
 - award and organisational agreements
 - industrial relations
 - Australian standards
 - confidentiality and privacy
 - OHS
 - the environment
 - native vegetation
 - equal employment opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care

Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste disposal, recycling and re-use guidelines

Trees typical to the scope of this unit may include the following characteristics:

- lean and weight distribution that can be assessed and readily adapted to falling direction with the use of wedges and/or control with hinge-wood
- various dimensions relative to local forest size distribution
- limited visible damage and/or defect
- species prone to free splitting and adverse reactions

during felling

- a crown that contains dead or broken material, entanglement or malformation and is visible for assessment and monitoring
- single or multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add complexity to the operation

Environmental protection measures may include action to limit the impact to:

- native vegetation
- soil and water
- heritage and archeological artefacts
- flora and fauna
- geomorphologic features
- landscape
- external site pollution
- recreational opportunities
- regeneration opportunities

Harvesting plan:

- is a formal document that outlines the operational requirements of the work site, which may include:
 - extraction plan
 - traffic plan
 - environmental requirements
 - restricted areas
 - identified hazards
 - harvesting prescription
 - product volumes
- while site plan document may be named differently between jurisdictions and regions, its common terms may include:
 - coupe plan
 - forest practices plan
 - site or logging plan

Job requirements may include:

- information and instructions relevant to tree-felling operations, including:
 - processing location details
 - trees to be felled and retained
 - general environmental requirements
 - site plan and environmental features

Appropriate personnel
may include:

- supervisors
- clients
- colleagues
- managers

Log extraction methods
may include:

- skidding
- forwarding
- using cable
- shovel logging

Requirements for product quality may include:

- product specifications
- stump shatter
- butt splitting
- log breakage
- stump height

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening and questioning to clarify and confirm understanding
- electronic communication devices

Environmental conditions
may relate to:

- ground growth
- canopy
- general forest lean
- ground slope
- ground hazards
- wind speed and direction

Hazards may include:

- uneven and unstable terrain
- unsafe trees
- fires
- overhead and underground services
- excavations
- traffic
- structures
- hazardous materials
- insects and animals

- other personnel and machinery

Trees considered outside own skill level include:

- trees that contain hazards and are deemed unsafe
- trees that are considered to be in the advanced category
- trees where cuts made may lead to loss of control of tree in felling

Tools and equipment may include:

- warning signs
- chainsaw and components
- PPE and clothing
- first aid equipment
- maintenance requirements
- support tools

Cutting techniques:

- will include:
 - scarf cutting
 - back cutting to provide hinge-wood and maintain control of tree
- and may include:
 - use of wedges to assist in controlling falling direction

Competency Field n/a

FPIHAR3221 Harvest trees manually (advanced)

Modification History

Version	Detail
1	Unit replaces FPIHAR3212A Harvest trees manually (advanced)

Unit Descriptor

This unit specifies the outcomes required to assess, plan and safely carry out advanced tree harvesting operations using a chainsaw.

Application of the Unit

This unit involves harvesting trees in forest and forest product operations of all sizes. It applies to a forest environment and involves application of skills and knowledge at a tradesperson level.

These skills and knowledge are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for felling

- 1.1 Identify and comply with applicable ***occupational health and safety*** (OHS), environmental, ***legislative*** and ***organisational requirements*** relevant to harvesting ***trees***
- 1.2 Identify and adhere to site ***environmental protection measures*** and harvest plan according to relevant legislation and regulations
- 1.3 Review and check ***job requirements*** with ***appropriate personnel***
- 1.4 Select ***tools and equipment*** appropriate to work requirements and check for operational effectiveness according to manufacturer recommendations
- 1.5 Sharpen and adjust chainsaw or change components according to manufacturer recommendations
- 1.6 Assess tree and determine felling requirements
- 1.7 Identify and control potential and existing risks and ***hazards*** in the work area
- 1.8 Identify trees to be felled and ***retained*** and establish general falling direction
- 1.9 Identify ***log extraction method*** and requirements
- 1.10 Determine ***requirements for product quality***

2. Assess conditions and surroundings

- 2.1 Identify and comply with site environmental concerns according to relevant federal, state or territory legislation and local regulations
- 2.2 Identify and assess ***environmental conditions*** according to ***harvesting plan***
- 2.3 Maintain awareness of environmental conditions and other personnel activity in the work area and modify

ELEMENT	PERFORMANCE CRITERIA
	<ul style="list-style-type: none"> 3.4 Assess general factors affecting felling requirements and detect and control specific forest or site risks and hazards
3. Assess tree and plan felling	<ul style="list-style-type: none"> 3.1 Locate and visually assess tree for felling characteristics 3.2 Assess and check required falling direction and possible deviation 3.3 Plan sequence of cuts to fell tree according to standard felling procedures and log quality requirements 3.4 Assess <i>limitations</i> of own skills in safely felling trees, identify <i>trees considered outside own skill level</i> and seek assistance from appropriate personnel where required 3.5 Note and monitor location and activity of other personnel in the work area
4. Fell trees of any size, species and condition	<ul style="list-style-type: none"> 4.1 Fell individual trees using planned <i>cutting techniques</i> according to site conditions, extraction method and at a safe distance from other personnel in the work area 4.2 Adjust cutting technique in response to movement and condition of tree 4.3 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable 4.4 Delay movement back into the felling area until all tree material, including from adjacent tree crowns, has fallen, and identify any dangerous tree branches that hang-up 4.5 Fell trees to meet production levels, log extraction methods and site requirements 4.6 Identify procedures for removal of trees that are hung-up
5. Maintain equipment	<ul style="list-style-type: none"> 5.1 Detect, rectify and report blunt or damaged saw chain according to workplace procedures 5.2 Monitor chainsaw for operational effectiveness and record and report faults, malfunctions and problems according to workplace procedures

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- Technical skills to:
 - use and maintain relevant tools and equipment
 - safely operate and maintain a chainsaw
 - assess, plan and carry out tree-felling operations appropriate to site conditions
- Communication skills to:
 - use appropriate communication and interpersonal techniques and methods with colleagues and others
 - use hand signals with other operators to maintain effective and safe tree felling
- Literacy skills to:
 - locate and report information
 - interpret, apply and convey information in written, diagrammatic and/or verbal form
- Numeracy skills to:
 - estimate tree height
 - calculate product mass and determine tree fall zone
 - measure tree length and diameter
- Problem-solving skills to:
 - review and identify work requirements
 - recognise own limitations in conditions and trees for felling
 - identify problems and equipment faults and demonstrate appropriate response procedures
 - apply safe work practices, including using personal protective equipment (PPE) and controlling hazards
 - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for felling trees manually
- Planning and organising skills to work to site requirements and extraction methods

Required knowledge:

- Basic knowledge of applicable federal, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for felling trees manually
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for harvesting trees manually
- Types of tools and equipment for harvesting trees manually, and the procedures for their safe use, operation and maintenance
- Problem identification and resolution strategies and common fault-finding

techniques

- Established communication channels and protocols
- Procedures for identifying and evaluating structural defects in trees
- Types and purposes of a range of cuts to fell trees
- Operational principles and limitations of a chainsaw
- Procedures for recording and reporting workplace information
- Chainsaw product specifications
- Site production requirements
- Fire protocols

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess, plan and safely and efficiently operate chainsaw equipment to manually harvest trees at an advanced level in a forest environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable federal, state or territory legislative and regulatory requirements and codes of practice including OHS, environmental and organisational policies and procedures relevant to harvesting trees at an advanced level
- compliance with applicable licensing or certification requirements relevant to harvesting trees at an advanced level
- effective communication and working safely with others in the work area
- assessing, planning and safely felling trees without damage to personnel, equipment and surrounding environment
- planning felling sequence and preparing surroundings for harvesting operations
- preparing, operating and maintaining chainsaw and other ancillary equipment

- appropriate extraction methods
 - applying specifications as outlined in harvesting plan
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to comply with relevant regulatory requirements and Australian standards
 - The following resources should be made available:
 - workplace location
 - materials and equipment relevant to undertaking work applicable to this unit
 - work instructions specific to tree felling
- Method of assessment**
- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
 - Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access, interpret and apply the essential underpinning knowledge
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in accordance with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- appropriate signage
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements: are to be in accordance with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- native vegetation
- equal opportunity

- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational

requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Trees typical to the scope of this unit may include the following characteristics:

- lean and weight distribution which adds significant complexity yet can be assessed and adapted to site requirements
- larger dimensions relative to local forest size distribution
- substantial lean
- damage and/or defect that requires complex felling techniques
- these may include multi legged, hollow butts, culls, stags
- species prone to free splitting and adverse reactions during falling
- a crown that contains dead or broken material, entanglement or malformation and presents a hazardous and difficult situation for assessment, monitoring and safe falling
- single or complex multi stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add significant complexity to the operation

- Environmental protection measures** may include action to limit the impact to:
- native vegetation
 - soil and water
 - heritage and archaeological artefacts
 - flora and fauna
 - geomorphologic features
 - landscape
 - external site pollution
 - recreational opportunities
 - regeneration opportunities
- Job requirements** may include
- information and instructions relevant to tree falling operations including processing location details and trees to be felled and retained
 - information may also include general environmental requirements
 - site plan and environmental features
- Appropriate personnel** may include:
- supervisors
 - clients
 - colleagues
 - managers
- Tools and equipment** may include
- warning signs
 - chainsaw and components
 - PPE and clothing
 - first aid equipment
 - maintenance requirements
 - support tools
- Hazards** may include:
- uneven/unstable terrain
 - unsafe trees
 - fires
 - overhead and underground services
 - excavations
 - traffic
 - structures
 - hazardous materials
 - insects and animals
 - other personnel and machinery

- Retained** trees include:
- those listed as heritage trees such as seed trees, habitat trees and crop trees
- Log extraction methods** may include:
- skidding
 - forwarding
 - cable
 - shovel logging
- Requirements for product quality** may include:
- product specifications
 - stump shatter
 - butt splitting
 - log breakage
 - stump height
- Communication** may include:
- verbal and non-verbal language
 - hand or other agreed signals
 - eye contact with other operators or personnel
 - active listening and questioning to clarify and confirm understanding
 - use of electronic communication devices
- Environmental conditions** may relate to:
- ground growth
 - canopy
 - general forest lean
 - ground slope
 - ground hazards
 - wind speed and direction
- Harvesting plan** is a formal document that outlines the operational requirements of the worksite which may include:
- extraction plan
 - traffic plan
 - environmental requirements
 - restricted areas
 - identified hazards
 - harvesting prescription
 - product volumes

the harvesting plan document may be named differently between jurisdictions and/or regions, common terms may include but are not restricted to:

- coupe plan
- forest practices plan
- harvesting or logging plan

Limitations may relate to:

- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation regulations and procedures
- complying with OHS requirements

Trees considered outside own skill level include:

- trees which contain hazards and are deemed unsafe
- trees where cuts made may lead to loss of control of tree in felling

Cutting Techniques will include:

- scarf-cutting
- back cutting to provide hinge-wood and maintain control of tree

and may include:

- use of wedges to assist in controlling falling direction

FPIHAR4201B Apply tree jacking techniques

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to apply tree jacking techniques in the process of felling trees 180° away from their natural direction of fall using purpose built tree jacks

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIHAR4201A Apply tree jacking techniques

Application of the Unit

Application of the unit

The unit involves applying tree jacking techniques in a forest or farm forest setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for <i>tree jacking</i>	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to applying tree jacking techniques are identified and followed</p> <p>1.2. <i>Work plan</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>trees</i> to be tree jacked are identified and assessed for safe working conditions and <i>environmental protection measures</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Tree jacking activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess and plan tree jacking	<p>2.1. <i>Environmental conditions</i> are assessed and the outcomes are used as the basis to plan the felling of each tree</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2.Movement and whereabouts of other personnel is monitored and work modified to be in line with OHS regulations</p> <p>2.3.Tree, location and <i>stability</i> are assessed for conditions likely to affect safety of tree jacking activities</p> <p>2.4.Tree is visually assessed for <i>defects, grade</i> and recovery status</p> <p>2.5.Growth around tree and appropriate escape route are selected and cleared either manually or mechanically</p> <p>2.6.<i>Fall direction</i> and allowable degree of error are assessed, considering <i>hang ups</i>, damage, <i>extraction</i> constraints and available open space</p> <p>2.7.<i>Cutting sequence</i> is planned to control direction of the fall and minimise damage to the tree and surrounding environment and communicated to other personnel</p> <p>2.8.Trees too dangerous to be felled safely are marked and referred to appropriate personnel</p>
3. Tree jack trees	<p>3.1.<i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>3.2.<i>Leaders</i> are removed and cleared in line with the tree jacking plan</p> <p>3.3.Unexpected characteristics of a tree are diagnosed and planning is reviewed</p> <p>3.4.Jacking slots are made to provide for placement of tree jacks in line with planned falling direction</p> <p>3.5.Cutting technique is adjusted and tree jacks are used to control movement and direction of tree being felled</p> <p>3.6.Falling is completed once initiated and planned safe exit route used in line with OHS requirements</p> <p>3.7.Movement of the tree on the ground is monitored and trees that hang up are assessed and cleared in line with site requirements</p> <p>3.8.Tree jacking process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
4. Conduct operator maintenance	<p>4.1.Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2.<i>Chain</i> is checked for blunt or damaged condition</p> <p>4.3.Chain and other components are removed, sharpened, maintained, adjusted and replaced in line</p>

ELEMENT**PERFORMANCE CRITERIA**

- with manufacturer's recommendations
- 4.4. Tree jacks are checked for operation and serviced
- 4.5. Chainsaw set-up is assessed and adjusted to suit cutting conditions
- 4.6. Chainsaw is kept in operational condition and checked to ensure it meets relevant standards prior to use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; advanced tree felling; efficiently and safely apply tree jacking techniques; accurately assess chainsaw chain and tree jacks condition
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and maintain information relating to tree jacking
- Numeracy skills sufficient to estimate and measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for applying tree jacking techniques
- Environmental protection requirements, including the safe disposal of waste material, the cleaning of plant, tools and equipment and the recycling and re-use of timber with defects
- Characteristics of trees and timber defects
- Organisational and site standards, requirements, policies and procedures for applying tree jacking techniques
- Tree jacking methods
- Chainsaw operation, cutting sequences and safety
- Established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently apply tree jacking techniques within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to the application of tree jacking techniques
- following organisational policies and procedures relevant to apply tree jacking techniques
- applying tree jacking techniques in line with the work order and within prescribed organisational tolerances
- conducting operator maintenance on a chainsaw
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in

Context of and specific resources for assessment

EVIDENCE GUIDE

an off-site context

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tree jacked

is the process of felling trees 180° away from their natural lean using purpose built tree jacks, held in position by boring holes into the solid wood of the tree and securing the jacks to these

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment

RANGE STATEMENT

Organisational requirements may include:

- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Work plan is to include:

- instructions for tree jacking for the work site
- and may include:

- type
- size
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- offsider/jack operator
- suppliers
- clients
- colleagues
- managers

Trees

are those in positions where conventional cutting techniques will not facilitate desired fall direction

Environmental protection

- ground growth

RANGE STATEMENT

measures may include:

- canopy
- general forest lean
- wind speed and direction
- fallen trees
- density of trees
- ground slope
- soil and water protection
- ground hazards
- obstacles
- contingencies for modifying operations during wet or other adverse weather conditions

Equipment may include:

- tree jacks
- chainsaws
- specific safety attire
- maintenance tools and equipment

and is to include:

- procedures for chainsaw lock-out such as protecting operators and co-workers from accidental injury by isolating the machine

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening
- questioning to clarify and confirm understanding
- use of electronic communication devices

Environmental conditions may include:

- ground growth
- ground slope
- gullies
- water courses
- seed trees
- habitat trees
- ground hazards
- obstacles

Stability

is the physical stability of the tree in-situ, that it is safe to fell and not likely to contain defect

Defects may include:

- shakes
- insect defects
- knots

RANGE STATEMENT

	<ul style="list-style-type: none"> resin pockets
Grade	is evaluation of the tree for defects, quality and size of log return
Fall direction	is 180° away from natural lean
Hang ups	are trees which become entangled or snagged with other objects, usually other standing trees and do not fall completely to the ground
Extraction	is the method of removing the log from the work site with mechanical equipment and cables, considering site conditions and specific log location
Cutting sequence	is the best direction or angle for making cuts to facilitate achieving the fall direction
Pre start-up checks	are conducted to ensure: <ul style="list-style-type: none"> equipment has been set-up correctly the systems are performing accurately and operating to optimum performance
Leaders	are new tree growth from the base or near the base of the tree
Records and reports may relate to:	<ul style="list-style-type: none"> tree type, size, length, diameter, inspection, grading and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions and may be: <ul style="list-style-type: none"> manual using a computer-based system or other appropriate organisational communication system
Chain	is the fast moving component surrounding the chainsaw blade containing many linked teeth

FPIHAR4202B Coordinate log recovery (hook tender)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to coordinate operational planning and setting up of cable recovery systems, including supervision and coordination of rigging slingers, yarders, choker setters and chasers

Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions.

This unit replaces FPIHAR4202A Coordinate log recovery (hook tender)

Application of the Unit

Application of the unit

The unit involves coordinating log recovery (hook tender) in a forest or farm forest setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for hook tender operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to coordinating log recovery (hook tender) are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>cable recovery equipment</i> are identified and assessed for safe working conditions and <i>environmental protection measures</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Hooker</i> and <i>cable operations</i> activities are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plan cable system layout	<p>2.1. Information essential to the planning of the cable system layout is obtained, evaluated and the site inspected for factors affecting harvesting operations</p>

ELEMENT**PERFORMANCE CRITERIA**

- and potential hazards
- 2.2. **Landing** location and size, **hauling boundaries**, access routes and construction requirements are provided to construction personnel
- 2.3. Cable system type is selected to provide optimum extraction rate for trees to be felled, considering site **topography** and codes of practice and minimising **system design additions**
- 2.4. General requirements for anchor points, backline and intermediate supports are identified and instructions given to fallers
3. Coordinate **yarder** and cable system set up
- 3.1. Rope sizes are selected for **lines** in line with the code of practice, yarder capacity and system design
- 3.2. **Components** and rigging are selected to meet code of practice requirements and system design
- 3.3. Components and lines are inspected during installation and set up
- 3.4. Site personnel are directed and assisted to layout lines, select **anchors** and position mobile backstops
- 3.5. Felled trees and **extraction sequence** are assessed for size, location and **obstructions** with recovery planned to minimise **line shifts**, log and environmental damage
- 3.6. **Support trees** are selected and directions provided for rigging
- 3.7. Unloaded and loaded system performance is checked and loads calculated to ensure they are within system and equipment capacity
- 3.8. Operations are monitored and procedural or system design changes to improve safety and payload efficiency noted and communicated
4. Coordinate rigging of **spars, towers** and trees
- 4.1. Cable system is checked from plans and operational requirements interpreted for tower, spars and support trees
- 4.2. Spars or support trees to be rigged, necessary **guylines** and required anchor points are checked from the plan or selected within guidelines provided, with trees topped in line with the code of practice
- 4.3. Rigging suitable for operational requirements, loads and rope sizes is selected to meet the code of practice and industry standards
- 4.4. Directions are provided to check components for wear, failure or missing parts prior to rigging, faults

ELEMENT**PERFORMANCE CRITERIA**

- are identified and corrective action is taken
- 4.5. Rigging is coordinated on machine towers to prepare, assemble and fit operational lines in line with system design, prior to raising
- 4.6. ***Climbing and pass line equipment*** is identified to be operated in line with the code of practice
- 4.7. ***Guys*** positioning and rigging within location angle requirements of the code of practice to provide minimal difference in length and tension is coordinated
- 4.8. System components are checked to ensure they meet the code of practice for size, safe working load, layout, position, safety straps, joins, lead angles and operating angles
5. Coordinate line shifts and rigging modifications
- 5.1. Line shifts are anticipated and required rigging is prepared in advance
- 5.2. Limitations of system positioning or design are diagnosed and modifications planned in line with the code of practice
- 5.3. Operations are monitored and procedural changes to improve safety and payload efficiency noted and communicated
- 5.4. New support trees, anchor points and mobile tail anchor position are located and riggers assigned to prepare and rig these in line with system requirements
- 5.5. Breakout processes and equipment faults are ***recorded and reported*** to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely coordinate hook tender operations
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for coordinating log recovery (hook tender)
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for coordinating log recovery (hook tender)
- Cable recovery operations and planning
- Rigging techniques
- Industry standard lengths
- Rigging and yarding operations
- Timber extraction methods
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they safely and efficiently coordinate hook tender operations within

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>organisational requirements</p> <p>The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:</p> <ul style="list-style-type: none"> • following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to coordinating log recovery (hook tender) • following organisational policies and procedures relevant to coordinating log recovery (hook tender) • coordinating hook tender operations in line with the work order and within prescribed organisational tolerances • planning the layout of cable systems in line with site conditions • modifying rigging and coordinating line shifts in line with the hook tender's instructions
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to follow relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use)

RANGE STATEMENT

- guidelines)
- Work order** is to include:
- instructions for coordinating hook tender operations from the work site
- and may include
- type
 - size
 - length
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Cable recovery equipment** may include:
- yarders
 - spars
 - rigging equipment
 - cables
- Environmental protection measures** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards
 - obstacles
 - contingencies for modifying operations during wet or other adverse weather conditions
- Equipment** is to include:
- refer to cable recovery equipment
 - procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine
- Hooker** (hook tender) is the cable logging team leader who decides which method of logging will be the fastest and

RANGE STATEMENT

most efficient, and also designs, plans and coordinates the establishment of cable recovery systems (the higher the hooker can get the logs off the ground means fewer broken logs, hang ups and snags)

Cable operations may include:

- activities covering a full range of species, log sizes, falling and retention densities, slope, other environmental conditions
- the use of cable systems including high lead (no skyline), standing skyline and a running skyline with hauling both uphill and downhill
- logs attached optimising payload without exceeding the lift or haul capacity of the system

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Landing

is the location where the yarder is positioned to receive the logs

Hauling boundaries

are designated forest coupes owned privately, by Government or by the forestry organisation with boundaries which fall within survey pegs for the land allocated for logging

Topography

is a map of the designated area showing terrain levels

System design additions are to include:

- multispans
- blind leads
- bridling
- other techniques potentially reducing extraction efficiency

Yarder

is the crane-like vehicle which winches the timber from the felling site to the landing using a cable

RANGE STATEMENT

	system
Lines are to include:	<ul style="list-style-type: none">• mainlines• haulback lines• skylines• strawlines• extensions• guylines
Components may include:	<ul style="list-style-type: none">• carriages• jacks• butt rigging• chokers• grapples• blocks• sheaves• ropes• shackles• pins• tail rope• straps• intermediate supports
Anchors are to include:	<ul style="list-style-type: none">• anchors• tailholds• block stumps• mobile backstops
Extraction sequence	is the method of removing the log from the work site with mechanical equipment and cables, considering site conditions and specific log location, in a way which minimises downtime and risk of snags, breakage and hang ups
Obstructions may include:	<ul style="list-style-type: none">• standing trees• stumps• rocks• ground projections
Line shifts	are the moving of rigging lines from one area of operation to a new area
Support trees	are trees (with heads removed) which can act as spars and be rigged accordingly
Spars	are out-posted erections which provide elevation

RANGE STATEMENT

for the cables some distance from the yarder tower

Towers

are the crane like raised towers which the cables operate from to provide height for extraction of logs.

Guylines

support the tower or spar and other rigged erections to provide stability and strength during operation

Climbing and pass line equipment

are lines linked to the drum line for the purposes of climbing trees and spars

Guys

- refer to guylines

Records and reports may include:

- cable recovery operations
- extraction methods
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

FPIHAR4203B Design log landings and snig tracks

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to design, plan and establish log landings and snig tracks and to provide support for their construction and development

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIHAR4203B Design log landings and snig tracks

Application of the Unit

Application of the unit

The unit involves designing log landings and snig tracks in a forest or farm forest setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan <i>landing</i> and recovery requirements	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to designing log landings and <i>snig tracks</i> are identified and followed</p> <p>1.2. <i>Logging</i> and <i>topography</i> details are obtained and assessed while applying <i>environmental management considerations</i></p> <p>1.3. Landing location and construction requirements are identified in line with the harvest plan and inspected to assess factors affecting harvesting operations</p> <p>1.4. Timeframe for use of the site and likely weather conditions are identified</p> <p>1.5. Log <i>extraction</i> methods and storage requirements for landings, roads, tracks, equipment placement, falling and recovery rates and delivery schedules are calculated and documented</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Design landing and snig tracks	<p>2.1. Specific landing site, size and level are calculated to meet all requirements, minimise landing</p>

ELEMENT**PERFORMANCE CRITERIA**

- environmental damage* and optimise construction time
- 2.2. Number and location of snig tracks are planned to optimise track clearing and construction time, log handling requirements and minimise environmental damage
- 2.3. Track and road entry points to landing are located in line with plan requirements, log handling procedures, vehicle and equipment access requirements, and turning and loading space requirements
- 2.4. Provision for equipment availability and access for construction are included in landing and track design
- 2.5. **Restoration** of land on completion of activity is planned
- 2.6. Landing design and track locations are documented in line with regulations
3. Coordinate landing and track development
- 3.1. Landing and snig track design and construction plan is clearly communicated to site personnel to enable preparation
- 3.2. Operational procedures for tracks and landings are planned with site personnel in line with the design plan
- 3.3. Construction of landing and tracks is monitored and unexpected ground, water, vegetation or other environmental conditions reviewed and design modified in line with new conditions
- 3.4. Technical assistance is provided to site personnel for the preparation of landing and tracks
- 3.5. Design and development process is **recorded and reported** to the **appropriate personnel**

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and

REQUIRED SKILLS AND KNOWLEDGE

equipment; efficiently and safely design log landings and snig tracks

- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for designing log landings and snig tracks
- Environmental protection requirements, including the safe disposal of waste material and returning the environment to its original or near to original condition on completion of activity
- Organisational and site standards, requirements, policies and procedures for designing log landings and snig tracks
- Log extraction methods
- Cable recovery operations and planning
- Landing design and development
- Snig track requirements, design and development
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently design log landings and snig tracks within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to designing log landings and snig tracks
- following organisational policies and procedures relevant to designing log landings and snig tracks
- designing log landings and snig tracks in line with the work order and within prescribed organisational tolerances
- planning the layout of the landing and snig tracks in line with site conditions
- coordinating the development of the landing and snig tracks in line with the hook tender's instructions

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Landing

is the location where the yarder is positioned to receive the timber

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Snig tracks** are to include:
- equipment access tracks
 - hauling tracks
 - emergency escape routes
 - vehicular tracks
- Logging** may include:
- activities covering a full range of species, log sizes, falling and retention densities, slope, other environmental conditions
 - use of cable systems including high lead (no skyline), standing skyline and a running skyline with hauling both uphill and downhill
 - Logs attached optimising payload without exceeding the lift or haul capacity of the system
- Topography** is a map of the designated area showing terrain levels
- Environmental management considerations** may include:
- ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards
 - obstacles
- Extraction** is the method of removing the log from the worksite with mechanical equipment and cables, considering site conditions and specific log location, in an order which minimises downtime and risk of snags, breakage and hang ups
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm

RANGE STATEMENT

- Environmental damage** may include:
- understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
 - natural vegetation and landscape
 - temporary, short-term, long-term and permanent
- Restoration** is the provision for placing and storing topsoil in preparation for returning the site to its original or near to original condition
- Records and reports** may include:
- landing and snig track design and development operations
 - extraction methods
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Prepare for <i>salvage</i> operations | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and coordinating fire salvage operations are identified and followed
1.2. Local authority is contacted and salvage approval obtained
1.3. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i>
1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations
1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Plan salvage operations | 2.1. Location including map and grid references are checked, <i>land ownings</i> are obtained and <i>boundaries</i> |

ELEMENT	PERFORMANCE CRITERIA
	established
	2.2. Topography including slope, elevation, contours and soil type are investigated and reported
	2.3. Operational activities including site preparation, environmental considerations and access are planned
	2.4. Environmental protection measures for the landscape, soil and drainage are planned and instigated
	2.5. Extent of damage caused by fire is assessed and reported
	2.6. Estimation of commercial viability of tree harvest and extraction is calculated and reported
	2.7. Clearing, trimming and felling operations are planned and communicated to harvesting personnel
3. Coordinate salvage operations	3.1. Schedule for salvaging is produced, checked and communicated
	3.2. Track builders are directed to form access in line with the salvage schedule and plan
	3.3. Clearing of burnt scrub and dangerous limbs is directed and monitored
	3.4. Movement and whereabouts of personnel is monitored and work modified to be in line with OHS regulations
	3.5. Tree, location and stability are assessed for conditions likely to affect safety of felling activities
	3.6. Fellers are directed to fall designated trees in line with the salvage plan and OHS regulations
	3.7. Use of mechanical equipment is monitored to minimise carbon emissions
	3.8. Logs are hauled from site and landscape is left in a safe and tidy condition to allow regeneration to occur

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; effectively assess salvage operation requirements including fire damage
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and coordinating fire salvage operations
- Environmental protection requirements, including the safe disposal of waste material, the recycling and re-use of timber with defects and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and coordinating fire salvage operations
- Sustainable forest management and the role of fire salvage operations in the recovery of fire damaged forests
- Environmental risks and hazards of fire damaged forests
- Characteristics of trees and timber defects
- Assessment of fire damaged trees
- Fire salvage operations and strategies
- Harvesting and extraction
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and coordinate fire salvage operations within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to planning and coordinating fire salvage operations
- following organisational policies and procedures relevant to planning and coordinating fire salvage operations
- planning and coordinating fire salvage operations in line with community expectations and operational requirements
- coordinating personnel to follow planning, communications and scheduling for fire salvage operations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

EVIDENCE GUIDE

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Salvage is the process of removing commercially viable

RANGE STATEMENT

trees from a site which has been damaged by fire and includes:

- minimising the impact of mechanical equipment on the environment
- leaving the site in a tidy and environmentally protected state ready for regeneration

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal

Organisational requirements

RANGE STATEMENT

may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for trimming and felling
- despatch of salvaged, felled trees from the work site

and may include:

- type
- size
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers
- local authorities

Equipment may include:

- basic assessment equipment
- computers
- safety attire

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from

RANGE STATEMENT

Communication may include:	accidental injury by isolating the machine
	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice• body language
Land ownings	is the process of notifying and obtaining owner approval to commence harvesting operations
Boundaries	are designated forest allotments owned privately, by Government or by the forestry organisation and fall within survey pegs for the land allocated
Topography	is a map of the designated area showing terrain levels, contours, elevations, slopes, gullies and adjoining land parcels
Operational activities may include:	<ul style="list-style-type: none">• coupe map details• site preparation• streamside buffers• filter strips• contours• gullies• crossing points• habitat protection• rainforest protection• flora and fauna protection• landscape protection• soil and water protection• excluded areas• rubbish removal• permanent roads• temporary roads• landings• dumps• snig tracks

RANGE STATEMENT

	<ul style="list-style-type: none"> • forwarding tracks • adjoining land • wet weather restrictions • fire protection requirements
Environmental protection measures may include:	<ul style="list-style-type: none"> • ground growth • canopy • general forest lean • wind speed and direction • fallen trees • density of trees • ground slope • soil and water protection • ground hazards • obstacles • contingencies for modifying operations during wet or other adverse weather conditions
Extent of damage is to include:	<ul style="list-style-type: none"> • impact fire has had on a forest region • how fire has affected the trees • what fire has done to underlying scrub • how safe the forest is to enter
Fire may include:	fires caused by: <ul style="list-style-type: none"> • arson • accident • lightning strike • wildfires
Commercial viability	is the assessment of trees to determine their physical stability and worth as useable logs for further production activities
Harvest and extraction	are the methods of felling and removing felled logs from the work site with mechanical equipment, considering site conditions and specific log location
Schedule	is the plan, timeline and list of events to take place in conducting fire salvage operations
Stability	is the assessment of a tree to determine if it is safe to fall, based on how badly affected by fire damage it is

RANGE STATEMENT

Regeneration is the return of an area to a revegetated state, protecting its landscape, soil and drainage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan <i>coupe</i> harvesting	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to implementing harvesting plans are identified and followed</p> <p>1.2. Size of coupe and available timber is calculated</p> <p>1.3. Human resource requirements, <i>equipment</i> and resource requirements are estimated</p> <p>1.4. Personnel plans and schedules are drawn up and employees notified of coupe harvesting date and location</p> <p>1.5. Equipment is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.6. <i>Planning permits</i> are applied for</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Implement harvesting plans	<p>2.1. Forest type, available <i>species</i> and <i>topography</i> are analysed and documented in line with plan and site procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	2.2. <i>Gross area</i> of coupe is calculated and <i>nett area</i> to be <i>harvested</i> established
	2.3. <i>Volume</i> estimates are calculated and reported
	2.4. <i>Operational activities</i> including site preparation, environmental considerations and access are planned
	2.5. Harvesting and <i>cartage</i> contracts are let for tender and issued and cartage routes set
	2.6. Schedule for harvesting is produced, checked and communicated
3. Review harvesting plan	3.1. Problems encountered during harvesting are assessed and processes planned for improvement
	3.2. Personnel and equipment efficiencies are reviewed and improvements planned for implementation
	3.3. Environmental issues encountered during harvesting are documented and fed into future planning processes
	3.4. Harvesting plan and methods are assessed and improvements devised
	3.5. Harvesting plan implementation issues are <i>recorded and reported</i> to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; effectively coordinate harvesting and cartage contracts
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to accurately calculate gross and nett areas
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards,

REQUIRED SKILLS AND KNOWLEDGE

codes of practice and established safe practices relevant to the full range of processes for implementing harvesting plans

- Environmental protection requirements, including the safe disposal of waste material the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for implementing harvesting plans
- Environmental risks and hazards specific to coupes
- Coupe establishment and harvesting planning
- Harvesting methodologies
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Coupe

is a large plot or stand of timber in a designated area which is planned for harvesting

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements

- legislation
- organisational policies and procedures

RANGE STATEMENT

may include:

- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Equipment may include:

- standard harvesting equipment
- equipment required for a specific harvesting activity

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine

Planning permits

are permits granted by local authorities for forest growing and harvesting operations to take place

RANGE STATEMENT

based on approved plans submitted to local government following all required regulations

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Species may include:

- native species of one or more type
- imported species

Topography

is a map of the designated area showing terrain levels, contours, elevations, slopes, gullies and adjoining land parcels, rainfall, soil type

Gross area

is the total area mass of the planned forest coupe

Nett area

is the total area of forest available for harvesting excluding streamside buffers, filter strips, habitat protection areas, rainforest protection, excluded areas, roads, tracks and landings

Harvested

is the method of cutting and extracting trees and logs from designated areas

Volume

is the estimated return of cubic metres or tonnes of timber for each of sawlogs, pulpwood or firewood

Operational activities may include:

- coupe map details
- site preparation
- streamside buffers
- filter strips
- contours
- gullies
- crossing points
- habitat protection
- rainforest protection
- flora and fauna protection

RANGE STATEMENT

- landscape protection
- soil and water protection
- excluded areas
- rubbish removal
- permanent roads
- temporary roads
- landings
- dumps
- snig tracks
- forwarding tracks
- adjoining land
- wet weather restrictions
- fire protection requirements

Cartage

is the use of log truck hauling operators to remove felled logs from the site

Records and reports may include:

- producing detailed records and reports outlining the implementation of harvesting plans and the review processes

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

FPIHAR5201B Design harvesting plans

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to design harvesting plans for established coupes to maximise output and cost efficiencies across multiple coupes in a number of locations

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIHAR5201A Design harvesting plans

Application of the Unit

Application of the unit The unit involves designing harvesting plans in a forest or farm forest setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for coupe harvest design	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to designing harvesting plans are identified and followed</p> <p>1.2. <i>Local authority</i> coverage, <i>land ownings</i> are obtained and <i>boundaries</i> are established</p> <p>1.3. Coupe locations including map and grid references are identified</p> <p>1.4. Land use <i>zonings</i> are identified or applied for</p> <p>1.5. Documented environmental issues encountered with previous harvesting plans are analysed and taken into consideration</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Design harvesting plans	<p>2.1. Forest types, available <i>species</i> and <i>topography</i> are analysed and documented in line with plan and site procedures</p> <p>2.2. <i>Gross area</i> of each coupe is calculated and <i>nett area</i> to be <i>harvested</i> devised</p> <p>2.3. <i>Volume</i> estimates are calculated and reported for</p>

ELEMENT	PERFORMANCE CRITERIA
3. Review harvesting plan design	<p>each coupe</p> <p>2.4. <i>Operational activities</i> including site preparation environmental considerations and access are designed</p> <p>2.5. Harvesting and <i>cartage</i> requirements are analysed and calculated</p> <p>2.6. Schedule for harvesting is designed, checked and communicated</p> <p>3.1. Harvesting plan designs are reviewed with other harvest plan designers</p> <p>3.2. Harvesting plan designs are tested and modified to suit each coupe</p> <p>3.3. Harvesting plan design is <i>recorded and reported</i> to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to accurately calculate gross and nett coupe areas
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for designing harvesting plans
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for designing harvesting plans

REQUIRED SKILLS AND KNOWLEDGE

- Environmental risks and hazards specific to coupes
- Harvesting planning design principles
- Harvesting methodologies
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently design harvesting plans within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to designing harvesting plans
- following organisational policies and procedures relevant to designing harvesting plans
- designing harvesting plans in line with regulations and organisational requirements
- designing harvesting plans in line with site conditions, regulations and organisational requirements

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

<p>Organisational requirements may include:</p>	<ul style="list-style-type: none"> • Australian Standards • confidentiality and privacy • OHS • the environment • equal opportunity • anti-discrimination • relevant industry codes of practice • duty of care • legal • organisational and site guidelines • policies and procedures relating to own role and responsibility • quality assurance • procedural manuals • quality and continuous improvement processes and standards • OHS, emergency and evacuation procedures • ethical standards • recording and reporting requirements • equipment use and maintenance and storage requirements • environmental management requirements (waste disposal, recycling and re-use guidelines)
<p>Local authorities are to include:</p>	<p>local government councils or shires with local planning and zoning authority for a given region</p>
<p>Land ownings</p>	<p>the process of notifying and obtaining owner approval to commence harvesting operations</p>
<p>Boundaries</p>	<p>are designated forest allotments owned privately, by Government or by the forestry organisation that fall within survey pegs for the land allocated</p>
<p>Zoning</p>	<p>is designated forest coupes owned privately, by government or by the forestry organisation with boundaries that fall within survey pegs for the land allocated for forest growing and harvesting operations under local authority allocation</p>
<p>Communication may include:</p>	<ul style="list-style-type: none"> • verbal and non-verbal language • constructive feedback • active listening

RANGE STATEMENT

- questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Species may include:**
- native species of one or more type
 - imported species
- Topography** is a map of the designated area showing terrain levels, contours, elevations, slopes, gullies and adjoining land parcels, rainfall, soil type
- Gross area** is the total area mass of the planned forest coupe
- Nett area** is the total area of forest available for harvesting excluding streamside buffers, filter strips, habitat protection areas, rainforest protection, excluded areas, roads, tracks and landings
- Harvested** is the method of cutting and extracting trees and logs from designated areas
- Volume** is the estimated return of cubic metres or tonnes of timber for each of sawlogs, pulpwood or firewood
- Operational activities may include:**
- coupe map details
 - site preparation
 - streamside buffers
 - filter strips
 - contours
 - gullies
 - crossing points
 - habitat protection
 - rainforest protection
 - flora and fauna protection
 - landscape protection
 - soil and water protection
 - excluded areas
 - rubbish removal
 - permanent roads

RANGE STATEMENT

- temporary roads
- landings
- dumps
- snig tracks
- forwarding tracks
- adjoining land
- wet weather restrictions
- fire protection requirements

Cartage

is the use of log truck hauling operators to remove felled logs from the site

Records and reports may include

- producing detailed records and reports outlining the design of harvesting plans and the review processes

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; and to efficiently and safely grade, sort and mark poles and debarked logs
- Communication skills and interpersonal techniques sufficient to interact

REQUIRED SKILLS AND KNOWLEDGE

appropriately with colleagues and others in the workplace

- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for grading round poles and debarked logs
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for grading round poles and debarked logs
- Environmental risks and hazards
- Methods of visual estimation, grading, colour identification and tagging
- Sorting, marking and distribution processes
- Industry standard diameters and lengths
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must

EVIDENCE GUIDE

be able to provide evidence that they can safely grade, sort and mark poles or debarked logs in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to grading round poles and debarked logs
- following organisational policies and procedures relevant to grading round poles and debarked logs
- grading, sorting and marking a full range of poles or debarked logs in readiness for storage and/or processing
- distributing poles or debarked logs on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

- (waste minimisation and disposal, recycling and re-use guidelines)
- Poles and debarked logs** may include:
- hardwood or softwood
 - poles left in the round
 - with or without preservative treatment
 - logs destined for conversion to boards
- Work order** is to include:
- instructions for receipt/despatch and grading
 - sorting and marking of poles or debarked logs to/from the designated storage location or processing
- and may include:
- type
 - size
 - quantity
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight

RANGE STATEMENT

- grade
 - shelf life
 - stock rotation position
- Equipment** may include:
- measuring equipment
 - moisture meters
 - lifting equipment for the movement of poles or logs
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Size** is to include:
- largest through to smallest diameters of poles and debarked timber within industry or site standards
 - longest through to shortest lengths of poles and debarked logs within industry or site standards
- Range** is the number of classifications/grades poles or logs are sorted into based on diameter or length
- Defects** may include:
- warp
 - wane
 - curvature
 - shakes
 - insect defects
 - knots
 - resin pockets
- Moisture content**
- is the amount of moisture maintained in poles or debarked logs after kiln drying to avoid cracking and deforming
 - in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates
- Records and reports** may
- product type
 - size

RANGE STATEMENT

include:

- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

On-site movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment

lifting equipment such as:

- fork lifts
- slings
- lifting/moving frames
- trolley jacks
- gantry cranes
- dozers
- loaders

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the manual sorting of timber

and may include:

- type
- width
- length
- thickness
- quantity

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

RANGE STATEMENT

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Boards may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber

Sorting

is the process of classifying timber into lots consisting of the same size and grade, dependent on length, width, thickness and quality of board

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- conveyors and transfer equipment
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Grading

is the process of:

- visually evaluating material characteristics and features for classification into varying strength and appearance grades
- inspecting timber to classify quality of individual boards

Features may include:

- incorrect moisture content
- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Visual assessment is to include:

- the inspection of timber to determine finish quality and faults

Disposing of may include:

- recycling sub-standard boards/material
- re-using sub-standard boards/material

Records and reports may include:

- sorting requirements
- product type
- size
- inspection
- grading and marking outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other

RANGE STATEMENT

appropriate organisational communication system

On-site movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment

lifting equipment such as:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

FPISAW2203B Sort boards mechanically

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to set up, operate and maintain a mechanical sorting machine to process boards of varying sizes

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW2203A Sort boards mechanically

Application of the Unit

Application of the unit

The unit involves sorting boards mechanically in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sorting	1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sorting boards mechanically are identified and followed 1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i> 1.3. Type and quantity of <i>boards</i> to be sorted are assessed and acquired from the <i>storage location</i> 1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.5. Sorting process is planned in line with site procedures 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements
2. Sort boards	2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements 2.2. Board cross-sections, lengths and <i>grades</i> to be sorted are identified, <i>size discriminations</i> set and timber

ELEMENT**PERFORMANCE CRITERIA**

- flow to the machine planned
- 2.3. **Program** linking board sizes to storage bins or trays is selected, entered and adjusted to optimise storage space and ensure an efficient operation
- 2.4. Sorting process is conducted automatically and correct operation of the machine, gates, conveyors and bins checked
- 2.5. Flow of material is maintained and boards are directed to subsequent operations in line with size and grade
- 2.6. Machine performance is monitored to ensure board sizes are consistent with machine settings and **visual inspection**
- 2.7. Boards rejected during the automatic sorting process or visual inspection are **disposed of** in line with site procedures and environmental requirements
- 2.8. Sorting process and equipment faults are **recorded and reported** to the appropriate personnel
3. Conduct operator maintenance
- 3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 3.2. **Photo electric cells and reflectors** or other switching systems are regularly cleaned and checked
- 3.3. Sorting machine size identification mechanisms are checked, maintained and cleaned
- 3.4. Sorting area is kept clear of dust, off-cuts and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely operate sorting equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to

REQUIRED SKILLS AND KNOWLEDGE

complete a task

- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sorting boards mechanically
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sorting boards mechanically
- Environmental risks and hazards
- Sorting procedures and mechanical sorting techniques
- Grading markings and quality standards
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely operate mechanical sorting equipment in line with organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sorting boards mechanically
- following with organisational policies and procedures relevant to sorting boards mechanically
- operating mechanical sorting equipment in readiness for allocation of timber to storage or downstream operations
- accurately setting mechanical sorting equipment parameters
- conducting operator maintenance on mechanical sorting equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge

EVIDENCE GUIDE

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management

RANGE STATEMENT

Environmental requirements may include:

- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the mechanical sorting of timber

RANGE STATEMENT

and may include:

- type
- width
- length
- thickness
- quantity

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- suppliers
- clients
- colleagues
- managers

Appropriate personnel may include:

Boards may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber

Sorting may include:

- classifying timber into lots consisting of the same size and grade dependent on:
 - length
 - width
 - thickness
 - quality of board
 - or sorting for other production lines or waste

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

RANGE STATEMENT

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position
- mechanical sorting machines

Equipment is to include:

and may include:

- drop sorters
- waterfalls
- unscramblers
- tray sorters

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Grading

is the process of:

- visually evaluating material characteristics and defects for classification into varying strength

RANGE STATEMENT

and appearance grades

- inspecting timber to classify quality of individual boards

Size discrimination

is the settings on the mechanical sorting machine which identify and classify the size of boards, determining their allocation to a size category

Program

is the computer based program which determines sorting of varying sized boards to their allocated storage area

Visual inspection is to include:

the assessment of timber to determine:

- finish quality
- faults
- recycling rejected boards
- re-using rejected boards
- automatic sorting requirements
- product type
- size
- inspection
- grading and marking outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

Disposing of may include:

Records and reports may include:

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Photo electric cells and reflectors are sensory devices which calculate size and tell the computer where to direct the board

 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

Environmental requirements
may include:

- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Docking

is the process of cutting boards to set lengths

Boards may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber

RANGE STATEMENT

Work order is to include:

- preservative treated timber
- instructions for the docking and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- measuring equipment
- power operated, manually controlled docking and trimming saws where the cutting angle is controlled relative to the board guides and clamps
- saws with adjustable angle
- saws with one blade
- radial arm saws
- table saws
- bench saws
- saws with automatic feed

and is to include:

- procedures for saw lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Cutting pattern and saw set-up sequences are to be limited to:

- single cuts requiring one cutting pass
- set up of cutting lengths
- number of boards to be cut

Communication may include:

- verbal and non-verbal language
- constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Grading

is the process of:

- visually evaluating material characteristics and features for classification into varying strength and appearance grades
- inspecting timber to classify quality of individual boards

Tolerance

is a set limit for cutting over or under the required length within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements

Features may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling boards with features, incorrect cuts and off-cuts
- re-using boards with features, incorrect cuts and off-cuts

Mechanical feed may include:

- conveyor belt systems

Recorded and reported may include:

- docking requirements
- product type
- size
- inspection
- grading and marking outcomes
- storage locations
- quality outcomes
- hazards

RANGE STATEMENT

- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Stacked may include:

- preparing for transport
- categorising in common size, length and angle
- marking lots in line with work order and site requirements
- locating as not to block access or passage

Dealing with may include:

- repair of damaged saws and blunt or damaged saw blades
- disposing of saws and saw blades that cannot be repaired

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to assembling <i>materials</i> using nail plates are identified and followed</p> <p>1.2. <i>Work order</i> and construction plans are reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> and <i>nail plates</i> to be assembled are collected</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Set-up jigs</i> required for construction are specified and prepared</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assemble materials	<p>2.1. <i>Timber components</i> are selected from pre-cut material in line with the cutting list and design specifications</p> <p>2.2. Allowable number and position of joints is</p>

ELEMENT**PERFORMANCE CRITERIA**

- interpreted from the construction plan
- 2.3. Components are positioned and clamped in jigs ready for joining with allowable faults, joints and grain in line with construction standards and grading rules
- 2.4. *Defective components* are rejected and *disposed of* in line with site procedures and environmental requirements
- 2.5. Components are stapled to maintain temporary alignment during assembly
3. Install nail plates
- 3.1. Nail plates are located and selected in line with the construction plans and standards
- 3.2. Material and nail plate press are positioned over joints
- 3.3. Nail plates are positioned on joints and installed in line with the construction plan
- 3.4. Sub-standard nail plates and nail plates damaged during the process are *dealt with* in line with site procedures and environmental requirements
- 3.5. *Assembly faults* are corrected in line with site procedures
4. Prepare material for despatch and report outcomes
- 4.1. Finished material is checked and labelled in line with work order
- 4.2. Components are removed from jigs and safely *stacked* in a designated location in line with work order requirements
- 4.3. Finished material is *strapped*, packed and labelled ready for transportation
- 4.4. *Equipment faults* are recognised and reported in line with site procedures
- 4.5. *Records and reports* are accurately completed, processed and maintained in line with workplace procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely assemble materials using nail plates
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for assembling materials using nail plates
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for assembling materials using nail plates
- Environmental risks and hazards
- Characteristics of timber and timber defects
- Types of materials for assembling with nail plates and their purpose
- Assembly sequences and jigs, componentry and construction standards
- Industry standard cross-sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely assemble materials using nail plates within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to assembling materials using nail plates
- following organisational policies and procedures relevant to assembling materials using nail plates
- assembling materials using nail plates in line with work order and construction plans to follow construction standards
- stacking and strapping bundles of completed products in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards

RANGE STATEMENT

- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Materials may include:

- components
- beams
- other solid lengths of timber joined at the ends with the aid of nail plates

Work order is to include:

- instructions for the assembly and despatch of materials from the work site

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber

Nail plates

are (usually) galvanised plates of varying size with a multitude of protruding points (nails) which hold the components together

Equipment may include:

- measuring equipment
- assembly jigs

RANGE STATEMENT

- nail plate presses
 - staple guns
 - nail guns
 - compressor or compressed air supply
 - marking equipment
 - strapping equipment
- Set-up jigs** may include:
- enterprise manufactured templates which assist in the positioning of components during the assembly process
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Timber components** are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut to follow the construction plans and cutting list
- Defective components** may include:
- components with an unacceptable level of:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Disposing of** may include:
- recycling defective components
 - re-using defective components
- Dealing with** may include:
- repairing nail plates damaged during the process
 - disposing of sub-standard nail plates and nail plates that cannot be repaired
- Assembly faults** may include:
- incorrectly positioned joints
 - timber splits from nailing

RANGE STATEMENT

- Stacked** may include:
- incorrectly positioned nail plates
 - preparing for transport categorising in common size, shape
 - marking lots in line with work order and site requirements
 - locating as not to block access or passage
- Strapped** may include:
- securing bundles with metal or plastic strap to prevent slippage without risk of strap breakage or damage to products
 - tightening and tensioning using hand-held equipment to prevent slippage without risk of strap breakage or damage to products
- Equipment faults** may include:
- damaged equipment components
 - electrical faults
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

	2.9. <i>Moisture content</i> of boards is measured and boards approved for de-stacking
	2.10. Racks are loaded onto <i>separation equipment</i> in line with site procedures
	2.11. Boards are separated and loaded onto conveyor systems
	2.12. <i>Bearers</i> and other protective timber are removed and stored for return to stacking area
	2.13. <i>Spacing stick</i> removal and collection are checked for correct operation and stored
	2.14. De-stacking area is kept clear of timber scraps and timber scraps are disposed of in line with site procedures and environmental requirements
3. Monitor board usage and maintain supply	3.1. Conveyor transfer procedures are maintained free of blockages
	3.2. Racks are supplied to board separation equipment consistent with required size and species for <i>dressing</i>
	3.3. Dressing process size changes are received and board supply changed at designated times
	3.4. Changeover points are monitored in line with site requirements
	3.5. De-stacking process, board supply and equipment faults are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely de-stack seasoning racks
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to

REQUIRED SKILLS AND KNOWLEDGE

complete a task

- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for de-stacking seasoning racks
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for de-stacking seasoning racks
- Environmental risks and hazards
- De-stacking techniques
- Moisture content and seasoning methods
- Mechanical separation systems
- Supply procedures
- Grading markings and quality standards
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and

EVIDENCE GUIDE

efficiently de-stack seasoning racks in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to de-stacking seasoning racks
 - following organisational policies and procedures relevant to de-stacking seasoning racks
 - de-stacking seasoning racks in readiness for allocation of timber to storage or downstream operations
 - accurately setting board separation equipment parameters
 - supplying de-stacked timber for the dressing process
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the separation and supply of timber

and may include:

- type
- width
- length
- thickness
- quantity

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Boards may include:

- native timber species
- imported timber species
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber

De-stacking

- is the process of breaking down seasoning racks, moisture testing the boards and visually assessing their appearance quality
- includes separating the boards from the rack bearers and spacing sticks

Seasoning racks are to include:

- air seasoning or kiln seasoning racks
- timber, steel or mobile racks with bearers and spacing sticks

Equipment is to include:

- mechanical board separation machines

and may include:

- tilt hoist
- drop slides
- waterfalls
- singulators

RANGE STATEMENT

- tray sorters

and is to include:

- procedures for equipment lock-out such as:
 - protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Visual assessment is

the assessment of timber to determine potential finish, quality and faults

Disposing of may include:

- recycling rejected racks/timber scraps
- re-using rejected racks/timber scraps

Moisture content

is the amount of moisture maintained in timber or timber products after kiln drying or to avoid cracking and deforming

Separation equipment

refer to equipment

Bearers

are large heavy timbers used to support loads of stacked timber in seasoning racks

Spacing sticks

are used between layers of drying timber in seasoning racks

Dressing

is the process of converting in-the-rough timber to planed clean timber using thicknessers and surface planers

Records and reports may include:

- board separation requirements
- supply requirements
- product type
- size
- inspection

RANGE STATEMENT

- grading and marking outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for rounding	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to rounding softwood logs are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be <i>rounded</i> are selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Rounding process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Round logs	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Scanner</i> is calibrated in line with site requirements</p> <p>2.3. Material is fed into the machine at the <i>feed rate</i> prescribed by organisational requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Rounding process is maintained and adjusted to produce the required quantity of logs and to maximise the feed rate
	2.5. Rounding process and <i>conveyors</i> are regularly checked and adjusted to maintain the desired quality and output
	2.6. Logs with <i>defects</i> is segregated or rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.7. Rounding process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.8. Rounded logs safely directed to storage in a designated location in line with work order requirements
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Cutters are checked for blunt or damaged condition
	3.3. Blunt or damaged cutters are removed, replaced and <i>dealt with</i> in line with site procedures, manufacturer's recommendations and environmental requirements
	3.4. Machine area is kept clear of dust and debris in line with OHS requirements
4. Complete handover	4.1. Production and quality records are completed and printed in line with standard operating procedures
	4.2. <i>Back-up files</i> are created in line with standard operating procedures
	4.3. Documentation is handed over to changeover operator and briefing of operations conducted

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- The ability to comply with legislation, regulations, standards, codes of practice and established safe practices and procedures related to rounding softwood logs
- Technical skills sufficient to use and maintain relevant tools, machinery and

REQUIRED SKILLS AND KNOWLEDGE

equipment; efficiently and safely round softwood logs

- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to procedures for recording and reporting workplace information
- Numeracy skills sufficient to estimate, measure and calculate diameters, machine settings and calibrations and time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes to round softwood timber
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for rounding softwood logs
- Environmental risks and hazards
- Log rounding systems, processes, feed rates and finish
- Characteristics of timber and timber defects
- Cutter condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely round softwood logs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- follow applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to rounding softwood logs
- follow organisational policies and procedures relevant to rounding softwood logs
- rounding softwood logs in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on rounding plant
- storing poles in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks,

EVIDENCE GUIDE

with questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the rounding of logs and despatch of logs from the work site to down-stream processing

and may include:

- treating
- species
- diameter
- length
- quantity
- grade

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs is to include:

assessment of:

- diameter range
- curvature
- faults
- species
- moisture content

Rounding

is the process of forcing a log through a rounding machine which shapes the debarked log into a round pole, making the pole available for further down-stream processing and out-feeding the waste for landscaping supplies

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components

RANGE STATEMENT

- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- measuring equipment
- rounding plant

and may include:

- automated storage-conveyor systems
- automated diameter and length sorting systems

and is to include:

- procedures for machine lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- rounding plant has been set-up correctly
- cutters are installed accurately
- machinery is operating to optimum performance

RANGE STATEMENT

Scanner is to include:

- calibration for sizing
- problem identification such as:
 - tangles
 - sorting pockets
 - monitor failure

Feed rate is to include:

- rate of speed the material is passed through the machine affecting the sharpness of the cutters
- finish of the material
- production output

Conveyors are to include:

- belts, chutes or travelator methods of transporting logs to and from the rounding plant, which may be automated in conjunction with the log storage area

Defects may include:

- incorrect moisture content
- warp
- wane
- curvature
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling rejected timber
- re-using rejected timber

Recorded and reported may include:

- the rounding system
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Dealing with may include:

- repairing blunt or damaged cutters
- disposing of blunt or damaged cutters that

RANGE STATEMENT

cannot be repaired

Back-up file

is the process of copying operating documents and records onto a computer back-up device which is subsequently removed from the site

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--------------------------|--|
| 1. Prepare for splitting | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to splitting wood products are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>products</i> to be <i>split</i> are identified and appropriate arrangements made</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Splitting process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Split wood products | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Material is fed into the equipment at the <i>feed rate</i> prescribed by organisational requirements</p> <p>2.3. Splitting process is maintained and adjusted to</p> |

ELEMENT**PERFORMANCE CRITERIA**

- produce the required quantity of product and maximise the feed rate
- 2.4.Splitting process is regularly checked and adjusted to maintain the desired quality and output
- 2.5.*Unsatisfactory product* is segregated or rejected and *disposed of* in line with site procedures and environmental requirements
- 2.6.Splitting process and equipment faults are *recorded and reported* to the appropriate personnel
- 2.7.Product is safely directed to storage in a designated location in line with work order requirements
3. Conduct operator maintenance
- 3.1.Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 3.2.Splitting saw is checked for blunt or damaged condition in line with site procedures
- 3.3.Blunt or damaged splitting equipment is identified and *dealt with* in line with site procedures, manufacturer's recommendations and environmental requirements
- 3.4.Machine area is kept clear of dust and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely split wood products
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for splitting wood products
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for split wood products
- Environmental risks and hazards
- Wood product splitting systems
- Characteristics of timber and timber defects
- Splitting processes, feed rates and finish
- Blade condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently split wood products within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include

EVIDENCE GUIDE

demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to splitting wood products
- following organisational policies and procedures relevant to splitting wood products
- splitting wood products in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on saw machinery
- storing wood products in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- carrying
- machine isolation and guarding
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the splitting of wood products and despatch of products from the work site to down-stream processing
- and may include:
- treating

RANGE STATEMENT

- species
- diameter
- length
- quantity
- grade

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Products include post or firewood, and will be assessed for:

- diameter range
- length
- curvature
- faults
- species
- moisture content

Splitting

is the process of using a saw or hydraulic rams to convert round wood into two or more pieces producing split posts or firewood

Equipment may include:

- hydraulic axe and rams
- circular saws
- bench saws
- band saws
- mechanical feed

and is to include:

- procedures for machine lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- saw has been set-up correctly
- blades are installed accurately
- machinery is operating to optimum performance

Feed rate is to include:

- rate of speed the material is passed through the machine affecting the sharpness of the blades
- finish of the material
- production output

Unsatisfactory product may include:

- incorrect moisture content
- warp
- wane
- curvature
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling unsatisfactory product
- re-using unsatisfactory product

Records and reports may include:

- sawing procedures
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system other appropriate organisational communication

RANGE STATEMENT

- Dealing with** may include:
- system
 - repairing blunt or damaged splitting equipment
 - disposing of blunt or damaged splitting equipment that cannot be repaired

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for hand portable sawmill location
- assembly
- dismantling
- transport from the work site to the next worksite

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs identification for sawing is to include:

- assessment of diameter range
- curvature
- faults
- species
- moisture content

Sawing

is the process of cutting a log into parts including green boards and off-cuts

Equipment is to include:

- hand portable sawmills
- procedures for machine lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

RANGE STATEMENT

Pre start-up checks

are conducted to ensure:

- saw has been set up correctly

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the preparation of timber treatment operations

and may include:

- timber supplies
- chemical supplies
- equipment set up
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers

RANGE STATEMENT

- Timber** may include:
- clients
 - colleagues
 - managers
 - native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - sleepers
 - logs
 - rounded poles
 - beams
 - laminated beams
- Treating**
- is the process of impregnating preservative solution filled with chemicals in to the timber to provide it with a durable resistance to weather and insect attack
- and may include:
- full cell
 - modified cell
 - empty cell
 - double vacuum
 - dip diffusion
 - vat and sprays
 - other processes developed by the enterprise
- and is to include:
- handling techniques for products and chemicals in line with OHS regulations and environmental laws
- Chemicals** may include:
- those specified by the enterprise and that follow regulatory requirements
- and may include:
- light organic solvents
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components

RANGE STATEMENT

- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- treaters
- vats
- ovens
- resin tanks
- effluent tanks

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately and operating to optimum performance

Water may include:

- stormwater
- contaminated water

RANGE STATEMENT

- bore water
 - recycled dam water
 - town mains water
- Moisture content**
- is the amount of moisture maintained in timber or timber products after kiln drying or to avoid cracking and deforming
 - in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates
- Preservative solution** may include:
- water-borne solutions
 - oil-based solutions
 - solvent-based solutions
- Records and reports** may include:
- treatment preparation requirements
 - charge records
 - product type
 - size
 - inspection
 - grading outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for treating	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to treating timber are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>timber</i> to be <i>treated</i> and <i>chemicals</i> to be used are assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Treating <i>cycles</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Treat timber	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Water management</i> procedures are applied</p> <p>2.3. <i>Moisture content</i> of timber is tested in line with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>organisational procedures</p> <p>2.4. <i>Preservative solution</i> strength is checked, maintained and adjusted for specified strength and volume</p> <p>2.5. <i>Treating plant</i> is brought to full operating condition and operating parameters regularly checked in line with site requirements</p> <p>2.6. <i>Branding</i> is completed and checked in line with regulatory requirements</p> <p>2.7. Treated timber is safely handled and transferred to storage location</p> <p>2.8. Timber treating process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
3. Conduct operator maintenance	<p>3.1. Treating plant shut down procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. Treating mechanisms are checked for effective condition</p> <p>3.3. Chemicals are handled and stored in line with regulatory requirements and stock levels reported</p> <p>3.4. Treating area is kept clear of dust, shavings and debris in line with OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely treat timber
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for treating timber
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for treating timber
- Environmental risks and hazards
- Timber treating techniques
- Handling of treated products and chemicals
- Methods of visual inspection
- Characteristics of timber and chemicals
- Water and chemical management procedures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently treat timber in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the

EVIDENCE GUIDE

competency in this unit

requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to treating timber
- following organisational policies and procedures relevant to treating timber
- treating timber in readiness for storage and/or processing
- conducting operator maintenance on the treating equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- carrying
- machine isolation and guarding
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for timber treating
- and may include:
- treating method
 - colour
 - type

RANGE STATEMENT

- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Timber may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- sleepers
- logs
- rounded poles
- beams or laminated beams

Treating

is the process of impregnating preservative solution filled with chemicals into the timber to provide it with a durable resistance to weather and insect attack

and may include:

- full cell
- modified cell
- empty cell
- double vacuum
- dip diffusion
- vat and sprays
- other processes developed by the enterprise

and is to include:

- handling techniques for products and chemicals in line with OHS regulations and environmental laws

Chemicals may include:

- those specified by the enterprise and that follow regulatory requirements

RANGE STATEMENT

Storage locations may include:

- light organic solvents
- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- treaters
- vats
- ovens
- resin tanks
- effluent tanks

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Cycles

are the times taken for each stage of the process

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences

RANGE STATEMENT

- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- oven and rack systems have been set-up correctly
- systems are performing accurately and operating to optimum performance

Water management may include:

- stormwater
- contaminated water
- bore water
- recycled dam water
- town mains water

Moisture content

- is the amount of moisture maintained in timber or timber products after kiln drying or to avoid cracking and deforming
- in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates

Preservative solution may include:

- water-borne solutions
- oil-based solutions
- solvent-based solutions

Treating plant

is the source of providing preservative solution to the timber in a controlled setting

Branding may include:

- burning
- hammer impressions
- ink
- tags

Records and reports may include:

- treating requirements
- charge records
- product type
- size
- inspection
- grading and branding outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

RANGE STATEMENT

- manual
- using a computer-based system or other appropriate organisational communication system

FPISAW3202B Produce sawn green boards

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and re-saw material to width and on the cant with sawing machinery to optimise timber conversion and usability. The unit includes operator maintenance

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW3202A Produce sawn green boards

Application of the Unit

Application of the unit

The unit involves producing sawn green boards in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Efficiently and safely convert timber
- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately identify blunt or damaged blades
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing sawn green boards
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing sawn green boards
- Environmental risks and hazards
- Characteristics of green timber and timber defects
- Cutting patterns and sequences
- Saw feed rates
- Saw blade condition assessment
- Industry standard cross-sections and lengths
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently produce sawn green boards within organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to producing sawn green boards
- following organisational policies and procedures relevant to producing sawn green boards
- producing sawn green boards in line with the work order and within prescribed organisational tolerances
- conducting operator maintenance on an automatic feed controlled rip saw
- stacking batches of cut material in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related

Timber conversion	is the process of producing boards by re-sawing green flitches or cants to optimise single boards

RANGE STATEMENT

maximising the amount of boards per flitch or cant

Work order is to include:

- instructions for the cutting and despatch of green timber boards from the work site

and may include:

- type
- size
- width
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- hardwood
- softwood
- native timber species
- imported timber species

Green boards

- are those which are still in the rough (not dressed) and have not been seasoned, having just been converted from green timber
- moisture content is yet to be controlled through air drying or kiln drying

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification

RANGE STATEMENT

- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- power operated, automatic feed controlled ripping saws where the cut is controlled relative to the board guides and fence
- saws with adjustable cant (sloping table)
- saws with one blade
- rip saws
- table saws
- bench saws

and is to include:

- procedures for saw lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Saw set-up is to include:

- setting depth
- width and cant of cut measured from the fence in line with product order and allowing for kerf (width of saw cut)

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately and

RANGE STATEMENT

- operating to optimum performance
- Ordered sizes** may include:
- a range of sizes cut to widths usually increasing in 5 mm increments
- Tolerances** are a set limit for cutting over or under the required width within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements
- Feed rate** is to include:
- rate of speed the material is passed through the machine affecting the sharpness of the cutting blades
 - finish of the material
 - production output
- Defects** may include:
- warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Disposing of** may include:
- recycling material with defects, incorrect cuts and off-cuts
 - re-using material with defects, incorrect cuts and off-cuts
- Records and reports** may include:
- product type
 - size
 - width
 - cant
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

RANGE STATEMENT

Stacking may include:

- preparing for transport
- categorising in common size, length, width and cant
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Dealing with may include:

- repair of damaged saws and blunt or damaged saw blades
- disposing of saws and saw blades that cannot be repaired

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sawing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to <i>breaking down logs</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Sawing process is planned in line with site procedures and to <i>optimise</i> volume and quality of <i>sawn recovery</i></p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Break down logs	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Logs are secured with <i>dogs</i> minimising damage and aligned with the saw</p> <p>2.3. Logs are cleared of foreign matter and fed into the saw at the <i>feed rate</i> prescribed by organisational requirements</p> <p>2.4. Break down process is regularly checked and</p>

ELEMENT	PERFORMANCE CRITERIA
	adjusted to maintain the desired quality and output
	2.5. Break down process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.6. Sub-standard material from the break down process is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.7. Processed logs are safely directed to the next stage of processing or storage in a designated location in line with work order requirements
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Saw and saw blades are checked for blunt or damaged condition
	3.3. Blunt or damaged saws and saw blades are identified and <i>dealt with</i> in line with site procedures, manufacturer's recommendations and environmental requirements
	3.4. Machine area is kept clear of dust and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely break down logs
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures; accurately identify blunt or damaged saws

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for breaking down logs
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for breaking down logs
- Environmental risks and hazards
- Log break down systems
- Characteristics of timber and timber defects
- Break down processes, feed rates and finish
- Blade condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently break down logs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to breaking down logs
 - following organisational policies and procedures relevant to breaking down logs
 - breaking down logs to produce sections in line with the work order and within prescribed organisational specifications
 - conducting operator maintenance on saw machinery
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. - quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Breaking down logs

is the process of cutting a log into flitches, cants or slabs, taking into account the characteristics of the log, such as regrowth logs, and processing requirements

and may include:

- assessment of diameter range
- curvature

RANGE STATEMENT

- Work order** is to include:
- faults
 - species
 - instructions for the sawing logs and despatch of flitches or cants from the work site to down-stream processing

and may include:

- treating
- species
- diameter
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- circular saws
- bench saws
- overhead frame saws or band saws (single, twin, single edges and twin edges)
- mechanical feed
- conveyors
- standard three headed dog carriages
- flat top carriages with head rigs

and is to include:

- procedures for machine lock-out, i.e. protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Optimising** includes:
- planning the cutting of a log to achieve the most from it
 - ensuring environmental requirements are central to this planning process

Sawn recovery

- is the volume of timber sawn from a resource compared to the volume of that resource

RANGE STATEMENT

- Communication** may include:
- is expressed as a percentage - $\text{sawn timber volume} / \text{initial log volume} \times 100$
 - maximises the value of the resource
 - verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Pre start-up checks** are conducted to ensure:
- saw has been set-up correctly
 - blades are installed accurately
 - machinery is operating to optimum performance
- Dogs** are the carriage devices which clamp logs during break down
- Feed rate** is to include:
- rate of speed the material is passed through the machine affecting the sharpness of the blades
 - finish of the material
 - production output
- Records and reports** may include:
- the sawing procedures
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another

RANGE STATEMENT

appropriate organisational communication system

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Dealing with may include:

- repairing blunt or damaged saws and saw blades
- disposing of saws and saw blades that cannot be repaired

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sawing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sawing flitches and cants are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Sawing process is planned in line with site procedures and to <i>optimise</i> volume and quality of recovery</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Saw flitches and cants	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. When necessary, <i>log sections</i> are secured with <i>dogs</i> minimising damage and aligned with the saw</p> <p>2.3. Log sections are cleared of foreign matter and fed into the saw at the <i>feed rate</i> prescribed by</p>

ELEMENT**PERFORMANCE CRITERIA**

- organisational requirements
- 2.4.Sawing sequence is planned, maintained and adjusted to produce the required quantity of flitches or cants and to maximise the feed rate
- 2.5.Sawing process is regularly checked and adjusted to maintain the desired quality and output
- 2.6.Log sections with *defects* and sawn edges are segregated or rejected and *disposed of* in line with site procedures and environmental requirements
- 2.7.Sawing process and equipment faults are *recorded and reported* to the appropriate personnel
- 2.8.Flitches or cants are safely directed to storage in a designated location in line with work order requirements
3. Conduct operator maintenance
- 3.1.Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 3.2.Saw and saw blades are checked for blunt or damaged condition in line with site procedures
- 3.3.Blunt or damaged saws and saw blades are *dealt with* in line with site procedures, manufacturer's recommendations and environmental requirements
- 3.4.Machine area is kept clear of dust and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately identify blunt or damaged saws; efficiently and safely saw flitches and cants
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task

REQUIRED SKILLS AND KNOWLEDGE

- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sawing flitches and cants
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sawing flitches and cants
- Environmental risks and hazards
- Flitch and cant sawing systems
- Characteristics of timber and timber defects
- Sawing processes, feed rates and finish
- Blade condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently saw flitches and cants within organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sawing flitches and cants
- following organisational policies and procedures relevant to sawing flitches and cants
- sawing log sections to produce flitches and cants in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on saw machinery

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements**
may include:
- manual handling including shifting, lifting and carrying
 - machine isolation and guarding
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements**
may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Flitch is a large piece of sawn log section cut longitudinally, sawn on at least two surfaces at ninety degrees and intended for further cutting

Cant is a thick piece of timber with two or more

RANGE STATEMENT

surfaces cut longitudinally on the angle (obliquely) sawn from a log section and intended for further sawing

Work order is to include:

- instructions for the sawing logs and despatch of flitches or cants from the work site to down-stream processing

and may include:

- treating
- species
- size
- length
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- circular saws
- bench saws
- overhead frame saws or band saws (single, twin, single edges and twin edges)
- mechanical feed
- conveyors
- standard three headed dog carriages
- flat top carriages with head rigs

and is to include:

- procedures for machine lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Optimising includes:

- planning the cutting of a log to achieve the most from it
- ensuring environmental requirements are central to this planning process

RANGE STATEMENT

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- saw has been set-up correctly
- blades are installed accurately
- machinery is operating to optimum performance

Log sections

are large sections and lengths of timber available for further processing as a result of breaking down logs

Dogs

- are the carriage devices which support logs during break down

Feed rate is to include:

- rate of speed the material is passed through the machine affecting the sharpness of the blades
- finish of the material
- production output

Defects may include:

- defects arising from a change in moisture content
- warp
- wane
- curvature
- shakes
- insect defects
- knots and resin pockets
- sweep
- taper
- end splits
- shape

Disposing of may include:

- recycling timber sections with defects and sawn edges

RANGE STATEMENT

- Records and reports** may include:
- re-using timber sections with defects and sawn edges
 - the sawing procedures
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system other appropriate organisational communication system
- Dealing with** may include:
- repair of damaged saws and blunt or damaged saw blades
 - disposing of saws and saw blades that cannot be repaired

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for drying	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to drying hardwood are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>hardwood</i> to be <i>dried</i> are assessed and acquired from the <i>conversion process</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Oven sections and sample boards are selected and cut in line with standard operating procedures</p> <p>1.6. Drying process is planned in line with site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Load and control kiln conditions	<p>2.1. Racks to be dried are <i>visually assessed</i> for consistent drying characteristics and adjusted to meet site</p>

ELEMENT**PERFORMANCE CRITERIA**

- requirements
- 2.2. **Moisture content** is measured and routinely compared with anticipated levels in line with standard operating procedures
 - 2.3. **Pre start-up checks** are carried out on equipment in line with site requirements
 - 2.4. **Emergency shut down** procedures are followed in case of alarm being triggered
 - 2.5. **Kiln** is loaded with racks selected for processing and loading completed and reported
 - 2.6. Sample boards are weighed during drying in line with standard operating procedures
 - 2.7. **Baffles and blankets** are positioned in line with standard operating procedures
 - 2.8. Kiln control settings are regularly adjusted and routinely checked with site **drying schedules**
3. Unload kiln and process hardwood
 - 3.1. **Drying end point** is identified and kiln made safe for entry
 - 3.2. Kiln is opened and moisture content of processed hardwood checked in line with anticipated **equilibrium moisture content (EMC)**
 - 3.3. **Moisture probes** and baffles are removed from timber in line with standard operating procedures
 - 3.4. Kiln change is monitored and reconditioning or high humidity treatment conducted as required
 - 3.5. Hardwood is directed and **moved to storage** or processing operations in line with site requirements
 - 3.6. Sub-standard material is rejected and **disposed of** in line with site procedures and environmental requirements
 - 3.7. Work area is cleaned in line with site requirements
 - 3.8. Drying process and equipment faults are **recorded and reported** to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely dry hardwood
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to measure moisture levels, and to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for drying hardwood
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for dry hardwood
- Environmental risks and hazards
- Using energy effectively and efficiently
- Drying techniques
- Kiln operations
- Basic knowledge of how wood dries
- Methods of visual inspection
- Characteristics of hardwood
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dry hardwood to target end moisture content in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to drying hardwood
- following organisational policies and procedures relevant to drying hardwood
- drying hardwood to target end moisture content in readiness for storage and/or processing
- conducting kiln operations
- correctly calculating moisture content from weighing sample boards

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE

workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and

RANGE STATEMENT

may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolating and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- instructions for the drying of hardwood

Work order is to include:

and may include:

- species
- colour
- type
- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Hardwood

usually comes from trees with leaf foliage and has large tube like vessels or pores consisting of short stubby cells varying in size

and may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- preservative treated timber

Drying

is the process of:

- placing hardwood in a heat controlled kiln to dry high levels of moisture from timber causing moisture loss from cells
- followed by humidity generation to

RANGE STATEMENT

recondition timber to its former shape and desired EMC

- finally kiln drying to required moisture content

Conversion process is to include:

- sawing of logs into flitches
- conversion of flitches into green boards

Equipment may include:

- low temperature kilns up to 60 to 70 degrees Celsius with a heat source which may be solar, electricity or gas
- kilns powered by burning wood waste up to temperatures of 90 degrees Celsius
- vacuum dryers
- kilns powered by steam producing boilers

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Visually assessed

is the assessment of materials to determine finish quality and faults

and may include:

- stability
- spacing of strips
- support to minimise warping

Moisture content

is the amount of moisture maintained in timber or timber products after drying to avoid cracking and deforming

and may include:

RANGE STATEMENT

	<ul style="list-style-type: none">• testing for capacitance• resistance• oven-dry conditions
Pre start-up checks	are conducted to ensure: <ul style="list-style-type: none">• equipment has been set-up correctly• systems are performing accurately• equipment is operating to optimum performance
Emergency shut down	is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product
Kiln	refer to equipment
Baffles and blankets	assist in the drying process by controlling air flow
Drying schedule	is the drying times based on moisture content
Drying end point	is the predicted time when the drying process will be completed and the desired moisture content achieved
Equilibrium moisture content (EMC)	is the moisture level to be achieved by drying which will be sustainable in the environment after processing thereby retaining its shape and strength without excessive movement
Moisture probes	are probes pierced into random boards which provide moisture readings on the kiln gauges to assist in modifying the drying schedule
On-site movement of material may include:	the use of: <ul style="list-style-type: none">• conveyor belt systems• track systems• lifting equipment• lifting equipment such as:<ul style="list-style-type: none">• fork lifts• slings• trolley jacks• gantry cranes• loaders• cross transfer trucks

RANGE STATEMENT

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

Storage may include:

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Records and reports may include:

- drying requirements
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for drying	1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to drying softwood are identified and followed 1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i> 1.3. Type and quantity of <i>softwood</i> to be <i>dried</i> are assessed and acquired from the <i>conversion process</i> 1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.5. Drying process is planned in line with site procedures 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements
2. Load and control kiln conditions	2.1. Racks to be dried are <i>visually assessed</i> for consistent drying characteristics and adjusted to meet site requirements 2.2. <i>Moisture content</i> is measured and routinely

ELEMENT**PERFORMANCE CRITERIA**

- compared with anticipated levels in line with standard operating procedures
- 2.3. *Pre start-up checks* are carried out on equipment in line with site requirements
- 2.4. *Emergency shut down* procedures are followed in case of alarm being triggered
- 2.5. *Kiln* is loaded with racks selected for processing and loading completed and reported
- 2.6. *Baffles and blankets* are positioned in line with standard operating procedures
- 2.7. Kiln control settings are regularly adjusted and routinely checked to site *drying schedules*
3. Unload kiln and process softwood
- 3.1. *Drying end point* is identified and kiln made safe for entry
- 3.2. Kiln is opened and moisture content of processed softwood identified in line with anticipated *equilibrium moisture content*
- 3.3. *Moisture probes* and baffles are removed from timber
- 3.4. Softwood is directed and *moved* to *storage* or processing operations in line with site requirements
- 3.5. Sub-standard material is rejected and *disposed of* in line with site procedures and environmental requirements
- 3.6. Work area is cleaned in line with site requirements
- 3.7. Drying process and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely dry softwood
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to measure moisture levels, and to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for drying softwood
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for drying softwood
- Environmental risks and hazards
- Using energy effectively and efficiently
- Drying techniques
- Kiln operation procedures
- Methods of visual inspection
- Characteristics of softwood
- Distribution processes
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dry softwood in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to drying softwood
- following organisational policies and procedures relevant to drying softwood
- drying softwood in readiness for storage and/or processing
- conducting kiln operations
- redistributing timber on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the drying of softwood

and may include:

- species
- colour
- type
- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Softwood

is non-pored wood, usually comes from trees with needle like foliage and has a more uniform cell structure native timber species

and may include:

- imported timber species
- dressed timber
- in-the-rough timber
- preservative treated timber

Drying

is the process of:

- placing timber in a heat controlled kiln to dry high levels of moisture from timber causing cell collapse
- followed by humidity generation to recondition timber to its former shape and desired EMC

Conversion process is to include:

- sawing logs into flitches
- converting flitches into green boards

Equipment may include:

- conventional, high temperature, very high temperature and extremely high temperature

RANGE STATEMENT

kilns and vacuum dryers of 60 to 150 degrees Celsius or higher with a heat source that may be steam, hot oil or gas

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Visually assessed

is the assessment of materials to determine finish quality and faults

and may include:

- stability
- spacing of strips
- support to minimise warping

Moisture content

is the amount of moisture maintained in timber or timber products after drying to avoid cracking and deforming

and may include:

- testing for capacitance
- resistance
- oven dry conditions

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Emergency shut down

is the immediate shutting off of the equipment to prevent an accident or prevent damage to the

RANGE STATEMENT

	machine or product
Kiln	refer to equipment
Baffles and blankets	assist in the drying process by controlling moisture
Drying schedule	is the drying times based on moisture content
Drying end point	is the predicted time when the drying process will be completed and the desired moisture content achieved
Equilibrium moisture content (EMC)	is the moisture level to be achieved by drying which will be sustainable in the environment after processing thereby retaining its shape and strength without excessive movement
Moisture probes	are probes pierced into random boards which provide moisture readings on the kiln gauges to assist in modifying the drying schedule
On-site movement of material may include:	the use of: <ul style="list-style-type: none">• conveyor belt systems• track systems• lifting equipment such as:<ul style="list-style-type: none">• fork lifts• slings• trolley jacks• gantry cranes• loaders assistance with lifting such as: <ul style="list-style-type: none">• the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
Storage may include:	<ul style="list-style-type: none">• storage racks• storage bays• bins• stacks• pallet boxes• modularised storage components• temporary stacking bays (stand, frame or ground)

RANGE STATEMENT

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Records and reports may include:

- drying requirements
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

FPISAW3207B Sharpen band saws

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to assess the condition of the band saw, set up the sharpening machine and sharpen the saw with a grinder

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW3207A Sharpen band saws

Application of the Unit

Application of the unit

The unit involves sharpening band saws in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sharpening	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sharpening band saws are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Band saw <i>blades</i> to be <i>sharpened</i> are removed from the designated machinery</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Sharpening process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess condition and set up sharpening equipment	<p>2.1. <i>Cutting performance</i> of blade is assessed for sharpening requirements and blade replacement reviewed in line with site requirements</p> <p>2.2. Condition of <i>teeth, set, tension</i> of blade and prior repairs are assessed for suitability to site</p>

ELEMENT	PERFORMANCE CRITERIA
3. Sharpen band saw blade	<p>requirements</p> <p>2.3. Sharpening machine is selected and grinding wheel changed or <i>dressed</i></p> <p>2.4. Machine settings are adjusted to suit required blade <i>geometry</i> and blade set to manufacturer's recommendations</p> <p>2.5. Selected tooth of blade is aligned with <i>machine feed</i> mechanism</p> <p>3.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>3.2. <i>Tests</i> are conducted to ensure teeth and machine feed mechanism are aligned</p> <p>3.3. Depth of machine cut and in-feed are established from blade condition</p> <p>3.4. Machine sharpening process is monitored to ensure correct grinding conditions and geometry</p> <p>3.5. Sharpening process is completed with all teeth in sharp condition at correct cutting angle and <i>profile</i></p> <p>3.6. Band saw blades that cannot be sharpened or are damaged in the process are <i>disposed of</i> in line with site procedures, manufacturer's recommendations and environmental requirements</p> <p>3.7. Band saw is packaged for protection during return to service</p> <p>3.8. Sharpening and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely sharpen band saws
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sharpening band saws
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sharpening band saws
- Environmental risks and hazards
- Characteristics of band saw blades
- Sharpening methods and geometry
- Tooth setting and/or methods for tooth alignment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently sharpen band saws within organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sharpening band saws
- following organisational policies and procedures relevant to sharpening band saws
- sharpening band saws in line with the work order and within prescribed organisational requirements
- removing and replacing band saw blades from equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements**
may include:
- manual handling including shifting, lifting and carrying
 - machine isolation and guarding
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements**
may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the sharpening of band saw blades in designated equipment

and may include:

- instructions for the environmental monitoring

RANGE STATEMENT

- Appropriate personnel** may include:
- of work and procedures
 - environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Blades** may include:
- wide band saw blades used for processing timber products
 - narrow band saw blades used for cutting both ferrous and non-ferrous materials
- Sharpening** is to include:
- the amount of material removed from the tooth profile
 - the ability to produce the required profile
 - the speed at which the abrasive wheel can remove material without affecting steel characteristics, and the quality of surface texture left by the abrasive wheel along the entire profile and at the intersection of all cutting edge angles
- Equipment** may include:
- alternative sharpening machines and grinding wheels
- and is to include:
- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Cutting performance** is to include:
- saw performance balanced against achievement of required production time

RANGE STATEMENT

- degree of deviation in the range of sawn products
- Teeth** are to include:
- sharpness of each tooth
 - damage to teeth
 - pitch
 - number of teeth per metre
- Set**
- is the distance cutting edge points extend from the blade surface (or plane) to provide the blade clearance from the material being sawn
 - in wide bandsaw blades is achieved by swaging and shaping, or tipping tooth points
 - in narrow bandsaw blades applies to, for example, alternate spring set and wave set to provide clearance
- Tension** is the level of stress or 'stiffness' induced at the cutting and back edges of the blade by compressing the blade along the inner zone
- Dressing** involves cleaning or shaving the top surface of the grinding wheel to remove the build up of old sharpening metal and coolant and dull abrasive grains
- Geometry**
- is the tooth pitch and the tooth angles that a blade is sharpened at
 - must match the type and characteristics of the material being sawn
- Machine feed**
- is the speed at which the abrasive wheel on the sharpening machine or grinder moves in and out of the tooth profiles
 - rates are generally measured in teeth per minute
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly
 - systems are performing accurately
 - machine is operating to optimum performance
- Testing** is the process of assessing a tooth after machine settings and grinding has been undertaken to check pitch and angle of the sharpening process
- Profile**
- is the shape or outline of the teeth designed to suit the characteristics of the materials being sawn

RANGE STATEMENT

- changes in line with sawing speeds, saw blade specifications, the material being sawn and direction of the sawing process
- Disposing of** may include:
- recycling band saw blades that cannot be sharpened or are damaged in the process
 - re-using band saw blades that cannot be sharpened or are damaged in the process
- Records and reports** may include:
- the blade type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sharpening	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>sharpening</i> circular saws are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Sharpening process is planned in line with site procedures and environmental requirements</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess condition and set up sharpening equipment	<p>2.1. <i>Cutting performance</i> of <i>blade</i> is assessed for sharpening requirements and blade replacement is reviewed in line with site requirements</p> <p>2.2. Condition of <i>teeth, set, straightness</i> of blade and prior repairs are assessed for suitability to site requirements</p> <p>2.3. Sharpening machine with suitable wheel diameter</p>

ELEMENT	PERFORMANCE CRITERIA
3. Sharpen circular saw blade	<p>and thickness is selected and grinding wheel changed, profiled or <i>dressed</i></p> <p>2.4. Machine settings are adjusted to suit required tooth profile <i>geometry</i>, blade set or kerf, blade thickness and diameter to manufacturer's recommendations</p> <p>2.5. Saw is set up in grinder with appropriate attachments for tooth <i>pitch</i></p> <p>3.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>3.2. Teeth <i>face</i> and <i>gullet</i> are ground to achieve the required sharpness and surface finish</p> <p>3.3. Tooth <i>profile</i> is maintained to industry standards</p> <p>3.4. Variations in tooth height are kept within industry or manufacturer tolerances for <i>concentricity</i></p> <p>3.5. Hand feeds of wheel and saw are controlled to minimise wear, avoid burn marks and maintain a smooth surface finish on all surfaces</p> <p>3.6. Circular saws that cannot be sharpened or are damaged in the sharpening process are <i>disposed of</i> in line with site procedures, manufacturer's recommendations and environmental requirements</p> <p>3.7. Sharpening and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely sharpen circular saws
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sharpening circular saws
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sharpening circular saws
- Environmental risks and hazards
- Characteristics of circular saw blades

FPISAW3209B Align sawing production systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to align canter rings and chipper heads for wood chipping equipment, which are used for both primary and secondary processing of solid wood products. The unit includes checking equipment and shutdown procedures

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW3209A Align sawing production systems

Application of the Unit

Application of the unit

The unit involves aligning sawing production systems in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|--|
| 1. Conduct shut down | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to aligning sawing production systems are identified and followed</p> <p>1.2. Mechanical and safety components are removed, replaced and temporarily stored to provide access to alignment parts</p> <p>1.3. Guides are removed, replaced and temporarily located in a safe manner</p> <p>1.4. Work area is kept clear of dust, off-cuts and debris in line with OHS requirements</p> |
| 2. Prepare for aligning | <p>2.1. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>2.2. Type of <i>canter rings</i> and <i>chipper heads</i> to be <i>aligned</i> are removed from the designated machinery</p> <p>2.3. <i>Equipment</i> is selected appropriate to work</p> |

ELEMENT**PERFORMANCE CRITERIA**

	requirements and checked for operational effectiveness in line with manufacturer's recommendations
	2.4. Aligning process is planned in line with site procedures
	2.5. <i>Communication</i> with others is established and maintained in line with OHS requirements
3. Align rings and heads	3.1. <i>Equipment history</i> and records are accessed and interpreted
	3.2. Manufacturer's data and alignment instructions are obtained and interpreted
	3.3. <i>Performance</i> of rings and heads are assessed for alignment requirements
	3.4. Alignment procedure is conducted in a sequential manner in line with manufacturer's instructions
	3.5. Saw is checked for alignment and free operation
	3.6. Aligning process and equipment faults are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely align canter rings and chipper heads
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of

REQUIRED SKILLS AND KNOWLEDGE

- processes for aligning sawing production systems
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for aligning sawing production systems
- Environmental risks and hazards
- Mechanical characteristics of sawing machines, chippers/canters and feed systems including line bars and carriages
- Equipment shutdown processes
- Alignment methods and settings
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently align canter rings and chipper heads within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to aligning sawing production systems
- following organisational policies and procedures

EVIDENCE GUIDE

- relevant to aligning sawing production systems
 - aligning canter rings and chipper heads in line with the work order and within prescribed organisational requirements
 - removing and replacing canter rings and chipper heads from equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures

Environmental requirements
may include:

RANGE STATEMENT

Legislative requirements:

- workplace practices
- are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the alignment of canter rings and chipper heads in designated equipment

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers

RANGE STATEMENT

- clients
- colleagues
- managers

Canter rings

are parts associated with the movement of logs to the chipper

Chipper heads

are the cutting component of the log chipping equipment

Alignment

is the process of positioning various parts of sawing systems in relation to each other in order to:

- reduce sawing deviation, vibration, and downtime
- increase production rates
- improve quality of sawn finish

Equipment may include:

- tools for removing and adjusting mechanical parts
- special jigs and precision measuring equipment
- laser equipment
- surveying instruments
- portable electrical lighting
- feeler gauges
- engineers rules
- vernier callipers
- micrometers
- plumb lines
- piano wire or string lines
- pointer
- markers
- portable computers that re-calibrate machine settings

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences

RANGE STATEMENT

- control of tone of voice
 - body language
- Equipment history** is to include:
- log of previous alignment measurements, settings, adjustments and timelines
- Performance** is to include:
- assessing sawing machine and system performance against recovery percentages, product sizing and/or standard deviation
- Records and reports** may include:
- performance
 - adjustment
 - historic records
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------|--|
| 1. Prepare for saw setting | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to filing and <i>setting saws</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Setting process is planned in line with site procedures</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Set saw | <p>2.1. Saw is set up in a selected <i>jig</i> to allow setting work to be conducted</p> <p>2.2. <i>Kerf</i> and finish requirements are checked to suit horsepower of the machine, the type of saw and cutting conditions</p> <p>2.3. Individual teeth are examined to check amount of</p> |

ELEMENT**PERFORMANCE CRITERIA**

- setting required
- 2.4. *Condition of welding, saw temper* and consistency of set between alternate teeth are maintained by setting
 - 2.5. Teeth are measured and assessed for the correct *setting placement* in line with site procedures
 - 2.6. Teeth are *bevelled* and *bevel* length is assessed in line with site procedures
 - 2.7. Set is applied to teeth requiring resetting allowing for estimated *spring back*
 - 2.8. Set of teeth is checked using gauges in line with site procedures
 - 2.9. Saw setting process and equipment faults are investigated and *recorded and reported* in line with site requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely set saws and produce bevels across back clearance angles on saw teeth
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for filing and setting saws
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

material

- Organisational and site standards, requirements, policies and procedures for filing and setting saws
- Environmental risks and hazards
- Characteristics of metal and saws
- Setting methods and geometry
- Saw condition assessment
- Geometric requirements of bevels
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently set saws within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to filing and setting saws
- following organisational policies and procedures relevant to filing and setting saws
- bevelling teeth and assessing bevel lengths, widths, angles, and surface texture, in line with standard operating procedures and site production

EVIDENCE GUIDE

- requirements
- removing and replacing saws from equipment
 - setting teeth and assessing conditions in line with standard operating procedures
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Setting

- is the angle the teeth are bent providing clearance to prevent the blade jamming during the cutting operation
- is most commonly associated with alternate left and right bending of teeth found on hand saws and solid tooth spring set saw blades

Saws may include:

- hand saws
- band saws
- circular saws (all types)
- gang saws

and are to include:

- procedures for equipment lock-out, i.e.

RANGE STATEMENT

- protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Work order** is to include:
- instructions for the setting of saws in designated equipment
- and may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** may include:
- setting instruments such as levers and gauges, automatic or hand-held grinders, jigs and vices
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Jig** is a device which secures the saw while setting takes place
- Kerf** is the width of the cut in timber caused by each tooth being tilted in opposing directions creating a cut wider than the thickness of the blade
- Condition of welding and saw temper** is to include:
- assessing the blade and the teeth for existing repairs resulting in welding which may have cracked or moved
 - hardness of the blade as excessive heat during cutting may alter the temper
- Setting placement** is to include:
- assessing the blade and the teeth for existing repairs and possible weaknesses resulting

RANGE STATEMENT

from previous welding or cracking, or damage caused through stress of bending teeth

Bevelled

is the process of filing saw teeth to a bevel to allow for better clearance during cutting operations

Bevels

- are the flat sections produced along the back clearance angles of saw teeth
- can be single or double (e.g. hogged, roof top and triple chip teeth)
- can be produced through hand filing or grinding

Spring back

- involves considering and allowing for the fact that metal has some memory and will want to move back to its original position
- effects can be compensated, depending on the period between maintenance and saw blade operation

Records and reports may include:

- saw setting
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

 - colleagues
 - managers
- Guides** are alloys secured to a carrier which provide straightness and smooth running of the blade by supporting it, not allowing it to move too far to the left, right or back
- Reconditioning** is to include:
- grinding the guide surface to restore it to a smooth flat surface
 - machining the guide surface to restore it to a smooth flat surface
- Equipment** may include:
- grinding equipment
 - metal lathes
 - milling machines
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Grinding** is the process of removing metal to restore a metal surface using grinding equipment

RANGE STATEMENT

Machining	is the process of removing metal to restore a metal surface using metal lathes or milling machines
Dressing	is the process of cleaning or shaving the top surface of the grinding wheel to remove the build up of old sharpening metal and coolant
Sharpening	is the process of grinding and honing the cutting bits in metal lathes or milling machines
Scored material is to include:	guides which are deeply scratched or scraped by: <ul style="list-style-type: none">• irregular running of the blade• poor operation of the saw• blunt or un-tensioned blade
Speeds and feeds	<ul style="list-style-type: none">• is the speed the grinding wheel rotates or machine cuts at, too fast and it may burn the metal, too slow and it may produce a rough finish or grab the guide• power feed controls movement of the guide to the desired rate
Geometry	is the pitch and angle that a guide is ground or sharpened at, allowing for the material being reconditioned
Disposing of may include:	<ul style="list-style-type: none">• recycling guides that cannot be reconditioned• re-using guides that cannot be reconditioned
Records and reports may include:	<ul style="list-style-type: none">• reconditioning• inspection• storage locations• quality outcomes• hazards• incidents• equipment malfunctions and may be: <ul style="list-style-type: none">• manual• using a computer-based system or another appropriate organisational communication system
Carrier	is the saw attachment which holds the guide in place by the saw blade
Tolerance	is the amount of space between the back of the

RANGE STATEMENT

blade and the guide to avoid the blade striking the guide

Clearance

is the amount of space allowed for left and right movement

Sawmilling and Processing

FPISAW3212B Sharpen tipped circular saws

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to assess the tipped circular saw condition, set up for sharpening and sharpen the saw with an automated grinder

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW3212A Sharpen tipped circular saws

Application of the Unit

Application of the unit The unit involves sharpening tipped circular saws in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sharpening	1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sharpening tipped circular saws are identified and followed 1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i> 1.3. <i>Tipped circular saw blades</i> to be <i>sharpened</i> are removed or appropriate equipment fitted to allow saw to be sharpened in machinery 1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.5. Sharpening process is planned in line with site procedures and environmental requirements 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements
2. Assess condition and set up sharpening equipment	2.1. <i>Cutting performance</i> of blade is assessed for sharpening requirements and blade replacement reviewed in line with site requirements

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|--------------------------------------|---|
| 3. Sharpen tipped circular saw blade | <p>2.2. Condition of <i>teeth</i>, <i>straightness</i> of blade and prior repairs are assessed for suitability to site requirements</p> <p>2.3. Sharpening machine with suitable wheel diameter is selected and grinding wheel changed or <i>dressed</i></p> <p>2.4. Machine settings are adjusted to suit required blade <i>geometry</i> and blade set to manufacturer's recommendations</p> <p>2.5. Saw is set up in grinder or grinder set up on saw while in machine to ensure tooth <i>profile</i> and geometry are maintained</p> <p>3.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>3.2. Grinding <i>coolant</i> system is prepared in line with site requirements</p> <p>3.3. Saw and grinding wheel angles, <i>speeds and feeds</i> are selected to suit saw</p> <p>3.4. Teeth <i>face</i> and <i>gullet</i> are ground to achieve the sharpened finish requested and to maintain original profile</p> <p>3.5. Tooth profile and <i>pitch</i> are maintained to industry standards</p> <p>3.6. Variations in tooth height and depth of cut are brought within industry tolerances for <i>concentricity</i></p> <p>3.7. Feeds of wheel and saw are set to minimise wear and to avoid burn marks</p> <p>3.8. Tipped circular saws that cannot be sharpened or are damaged in the sharpening process and cannot be repaired are <i>disposed of</i> in line with site procedures, manufacturer's recommendations and environmental requirements</p> <p>3.9. Sharpening and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p> |
|--------------------------------------|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely sharpen tipped circular saws
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sharpening tipped circular saws
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sharpening tipped circular saws
- Environmental risks and hazards
- Characteristics of tipped circular saw blades
- Sharpening methods and geometry
- Teeth settings methods
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently sharpen tipped circular saws within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sharpening tipped circular saws
- following organisational policies and procedures relevant to sharpening tipped circular saws
- sharpening tipped circular saws in line with the work order and within prescribed organisational requirements
- removing and replacing tipped circular saw blades from equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage

RANGE STATEMENT

- requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Saws** may include:
- circular saws
 - hot saws
 - cold saws
- Work order** is to include:
- instructions for the sharpening of tipped circular saw blades in designated equipment
- and may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Tipped circular saw blades** may include:
- tipped circular saw blades used for cutting timber
- and tips may include:
- tungsten carbide
 - satellite
 - other alloyed materials such as high speed steel
- Sharpening** is to include:
- face
 - gullet
 - pitch
 - profile
 - angle
 - depth of cut
 - speed the blade passes over the grinding wheel to obtain a sharp edge
- Equipment** may include:
- manually or automatically adjustable grinding machines
 - abrasive wheels
 - measuring tools equipment
- and is to include:

RANGE STATEMENT

- procedures for equipment lock-out, i.e. protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Cutting performance** may include:
- length of production time achieved by the blade
 - whether the blade performed with site tolerances of allowable deviation
 - whether the surface finish was in line with site quality requirements
- Teeth** are to include:
- sharpness of each tooth
 - damage to teeth
 - pitch
 - number of teeth per metre
- Straightness** is assessment of the entire blade to ensure it has not bent out of shape or warped in any way
- Dressing** is the process of cleaning or shaving the top surface of the grinding wheel to remove the build up of old sharpening metal and coolant
- Geometry** is the pitch and angle that a blade is sharpened at, allowing for the material they will be cutting
- Profile**
- is the shape of the teeth in line with the timber being cut
 - usual direction of cutting, crosscut across the grain and ripping with the grain
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly
 - systems are performing accurately

RANGE STATEMENT

- machinery is operating to optimum performance
- Coolant** is used in conjunction with grinding operations to cool the metal blade as it generates heat from the sharpening process to prevent burning
- Speeds and feeds**
- is the speed the grinding wheel rotates at, too fast and it may burn the metal, too slow and it may produce a rough finish or grab the blade
 - similarly, the power feed controls movement of the blade to the desired rate
- Face** is to include:
- front edge of each tooth
 - cutting part of the tooth
- Gullet** is the bottom hollowed section between each tooth
- Pitch** is the distance between the tips of the teeth on the saw blade
- Concentricity** is ensuring all teeth are at the same radius from the saw blade centre and that one tip is not higher than another
- Disposing of** may include:
- recycling tipped circular saws that cannot be sharpened or cannot be repaired
 - re-using tipped circular saws that cannot be sharpened or cannot be repaired
- Records and reports** may include:
- the blade type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to levelling and tensioning circular saws are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Levelling and tensioning process is planned in line with site procedures and environmental requirements</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Assess saw condition	<p>2.1. Saws are handled safely without damage to teeth</p> <p>2.2. Foreign material built up on saw surfaces is cleaned for inspection</p> <p>2.3. Saw is inspected to assess condition of teeth and saw plate</p> <p>2.4. Saw is declared unserviceable where hazardous</p>

ELEMENT	PERFORMANCE CRITERIA
	defects are found
	2.5. Unserviceable saws are segregated and disposed of in line with site procedures, manufacturer's requirements and environmental requirements
3. Level saw	3.1. Radial and circular ridges or lumps are assessed and matched on both sides of the blade
	3.2. Gauges and straight edges are used in both radial and circular directions and monitored for accuracy
	3.3. Ridges or lumps are progressively removed through levelling, the use of structure rolls or levelling rolls to achieve flatness
	3.4. Hammering and rolling patterns are controlled to reduce internal blade stresses to avoid spring-back and re-occurrence of defects
4. Tension saw	4.1. Consistency of blade curvature is assessed with a straight edge or tension gauge
	4.2. Tension requirements are determined from assessment of curvature consistency and curvature required for site production requirements
	4.3. Blade is tensioned using appropriate tools and equipment in line with required standard
	4.4. Final checks are made to ensure tension amount, distribution, placement and level in line with site production requirements
	4.5. Saws damaged in the levelling and tensioning process are repaired/sent for repair and those that cannot be repaired are disposed of in line with site procedures, manufacturer's recommendations and environmental requirements
	4.6. Levelling and tensioning process and equipment faults are investigated, recorded and reported in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely level and tension circular saws
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for levelling and tensioning circular saws
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for levelling and tensioning circular saws
- Environmental risks and hazards
- Characteristics of metal and saws
- Levelling and tensioning methods
- Saw condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently level and tension circular saws within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to levelling and tensioning circular saws
- following organisational policies and procedures relevant to levelling and tensioning circular saws
- levelling and tensioning circular saws in line with work order and within prescribed organisational requirements
- removing and replacing circular saws from equipment
- assessing circular saw conditions in line with standard operating procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

RANGE STATEMENT

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements

RANGE STATEMENT

- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Levelling

is the process of removing lumps and ridges in the blade using the appropriate and specialised saw hammers

Tensioning

is the process of placing tension in a blade to counteract forces and rotational stresses

Work order is to include:

- instructions for the levelling and tensioning of circular saws in designated equipment

and may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- hammers
- stretcher rolls
- specialised levelling rolls
- tensioning instruments
- gauges and straight edges to check accuracy of hammering or rolling processes on particular sections of the saw blade

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

RANGE STATEMENT

Disposing of may include:

- recycling unserviceable saws/saws damaged in the levelling and tensioning process that cannot be repaired
- re-using unserviceable saws/saws damaged in the levelling and tensioning process that cannot be repaired

Radial and circular ridges or lumps are to include:

- defects obtained during saw operation

Gauges and straight edges are to include:

- measuring instruments used to check the results of hammering and/or rolling the blade

Stretcher and levelling rolls are to include:

- devices for assisting in the process of removing saw defects such as ridges and lumps

Patterns

are the sequences applied when hammering or rolling identified areas of the blade to remove distortions and stresses in the form of lumps, ridges, twists, loose, tight, or neutral sections

Spring-back

is the principle of compensating for 'metal creep' that causes saw blade steel to stress-relieve over time thus reducing tension permanence in blades

Curvature

is the amount of tension achieved in a blade by compressing and elongating predetermined sections or zones in the blade

Records and reports may include:

- levelling and tensioning
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any

EVIDENCE GUIDE

relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements may include:

Work order is to include:

- instructions for the joining of band saw blades in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- suppliers
- clients
- colleagues
- managers

Appropriate personnel may include:

RANGE STATEMENT

Blades may include:

- narrow and wide band saws blades that cut both ferrous and non-ferrous materials
- frame or 'gangsaw' blades
- other blades that require joins that alter blade length

Joining

is the process of using welding equipment that fuses together the two ends of a saw blade to form a continuous loop or alter the total length of a blade to suit machine design requirements

Equipment may include:

- specialised band saw welding plant
- GMAW
- GTAW
- MMAW
- oxyacetylene equipment
- grinding and finishing equipment
- hand or power operated tools

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Saw blank

is a new fully toothed band saw blade or ribbon of steel which is yet to be joined to form a loop

Weld defects

are any features produced in the weld zone or weld deposit that have the effect of weakening the weld zone or deposit

Ends

are the ends of the blank or the ends of the existing blade being rejoined at either the crack or

RANGE STATEMENT

	the previous joining point
Welder	refer to equipment
Tolerances	are the spacing between the ends when welding, allowing for penetration of the weld to occur
Burning is to include:	is the overheating of the weld deposit and saw steel during removal of the weld bead to a point that has an effect of weakening the strength of the weld or join
Annealing	<ul style="list-style-type: none">• is the process of post heating the heat affected weld zone to the recommended temperature range and allowing slow cooling of the post-heated zones• can be done manually or by specialised equipment
Finishing	is the process of: <ul style="list-style-type: none">• removing all distortions from the blade surface• tensioning the weld zone (where applicable)• adjusting back length of the blade (where applicable)• cleaning welded zone to enterprise standard
Disposing of may include:	<ul style="list-style-type: none">• recycling sub-standard joined/repared band saw blades and band saw blades damaged during the join/repair process• re-using sub-standard joined/repared band saw blades and band saw blades damaged during the join/repair process
Records and reports may include:	<ul style="list-style-type: none">• the blade type• welding technique• size• inspection• grading and labelling outcomes• storage locations• quality outcomes• hazards• incidents• equipment malfunctions
	and may be:

RANGE STATEMENT

- manual
- using a computer-based system or other appropriate organisational communication system

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for screening	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to screening wood chips are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>wood chips</i> to be <i>screened</i> are acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Screening process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Screen wood chips	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Machines and <i>feed systems</i> are started and adjusted to screen wood chip size in line with organisational requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.3. Coarse and fine screens are regularly raked and cleared to *remove* oversized material in line with standard operating procedures and environmental requirements
- 2.4. Screening is regularly sampled and analysed to ensure wood chips conform to quality specifications and organisational requirements
- 2.5. Wood chips that do not conform to quality specifications and organisational requirements are segregated and *disposed of* in line with site procedures and environmental requirements
- 2.6. Screening is continually monitored for matter which may cause *contamination*
- 2.7. Conveyor operations are monitored and jams cleared to ensure free flow of output material to transfer systems
- 2.8. Screening process and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely screen wood chips
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for screening wood chips

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for screening wood chips
- Environmental risks and hazards
- Wood chip screening techniques and assessment
- Characteristics of wood chips and stock levels
- Chip production process
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently screen wood chips within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to screening wood chips
- following organisational policies and procedures relevant to screening wood chips

EVIDENCE GUIDE

- screening wood chips in line with the work order and within prescribed organisational requirements
 - directing wood chips to the transfer process in line with organisational requirements and OHS regulations
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate

EVIDENCE GUIDE

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the screening of chips and the chip size

and may include:

- feed rate
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may

- supervisors

RANGE STATEMENT

include:

- suppliers
- clients
- colleagues
- managers

Wood chips

are the output product of converting wood into chip material which is then used to produce other products

Screening

is the process of sorting wood chips into categories of species, size, moisture content and contamination issues associated with selected wood such as logs, billets, off-cuts, waste timber, down grade timber, residue, chips or reject boards

Equipment may include:

- mechanical
- automated
- digitised
- computer assisted screening systems
- mechanised feed systems

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Feed systems may include:

- conveyors, chutes or track systems moving

RANGE STATEMENT

- processed wood chips from the chipping machines to the screening system
- Removal** may include:
- recycling oversized material
 - re-using oversized material
- Disposing of** may include:
- recycling wood chips that do not conform to quality specifications and organisational requirements
 - re-using wood chips that do not conform to quality specifications and organisational requirements
- Contamination** may include:
- bark
 - charcoal
 - rock and metal
 - process of moving wood chips to the screening system and from the screening system to the transfer process
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to hard face saw teeth	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to hard facing saw teeth are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Hard facing process is planned in line with site procedures and environmental requirements</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Hard face saw teeth	<p>2.1. <i>Material stock</i> to be used for hard facing is selected and set up in the machine following manufacturer's recommendations</p> <p>2.2. Saw is set up in machine and adjustments made to machine <i>variables</i> to suit saw and material in line with manufacturer's recommendations</p> <p>2.3. Individual teeth are aligned to machine tip to ensure hard facing is applied to cutting surfaces</p> <p>2.4. Machine is operated and adjusted for variables to</p>

ELEMENT**PERFORMANCE CRITERIA**

- ensure material cohesion
- 2.5. Completed facing is checked against specifications
- 2.6. Hard facing process and equipment faults are investigated, *recorded and reported* in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely hard face saw teeth
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for hard facing saw teeth
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for hard facing saw teeth
- Environmental risks and hazards
- Characteristics of metal and saws
- Hard facing methods
- Saw condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques

REQUIRED SKILLS AND KNOWLEDGE

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently hard face saw teeth within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to hard facing saw teeth
- following organisational policies and procedures relevant to hard facing saw teeth
- hard facing saw teeth in line with the work order and within prescribed organisational requirements
- removing and replacing saws from equipment
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements

Context of and specific resources for assessment

EVIDENCE GUIDE

Method of assessment

- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Hard facing

is the process of cohering a hard metal substance (the face) to the existing face of saw blade teeth

Saws may include:

- band saws
- circular saws (all types)
- gang saws

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Work order is to include:

- instructions for the hard facing of saw teeth in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- resistance welding equipment
- plasma transfer equipment

RANGE STATEMENT

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Material stock is to include:

- hard compound metal used to hard face saw teeth

Variables may include:

- pressure
- temperature
- current
- voltage
- weld time
- vacuum

Records and reports may include:

- saw teeth hard facing outcomes
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

FPISAW3218B Replace tungsten tips

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to remove worn tungsten tips from saws and to braze, anneal, clean and prepare replacement tips for grinding and return to service

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW3218A Replace tungsten tips

Application of the Unit

Application of the unit The unit involves replacing tungsten tips in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for replacement	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to replacing tungsten tips are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Replacement process is planned in line with site procedures and environmental requirements</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Remove worn tips	<p>2.1. <i>Saw</i> is cleaned of foreign matter and checked for defects</p> <p>2.2. Broken tips are identified and marked</p> <p>2.3. Broken tips are <i>removed</i> from seat using specified method and with minimal damage to the tooth seat and <i>disposed of</i> in line with site procedures and environmental requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

3. Replace tips
- 2.4. **Tooth seats** are repaired to specified tolerance and dimensions
 - 3.1. Saw is set up in **brazing jig** in line with manufacturer's instructions
 - 3.2. **Brazing material** and technique is selected suitable for the material, application and the control of heat
 - 3.3. Replacement tip is selected to meet application specifications and brazed into position
 - 3.4. Trial weld of one tip is conducted and adjusted where necessary, to confirm weld pressure, current temperature and anneal settings against specifications
 - 3.5. Trial weld is included in replacement process or where weld is sub-standard, material is segregated and disposed of in line with site procedures and environmental requirements
 - 3.6. Manual or automatic feeds are set in line with the number of tips to be welded
 - 3.7. Tip replacement is carried out regularly, checking and adjusting **annealing** process temperatures and current to ensure staying within the specified range
 - 3.8. Surplus brazing material is removed from saw surfaces and tip faces **dressed** to prepare them for sharpening
 - 3.9. Replacement process and equipment faults are investigated, **recorded and reported** in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely replace tungsten tip
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for replacing tungsten tips
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for replacing tungsten tips
- Environmental risks and hazards
- Characteristics of metal and saws
- Tungsten tip replacement methods
- Saw condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently replace tungsten tips within organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to replacing tungsten tips
- following organisational policies and procedures relevant to replacing tungsten tips
- replacing tungsten tips in line with the work order and within prescribed organisational requirements
- removing and replacing tungsten tips from equipment
- removing and assessing condition of tungsten tips in line with standard operating procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions

RANGE STATEMENT

- relating to forest fire
- manual handling including shifting, lifting and carrying
 - machine isolation and guarding
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
 - legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Organisational requirements** may include:
- Tungsten tip replacement** is to include:
- the process of brazing new tungsten tips onto the tooth face or tooth seat
 - replacing tips that are broken, missing or worn out

RANGE STATEMENT**Work order** is to include:

- instructions for the replacement of tungsten tips on saws in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- brazing equipment
- jigs

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Saws may include:

- band saws
- circular saws (all types)
- gang saws

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Removal may include:

- melting of the brazed joint
- chipping or levering the tip off the saw

Disposing of may include:

- recycling broken tips/sub-standard trial weld
- re-using broken tips/sub-standard trial weld

Tooth seats are to include:

- the upper part of the tooth face or any recess designed for locating and positioning a tip on the tooth face

RANGE STATEMENT

- Brazing jigs** are jigs which hold the saw and tungsten tip in place securely to allow brazing to occur
- Brazing material** may include:
- silver braze (silver solder)
 - special shock absorbing shim
 - flux in the form of a liquid or paste
- Annealing** is the process of post heating the tip and/or zones behind the tip to the recommended temperature range and allowing slow cooling of the post-heated zones
- Dressing** is the process of cleaning bonded abrasive wheel faces using industry accepted methods or specialised consumables such as diamond wheel dressing sticks
- Records and reports** may include:
- tungsten tip replacement
 - inspection
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and

EVIDENCE GUIDE

efficiently replace stellite tips within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to replacing stellite tips
- following organisational policies and procedures relevant to replacing stellite tips
- replacing stellite tips in line with the work order and within prescribed organisational requirements
- removing and replacing stellite tips from equipment
- removing and assessing condition of stellite tips in line with standard operating procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required

EVIDENCE GUIDE

knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Stellite tip replacement is to include:

- the process of welding and/or silver brazing (soldering) new or replacement stellite tips into the tooth seat
- replacing tips that are worn out
- re-building broken or damaged tips

Work order is to include:

- instructions for the replacement of stellite tips on saws in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- automatic or semi-automatic tipping machines
- special purpose jigs
- silver brazing equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Saws may include:

- band saws
- circular saws (all types)
- gang saws

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

RANGE STATEMENT

Tolerances are to include:

- stellite weld deposits or replacement tip sizes that are large enough to allow for side dressing of cutting edges to required hook, back, tangential, and radial clearance angles

Prepare saw teeth may include:

- surface cleaning of all components critical to the welding process
- application of a solution or paste to prevent oxidisation and contamination of all welded or brazed surfaces

Welding jigs

are jigs or machines which securely hold and position saw blades and/or stellite tips to allow accuracy in brazing or welding

Brazing material may include:

- stellite rod
- silver brazing rod
- shim or ribbon
- brazing flux

Disposing of may include:
