- recycling sub-standard trial weld/tips that cannot be repaired
- re-using sub-standard trial weld/tips that cannot be repaired

Annealing

- is the process of re-heating the heat affected zone behind the tip to the recommended temperature range and allowing slow cooling of the post-heated zone

Records and reports may include:

- stellite tip replacement
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

FPISAW3220C Maintain wide band saw blades

Modification History

Version	Comments
Version 1.2	Data entry error in numbering of performance criteria in elements 1 and 2 corrected
Version 1.1	Updated in line with skills for sustainability review to reflect organisational environmental requirements

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to level, tension, back-gauge, weld and replace teeth on wide band saw blades

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW3220B Maintain wide band saw blades. Equivalent

Application of the Unit

Application of the unit

The unit involves maintaining wide band saw blades in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------|--|
| 1. Prepare for maintenance | <ul style="list-style-type: none"> 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to maintaining wide band saw blades are identified and followed 1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i> 1.3. <i>Wide band and gang saws</i> to be <i>maintained</i> are removed from the designated machinery 1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.5. Maintenance process is planned in line with site procedures and environmental requirements 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Assess saw condition | <ul style="list-style-type: none"> 2.1. Saws are handled safely without damage to teeth 2.2. Foreign material built up on blade surfaces is cleaned for inspection |

ELEMENT**PERFORMANCE CRITERIA**

- 2.3. Saw is inspected to assess condition of teeth and saw blade
- 2.4. Teeth and tips requiring repair or replacement are checked and marked
- 2.5. Saw is declared unserviceable where hazardous defects are found and *disposed of* in line with site procedures, manufacturer's recommendations and environmental requirements
3. Level, tension and back-gauge saw blade
- 3.1. *Ridges or lumps* across and along saw are assessed and matched on both sides of the blade
- 3.2. *Gauges and straight edges* are used in both directions and monitored for accuracy
- 3.3. Ridges or lumps are progressively removed through *levelling* and the use of *stretcher rolls or levelling rolls* to achieve flatness
- 3.4. Levelling or rolling *patterns* are controlled to localise stresses to avoid spring-back and re-occurrence of defects
- 3.5. Saw blade is checked against required *curvature* using a gauge to identify *tensioning* requirements
- 3.6. Tension curvature is obtained across and along saw blade in line with required standard
- 3.7. Alignment of saw back is checked against saw tolerances using a gauge and areas not conforming are rolled to obtain required tolerance
4. Repair teeth and blade cracks
- 4.1. Saw blade is placed in *welding jig* for applying heat and undertaking welding activities
- 4.2. Weld line is marked to check amount of damaged tooth to be removed or crack to be repaired and selected to minimise stresses
- 4.3. Metal is removed to the proposed line, the metal edge is prepared for the *welding* process and cleaned free of burn marks
- 4.4. Worn, broken or ground surface is prepared for metal build up or replacement by applying heat and pressure
- 4.5. Teeth or cracked area is built up or replaced using compatible welding material and welding procedures that ensure specified *metal penetration and density*
- 4.6. Weld *run-off tabs* are used to limit stress and hollows at edges of the saw blade
- 4.7. Teeth or cracks are ground or filed to required shape,

ELEMENT**PERFORMANCE CRITERIA**

tolerance and pitch

- 4.8. Saws where teeth, tips or blade cracks are damaged during the repair process and cannot be repaired are disposed of in line with site procedures, manufacturer's recommendations and environmental requirements
- 4.9. Repair process and equipment faults are investigated, *recorded and reported* in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely maintain wide band and gang saw blades
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for maintaining wide band saw blades
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for maintaining wide band saw blades
- Environmental risks and hazards
- Characteristics of welding consumables
- Characteristics of saw steel
- Methods that can be applied to level and tension blades

REQUIRED SKILLS AND KNOWLEDGE

- Teeth repair methods
- Saw condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently maintain wide band saw blades and gang saws within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to maintaining wide band saw blades
- following organisational policies and procedures relevant to maintaining wide band saw blades
- maintaining wide band and gang saw blades in line with work order and within prescribed organisational requirements
- removing and replacing saws from equipment
- assessing saw conditions in line with standard operating procedures

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolating and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the repair of wide band and gang saws in designated equipment
- and may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Wide band and gang saws** are to include:
- large heavy duty saws used widely in the Forestry Industry

RANGE STATEMENT

Maintenance may include:

the correction of:

- lumps
- ridges
- cracks
- broken or damaged teeth

Equipment may include:

- hammers
- stretcher / tension rolls
- levelling rolls
- tension gauges and straight edges to check accuracy of levelling and tensioning
- welding equipment

and a range of hand-held tools including:

- punches
- engineers hammers
- angle grinders
- sanders
- hand files
- abrasive paper/cloth

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Disposing of may include:

- recycling un-serviceable saws/saws where teeth, tips or blade cracks are damaged during the repair process and cannot be repaired
- re-using un-serviceable saws/saws where teeth, tips or blade cracks are damaged during the repair process and cannot be repaired

Ridges or lumps are to include:

- defects and distortions obtained during saw blade operation

Gauges and straight edges are to include:

- measuring and accuracy instruments used in checking the results of hammering and tensioning

RANGE STATEMENT

- Levelling** is to include:
- mechanical gear driven devices used to assist in the process of removing saw defects and distortions such as ridges, lumps, and twists
- Stretcher rolls and levelling rolls** are to include:
- devices for assisting in the process of removing saw defects such as ridges and lumps
- Patterns** are to include:
- methods which use hammers or rolls to remove defects evenly and without affecting the opposing side
- Curvature**
- is the distance or chord height measured when the centre of the blade falls away as a result of an elongating inner zone
 - chord height 'tension drop' is generally measured with a tension gauge having a curvature that suits blade width, thickness, and production conditions
- Tensioning**
- is the process of using mechanically driven rolls to compress and elongate certain sections of the inner zone of a blade; compression of the inner zone places the outer edges of the blade in tension
 - artificially stiffens the cutting edge and reduces the influence of sawing forces that cause buckling of the cutting edge and lateral instability
- Welding jigs**
- are jigs or benches which hold the saw and/or teeth in place securely to allow welding to occur
 - 'benches' incorporate anvils and clamps to lock the blade into welding position
- Welding** may include:
- processes such as:
 - oxyacetylene (fuel gas) welding
 - gas tungsten arc welding (GTAW/TIG)
 - gas metal arc welding (GMAW/MIG)
- Metal penetration and density** is to include:
- a weld bead which provides full penetration fusing together adjacent metal parts
 - a weld free from any faults that would have the potential to weaken the strength and endurance capability of the weld deposit and weld zone
- Run-on and run-off tabs**
- are used mainly in GMAW and GTAW welding processes to ensure full penetration of the weld bead at the start and finish of the weld

RANGE STATEMENT**Tolerance** may include:

- are removed after annealing
- profile
- pitch
- set
- material thickness to manufacturer's specifications

Records and reports may include:

- maintain of wide band and gang saws
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for profiling	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to profiling saw blanks are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Band, wide band and gang saws</i> to be <i>profiled</i> are calculated for production</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Profiling process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Profile blanks	<p>2.1. <i>Key dimensions</i> of saw are calculated</p> <p>2.2. Calculated length of <i>blank</i> is obtained or cut from <i>ribbon stock</i></p> <p>2.3. <i>Press</i> is set up with <i>punches</i> to suit saw dimensions</p> <p>2.4. First tooth is punched in blank to provide alignment</p>

ELEMENT	PERFORMANCE CRITERIA
	for other teeth
	2.5. Remaining teeth are punched to required <i>pitch</i> and <i>tooth profile</i>
	2.6. <i>Performance</i> of profiling equipment is assessed for required changes
	2.7. Saw blanks damaged during the process that cannot be repaired are <i>disposed of</i> in line with site procedures and environmental requirements
	2.8. Profiling process and equipment faults are investigated, <i>recorded and reported</i> in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely profile saw blanks
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for profiling saw blanks
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for profiling saw blanks
- Environmental risks and hazards

REQUIRED SKILLS AND KNOWLEDGE

- Characteristics of metal and saws
- Profiling methods
- Teeth pressing and punching methods
- Saw condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Band, wide band and gang saws** are to include:
- large heavy duty saws used widely in the Forestry Industry

RANGE STATEMENT

Profiling	is the process of making band, wide band and gang saw blanks in preparation for joining or welding
Equipment may include:	<ul style="list-style-type: none">• power fly presses• punch systems
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice• body language
Key dimensions are to include:	<ul style="list-style-type: none">• blade width• length• pitch• gullet depth• hook and back clearance angles• number of teeth• manufacturer's specifications• existing saw and site documentation• data of timber processing requirements• sawmill processes
Blanks are to include:	<ul style="list-style-type: none">• new blades ready for use after calculation of length, geometry and pressing
Ribbon stock	is the role of blade material, straight on both edges awaiting cutting to length and pressing
Press	is the equipment which provides weight and cutting power to achieve the saw blade profile
Punches	are housed in the press and provide the cutting pattern for the profile of the saw blade and teeth
Pitch is to include:	is the distance between tips of the teeth
Tooth profile is to include:	is the shape of the teeth in line with the material being cut

RANGE STATEMENT

Performance

- is how effectively the profiling equipment is able to produce tooth profiles that meet manufacturing tolerances, specifications and timeframes

and is to include:

- edge finish
- wear rates
- production rates
- distortion

Disposing of may include:

- recycling saw blanks damaged during the process and cannot be repaired
- re-using saw blanks damaged during the process and cannot be repaired

Records and reports may include:

- profiling of band, wide band and gang saw blanks
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for reconditioning	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to reconditioning band mill wheels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.4. Reconditioning process is planned in line with site procedures and environmental requirements</p> <p>1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Fit and grind wheel profile	<p>2.1. Wheel is inspected and measured to identify wear and method of <i>grinding</i></p> <p>2.2. Wheel grinder is serviced, fitted and aligned to the <i>band mill</i> and wheel in line with manufacturer's specifications and recommended <i>tolerances</i></p> <p>2.3. Trial cut is taken to check and further <i>align</i> the</p>

ELEMENT**PERFORMANCE CRITERIA**

- grinder
- 2.4. Wheel is ground until all signs of wear are removed, ensuring the face is not hollow and obtaining the required wheel *profile* and finish
 - 2.5. Grinding *feeds* are controlled to obtain the required profile
 - 2.6. Wheel is measured to ensure the diameter of back and front edges are equivalent
 - 2.7. Wheel profile is measured to ensure grinding has achieved the required profile
 - 2.8. Grinder traversing speeds are controlled to obtain the required profile
3. Reassemble band mill
- 3.1. Grinder and base plate are removed from band mill at completion of grinding
 - 3.2. Band mill components are reassembled to manufacturer's specifications
 - 3.3. Band saw is set up on *mill* to specified alignment
 - 3.4. Band saw and mill operation are tested to ensure correct operation
 - 3.5. *Isolation padlocks or tags* are removed at completion of the work in line with OHS legislation and site procedures
 - 3.6. Band saw mills damaged during the process that cannot be repaired are *disposed of* in line with site procedures and environmental requirements
 - 3.7. Reconditioning process and equipment faults are investigated, *recorded and reported* in line with site requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely recondition band mill wheels
- Communication skills and interpersonal techniques sufficient to interact

REQUIRED SKILLS AND KNOWLEDGE

appropriately with colleagues and others in the workplace

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to take wheel measurements, and to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for reconditioning band mill wheels
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for reconditioning band mill wheels
- Environmental risks and hazards
- Characteristics of metal and saws
- Disassembly and reassembly methods
- Band mill wheel assessment
- Grinding and alignment techniques
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently recondition band mill wheels within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to reconditioning band mill wheels
- following organisational policies and procedures relevant to reconditioning band mill wheels
- reconditioning band mill wheels in line with the work order and within prescribed organisational requirements
- removing and replacing wheels from band mill if faces are to be resurfaced on a metal lathe
- assessing band mill wheel conditions in line with standard operating procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage

RANGE STATEMENT

requirements

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Reconditioning

is the process of re-grinding the faces of the band mill wheels with grinding equipment to regain the specified profile for continued accuracy during operation

Band and wide band mill wheels are to include:

- the drive and driven wheels of any bandmill that support, turn, and maintain the alignment of the band saw blade for accurate cutting

Work order is to include:

- instructions for the reconditioning of band mill wheels in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- specialised grinding equipment
- measuring equipment

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Grinding

is the process of removing wear and defects from band mill wheels

Band mill

is the same as 'mill' and is to include the entire mechanical structure and componentry that make

RANGE STATEMENT

	up the machine
Tolerance may include:	<ul style="list-style-type: none">• wheel alignment• alignment of saw guides to wheel faces• wheel thickness to manufacturer's specifications
Alignment	is the process of measuring and testing the band mill wheels to ensure they run in a manner which makes the band saw blade rotate consistently without movement across the wheels
Profile	is the even shape and width of the wheel
Feeds	is the process of matching the speed of band mill wheel rotation with the speed and depth of cut taken by the abrasive grinding wheel or cutting tool being used to re-surface the wheel face
Mill may include:	<ul style="list-style-type: none">• all of the processing plant and timber feed systems which are linked to the band mill
Isolation padlocks and tags may include:	<ul style="list-style-type: none">• devices that isolate the piece of machinery• devices that alert personnel to its isolation from service
Disposing of may include:	<ul style="list-style-type: none">• recycling band saw mills damaged during the process that cannot be repaired• re-using band saw mills damaged during the process that cannot be repaired
Records and reports may include:	<ul style="list-style-type: none">• reconditioning of band mill wheels• inspection• storage locations• quality outcomes• hazards• incidents• equipment malfunctions
	and may be:
	<ul style="list-style-type: none">• manual• using a computer-based system or other appropriate organisational communication system

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for assessment

- 1.1. Applicable ***Occupational Health and Safety (OHS), environmental, legislative and organisational requirements*** relevant to assessing wood chips are identified and followed
- 1.2. ***Work order*** is reviewed and checked with ***appropriate personnel***
- 1.3. Type and quantity of ***wood chips*** for ***assessment*** are obtained
- 1.4. ***Equipment*** is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations
- 1.5. Testing processes are selected and planned in line with site procedures and environmental requirements
- 1.6. ***Communication*** with others is established and maintained in line with OHS requirements

2. Collect and assess samples

- 2.1. Material being chipped is inspected for ***contaminants***
- 2.2. Chip production, transport and storage processes are examined for potential sources of contamination

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|--|--|
| 3. Test wood chips and report outcomes | <p>2.3. Chips are visually assessed at production, transport and storage locations in line with site procedures</p> <p>2.4. Potential problems with <i>chip characteristics</i> and contamination are reported in line with site procedures and environmental requirements</p> <p>2.5. Chip <i>samples</i> are collected from <i>designated locations</i> and kept free from mixing and contamination</p> <p>2.6. Sampling records are completed in line with site procedures</p> <p>3.1. Chip specifications are identified from production schedules and order requirements</p> <p>3.2. Chips are <i>tested</i> for <i>moisture content</i>, size distribution, shape and contamination</p> <p>3.3. Chip samples are stored and test reports completed in line with site requirements</p> <p>3.4. Test results are communicated to production personnel to facilitate process control or changes</p> <p>3.5. Test sampling is modified in response to new problems and production changes</p> <p>3.6. Testing process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p> |
|--|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely assess wood chips
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for assessing wood chips
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for assessing wood chips
- Environmental risks and hazards
- Sampling and testing techniques
- Characteristics of wood chips
- Visual assessment techniques
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently assess wood chips within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to assessing wood chips
 - following organisational policies and procedures relevant to assessing wood chips
 - assessing wood chips in line with the work order and within prescribed organisational requirements
 - testing wood chips for contamination and moisture content
 - reporting on outcomes of testing
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred

EVIDENCE GUIDE

to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

Environmental requirements
may include:

- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the sampling and testing of wood chips

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to

RANGE STATEMENT

Appropriate personnel may include:	the work <ul style="list-style-type: none">• supervisors• suppliers• clients• colleagues• managers
Wood chips	are the output product as a result of converting wood into chip material which is then used to produce other products
Assessment is to include:	the inspection of wood chips to determine: <ul style="list-style-type: none">• size distribution• shape• finish quality• contamination• faults
Equipment may include:	<ul style="list-style-type: none">• moisture meters• basic testing equipment
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice• body language
Contaminants may include:	<ul style="list-style-type: none">• disease• infestation• rot• paint• plastic• bark• charcoal• rock• metal
Chip characteristics are to include:	<ul style="list-style-type: none">• moisture content• size

RANGE STATEMENT

- shape
- species

Sampling

is the selection of small lots of wood chips from various points of the stockpile or other designated locations

Designated location may include:

- stock piles
- production points
- transport methods
- from transfer systems

Testing is to include:

the most appropriate approach taken to:

- ascertain the cause of a problem
- improve a current methodology

Moisture content

- is the amount of moisture maintained in wood chips after processing to avoid cracking and deforming
- in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates

Records and reports may include:

- sampling and testing results
- quantities produced
- condition changes
- production difficulties
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

manual

using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan stockpile operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to coordinating and monitoring the wood chip stockpile are identified and followed</p> <p>1.2. Variations in wood chip supply are assessed, recorded and reported</p> <p>1.3. <i>Stockpile</i> schedules are produced and applied in line with site procedures</p> <p>1.4. <i>Chip movement</i> procedures including order information are planned and scheduled</p> <p>1.5. Stockpile management is planned and prescribed</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Control stockpile	<p>2.1. Wood chip stockpile size growth is estimated from <i>production and shipping schedules</i></p> <p>2.2. Direction and extent for <i>spread or contraction</i> of stockpile is planned in line with site procedures and environmental requirements</p> <p>2.3. Chip spreading requirements are estimated</p>

ELEMENT	PERFORMANCE CRITERIA
3. Coordinate wood chip movement and loading	<p>considering the reach of the <i>chip slinging equipment</i></p> <p>2.4. Stockpile is inspected to identify hazards within vehicle operational area</p> <p>3.1. <i>Vehicles</i> and attachments are selected and allocated to spread chips and load <i>transport modes</i></p> <p>3.2. Personnel are advised of spreading, movement and loading operations</p> <p>3.3. Stockpile <i>levelling</i> is coordinated in line with site procedures and environmental requirements</p> <p>3.4. Wood chip retrieval from the stockpile edges is coordinated and directed to transport modes</p> <p>3.5. Stockpile coordination and equipment faults are investigated, <i>recorded and reported</i> in line with site requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely coordinate and monitor the wood chip stockpile
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for coordinating and monitoring the wood chip stockpile
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for coordinating and monitoring the wood chip stockpile
- Environmental risks and hazards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------|---|
| 1. Prepare for maintenance | 2.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to maintaining frame saw blades are identified and followed |
| 2. Assess saw condition | 2.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i> |
| | 2.3. <i>Frame saw blades</i> to be <i>maintained</i> are removed from the designated machinery |
| | 2.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations |
| | 2.5. Repair process is planned in line with site procedures and environmental requirements |
| | 2.6. <i>Communication</i> with others is established and maintained in line with OHS requirements |

ELEMENT**PERFORMANCE CRITERIA**

- 2.7.Saws are handled safely without damage to teeth
- 2.8.Foreign material built up on saw surfaces is cleaned for inspection
- 2.9.Saw is inspected to assess condition of teeth and saw blade
- 2.10. Teeth and tips requiring repair or replacement are checked and marked
- 2.11. Saw is declared unserviceable where hazardous defects are found and *disposed of* in line with site procedures, manufacturer's recommendations and environmental requirements
3. Hammer, tension and back-gauge saw
- 3.1.*Ridges or lumps* across and along saw are assessed and matched on both sides of the blade
- 3.2.*Gauges and straight edges* are used in both directions and monitored for accuracy
- 3.3.Ridges or lumps are progressively removed through *hammering* and the use of *structure rolls or levelling rolls* to achieve flatness
- 3.4.Hammering or rolling *patterns* are controlled to localise stresses to avoid spring-back and re-occurrence of defects
- 3.5.Saw is checked against required *curvature* using a gauge to identify *tensioning* requirements
- 3.6.Tension curvature is obtained across and along saw in line with required standard
- 3.7.Alignment of saw back is checked against saw tolerances using a gauge and areas not conforming rolled to obtain required tolerance
4. Repair teeth
- 4.1.Saw is placed in *welding jig* for applying heat and undertaking welding activities
- 4.2.Weld line is marked to identify amount of damaged tooth to be removed and selected to minimise stresses
- 4.3.Metal is removed to the proposed line, the metal edge is prepared for the *welding* process and cleaned of burn marks
- 4.4.Worn, broken or ground surface is prepared for metal build up or replacement by applying heat and pressure
- 4.5.Teeth are built up or replaced using compatible welding material and welding procedures that ensure specified *metal penetration and density*

ELEMENT**PERFORMANCE CRITERIA**

- 4.6. Weld *run-off tabs* are used to limit stress and hollows at edges of the saw
- 4.7. Teeth are ground or filed to required shape, *tolerance* and pitch
- 4.8. Metal is heat treated to *temper* recommended by manufacturer
- 4.9. Saws damaged during the repair that cannot be repaired are disposed of in line with site procedures, manufacturer's recommendations and environmental requirements
- 4.10. Repair process and equipment faults are investigated, *recorded and reported* in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely maintain frame saw blades
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for maintaining frame saw blades
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for maintaining frame saw blades

REQUIRED SKILLS AND KNOWLEDGE

- Environmental risks and hazards
- Characteristics of metal and saws
- Hammering and tensioning methods
- Teeth repair methods
- Saw condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently maintain frame saw blades within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to maintaining frame saw blades
- following organisational policies and procedures relevant maintaining frame saw blades
- maintaining frame saw blades in line with work order and within prescribed organisational requirements
- removing and replacing saws from equipment
- assessing saw condition in line with standard

EVIDENCE GUIDE

Context of and specific resources for assessment

operating procedures

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

EVIDENCE GUIDE

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

RANGE STATEMENT

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the repair of frame saw blades in designated equipment
- and may include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Frame saw blades** are to include:
- large heavy duty saws used widely in the Forestry Industry

RANGE STATEMENT

- Maintenance** may include: the correction of:
- lumps
 - ridges
 - cracks
 - broken or damaged teeth
- Equipment** may include:
- hammers
 - structure rolls
 - levelling rolls
 - tensioning instruments
 - gauges and straight edges to check accuracy of hammering or tensioning
 - welding equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Disposing of** may include:
- recycling un-serviceable saws/saws damaged during the repair process that cannot be repaired
 - re-using un-serviceable saws/saws damaged during the repair process that cannot be repaired
- Ridges or lumps** are to include:
- defects obtained during saw operation
- Gauges and straight edges** are to include:
- measuring and accuracy instruments used in checking the results of hammering and tensioning
- Hammered** is the process of removing ridges and lumps from saw blades using hammers or rolls
- Structure rolls and levelling rolls** are devices for assisting in the process of removing saw defects such as ridges and lumps
- Patterns** are to include:
- methods which use hammers or rolls to remove defects evenly and without affecting

RANGE STATEMENT

	the opposing side
Curvature is to include:	<ul style="list-style-type: none">• how much tension is achieved in a saw by placing curvature in it
Tensioning	is the process of placing tension in a blade to counteract force during cutting
Welding jigs	hold the saw and tip in place securely to allow welding to occur
Welding may include:	<ul style="list-style-type: none">• oxyacetylene• gas tungsten arc
Metal penetration and density is to include:	<ul style="list-style-type: none">• a weld which provides enough penetration to ensure a strong cohesion• density that ensures the weld is free of holes and inclusions
Run-off tabs are to ensure:	<ul style="list-style-type: none">• that minimal welding splatter ends up on the saw blade, subsequently requiring grinding off
Tolerance may include:	<ul style="list-style-type: none">• profile• pitch• set• material thickness to manufacturer's specifications
Temper	is the toughening process which occurs by heating the welded or built up area and allowing it to cool slowly
Records and reports may include:	<ul style="list-style-type: none">• maintenance of frame saw blades• inspection• storage locations• quality outcomes• hazards• incidents• equipment malfunctions
	and may be:
	<ul style="list-style-type: none">• manual• using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------|---|
| 1. Prepare for machining | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sawing logs using CNC optimising systems are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be <i>sawn</i> are acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Log sawing process is planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Set up optimising system | <p>2.1. <i>CNC optimising program</i> is set to job specifications</p> <p>2.2. Safety equipment, including emergency stops, gauges, guards and controls are checked</p> <p>2.3. <i>Saw settings</i> and adjustments are made in line with</p> |

ELEMENT**PERFORMANCE CRITERIA**

- job requirements, and machine and tool manufacturer's instructions
- 2.4.Saw and cutting mechanisms are checked for safe and effective operation
- 2.5.Trial runs are conducted to check system operation, accuracy and quality of finished work
- 2.6.Final adjustments are made to the CNC optimising program and equipment in line with workplace procedures
3. Operate optimising log saw
- 3.1.**Pre start-up checks** are carried out on equipment in line with site requirements
- 3.2.Logs are fed into machine in line with manufacturer's instructions, safe handling procedures and standard workplace operating procedures
- 3.3.Saw is operated in line with its designed capacity and purpose, tooling requirements and manufacturer's recommendations
- 3.4.Saw operation is monitored to ensure product quality and **output**
- 3.5.**Waste** quantities are checked and minimised
- 3.6.Items that do not meet quality requirements are repaired, recycled or discarded in line with workplace procedures
- 3.7.Sawing process and equipment faults are **recorded and reported** to the appropriate personnel
4. Conduct operator maintenance
- 4.1.Equipment lock-out procedures are followed in line with OHS legislation and site proceduresBlades are checked for blunt or damaged condition in line with site procedures
- 4.2.Blunt or damaged saws are identified and **dealt with** in line with site procedures, manufacturer's recommendations and environmental requirements
- 4.3.Machining area is kept clear of dust, off-cuts and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely saw logs using CNC optimising systems
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for sawing logs using CNC optimising systems
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for sawing logs using CNC optimising systems
- Environmental risks and hazards
- Characteristics of logs and defects
- Set up and operation of CNC equipment
- Optimising systems
- Computer programs
- Cutting patterns and sequences
- Blade condition assessment
- Industry standard cross-sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently saw logs using CNC optimising systems within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sawing logs using CNC optimising systems
- following organisational policies and procedures relevant to sawing logs using CNC optimising systems
- sawing logs using CNC optimising systems in line with work order and within prescribed organisational tolerances
- setting computer programs for the CNC optimising system to follow
- conducting operator maintenance on CNC optimising equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance

Organisational requirements may include:

RANGE STATEMENT

- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the machining and despatch of logs and cut product from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Logs are to include:

assessment of:

- diameter range
- curvature
- faults
- species
- moisture content

Sawing is to include:

- sawing operations with CNC optimising systems

Storage locations may include:

- storage racks
- storage bays
- bins

RANGE STATEMENT

- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- CNC optimising log saws
- procedures for lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

CNC optimising program is to include:

- computer generated program, selected by the operator (sub-programs, parametric performance of CAM functions)
- downloading and storing 3D scan data, which translates into the CNC equipment operating automatically to fulfil its programmed instructions

Saw settings may include:

- measurement
- setting equipment to stops, fences, angles, depths, feeds or speeds

RANGE STATEMENT

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- blades are installed accurately
- machinery is operating to optimum performance

Output is to include:

- the speed at which material is cut
- rate at which material is cut

Waste may include:

- off-cuts
- shavings
- sawdust

Records and reports may include:

- the sawing method
- optimising reports
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

manual using a computer-based system or another appropriate organisational communication system

Dealing with may include:

- repairing blunt or damaged saws
- disposing of blunt or damaged saws that cannot be repaired

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select log and prepare for sawing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>selecting</i> and <i>sawing</i> logs in <i>multi-species</i> operations are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Appropriate logs are selected by species and size or grade, and billeted to suit work order</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Log is selected with reference to production and log utilisation requirements</p> <p>1.6. Logs with <i>features</i> which are not suitable are segregated or rejected and <i>disposed of</i> in line with site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>

ELEMENT	PERFORMANCE CRITERIA
2. Break down logs	<p>2.1. Pre start-up checks are carried out on equipment in line with site requirements</p> <p>2.2. Sawing or selection process is planned in line with site procedures, environmental requirements and to optimise volume and quality of recovery</p> <p>2.3. Log is held with dogs, minimising damage and aligning with saw/s</p> <p>2.4. Logs or flitches are cleared of foreign matter and fed into the saw at the feed rate prescribed by organisational requirements</p> <p>2.5. Sawing sequence is planned, maintained and adjusted to produce the required quantity of flitches or cants and to maximise the feed rate</p> <p>2.6. Break down process is regularly checked and adjusted to maintain the desired quality and output</p> <p>2.7. Break down processes are adjusted to allow for changes in species, revealing of features, or unacceptable characteristics</p> <p>2.8. Break down process and equipment faults are recorded and reported to the appropriate personnel</p> <p>2.9. Flitches or cants are safely directed in line with flow control</p>
3. Conduct operator maintenance	<p>3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. Saw blades are checked for blunt or damaged condition</p> <p>3.3. Blunt or damaged saws are identified and dealt with in line with site procedures, manufacturer's recommendations and environmental requirements</p> <p>3.4. Machine area is kept clear of residue and debris and maintained as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and

REQUIRED SKILLS AND KNOWLEDGE

equipment; identify species and strength groups of logs; identify recovery potential of raw resource (logs); efficiently and safely saw logs in multi-species operations

- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures; accurately identify blunt or damaged saws in multi-species operations

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for selecting and sawing logs in multi-species operations
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for selecting and sawing logs in multi-species operations
- Environmental risks and hazards
- Log sawing systems and machine capabilities
- Species and recovery characteristics of timber and timber defects
- Cutting pattern requirements, feed rates and finish
- Blade condition assessment
- Flow control systems and marking requirements
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards

Organisational requirements
may include:

RANGE STATEMENT

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Selection may include:

- species
- size
- length
- quality
- shape
- sweep
- spiral grain
- pipe
- heart line
- strength group
- defects
- characteristics
- durability
- borer resistance

Sawing

- is the process of cutting a log into parts including flitches, cants and off-cuts

Multi-species logs are to include: assessment of:

- diameter range
- curvature
- faults
- softwood species of various types
- moisture content

Work order is to include:

- instructions for the selecting and sawing of logs and despatching of flitches or cants from the work site to down-stream processing

and may include:

- treating
- species
- diameter
- length
- quantity
- grade

RANGE STATEMENT

Appropriate personnel may include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work
- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment includes:

- loaders
- forklifts
- chainsaws
- other yarding equipment utilised in log selection and conversion

and may include:

- circular saws
- bench saws
- overhead frame saws or band saws (single, twin, single edges and twin edges)
- mechanical feed
- conveyors
- standard two-five headed dog carriages
- flat top carriages with head rigs

and is to include:

- procedures for machine lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Features may include:

- defects arising from a change in moisture content
- curvature
- spiral grain
- shakes
- insect defects
- knots and resin pockets
- sweep
- taper
- end splits and shape
- heart shakes
- heart crack-decay

RANGE STATEMENT

Disposing of may include:

- recycling timber with unsuitable features
- re-using timber with unsuitable features

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- saw has been set-up correctly
- blades are installed accurately
- machinery is operating to optimum performance

Optimising includes:

- planning the cutting of a log to achieve the most from it
- ensuring environmental requirements are central to this planning process

Dogs

- are the carriage devices which secure logs during break down

Flitch

- is a large piece of sawn log intended for further cutting that is sawn on at least two surfaces

Feed rate is to include:

- rate of speed the material is passed through the saw/s, allowing for the type of saw blades, power source, log species, depth of cut and log quality affecting the sharpness of the blades
- finish of the material
- production output

Cant

is a thick piece of timber with two or more surfaces sawn from a log and intended for further sawing

Break down

is the process of sawing a log into its parts as specified by the work order and the characteristics of the log

RANGE STATEMENT

Characteristics may include:

- gum veins
- over growths
- knots
- resin pockets

Records and reports may include:

- the sawing procedures
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Dealing with may include:

- repair of damaged saws and blunt or damaged saw blades
- disposing of saws and saw blades that cannot be repaired

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------------|---|
| 1. Maintain quality output | 1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to applying principles of blade design to sawing procedures are identified and followed
1.2. <i>Quality system</i> procedures are applied and adhered to
1.3. <i>Blades</i> are <i>visually inspected</i> before processing <i>products</i> and completing work
1.4. <i>Product specifications</i> are checked and conformed with
1.5. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Apply blade design principles | 2.1. <i>Types</i> and <i>styles</i> of blades are classified in line with workplace procedures
2.2. <i>Properties</i> of blades are compared with product specification requirements
2.3. Blade <i>characteristics</i> and <i>design capacities</i> are evaluated and compared to work requirements
2.4. Blades are selected to suit work requirements, material being cut and environmental requirements |

ELEMENT	PERFORMANCE CRITERIA
3. Monitor and control blade care	<p>3.1. <i>Sawing</i> is planned to <i>optimise</i> the resource value and minimise damage and wear to blades</p> <p>3.2. Machinery and equipment are regularly maintained and adjusted to minimise product waste and maximise blade lifespan</p> <p>3.3. Problems are immediately assessed and rectified to avoid damage to blades</p> <p>3.4. Damage to blades is <i>dealt with</i> in line with site procedures, manufacturer's recommendations and environmental requirements</p> <p>3.5. Quality output through applying blade design principles and blade care procedures are <i>recorded and reported</i> in line with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely select blades for sawing procedures
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and blade faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for applying principles of blade design to sawing procedures
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

applying principles of blade design to sawing procedures

- Environmental risks and hazards
- Blade design principles
- Optimisation of saw blade use
- Quality systems
- Blade care and processing
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently select blades for sawing procedures in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to applying principles of blade design to sawing procedures
- following organisational policies and procedures relevant to applying principles of blade design to sawing procedures
- selecting blades for sawing procedures in line with environmental legislation and workplace procedures

EVIDENCE GUIDE

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable

EVIDENCE GUIDE

adjustment may be applied during assessment

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements

may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations

RANGE STATEMENT

- Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Quality systems** may include:
- enterprise based systems
 - second party certification
 - third party certification
 - ISO9000 series
 - other regulatory systems
- Blades** are to include:
- all types of saw blades used by the enterprise
- Visual inspection** may include:
- assessing the condition of blades
 - assessing any visual wear or damage which may have occurred during operation
- Product** may include:
- trees
 - logs
 - timber
 - panels
 - boards
- Product specifications** may
- specifications set for optimisation of timber in line with the available resource

RANGE STATEMENT

include:

- customer requirements
- industry standard cross sections and lengths
- enterprise standards

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Types may include:

- circular saw blades
- band saw blades
- gang saw blades
- wide saw blades

Styles may include:

- standard steel blades
- tungsten tipped blades
- stellite tipped blades

Properties are to include:

- metal from which blades are made
- tensile strength of the blade
- geometry and concentricity

Characteristics are to include:

- blade pitch
- kerf
- gullet
- face
- set
- straightness
- profile
- angle
- depth
- teeth shape
- application (cross cut or ripping)
- number of teeth per metre

Design capacity

is the rated capacity of the blade in terms of speed (for tension and temperature) and hardness

Sawing

is the process of cutting products using cross-cut

RANGE STATEMENT

or ripping methods

Optimising includes:

- planning the sawing of timber to achieve the most from it
- ensuring environmental requirements are central to this planning process

Dealing with may include:

- repairing blunt or damaged saws and saw blades
- disposing of blunt or damaged saws and saw blades that cannot be repaired

Records and reports may include:

- maintaining quality and product care procedures
- risk
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------|---|
| 1. Prepare for sawing | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to operating a portable sawmill are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>logs</i> to be <i>sawn</i> is selected from the location</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Sawing process is planned to <i>optimise</i> volume and quality of recovery</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Break down logs | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Logs to be sawn are <i>positioned</i> with cant hooks, winches or log rollers and <i>stabilised</i> with chock logs</p> |

ELEMENT	PERFORMANCE CRITERIA
	or pre-notched runners in line with site procedures
	2.3.Sawn board dimensions are obtained from customer orders or work order
	2.4.Number of boards and <i>sequence of cuts</i> from an individual log are estimated taking into account log characteristics
	2.5.Saw, <i>carriage</i> and mill are adjusted to suit dimensions of boards to be cut
	2.6.Saw is operated to saw logs while controlling <i>sawn edges</i>
	2.7. <i>Defects</i> in logs, reject boards and off-cuts are directed to waste or <i>sawn recovery</i>
	2.8.Portable sawmilling process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Conduct operator maintenance	3.1.Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2.Saw and saw blades are checked for blunt or damaged condition in line with site procedures
	3.3.Blunt or damaged saws and saw blades are identified and <i>dealt with</i> in line with site procedures and manufacturer's recommendations and environmental requirements
	3.4.Machine area is kept clear of dust and debris in line with OHS and site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely and efficiently operate a portable sawmill
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to calculate dimensions, and to estimate, measure and

REQUIRED SKILLS AND KNOWLEDGE

calculate time required to complete a task

- Problem solving skills sufficient to accurately identify blunt or damaged saws; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for operating a portable sawmill
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a portable sawmill
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Portable sawmilling systems
- Characteristics of timber and timber defects
- Break down processes, feed rates and finish
- Blade condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and

EVIDENCE GUIDE

efficiently operate a portable sawmill within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to operating a portable sawmill
- following organisational policies and procedures relevant to operating a portable sawmill
- operating a portable sawmill to produce green boards in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on portable sawmill machinery

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to

EVIDENCE GUIDE

access and correctly interpret and apply the required knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- machine isolation and guarding
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling)

RANGE STATEMENT

- and re-use guidelines)
- Work order** is to include:
- instructions for the portable sawmill location
 - sawing logs and despatching from the work site to down-stream processing
- and may include:
- species
 - diameter
 - length
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Logs** are to include: assessment of:
- diameter range
 - curvature
 - faults
 - species
 - moisture content
- Sawing** is the process of cutting a log into parts including green boards and off-cuts
- Equipment** includes:
- portable sawmills
 - procedures for machine lock-out, i.e. protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Optimising** includes:
- planning the cutting of a log to achieve the most from it, i.e. the most and widest boards possible
 - ensuring environmental requirements are central to this planning process
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- saw has been set-up correctly
- blades are installed accurately
- machinery is operating to optimum performance

Positioned may include:

use of:

- cant hooks
- winches
- log rollers
- mechanical lifting equipment

Stabilised may include:

use of:

- chock logs
- wedges
- pre-notched runners

Sequence of cuts

is the process of sawing a log into its parts as specified by the work order and the characteristics of the log in an order which optimises return of green boards

Carriage may include:

component of the portable sawmill that:

- supports the log and assists with feed during the sawing process
- supports the saw and allows the saw to travel through the log

Sawn edges are to include:

- waste sections of timber
- round sides of the first cut

Defects may include:

- defects arising from a change in moisture content
- warp
- wane

RANGE STATEMENT

- curvature
- shakes
- insect defects
- knots and resin pockets
- sweep
- taper
- end splits
- shape

Sawn recovery

- is the marketable timber from the reject timber and off-cuts

Records and reports may detail:

- sawing procedures
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Dealing with may include:

- repairing blunt or damaged saws and saw blades
- disposing of blunt or damaged saws and saw blades that cannot be repaired

PERFORMANCE CRITERIA

- | | |
|------------------------------------|---|
| 1. Plan treatment plant procedures | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and monitoring timber treatment plant operations are identified and followed</p> <p>1.2. Variations in timber characteristics are assessed and <i>moisture content</i> registered</p> <p>1.3. <i>Timber treatment</i> schedules are produced and applied in line with site procedures and environmental requirements</p> <p>1.4. <i>Water management</i> procedures are planned and scheduled</p> <p>1.5. <i>Waste minimisation</i> and control measures are</p> |
|------------------------------------|---|

ELEMENT	PERFORMANCE CRITERIA
	planned and prescribed
	1.6. Communication with others is established and maintained in line with OHS requirements
2. Monitor treatment plant performance	2.1. Charge sheets are checked and interpreted to ensure accuracy
	2.2. Reconciliation statements are checked and interpreted to ensure accuracy
	2.3. Process trends are checked and analysed for optimum performance
	2.4. Treatment operations and output are monitored to record possible process improvements and to ensure maximum cost effectiveness
	2.5. Timber with sub-standard treatment results is disposed of in line with site procedures and environmental requirements
	2.6. Treatment operations, major problems and equipment faults are investigated, recorded and reported in line with site requirements
3. Modify operations and assess technical developments	3.1. Modifications are made to schedules to ensure optimum performance
	3.2. Treatment improvement modifications are documented and communicated in line with site procedures
	3.3. Developments in treatment processes and related technology are diagnosed for possible improvements
	3.4. Technical developments are analysed and assessed for potential incorporation into existing plant operations and procedures
	3.5. Proposed developments are authorised, trialled, documented and introduced into site operations
	3.6. Material from unsuccessful trials is disposed of in line with site procedures and environmental requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to assess, schedule and apply treatment plant procedures; monitor treatment plant performance and modify operations as required; analyse and assess technical developments for incorporation into existing operations and procedures; efficiently and effectively plan and monitor timber treatment plant operations
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to interpret charge sheets, reconciliation statements and process trends, and to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to demonstrate appropriate response procedures to major problems and equipment faults

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for planning and monitoring timber treatment plant operations
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and monitoring timber treatment plant operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Timber treatment plant operation procedures
- Water management methodologies
- Waste minimisation control measures
- Treatment plant modification strategies
- Technical development diagnosis and solution methodologies
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks

REQUIRED SKILLS AND KNOWLEDGE

- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and monitor timber treatment plant operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to planning and monitoring timber treatment plant operations
- following organisational policies and procedures relevant to planning and monitoring timber treatment plant operations
- planning and monitoring of timber treatment plant operations for the enterprise
- modifying timber treatment plant operations for the enterprise
- coordinating personnel to follow planning, communications and scheduling for timber treatment plant operations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context

EVIDENCE GUIDE

- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

RANGE STATEMENT

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Moisture content

is the amount of moisture maintained in timber or timber products after kiln drying to avoid cracking and deforming

Timber treatment

- is the process of impregnating preservative solution filled with chemicals into the timber to provide it with a durable resistance to weather and insect attack

and may include:

- full cell
- modified cell
- empty cell
- double vacuum
- dip diffusion
- vat and sprays
- other processes developed by the enterprise

Water management may include:

- stormwater
- contaminated water
- bore water
- recycled dam water
- town mains water

Waste minimisation may include:

- measures to control chemical waste
- wood residues
- packaging residues
- debris

RANGE STATEMENT

- soil
 - other foreign matter
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Charge sheets** are to include:
- records of the treatment plant charge
 - amount of power and energy developed and used
- Reconciliation statements** are to include:
- statements reflecting chemical usage and cost
 - treatment times for cycles
 - breakdown losses
 - energy costs
 - modification expenses
- Process trends** are to include:
- mapping processing conditions to establish trends
 - using this information for modifications
- Disposing of** may include:
- recycling sub-standard timber/unsuccesful trial material
 - re-using sub-standard timber/unsuccesful trial material
- Records and reports** may include:
- planning and monitoring outcomes
 - reconciliations
 - charge sheets
 - material movement
 - despatch outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual

RANGE STATEMENT

- Technical developments** may include:
- using a computer-based system or another appropriate organisational communication system
 - less toxic chemicals
 - improved methods of chemical penetration
 - improved chemical formulation
 - improved process methods

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to plan fitch, cant sizes and cutting patterns, to coordinate sawing processes and monitor equipment and output

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPISAW4202A Plan and monitor saw log operations

Application of the Unit

Application of the unit

The unit involves planning and monitoring saw log operations in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan saw log operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and monitoring saw log operations are identified and followed</p> <p>1.2. Variations in timber characteristics are assessed, recorded and reported to <i>sawyers</i></p> <p>1.3. <i>Timber cutting</i> schedules are produced and applied in line with site procedures</p> <p>1.4. <i>Log management</i> procedures, including order information, are planned, scheduled and communicated to sawyers</p> <p>1.5. <i>Cutting patterns</i> are planned and prescribed in line with environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Monitor saw log performance	<p>2.1. Standard cutting patterns are reviewed for suitability to planned cutting schedules</p> <p>2.2. Timber cutting processes are monitored for effectiveness of cutting pattern and condition of timber</p>

ELEMENT	PERFORMANCE CRITERIA
3. Coordinate saw log operations	<p>2.3. Assistance is provided to sawyers with the evaluation of logs and sawing problems</p> <p>2.4. Saw log management and <i>output</i> are monitored to record possible process improvements</p> <p>2.5. Saw log operations, major problems and equipment faults are investigated and <i>recorded and reported</i> in line with site requirements</p> <p>3.1. Cutting operations and output are monitored to record and action possible process improvements based on cutting patterns, timber being processed and environmental requirements</p> <p>3.2. Modifications are made to cutting patterns or schedules to ensure optimum performance and communicated to operators</p> <p>3.3. Cutting improvement modifications are documented and communicated in line with site procedures and environmental requirements</p> <p>3.4. Cutting output details are obtained and recorded in line with site requirements</p> <p>3.5. Cut timber is directed to <i>storage</i> or <i>transferred</i> for further processing</p> <p>3.6. Operating logs and cutting records are completed and maintained to site standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to assess, schedule and apply saw log operations; monitor saw log performance and modify operations as required; efficiently and safely plan and monitor saw log operations
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task

REQUIRED SKILLS AND KNOWLEDGE

- Problem solving skills sufficient to demonstrate appropriate response procedures to major problems and equipment faults

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and monitoring saw log operations
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and monitoring saw log operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Log sawing procedures and management
- Cutting pattern methodologies
- Cutting sequences
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and monitor saw log operations in line with organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to planning and monitoring saw log operations
- following organisational policies and procedures relevant to planning and monitoring saw log operations
- planning and monitoring of saw log operations for the enterprise
- modifying cutting patterns and schedules for saw log operations within the enterprise
- coordinating personnel to follow planning, communications and scheduling for saw log operations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required

EVIDENCE GUIDE

knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

- Sawyers** are the operators who use the saws to saw logs
- Timber cutting** is the process of converting logs into flitches or cants following prescribed cutting patterns
- Log management** is to include:
- assessing individual logs for the most suitable cutting sequence and pattern
 - assessing which type of flitches or cants can be cut from the log
 - handling of the log
- Cutting patterns** is the way in which the log is cut up to achieve the output of flitches or cants planned for that log
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Output** is the size, quality and quantity of flitches or cants produced from a log
- Records and reports** may include:
- planning and monitoring outcomes
 - operating logs
 - cutting records
 - material movement
 - despatch outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

RANGE STATEMENT

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Transferral may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment

lifting equipment may include:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting may include:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan drying procedures	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to coordinating timber drying operations are identified and followed</p> <p>1.2. Variations in timber characteristics are assessed and <i>moisture content</i> measured and recorded</p> <p>1.3. <i>Timber drying</i> schedules are produced and applied in line with site procedures</p> <p>1.4. <i>Kiln management</i> procedures are planned and scheduled in line with site procedures and environmental requirements</p> <p>1.5. <i>Process cycles</i> are planned and prescribed</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Control drying operations	<p>2.1. <i>Charge sheets</i> are checked and interpreted to ensure accuracy in line with final moisture content reading</p> <p>2.2. <i>Process trends</i> are checked and analysed for optimum performance</p> <p>2.3. <i>Seasoning chambers</i> are checked and controlled in</p>

ELEMENT	PERFORMANCE CRITERIA
3. Coordinate drying process	<p>line with standard operating procedures</p> <p>2.4. Drying operations, major problems and equipment faults are investigated and <i>recorded and reported</i> in line with site requirements</p> <p>3.1. Drying operations and output are monitored to record possible process improvements based on moisture control and timber being processed</p> <p>3.2. Modifications are made to processing cycles to ensure optimum performance and communicated to operators</p> <p>3.3. Drying improvement modifications are documented and communicated in line with site procedures</p> <p>3.4. Charge details are obtained and recorded in line with site requirements</p> <p>3.5. Dried timber is directed to <i>storage</i> or <i>transferred</i> for further processing</p> <p>3.6. Operating logs and seasoning records are completed and maintained to site standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to assess, schedule and apply drying procedures; monitor drying operations and output, and modify as required; efficiently and safely coordinate timber drying operations
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to demonstrate appropriate response procedures to major problems and equipment faults

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards,

codes of practice and established safe practices relevant to the full range of processes for coordinating timber drying operations

- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for coordinating timber drying operations
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Timber drying operation procedures
- Kiln management methodologies
- Process cycles and modifications
- Timber characteristics and moisture content interpretation
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently coordinate timber drying operations in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to, and satisfy, all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to coordinating timber drying operations
 - following organisational policies and procedures relevant to coordinating timber drying operations
 - coordinating timber drying operations for the enterprise
 - modifying timber drying operations for the enterprise
 - coordinating personnel to follow planning, communications and scheduling for timber drying operations
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements** may include:
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Moisture content is the amount of moisture maintained in timber or timber products after kiln drying to avoid cracking and deforming

Timber drying is the process of:

- placing timber in a heat controlled kiln to dry

RANGE STATEMENT

- high levels of moisture from timber causing cell collapse followed by humidity generation to recondition timber to its former shape and desired EMC
- Kiln management** may include:
- in the case of hardwood, final kiln drying to required moisture content
 - low temperature kilns
 - conventional
 - high temperature kilns and vacuum dryers
 - setting process cycles and charge rates
- Process cycles** are the times taken for each stage of the process
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Charge sheets** are to include:
- records of the treatment plant charge
 - amount of power and energy developed and used
- Process trends** are to include:
- mapping processing conditions to establish trends
 - using this information for modifications
- Seasoning chambers** are the various compartments or rooms of a kiln that are independently controlled
- Records and reports** may include:
- coordinating outcomes
 - operating logs
 - seasoning records
 - charge sheets
 - material movement
 - despatch outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents

RANGE STATEMENT

- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)
- and may be divided into:
 - standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position

Transferral may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions

RANGE STATEMENT

- relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Records and reports** may include:
- planning and monitoring outcomes
 - operating logs
 - cutting records
 - material movement
 - despatch outcomes

RANGE STATEMENT

- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Sawyers

are the operators who use the saws to saw boards

Board conversion

is the process of producing boards by re-sawing green flitches or cants to optimise single boards maximising the amount of boards per flitch or cant

Flitch and cant management is to include:

- assessing individual flitches or cants for the most suitable cutting sequence and pattern
- assessing which type of boards can be cut from the flitch or cant

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Cutting patterns

is the way in which the flitch or cant is cut up to achieve the output boards planned for that log

Output is to include:

what is produced from a flitch or cant in relation to:

- size
- volume recovery
- sawn finish
- dimensional consistency
- quality of boards

RANGE STATEMENT

Disposing of may include:

- recycling unsuitable fitches or cants
- re-using unsuitable fitches or cants

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)
- and may be divided into:
 - standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position

Transferral may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment

lifting equipment may include:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting may include:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

FPITMM2201B Cut material to length and angles

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and cut material to length and angle with a power driven saw. The unit includes operator maintenance

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPITMM2201A Cut material to length and angle

Application of the Unit

Application of the unit

This unit involves cutting material to length and angle in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------------|--|
| 1. Prepare for cutting | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to cutting material to length and angle are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be cut is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work order and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Cutting list is interpreted in line with work order and site procedures</p> <p>1.6. Material <i>cutting patterns and saw set-up sequences</i> are planned in line with site procedures</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Cut material to length and angle | <p>2.1. Material is marked and stops set in preparation for cutting</p> <p>2.2. Equipment and machinery are used in line with</p> |

ELEMENT

PERFORMANCE CRITERIA

- organisational procedures, manufacturer's instructions and environmental protection requirements
- 2.3. Cutting sequence and patterns are followed to produce the required quantity
- 2.4. Cuts are checked for length and angle within a set *tolerance*
- 2.5. Material with *defects*, incorrect cuts and off-cuts are *disposed* of in line with site procedures and environmental requirements
- 2.6. Processing and equipment faults are reported to the appropriate personnel
- 2.7. Material is safely *stacked* in a designated location in line with work order requirements
- 3. Conduct operator maintenance
 - 3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
 - 3.2. Saw blades are checked for blunt or damaged condition
 - 3.3. Saw blades are removed and replaced in line with manufacturer's recommendations and used blades are disposed of in line with site procedures and environmental requirements
 - 3.4. Saw area is kept clear of dust, off-cuts and debris in line with OHS and site requirements
- 4.
- 5.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and safely cut material to length and angle
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task and to calculate length and angle of material for cutting
- Problem solving skills sufficient to review and accurately identify work requirements, identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for cutting material to length and angle
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting material to length and angle
- Environmental risks and hazards
- Characteristics of timber and timber defects
- Cutting patterns and sequences
- Saw blade condition assessment
- Industry standard cross-sections and lengths
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut materials to length and angle within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to cutting material to length and angle
- following organisational policies and procedures relevant to cutting material to length and angle
- effectively communicating and following safe work practices
- cutting material to length and angle in line with the work order and within prescribed organisational tolerances
- conducting operator maintenance on a docking saw
- stacking batches of cut material in line with organisational requirements and OHS regulations
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Context of and specific resources for assessment

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards

RANGE STATEMENT

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the cutting and despatch of timber and timber products from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams or laminated beams

Storage locations may include:

- storage racks

RANGE STATEMENT

- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- power operated
- manually controlled docking and trimming saws where the cutting angle is controlled relative to the board guides and clamps
- saws with adjustable angle
- saws with one blade
- radial arm saws
- table saws
- bench saws
- saws with automatic feed

and is to include:

- procedures for saw lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Cutting patterns and saw set-up sequences are to include:

- single and compound angles requiring one or two cutting passes

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm

RANGE STATEMENT

understanding

- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Tolerances

are a set limit for cutting over or under the required length within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements

Defects may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling material with defects, incorrect cuts and off-cuts
- re-using material with defects, incorrect cuts and off-cuts

Stacking may include:

- preparing for transport
- categorising in common size, length and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for machining	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to machining material are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be <i>machined</i> is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Material machining process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up machines	<p>2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked</p> <p>2.2. <i>Machine settings</i> and adjustments are made in line with job requirements, and machine and tool</p>

ELEMENT	PERFORMANCE CRITERIA
3. Operate machines	<p>manufacturer's instructions</p> <p>2.3. Trial runs are conducted to check machine operation, accuracy and quality of finished work</p> <p>2.4. Material machined during the trial run is accepted or rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.5. Necessary adjustments are made to machine settings</p> <p>3.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>3.2. Machine is operated in line with manufacturer's instructions, safe handling procedures, standard workplace operating procedures and environmental protection requirements</p> <p>3.3. Machine operation is monitored to ensure product quality and <i>output</i></p> <p>3.4. Material is safely <i>stacked</i> in a designated location in line with work order requirements</p> <p>3.5. <i>Waste</i> quantities are checked and minimised and items that do not meet quality requirements repaired, recycled or discarded in line with site procedures and environmental requirements</p> <p>3.6. Fixed cutter heads are removed and replaced in line with site procedures</p> <p>3.7. Straight cutters are jointed in line with site procedures</p> <p>3.8. Machining outcomes and equipment faults or maintenance requirements are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to safely machine material, use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task and to calculate quantities of materials
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures, review and accurately identify work requirements

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for machining material
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for machining material
- Environmental risks and hazards
- Characteristics of timber, timber products and defects
- Cutting patterns and sequences
- Blade, knife, drill and sanding belt condition assessment
- Industry standard cross-sections and lengths
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clarify and review fabrication plans	<p>1.1.Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to reading and interpreting timber truss, floor and/or frame fabrication plans are identified and followed</p> <p>1.2.<i>Work order</i> and fabrication plans are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3.Drawing views and notes are interpreted and design requirements and restrictions are identified and complied with</p> <p>1.4.Additional information and data is obtained from appropriate personnel and sources if required</p> <p>1.5.<i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p>
2. Interpret and read fabrication plans	<p>2.1.Plans, work requirements and sequencing are identified, interpreted and applied to <i>assembling components</i></p> <p>2.2.Layouts, spacing and sizing of individual structural members are confirmed in line with work order requirements</p> <p>2.3.Quantities for bracing and ancillaries for trusses or</p>

ELEMENT**PERFORMANCE CRITERIA**

- frames are allowed for
- 2.4. **Timber component** information and details are interpreted from plan documentation
- 2.5. **Hardware** information and details are interpreted from plan documentation
- 2.6. **Bracing points** are correctly identified, located and labelled from plan documentation
- 2.7. The need for **camber** is established and identified
3. Confirm work order and fabrication plan
- 3.1. **Set-up jigs** required for construction are identified and prepared
- 3.2. Truss, floor or frame types are identified and timber type and species selected in line with work order
- 3.3. Assembly hardware is located and selected in line with the fabrication plans and standards
- 3.4. Characteristics and **design details** of material are visually assessed against work order
- 3.5. Sub-standard materials are rejected and disposed of in line with site requirements to minimise wastage
- 3.6. Common site problems are discussed and prevention strategies examined and adopted to ensure future site practice meets design requirements
4. Confirm products to fabrication plan
- 4.1. Components are set to include camber adjustments, overhang and other design requirements
- 4.2. Hardware is positioned on joints and installed in line with design specifications
- 4.3. Assembly faults are corrected in line with site procedures
- 4.4. Finished product is assessed for quality against assembly drawing and labelled in line with the work order
- 4.5. Assessment outcomes and distribution problems are recorded and reported in line with workplace procedures
- 4.6. **Records and reports** are accurately completed, processed and maintained in line with workplace procedures
- 5.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to measure and check length and angle of components; identify a range of timber products, sizes and specifications; and identify a range of nail plate products, sizes and specifications
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to read and interpret timber truss, floor and/or frame plans
- Numeracy skills sufficient to measure and calculate length and angles including basic addition and subtraction
- Problem solving skills sufficient to identify and resolve potential fabrication plan problems
- Planning and organisational skills sufficient to develop a logical construction sequence to construct trusses, frames and/or floors from the plan

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for reading and interpreting timber truss, floor and/or frame plans
- Organisational and site standards, requirements, policies and procedures relevant to reading and interpreting timber truss, floor and/or frame plans

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material
- Knowledge of a range of appropriate truss, floor and/or frame types and components
- Understanding of relevant abbreviations and symbols and industry terminology used in fabrication plans
- Workplace communication channels to resolve any potential fabrication issues
- Appropriate units of measurement and component tolerances in use at the work site
- Industry standard cross sections and lengths
- Characteristics of timber and timber defects
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment for reading and interpreting truss, floor and frame fabrication plans and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can read and interpret a range of timber truss, floor and/or frame fabrication plans

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to reading and interpreting timber truss, floor and/or frame plans
- following organisational policies and procedures

EVIDENCE GUIDE

- relevant to reading and interpreting timber truss, floor and/or frame plans
- Context of and specific resources for assessment**
- development of a logical construction sequence for a range of products from the fabrication plans
 - Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to comply with relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards

RANGE STATEMENT

- confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the assembly and despatch of timber and timber products from the work site
- and may include:
- fabrication plans or drawings
 - type of product
 - size
 - quantity
 - grade
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm

RANGE STATEMENT

- understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Assembling components** for timber truss, floor and frame may include:
- design assumptions regarding supporting and tying components
- Timber components**
- are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut to comply with the fabrication plans and cutting list
- Hardware** may include:
- nailing plates
 - floor truss plates
 - bracing
 - supplementary fittings and fixings
- Bracing points**
- are the points at which timber, ply or metal are attached to truss or frame to prevent lateral movement
- Camber**
- is an upward curvature built into a truss to compensate for roof load
- Set-up jigs** may include:
- enterprise manufactured templates which assist in the positioning of components to corresponding work order during the assembly process
- Design details** may include:
- timber component species
 - type
 - cross-section
 - grade
 - length and cutting angles
 - nail plate and other joining hardware sizes and marking requirements
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents or equipment malfunctions

RANGE STATEMENT

and may be:

- manual
- using a computer-based system
- other appropriate organisational communication system

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for conversion	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>converting timber</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be converted is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Timber conversion and <i>saw set-up</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Produce boards	<p>2.1. Saw, carriage and feed are set, regularly checked and adjusted to suit conversion plan, <i>ordered sizes</i> and <i>tolerances</i></p> <p>2.2. Timber supply is monitored to ensure constant</p>

ELEMENT	PERFORMANCE CRITERIA
	supply to the saw
	2.3. Equipment and machinery are used in line with organisational procedures, manufacturer's instructions and environmental protection requirements
	2.4. Saw bench is operated to produce boards without damage to boards or saw blade and <i>feed rate</i> is maintained
	2.5. Material with <i>defects</i> , incorrect cuts and off-cuts is <i>disposed of</i> in line with site procedures and environmental requirements
	2.6. Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.7. Material is safely <i>stacked</i> in a designated location in line with work order requirements
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Saw blades are checked for blunt or damaged condition in line with site requirements
	3.3. Saw blades are removed and replaced in line with manufacturer's recommendations
	3.4. Saw area is kept clear of dust, off-cuts and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; safely convert timber
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to measure and calculate length and angles including basic addition and subtraction
- Problem solving skills sufficient to identify problems and equipment faults and

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for converting timber
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to converting timber
- Environmental risks and hazards
- Characteristics of timber and timber defects
- Cutting patterns and sequences
- Saw feed rates
- Saw blade condition assessment
- Industry standard cross-sections and lengths
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently convert timber within organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to converting timber
- following organisational policies and procedures relevant to converting timber
- effectively communicating and following safe working practices
- cutting material to width and thickness in line with the work order and within prescribed organisational tolerances
- conducting operator maintenance on a automatic feed controlled rip saw
- stacking batches of cut material in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required

EVIDENCE GUIDE

knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
 - elimination of hazardous materials and substances
 - safe forest practices including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Timber conversion

is the process of producing boards by:

- re-sawing in-the-rough boards to optimise single boards through cutting away waste edges
- cutting boards into two or more boards thereby maximising the amount of product in line with the work order

Work order is to include:

- instructions for the cutting and despatch of timber and timber products from the work site

and may include:

- type
- size
- width
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- green timber
- stress and non-stress graded timber,
- preservative treated timber
- coated and/or treated timber products
- beams or laminated beams

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components

RANGE STATEMENT

- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- power operated
- automatic feed controlled ripping saws where the cut is controlled relative to the board guides and fence
- saws with adjustable thickness (sloping table)
- saws with one blade
- rip saws
- table saws
- bench saws

and is to include procedures for:

- saw lock-out, i.e. protecting operators and co-workers from accidental injury by isolating the machine from the power source

Saw set-up is to include:

- setting depth, width and thickness of cut measured from the fence in line with product order and allowing for kerf (width of saw cut)

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Ordered sizes may include:

- a range of sizes cut to widths usually

RANGE STATEMENT

increasing in 5 mm increments

Tolerances

are a set limit for cutting over or under the required width within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements

Feed rate

is the rate of speed at which the material is passed through the machine affecting the sharpness of the cutting blades, the finish of the material and the production output

Defects may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling material with defects, incorrect cuts and off-cuts
- re-using material with defects, incorrect cuts and off-cuts

Records and reports may include:

- product type
- size
- width
- thickness
- inspection, grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents or equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Stacking may include:

- preparing for transport
- categorising in common size, length, width and thickness
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for profiling	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to manufacturing <i>machined joints</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be <i>machined</i> is selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Material to be manufactured and process to be used are identified and <i>cutting blades or drills</i> selected</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up profiling equipment	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Machine guides</i> are selected and attached to the machinery</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---------------------------------|---|
| 3. Cut material to profile | <p>2.3. Cutting blades or drills are installed in the selected machinery</p> <p>2.4. Depth and width of cut or hole are set in line with the required process and to minimise waste</p> <p>2.5. Material stack is positioned in close proximity to maximise ease of machine feeding</p> <p>2.6. Equipment set-up is checked and adjusted by testing a piece of timber to set depth and width</p> <p>3.1. Material is fed into the machine at the <i>feed rate</i> prescribed by organisational requirements</p> <p>3.2. Equipment and machinery are used in line with organisational procedures, manufacturer's instructions and environmental protection requirements</p> <p>3.3. Manufacturing sequence is followed, maintained and adjusted to produce the required quantity and maximise the feed rate</p> <p>3.4. Manufacturing process is regularly checked and adjusted to maintain the desired depth and width</p> <p>3.5. Material with <i>defects</i> is rejected and <i>disposed of</i> in line with site procedures</p> <p>3.6. Processing and equipment faults are reported to the appropriate personnel</p> <p>3.7. Material is safely <i>stacked</i> in a designated location in line with work order requirements</p> <p>3.8. <i>Records and reports</i> are accurately completed, processed and maintained in line with workplace procedures</p> |
| 4. Conduct operator maintenance | <p>4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2. Cutting blades or drills are checked for blunt or damaged condition in line with site procedures</p> <p>4.3. Cutting blades or drills are removed and replaced in line with manufacturer's recommendations</p> <p>4.4. Machine area is kept clear of dust and debris in line with OHS requirements</p> |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and safely manufacture using joinery machines
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task and to calculate length, angle, depth and width including basic addition and subtraction
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for manufacture using joinery machines
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to manufacture using joinery machines
- Environmental risks and hazards
- Types of machined joints
- Characteristics of timber and timber defects
- Cutting processes, feed rates and finish
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they safely and efficiently manufacture material using joinery machines within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to manufacturing material using joinery machines
- following organisational policies and procedures relevant to manufacturing material using joinery machines
- effectively communicating and following safe working practices
- cutting and drilling machined joints in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on joinery machine equipment
- stacking batches of cut material in line with organisational requirements and OHS regulations
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to

Context of and specific resources for assessment

EVIDENCE GUIDE

undertaking work applicable to this unit

- specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility

RANGE STATEMENT

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Machined joints may include:

- grooves - square u-shape slots of varying depth and width which run with the grain along the length of the board, generally used for joining or receiving another piece of timber
- rebates - vary in depth and width and occur at the edge or end of boards to accept another piece of timber to fit flush with the end or edge
- bevels - angles of varying degree cut on the edge or end of boards at the full thickness of the board for joining or decorative purposes
- trenches - cut across the grain and board at varying depths and widths to join and receive other timber components
- mortises - square or rectangular slots cut through timber or cut to a depth to receive a timber tenon
- tenons - cut at the end of a piece of timber at both edges and one or both flats to form a pin which can in turn fit a mortise, for joining purposes
- holes - drilled or bored completely through or stopped blind to accept dowels or metal joining hardware

Work order is to include

- instructions for the cutting or drilling and despatch of timber and timber products from the work site

and may include:

- machining process
- type

RANGE STATEMENT

- size
- length
- width
- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board
- coated and/or treated timber products
- beams or laminated beams

Machining is to include:

- drilling
- boring
- mortising
- tenoning
- trenching
- grooving
- rebating
- bevelling
- routing

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks

RANGE STATEMENT

- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- saws
- routing machines
- single or double end tenoners
- mortisers
- borers
- multi-borers
- drill presses

and is to include:

- procedures for machine lock-out, i.e. protecting operators and co-workers from accidental injury by isolating the machine from the power source

Cutting blades and drills may include:

- router cutting bits which cut square or angular
- drills in varying sizes
- mortising chisels
- tenoning saws or chains
- trenching heads

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to

RANGE STATEMENT

- individual social and cultural differences
- control of tone of voice and body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- cutters or drills are installed accurately
- machinery is operating to optimum performance

Machine guides may include:

- machine manufacturer produced guides located strategically on the machine to maintain timber in straight feed and ensure consistency of cut
- enterprise produced guides
- jigs to maintain consistency of timber against cutting blades or drills

Feed rate is to include:

- the rate of speed at which the material is passed through the machine affecting the sharpness of the cutting blades
- the finish of the material
- the production output

Defects may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling material with defects
- re-using material with defects

Stacking may include:

- preparing for transport
- categorising in machining process
- common size, length and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Records and reports may include:

- product type
- size
- process
- inspection
- grading and labelling outcomes
- storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents or equipment malfunctions
- and may be: manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>estimating and costing</i> are identified and followed</p> <p>1.2. Details of customer requirements are obtained through discussion with customer or from information supplied</p> <p>1.3. <i>Product information</i> is assessed and communicated to <i>appropriate personnel</i> in line with customer requirements</p> <p>1.4. Delivery point and methods of <i>transportation</i> are determined in line with organisational procedures and environmental protection requirements</p> <p>1.5. Details are recorded in line with organisational practice</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Estimate materials, time and labour	<p>2.1. Types and quantities of materials required for product manufacture are estimated</p> <p>2.2. <i>Resource requirements</i> to achieve product manufacture and perform required services are</p>

ELEMENT	PERFORMANCE CRITERIA
	estimated
	2.3. Completed estimate for product manufacture is documented and checked to match customer requirements
3. Calculate costs	3.1. Total materials, labour and <i>overhead costs</i> are calculated in line with organisational procedures
	3.2. Total job cost is calculated, including overheads and <i>mark-up percentages</i>
	3.3. Final cost to customer is calculated in line with organisational procedures
4. Check and document details	4.1. Details of costs and charges are documented in line with organisational practice
	4.2. Costs, calculations or other details are checked in line with organisational practice
	4.3. Customer <i>quotation</i> is prepared in line with organisational procedures
	4.4. Details are documented for future reference in line with organisational practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to safely estimate and cost materials, labour and overheads
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of

REQUIRED SKILLS AND KNOWLEDGE

- processes for estimating and costing
- Environmental protection requirements, including the safe disposal of waste material and minimising carbon emissions
 - Organisational and site standards, requirements, policies and procedures relevant to estimating and costing
 - Environmental risks and hazards
 - Using energy effectively and efficiently
 - Using material effectively and efficiently
 - Estimating and costing procedures
 - Product knowledge and production procedures
 - Staff salaries and overheads
 - Profit margins
 - Established communication channels and protocols
 - Problem identification and resolution strategies and common fault finding techniques
 - Types of tools and equipment and procedures for their safe use, operation and maintenance
 - Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
 - Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently estimate and cost jobs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and

EVIDENCE GUIDE

- codes of practice relevant to estimating and costing
- following organisational policies and procedures relevant to estimating and costing
 - effective communication and safe working practices
 - estimating and costing jobs on behalf of the organisation following established procedures
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- labour
- material
- overheads
- current product range and availability
- making comparisons between products and services related to brand options
- product features
- warranties and price
- knowledge of competitors' products
- service range and pricing structure
- environmental sustainability issues
- supervisor
- manager

Organisational requirements may include:

Estimating and costing is to include:

Product information may include:

Appropriate personnel may

RANGE STATEMENT

include:

- colleagues
- clients
- customers
- suppliers

Transportation may include:

- ships
- trains
- trucks
- utes
- vans
- couriers

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams or laminated beams

Resource requirements may include:

- number of personnel to complete the job
- time requirements
- overtime considerations and overheads

Overhead costs may include:

- superannuation
- sick leave entitlements
- leave loading
- other staff entitlements

RANGE STATEMENT

- enterprise overheads
- environmental protection requirements

Mark-up percentage

is the desired or intended profit margin over and above all costs

Quotations

are formally presented costs for producing a product or providing a service to the customer

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Prepare to interpret plans or designs | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to interpreting a range of plans and designs to prepare timber <i>roof truss</i> drawings and production documents using computers are identified and followed |
| | 1.2. Information about plans or designs, <i>identified standards, design factors</i> and specifications is gathered |
| | 1.3. <i>Stakeholders</i> are identified and consulted where clarification is needed |
| | 1.4. <i>Drawings and documentation</i> are maintained to identified standards |
| 2. Create roof truss layouts | 2.1. <i>Computer software</i> is checked for currency |
| | 2.2. Design factors and data are input to the software |
| | 2.3. Pitching lines and load bearing points are identified |
| | 2.4. <i>Roof shapes</i> are input and roof truss layout is created |
| | 2.5. Design requirements outside software limitations are referred to appropriate personnel for resolution |

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------|--|
| 3. Review roof truss layouts | 3.1. Roof trusses are designed and proved against identified standards
3.2. Roof truss designs are reviewed and amended to ensure efficiency is met with respect to <i>available materials</i> and <i>production requirements</i> , while maintaining identified standards
3.3. Design variations are referred to appropriate stakeholders following organisational referral procedures, where design varies from identified standards |
| 4. Create outputs | 4.1. Drawings and documentation are prepared
4.2. Drawings and documentation are communicated and stored, in line with identified standards |
| 5. | |
| 6. | |
| 7. | |
| 8. | |
| 9. | |
| 10. | |
| 11. | |
| 12. | |
| 13. | |
| 14. | |
| 15. | |
| 16. | |
| 17. | |
| 18. | |
| 19. | |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to accurately prepare roof truss drawings and production documents to identified standards using custom software
- Communication skills sufficient to interact with stakeholders

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to locate, interpret and apply relevant information and to accurately record outputs
- Numeracy skills sufficient to select and use appropriate mathematical techniques
- Problem solving skills sufficient to identify problems and appropriately initiate solutions or referral processes

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for the interpretation of plans and designs to prepare timber roof truss drawings and production documents using computers
- Organisational and site standards, requirements, policies and procedures relevant to interpreting plans and designs to prepare a limited range of timber roof truss drawings and production documents using computers
- Environmental protection requirements, including the safe disposal of waste material
- Limits of ability and authority with respect to non-conforming design
- Common industry standard sizes, profiles and spacing dimensions
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment relevant to preparing timber roof truss drawings and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can use computer software to prepare timber roof truss drawings and documents from plans and designs provided

Critical aspects for assessment

The evidence required to demonstrate competency in this unit

EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit

must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to interpreting plans and designs to prepare timber roof truss drawings and production documents using computers
- following organisational policies and procedures relevant to interpreting plans and designs to prepare a limited range of timber roof truss drawings and production documents using computers
- preparation of roof truss drawings and production documents suitable for manufacture of roof trusses

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- management of hazardous materials and substances
- ergonomic office layouts and practice
- manual handling including shifting, lifting and

RANGE STATEMENT

carrying

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- Building Code of Australia
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- procedures relating to economical design with respect to production and materials

Roof trusses must include:

- "A" type truss
- truncated standard truss
- girder truss
- truncated girder
- jack truss
- rafter truss
- gable truss
- saddle truss

RANGE STATEMENT

- Roof trusses** may include:
- raking truss
 - parallel chord truss
 - vaulted truss
 - truncated saddle truss
 - scissor truss
- Identified standards** may include:
- Building Code of Australia
 - Australian Standards
 - organisational quality standards
- Design factors** may include:
- roof material loads
 - wind zone and applied loads
 - commercial or residential output
 - additional roof loading
 - post disaster structures
 - roof shape
 - roof lines
- Stakeholders** may include:
- clients
 - builders
 - manager
 - supervisor
 - production staff
 - engineers
 - architects and designers
 - building certifiers
 - software providers
- Drawings and documentation** may include:
- drawing views
 - drawing notes
 - records of conversation
 - records of amendments
 - functional and pictorial images
 - design records
 - component cutting details
- Computer software** must include:
- software capable of developing a design outcome to an identified standard
- Roof shapes** may include
- hipped
 - gabled
 - bowstring
 - mansard
 - skillion
 - dual pitch

RANGE STATEMENT

Available materials may include:

- bell
- timber dimensions, grades and treatments
- nail plate and other hardware dimensions

Production requirements may include:

- plant availability
- labour availability
- production schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. Prepare to interpret plans or designs | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to interpreting a range of plans and designs to prepare timber <i>wall frame</i> drawings and production documents using computers are identified and followed |
| | 1.2. Information about plans or designs, <i>identified standards, design factors</i> and specifications is gathered |
| | 1.3. <i>Stakeholders</i> are identified and consulted where clarification is needed |
| | 1.4. <i>Drawings and documentation</i> are maintained to identified standards |
| 2. Create wall frame layouts | 2.1. <i>Computer software</i> is checked for currency |
| | 2.2. <i>Applied loads</i> and data are input to the software |
| | 2.3. Wall frame layouts are created |
| | 2.4. Structural members outside software limitations are referred to appropriate personnel |
| 3. Review wall frame layouts | 3.1. Wall frames are designed and proved against identified standards |

ELEMENT

PERFORMANCE CRITERIA

- 3.2. Wall frame designs are reviewed and amended to ensure maximum efficiency of *available materials* and *production requirements*, while maintaining identified standards
- 3.3. Design variations are referred to appropriate stakeholders and organisational referral procedures are followed, where design varies from identified standards
4. Create outputs
 - 4.1. Drawings and documentation are prepared
 - 4.2. Drawings and documentation are communicated and stored, in line with identified standards
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.
- 11.
- 12.
- 13.
- 14.
- 15.
- 16.
- 17.
- 18.
- 19.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to accurately prepare wall frame drawings and production documents to identified standards using custom software
- Communication skills sufficient to interact with stakeholders
- Literacy skills sufficient to locate, interpret and apply relevant information and to accurately record outputs

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to select and use appropriate mathematical techniques
- Problem solving skills sufficient to identify problems and appropriately initiate solutions or referral processes

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for the interpretation of plans and designs to prepare wall frame drawings and production documents using computers
- Organisational and site standards, requirements, policies and procedures relevant to the interpretation of plans and designs to prepare timber wall frame drawings and production documents using computers
- Environmental protection requirements, including the safe disposal of waste material
- Limits of ability and authority with respect to non-conforming design
- Common industry standard sizes, profiles and spacing dimensions
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment relevant to preparing wall frame drawings and production documents and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Context of and specific resources for assessment

legislative and regulatory requirements and codes of practice relevant to interpreting plans and designs to prepare timber wall frame drawings and production documents using computers

- following organisational policies and procedures relevant to interpreting plans and designs to prepare timber wall frame drawings and production documents using computers
- preparation of wall frame drawings and production documents suitable for the manufacture of wall frames
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- ergonomic office layouts and practice
- management of hazardous materials and substances
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification

RANGE STATEMENT

requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- Building Code of Australia
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Wall frames may include:

- standard
- raking
- fire rated

Identified standards may include:

- Building Code of Australia
- Australian Standards
- multi-residential framing code
- organisational quality standards

Design factors may include:

- wall heights
- lintel requirements
- claddings
- framing codes
- door and window locations
- fire rating

RANGE STATEMENT

Stakeholders may include:

- clients
- builders
- manager
- supervisor
- production staff
- engineers
- architects and designers
- building certifiers
- software providers

Drawings and documentation may include:

- drawing views
- drawing notes
- records of conversation
- records of amendments
- functional and pictorial images
- design records
- component cutting details

Computer software must include:

- software capable of developing a design outcome to an identified standard

Applied loads may include:

- roof loads
- wind zone
- commercial or residential output
- additional floor loading
- post disaster structures

Available materials may include:

- timber dimensions, grades and treatments
- nail plate and other hardware dimensions

Production requirements may include:

- plant availability
- labour availability
- production schedules

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to plan and set up the assembly of timber floor trusses using a purpose built jig or computer-operated truss table, and oversee the operation of the truss press

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

Application of the Unit

Application of the unit

The unit involves setting up and producing floor trusses in a timber and wood products production environment

It may be applied at either a truss/frame fabrication facility or timber merchants facility

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	<p>1.1.Applicable <i>Occupational Health and Safety (OHS)</i>, environmental, <i>legislative</i> and <i>organisational</i> requirements relevant to assembling <i>timber floor trusses</i> are identified and followed</p> <p>1.2.<i>Work order</i> and construction plans are reviewed and clarified with <i>appropriate personnel</i></p> <p>1.3.Type and quantity of <i>material</i> to be assembled and <i>assembly hardware</i> is collected</p> <p>1.4.<i>Tools and equipment</i> are selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5.<i>Set-up table or jigs</i> required for construction are identified and prepared</p> <p>1.6.<i>Communication</i> with others is established and maintained in line with OHS and organisational requirements</p>
2. Set up floor truss	<p>2.1.Product size and number of joints are assessed with table or jig area, and sections and layout are planned</p> <p>2.2.<i>Timber components</i> are selected from pre-cut material in line with the cutting list and are checked for fit</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.3. *Steel web components* are selected in line with the construction plans and standards
- 2.4. Jig components are positioned to accurately locate and support the assembly components and jig or table is adjusted to suit
- 2.5. Components are positioned and clamped in jigs ready for joining with allowable faults, joints and grain in line with construction standards and grading rules
- 2.6. Components are set to include overhang and other design requirements, including camber if specified
- 2.7. *Webs* are set up to nominated pattern configuration
- 2.8. *Defective components* are identified and disposed of or recycled in line with site procedures
- 2.9. Components are clamped and/or nailed to maintain temporary alignment during assembly
3. Control pressing operations
- 3.1. Hardware is positioned on joints and installed in line with design specifications
- 3.2. Truss-pressing operations are coordinated to ensure finished product complies with customer orders
- 3.3. *Assembly faults* are corrected in line with site procedures
4. Prepare products for despatch and report
- 4.1. Finished product is assessed for quality against construction standards and labelled in line with the work order
- 4.2. Components are removed from table or jigs and safely *stacked* in a designated location in line with work order requirements
- 4.3. Finished products are *strapped*, packed and labelled ready for transportation
- 4.4. Equipment faults are recognised and reported in line with site procedures
- 4.5. Records and reports are accurately completed, processed and maintained in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to set up and fix timber floor truss components, pack, stack and strap components for despatch
- Communication skills sufficient to read and interpret plans and drawings, complete and process production records and label products for despatch
- Literacy skills sufficient to read and interpret plans and process production records
- Numeracy skills sufficient to estimate timeframes for job completion and number and types of components needed to produce floor trusses
- Problem solving skills sufficient to identify and rectify non-compliant product
- Planning and organisational skills sufficient to plan assembly sequences and jig operation

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for setting up timber floor trusses
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for setting up floor trusses
- Characteristics of timber and timber defects
- Assembly sequences and jig operation
- Assembly, componentry and construction standards
- Quality requirements of national building codes and standards
- Industry standard cross-sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment for setting up timber floor trusses and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can plan and set up the assembly of timber floor trusses using a purpose built jig or computer-operated truss table, and oversee the operation of the truss press

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to setting up timber floor trusses
- following organisational policies and procedures relevant to setting up timber floor trusses
- safely setting up a timber floor truss jig
- safely conducting pressing operations as per work orders

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE

workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and

RANGE STATEMENT

may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- fatigue management
- hazard identification and risk control
- elimination of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

RANGE STATEMENT

Timber floor trusses

- are jointed structures designed to act as a beam of long span, while each member is usually subjected to gravity, dead and live loads

and may include:

- joists
- purlins
- chords
- beams

Work order is to include:

- instructions for the assembly and despatch of timber and timber products from the work site and

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- laminated veneer
- coated and/or treated timber products
- beams or laminated beams

Assembly hardware may include:

- nailing plates
- floor truss spacers and bracing
- nail gun nails and staples

Tools and equipment may include:

- measuring equipment
- electric circular saws
- docking saws
- drills

RANGE STATEMENT

- assembly jigs
 - assembly table
 - nail plate presses
 - staple guns
 - nail guns
 - compressor or compressed air supply
 - marking equipment
 - strapping equipment
- Set-up table/ jigs:**
- are enterprise manufactured templates and structures which assist in the positioning of components during the assembly process
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Timber components**
- are the sections of timber or timber product which have been pre-cut in readiness for assembly and have been cut to comply with the construction plans and cutting list
- Steel web components**
- are V shaped steel tension web members
- Webs**
- are truss internal supports - arranged symmetrically
- Defective components** may include components with an unacceptable level of:
- warp
 - wane/want
 - cupping
 - shakes
 - spring
 - bow
 - splits
 - insect defects
 - knots
 - resin pockets

RANGE STATEMENT

Assembly faults may include:

- incorrectly positioned joints
- timber splits from nailing
- incorrectly positioned hardware

Stacking may include:

- preparation for transport
- categorising in common size and shape
- marking lots in line with work order and site procedures and located so as not to block access or passage

Strapping

- is securing bundles with metal or plastic strap and tightening and tensioning using hand held equipment to prevent slippage without risk of strap breakage or damage to products

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for construction	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to constructing prototypes and samples are identified and followed</p> <p>1.2. <i>Prototype</i> purpose, <i>work order</i> and construction plans are produced and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> and <i>assembly hardware</i> to be constructed are collected</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Stages</i> of the construction process are planned and documented</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set up components	<p>2.1. <i>Set-up jigs</i> required for construction are specified and prepared</p> <p>2.2. <i>Timber components</i> are selected, checked for</p>

ELEMENT**PERFORMANCE CRITERIA**

- compatibility with the specifications and cut in line with the prototype plans
- 2.3. Components are positioned and clamped in jigs ready for joining with allowable faults, joints and grain in line with construction standards and grading rules
- 2.4. **Defective components** are rejected and **disposed of** in line with site procedures and environmental requirements
- 2.5. Timber that is cut incorrectly and off-cuts are disposed of in line with site procedures and environmental requirements
- 2.6. Components are stapled to maintain temporary alignment during construction
3. Construct prototype
- 3.1. Construction plan is followed to construct the item
- 3.2. Assembly hardware is located and selected in line with the prototype construction plans and specifications
- 3.3. Checks are conducted at designated points in construction
- 3.4. Hardware is positioned on joints and installed, following prototype specifications
- 3.5. **Temporary bracing** is nailed or stapled to the product in line with construction standards
- 3.6. **Modifications** to designs and plans are detected and recommended within workplace procedures
- 3.7. **Construction faults** are corrected and prototype plans modified
- 3.8. Modifications to the plan are documented and followed
- 3.9. Prototype or sample is checked for effectiveness and timeliness of construction to suit the purpose
- 3.10. Prototype development processes and problems are **recorded and reported** to the appropriate personnel
- 3.11. When no longer required, temporary bracing, prototypes and samples are stored or disposed of in line with site procedures and environmental requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and safely construct prototypes and samples
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate length and angles including basic addition and subtraction and to calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for constructing prototypes and samples
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to constructing prototypes and samples
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Characteristics of timber and timber defects
- Products and their use
- Construction sequences and jigs
- Construction componentry and construction standards
- Industry standard cross-sections and lengths
- Established communication channels and protocols
- Problem identification and resolution strategies and fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently construct prototypes and samples within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to constructing prototypes and samples
- following organisational policies and procedures relevant to constructing prototypes and samples
- effective communication and safe working practices
- constructing prototypes and samples in line with construction plans, drawings and specifications to follow construction standards
- assessing prototype success with accepted development times, organisational production procedures and product purpose

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to

EVIDENCE GUIDE

Method of assessment

- undertaking work applicable to this unit
- specifications and work instructions
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency

- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility

RANGE STATEMENT

- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Prototypes may include:

new designs for:

- pallets
- crates
- trellises
- trusses
- stairs
- doors
- windows
- frames
- beams
- new product development

Work order is to include:

- instructions for the construction and testing of new timber products from the work site

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

RANGE STATEMENT

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard,
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams or laminated beams

Assembly hardware is to include:

- nailing plates
- and may include:

- gang nails
- nail gun nails
- staples

Equipment may include:

- measuring equipment
- assembly jigs
- nail plate presses
- staple guns
- nail guns
- compressor or compressed air supply
- marking equipment
- strapping equipment

Stages

are the development phases of the new prototype, allowing review for each process and modification

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Set-up jigs

- are the organisation's manufactured templates

RANGE STATEMENT

which assist in the positioning of components during the assembly process

- are usually newly developed as part of the prototype development process

Timber components

are the sections of timber or timber product which are cut in readiness for assembly and have been cut to follow the construction plans and specifications

Defective components may include:

- components with an unacceptable level of :
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets

Disposing of may include:

- recycling material with defective components; timber that is cut incorrectly, off-cuts; temporary bracing, prototypes or samples no longer required
- re-using material with defective components; timber that is cut incorrectly, off-cuts; temporary bracing, prototypes or samples no longer required

Temporary bracing

may be fixed to secure the assembled product in alignment and square during transportation, moving and positioning on site

Modifications may include:

- changing aspects of the prototype plans, drawings and specifications to facilitate acceptable construction methods, standard component sizes or to rectify and overcome a construction fault

Construction faults may include:

- incorrectly positioned joints
- timber splits from nailing
- incorrectly positioned hardware

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions
- and may be:
- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather and diagnose information	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to diagnosing and calculating production costs are identified and followed</p> <p>1.2. Details of the particular <i>product</i> and <i>competitor's products</i> are obtained</p> <p>1.3. Details of the proposed production operation are obtained and analysed</p> <p>1.4. <i>Labour unit cost</i> projections are obtained and agreed</p> <p>1.5. <i>Logistic support contracts</i>, supply agreements or equivalent are obtained and analysed</p> <p>1.6. Details of proposed warehousing, <i>physical distribution systems</i> and related cost factors are obtained</p> <p>1.7. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Estimate materials and labour	<p>2.1. Types and quantities of <i>material</i> required for production are estimated and recorded</p> <p>2.2. <i>Time requirements</i> for production activities and</p>

ELEMENT	PERFORMANCE CRITERIA
3. Calculate costs and overheads	<p>other lead times are estimated</p> <p>2.3.Labour requirements for direct production and handling operations are estimated and recorded</p> <p>3.1.Components contributing to <i>overhead costs</i> are determined</p> <p>3.2.Overhead costs to be attributed to work in line with commercial and organisational procedures are determined</p> <p>3.3.Total materials and labour costs are calculated in line with organisational procedures</p> <p>3.4.Total production cost is calculated, including overheads and <i>mark-up percentages</i></p> <p>3.5.Final cost to customer is calculated in conjunction with marketing and sales personnel</p> <p>3.6.Cost calculation processes and problems are <i>recorded and reported to appropriate personnel</i></p>
4. Check and document details	<p>4.1.Details of costs and charges are documented in line with organisational practice</p> <p>4.2.Costs, calculations or other details are checked by other organisational personnel</p> <p>4.3.Details are documented for future reference in line with organisational practice</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, safely diagnose and calculate production costs
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate and calculate costs for materials, labour and overheads
- Problem solving skills sufficient to identify problems and equipment faults and

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for diagnosing and calculating production costs
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to diagnosing and calculating production costs
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Material and labour costs
- Overhead costs
- Production and associated costs
- Construction methods and construction standards
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and effectively diagnose and calculate production costs within organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to diagnosing and calculating production costs
- following organisational policies and procedures relevant to diagnosing and calculating production costs
- effective communication and safe working practices
- diagnosing and calculating production costs in line with organisational requirements

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions

RANGE STATEMENT

- relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Environmental requirements** may include:
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Products** may include:
- pallets
 - crates
 - trellises
 - trusses
 - stairs

RANGE STATEMENT

- doors
- windows
- frames
- beams

Competitor's products: are products that compete directly with those produced by the organisation

Labour costs may include:

- number of personnel to complete the job
- amount of time to complete the job
- overtime considerations
- overheads
- environmental protection requirements

Logistic support contracts are to include:

- external companies who provide products and services to assist in the production process
- internal sections of the organisation that provide products and services to assist in the production process

Physical distribution systems are the methods and systems for distributing materials and products to and from the production area and from there to the warehouse or storage area

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard,
- fibreboard and other manufactured board

RANGE STATEMENT

products

- coated and/or treated timber products
- beams or laminated beams

Time requirements are to include: the amount of time required to complete a:

- product
- task
- project

Overhead costs may include:

- rental or lease costs
- utilities
- non-production resources
- depreciation of plant and equipment
- warehousing margins
- physical distribution unit costs
- insurance and other costs incurred by doing business
- superannuation
- sick leave entitlements
- leave loading
- other staff entitlements
- organisational overheads
- environmental protection requirements

Mark-up percentage: is the desired or intended profit margin over and above all costs

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents or equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Appropriate personnel may include:

- supervisors
- suppliers
- clients

RANGE STATEMENT

- colleagues
- managers

FPITMM4203B Install and commission CNC software

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit specifies the outcomes required to install and commission computer numerically controlled (CNC) processes and machine control programs for CNC sizing machines and CNC machining and processing centres

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPITMM4203A Install and commission CNC software

Application of the Unit

Application of the unit

This unit involves installing and commissioning CNC software in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for software installation	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>installing and commissioning CNC software</i> are identified and followed</p> <p>1.2. <i>Program format</i> and operational purpose are accurately diagnosed and specified applications identified</p> <p>1.3. Specifications are checked for intended operating conditions</p> <p>1.4. Program instructions are checked for compliance with specifications</p> <p>1.5. <i>Software timers</i> are counter set to specification</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Install automatic process machine control programs	<p>2.1. Appropriate program loading technique is selected</p> <p>2.2. <i>External loading devices</i> are correctly connected to automatic process <i>machine control system</i></p> <p>2.3. Machine control system is placed in correct</p>

ELEMENT	PERFORMANCE CRITERIA
	operational mode to accept program loading
	2.4. Program is downloaded in line with manufacturer's recommended procedure and enterprise requirements
	2.5. Checks are made during and after downloading to ensure accurate and complete data transfer
	2.6. External program loading devices and connections are disconnected from process and machine control system
3. Commission automatic process and machine control program	3.1. Operation of the equipment using the program is monitored for accuracy and safe performance
	3.2. Outputs are checked and measured for compliance with specifications
	3.3. External inputs are checked for compliance with specifications, in line with specified procedures
	3.4. Total operation is checked for compliance with specifications
	3.5. Location of program master copy storage is identified
	3.6. Installation and commissioning process and equipment faults are recorded and reported to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, safely install and commission CNC software
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for installing and commissioning CNC software
- Environmental protection requirements, including the safe disposal of waste material and minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures relevant to installing and commissioning CNC software
- Environmental risks and hazards
- Using energy efficiently
- Software programs and installation methods
- Commissioning procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently install and commission CNC software in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and

EVIDENCE GUIDE

- codes of practice relevant to installing and commissioning CNC software
- following organisational policies and procedures relevant to installing and commissioning CNC software
 - effective communication and safe working practices
 - installing and commissioning CNC software for CNC equipment within the enterprise
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment

EVIDENCE GUIDE

of other units of competency

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures

Environmental requirements

RANGE STATEMENT

may include:

- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- the process of setting a program to direct a piece of CNC equipment to undertake the sequence of work and output required.

Installing and commissioning CNC software is to include:

commissioning includes:

- checking that the machine is operating safely and in line with its intended purpose and program

Program format

relates to the intended actions of the CNC machine and the time needed to perform those

RANGE STATEMENT

	actions, taking into account the limitations of the machinery and cutters
Software timer	is the software component that schedules which activities occur at what point in the program format
Communication may include:	<ul style="list-style-type: none">• schedules• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice and body language
External loading devices	are computers (desktop, notebook or laptop) with disk drives able to be linked to the machine control system
Machine control system	is the computerised operating controls for the CNC machine which stores and runs the program at the direction of an operator
Output	is the product intended for production, produced to the intended outcome following the program format in the intended time
External inputs	involve feeding the program from the attached computer to the machine control system which is checked for accuracy with the program master
Program master copy:	<ul style="list-style-type: none">• is the final approved operating program which will be used to reset the CNC machine after maintenance or recalibration of components• is stored in a safe location away from the CNC machine
Records and reports may include:	<ul style="list-style-type: none">• planning and monitoring outcomes• operating logs• performance records• material movement• quality outcomes• hazards

RANGE STATEMENT

- incidents or equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

ELEMENT	PERFORMANCE CRITERIA
	site procedures
	1.6. Communication with others is established and maintained in line with OHS requirements
2. Test samples	2.1. Conforming or non-conforming products , materials or waste are selected for testing in line with organisational requirements
	2.2. Observations of operators and copies of procedures are collected
	2.3. Problems or improvement requirements are interpreted and analysed
	2.4. Samples are prepared and manufacturing dates, times and batches identified from production records
	2.5. Test data is established, reviewed and interpreted in line with site procedures
	2.6. Test is conducted in line with industry standards and environmental protection requirements
	2.7. Comparisons of all data collected are made and the results checked by further sampling and testing
3. Evaluate and report test outcomes	3.1. Results of tests are evaluated for implication and impact on production process
	3.2. Action is taken to rectify or improve upon the test results achieved
	3.3. Recommendations are noted and considered for feasibility
	3.4. Test results are communicated to production personnel to facilitate process control or changes
	3.5. Testing process and equipment faults are recorded and reported to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, safely sample and test products to specifications
- Communication skills and interpersonal techniques sufficient to interact

REQUIRED SKILLS AND KNOWLEDGE

appropriately with colleagues and others in the workplace

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time and resources required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for sampling and testing products to specifications
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to sampling and testing products to specifications
- Environmental risks and hazards
- Using energy effectively and efficiently
- Sampling and testing techniques
- Characteristics of raw materials and other entities
- Testing conditions and facilities
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently sample and test products to specifications within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sampling and testing products to specifications
- following organisational policies and procedures relevant to sampling and testing products to specifications
- effective communication and safe working practices
- sampling and testing products to specifications in line with prescribed organisational requirements
- undertaking testing procedures for given entities
- reporting on testing outcomes

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks,

EVIDENCE GUIDE

with questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements

RANGE STATEMENT

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Product quality specifications** are to include:
- the guidelines set down by the organisation for the development or production of products or materials, which specify the intended outcomes and quality expectations to set tolerances
- Testing** is to include:
- the most appropriate approach taken to ascertain the cause of a problem or to improve a current methodology
- Equipment** may include:
- a range of:
- testing equipment
 - tools
 - gauges
- Calibration** is the setting of testing equipment to follow the convention, which in turn checks their accuracy and ensures accurate test results
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Products** may include:
- any manufactured product, material or associated product used by the organisation
- Sampling** is the process of selecting random products or materials from the production line in preparation for testing
- Recording and reporting** may include:
- testing results
 - quantities produced
 - condition changes
 - production difficulties
 - storage locations
 - quality outcomes
 - hazards

RANGE STATEMENT

- incidents or equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Interpret plans or designs and create layouts | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to preparing and advising on timber <i>roof truss</i> details are identified and followed
1.2. <i>Design inputs</i> are identified and verified
1.3. <i>Computer software</i> is checked for currency and used to prepare roof truss layouts and production documentation
1.4. Design requirements outside software limitations are resolved |
| 2. Review and test design options | 2.1. Roof truss layouts are reviewed and tested for optimal suitability for stakeholders
2.2. <i>Effective processes</i> are used to optimise roof truss layout and ensure <i>stakeholder</i> objectives are met |
| 3. Provide advice on design, production and installation issues | 3.1. <i>Production and installation advice</i> is prepared and documented
3.2. Documented advice is maintained and communicated to all stakeholders, prior to and following installation, as required by organisational procedures |

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------|--|
| 4. Manage roof truss outputs | 4.1. Roof truss design layouts are certified in line with legislative or organisational requirements |
| | 4.2. <i>Drawings and documentation</i> are maintained, communicated and stored, in line with <i>identified standards</i> |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to accurately prepare roof truss drawings, production documents and installation instructions and test designs and specifications using custom software
- Communication skills sufficient to discuss and provide production and installation advice to a range of stakeholders
- Literacy skills sufficient to interpret design requirements, research evaluate and communicate design concepts, interpret workplace documents and technical information, prepare accurate and detailed advice and instructions to a range of stakeholders
- Numeracy skills sufficient to evaluate areas, volumes, loads, pressures, mass and grades, analyse qualitative and quantitative information and data
- Problem solving skills sufficient to identify problems and appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing and advising on a broad range of timber roof truss drawings, production documents and installation instructions using custom software
- Organisational and site standards, requirements, policies and procedures relevant to interpreting plans and designs to prepare a broad range of timber roof truss details
- Environmental protection requirements, including the safe disposal of waste material
- Limits of ability and authority with respect to non-conforming design
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding

REQUIRED SKILLS AND KNOWLEDGE

techniques

- Types of tools and equipment relevant to preparing and advising on timber roof truss details, and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can prepare and advise on a broad range of timber roof truss details using computers

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to preparing and advising on a broad range of timber roof truss details using computers
- following organisational policies and procedures relevant to preparing and advising on a broad range of timber roof truss details using computers
- preparation and advice on a broad range of timber roof truss details using computers
- preparation of roof truss layouts and production documentation for each roof truss type identified in the range statement
- preparation of roof truss layouts and production documentation where interaction between roof truss types is required
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- ergonomic office layouts and practice
- elimination of hazardous materials and substances
- management of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- Building Code of Australia
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal

Organisational requirements may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility

RANGE STATEMENT

- quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste disposal, recycling and re-use guidelines)
- Roof trusses** must include:
- "A" type truss
 - truncated standard
 - raking truss
 - girder truss
 - truncated girder
 - jack girder
 - rafter truss
 - gable truss
 - saddle truss
 - bowstring truss
 - vaulted truss
 - truncated saddle
- Design inputs** may include:
- identified standards
 - pitching lines and load bearing points
- and may include design factors such as:
- roof material loads
 - wind zone and applied loads
 - commercial or residential output
 - additional roof loading
 - post disaster structures
 - roof shape
 - roof lines
- and may include available materials, such as:
- dimensioned timber
 - graded timber
 - treated or untreated timber
 - nail plate and other hardware dimensions
- Computer software** must
- proprietary software capable of developing a

RANGE STATEMENT

include: planning outcome to an identified standard

Effective processes may include:

- documented use of iterative process
- documented use of organisational process
- documented reference to identified standards

Stakeholders may include:

- clients
- builders
- manager
- supervisor
- production staff
- engineers
- architects and designers
- building certifiers
- software providers

Production and installation advice may include:

- installation instructions to stakeholders, including roof truss layouts
- certification to stakeholders

Drawings and documentation may include:

- drawing views
- drawing notes
- records of conversation
- records of amendments
- functional and pictorial images
- design records
- component cutting details

Identified standards may include:

- Building Codes of Australia
- Australian Standards
- organisational quality standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1. Interpret plans or designs and create layouts | 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), environmental, <i>legislative</i> and <i>organisational requirements</i> relevant to preparing and advising on a broad range of timber <i>floor system</i> details using computers are identified and followed
1.2. <i>Design inputs</i> are identified and verified
1.3. <i>Computer software</i> is checked for currency and used to prepare floor system layouts and production documentation
1.4. Design requirements outside software limitations are resolved |
| 2. Review and test design options | 2.1. Floor system layouts are tested for optimal suitability for stakeholders
2.2. <i>Effective processes</i> are used to optimise floor system layout and ensure <i>stakeholder</i> objectives are met |
| 3. Provide advice on design, production and installation issues | 3.1. <i>Production and installation advice</i> is prepared and documented
3.2. Documented advice is maintained and communicated to all stakeholders, prior to and following installation, as required by organisational |

ELEMENT

PERFORMANCE CRITERIA

	procedures
4. Manage floor system outputs	4.1. Floor system design layouts are certified in line with legislative or organisational requirements 4.2. <i>Drawings and documentation</i> are maintained, communicated and stored in line with <i>identified standards</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to accurately prepare timber floor system drawings, production documents and installation instructions and test designs and specifications using custom software
- Communication skills sufficient to discuss and provide production and installation advice to a range of stakeholders
- Literacy skills sufficient to interpret design requirements, research evaluate and communicate design concepts, interpret workplace documents and technical information, prepare accurate and detailed advice and instruction to a range of stakeholders
- Numeracy skills sufficient to evaluate areas, volumes, loads, pressures, mass and grades, efficiently analyse qualitative and quantitative information and data
- Problem solving skills sufficient to identify problems and appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing and advising on a broad range of timber floor system drawings, production documents and installation instructions using custom software
- Organisational and site standards, requirements, policies and procedures for interpreting plans and designs to prepare a broad range of timber floor system drawings and production documents using computers
- Environmental protection requirements, including the safe disposal of waste material
- Limits of ability and authority with respect to non-conforming design

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment for preparing and advising on timber floor system details using computers and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can prepare and advise on a broad range of timber floor system details using computers

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to preparing and advising on a broad range of timber floor system details using computers
- following organisational policies and procedures relevant to preparing and advising on a broad range of timber floor system details using computers
- preparing and advising on a broad range of timber floor system details using computers
- preparation of floor system layouts and production documentation for each floor system type identified in the range statement
- preparation of floor system layouts and production documentation where composites floor system layouts are required

Context of and specific resources

- Competency is to be assessed in the workplace or

- 4.1. Wall frame design layouts are certified in line with legislative or organisational requirements
- 4.2. *Drawings and documentation* are maintained, communicated and stored, in line with *identified standards*

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to accurately prepare wall frame drawings, production documents and installation instructions and test designs and specifications using custom software
- Communication skills sufficient to interact with and provide production and installation advice to a range of stakeholders
- Literacy skills sufficient to interpret design requirements, research evaluate and communicate design concepts, interpret workplace documents and technical information, prepare accurate and detailed advice and instruction to a range of stakeholders
- Numeracy skills sufficient to evaluate areas, volumes, loads, pressures, mass and grades, analyse qualitative and quantitative information and data
- Problem solving skills sufficient to identify problems and appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing and advising on a broad range of wall frame drawings, production documents and installation instructions using custom software
- Organisational and site standards, requirements, policies and procedures relevant to interpreting plans and designs to prepare a broad range of timber wall frame drawings and production documents using computers
- Environmental protection requirements, including the safe disposal of waste material
- Limits of ability and authority with respect to non-conforming design

REQUIRED SKILLS AND KNOWLEDGE

- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment for preparing and advising on timber wall frames using computers and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can prepare and advise on a broad range of timber wall frame details using computers

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to preparing and advising on a broad range of timber wall frame details using computers
- following organisational policies and procedures relevant to preparing and advising on a broad range of timber wall frame details using computers
- the ability to prepare and advise on a broad range of timber wall frame details using computers
- preparation of wall frame layouts and production documentation for each wall frame type identified in the range statement
- preparation of wall frame layouts and production documentation where interaction between wall frame types is required
- Competency is to be assessed in the workplace or realistically simulated workplace

Context of and specific

EVIDENCE GUIDE

resources for assessment

- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- ergonomic office layouts and practice
- elimination of hazardous materials and substances
- management of hazardous materials and substances
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- Building Code of Australia
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice

RANGE STATEMENT

Organisational requirements may include:

- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)

Wall frame systems must include:

- standard wall frame
- raking wall frame
- fire rated wall frame

Design inputs may include:

- wall heights
- lintel requirements
- claddings
- framing codes
- door and window locations
- fire rating

and may include applied loads, such as:

- roof loads
- wind zone
- commercial or residential output
- additional floor loading
- post disaster structures

and may include available materials, such as:

- dimensioned timber
- graded timber
- treated or untreated timber
- nail plate and other hardware dimensions
- proprietary software capable of developing a planning outcome to an identified standard

Computer software must include:

RANGE STATEMENT

Effective process may include:

- documented use of organisational process
- documented reference to identified standards

Stakeholders may include:

- clients
- builders
- manager
- supervisor
- production staff
- engineers
- architects and designers
- building certifiers
- software providers

Production and installation advice may include:

- installation instructions to stakeholders, including wall frame layouts

certification

- documented advice to production
- feedback to installers

Drawings and documentation may include:

- drawing views
- drawing notes
- records of conversation
- records of amendments
- functional and pictorial images
- design records
- component cutting details

Identified standards may include:

- Building Code of Australia
- Australian Standards
- multi-residential framing code
- organisational quality standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse design objectives	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to assessing product feasibility of designs are identified and followed</p> <p>1.2. <i>Design purpose</i> is assessed and the potential market for the product investigated</p> <p>1.3. Intended production <i>materials</i> and production processes are <i>analysed</i> as the basis for development</p> <p>1.4. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Set the design assessment criteria	<p>2.1. <i>Criteria</i> for the assessment of production material options are established</p> <p>2.2. Criteria for the assessment of product <i>functionality</i> are established</p> <p>2.3. Criteria for the assessment of production process options are established and impact of these on overall business operations assessed</p> <p>2.4. Criteria for the assessment of safety and potential <i>liability</i> issues are established</p> <p>2.5. Criteria for assessment of costs and <i>marketability</i></p>

ELEMENT	PERFORMANCE CRITERIA
3. Apply the assessment criteria	<p>are established</p> <p>3.1. Resources including human, material, equipment and systems are allocated to particular design grading criteria processes</p> <p>3.2. Products which are competitors or potential competitors in the market place are selected for comparative purposes</p> <p>3.3. Design is scored and graded against agreed criteria and results recorded</p> <p>3.4. Competition products are scored and graded against agreed criteria and results recorded</p> <p>3.5. Assessment results are completed in line with the agreed process</p>
4. Establish feasibility and options	<p>4.1. Assessment results of the design and competition products are analysed</p> <p>4.2. Designs which fail to satisfy assessment and provide no optional potential are rejected</p> <p>4.3. Designs which fail to satisfy assessment and have optional or alternative potential are referred to appropriate personnel</p> <p>4.4. Designs which satisfy potential are conditionally endorsed and conditions recorded and passed to the appropriate personnel</p> <p>4.5. Formal records and reports are completed and processed in line with organisational procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment safely assess product feasibility of designs
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to

REQUIRED SKILLS AND KNOWLEDGE

complete a task

- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for assessing product feasibility of designs
- Environmental protection requirements, including the safe disposal of waste material and minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures relevant to the assessment of product feasibility of designs
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Problem identification and resolution
- Product design methods and trends
- Characteristics of materials and equipment
- Products and their use
- Criteria for assessing designs
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently assess product feasibility of designs within

- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements
may include:

- legal, organisational and site guidelines
- policies and procedures relating to own role and responsibility

RANGE STATEMENT

- quality assurance
- procedural manuals, quality and continuous improvement processes and standards
- OHS, emergency and evacuation
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use
- maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Design purpose is to include:

the process of applying:

- problem solving skills
- thought processes
- cultural and demographic awareness
- materials technology
- conceptual development techniques
- working with production limitations to determine and produce products or 3-D functional solutions

Materials may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams or laminated beams

Analysis of production processes is to include:

- consideration of the impact on the environment
- use of renewable energy
- effective and efficient use of energy
- effective and efficient use of material

Communication may include:

- verbal and non-verbal language
- constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Criteria are a proforma for establishing the viability of any aspect of the design process and scoring that on a points system against set questions

Functionality is the process of assessing a design for its ease of use and application together with its relevance for the desired purpose

Liability is to include: assessing a design to ensure:

- it will not cause danger to someone or something resulting in litigation against the enterprise
- its impact on the environment is minimised or off-set (where feasible)

Marketability is the process of assessing the potential for sale of the product

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents or equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop prototype specifications	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to developing, trialling and evaluating prototypes are identified and followed</p> <p>1.2. <i>Prototype</i> purpose and outline requirements are specified from design concepts or customer requirements</p> <p>1.3. <i>Materials</i> are specified following a detailed analysis of the options</p> <p>1.4. Detailed prototype <i>design</i> specifications are prepared and documented</p> <p>1.5. Construction requirements and methods are specified appropriate for the materials to be used</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Plan and prepare prototype for construction	<p>2.1. <i>Work order</i> and <i>work plans</i> are produced and checked with <i>appropriate personnel</i></p> <p>2.2. Type and quantity of material and <i>consumables</i> to be constructed are collected</p> <p>2.3. <i>Equipment</i> is selected appropriate to work</p>

ELEMENT**PERFORMANCE CRITERIA**

- requirements and checked for operational effectiveness in line with manufacturer's recommendations
- 2.4. *Stages* of the construction process are planned, documented and quality checked
- 2.5. Appropriate *jigs* and other construction aids are obtained and adjusted to suit the work
3. Produce the prototype
- 3.1. Work plan is followed to construct the item
- 3.2. Checks are conducted at designated points in construction
- 3.3. *Modifications* to designs and plans are detected and recommended within workplace procedures
- 3.4. Modifications to the plan are documented and followed
- 3.5. Prototype is checked for effectiveness and timeliness of construction to suit the purpose
- 3.6. Prototype development processes and problems are *recorded and reported*
4. Trial and evaluate the prototype
- 4.1. *Trial* objectives and processes are developed, specified and documented
- 4.2. Personnel involved in the trial and evaluation are informed of their responsibilities and functions
- 4.3. Trial equipment, tools and materials are prepared and certified prior to use
- 4.4. Prototype trials are conducted and results captured and recorded in line with the trial specification
- 4.5. Results of trials are evaluated and evaluation records and recommendations are processed in line with enterprise procedures
- 4.6. Sample prototypes are *disposed of* in line with site procedures and environmental requirements
- 4.7. Prototypes no longer required are stored or disposed of in line with site procedures and environmental requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, safely develop, trial and evaluate prototypes
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for developing, trialling and evaluating prototypes
- Environmental protection requirements, including the safe disposal of waste material and minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures relevant to developing, trialling and evaluating prototypes
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- Prototype development and purposes, prototype trialling and evaluation processes
- Characteristics of timber and timber defects
- Construction sequences and jigs
- Industry standard cross-sections and lengths
- Construction componentry and standards
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely develop, trial and evaluate prototypes within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to developing, trialling and evaluating prototypes
- following organisational policies and procedures relevant to developing, trialling and evaluating prototypes
- effective communication and safe working practices
- developing, trialling and evaluating prototypes in line with construction plans, drawings and specifications to follow construction standards
- trialling and evaluating prototype outcomes within acceptable development times, enterprise production procedures and product purpose

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Prototypes may include:

- new designs for:
 - pallets
 - crates
 - trellises
 - trusses
 - stairs
 - doors
 - windows
 - frames, beams
- new product development

Material may include:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products
- coated and/or treated timber products
- beams or laminated beams

Design is to include:

- the process of applying:
 - problem solving skills
 - thought processes
 - cultural and demographic awareness
 - materials technology
 - conceptual development techniques
- working with production limitations to

RANGE STATEMENT

determine and produce products or 3-D functional solutions

- awareness of potential environmental issues and processes to accommodate these issues
- using energy and materials efficiently
- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language
- instructions for the construction and testing of new timber products from the work site

Communication may include:

Work order is to include:

and may include:

- construction plans or drawings
- type of product
- size
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Work plan is to include:

- the development sequence
- use of material
- labour requirements

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Consumables are to include:

- nailing plates

and may include:

- gang nails
- nail gun nails
- staples

RANGE STATEMENT

- Equipment** may include:
- finishing products
 - adhesives
 - measuring equipment
 - assembly jigs
 - nail plate presses
 - staple guns
 - nail guns
 - compressor or compressed air supply
 - marking equipment
 - strapping equipment
- Stages** are to include:
- development phases of the new prototype
 - review for each process and modification
- Jigs** may include:
- enterprise manufactured templates which assist in the positioning of components during the assembly process
 - newly developed jigs as part of the prototype development process
- Modifications** may include: changing aspects of the prototype plans, drawings and specifications to:
- facilitate acceptable construction methods
 - facilitate standard component sizes
 - rectify and overcome a construction fault
 - respond to environmental issues
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents or equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system
- Trial** is to include: the process of testing the prototype for:
- strength
 - durability

RANGE STATEMENT

- operational effectiveness
 - impact of the production process on the environment
- Disposing of** may include:
- recycling sample prototypes or prototypes no longer required
 - re-using sample prototypes or prototypes no longer required

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for drawing

- 1.1. Applicable ***Occupational Health and Safety (OHS), environmental, legislative and organisational requirements*** relevant to generating and transferring complex computer-aided drawings and specifications are identified and followed
- 1.2. Type of ***drawings*** to be created with ***computer-aided design (CAD) systems*** is identified and checked with ***appropriate personnel***
- 1.3. ***Equipment*** is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations
- 1.4. CAD process is planned in line with site procedures
- 1.5. ***Communication*** with others is established and

ELEMENT

PERFORMANCE CRITERIA

- maintained in line with OHS requirements
2. Create exploded assembly drawings
- 2.1. **Drawing preparations** are obtained and completed
 - 2.2. **3-D models** are prepared for all components
 - 2.3. **Perspective view** of the model is created in line with drawing specifications
 - 2.4. Model is **exploded** so that all components are visible
 - 2.5. All individual components are labelled in line with organisational requirements
 - 2.6. Quality checks are completed to ensure accuracy of outcomes
 - 2.7. Drawings are stored in line with organisational requirements
3. Create job sheets
- 3.1. **Job sheet preparations** are selected and completed
 - 3.2. Job sheet template is set up in line with organisational requirements and practices
 - 3.3. **Orthographic views** are created and dimensioned
 - 3.4. Sequencing of machine operations and operator requirements are specified and listed
 - 3.5. Draft job sheets are prepared, reviewed, tested and amended to organisational requirements
 - 3.6. Job sheets are stored in line with organisational requirements
4. Convert drawings for CNC applications
- 4.1. **Conversion** requirements are identified and checked from the **CNC machine** specifications
 - 4.2. **Layers** are created and additional information required for final conversion obtained
 - 4.3. **Drawing entities** are assigned to the relevant layers
 - 4.4. Conversion to the required file type is completed
 - 4.5. Converted file is stored in line with organisational requirements
 - 4.6. Generation process and equipment faults are **recorded and reported**

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, safely generate and transfer complex drawings using CAD systems
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for generating and transferring complex computer-aided drawings
- Environmental protection requirements, including the safe disposal of waste material and minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures relevant to generating and transferring complex computer-aided drawings
- Environmental risks and hazards
- Characteristics of timber, timber products and defects
- Set up of CAD programs
- CNC machines and building products
- Drawing techniques and principles
- Standard material sizes
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely generate and transfer complex computer-aided drawings and specifications in line with site standards and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to generating and transferring complex computer-aided drawings
- following organisational policies and procedures relevant to generating and transferring complex computer-aided drawings
- effective communication and safe working practices
- generating and transferring complex drawings using CAD systems in line with site requirements
- the conversion of complex drawings for use in CNC machine operating centres

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Drawings** may include:
- perspective
 - orthographic and exploded views
 - plans
 - diagrams
 - charts
 - elevations
- CAD systems** are comprised of proprietary software programs
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** is to include:
- computers
 - CAD software programs
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice and body language
- Drawing preparations** may include:
- drawing name
 - labelling information
 - dimensions
 - specifications
 - information management requirements
- 3-D models** may include:
- scale model components
 - 3-D computer images of componentry
- Perspective view** is to include:
- one, two and three point perspective drawings

RANGE STATEMENT

- Exploded** is when all of the parts of a drawing are separated into their assembly components
- Job sheet preparations** may include:
- file storage
 - product coding
 - inventory information
 - drawing management requirements
- Orthographic views** are to include:
- standard views (front, side, top, and so on) of a given object
- Conversion** is to include:
- the process of transferring computer generated drawing views to CNC machine operating centres for translation to program formats
- CNC machines** may include:
- CNC sizing machines
 - CNC machining and processing centres
- Layers** are the analogous step-by-step added views of an exploded drawing - much like transparent layers placed over the top of one another
- Drawing entities** are to include:
- any single item created on the screen including but not limited to:
 - lines
 - arcs
 - circles
 - text
 - hatch
 - dimensions
- Records and reports** may include:
- the specified drawings
 - product type
 - sizes
 - quality outcomes
 - and may be:
 - manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Establish design objectives and success factors

- 1.1. Applicable *Occupational Health and Safety* (OHS), *environmental, legislative* and *organisational requirements* relevant to managing product design are identified and followed
- 1.2. Information on *design tasks* is collected, analysed and maintained
- 1.3 Design workload is packaged into discrete, manageable *design work units*
- 1.4 Criteria for each design work unit are specified and *key success factors* and indicators are established
- 1.5 *Communication* with others is established and maintained in accordance with OHS requirements

2. Plan the design activity

- 2.1. Scope of each design work unit is reviewed and personnel and material resource requirements specified
- 2.2. Design work units are programmed and scheduled in line with target achievement dates and resource constraints
- 2.3. Design work plan, including key success or

ELEMENT	PERFORMANCE CRITERIA
	performance indicators, is processed and approved in line with enterprise procedures
3. Implement the design work plan	<p>3.1. Resources including human, material, equipment and systems are allocated to particular design work units and tasks</p> <p>3.2. Designers are directed and involved in finalising work preparations and processes, and in establishing key performance indicators</p> <p>3.3. Coordination issues with <i>supporting agencies</i> and departments are resolved</p> <p>3.4. Removal of <i>inhibitors</i> to achievements are met</p> <p>3.5. Progress reviews are carried out and support provided to the designers to maintain technical design standards and achievement targets</p> <p>3.6. Design outcomes are prepared, finalised and certified as meeting the required specifications</p> <p>3.7. Design outcomes are documented and processed for the client's acceptance</p> <p>3.1.3.8. Design process and problems are <i>recorded and reported</i> to <i>appropriate personnel</i></p>
4. Monitor and respond to design performance	<p>4.1. <i>Performance targets</i> are monitored to assess progress and to provide indicators as to target revision or other intervention response</p> <p>4.2. Unsatisfactory performance is detected and prompt action is taken to rectify the situation</p> <p>4.3. Mentoring and coaching is provided to support individuals or teams through the design process</p> <p>4.4. Recommendations for variations to plans are negotiated and approved by the appropriate personnel</p> <p>4.5. Systems, procedures and records associated with documenting performance are managed in accordance with the enterprise requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment and safely manage product design

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- Design tasks** are to include:
- ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - the process of applying problem solving skills
 - thought processes
 - cultural and demographic awareness
 - materials technology
 - conceptual development techniques
 - working with production limitations to determine and produce products or 3-D functional solutions

Design work units

break up tasks into manageable parts for design teams or individuals who may work on separate parts of a design project

Key success factors may include:

- achieving goals in the time allocated
- meeting specified design criteria
- minimising the impact of production on the environmental
- using energy efficiently and effectively
- using material efficiently and effectively

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Supporting agencies may include: organisations providing:

- services
- graphic work
- componentry

Inhibitors may include:

barriers to design outcomes such as:

RANGE STATEMENT

- Records and reports** may include:
- standard timber sizes
 - equipment usage capabilities and skill capabilities
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents or equipment malfunctions and
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Performance targets** are to include:
- completion of design tasks inside designated timeframes
 - design outcomes in line with the established criteria

FPITMM5205B Optimise CNC operations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to analyse production orders, production histories and machine capabilities and to manipulate machine control programs to optimise production performance for computer numerically controlled (CNC) sizing machines, and CNC machining and processing centres

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPITMM5205A Optimise CNC operations

Application of the Unit

Application of the unit

The unit involves optimising software for computer numerical controlled machines in a forest products factory environment

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment, safely optimise CNC operations
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for optimising software for CNC machines
- Environmental protection requirements, including the safe disposal of waste material and minimising carbon emissions
- Organisational and site standards, requirements, policies and procedures relevant to optimising software for CNC machines
- Environmental risks and hazards
- Using energy effectively and efficiently
- Using material effectively and efficiently
- CNC operations and optimisation
- Software programs and installation methods
- Commissioning procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can optimise software for computer numerical controlled machines

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to optimising software for CNC machines
- following organisational policies and procedures relevant to optimising software for CNC machines
- effective communication and safe working practices
- optimising operations for CNC equipment within the enterprise

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements

RANGE STATEMENT

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Optimisation of CNC machines is the process of maximising a program to direct a piece of CNC equipment to undertake the sequence of work and maximise output

Production potential is the capacity of CNC equipment to produce output at a faster rate and in a more efficient way based on improving program formats

Production orders may include:

- number of products to be produced
- treatment to be applied (sizing or machining activity)

Integration orders are to include:

- instructions to collate two or more sets of software information established through a common identifier

Software is the programs and other operating systems used by a computer

Communication may include:

- schedules
- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice and body language

Program format is to include:

- intended actions of the CNC machine
- time it takes for intended CNC actions based on the limitations of the machinery and the cutters

Software timers are the software component that schedules which activities occur at what point in the program format

External loading devices are computers (desktop, notebook or laptop) with disk drives able to be linked to the machine control system

RANGE STATEMENT

Machine control system	is the computerised operating controls for the CNC machine which stores and runs the program at the direction of an operator
Integration protocols are to include:	<ul style="list-style-type: none">• the compatibility of two or more sets of software information being collated to form a new program without corrupting
Output	is the product intended for production, produced to the intended outcome following the program format in the intended time
External inputs	involve feeding the program from the attached computer to the machine control system which is checked for accuracy with the program master
Program master copy	<ul style="list-style-type: none">• is the final approved operating program which will be used to reset the CNC machine after maintenance or recalibration of components• is stored in a safe location away from the CNC machine
Records and reports may include:	<ul style="list-style-type: none">• planning and monitoring outcomes• operating logs• performance records• material movement• quality outcomes• hazards• incidents or equipment malfunctions and may be: <ul style="list-style-type: none">• manual• using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to cutting panels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be cut is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Material <i>cutting patterns and saw set-up</i> sequences are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Cut material to size or angle	<p>2.1. Material is marked and stops set in preparation for cutting</p> <p>2.2. Cutting sequence and patterns are followed to produce the required quantity</p> <p>2.3. Cuts are checked for length or angle within a set</p>

ELEMENT**PERFORMANCE CRITERIA***tolerance*

- | | |
|---------------------------------|---|
| 3. Conduct operator maintenance | <p>2.4. Material with <i>defects</i>, incorrect cuts and off-cuts are <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.5. Processing and equipment faults are reported to the appropriate personnel</p> <p>2.6. Material is safely <i>stacked</i> in a designated location in line with work order requirements</p> <p>3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. Saw blades are checked for blunt or damaged condition in line with site procedures</p> <p>3.3. Saw blades are removed and replaced in line with manufacturer's recommendations</p> <p>3.4. Saw area is kept clear of dust, off-cuts and debris in line with OHS requirements</p> |
|---------------------------------|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately check cuts for correct length or angle; safely stack material
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task; calculate length and angles including basic addition and subtraction
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards,

REQUIRED SKILLS AND KNOWLEDGE

codes of practice and established safe practices relevant to the full range of processes for cutting panels

- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting panels
- Characteristics of timber panels and timber panel defects
- Cutting patterns and sequences
- Saw blade condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut panels to size and angle within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to cutting panels
- following organisational policies and procedures relevant to cutting panels

EVIDENCE GUIDE

Context of and specific resources for assessment

- cutting panels to size and angle in line with the work order and within prescribed organisational tolerances
- conducting operator maintenance on a panel saw with carriage
- stacking batches of cut material in line with organisational requirements and OHS regulations
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the cutting and despatch of timber panel products from the work site

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring

RANGE STATEMENT

- Appropriate personnel** may include:
- of work and procedures
 - environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Material** may include:
- medium density fibreboard
 - laminated veneer
 - chipboard
 - fibreboard
 - plywood
 - continuous ply
 - other manufactured board products
- Storage locations** may include:
- the use of:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** may include:
- measuring equipment
 - power operated
 - manually controlled docking and trimming saws with carriages where the cutting angle is controlled relative to the board guides and

RANGE STATEMENT

clamps

- saws with adjustable angle
- saws with one or multiple blades
- bandsaws
- panel saws
- table saws
- bench saws

and is to include

- procedures for saw lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
 - single straight cuts and angles requiring one cutting pass set for multiple cuts of the same size
- Cutting patterns and saw set-up sequences** are to include:

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Tolerance

is a set limit for cutting over or under the required length within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements

Defects may include:

- panel warp
- wane
- cupping and veneer or plywood defects including:
 - shakes
 - insect defects
 - knots
 - resin pockets

Disposed of may include:

- recycling timber with defects, incorrect cuts and off-cuts

RANGE STATEMENT

Stacking may include:

- re-using timber with defects, incorrect cuts and off-cuts
 - preparing for transport
- categorising in common size, thickness, length and angle
- marking lots in line with work order and site requirements
 - locating timber so as not to block access or passage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for treating	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to surface treating raw board are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>raw boards</i> to be <i>surface treated</i> is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Material surface treating <i>feed rates</i> and <i>chemical products</i> are selected and planned in line with site procedures and environmental requirements</p> <p>1.6. <i>Communication</i> with others is established and maintained in line within OHS requirements</p>
2. Surface treat raw boards	<p>2.1. Surface treatment is applied with additive flow rates continually monitored and adjusted in line with site requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|----------------------------------|--|
| 3. Shut down and clean equipment | <p>2.2. <i>Spray operations</i> are continually checked with blockages and filters cleared to maintain spray coverage to specifications</p> <p>2.3. Boards are regularly checked for surface quality and contamination in line with site requirements and corrective action taken</p> <p>2.4. Sub-standard boards are removed from the treatment process and reviewed for further action</p> <p>2.5. Processing and equipment faults are recorded and reported to appropriate personnel</p> <p>2.6. Material is safely dried and stacked in a designated location in line with work order requirements</p> <p>3.1. Shutdown procedures are coordinated with other line operators and followed in line with OHS legislation and site procedures</p> <p>3.2. Pumps are turned off and equipment flushed in line with organisational standard operating procedures</p> <p>3.3. Excess chemicals and flushing liquid are disposed of in line with statutory requirements and environmental regulations</p> <p>3.4. Equipment and chemicals are stored in line with statutory requirements and environmental regulations</p> |
|----------------------------------|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely dry and stack material
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for surface treating raw board
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures related to surface treating raw board
- Characteristics of timber panels
- Chemicals and chemical treatment feed rates
- Spray operations and shut-down procedures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- Work order** is to include:
- instructions for the chemical treatment of timber panel products
- and may include:
- type
 - size
 - length

RANGE STATEMENT

- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Raw boards may include:

- medium density fibreboard
- core for laminated veneer
- chipboard
- fibreboard
- plywood
- other manufactured board products

Surface treatments

are the application of enterprise specific chemical systems to protect wood panel products from infestation, to temper surfaces and ensure faultless bonding of veneers and laminates

Storage locations may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade

RANGE STATEMENT

- shelf life
 - stock rotation position
- Equipment** may include:
- compressor driven spray boom equipment
- Feed rates** are to include:
- the rate of speed the chemicals are passed through the spray equipment affecting the risk of equipment blockage
 - the finish of the material
 - the production output
- Chemical products** see surface treatments
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Spray operations** see equipment and surface treatments
- Contamination** may include:
- dust
 - water spots
 - oil spots from equipment or oily finger prints
- and may cause:
- orange peel effect
 - incomplete cover
 - solvent boil
 - other coverage defects
- Further action** may include:
- re-treating sub-standard boards
 - recycling sub-standard boards
 - re-using sub-standard boards
- Records and reports** may include:
- treatment method
 - product type
 - feed rate
 - inspection
 - grading and labelling outcomes
 - storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Stacking may include:

- preparing for transport
- categorising in common size, thickness, length, surface treatment
- marking lots in line with work order and site requirements
- locating timber so as not to block access or passage

Shutdown is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source
- cleaning and maintaining all parts
- storage of chemicals

Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.4. Work area is cleaned in line with site requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; effectively assess repair requirements; effectively mix filler ingredients; effectively apply mending tape to splits
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes repairing veneer and ply
- Environmental protection requirements, including the safe disposal of waste

REQUIRED SKILLS AND KNOWLEDGE

- material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to repairing veneer and ply
- Veneer, panel and plywood repair methods
- Methods of visual inspection
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- Work order** is to include:
- instructions for the receipt/despatch and repair of veneer, panel and plywood to/from the designated storage location or processing
- and may include:
- type
 - size
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers

RANGE STATEMENT

Filler may include:

- ready to use pre-mix fillers
- two part fillers
- waxes

Repair process may include:

- assessing material for splits
- voids and splintered or missing edges
- number and frequency of defects
- requirements for grade
- disposition of ply
- selecting the appropriate filler to suit the defective part
- filling the void
- levelling off the filler
- passing it on for sanding

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Veneer, panel and plywood

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- veneer types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn
- panels may include:
 - medium density
 - fibreboard
 - chipboard
 - fibreboard
- plywood is usually three or more layers of veneer with the layers alternating in grain direction to increase strength

Mending tape

is one sided tacking tape used to return veneer to its original position, hiding splits or cracks

RANGE STATEMENT

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

Regrading

is the process of visually inspecting veneer, panel and plywood to re-classify their quality and use after repair has taken effect

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size

RANGE STATEMENT

- dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Disposing of** may include:
- recycling sub-standard material
 - re-using sub-standard material

Type and quantity of material to be repaired is acquired from the veneer production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Patch strips</i> are selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Patch veneer | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Equipment controls are set and veneer flow coordinated with other operators to ensure minimal downtime</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.3. Patch strips are cut minimising wastage and fed into the machine
	2.4. Veneer sheets are positioned to accept the patch and processed in line with site requirements
	2.5. Out-feed bins or trays are positioned to collect the repaired veneer and are regularly cleared
	2.6. Problems are identified and reported and manual patching applied as required in line with site procedures
3. Redistribute material	3.1. Patched veneer is <i>regraded</i> in line with site requirements and industry standards
	3.2. Material is directed and <i>moved to storage</i> or processing operations in line with site requirements
	3.3. Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	3.4. Work area is cleaned in line with site requirements
	3.5. Repair processes are <i>recorded and reported</i> to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; effectively apply manual patching; effectively select and cut patch strips
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for the mechanical repair of veneer
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures relevant to mechanically repairing veneer
- Mechanical veneer repair methods
- Methods of visual inspection
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently repair veneer mechanically in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to mechanically repairing veneer

EVIDENCE GUIDE

- following organisational policies and procedures relevant to mechanically repairing veneer
 - repairing veneer mechanically in readiness for storage and/or processing
 - redistributing material on site using designated equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage

EVIDENCE GUIDE

the candidate

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Work order is to include:

- instructions for the receipt/despatch and repair of veneer to/from the designated storage location or processing

and may include:

- type

RANGE STATEMENT

- size
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** is to include:
- veneer patching machinery, out-feed bins or trays
- and may include:
- lifting equipment
- Patch strips** are:
- replacement pieces of veneer to cover the reverse of deficit areas
 - lined with an adhesive heat reactive backing
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance
- Regrading** is the process of visually inspecting veneer to re-classify their quality and use after repair has taken effect
- Movement of material** may include:
- the use of:
- conveyor belt systems

RANGE STATEMENT

- track systems
- lifting equipment
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes

RANGE STATEMENT

- hazards
- incidents
- equipment malfunctions

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to operate specialist equipment to produce chip and fibre blends in readiness for the production of panel products, while monitoring and maintaining the flow of operation. The unit includes assessment of chips and set-up of equipment

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP2205A Prepare chip or fibre blends

Application of the Unit

Application of the unit

The unit involves preparing chip or fibre blends in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Prerequisite units

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------|---|
| 1. Prepare for mixing | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to preparing chip or fibre blends are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with appropriate personnel</p> <p>1.3. Type and quantity of glue and other ingredients is selected in line with environmental requirements</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Mixing process is planned in line with site procedures</p> <p>1.6. Communication with others is established and maintained in line with OHS requirements</p> |
|-----------------------|---|

ELEMENT	PERFORMANCE CRITERIA
2. Mix ingredients	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Ingredient mixing and <i>feed systems</i> are started and adjusted to produce chip or fibre blend in line with organisational requirements</p> <p>2.3. Blend production is regularly checked to ensure it conforms with organisational and environmental requirements</p> <p>2.4. Additive levels are monitored and replenished in line with mixing process requirements</p> <p>2.5. Samples of mix are regularly taken for testing in line with site requirements</p> <p>2.6. Material chutes are kept free of blockages and system leakages corrected</p> <p>2.7. Processing results and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
3. Conduct operator maintenance	<p>3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. Mixing systems and components are flushed clean in line with site procedures and environmental requirements</p> <p>3.3. Blender system is isolated and cleaned in line with site procedures and environmental requirements</p> <p>3.4. Excess glue is disposed of and unused glue is stored or disposed of in, line with environmental regulations</p> <p>3.5. Machine area is kept clear of waste and debris in line with OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely produce chip or fibre blends
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes to prepare chip or fibre blends
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for preparing chip or fibre blends
- Mixing and blending methodologies
- Chip and fibre blend production process
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Chip or fibre blends

is the output product as a result of smashing wood chips into chip or fibrous blends which is then used to produce panel products

Work order is to include:

- instructions for the preparation of chip or fibre blends

and may include:

- type
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Glue and other ingredients may include:

- application of enterprise specific recipes to blend chips or fibre using water based glues, resin based glues or synthetic glues

Equipment is to include:

- mixer with pre-programmed mix quantities and cycles with manually controlled feed, blender and transfer systems
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Mixing may include:

- type of blend
- recipes and mixing cycles as prescribed by the enterprise

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice

RANGE STATEMENT

- body language
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance
- Feed systems** are to include:
- filtrate
 - white water
 - stock level
 - fibre consistency
 - feed level
 - steam flow
 - raw water
 - noise
 - metal detectors
 - power consumption
- Records and reports** may include:
- product type
 - size
 - profile
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to preparing veneer for <i>ply</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of material to be assembled is acquired from the veneer production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Production process</i> is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Bond veneers	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Spreader stations</i> are adjusted to provide material delivery in line with required board cross-section distribution</p> <p>2.3. <i>Glue feed, spread and tack levels</i> are regularly adjusted to apply glue to cross-grain <i>veneer</i> evenly</p>

ELEMENT	PERFORMANCE CRITERIA
	in line with operating procedures
	2.4.Veneer is positioned and fed to suit planned assembly with cross-grain and long grain veneer selected and assembled in the correct sequence
	2.5.Veneer is placed to minimise gaps and edge mismatch
	2.6.Completed assemblies are transferred for <i>pressing</i> in line with site requirements
	2.7.Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Redistribute material	3.1.Assembled ply is <i>graded</i> in line with site requirements and industry standards
	3.2.Material is directed and <i>moved to storage</i> or processing operations in line with site requirements
	3.3.Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	3.4.Excess glue is disposed of and unused glue is stored or disposed of, in line with environmental regulations
	3.5.Work area is cleaned in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and evenly apply glue; effectively grade assembled ply
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing veneer for ply
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for preparing veneer for ply
- Environmental risks and hazards
- Ply production methods
- Veneer binding techniques
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently prepare veneer for ply in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the

EVIDENCE GUIDE

competency in this unit

requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to preparing veneer for ply
- following organisational policies and procedures relevant to preparing veneer for ply
- preparing veneer for ply in readiness for storage and/or processing
- operating glue spreading equipment to bond sheets of veneer
- redistributing material on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions

RANGE STATEMENT

- relating to forest fire
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Ply

is strong panelling, varying in thickness, consisting of two or more plies of veneer alternating in grain direction, which are glued and pressed together

RANGE STATEMENT

Work order is to include:

- instructions for the receipt/despatch and assembling of ply from veneer to pressing and to/from the designated storage location or processing

and may include:

- type
- size
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment is to include:

- ply assembly tables with glue spreading stations

and may include:

- lifting equipment

Production process is to include:

- the glue mix used to bond sheets of veneer alternating in grain direction (to provide strength and rigidity) to form varying thickness sheets of plywood with a varying number of layers of veneer, before pressing
- use of a higher grade veneer on outer surfaces

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

RANGE STATEMENT

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Spreader stations

are the booms which pour and spread the glue mix onto the veneer sheeting

Glue feed, spread and tack levels

- glue feed is the feed rate at which an amount of glue is transferred to the veneer sheet
- spread is the coverage of glue over the veneer sheet area
- tack level is the required degree of stickiness (governed by weather conditions) for the glue to assure a successful bond

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Pressing

is the process of securing the bond by placing the assembled ply sheeting in a large pressing machine to remove any air pockets or other abnormalities

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manually
- using a computer-based system or another appropriate organisational communication system

Grading

is the process of visually inspecting plywood to classify its quality and use after assembly has taken effect and to ensure the bonding process has

RANGE STATEMENT

- been successful
- Movement of material** may include:
- the use of:
- conveyor belt systems
 - track systems
 - lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
 - assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Storage** may include:
- the use of:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Disposing of** may include:
- recycling sub-standard material
 - re-using sub-standard material

Competency field Wood Panel Products

FPIWPP2207B Scarf edges of veneer

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to scarf the edges of veneer to optimise the use of veneer in readiness for bonding to panel products

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP2207A Scarf edges of veneer

Application of the Unit

Application of the unit

The unit involves scarfing edges of veneer in a forest products factory.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for scarfing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to scarfing edges of veneer are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of veneer to be <i>scarfed</i> is acquired from the <i>veneer</i> production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Scarfing sequence and <i>scarf angle</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Scarf veneer	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Machine functions and <i>feed rate</i> are set for optimal recovery of product</p> <p>2.3. Scarfing method is selected in line with the veneer</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>being joined</p> <p>2.4.Veneer is positioned and fed at rate appropriate to the machine speed, capacity, veneer thickness and condition</p> <p>2.5.Sheets are <i>visually assessed</i> and scarfed to specification</p> <p>2.6.<i>Out-feed</i> is coordinated to ensure efficient recovery of scarfed material</p> <p>2.7.Scarfing processes and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
3. Redistribute material	<p>3.1.Veneer is <i>regraded</i> and joins assessed in line with site requirements and industry standards</p> <p>3.2.Material is directed and <i>moved to storage</i> or processing operations in line with site requirements</p> <p>3.3.Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.4.Work area is cleaned in line with site requirements</p>
4. Conduct operator maintenance	<p>4.1.Equipment lock-out procedures are followed in line with OHS legislation and site procedures</p> <p>4.2.Cutters or blades are checked for blunt or damaged condition in line with site procedures</p> <p>4.3.Cutters or blades are removed and replaced in line with manufacturer's recommendations</p> <p>4.4.Machine area is kept clear of dust, off-cuts and debris in line with OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely scarf edges of veneer
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for scarf edges of veneer
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for scarfing edges of veneer
- Environmental risks and hazards
- Veneer scarfing techniques
- Methods of visual inspection
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently scarf veneer in line with organisational

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>requirements</p> <p>The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:</p> <ul style="list-style-type: none"> • following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to scarfing edges of veneer • following organisational policies and procedures relevant to scarfing edges of veneer • scarfing veneer in readiness for application to panel products or for interim storage • redistributing material on site using designated equipment
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills • Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge • Assessment may be applied under project-related

EVIDENCE GUIDE

conditions (real or simulated) and require evidence of process

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and

RANGE STATEMENT

substances

- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the scarfing of veneer

and may include:

RANGE STATEMENT

- species
 - colour
 - type, width
 - length, thickness
 - quantity
 - scarfing method
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Scarfing** is the process of overlapping the end or edge of one piece of veneer over the end or edge of another to extend the veneer and its application potential or to create a continuous role
- Veneer**
- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
 - types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn
- Equipment** may include:
- specialised scarfing machines
- and is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Scarf angle** is the angle at which the end of the veneer is tapered to allow overlap of the joining piece of veneer which has been scarfed at the opposing angle
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Feed rate is to include:

- the rate of speed the veneer is passed through the scarfing machine
- the impact on equipment
- the finish of the scarf
- the production output

Visually assessed is to include:

- strength
- overlaps
- gaps
- veneer faults
- joining spacings

Out-feed :

is the scarfed veneer produced from the machining operation

and includes:

- handling it in such a way as to ensure the thin edge is not broken or torn

Records and reports may include:

- scarfing requirements and angle
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another

RANGE STATEMENT

appropriate organisational communication system

Regrading

is the process of visually inspecting veneer to re-classify its quality and use after scarfing has taken effect

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position
- recycling sub-standard material

Disposing of may include:

RANGE STATEMENT

- re-using sub-standard material

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to <i>cutting veneer</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of veneer to be cut is acquired from the veneer production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Cutting process is selected and planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Cut veneer	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Conveyor</i> and <i>guillotine</i> operation is coordinated with veneer production</p> <p>2.3. Optimal cutting positions are selected to minimise</p>

ELEMENT	PERFORMANCE CRITERIA
	<i>defects</i> and maximise full width sheets
	2.4. Cutting is conducted and <i>feed rate</i> monitored in line with operational procedures
	2.5. Conveyors are regularly monitored for material flow problems
	2.6. Veneer is <i>visually assessed</i> through the cutting process
	2.7. Cutting process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Redistribute material	3.1. Material is directed and <i>moved to storage</i> or processing operations in line with site requirements
	3.2. Sub-standard material and off-cuts are rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	3.3. Work area is cleaned in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut veneer
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting veneer

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting veneer
- Environmental risks and hazards
- Veneer cutting techniques
- Methods of visual inspection
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut veneer in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to cutting veneer
- following organisational policies and procedures relevant to cutting veneer
- cutting veneer in readiness for application to panel

EVIDENCE GUIDE

- products or for interim storage
- redistributing material on site using designated equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Organisational requirements
may include:

Cutting

is the process of visually inspecting veneer to determine cuts

and is to include:

- optimising sheet sizes using power driven guillotines

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood

- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Work order is to include:

- instructions for the cutting of veneer

and may include:

RANGE STATEMENT

- species
- colour
- type
- width
- length
- thickness
- quantity
- cutting method
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- electronic guillotines
- conveyor belt systems

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

RANGE STATEMENT**Conveyor** is to include:

- belts or travelator methods of transporting veneer to and from the guillotine, which may be automated in conjunction with the veneer production process

Guillotine

is the piece of electronic equipment used to cut veneer, which can be computer programmed

Defects may include:

- incorrect moisture content
- warp
- wane
- shakes
- insect defects
- splits
- knots
- resin pockets

Feed rate is to include:

- the rate of speed the veneer is passed through the guillotine
- the impact on equipment
- the finish of the cut
- the production output

Visually assessed is to include:

- strength
- defects
- gaps
- other veneer faults

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Movement of material may include:

the use of:

- conveyor belt systems

RANGE STATEMENT

- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard material and off-cuts
- re-using sub-standard material and off-cuts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to sawing products from continuous ply are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>continuous ply</i> to be cut is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Material <i>cutting patterns and saw set-up sequences</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Cut continuous ply to size	<p>2.1. Material is marked and stops set in preparation for cutting</p> <p>2.2. Ply is set-up on the in-feed and <i>feed systems</i> and rate regularly checked and adjusted</p>

ELEMENT	PERFORMANCE CRITERIA
	2.3. Cutting sequence and patterns are followed to produce the required quantity
	2.4. Cuts are checked for length or angle within a set <i>tolerance</i>
	2.5. Material with <i>defects</i> , incorrect cuts and off-cuts are <i>disposed of</i> in line with site procedures and environmental requirements
	2.6. Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.7. Material is safely <i>stacked</i> in a designated location in line with work order requirements
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Saw blades are checked for blunt or damaged condition
	3.3. Saw blades are removed and replaced in line with manufacturer's recommendations
	3.4. Saw area is kept clear of dust, off-cuts and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently saw products from continuous ply within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to sawing products from continuous ply

EVIDENCE GUIDE

- following organisational policies and procedures relevant to sawing products from continuous ply
 - sawing products from continuous ply in line with the work order and within prescribed organisational tolerances
 - conducting operator maintenance on a panel saw with carriage
 - stacking batches of cut material in line with organisational requirements and OHS regulations
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the cutting and despatch of timber panel products from the work site

and may include:

- type
- size
- length
- angle
- quantity

RANGE STATEMENT

- grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Continuous ply** is a role of ply which has been rotary peeled from a log
- Storage locations** may include:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** may include:
- measuring equipment
 - power operated, manually controlled docking and trimming saws with carriages where the cutting angle is controlled relative to the board guides and clamps
 - saws with adjustable angle
 - saws with one or multiple blades
 - bandsaws
 - panel saws
 - table saws

RANGE STATEMENT

- bench saws

and is to include:

- procedures for saw lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Cutting patterns and saw set-up sequences** are to include:
- single straight cuts and angles requiring one cutting
 - passes set for multiple cuts of the same size
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Feed systems** are to include:
- rollers which support the continuous ply
 - rate of speed they supply the continuous ply to the saw
- Tolerances** are a set limit for cutting over or under the required size within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements
- Defects** may include:
- panel warp
 - wane
 - cupping and veneer or plywood defects including shakes
 - insect defects
 - knots
 - resin pockets
- Disposing of** may include:
- recycling timber with defects, incorrect cuts and off-cuts
 - re-using timber with defects, incorrect cuts and off-cuts
- Records and reports** may include:
- product type
 - size

RANGE STATEMENT

- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Stacking may include:

- preparing for transport
- categorising in common size, thickness, length and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------|---|
| 1. Prepare for profiling | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environment, legislative</i> and <i>organisational requirements</i> relevant to cutting panels to <i>profile</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be profiled is selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Profile to be cut is identified and cutting blades selected</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Set up profiling equipment | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Machine guides</i> are selected and attached to the machinery</p> <p>2.3. Cutting blades are installed in the selected</p> |

ELEMENT**PERFORMANCE CRITERIA**

- machinery
- 2.4. Depth of cut/profile is set in line with the required profile and minimisation of waste
- 2.5. Panel stack is positioned in close proximity to maximise ease of machine feeding
- 2.6. Equipment set-up is checked and adjusted by running a panel through the machine to set depth and profile
3. Cut *material* to profile
- 3.1. Panels are fed into the machine at the *feed rate* prescribed by organisational requirements
- 3.2. Cutting sequence is followed, maintained and adjusted to produce the required quantity and maximise the feed rate
- 3.3. Profiling process is regularly checked and adjusted to maintain the desired depth and profile
- 3.4. Panels with *defects* are rejected and *disposed of* in line with site procedures and environmental requirements
- 3.5. Processing and equipment faults are reported to the appropriate personnel
- 3.6. Panels are safely *stacked* in a designated location in line with work order requirements
- 3.7. *Records and reports* are accurately completed, processed and maintained in line with workplace procedures
4. Conduct operator maintenance
- 4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
- 4.2. Cutting blades are checked for blunt or damaged condition in line with site procedures
- 4.3. Cutting blades are removed and replaced in line with manufacturer's recommendations
- 4.4. Machine area is kept clear of dust and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut panels to profile
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting panels to profile
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting panels to profile
- Environmental risks and hazards
- Characteristics of panels and panel defects
- Cutting profiles, feed rates and finish
- Cutting blade condition assessment
- Storage Systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut panels to profile within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to cutting panels to profile
- following organisational policies and procedures relevant cutting panels to profile
- cutting panels to profile in line with the work order and within prescribed organisational specifications
- conducting operator maintenance on a multi-head planing machine
- stacking batches of cut panels in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE

workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and

RANGE STATEMENT

may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards

RANGE STATEMENT

- recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Profile** may include:
- various shapes and patterns to which steel cutting blades can be shaped, that will in turn shape the panel to achieve the desired profile outcome

profiled products may include:

- building components
 - furniture components
 - tops
 - quad
 - beading
 - mouldings
 - shaped beams
 - architraves
 - skirting boards
 - scotia
- Work order** is to include:
- instructions for the cutting
 - despatch of panel products from the work site

and may include:

- type
 - size
 - length
 - profile
 - thickness
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers

RANGE STATEMENT

Material may include:

- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard
- other manufactured board products

Storage locations may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- measuring equipment
- multi-head planing machines (four siders)
- spindle moulders
- routing machines
- shaping machines
- profile cutting blades in various shapes and sizes

and is to include:

- procedures for machine lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening

RANGE STATEMENT

- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- cutters are installed accurately
- machinery is operating to optimum performance

Machine guides may include:

- machine manufacturer produced guides located strategically on the machine to maintain timber in straight feed and ensure consistency of profile cut
- enterprise produced guides/jigs to maintain consistency of timber against cutting blades

Disposing of may include:

- recycling panels with defects
- re-using panels with defects

Feed rate is to include:

- the rate of speed the panel is passed through the machine affecting the sharpness of the cutting blades
- the finish of the material
- the production output

Defects may include:

- warp
- wane
- cupping
- holes
- breakages
- lifting veneer
- bonding problems

Stacking may include:

- preparing for transport
- categorising in common size, length, thickness and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Records and reports may include:

- product type
- size

RANGE STATEMENT

- profile
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1. Prepare to move material by transfer equipment | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to moving <i>material</i> by transfer equipment are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of material to be moved is inspected and checked for potential hazards, obstructions and spillage in line with site procedures and environmental requirements</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Moving processes</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Move material | <p>2.1. <i>Communication signals</i> are identified and nearby personnel notified of impending operation</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.2. Material to be moved and loading point are identified from schedules, orders and instructions
	2.3. <i>Material dimensions and weight</i> are estimated to ensure the transfer equipment is kept stable and not overloaded
	2.4. Load is manoeuvred into position using relevant transfer car techniques in line with manufacturer's recommendations
	2.5. Material is moved using rail and transfer car in line with site requirements
	2.6. Moving processes and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Shut down equipment	3.1. Material is cleared from transfer car prior to shutdown
	3.2. <i>Shutdown</i> procedures are coordinated with other line operators and followed in line with OHS legislation and site procedures
	3.3. <i>Safety locks and brakes</i> are applied to prevent accidental movement of the equipment
	3.4. Routine post operational checks are conducted in line with organisational standard operating procedures
	3.5. Areas around rail system are cleared of material spillage in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely move material using transfer car
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately locate, record and report information
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to review and accurately identify work

REQUIRED SKILLS AND KNOWLEDGE

requirements; identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for moving material by transfer equipment
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for rail and transfer car operations
- Environmental risks and hazards
- Transfer car capacities and hazards
- Rail and transfer car shut-down procedures
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Material may include:

- treated paper
- wood chips
- flakes
- wood fibre
- logs
- bark
- off-cuts
- timber
- raw board

RANGE STATEMENT

- Work order** is to include:
- panel products
 - veneer
 - instructions for the receipt/despatch and moving of timber and timber products to/from the designated storage location
- and may include:
- type
 - size
 - quantity
 - grade
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** may include:
- rail and electrically powered rail mounted transfer car systems
 - 'follow me' trolleys
 - electronic-eye trolleys used in layup
- Moving process** is to include:
- the control of rail and transfer car systems including start-up and shut-down
 - monitoring of hazards
 - weight and oversize objects
 - control of loading and unloading points
 - communication signals
 - observation of other personnel
 - minimising carbon emissions
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences

RANGE STATEMENT

- Communication signals** may include:
- control of tone of voice
 - body language
 - hand signals
 - whistles
 - sirens
 - loud speaker announcements
 - warning signals
 - two way radios
- Material dimensions and weight** are to include:
- monitoring of articles or products which may be unstable
 - oversize or over the weight capacity of the transfer car requiring redistribution or alternate transfer
- Records and reports** may include:
- rail and transfer car operations
 - product types
 - size
 - inspection and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system
- Shutdown** is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machinery from the power source
 - cleaning and maintaining all parts
- Safety locks and brakes** are applied to the transfer car to prevent it from movement during shut-down

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for peeling	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to producing veneer from debarked <i>logs</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of timber species to be <i>peeled or sliced</i> is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Veneer</i> peeling or slicing process and thickness are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Peel veneer	<p>2.1. Size and condition of logs is checked as acceptable and then loaded into the lathe</p> <p>2.2. <i>Drive logs</i> are placed to maximise available veneer and waste product removed</p>

ELEMENT	PERFORMANCE CRITERIA
	2.3.Veneer peeling or slicing process is set and commenced to optimise veneer recovery and <i>grading</i>
	2.4.Machine speed and control of veneer cut are constantly adjusted to suit the log characteristics in line with site procedures
	2.5.Material with <i>defects</i> and <i>log cores</i> are <i>disposed of</i> in line with site procedures and environmental requirements
	2.6.Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Conduct operator maintenance	3.1.Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2.Cutting blades are checked for blunt or damaged condition in line with site procedures
	3.3.Cutting blades are removed and replaced in line with manufacturer's recommendations
	3.4.Machine area is kept clear of dust, off-cuts and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely peel or slice veneer using a rotating lathe or rotary slicer
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing veneer from debarked logs
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing veneer from debarked logs
- Environmental risks and hazards
- Characteristics of logs and timber defects
- Peeling and slicing processes using a rotating lathe or rotary slicer
- Cutting blade condition assessment
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently produce veneer from debarked logs within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to producing veneer from debarked logs

EVIDENCE GUIDE

- following organisational policies and procedures relevant to producing veneer from debarked logs
 - producing veneer from debarked logs in line with the work order and within prescribed organisational tolerances using a rotating lathe or rotary slicer
 - conduct operator maintenance on a peeling lathe or rotary slicer
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow with relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE

- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

RANGE STATEMENT

- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Logs** may include:
- varying species which have been kiln or air-dried and de-barked and are usually consistently round and straight
- Work order** is to include:
- instructions for the cutting and grade of timber veneer from debarked logs
- and may include:
- type
 - width
 - length
 - thickness

RANGE STATEMENT

- quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Peeling or slicing** is the process of removing timber in thin sheet form from a rotating lathe or rotary slicer
- Storage locations** may include: the use of:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** is to include:
- specialised veneer peeling lathes or rotary slicer
 - procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Veneer**
- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of

RANGE STATEMENT

- Communication** may include:
- plywood
 - types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn
 - verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Drive logs** is the log set-up and being utilised for veneer peeling to produce rotary (radial) sawn veneer
- Grading** is the process of visually inspecting logs or timber to classify their quality and use
- Defects** may include:
- warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- Log cores** are the remaining centre (pith) part of the log which is too small to remove further veneer from
- Disposing of** may include:
- recycling material with defects and timber cores
 - re-using material with defects and timber cores
- Records and reports** may include:
- product type
 - size
 - profile
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards

RANGE STATEMENT

- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|--|
| 1. Prepare for painting | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to painting panels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be painted is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Panel <i>painting process, feed rates</i> and <i>paints</i> are selected and planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Paint panels | <p>2.1. Paint products are loaded in equipment in line with manufacturer's specifications</p> <p>2.2. Paint is applied with flow rates and <i>viscosity</i> continually monitored and adjusted in line with site</p> |

ELEMENT	PERFORMANCE CRITERIA
	requirements
	2.3. <i>Paint operations</i> are continually checked with blockages and filters cleared to maintain paint coverage to specifications
	2.4. Panels are regularly checked for surface quality and <i>contamination</i> , and <i>graded</i> in line with site requirements and corrective action taken
	2.5. Sub-standard panels are removed from the painting process and reviewed for <i>further action</i>
	2.6. Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.7. Material is safely dried and <i>stacked</i> in a designated location in line with work order requirements
3. Shut down and clean equipment	3.1. <i>Shutdown</i> procedures are coordinated with other line operators and followed in line with OHS legislation and site procedures
	3.2. Pumps are turned off and equipment flushed in line with organisational standard operating procedures
	3.3. Excess paint and flushing liquid are disposed of in line with statutory requirements and environmental regulations
	3.4. Equipment and paint are stored in line with statutory requirements and environmental regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely paint panels
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and

REQUIRED SKILLS AND KNOWLEDGE

demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for paint panels
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for painting panels
- Environmental risks and hazards
- Characteristics of timber panels
- Paints, their viscosity, film thickness, film wetness and feed rates
- Paint operations and shut sown procedures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently paint panels within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include

EVIDENCE GUIDE

demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to painting panels
- following organisational policies and procedures relevant to painting panels
- painting panels in line with the work order and within prescribed organisational requirements
- conducting spray or roller coating operations and shut-down procedures
- stacking batches of painted panels in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements** may include:
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the painting of timber panel products
- and may include:
- type
 - size

RANGE STATEMENT

- length
- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Panels may include:

- medium density fibreboard
- chipboard
- fibreboard
- plywood
- other manufactured board products

Storage locations may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- roller coating lines
- spray booths

RANGE STATEMENT

- curtain coating lines
 - trays
 - overflow trays
 - thinner reservoirs
 - spray guns
 - roller coaters
- Painting process** includes:
- the application of paint to coat wood panel products for customer orders
- and may include:
- application of paint coats ensuring viscosity
 - film thickness
 - film wetness
 - rate of application to ensure surface integrity
- Feed rates** are to include:
- the rate of speed the paint is passed through the spray or roller coating equipment affecting the risk of equipment blockage
 - the finish of the material
 - the production output
- Paints** are to include:
- water based paints
- and may include:
- oil based paints
 - solvent based paints
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Viscosity** is the amount of resistance to flow or stickiness of the paint
- Paint operations**
- see equipment and painting process
- Contamination** may include:
- dust
 - water spots

RANGE STATEMENT

- oil spots from equipment or oily finger prints and may cause orange peel effect
- incomplete cover
- solvent boil
- other coating defects

Grading

is the quality checking of finished products to determine surface integrity and classify products into levels of quality

Further action may include:

- re-painting sub-standard panels
- recycling sub-standard panels
- re-using sub-standard panels

Records and reports may include:

- painting method
- product type
- feed rate
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Stacking may include:

- preparing for transport
- categorising in common size, thickness, length, coating
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Shutdown is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- cleaning and maintaining all parts
- storage of paints

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for fibre production	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to producing <i>fibre</i> from <i>chips</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of chips are <i>assessed</i> and acquired from the <i>stockpile</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Defibrator</i> process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Produce fibre	3.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements
3. Conduct operator maintenance	3.2. <i>Defibrator</i> and <i>feed systems</i> are started and adjusted to produce fibre size in line with organisational

ELEMENT**PERFORMANCE CRITERIA**

- requirements
- 3.3. Fibre production is regularly checked to ensure it conforms with organisational requirements
 - 3.4. Chip flow and *pulp* out-feed are monitored to ensure optimal production rate and prevent blockages
 - 3.5. Output of fibre is directed to storage bins in line with prescribed fill levels
 - 3.6. Faults requiring *emergency shutdown* are detected and action taken to rectify the problem
 - 3.7. Sub-standard fibre is rejected and *disposed of* in line with site procedures and environmental requirements
 - 3.8. Processing and equipment faults are *recorded and reported* to the appropriate personnel
 - 3.9. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
 - 3.10. Defibrator blades are checked for blunt or damaged condition in line with site procedures
 - 3.11. Defibrator components are cleaned in line with manufacturer's recommendations
 - 3.12. Machine area is kept clear of dust and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely produce fibre from chips
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing fibre from chips
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing fibre from chips
- Environmental risks and hazards
- Characteristics of wood chips and stock levels
- Fibre production process
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

RANGE STATEMENT

Environmental requirements
may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Fibre

is the output product as a result of smashing wood chips into fibrous material which is then used to produce medium density fibreboard

Chips

- are the raw product used to produce fibre
- are an output of breaking down logs into wood chips approximately the size of a 50 cent coin

RANGE STATEMENT

Work order is to include:

- instructions for the assessment of chips and the fibre grade

and may include:

- feed rate and quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Assessing chips is to include:

- species
- size
- moisture content
- contamination issues

Stockpile

is the piles of available chips ready for conversion to fibre, classified in size and species

Equipment is to include:

- procedures for equipment lock-out, i.e. protecting operators and co-workers from accidental injury by isolating the machine from the power source

Defibrator

is the machine used to convert wood chips to fibre for the production of medium density fibreboard

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately

RANGE STATEMENT

- Feed systems** are to include:
- machinery is operating to optimum performance
 - filtrate
 - white water
 - stock level
 - fibre consistency
 - feed level
 - steam flow
 - raw water
 - noise
 - metal detectors
 - power consumption
- Pulp** is the unwanted waste by-product from producing fibre
- Emergency shutdown** is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product
- Disposing of** may include:
- recycling sub-standard fibre
 - re-using sub-standard fibre
- Records and reports** may include:
- product type
 - size
 - profile
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for forming	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>form board</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>flakes or fibre</i> is <i>assessed</i> and acquired from the <i>stockpile</i> or <i>storage bins</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Forming process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Form board	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Stock tanks</i> are maintained at the correct levels in line with organisational requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.3. *Spreader stations* are adjusted to provide material delivery in line with required board cross-section distribution
- 2.4. Operational condition and set-up of former is checked to confirm mat condition
- 2.5. *Forming equipment* is checked for defects and positioned to load press in line with operating procedures
- 2.6. *Former and forming line* are started, operated and adjusted to produce board in line with organisational requirements
- 2.7. Slitters/saws are set to cut formed mat to width and length
- 2.8. Sub-standard board is rejected and *disposed of* in line with site procedures and environmental requirements
- 2.9. Faults requiring *emergency shutdown* are detected and action taken to rectify the problem
3. Shut down and clean equipment
- 3.1. Material is cleared from conveyor belts prior to shut-down in accordance with site procedures
- 3.2. *Shutdown* procedures are coordinated with other line operators and followed in accordance with OHS legislation and site procedures
- 3.3. Routine post operational checks are conducted in accordance with organisational standard operating procedures
- 3.4. Areas around conveyors and forming stations are cleared of material spillage
- 3.5. Spreading stations, formers and forming lines are cleaned internally and externally in accordance with organisational requirements
- 3.6. Processing and equipment faults are *recorded and reported* to the appropriate personnel

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely produce form board
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for producing form board
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for producing form board
- Environmental risks and hazards
- Characteristics of wood chips, fibre and stock levels
- Board forming process
- Material delivery rates
- Composition of chipboard and fibreboard
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently form boards within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to form board
- following organisational policies and procedures relevant to form board
- forming boards in line with the work order and within prescribed organisational requirements using spreader station, former and forming line
- conducting operator shut-down and cleaning of equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

RANGE STATEMENT

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage

RANGE STATEMENT

requirements

- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Forming board

is the process of spreading mixture over a former in line with order size and pressing it with heat and pressure to produce a hard panel

Work order is to include:

- instructions for the receipt/despatch of formed boards to/from the designated storage location or processing

and may include:

- type
- size
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Fibre or flakes assessment

- fibre is the output product as a result of smashing wood chips into fibrous material which is then used to produce medium density fibreboard
- flakes are used to produce chipboard and are another process of breaking down wood or wood chips

assessment may include:

- species
- size
- grade
- moisture content
- contamination issues

Stockpile

is the pile of available flakes ready for board forming, classified in size and species

Storage bins

- are the catchment bins used to collect fibre

RANGE STATEMENT

- after conversion of chips to fibre
- store fibre until ready for use in board production
 - spreading stations
 - formers and forming lines
 - slitters/saws
 - screens
 - cleaning equipment
- Equipment** is to include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Communication** may include:
- Pre start-up checks** are conducted to ensure:
- equipment has been set-up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance
- Stock tanks**
- are the tanks which hold the wet fibre or flake mix to be spread on the forming line
 - provide product to the spreader stations
- Spreader stations** are the booms which pour and spread the glue mix onto the board in readiness for adhering laminate or veneer
- Forming equipment** is to include:
- mats
 - screens
 - trays
 - plates
- Former and forming line**
- forming line collects the product and provides a base for the former to convert the product into solid pressed board which is in-turn cut by the slitters/saws to form rough sized sheets
- Disposing of** may include:
- recycling sub-standard board
 - re-using sub-standard board

RANGE STATEMENT

Emergency shutdown

is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product

Shut down is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- cleaning and maintaining all parts

Records and reports may include:

- product type
- size
- thickness
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------|---|
| 1. Prepare for joining veneer | <ul style="list-style-type: none"> 1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to <i>matching and joining veneer</i> are identified and complied with 1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i> 1.3. Type and quantity of veneer to be matched and joined is acquired from the veneer production process 1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations 1.5. Matching and joining process is selected in accordance with site procedures 1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements |
| 2. Match and join veneer | <ul style="list-style-type: none"> 2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements 2.2. Machine functions and <i>feed rate</i> are set for optimal recovery of product |

ELEMENT	PERFORMANCE CRITERIA
	2.3. Joining method is selected in line with the veneer being matched
	2.4. Sheets are <i>visually assessed</i> and matched to specification
	2.5. Sheets are <i>clipped</i> to provide clean edges and joined in line with organisational requirements
	2.6. Matching and joining processes are <i>recorded and reported</i> to the appropriate personnel
3. Redistribute material	3.1. Veneer is <i>regraded</i> and joins assessed in line with site requirements and industry standards
	3.2. Material is directed and <i>moved to storage</i> or processing operations in line with site requirements
	3.3. Sub-standard material is rejected and <i>disposed of</i> in accordance with site procedures and environmental requirements
	3.4. Excess glue is disposed of and unused glue is stored or disposed of, in line with environmental regulations
	3.5. Work area is cleaned in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely match and join veneer
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or

REQUIRED SKILLS AND KNOWLEDGE

Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for match and join veneer

- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for matching and joining veneer
- Environmental risks and hazards
- Veneer matching and joining techniques
- Methods of visual inspection
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

- workplace practices

Environmental requirements may include:

RANGE STATEMENT

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Match and join veneer

matching may include:

- matching grain
- grade
- length
- book matching
- colour matching

joining veneer may include:

- stitching
- gluing

RANGE STATEMENT

- Work order** is to include:
- taping
 - instructions for the matching and joining of veneer
- and may include:
- species
 - colour
 - type
 - width
 - length
 - thickness
 - quantity matching method
 - joining method
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** may include:
- clipping machines
 - guillotines
 - veneer sewing equipment
 - veneer gluing equipment
 - veneer taping equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly

RANGE STATEMENT

- systems are performing accurately
 - machinery is operating to optimum performance
- Feed rate** is to include:
- the rate of speed the veneer is passed through the joining machine
 - the impact on binding materials
 - the finish of the join
 - the production output
- Visually assessed** is to include:
- strength
 - overlaps
 - gaps
 - veneer faults
 - joining spacings
- Clipping** is to include:
- cutting or guillotining of veneer to form a straight edge
 - removing defects
 - splits or uneven edges
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manually
 - using a computer-based system or other appropriate organisational communication system
- Regrading** is the process of visually inspecting veneer to re-classify its quality and use after matching and joining has taken effect
- Movement of material** may include:
- the use of:
- conveyor belt systems
 - track systems
 - lifting equipment

RANGE STATEMENT

lifting equipment such as:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position
- recycling sub-standard material
- re-using sub-standard material

Disposing of may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for application	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>laminating</i> and <i>veneering</i> board surfaces are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of laminate or veneer and <i>board</i> to be adhered is acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Production process</i> is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Apply laminate or veneer	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Veneer or laminate and board are loaded and fed to suit planned assembly in the correct sequence</p>

ELEMENT**PERFORMANCE CRITERIA**

- 2.3. *Spreader stations* are adjusted to provide material delivery in line with required board cross-section distribution
- 2.4. *Glue feed, spread and tack levels* are regularly adjusted to apply glue to board evenly and ensure it remains free from foreign material likely to cause contamination
- 2.5. *Heat rolling* process is regularly checked to prevent creases, bubbles or other surface defects
- 2.6. Laminate or veneer is routinely monitored for position, adhesion, contamination, finish and *trim tolerances*
- 2.7. Finished panels are *transferred* for further processing in line with site requirements
- 2.8. Processing and equipment faults are *recorded and reported* to the appropriate personnel
- 2.9. Sub-standard material is rejected and *disposed of* in line with site procedures and environmental requirements
3. Shut down and clean equipment
- 3.1. *Shutdown* procedures are coordinated with other line operators and followed in line with OHS legislation and site procedures
- 3.2. Gluing equipment, rollers, cauls, screens and handling equipment are stripped, cleaned and replaced if necessary in line with site operating procedures
- 3.3. Cutters or blades are checked for blunt or damaged condition
- 3.4. Cutters or blades are removed and replaced in line with manufacturer's recommendations
- 3.5. Machine area is kept clear of foreign material, dust and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely laminate and veneer board surfaces
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes to laminate and veneer board surfaces
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment.
- Organisational and site standards, requirements, policies and procedures for laminating and veneering board surfaces
- Environmental risks and hazards
- Laminate and veneer application processes
- Veneer, laminate and board characteristics
- Bonding methods
- Distribution processes
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently laminate and veneer board surfaces in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to laminating and veneering board surfaces
- following organisational policies and procedures relevant to laminating and veneering board surfaces
- effective communication and safe work practices
- laminating and veneering board surfaces in readiness for storage and/or processing
- operate glue spreading equipment to bond veneer or laminate to board
- redistributing material on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package

EVIDENCE GUIDE

- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Laminate

is usually a thin synthetic or vinyl manufactured sheeting supplied in rolls

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Work order is to include:

- instructions for the receipt/despatch and laminating or veneering of board surfaces to/from the designated storage location or processing

and may include:

- type
- size
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Board may include:

- medium density fibreboard
- chipboard
- fibreboard
- plywood
- other manufactured board products

Equipment is to include:

- laminate and veneer bonding machines
- ancillary equipment with glue spreading

RANGE STATEMENT

stations

- heat rollers

and may include:

- accumulators for continuous operation
- lifting equipment

Production process is to include:

- the glue mix used to bond sheets of veneer or laminate to varying types of board including panel size, panel thickness, laminate or veneer type, glue application and finishing processes

and may include:

- the process of trimming laminate or veneer to a square edge or bevel

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Spreader stations

are the booms which pour and spread the glue mix onto the board in readiness for adhering laminate or veneer

Glue feed, spread and tack levels

- glue feed is the feed rate at which an amount of glue is transferred to the board
- spread is the coverage of glue over the board area
- tack level is the required degree of stickiness (governed by weather conditions) for the glue to guarantee a successful bond

Heat rolling

are the parts which ensure a secure and flat bond

RANGE STATEMENT

of the laminate or veneer to the board, these follow the bonding process closely

Trim tolerances:

are enterprise specified overhang of laminate or veneer to be trimmed, avoiding situations where board is not adequately covered

Transferral may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment

lifting equipment such as:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manually
- using a computer-based system or other appropriate organisational communication system

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Shutdown is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine

RANGE STATEMENT

from the power source cleaning and
maintaining all parts

Unit descriptor

This unit describes the outcomes required to clip veneer in readiness for matching and bonding to panel products. The unit includes sorting clipped veneer

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP3207A Clip veneer

Application of the Unit

Application of the unit

The unit involves clipping veneer in a forest products factory

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for clipping veneer	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to clipping veneer are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>veneer</i> to be <i>clipped</i> is acquired from the veneer production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Clipping process is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Clip veneer	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Clipping machine functions are set for optimal recovery of product</p> <p>2.3. <i>Clipping pattern</i> is selected in line with the veneer</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>being matched</p> <p>2.4. Sheets are <i>visually assessed</i> to specification</p> <p>2.5. Sheets are clipped to size, removing all unwanted sections and providing clean edges in line with organisational requirements</p> <p>2.6. Clipping process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p>
3. Sort and redistribute veneer	<p>3.1. Veneer is <i>regraded</i> in line with industry standards and classified into grade, colour and match groupings</p> <p>3.2. Material is directed and <i>moved to storage</i> or processing operations in line with site requirements</p> <p>3.3. Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>3.4. Work area is cleaned in line with site requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely clip veneer
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for clipping veneer
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for clipping veneer
- Environmental risks and hazards
- Veneer clipping techniques
- Methods of visual inspection
- Sorting and distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently clip veneer in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to clipping veneer
- following organisational policies and procedures relevant to clipping veneer
- clip veneer in readiness for matching and the application to panel products or for interim storage
- sort and redistribute material on site using designated

EVIDENCE GUIDE

Context of and specific resources for assessment

equipment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

EVIDENCE GUIDE

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements

RANGE STATEMENT

- industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the clipping of veneer
- and may include:
- species
 - colour
 - type
 - width
 - length
 - thickness
 - quantity matching method
 - joining method
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may
- supervisors

RANGE STATEMENT

include:

- suppliers
- clients
- colleagues
- managers

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Clipping

is the cutting or guillotining of veneer to form a straight edge, remove defects, splits or uneven edges

Equipment may include:

- measuring tapes
- dial gauges
- clipping machines
- guillotines

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Clipping pattern

is the assessment of the available veneer to determine useable section which in turn will be marked and cut

Visually assessed is to include:

- dimension
- edge condition
- position and size of knots

RANGE STATEMENT

- Records and reports** may include:
- other defects
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Regrading

is the process of visually inspecting veneer to re-classify its quality and use after clipping has taken effect

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes

RANGE STATEMENT

- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position
- recycling sub-standard material
- re-using sub-standard material

Disposing of may include:

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------|--|
| 1. Prepare for hole punching | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to punching <i>peg holes</i> in panels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be <i>punched</i> is selected from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Punching process and hole lay out are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Punch peg holes | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Material is fed into the machine at the <i>feed rate</i> prescribed by organisational requirements</p> |

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|----|------------------------------|--|
| 3. | Conduct operator maintenance | 2.3. Punching sequence is followed, maintained and adjusted to produce the required quantity and maximise the feed rate
2.4. Punching process is regularly checked and adjusted to maintain the desired quality and output
2.5. Material with <i>defects</i> is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
2.6. Punching process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
2.7. Material is safely <i>stacked</i> in a designated location in line with work order requirements
3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
3.2. Punches are checked for blunt or damaged condition in line with site procedures
3.3. Punches are removed and replaced in line with manufacturer's recommendations
3.4. Machine area is kept clear of dust and debris in line with OHS requirements |
|----|------------------------------|--|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely punch peg holes in panels
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for punching peg holes in panels
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for punching peg holes in panels
- Environmental risks and hazards
- Types of punched panels
- Characteristics of timber and timber defects
- Punching processes, feed rates and finish
- Punch condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that

EVIDENCE GUIDE

competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire

RANGE STATEMENT

- Environmental requirements** may include:
- manual handling including shifting, lifting and carrying
 - legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Peg holes are small diameter holes punched in panel approximately 10 cm apart (or to enterprise or customer specification) horizontally and diagonally over the entirety of the panel

Work order is to include:

- instructions for the punching and despatch of

RANGE STATEMENT

timber panel products from the work site
and may include:

- punching process
- type
- size
- length
- width
- thickness
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- medium density fibreboard
- chipboard
- fibreboard
- other manufactured board products, usually thinner stock of approximately 3-10 cm thick

Punching

is the process of punching multiple holes through thin panel simultaneously to a planned hole layout, in line with enterprise or customer specifications

Storage locations may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification

RANGE STATEMENT

- product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** may include:
- measuring equipment
 - punching machines
- and is to include:
- procedures for machine lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly
 - punches are installed accurately
 - machinery is operating to optimum performance
- Feed rate** is the rate of speed the material is passed through the machine affecting the sharpness of the punches, the finish of the material and the production output
- Defects** may include:
- warp
 - wane
 - cupping
 - incorrect margins

RANGE STATEMENT

- incorrect patterns
 - doglegs
 - broken punches
- Disposing of** may include:
- recycling material with defects
 - re-using material with defects
- Records and reports** may include:
- punching sequence
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system
- Stacking** may include:
- preparing for transport
- categorising in machining process, common size, length and thickness
- marking lots in line with work order and site requirements
 - locating so as not to block access or passage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for mixing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to preparing <i>resin</i> and additives are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>glue or resin</i> to be <i>mixed</i> is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Mixing process is selected and planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Mix glue	<p>2.1. Resin or glue ingredients and <i>additives</i> are measured and mixed ensuring minimum wastage in line with site requirements</p> <p>2.2. Mix is transferred to appropriate storage location or</p>

ELEMENT	PERFORMANCE CRITERIA
	production equipment without contamination through <i>transfer lines</i>
	2.3. Addition rate of resins or additives is monitored and pumps adjusted
	2.4. Samples of mix are regularly taken for <i>testing</i> in line with standard operating procedures
	2.5. Mixing processes and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Maintain and clean equipment	3.1. Mixing, storage and transfer equipment are cleaned to organisation requirements
	3.2. Pumps are turned off and equipment flushed in line with organisational standard operating procedures
	3.3. Excess glue or resin and additives are disposed of in line with statutory requirements and environmental regulations
	3.4. Equipment and ingredients are stored in line with statutory requirements and environmental regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely prepare resin and additives
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for preparing resin and additives

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for preparing resin and additives
- Environmental risks and hazards
- Additive and resin types and uses
- Characteristics of glue, resin and additives
- Weather conditions affecting bonding times
- Mixing operations and maintenance procedures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation

Environmental requirements

RANGE STATEMENT

may include:

- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the mixing of additives and resin

and may include:

- type
- quantity
- setting rate
- mixing percentages
- additives

RANGE STATEMENT

- hardness
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Glue and resin** may include:
- synthetic or animal based adhesives such as casein
 - rubber based adhesives
 - poly vinyl acetate
 - epoxy resins
 - formaldehydes
- Mixing:**
- usually includes mixing a base ingredient with a harder ingredient to aid setting plus any specified additives to specified quantities
 - can occur manually or mechanically
- Storage locations** may include:
- drums kept in flammable goods storage areas
 - plastic tubs kept in flammable goods storage areas
- Equipment** may include:
- mixers with manually controlled feed
 - mixers with pre-programmed mix quantities
 - cycles
 - transfer pumps
 - valves
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Additives** may include:
- agents which harden, soften, accelerate or decelerate glue or resin setting

RANGE STATEMENT

Transfer lines may include:

- transfer of ingredients to the mixers
- transfer of the mixed glue to storage or production

Testing is to include:

regular sampling of the glue, additives or resin to check:

- mix quantities
- setting speed (is it going off?)
- how weather conditions may be affecting the process

Records and reports may include:

- testing results
- quantities produced
- condition changes
- production difficulties
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

FPIWPP3210B Laminate board

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to set-up, operate and shut-down the laminating press and ancillary equipment used to laminate board with treated material

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP3410A Laminate board

Application of the Unit

Application of the unit The unit involves laminate board in a forest products factory

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for laminating	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to <i>laminating board</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>board</i> and <i>material</i> to be laminated is acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Production process</i> is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Laminate board	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Material and board are loaded and fed to suit planned assembly in the correct sequence</p> <p>2.3. <i>Pressing</i> process is regularly checked to prevent</p>

ELEMENT	PERFORMANCE CRITERIA
	creases, bubbles or other surface defects
	2.4. Board and material lay up are routinely monitored for position, adhesion, contamination and finish
	2.5. Finished panels are <i>transferred</i> for further processing in line with site requirements
	2.6. Laminating process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.7. Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
3. Shut down and clean equipment	3.1. <i>Shutdown</i> procedures are coordinated with other line operators and followed in line with OHS legislation and site procedures
	3.2. Laminating press and equipment are stripped and cleaned in line with site operating procedures
	3.3. Excess bonding agent is disposed of and unused bonding agent is stored or disposed of in line with environmental regulations
	3.4. Machine area is kept clear of foreign material, dust and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely laminate board
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for laminating board
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment.
- Organisational and site standards, requirements, policies and procedures for laminating board
- Environmental risks and hazards
- Treated material application processes
- Treated material and board characteristics
- Bonding methods
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently laminate board in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to laminating board
 - following organisational policies and procedures relevant to laminating board
 - laminating board in readiness for storage and/or processing
 - operating laminating press equipment to bond paper or laminate to board
 - redistributing material on site using designated equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Laminating board** is to include:
- the bonding agent mix used to bond and press sheets of material (such as paper) to varying types of board, including panel size, panel thickness, and finishing processes
- and may include:
- the process of trimming material to a square

RANGE STATEMENT

- Work order** is to include:
- edge or bevel
 - instructions for the receipt/despatch and pressing of board to/from the designated storage location or processing
- and may include:
- texture
 - colour
 - type
 - size
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Board** may include:
- medium density fibreboard
 - chipboard
 - plywood
 - fibreboard
 - other manufactured board products
- Material** may be:
- a treated paper in roll form, often impregnated with a durable resin
- and can be:
- decorative or for construction purposes
- and may include:
- laminate
 - veneer
 - treated paper
- Equipment** is to include:
- laminating press with bond spreading stations
 - feeding systems
- and may include:
- accumulators for continuous operation
 - lifting equipment

RANGE STATEMENT

- Production process**
- see laminating board
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Pre start-up checks**
- are conducted to ensure:
- machine has been set-up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance
- Pressing**
- is the process of compressing the treated material to the board after adhesion between large heated plates
- Transferral** may include:
- the use of:
- conveyor belt systems
 - track systems
 - lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
 - assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Shutdown is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- cleaning and maintaining all parts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for maintenance	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to maintaining <i>caul plates</i> and screens are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Caul plates and <i>screens</i> to be <i>maintained</i> are removed from the designated machinery</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Maintenance process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Change, clean and polish caul plates	<p>2.1. Plates requiring cleaning are identified and removed from <i>circuit</i> to <i>plate rack</i> in line with operating procedures</p> <p>2.2. Plates are processed through full <i>cleaning cycle</i></p>

ELEMENT	PERFORMANCE CRITERIA
	2.3. Plates are inspected and those with <i>defects</i> separated for repairs
	2.4. Plates are dried and prepared for use and returned to circuit in line with standard operating procedures
	2.5. Plates are <i>polished</i> using polishing table and head in line with operating procedures
	2.6. Polished plates are stored for use in line with organisational requirements
	2.7. Chemicals are stored and disposed of in line with statutory requirements and environmental regulations
3. Prepare backing screens	3.1. Screens are rolled from plate and secured in line with standard operating procedures
	3.2. Screens are processed through full cleaning cycle
	3.3. Screens are stacked and inspected for faults
	3.4. Defective screens are identified, removed and <i>disposed of</i> in line with site procedures and environmental requirements
4. Remove and replace transport plates	4.1. <i>Load shifting</i> and transport requirements are coordinated to remove and replace <i>transport plates</i> with minimal downtime
	4.2. Defective plates are identified, removed from circuit and disposed of in line with site procedures and environmental requirements
	4.3. Replacement plates are prepared and fitted in line with standard operating procedures
	4.4. Maintenance process and equipment faults are <i>recorded and reported</i> to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely maintain caul plates and screens
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for maintaining caul plates and screens
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for maintaining caul plates and screens
- Environmental risks and hazards
- Characteristics of metal, caul plates and screens
- Caul plate and screen maintenance procedures
- Removal and replacement methods
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control

RANGE STATEMENT

- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Caul plates

are double sided smooth plates used in the drying and heat pressing of board in the semi-wet or dry board forming process (the smoothness allows for easier separation)

Work order is to include:

- instructions for the maintenance of the caul plates and screens in designated equipment

and may also include:

- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Screens

are plates which allow for drainage of water as the board forming process takes it through rollers prior to going through the heat press

Maintenance

is the process of cleaning and repairing caul plates and screens which undergo considerable stress from pressure, heat and sticky substances

Equipment may include:

- caul plates
- screens
- transport plates
- cleaning equipment

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to

RANGE STATEMENT

- individual social and cultural differences
 - control of tone of voice
 - body language
- Circuit** is the board forming process from start to finish
- Plate rack** is the racking system which caul plates and screens sit upon
- Cleaning cycle** may include:
- chemical baths
 - heat treatment baths
- Defects** may include:
- buckling
 - build up of board product
 - marking of the plates
 - dents
- Polishing** ensures both surfaces of caul plates are smooth and polished to ensure easy separation of formed boards
- Disposing of** may include:
- recycling defective material
 - re-using defective material
- Load shifting** may include: the use of:
- conveyor belt systems
 - track systems
 - lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
 - assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Transport plates** are the plates which carry caul plates and screens through the drying process and heat press
- Records and reports** may include:
- the knife or blade type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for drying	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to drying material are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be <i>dried</i> is assessed and acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Drying process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Dry material	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Furnace</i> is lit and continually monitored in line with operational procedures and environmental</p>

ELEMENT	PERFORMANCE CRITERIA
	regulations
	2.3. Emergency shutdown procedures are followed in response to a fire
	2.4. Drying temperature, humidity and feed rate are set for optimal recovery of product
	2.5. Material is positioned and fed at rate appropriate to the machine speed, capacity, treatment being dried, thickness and condition
	2.6. Material is visually assessed and moisture levels measured to ensure specified outcome has been achieved
	2.7. Out-feed is coordinated to ensure efficient recovery of dried material
	2.8. Drying process and equipment faults are recorded and reported to the appropriate personnel
3. Redistribute material	3.1. Material is regraded in line with site requirements and industry standards
	3.2. Material is directed and moved to storage or processing operations in line with site requirements
	3.3. Sub-standard material is rejected and disposed of in line with site requirements and environmental requirements
	3.4. Work area is cleaned in line with site requirements
4. Conduct operator maintenance	4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	4.2. Drying mechanisms are checked for effective condition in line with site procedures
	4.3. Oil levels, air filters, conveyors and chains are checked, replenished or maintained in line with organisational requirements
	4.4. Machine area is kept clear of dust, shavings and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely dry material
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for dry material
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for drying material
- Environmental risks and hazards
- Drying techniques
- Procedures for operating continuous operating single pass or multi pass driers or flash driers
- Methods for checking moisture content
- Methods of visual assessment
- Characteristics of timber and veneer
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dry material in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to drying material
- following organisational policies and procedures relevant to drying material
- drying material in readiness for storage and/or processing
- redistributing material on site using designated equipment
- conducting operator maintenance on drying equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- instructions for the drying of material

Work order is to include:

and may include:

- species
- colour
- type
- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Material may include:

- solid timber
- flake
- veneer
- raw boards
- laminated panels
- veneered panels
- plywood

Drying may include:

- pre-dryers
- dryers
- cooling sections
- steam
- heated air
- gas

Equipment may include:

- continuous operating single pass or multi pass driers

RANGE STATEMENT

- flash driers
- furnaces and ancillary equipment such as continuous conveyor
- pre-driers
- cooling sections

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machinery has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Furnace

is the source of providing heat to the drying system, often using oil

Emergency shutdown

is the immediate shutting off of equipment to prevent an accident or prevent damage to the machine or product

Feed rate is to include:

- the rate of speed the material is passed through the drying equipment
- the impact on equipment
- the finish
- the production output

Visually assessed

is the assessment of materials to determine finish quality and faults

RANGE STATEMENT

Moisture level

- is the amount of moisture maintained in timber or timber products after drying to avoid cracking and deforming
- in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates

Out-feed is to include:

- the material exiting from the drying operation and handled to prevent further damage to the surfaces or edges

Records and reports may include:

- drying requirements
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manually
- using a computer-based system or other appropriate organisational communication system

Regrading

is the process of visually inspecting material to re-classify quality and use after drying has taken place

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment

lifting equipment such as:

- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders

assistance with lifting such as:

- the involvement of two or more personnel to

RANGE STATEMENT

lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------|---|
| 1. Prepare for heat treating | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to heat treating material are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>material</i> to be <i>heat treated</i> is assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Heat treating process <i>cycles</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Dry material | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Oven</i> settings are adjusted to suit process cycles and material condition and continually monitored in line with operational procedures</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.3. <i>Emergency shutdown</i> procedures are followed in response to oven alarm
	2.4. Heating temperature and humidity are set for optimal recovery of product
	2.5. <i>Racks</i> containing materials of consistent processing condition and allowable range of thickness are prepared and loaded into the oven, maximising space
	2.6. Material is <i>visually assessed</i> and <i>moisture levels</i> measured to ensure specified outcome has been achieved
	2.7. Processed racks are tagged or marked and material samples taken for <i>testing</i> in line with site requirements
	2.8. Heat treating process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Redistribute material	3.1. Material is <i>regraded</i> in line with site requirements and industry standards
	3.2. Material is directed and <i>moved</i> to storage or processing operations in line with site requirements
	3.3. Sub-standard material is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	3.4. Work area is cleaned in line with OHS requirements
4. Conduct operator maintenance	4.1. Oven shut-down procedures are followed in line with OHS legislation and site procedures
	4.2. Heat treating mechanisms are checked for effective condition in line with site procedures
	4.3. Temperature and humidity settings, water drainage, atomising sprays and fans are checked, adjusted or maintained
	4.4. Oven area is kept clear of dust, shavings and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely heat treat material
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for heat treating material
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for heat treating material
- Environmental risks and hazards
- Heat treating techniques
- Methods of visual inspection
- Characteristics of material
- Oven temperatures and humidity
- Distribution processes
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently heat treat material in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to heat treating material
- following organisational policies and procedures relevant to heat treating material
- heat treating material in readiness for storage and/or processing
- redistributing material on site using designated equipment
- conducting operator maintenance on oven and racking equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures

RANGE STATEMENT

- ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the heat treating of material
- and may include:
- colour
 - type
 - width
 - length
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Material** may include:
- logs
 - raw boards
 - laminated panels
 - coves
 - board
 - medium density fibreboard
 - plywood
- Heat treating** is the process of curing newly formed materials or board to the desired level of moisture content, weight, thickness and density
- Storage locations** may include: the use of:
- storage racks
 - storage bays
 - bins
 - stacks

RANGE STATEMENT

- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position
- standard or controlled humidity type ovens including:
 - temperature and humidity settings
 - water drainage
 - atomising sprays
 - fans

Equipment may include:

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Cycles

are the heat treating time materials spend in the oven based on condition of the materials and thickness

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

RANGE STATEMENT

Pre start-up checks

are conducted to ensure:

- oven and rack systems have been set-up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Oven

is the source of providing heat to the materials on the drying racks in an isolated and controlled setting with heat and humidity set accordingly

Emergency shutdown

is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product

Racks

- are the systems on which the enterprise has chosen to treat the materials
- are usually a tiered system for the materials to lie on while being treated ensuring stability and reasonable spacing to prevent warping
- can be motorised, wheeled or lifted into position

Visually assessed

is the assessment of materials to determine finish quality and faults

Moisture level

- is the amount of moisture maintained in timber or timber products after drying to avoid cracking and deforming
- in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates

Testing

- is the process of measuring:
 - moisture content
 - weight
 - thickness and density to achieve the desired outcome for all of these
- ensures accurate heat treating
- allows for adjustment of the cycles accordingly

Records and reports may include:

- heat treating requirements
- product type
- size
- inspection

RANGE STATEMENT

- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system
- another appropriate organisational communication system

Regrading

is the process of visually inspecting material to re-classify quality and use after treating has taken effect

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|--|
| 1. Prepare for treating | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to treat paper are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>paper</i> to be <i>treated</i> is assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Treating processes are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Load and treat paper | <p>2.1. Paper rolls are located and moved to loader</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.3. Paper is threaded and feed commenced and monitored in line with operating procedures and minimal damage to paper</p> <p>2.4. Rolls are changed at depletion and in conjunction</p> |

ELEMENT**PERFORMANCE CRITERIA**

- with treatment requirements
- 2.5. **Treater** is brought to full operating condition and operating parameters regularly checked in line with site requirements
- 2.6. Treating line is run and paper treated with foreign material monitored and kept clear of treating process
- 2.7. **Resin** parameters are regularly checked and adjusted in line with operating procedures
- 2.8. Paper is regularly **assessed** to ensure specified outcomes have been achieved
- 2.9. Paper treating process and equipment faults are **recorded and reported** to the appropriate personnel
3. Fill resin tank
- 3.1. Resin feed from tanks is shut off in line with operating procedures
- 3.2. **Resin tanks** are thoroughly washed and drained following operating procedures
- 3.3. Resin being pumped from the delivery truck to the tank is monitored to ensure successful transfer and documentation is completed
- 3.4. Area surrounding tank is washed clear of any spillage in line with statutory requirements and environmental regulations
4. Operate effluent system
- 4.1. **Effluent tanks** are monitored and regularly cleaned in line with site requirements
- 4.2. **Settling agents** are added to effluent tanks to enterprise specified quantities and allowed to settle
- 4.3. **Solids** are removed and disposed of in line with statutory requirements and environmental regulations
5. Conduct operator maintenance
- 5.1. Treater shut-down procedures are followed in line with OHS legislation and site procedures
- 5.2. Treating mechanisms are checked for effective condition in line with site procedures
- 5.3. **Vat and oven** temperatures are checked, adjusted or maintained
- 5.4. Excess resin is disposed of in line with statutory requirements and environmental regulations
- 5.5. Treating area is kept clear of dust, shavings and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely treat paper
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for treating paper
- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for treating paper
- Environmental risks and hazards
- Paper treating techniques
- Methods of visual inspection
- Characteristics of paper and resin
- Oven and vat temperatures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently treat paper in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to treating paper
- following organisational policies and procedures relevant to treating paper
- treating paper in readiness for storage and/or processing
- conducting operator maintenance on oven and racking equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE

application of required knowledge

- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

RANGE STATEMENT

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage

RANGE STATEMENT

- Work order** is to include:
- requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - instructions for the paper treating
- and may include:
- treating method
 - colour
 - type
 - width
 - length
 - thickness
 - quantity
- and may also include:
- instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Paper** is to include:
- paper provided in roll form
 - types or thicknesses that are in line with customer usage requirements
- and may include:
- parameters such as dry width
 - expansion ratio
 - contamination levels
 - resin weight
- Treating** is the process of impregnating paper with a durable resin
- Storage locations** may include: the use of:
- storage racks
 - storage bays
 - bins
 - stacks

RANGE STATEMENT

- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment may include:

- treaters
- vats
- ovens
- resin tanks
- effluent tanks

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- oven and rack systems have been set-up correctly
- systems are performing accurately
- equipment is operating to optimum

RANGE STATEMENT

	performance
Treater	is the source of providing heat and resin to the paper in a controlled setting with the heat set accordingly
Resin	<ul style="list-style-type: none">• is a powder or liquid form of organic compound made by polymerisation• is used to plasticise paper, hardening and making it durable
Assessed is to include:	<ul style="list-style-type: none">• finish quality• faults
Records and reports may include:	<ul style="list-style-type: none">• treating requirements• product type• size• inspection• grading and labelling outcomes• storage locations• quality outcomes• hazards• incidents• equipment malfunctions and may be: <ul style="list-style-type: none">• manually• using a computer-based system or other appropriate organisational communication system
Resin tanks	are tanks which hold, heat and transfer resin to the treating process
Effluent tanks	are the tanks which accept the run off return from the treating process which contain many foreign particles and solids
Settling agents	are flocking products which capture foreign particles and solids floating weightlessly within the effluent tank and settle them to the bottom of the tank for easy removal
Solids	are the result of using settling agents to solidify foreign particles in the effluent tank for easy removal

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely cut paper
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting paper

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for cutting paper
- Environmental risks and hazards
- Paper cutting techniques
- Methods of visual inspection
- Distribution processes
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently cut paper in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to cutting paper
- following organisational policies and procedures relevant to cutting paper

EVIDENCE GUIDE

Context of and specific resources for assessment

- cutting paper in readiness for application to panel products or for interim storage
- redistributing paper on site using designated equipment
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any

EVIDENCE GUIDE

relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations,

RANGE STATEMENT

certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Cutting is to include:

- the process of visually inspecting paper to determine cuts
- optimising sheet sizes using power driven guillotines or traversing rotary cutters

Paper is to include:

- resin impregnated paper provided in roll form
- types or thicknesses that are in line with customer usage requirements

and may include:

- parameters such as dry width
- expansion ratio
- contamination levels
- resin weight

RANGE STATEMENT

Work order is to include:

- instructions for the cutting of paper

and may include:

- colour
- type
- width
- length
- thickness
- quantity
- cutting method
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Equipment may include:

- electronic guillotines
- conveyor belt systems
- traversing rotary cutters

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly

RANGE STATEMENT

- systems are performing accurately
 - machinery is operating to optimum performance
- Conveyor** is to include:
- belts or travelator methods of transporting paper to and from the guillotine, which may be automated in conjunction with the paper treating production process
- Guillotine** is the piece of electronic equipment used to cut paper, which can be computer programmed
- Defects** may include:
- incorrect moisture content
 - paper making defects
 - resin impregnating defects
- Feed rate** is to include:
- the rate of speed the paper is passed through the guillotine
 - the impact on equipment
 - the finish of the cut
 - the production output
- Visually assessed** is to include:
- strength
 - defects
 - other paper faults
- Records and reports** may include:
- product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system
- Movement of material** may include:
- the use of:
- conveyor belt systems
 - track systems
 - lifting equipment such as:
 - fork lifts

RANGE STATEMENT

- slings
- trolley jacks
- gantry cranes
- loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Disposing of may include:

- recycling sub-standard and defective paper
- re-using sub-standard and defective paper

FPIWPP3216B Press material using the daylight process

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit describes the outcomes required to set-up, operate and shut-down the press and ancillary equipment used to press material using the daylight process

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP3216A Press material using the daylight process

Application of the Unit

Application of the unit The unit involves pressing material using the daylight process in a forest products setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for pressing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to pressing <i>material</i> using the <i>daylight process</i> are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of material to be pressed is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Pressing</i> process is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Press material	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Press <i>cycle</i> times, pressures, temperatures and product parameters are set and adjusted for</p>

ELEMENT**PERFORMANCE CRITERIA**

- production requirements
- 2.3. Material is pressed while monitoring and adjusting material position, *feed rate*, mat condition and press condition
- 2.4. Unload and reload cycles are performed in line with site procedures
- 2.5. Pressed material and thickness changes are regularly assessed and necessary changes to *former*, press set-up and *blending* requirements made
- 2.6. Pressed material production is regularly checked to ensure it conforms with size and organisational requirements
- 2.7. Pressing process and equipment faults are *recorded and reported* to the appropriate personnel
3. Unload material
- 3.1. Press is opened in line with operating procedures
- 3.2. Material and *forming equipment* are separated and removed from press using unloading equipment
- 3.3. Material is loaded into the *cooling receiver*, trimmed, checked and unloaded
- 3.4. Material samples are *tested* to confirm that they follow industry standard and to check for *defects*
- 3.5. Material with defects is rejected and *disposed of* in line with site procedures and environmental requirements
- 3.6. Finished material is *transferred* for further processing in line with site requirements
4. Shut down and clean equipment
- 4.1. *Shutdown* procedures are coordinated with designated stop time and other line operators, and followed in line with OHS legislation and site procedures
- 4.2. Blending equipment, press and handling equipment are stripped and cleaned in line with site operating procedures
- 4.3. Press bars or stops, plates and screens are checked and cleaned
- 4.4. Machine area is kept clear of foreign material, dust and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely press material
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for pressing material using the daylight process
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for pressing material using the daylight process
- Environmental risks and hazards
- Material pressing processes
- Chip, flake and fibre characteristics
- Blending methods
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently press material using the daylight process in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to pressing material using the daylight process
- following organisational policies and procedures relevant to pressing material using the daylight process
- pressing material in readiness for storage and/or processing
- operating blending and daylight press equipment to bond and produce pressed material
- redistributing material on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Environmental requirements may include:

- legislation
- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals

RANGE STATEMENT

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Material may include:

- medium density fibreboard
- chipboard
- fibreboard
- other manufactured board products
- panels
- veneered panels
- chips (which are an output of breaking down logs into wood chips approximately the size of a 50 cent coin and then breaking these down to form smaller chips for chipboard production)
- fibre (which is the output product as a result of smashing wood chips into fibrous material which is then used to produce medium density fibreboard)
- flakes (which are the output product as a result of converting wood chips into a thinner chip material which is then used to produce panel products)

Daylight process may include:

- multi-daylight press operations

Work order is to include:

- instructions for the receipt/despatch and pressing of material to/from the designated storage location or processing

and may include:

- texture
- colour
- type
- size
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures

RANGE STATEMENT

- Appropriate personnel** may include:
- environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Storage location** may include: the use of:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** is to include:
- daylight process presses, which are driven by steam pressure and include:
 - electric
 - pneumatic or hydraulic loading and unloading equipment
 - pre-presses
 - formers
 - forming equipment
 - press bars or stops
 - cooling receivers
 - blending equipment
 - trimming equipment
- Pressing**
- is the process of compressing material using

RANGE STATEMENT

formers and a heat driven press system

and includes consideration of:

- weight
- thickness
- length
- width
- bond
- porosity
- moisture content
- bare fibres
- foreign material
- visual appearance
- surface blemishes
- trimmed edge appearance

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Cycle

- is the process of forming material and pressing it until it is ready for cooling
- unloading the press and restarting the process commences another cycle
- process includes time, pressure and temperature considerations

Feed rate

is the rate of speed at which the blended material is pumped into the former

Former

is the piece of equipment which shapes the molten

RANGE STATEMENT

chips, flakes or fibre into sheet form

Blending

is the mixing of the chips, flakes or fibre with the binding ingredients and hardening agents

Records and reports may include:

- material type
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Forming equipment is to include:

- mats
- screens
- trays
- plates

Cooling receiver

is the equipment and process used to cool the newly set and pressed material

Testing

- is the process of measuring moisture content, weight, thickness and density of the panels to achieve the desired outcome for all of these
- ensures accurate forming and cycle times
- allows for adjustment of the cycles accordingly

Defects may include:

- surface blemishes
- discolouration
- natural timber defects
- forming deformities

Disposing of may include:

- recycling material with defects
- re-using material with defects

Transferral may include:

the use of:

- conveyor belt systems

RANGE STATEMENT

- track systems
 - lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
 - assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Shutdown** is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
 - cleaning and maintaining all parts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare effluent plant	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to processing production effluent are identified and followed</p> <p>1.2. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.3. <i>Pumping lines</i> are set-up and checked in line with site requirements</p> <p>1.4. <i>Treatment solution</i> is pumped from the mixing tank to effluent line settling pits and clarifier</p> <p>1.5. <i>Sludge</i> is run from <i>clarifier</i> and water drained from sludge beds in line with organisational procedures and environmental regulations</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Distribute water to pasture	<p>2.1. Water is pumped to <i>pasture</i> area in line with environmental regulations</p> <p>2.2. <i>Flow rate</i> is set, monitored and adjusted to suit</p>

ELEMENT	PERFORMANCE CRITERIA
3. Conduct operator maintenance	<p>required absorption rate</p> <p>2.3. <i>pH level</i> is checked, monitored and adjusted in line with environmental regulations</p> <p>2.4. Effluent processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p> <p>3.1. Effluent plant shut-down procedures are followed in line with OHS legislation and site procedures</p> <p>3.2. <i>Settling pits</i> are drained and cleaned to collection point</p> <p>3.3. <i>Solids</i> are cleaned from discharge drain and disposed of in line with site procedures and environmental regulations</p> <p>3.4. Water is recirculated from catchment area to irrigation</p> <p>3.5. Dam banks are monitored for weed and vermin</p> <p>3.6. Effluent plant area is kept clear of foreign bodies and debris in line with OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely process effluent
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for processing production effluent

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for processing production effluent
- Environmental risks and hazards
- Effluent processing techniques
- Effluent treatment
- Effluent discharge environmental regulations
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently process production effluent in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to processing production effluent
- following organisational policies and procedures relevant to processing production effluent

EVIDENCE GUIDE

- processing production effluent and discharge it to pasture
 - conducting operator maintenance on effluent treating equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
 - Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate

EVIDENCE GUIDE

- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements

may include:

Legislative requirements:

are to be in line with applicable Commonwealth,

RANGE STATEMENT

State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Equipment may include:

- pumping lines
- mixing tanks
- effluent line settling pits
- clarifiers
- sludge beds

and is to include:

- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Pumping lines

disperse processed effluent from the treating system to pasture and between treating system

RANGE STATEMENT

	components
Treatment solution	are flocking products or settling agents which capture foreign particles and solids floating weightlessly within the settling pit and sink these to the bottom and the discharge pipes for easy removal
Sludge	is a tanked area where treated effluent is further treated to gain clarity, processing it in readiness for discharge to pasture
Clarifier	process clears the effluent removing cloudiness and subsequent foreign particles
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice• body language
Pasture	is the surrounding rural fields where processed effluent is discharged as a method of irrigation
Flow rate	is the speed at which processed effluent is discharged
pH level	measures acidity or alkalinity in the processed effluent to achieve the acceptable level to suit the environment it is being pumped to
Records and reports may include:	<ul style="list-style-type: none">• processing and treating requirements• storage locations• quality outcomes• hazards• incidents• equipment malfunctions and may be: <ul style="list-style-type: none">• manual

RANGE STATEMENT

- using a computer-based system or another appropriate organisational communication system

Settling pits

are the catchments which accept the run off return from the treating process which contain many foreign particles and solids

Solids

are the result of using settling agents to solidify foreign particles in the effluent tank or settling pits for easy removal

FPIWPP3218B Plan and coordinate machining of panels

Modification History

FPI05 changed to FPI11 in Method of assessment

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to plan the production of panels and cutting patterns, coordinate cutting processes and monitor equipment and output

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP3218A Plan and coordinate machining of panels

Application of the Unit

Application of the unit

The unit involves planning and coordinating machining of panels in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan machining operations	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and coordinating machining of panels are identified and followed</p> <p>1.2. Variations in panel characteristics are assessed, recorded and reported to <i>operators</i></p> <p>1.3. <i>Panel machining</i> schedules are produced and applied in line with site procedures</p> <p>1.4. <i>Panel type</i> and sizes including order information are planned, scheduled and communicated to operators</p> <p>1.5. <i>Cutting patterns</i> are planned and prescribed</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Monitor panel machining performance	<p>2.1. Standard cutting patterns are reviewed for suitability to planned cutting schedules</p> <p>2.2. Panel cutting processes are monitored for effectiveness of cutting pattern and condition of panel</p> <p>2.3. Assistance is provided to operators with the</p>

ELEMENT**PERFORMANCE CRITERIA**

- evaluation of panels and machining problems
- 2.4. Panel management and *output* are monitored to record possible process improvements
- 2.5. Panel machining, major problems and equipment faults are investigated, *recorded and reported* in line with site requirements
3. Coordinate panel cutting
- 3.1. Cutting operations and output are monitored to record and action possible process improvements based on cutting patterns and panels being processed
- 3.2. Modifications are made to cutting patterns or schedules to ensure optimum performance and communicated to operators
- 3.3. Cutting improvement modifications are documented and communicated in line with site procedures
- 3.4. Cutting output details are obtained and recorded in line with site requirements
- 3.5. Machined panels are directed to *storage* or *transferred* for further processing
- 3.6. Processes for rejecting and *disposing of* unsuitable machined panels and off-cuts are followed in line with site procedures and environmental requirements
- 3.7. Operating logs and cutting records are completed and maintained to site standards

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; accurately record and report workplace information, and maintain documentation; efficiently and safely plan and coordinate panel machining operations
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to

REQUIRED SKILLS AND KNOWLEDGE

complete a task

- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and coordinating machining of panels
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and coordinating machining of panels
- Environmental risks and hazards
- Typical routine problems encountered in the process and with equipment and adjustments required for correction
- Types of tools and equipment and procedures for their use, operation and maintenance
- Panel selection procedures and management
- Cutting pattern methodologies
- Cutting sequences
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and coordinate panel machining

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>operations in line with organisational requirements</p> <p>The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:</p> <ul style="list-style-type: none"> • following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to planning and coordinating machining of panels • following organisational policies and procedures relevant to planning and coordinating machining of panels • planning and coordinating panel machining operations for the enterprise • modifying cutting patterns and schedules for panel machining within the enterprise • coordinating personnel to follow planning, communications and scheduling for panel machining
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to follow relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to undertaking work applicable to this unit • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge • Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills

EVIDENCE GUIDE

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

RANGE STATEMENT

- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Operators

are the personnel who use the machines to cut, shape or profile panels to size, shape or profile

RANGE STATEMENT

Panel machining is the process of cutting panels to size, shape or profile

Panel types may include:

- laminated
- veneered
- plywood
- chipboard
- fibreboard
- medium density fibreboard

with a range of:

- sizes
- surface treatments
- edge treatments
- thicknesses
- grades

Cutting patterns are to include:

- ways in which the panel is cut, shaped or profiled to achieve the output results planned for that panel

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Output is to include:

- size
- volume recovery
- finish
- dimensional consistency
- quality of panels produced

Records and reports may include:

- planning and monitoring outcomes
- operating logs
- cutting records
- material movement
- despatch outcomes
- storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Storage may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Transferral may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the

RANGE STATEMENT

- Disposing of** may include:
- movement of mechanical equipment
 - recycling unsuitable machined panels and off-cuts
 - re-using unsuitable machined panels and off-cuts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for blending	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to blending and testing binding mixes are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of ingredients to form the <i>binding mix</i> to be blended is acquired from <i>storage</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Blending process is selected and planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Blend and test binding mix	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Blend cycles are set in line with organisational requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---------------------------------|---|
| 3. Maintain and clean equipment | <p>2.3. <i>Ingredients</i> and <i>additives</i> are measured and blended ensuring minimum wastage in line with site and environmental requirements</p> <p>2.4. Blend is transferred to appropriate storage location or production equipment without contamination through <i>transfer lines</i></p> <p>2.5. Addition rate of additives are monitored and pumps adjusted</p> <p>2.6. Samples of blend are regularly taken for <i>testing</i> to check tack and adhesion properties in line with standard operating procedures</p> <p>2.7. Test results are interpreted and adjustments made to achieve desired properties</p> <p>2.8. Sub-standard blend is rejected and disposed of in line with site procedures and environmental regulations</p> <p>2.9. Blending process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p> <p>3.1. Blending, storage and transfer equipment is cleaned to organisation requirements</p> <p>3.2. Pumps are turned off and equipment flushed in line with organisational standard operating procedures</p> <p>3.3. Excess blended material and additives are disposed of in line with statutory requirements</p> <p>3.4. Equipment and ingredients are stored in line with statutory requirements</p> |
|---------------------------------|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely blend and test binding mixes
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation

REQUIRED SKILLS AND KNOWLEDGE

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for blending and testing binding mixes
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for blending and testing binding mixes
- Environmental risks and hazards
- Blending techniques and ingredients
- Characteristics of ingredients and additives
- Weather conditions affecting blending conditions
- Blending operations and maintenance procedures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and

EVIDENCE GUIDE

efficiently blend and test binding mixes within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to blending and testing binding mixes
- following organisational policies and procedures relevant to blending and testing binding mixes
- blending and testing binding mixes in line with the work order and within prescribed organisational requirements
- conducting blending operations and maintenance procedures
- storing batches of binding mix in line with organisational requirements and OHS regulations

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must

EVIDENCE GUIDE

- also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other units of competency
 - The assessment environment should not disadvantage the candidate
 - Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
 - Where the participant has a disability, reasonable adjustment may be applied during assessment
 - Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment

RANGE STATEMENT

- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the blending of binding mixes

and may include:

- type
- quantity
- setting rate
- mixing percentages
- additives
- hardness
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Binding mix may include:

- chips
- flakes
- fibre
- glue
- additives
- other enterprise specified ingredients

Storage locations may include:

- drums kept in flammable goods storage areas
- plastic tubs kept in flammable goods storage areas

Equipment may include:

- blenders with manually controlled feed
- mixers with pre-programmed mix quantities
- cycles
- transfer pumps
- valves

Blending:

- usually includes mixing a base ingredient with a hardener to aid setting plus any specified additives to specified quantities
- can occur manually or mechanically

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening

RANGE STATEMENT

- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately
- equipment is operating to optimum performance

Ingredients may include:

synthetic or animal based adhesives such as:

- casein
- rubber based adhesives
- poly vinyl acetate
- epoxy resins and formaldehydes
- chips
- flakes or fibre
- hardeners
- softeners
- accelerants
- decelerators
- dyes

Additives may include:

agents which:

- harden
- soften
- accelerate or decelerate glue or resin setting

Transfer lines may include:

- transfer of ingredients to the blenders
- transfer of the binding mix to storage or production

Testing is to include:

regular sampling of the blending mix to check:

- mix quantities
- ingredient characteristics
- viscosity
- colour
- spread

RANGE STATEMENT

- tack
- cured bond strength
- setting speed (is it going off)
- how weather conditions may be affecting the process

- Records and reports** may include:
- binding and testing results
 - quantities produced
 - condition changes
 - production difficulties
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan painting procedures	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and coordinating panel painting are identified and followed</p> <p>1.2. Variations in <i>paint mixtures</i> are monitored, assessed and adjusted</p> <p>1.3. <i>Painting</i> schedules are produced and applied in line with site procedures</p> <p>1.4. <i>Equipment</i> procedures, settings and operation are planned and scheduled</p> <p>1.5. <i>Waste minimisation</i> and control measures are planned and prescribed</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Coordinate painting activities	<p>2.1. <i>Work orders</i> are checked and interpreted to ensure accuracy</p> <p>2.2. <i>Operators</i> are directed to load and unload painting equipment</p> <p>2.3. <i>Paint line</i> performance is checked and data</p>

ELEMENT**PERFORMANCE CRITERIA**

- interpreted to ensure accuracy and intended coverage
- 2.4. Paint application procedures and curing processes are coordinated and monitored for quality finish and completion rates
 - 2.5. Painting operations and output are monitored to record possible process improvements and to ensure maximum cost effectiveness
 - 2.6. Painting operations, major problems and equipment faults are investigated, *recorded and reported* in line with site requirements
 - 2.7. Processes for disposing of excess paint that cannot be stored are followed in line with site procedures and environmental regulations
 - 2.8. Processes for cleaning painting equipment are followed in line with site procedures and environmental regulations
3. Modify operations and assess technical developments
 - 3.1. Modifications are made to schedules to ensure optimum performance
 - 3.2. Painting process improvement modifications are documented and communicated in line with site procedures
 - 3.3. Developments in painting processes and related technology are diagnosed for possible improvements
 - 3.4. *Technical developments* are analysed and assessed for potential incorporation into existing painting procedures
 - 3.5. Proposed developments are authorised, trialled, documented and introduced into site operations

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely plan and coordinate panel painting
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace

REQUIRED SKILLS AND KNOWLEDGE

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and coordinating panel painting
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and coordinating panel painting
- Environmental risks and hazards
- Painting operation procedures
- Paint line management and operation
- Waste minimisation control measures
- Painting modification strategies
- Technical development diagnosis and solution methodologies
- Established communication channels and protocols
- Principles of cultural diversity and access and equity
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and coordinate panel painting in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to planning and coordinating panel painting
- following organisational policies and procedures relevant to planning and coordinating panel painting
- modifying painting operations for the enterprise
- coordinating personnel to follow planning, communications and scheduling for panel painting

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to

EVIDENCE GUIDE

access and correctly interpret and apply the required knowledge

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment

RANGE STATEMENT

- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

RANGE STATEMENT

Paint mixtures are to include:

- water based paints

and may include:

- oil based or solvent based paints with additives to accelerate or slow drying times

Painting is to include:

- the application of paint to coat wood panel products for customer orders

and may include:

- application of paint coats ensuring viscosity
- film thickness
- film wetness
- rate of application to ensure surface integrity

Equipment may include:

- roller coating lines
- spray booths
- curtain coating lines
- trays
- overflow trays
- thinner reservoirs
- spray guns
- roller coaters

Waste minimisation may include:

- measures to control paint and additive waste
- other foreign matter

Communication may include:

- schedules
- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Work order is to include:

- instructions for the painting of timber panel products

and may include:

- type
- size
- length

RANGE STATEMENT

- thickness
- quantity
- grade:
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Operators

are personnel who operate the roller coaters, curtain coaters or spray equipment

Paint line

is the automated, mechanised or manual systems of moving products past painting stations from the preparation area, through preparation coating, rub downs, final coating and curing

Records and reports may include:

- planning and monitoring outcomes
- data sheets
- material movement
- despatch outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Technical developments may include:

unforeseen problems related to:

- plant
- equipment
- paints
- panels

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for trimming	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to trimming new panels to size are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>panels</i> to be <i>trimmed</i> is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Material <i>trimming sequences</i> are planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Trim panels to size	<p>2.1. <i>Feed system</i> is set to stop material automatically for trimming to occur</p> <p>2.2. Monitoring of the trimming sequence is continued until the new <i>panel production run</i> ceases</p> <p>2.3. Cuts are checked for length within a set <i>tolerance</i></p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Material with <i>defects</i> , incorrect cuts and off-cuts is <i>disposed of</i> in line with site procedures and environmental requirements
	2.5. Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
	2.6. Material is safely <i>stacked</i> in a designated location in line with work order requirements
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Saw blades are checked for blunt or damaged condition
	3.3. Saw blades are removed and replaced in line with manufacturer's recommendations
	3.4. Saw area is kept clear of dust, off-cuts and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely trim new panels to size
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for trimming new panels to size
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- Organisational and site standards, requirements, policies and procedures for trimming new panels to size
- Environmental risks and hazards
- Characteristics of timber panels and timber panel defects
- Production trimming sequences
- Saw blade condition assessment
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently trim new panels to size within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to trimming new panels to size
- following organisational policies and procedures relevant to trimming new panels to size
- trimming new panels to size in line with the work order and within prescribed organisational tolerances

EVIDENCE GUIDE

Context of and specific resources for assessment

- conducting operator maintenance on trimming saws
- stacking batches of cut material in line with organisational requirements and OHS regulations
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to

EVIDENCE GUIDE

Aboriginality, gender or language backgrounds other than English

- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice

RANGE STATEMENT

and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- instructions for the trimming and despatch of timber panel products from the work site

Organisational requirements
may include:

Work order is to include:

and may include:

- type
- size
- length
- angle
- quantity
- grade
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

RANGE STATEMENT

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Panels may include:

- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard
- plywood
- continuous ply
- other manufactured board products

Trimming is to include:

- the process of automated trimming saws cutting across new panels
- trimming them to size, as they progress along the production line

Storage locations may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- procedures for saw lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

RANGE STATEMENT

Trimming sequence	is the timing and stopping of new panel to allow trimming to occur to set sizes
Communication may include:	<ul style="list-style-type: none">• verbal and non-verbal language• constructive feedback• active listening• questioning to clarify and confirm understanding• use of positive, confident and cooperative language• use of language and concepts appropriate to individual social and cultural differences• control of tone of voice• body language
Feed system may include:	<ul style="list-style-type: none">• conveyor belt systems• tracks• sliding systems
Panel production run	is the batch of board forming as it progresses through the stages to become a solid panel capable of being trimmed
Tolerances	are a set limit for cutting over or under the required length within a set margin of acceptance usually + or - 0.5 mm or in line with order or organisational requirements
Defects may include:	<ul style="list-style-type: none">• panel warp• wane• cupping and veneer or plywood defects including shakes• insect defects• knots• resin pockets
Disposing of may include:	<ul style="list-style-type: none">• recycling material with defects, incorrect cuts and off-cuts• reusing material with defects, incorrect cuts and off-cuts
Records and reports may include:	<ul style="list-style-type: none">• product type• size• inspection• grading and labelling outcomes• storage locations

RANGE STATEMENT

- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Stacking may include:

- preparing for transport
- categorising in common
 - size
 - thickness
 - length and angle
- marking lots in line with work order and site requirements
- locating so as not to block access or passage

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for pressing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to pressing laminated ply are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of ply to be pressed is acquired from the assembly process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Pressing</i> process is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Press ply	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Press <i>cycle</i> times, pressures, temperatures and product parameters are set and adjusted for production requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|--------------------------|---|
| 3. Unload and load press | <p>2.3. Assembled ply is <i>assessed</i> and <i>tack level</i> checked before loading with defective assemblies returned for reworking</p> <p>2.4. Hot or cold press is operated to press boards and monitored in line with site requirements</p> <p>2.5. Unload and reload cycles are performed</p> <p>2.6. Pressed and finished ply is regularly assessed and necessary changes to assembly and pressing processes actioned</p> <p>2.7. Sub-standard pressed ply is <i>disposed of</i> in line with site procedures and environmental requirements</p> <p>2.8. Pressing process and equipment faults are <i>recorded and reported</i> to the appropriate personnel</p> <p>3.1. Press is opened in line with operating procedures</p> <p>3.2. Ply and <i>plates</i> are separated and removed</p> <p>3.3. Ply is loaded into transport or storage racks for cooling</p> <p>3.4. Plate condition is monitored during unloading, cleaned and sprayed with <i>release agent</i> with defective plates removed for repair</p> <p>3.5. Assembled ply, plates and <i>overlay panels</i> are stacked in the press to specified height or number and squareness</p> <p>3.6. Finished ply is <i>transferred</i> for further processing in line with site requirements</p> |
|--------------------------|---|

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely press ply
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to

REQUIRED SKILLS AND KNOWLEDGE

complete a task

- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for pressing laminated ply
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for pressing laminated ply
- Environmental risks and hazards
- Ply pressing processes
- Laminated ply characteristics
- Hot, cold and combination pressing methods
- Storage systems and labelling
- Established communication channels and protocols
- Principles of cultural diversity and access and equity
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently press laminated ply in line with organisational requirements

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to pressing laminated ply
- following organisational policies and procedures relevant to pressing laminated ply
- pressing ply in readiness for storage and/or processing
- operating hot and cold pressing equipment to produce laminated ply
- redistributing material on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge

EVIDENCE GUIDE

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management

RANGE STATEMENT

- elimination of hazardous materials and substances
 - safe forest practices including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Ply** may include:
- species
 - veneer type

RANGE STATEMENT

- laminating method
 - number of plies
 - thickness and sheet size to form a ply assembly (the number of plies glued to form a plywood sheet)
- Work order** is to include:
- instructions for the receipt/despatch and pressing of ply to/from the designated storage location or processing

and may include:

- texture
 - colour
 - type
 - size
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Equipment** is to include:
- cold and hot presses with temperature control, steam pressure control, load and cycle times

Pressing is the process of using a cold or heat driven press to use weight or steam generated pressure to compress the multiple layers of pre-bonded plies together between pressing plates

- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice

RANGE STATEMENT

- body language
- Pre start-up checks** are conducted to ensure:
- equipment has been set-up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance
- Cycle**
- is the process of forming ply and pressing it until it is ready for cooling
 - includes unloading the press and restarting the process to commence another cycle
 - process includes time, pressure and temperature considerations
- Assessing** is to include:
- production conditions (glue application, pre-press delays and ambient temperature)
 - ply assembly (tack level, glue transfer, grip and moisture content)
 - finished ply (thickness, thickness distribution, alignment of veneer, bond strength, ply adhesion, foreign material and overall appearance)
- Tack level** is the degree of stickiness the bonding adhesive (between laminates) is at to be deemed ready for pressing
- Disposing of** may include:
- recycling sub-standard pressed ply
 - re-using sub-standard pressed ply
- Records and reports** may include:
- material type
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication system

RANGE STATEMENT

- Release agent**
- prevents panels or adhesives from sticking to the pressing plates
 - ensures clean separation at opening and unloading
- Overlay panels**
- provide protection to the ply assemblies being pressed from the pressing plates
 - are the first and last sheets placed in the press
- Transferral** may include:
- the use of conveyor belt systems
 - track systems
 - lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
 - assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Shutdown** is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
 - cleaning and maintaining all parts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for immunisation	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to immunising veneer are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>veneer</i> to be <i>immunised</i> is assessed and acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Immunising process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Immunise veneer	<p>2.1. Type and quantity of <i>chemicals</i> and <i>solutions</i> is acquired from planned treatment cycles and prepared</p> <p>2.2. Ancillary equipment used for addition of solution chemicals is operated in line with operating</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures
	2.3. Samples of solution are regularly taken for <i>testing</i> in line with standard operating procedures
	2.4. Load and unload <i>cycles</i> are planned to provide selected treatment and drainage time for veneer
	2.5. Veneer is loaded and unloaded from <i>solution tanks</i> in line with operating procedures
	2.6. <i>Transfer equipment</i> is operated to shift veneer and <i>visual assessment</i> of treated veneer undertaken to establish modifications to treatment process
	2.7. Drainage of treated veneer is monitored to ensure even drying
	2.8. Dried veneer panels are packed and <i>marked</i> in line with standard operating procedures
	2.9. Veneer panels where the immunisation process has failed are rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.10. Veneer immunising process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Clean up and store chemicals	3.1. Veneer immunisation clean up procedures are followed in line with OHS legislation and site procedures
	3.2. Treating mechanisms are checked for effective condition
	3.3. Treatment area is kept clear of dust, shavings and debris in line with OHS requirements
	3.4. Chemicals and solutions are stored in line with statutory requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely immunise veneer
- Communication skills and interpersonal techniques sufficient to interact

REQUIRED SKILLS AND KNOWLEDGE

appropriately with colleagues and others in the workplace

- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for immunising veneer
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for immunising veneer
- Environmental risks and hazards
- Veneer immunising techniques
- Methods of visual inspection
- Characteristics of veneer, chemicals and chemical solutions

- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for veneer immunising

and may include:

RANGE STATEMENT

- treating method
- colour
- type
- width
- length
- thickness
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn

Immunising

is the process of dipping veneer in solution tanks filled with chemical solutions designed to penetrate the veneer, kill any existing insects and prevent any further insect attack which may affect the visual appearance of the veneer

Storage locations may include:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension

RANGE STATEMENT

	<ul style="list-style-type: none"> • stack number • weight • grade • shelf life • stock rotation position
Equipment may include:	<ul style="list-style-type: none"> • chemical solution tanks • chemical mixing and transfer equipment • veneer transfer equipment <p>and is to include:</p> <ul style="list-style-type: none"> • procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
Communication may include:	<ul style="list-style-type: none"> • verbal and non-verbal language • constructive feedback • active listening • questioning to clarify and confirm understanding • use of positive, confident and cooperative language • use of language and concepts appropriate to individual social and cultural differences • control of tone of voice • body language
Chemicals may include:	<ul style="list-style-type: none"> • insecticides • solvents • preservative oils • waterborne preservatives
Solutions	are the mix of chemicals to achieve enterprise, customer requirements and/or regulations
Testing	is conducted to ensure the chemical solution is still as specified
Cycle	is the process of immunising veneer from start to finish with one batch of veneer and then commencing a new cycle
Solution tanks	are large tanks filled with chemical solution that veneer is transferred to and held suspended in, for the specified time to allow the chemicals to impregnate the veneer

RANGE STATEMENT

Transfer equipment may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Visual assessment

is the assessment of veneer to determine finish quality and faults

Marking may include:

- batch number
- treatment type
- client identification
- destination
- address
- contents
- special instructions
- handling instructions

Disposing of may include:

- recycling veneer panels where the immunisation process has failed
- re-using veneer panels where the immunisation process has failed

Records and reports may include:

- treating requirements
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

RANGE STATEMENT

- manual
using a computer-based system or other
appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sanding	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative and organisational requirements</i> relevant to profile sanding products are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>profiles</i> to be <i>sanded</i> is acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Sanding process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Sand profiles	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Sanding profile and <i>feed rate</i> are set for optimal smoothing of product and adjusted to suit varying products</p>

ELEMENT	PERFORMANCE CRITERIA
	2.3.Sanding is conducted in line with site requirements
	2.4. <i>Dust extraction</i> equipment is regularly checked and cleaned to avoid blockages
	2.5. <i>Products</i> are <i>visually assessed</i> to ensure specified outcome has been achieved
	2.6. <i>Sanding medium</i> is removed and replaced when worn
	2.7.Products with sanding defects are rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.8.Sanding process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Redistribute material	3.1.Products are <i>regraded</i> in line with site requirements and industry standards
	3.2.Material is directed and <i>moved to storage</i> or processing operations in line with site requirements
	3.3.Sub-standard material is rejected and disposed of in line with site requirements
	3.4.Work area is cleaned in line with site requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely sand profiles; effectively visually assess product quality
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for profile sanding products
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for profile sanding products
- Environmental risks and hazards
- Sanding techniques
- Products and profile types
- Methods of visual inspection
- Characteristics of timber and panels
- Distribution processes
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently sand profiled products in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to profile sanding products
 - following organisational policies and procedures relevant to profile sanding products
 - profiling sanding products in readiness for coating, despatch or for interim storage
 - redistributing material on site using designated equipment
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation

Environmental requirements

RANGE STATEMENT

may include:

- organisational policies and procedures
- workplace practices

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for profile sanding of timber or panels

and may include:

- species
- colour
- type
- width
- length

RANGE STATEMENT

- thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Profiles** are the shapes which have been moulded onto timber or cut in panels which the sander in turn must match
- Sanding** is the process of finishing or smoothing timber or panels and removing any machine marks or imperfections to an acceptable standard of smoothness or surface texture, which will allow coating
- Equipment** is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language
- Pre start-up checks** are conducted to ensure:
- machine has been set-up correctly
 - systems are performing accurately
 - machinery is operating to optimum performance

RANGE STATEMENT

- Feed rate** is to include:
- the rate of speed the timber or panel is passed through the sanding machine
 - the impact on equipment
 - the finish
 - the production output
- Dust extraction** is to include:
- machine specific dust extraction systems with collection bags
 - hopper based extraction systems which link all machines to the one extractor source through a series of connected pipes
- Products** may include:
- solid timber or panel moulded strips
 - building components
 - furniture components
 - bench tops
 - shaped panels
 - any articles with moulded or shaped edges/surfaces
- Visually assessed** is to include:
- thickness
 - finish quality
 - sanding faults
- Sanding medium** may include:
- sandpaper
 - emery cloth
 - sanding belts
 - other enterprise selected medium
- Disposing of** may include:
- recycling products with sanding defects
 - re-using products with sanding defects
- Records and reports** may include:
- sanding requirements
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or other appropriate organisational communication

RANGE STATEMENT

system

Regrading

is the process of visually inspecting timber or panels to re-classify quality and use after sanding has taken effect

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for production	<p>1.1. Applicable <i>Occupational Health and Safety (OHS), environmental, legislative and organisational requirements</i> relevant to producing profile sanding shoes and wheels are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>blanks</i> for <i>shoes and wheels</i> to be produced is acquired from stock</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Production process</i> is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Produce shoes and wheels	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Template</i> is produced from tin or other metal plate to match profile</p> <p>2.3. Shoe or wheel is positioned in the machine and shaped in line with the template, stopping regularly to check shaping with template</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Wheels or shoes are labelled to follow the profile
	2.5. Wheels or shoes are installed into the <i>profile sander</i> in readiness for profile sanding operations
	2.6. Templates with defects are rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.7. Production process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. Shoe or wheel shaping equipment is checked for condition and maintained
	3.3. Shaper cutters are checked for blunt or damaged condition and sharpened
	3.4. Tool room is cleaned and cleared of waste in line with site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely produce profile sanding shoes and wheels
- Communication skills sufficient to use appropriate communication and interpersonal techniques with colleagues and others
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of

Organisational requirements may include:

Work order is to include:

instructions for profiles of sanding wheels and shoes including:

- size
- shape
- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients

RANGE STATEMENT

- colleagues
- managers

Blanks

are the outer part of the profile sander wheels and shoes with their hard rubberised/plasticised surface (like a solid tyre) which are then shaped to meet the need of a given profile

Shoes and wheels

- are the attachments on the profile sanding machine which provide the sanding medium support to achieve profile
- shoes are a static part
- wheels are a moving part

Equipment is to include:

- shoe and wheel shaping equipment such as milling machines and metal lathes
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source

Production process is to include:

- mounting a wheel in a metal lathe
- shoe in a milling machine
- forming the shape of the profile in the blank with the aid of a template

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Template

- is a thin piece of metal such as tin which is cut to match the profile of the product requiring profile sanding
- is used to gauge the shaping process to achieve

RANGE STATEMENT

- Profile sander**
- the matching shape on the blank wheel or shoe
 - is the piece of machinery which profile sands timber and timber components
 - utilises wheels and shoes to provide a base to the sanding medium which in turn smoothes the timber
- Disposing of** may include:
- recycling templates with defects
 - re-using templates with defects
- Records and reports** may include:
- shaping requirements
 - product type
 - size
 - inspection
 - grading and labelling outcomes
 - storage locations
 - quality outcomes
 - hazards
 - incidents
 - equipment malfunctions
- and may be:
- manual
 - using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for pressing	<p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to operating a continuous press are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>chips, flakes or fibre</i> to be pressed is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. <i>Pressing</i> process is selected in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p>
2. Form and press board	<p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Press pressures, temperatures and product parameters are set and adjusted for production requirements</p> <p>2.3. Operational condition and set-up of <i>former</i> is</p>

ELEMENT**PERFORMANCE CRITERIA**

- checked to confirm mat condition
- 2.4. **Forming equipment** is checked for defects and positioned to load press in line with operating procedures
- 2.5. Boards are pressed while monitoring and adjusting board position, **feed rate**, mat condition and press condition
- 2.6. Size changes and line speeds are planned to meet production schedules
- 2.7. Pressed board and thickness changes are regularly assessed and necessary changes made to former, press set-up and **blending** requirements
- 2.8. Board samples are **tested** to confirm following of industry standard and to check for **defects**
- 2.9. Finished boards are **transferred** for further processing in line with site requirements
- 2.10. Finished boards with defects are rejected and **disposed of** in line with site procedures and environmental requirements
- 2.11. Pressing process and equipment faults are **recorded and reported** to the appropriate personnel
3. Shut down and clean equipment
- 3.1. **Shutdown** procedures are coordinated with designated stop time and other line operators, and followed in line with OHS legislation and site procedures
- 3.2. Board and forming equipment are separated and removed from press using unloading equipment
- 3.3. Blending equipment, press and handling equipment are stripped and cleaned in line with site operating procedures
- 3.4. Machine area is kept clear of foreign material, dust and debris in line with OHS requirements

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely press board with a continuous press
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and maintain information relating to pressing board with a continuous press
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for operating a continuous press
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for operating a continuous press
- Environmental risks and hazards
- Board pressing processes
- Continuous press procedures
- Chip, flake and fibre characteristics
- Blending methods
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently press board with a continuous press in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to operating a continuous press
- following organisational policies and procedures relevant to operating a continuous press
- pressing board with a continuous press in readiness for storage and/or processing
- operating the blending and continuous press equipment to bond and produce board
- redistributing material on site using designated equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks,

EVIDENCE GUIDE

with questioning on required knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements

RANGE STATEMENT

- Board** may include:
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
 - medium density fibreboard
 - chipboard
 - fibreboard
 - other manufactured board products
- Work order** is to include:
- instructions for the receipt/despatch and pressing of board to/from the designated storage location or processing
- and may include:
- texture
 - colour
 - type
 - size
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Chips, flakes and fibre**
- chips are an output of breaking down logs into wood chips approximately the size of a 50 cent coin and then breaking these down to form smaller chips for chipboard production
 - fibre is the output product as a result of smashing wood chips into fibrous material which is then used to produce medium density fibreboard
 - flakes are the output product as a result of converting wood chips into a thinner chip material which is then used to produce panel products
- Storage location** may include: the use of:
- storage racks
 - storage bays

RANGE STATEMENT

- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Equipment is to include:

- continuous presses with continuous forming lines

Pressing

- is the process of compressing the blended chips, flakes or fibre into board using formers and a heat driven press system
- includes consideration of weight, thickness, length, width, bond, porosity, moisture content, bare fibres, foreign material, visual appearance, surface blemishes and trimmed edge appearance

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- equipment has been set-up correctly
- systems are performing accurately

RANGE STATEMENT

- machinery is operating to optimum performance
- Former** is the piece of equipment which shapes the molten chips, flakes or fibre into sheet form
- Forming equipment** is to include:
- mats
 - screens
 - trays
 - plates
- Feed rate** is the rate of speed the blended material is pumped into the former
- Blending** is the mixing of the chips, flakes or fibre with the binding ingredients and hardening agents
- Testing**
- is the process of measuring moisture content, weight, thickness and density of the panels to achieve the desired outcome for all of these
 - information ensures accurate forming and cycle times and allows for adjustment of the cycles accordingly
- Defects may include:**
- surface blemishes
 - discolouration
 - natural timber defects
 - clean scalping from pendistors
 - forming deformities
- Transferral** may include: the use of:
- conveyor belt systems
 - track systems
 - lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
 - assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment
- Disposing of** may include:
- recycling finished boards with defects
 - re-using finished boards with defects

RANGE STATEMENT

Records and reports may include:

- material type
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
 - using a computer-based system or other appropriate organisational communication system
- Shutdown** is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
 - cleaning and maintaining all parts

FPIWPP3227B Vacuum paint

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to paint articles using a vacuum painting line with drying ovens and de-nibbing machines

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP3227A Vacuum paint

Application of the Unit

Application of the unit

The unit involves vacuum painting in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------|---|
| 1. Prepare for painting | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to vacuum painting are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of articles to be vacuum painted is acquired from the <i>storage location</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Vacuum painting process, <i>feed rates</i> and <i>paint</i> are selected and planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Vacuum paint | <p>2.1. Paint products are loaded in equipment in line with manufacturer's specifications</p> <p>2.2. <i>Paint templates</i> are manufactured and fitted to manufacturer's specifications</p> <p>2.3. Vacuum coater is run in line with recipes and</p> |

ELEMENT**PERFORMANCE CRITERIA**

- manufacturer's recommendations
- 2.4. Paint is applied with flow rates and *viscosity* continually monitored and adjusted in line with site requirements
- 2.5. Paint operations and *wet film thickness* are continually checked with blockages and filters cleared to maintain paint coverage to specifications
- 2.6. Products are regularly checked for surface quality and *contamination* in line with site requirements and corrective action taken
- 2.7. Sub-standard painted items are removed from the painting process and reviewed for *further action*
- 2.8. Test equipment is calibrated and used to regularly test samples of paint
- 2.9. Processing and equipment faults are *recorded and reported* to the appropriate personnel
3. Operate drying oven
- 3.1. Ovens are started and brought to operating temperature in line with manufacturer's specifications
- 3.2. Oven drying processes are monitored in line with operating procedures
- 3.3. Products with oven drying defects are rejected and *disposed of* in line with site procedures and environmental requirements
- 3.4. Adjustments to drying operations are made in response to paint adhesion test results
4. Operate de-nibber
- 4.1. De-nibbing machine is set-up and started in line with manufacturer's recommendations
- 4.2. Profile flap brushes are selected and installed
- 4.3. Sample strips are processed and assessed
- 4.4. Products with de-nibber defects are rejected and disposed of in line with site procedures and environmental requirements
- 4.5. Adjustments to de-nibbing process are made in line with sample results
- 4.6. De-nibbing machine is operated and monitored in line with standard operating procedures
- 4.7. Routine de-nibbing problems are investigated and resolved
5. Shut down and clean equipment
- 5.1. *Shutdown* procedures are coordinated with other line operators and followed in line with OHS legislation and site procedures
- 5.2. Vacuum coater, dryer and de-nibber are turned off

ELEMENT**PERFORMANCE CRITERIA**

- and equipment flushed in line with organisational standard operating procedures
- 5.3.Excess paint and flushing liquid are disposed of in line with statutory requirements and environmental regulations
- 5.4.Equipment and paint are stored in line with statutory requirements and environmental regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- The ability to follow legislation, regulations, standards, codes of practice and established safe practices and procedures relevant to using a vacuum painting line with drying ovens and de-nibbing machines
- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely vacuum paint
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for vacuum painting
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for vacuum painting
- Environmental risks and hazards
- Vacuum painting operations

REQUIRED SKILLS AND KNOWLEDGE

- Paints, their viscosity, film thickness, film wetness and feed rates
- Paint operations and shut down procedures
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently vacuum paint within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to vacuum painting
- following organisational policies and procedures relevant to vacuum painting
- using vacuum paint in line with the work order and within prescribed organisational requirements
- conducting paint operations and shut-down procedures

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised

EVIDENCE GUIDE

work practices, safety requirements and environmental constraints

- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity

RANGE STATEMENT

Organisational requirements may include:

- anti-discrimination
- relevant industry codes of practice
- duty of care
- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Vacuum painting

- consists of a small box-like chamber with a part profile cut into two opposite sides where preheated parts are passed through the chamber and flooded with paint
- places this chamber under constant negative pressure to prevent paint escaping from the openings
- allows the painting operation to easily keep up with the rest of the line by painting at least three parts per minute
- process conveys parts from the paint station, into a drying oven where they emerge 10 minutes later, dry and ready for packaging
- instructions for the painting of products

Work order is to include:

and may include:

- type
- size
- length
- thickness
- quantity
- grade
- instructions for the environmental monitoring

RANGE STATEMENT

- of work and procedures
- environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Storage locations** may include: the use of:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- and may be divided into:
- standard product classification
 - product designation
 - size
 - dimension
 - stack number
 - weight
 - grade
 - shelf life
 - stock rotation position
- Equipment** is to include:
- vacuum painting chambers
 - drying ovens
 - de-nibbers together with continuous roller conveyors
- Feed rates** is to include:
- the rate of speed the paint is passed through the vacuum painting equipment affecting the risk of equipment blockage
 - the finish of the material
 - the production output
- Paint** includes:
- paints suitable to vacuum coating
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback

RANGE STATEMENT

- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language
- see vacuum painting

Paint template

Viscosity

is the amount of resistance to flow or stickiness of the paint

Wet film thickness

is the amount of paint build up, while wet, maintained over the timber product during the painting process

Contamination may include:

- dust
- water spots
- oil spots from equipment or oily finger prints

and may cause:

- orange peel effect
- incomplete cover
- solvent boil
- other coating defects

Further action may include:

- re-painting sub-standard painted items
- recycling sub-standard painted items
- re-using sub-standard painted items

Records and reports may include:

- product type
- feed rate
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system

RANGE STATEMENT

- Disposing of** may include:
- Shutdown** is to include:
- other appropriate organisational communication system
 - recycling products with defects
 - reusing products with defects
 - procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source cleaning and maintaining all parts
 - storage of paints

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------|---|
| 1. Prepare for drying | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to drying wood flakes are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>flakes</i> to be <i>dried</i> is assessed and acquired from the production process</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Drying process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Dry flake | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. Dryer and hot oil system are started and continually monitored in line with operational procedures</p> <p>2.3. <i>Emergency shut-down</i> procedures are followed in</p> |

ELEMENT	PERFORMANCE CRITERIA
	response to a fire
	2.4. Drying temperature, humidity and <i>feed rate</i> are set for optimal recovery of product
	2.5. Flake is positioned and fed at rate appropriate to the machine speed, capacity, flake <i>moisture content</i> , thickness and condition
	2.6. Flake is <i>visually assessed</i> and moisture levels measured to ensure specified outcome has been achieved
	2.7. <i>Out-feed</i> is coordinated to ensure efficient recovery of dried flake
	2.8. Sub-standard flake is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.9. Drying process and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Redistribute flake	3.1. Flake is <i>regraded</i> in line with site requirements and industry standards
	3.2. Flake is directed and <i>moved to storage</i> or processing operations in line with site requirements
	3.3. Sub-standard material is rejected and disposed of in line with site requirements
	3.4. Work area is cleaned in line with site requirements
4. Conduct operator maintenance	4.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	4.2. Drying mechanisms are checked for effective condition
	4.3. Oil levels, air filters, conveyors and chains are checked, replenished or maintained
	4.4. Drying area is kept clear of dust, shavings and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely dry flake; safely operate dryer and hot oil systems; visually assess flake
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for drying wood flakes
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for drying wood flakes
- Drying techniques
- Methods of visual inspection and characteristics of flake
- Distribution processes
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information
-

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently dry flake in line with organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to drying wood flakes
- following organisational policies and procedures relevant drying wood flakes
- drying flake in readiness for storage and/or processing
- redistributing flake on site using designated equipment
- conducting operator maintenance on drying equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must

EVIDENCE GUIDE

also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment

RANGE STATEMENT

- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying
- legislation
- organisational policies and procedures
- workplace practices

Environmental requirements
may include:

Legislative requirements:

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

Organisational requirements
may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements

RANGE STATEMENT

(waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

- instructions for the drying of flake

and may include:

- species
- colour
- type
- size
- thickness

and may also include:

- quantity
- instructions for the environmental monitoring of work and procedures
- environmental care requirements relevant to the work

Appropriate personnel may include:

- supervisors
- suppliers
- clients
- colleagues
- managers

Flakes

- are used to produce chipboard
- are another process of breaking down wood or wood chips

Drying may include:

- pre-dryers
- dryers
- cooling sections
- steam
- heated air
- gas

Equipment may include:

- single pass or multi pass dryers
- flash dryers
- furnaces and ancillary equipment such as continuous conveyor
- pre-dryers
- cooling sections
- dry and wet silo storage
- fuel feed systems
- combustors
- oil heating systems

RANGE STATEMENT

- dust silos
- emergency generators
- effluent systems
- sluice systems
- recirculated air systems
- furnace systems
- fire control and suppression systems
- knife mill systems
- wet gisiger systems
- in-feed systems

and is to include:

- procedures for equipment lock-out such as protecting operators and co-workers from accidental injury by isolating the machine from the power source

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machinery has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Emergency shut-down

is the immediate shutting off of the equipment to prevent an accident or prevent damage to the machine or product

Feed rate is to include:

- the rate of speed the material is passed through the drying equipment
- the impact on equipment
- the finish
- the production output

RANGE STATEMENT

Moisture content

- is the amount of moisture maintained in timber or timber products after drying to avoid cracking and deforming
- in Australia generally ranges between 10% in warmer, more humid climates to 14% in cooler climates

Visually assessed is to include:

- the assessment of flakes to determine finish quality and faults

Out-feed

is the flake exiting from the drying operation

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Records and reports may include:

- drying requirements
- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system other appropriate organisational communication system

Regrading

is the process of visually inspecting flake to re-classify quality and use after drying has taken place

Movement of flakes may include: the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders

RANGE STATEMENT

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

FPIWPP3229B Classify flake

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to operate specialist equipment to classify flake in readiness for downstream production of panel products, while monitoring and maintaining the flow of operation. The unit includes operator maintenance

General workplace legislative and regulatory requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPIWPP3229A Classify flake

Application of the Unit

Application of the unit

The unit involves classifying flake in a forest products factory setting

The skills and knowledge required for competent workplace performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------------|--|
| 1. Prepare for flake classification | <p>1.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental</i>, <i>legislative</i> and <i>organisational requirements</i> relevant to classifying flake are identified and followed</p> <p>1.2. <i>Work order</i> is reviewed and checked with <i>appropriate personnel</i></p> <p>1.3. Type and quantity of <i>flake</i> to be <i>classified</i> is <i>assessed</i> and acquired from the <i>stockpile</i></p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in line with manufacturer's recommendations</p> <p>1.5. Flake classifying process is planned in line with site procedures</p> <p>1.6. <i>Communication</i> with others is established and maintained in line with OHS requirements</p> |
| 2. Classify flake | <p>2.1. <i>Pre start-up checks</i> are carried out on equipment in line with site requirements</p> <p>2.2. <i>Screens</i> and <i>feed systems</i> are adjusted to separate flake into required sizes</p> |

ELEMENT	PERFORMANCE CRITERIA
	2.3. Equipment is operated to classify flake into size categories and regularly checked in line with site requirements
	2.4. Flake flow, usage and <i>silo</i> levels are monitored and action taken to ensure optimal production and availability of sufficient storage space
	2.5. Output is directed to designated silos and blockages immediately cleared to ensure smooth <i>transfer</i>
	2.6. Faults requiring <i>emergency shutdown</i> are detected and action taken to rectify the problem
	2.7. Flake unsuitable for classification is rejected and <i>disposed of</i> in line with site procedures and environmental requirements
	2.8. Processing and equipment faults are <i>recorded and reported</i> to the appropriate personnel
3. Conduct operator maintenance	3.1. Equipment lock-out procedures are followed in line with OHS legislation and site procedures
	3.2. <i>Grinding elements</i> are checked for faulty, blunt or damaged condition
	3.3. Grinding elements are removed and replaced in line with manufacturer's recommendations
	3.4. Machine and surrounding area is kept clear of foreign matter and debris in line with OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely classify flake
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information, and maintain documentation
- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task

REQUIRED SKILLS AND KNOWLEDGE

- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Basic knowledge and understanding of applicable Commonwealth, State or Territory legislation, regulations, standards and codes of practice relevant to the full range of processes for classifying flake
- Environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for classifying flake
- Environmental risks and hazards
- Characteristics of flake and silo levels
- Flake classification process
- Storage systems and labelling
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently classify flake within organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

EVIDENCE GUIDE

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to classifying flake
 - following organisational policies and procedures relevant to classifying flake
 - classifying flake in line with the work order and within prescribed organisational requirements
 - conducting operator maintenance on flake classifying equipment
 - storing flakes in line with organisational requirements and OHS regulations
- Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
 - Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
 - Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
 - Assessment is to follow relevant regulatory or Australian Standards requirements
 - The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions
- Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
 - Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
 - Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge
 - Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE

particular circumstance, but is able to be transferred to other circumstances

- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and

RANGE STATEMENT

- carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices
- Legislative requirements:** are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:
- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)
- Work order** is to include:
- instructions for the assessment of flake and the flake grade
- and may include:
- feed rate
 - quantity
 - instructions for the environmental monitoring

RANGE STATEMENT

- Appropriate personnel** may include:
- of work and procedures
 - environmental care requirements relevant to the work
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Flake** is the output product as a result of converting wood, wood dust, planer shavings, shredded board or woodchips into flake which is then used to produce panel products
- Classifying** is the separation of flake into size categories, species, core fraction, surface fraction, overs and dust
- Assessing** is to include:
- screen fractions
 - species
 - size
 - moisture content
 - contamination issues associated with selected flake
- Stockpile** is the piles of available wood flake ready for classification to size and species
- Equipment** may include:
- classifiers
 - flake towers
 - screens
 - sifters
 - silos
 - mechanised feed systems
- and is to include:
- procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding

RANGE STATEMENT

- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Pre start-up checks

are conducted to ensure:

- machine has been set-up correctly
- systems are performing accurately
- machinery is operating to optimum performance

Screens

are the sorting devices which separate flake according to size and type

Feed systems may include:

- conveyors
- transfer cars or chutes which continually provide flake to the classifier

Silos

are large storage towers or buildings where classified flake is pumped to in readiness for downstream production

Transfer is to include:

- the process of moving the classified flake from the classifier to the silos

and may include:

- regular feed systems
- blow lines
- drag chains

Emergency shutdown

is the immediate shutting off of equipment to prevent an accident or prevent damage to the machine or product

Disposing of may include:

- recycling flake unsuitable for classification
- re-using flake unsuitable for classification

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents

RANGE STATEMENT

- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Grinding elements may include:

- screens
- hammers
- blades contained within the classifier for the separation of flake

- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Work order is to include:

instructions for producing decorative veneer

and may include:

- species
- colour
- type
- width
- length
- thickness

RANGE STATEMENT

- quantity matching method
 - joining method
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Decorative veneers** may include:
- growth ring
 - ray
 - ribbon
 - wavy
 - curly
 - fiddle-back
 - crotch
 - swirl
 - birds eye
 - burl
 - burr
 - butt
 - stump
- Production** may include:
- book matching
 - end matching
 - four piece butt matching
 - diamond matching
 - herring-bone matching
 - segmental matching
 - slip drawn matching
- Equipment** may include:
- clipping machines
 - guillotines
 - measuring equipment
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative

RANGE STATEMENT

language

- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Defects may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Layout design

is the production method stipulated by the work order or customer and is to be laid out in the pattern which best accentuates the decorative veneer

Panel products may include:

- medium density fibreboard
- chipboard
- fibreboard
- plywood
- other manufactured board products

Disposing of may include:

- recycling sub-standard material
- re-using sub-standard material

Records and reports may include:

- product type
- size
- inspection
- grading and labelling outcomes
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or other appropriate organisational communication system

Regrading

is the process of visually inspecting veneer to re-classify its quality and use after production has

RANGE STATEMENT

taken effect

Movement of material may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- assistance with lifting such as:
 - the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Veneer

- is the thin sheet of timber (varying in thickness to suit organisational or customer specifications) used to produce the layers of plywood
- types are usually referred to as quarter sawn, back sawn and radial (or rotary) sawn
- instructions for the slicing of timber veneer from prepared flitches

Work order is to include:

and may include:

- type
- width

RANGE STATEMENT

- length
 - thickness
 - quantity
 - instructions for the environmental monitoring of work and procedures
 - environmental care requirements relevant to the work
- Appropriate personnel** may include:
- supervisors
 - suppliers
 - clients
 - colleagues
 - managers
- Slicing** is the process of removing timber in leaf form from a prepared flitch using a vertical or horizontal slicing machine
- Storage locations** may include: the use of:
- storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays (stand, frame or ground)
- Equipment** is to include:
- a vertical or horizontal slicing machine
 - procedures for equipment lock-out, ie protecting operators and co-workers from accidental injury by isolating the machine from the power source
- Communication** may include:
- verbal and non-verbal language
 - constructive feedback
 - active listening
 - questioning to clarify and confirm understanding
 - use of positive, confident and cooperative language
 - use of language and concepts appropriate to individual social and cultural differences
 - control of tone of voice
 - body language

RANGE STATEMENT

Flitches

are logs which have been debarked and rough squared to be accommodated in a flitch slicing machine to allow the horizontal slicing of veneer, either quarter sawn or back sawn

Defects may include:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets

Disposing of may include:

- recycling material with defects and rejected flitch and backing-boards
- re-using material with defects and rejected flitch and backing-boards

Records and reports may include:

- product type
- size
- profile
- inspection
- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system or another appropriate organisational communication system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| <ol style="list-style-type: none"> 1. Plan production 2. Monitor panel production performance | <ol style="list-style-type: none"> 2.1. Applicable <i>Occupational Health and Safety</i> (OHS), <i>environmental, legislative</i> and <i>organisational requirements</i> relevant to planning and coordinating panel production are identified and followed 2.2. Variations in panel characteristics are assessed, recorded and reported to <i>operators</i> 2.3. <i>Panel production</i> schedules are produced and applied in line with site procedures 2.4. <i>Panel type</i> and sizes including order information are planned, scheduled and communicated to operators 2.5. <i>Production methods</i> are planned and prescribed 2.6. <i>Communication</i> with others is established and maintained in line with OHS requirements 2.7. Production methods are reviewed for suitability to planned schedules and <i>production orders</i> 2.8. Panel production is monitored for effectiveness of |
|---|---|

ELEMENT**PERFORMANCE CRITERIA**

- forming, laminating or veneering procedures and condition of panels
- 2.9. Assistance is provided to operators with the evaluation of panels and production problems
- 2.10. Panel management and *output* are monitored to record possible process improvements
- 2.11. Panel production, major problems and equipment faults are investigated, *recorded and reported* in line with site requirements
- 2.12. Processes for rejecting and *disposing of* sub-standard panels produced are developed in line with site procedures and environmental requirements
3. Coordinate panel production
- 3.1. Production and output are monitored to record and action possible process improvements based on production methods and panels being processed
- 3.2. Modifications are made to production methods or schedules to ensure optimum performance and communicated to operators
- 3.3. Production improvement modifications are documented and communicated in line with site procedures
- 3.4. Production output details are obtained and recorded in line with site requirements
- 3.5. Produced panels are directed to *storage* or *transferred* for further processing
- 3.6. Operating logs and cutting records are completed and maintained to site standards

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to use and maintain relevant tools, machinery and equipment; efficiently and safely plan and coordinate panel production
- Communication skills and interpersonal techniques sufficient to interact appropriately with colleagues and others in the workplace
- Literacy skills sufficient to accurately record and report workplace information,

REQUIRED SKILLS AND KNOWLEDGE

and maintain documentation

- Numeracy skills sufficient to estimate, measure and calculate time required to complete a task
- Problem solving skills sufficient to identify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for planning and coordinating panel production
- Environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, minimising carbon emissions and the cleaning of plant, tools and equipment
- Organisational and site standards, requirements, policies and procedures for planning and coordinating panel production
- Environmental risks and hazards
- Panel production procedures and management
- Panel types and production methodologies
- Established communication channels and protocols
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance
- Appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- Procedures for recording and reporting workplace information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently plan and coordinate panel production in line with organisational requirements

Critical aspects for assessment and

The evidence required to demonstrate competency in this

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice relevant to planning and coordinating panel production
- following organisational policies and procedures relevant to planning and coordinating panel production
- planning and coordinating panel production for the enterprise
- modifying production methods and schedules for panel production within the enterprise
- coordinating personnel to follow planning, communications and scheduling for panel production

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to follow relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to undertaking work applicable to this unit
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge
- Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the required knowledge

EVIDENCE GUIDE

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements:

are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management

RANGE STATEMENT

- elimination of hazardous materials and substances
 - safe forest practices including required actions relating to forest fire
 - manual handling including shifting, lifting and carrying
- Environmental requirements** may include:
- legislation
 - organisational policies and procedures
 - workplace practices

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - OHS
 - the environment
 - equal opportunity
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care
- Organisational requirements** may include:
- legal
 - organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - OHS, emergency and evacuation procedures
 - ethical standards
 - recording and reporting requirements
 - equipment use and maintenance and storage requirements
 - environmental management requirements (waste minimisation and disposal, recycling and re-use guidelines)

Operators are the personnel who use the production machinery and equipment to form and laminate

RANGE STATEMENT

boards, apply laminates and veneers to board

Panel production may include:

- board forming
- board lamination
- the application of laminates and veneers to boards

Panel types may include:

- laminated
- veneered
- plywood
- chipboard
- fibreboard
- medium density fibreboard

with a range of:

- sizes
- surface treatments
- thicknesses
- grades

Production methods may include:

- one or more of the following:

board forming, which is :

- the process of spreading a blend mixture over a former in line with order size and pressing it with heat and pressure to produce a hard panel

pressing board using the daylight process includes:

- compressing the blended chips, flakes or fibre into board using formers and a heat driven press system including consideration of weight, thickness, length, width, bond, porosity, moisture content, bare fibres, foreign material, visual appearance, surface blemishes and trimmed edge appearance

board laminating, which is to include:

- the glue mix used to bond and press sheets of paper to varying types of board (usually a type of ply) including panel size, panel thickness, glue application and finishing processes

and may include:

- the process of trimming paper to a square edge or bevel
- pressing laminated ply using a cold or heat

RANGE STATEMENT

driven press to use weight or steam generated pressure to compress the multiple layers of pre-bonded plies together between pressing plates

application of laminates or veneers, which is to include:

- the glue mix used to bond sheets of veneer or laminate to varying types of board including panel size, panel thickness, laminate or veneer type, glue application and finishing processes. It may include the process of trimming laminate or veneer to a square edge or bevel

Communication may include:

- verbal and non-verbal language
- constructive feedback
- active listening
- questioning to clarify and confirm understanding
- use of positive, confident and cooperative language
- use of language and concepts appropriate to individual social and cultural differences
- control of tone of voice
- body language

Production order is to include:

- instructions for the production of panels and despatch to downstream operations

and may include:

- batch requirements
- type of product
- size
- quantity
- grade

Output is to include:

- size
- volume recovery
- finish
- dimensional consistency
- quality of panels produced

Records and reports may include:

- planning and monitoring outcomes
- operating logs
- production records
- material movement
- despatch outcomes

RANGE STATEMENT

- storage locations
- quality outcomes
- hazards
- incidents
- equipment malfunctions

and may be:

- manual
- using a computer-based system other appropriate organisational communication system

Disposing of may include:

- recycling sub-standard panels produced
- re-using sub-standard panels produced

Storage may include:

the use of:

- storage racks
- storage bays
- bins
- stacks
- pallet boxes
- modularised storage components
- temporary stacking bays (stand, frame or ground)

and may be divided into:

- standard product classification
- product designation
- size
- dimension
- stack number
- weight
- grade
- shelf life
- stock rotation position

Transferral may include:

the use of:

- conveyor belt systems
- track systems
- lifting equipment such as:
 - fork lifts
 - slings
 - trolley jacks

RANGE STATEMENT

- gantry cranes
- loaders

assistance with lifting such as:

- the involvement of two or more personnel to lift materials manually or to guide the movement of mechanical equipment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse market information	<p>1.1. Markets for existing or new products or services are identified, researched and analysed for possible entry or development.</p> <p>1.2. Past trends and developments are analysed to determine market variability and associated risks.</p> <p>1.3. Market environment is continually monitored in a consistent manner to ensure information is current and reliable.</p> <p>1.4. The legal, ethical and environmental constraints of the market(s) and their effect on the enterprise are identified.</p> <p>1.5. Product mix that suits market requirements/price advantage at the time is adopted.</p>
2. Develop a marketing plan	<p>2.1. Alternative marketing strategies and techniques are assessed and interpreted to identify marketing targets and methods.</p> <p>2.2. Marketing strategies are based on reliable data, market environment and substantiated trends.</p> <p>2.3. Marketing options incorporate suitable advice from marketing professionals.</p> <p>2.4. A measurable cost-effective marketing plan is developed incorporating a reasoned analysis of market research and business plan objectives.</p>
3. Implement marketing activities	<p>3.1. Planned marketing activities are scheduled within appropriate timeframes.</p> <p>3.2. Measurable performance targets are developed and meet business plan objectives.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Distribution channels are organised, and product and service information is accurate and readily available to clients.</p> <p>3.4. Marketing activities are implemented within budgetary constraints to meet legal, ethical and enterprise requirements.</p>
4. Evaluate marketing performance	<p>4.1. Product, pricing and distribution policies are monitored in relation to market changes, marketing objectives and enterprise requirements.</p> <p>4.2. Areas of positive performance are identified and corrective action is taken to remedy poor performance areas.</p> <p>4.3. An objective assessment of the marketing plan and implementation is made by a comparison of valid and reliable data against performance targets.</p> <p>4.4. Relevant information is documented for continual analysis and effective planning management.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analyse with regard to market research and assessments
- manage information
- assess financial strategies and prepare budgets
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none"> • price risk management • performance evaluation measures • competitors strengths and weaknesses • business planning process • customer relations policies • market conditions and forces • enterprise goals, objectives and directions • markets and market analysis • communication and promotion skills • marketing principles and practice • principles of trend analysis.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • collect, analyse and present data in the internal and external business environment • assess alternative marketing strategies and techniques to meet business plan objectives • plan and implement a marketing strategy • monitor product, pricing and distribution policies to improve market performance.
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Markets may include:	<ul style="list-style-type: none"> • wholesalers • retailers • exporters • local, national and/or international customers • private and public sector organisations and enterprises.
Marketing strategies may include:	<ul style="list-style-type: none"> • various information with regard to: <ul style="list-style-type: none"> • pricing • promotion • product quality • service standards • distribution channels.

AHCARB204A Undertake standard climbing techniques

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of climbing small trees with ropes and harness for the purpose of pruning and defines the standard required to: carry out pre-operational and safety checks; identify and report site and tree hazards and implement risk controls; select, prepare and inspect ropes, harnesses and other equipment associated with climbing trees; safely climb/ascend and descend a tree with rope and harness; climb using documented low risk work methods; inspect for faults and store ropes, harnesses and other climbing and safety equipment and record and replace if worn or faulty.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to the basic techniques used to climb trees in Arboriculture and applies to a climbing tree worker. This standard involves working under routine supervision with intermittent checking by supervisors or qualified arborists. Climbing techniques follow documented low risk work methods and procedures.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for climbing operations	<p>1.1.Climbing instructions and methods are determined according to enterprise Standard Operating Procedures (SOPs).</p> <p>1.2.Hazards associated with the climb are identified and reported to the supervisor.</p> <p>1.3.Climbing tools and equipment are selected, prepared and used according to supervisor's instructions and manufacturer's guidelines.</p>
2. Tie knots required for tree climbing operations	<p>2.1.Ropes specific to the task are selected and inspected for wear, damage and soundness.</p> <p>2.2.Industry recognised knots are used in accordance with the required application.</p> <p>2.3.All knots are checked on completion in accordance with established workplace practice.</p>
3. Climb trees in a low hazard work environment	<p>3.1.Personal Protective Equipment (PPE) and safety equipment is selected, maintained and used according to enterprise procedures.</p> <p>3.2.Climbing is undertaken using standard industry methods, enterprise SOPs and according to Occupational Health and Safety (OHS) requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and report risks
- select and prepare climbing tools and equipment
- select and inspect ropes
- use industry recognised knots
- climb trees and use ropes
- estimate tree heights and loads
- interpret supervisors directions and communicate with fellow team members
- minimise noise, dust, and high activity vehicle traffic to prevent nuisance-level environmental disturbance
- follow guidelines, instructions and supervision
- participate and contribute to team objectives
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- basic climbing principles and preparation procedures
- basic climbing techniques and planning
- safe working limit of ropes
- safe work practices relevant to tree climbing activities
- tree anatomy and physiology
- local government tree protection and preservation regulations
- AS4373-2007 Pruning of amenity trees
- relevant Code of Practice.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • carry out pre-operational and safety checks • identify and report site and tree hazards, and implement risk controls • select, prepare and inspect ropes, harnesses and other equipment associated with climbing trees • safely climb/ascend and descend a tree with rope and harness • climb using documented low risk work methods • inspect for faults and store ropes, harnesses and other climbing and safety equipment and record and replace if worn or faulty.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Trees may include:	<ul style="list-style-type: none"> • all species of trees and woody tree like vegetation forms where trees are healthy, free from decay, disease and pests, and are free from embedded objects such as wire, nails or spikes and are NOT prone to branch failure.

RANGE STATEMENT

Knots may include knots such as:

- bowline
- bowline on a bight
- tautline
- prussik
- figure 8
- clove hitch
- half hitch.

AHCARB206A Undertake stump removal

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of removing tree stumps from the ground with the aid of motorised stump grinders and defines the standard required to: conduct pre-operational and safety checks on machinery and equipment; perform hazard identification and risk control procedures; inspect the work area to determine method of removal using the risk controls; select and safely use a range of stump removal machinery and equipment; perform operational maintenance on stump removal machinery and equipment.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the mechanical removal of tree stumps using a stump grinding machine.
--------------------------------	--

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for stump removal operations	<p>1.1.Site location and details regarding the removal of stumps is collected and interpreted.</p> <p>1.2.All underground services are located according to supply authorities' guidelines.</p> <p>1.3.Tools and equipment are selected according to supervisor's instructions and manufacturer's guidelines.</p> <p>1.4.Site and work zone hazards are identified and recorded, risk level established, and controls checked against the safety plan or safe work method statement.</p> <p>1.5.Suitable Personal Protective Equipment (PPE) is selected, used and maintained such as safety glasses for eye protection.</p>
2. Undertake removal operations	<p>2.1.Pre-operational and safety checks are carried out on stump removing tools and equipment, according to documented guidelines.</p> <p>2.2.Tools and equipment appropriate to the task being undertaken are used according to documented Occupational Health and Safety (OHS) requirements and to manufacturer's specifications.</p> <p>2.3.Stump is removed to agreed depth and spread without damage to underground services and surrounding areas.</p> <p>2.4.Stump hole is back-filled and consolidated to original ground level according to enterprise policy.</p>
3. Complete stump	<p>3.1.Waste material is collected and disposed of and/or recycled in a manner that causes minimal damage to</p>

ELEMENT	PERFORMANCE CRITERIA
removal operation	<p>the environment.</p> <p>3.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and enterprise guidelines.</p> <p>3.3. A clean and safe work area is maintained throughout and upon completion of work according to enterprise Standard Operating Procedures (SOPs).</p> <p>3.4. Relevant records are maintained according to enterprise guidelines.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- conduct pre-operational and safety checks on machinery and equipment
- perform hazard identification and risk control procedures
- inspect the work area to determine method of removal using the risk controls
- select and safely use a range of stump removal machinery and equipment
- perform operational maintenance on stump removal machinery and equipment
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- manufacturer guidelines for operating stump grinding machinery
- environmental implications of removal activities including run off, drainage, salinity and soil erosion, and soil disturbance
- removal practices associated with different soil types
- the effect of adverse outdoor climatic conditions.

AHCARB307A Undertake complex tree climbing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers tree climbing and rigging associated with tree operations such as tree pruning and tree removal in complex situations and defines the standard required to: carry out and record pre-operational and safety checks; conduct a site and tree hazard identification and risk control assessment; inspect a tree and determine safest and best work method using risk controls established; select, inspect and prepare ropes, harnesses and other equipment associated with climbing trees; safely climb/ascend and descend large, hazardous and complex trees using a number of anchor points; climb using documented low risk work methods; inspect for faults and store ropes, harnesses and other climbing and safety equipment and replace if worn or faulty; practice an aerial rescue and document the hazards identified and the risk controls selected.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to advanced techniques used to climb trees in arboriculture and applies to a climbing arborist.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for climbing and tree operations	1.1. Team members are informed of their role and duties in the climbing and tree operations. 1.2. Ropes are selected according to industry specifications and required tree works. 1.3. Ropes are assessed prior to use with damaged and faulty ropes discarded according to enterprise policy. 1.4. Appropriate climbing tools and equipment are selected. 1.5. Ropes, tools and equipment are checked. 1.6. Tree is inspected for safe ascension route.
2. Ascend and descend from trees	2.1. Occupational Health and Safety (OHS) hazards are identified risks assessed and appropriate controls are documented and implemented. 2.2. Personal protective and safety equipment is used and adjusted. 2.3. Trees are ascended using appropriate techniques and equipment. 2.4. Safe anchor points are selected according to strength

ELEMENT	PERFORMANCE CRITERIA
	<p>and suitability requirements.</p> <p>2.5. Tree is descended in a controlled manner according to industry practice.</p>
3. Undertake tree operations	<p>3.1. Required tree operations are carried out according to treatment plans, work procedures and rigging techniques.</p> <p>3.2. Load is balanced, tensioned and lowered in a staged controlled manner using appropriate crane points according to safe work practices, branch weight and rope characteristics.</p> <p>3.3. Staff are communicated with during operations, as required, verbally and by hand signals.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- climb trees and use twin ropes
- select and inspect appropriate equipment
- select and tie a wide range of knots
- select low risk anchor points
- apply a range of tree treatments
- attach and use rigging equipment
- balance and tension a load
- operate chainsaws and pole-saws
- perform aerial rescue techniques
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- identification of tree species and their pruning requirements
- tree pruning techniques appropriate to the pruning requirements of the species
- tree morphology, physiology and Compartmentalisation of Decay in Trees (CODIT) principles
- advanced tree climbing practices and principles including the use of Personal Protective Equipment (PPE) and secondary attachments
- types, uses and safe working limit of ropes and all other equipment
- impact of force under normal/failure conditions
- capability of lifting and lowering equipment
- Safe Working Loads (SWL) relationship between Breaking Strength (BS), Safety Factor (SF), Working Load Limit (WLL) and Cycles to Failure (CTF)
- awareness of power line clearances
- first aid and rescue procedures applicable to tree work
- industry codes of practice
- a broad range of trees and treatments
- advanced chainsaw techniques
- local government tree protection and preservation regulations
- AS4373-2007 Pruning of amenity trees
- relevant Code of Practice.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out and record pre-operational and safety checks
- conduct a site and tree hazard identification and risk

EVIDENCE GUIDE	
	<p>control assessment</p> <ul style="list-style-type: none"> inspect a tree and determine safest and best work method using risk controls established select, inspect and prepare ropes, harnesses and other equipment associated with climbing trees safely climb, ascend and descend large, hazardous and complex trees using a number of anchor points climb using documented safe work methods inspect for faults and store ropes, harnesses and other climbing and safety equipment and replace if worn or faulty. document the hazards identified and the risk controls selected.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Situations may include:	<ul style="list-style-type: none"> complex tree climbing incorporates situations made hazardous by tree branches vulnerable to failure under a load trees affected by decay, disease and/or pests, trees with embedded objects such as wire, nails or spikes proximity of power lines adjacent property or intruding branches the tree's height, size, trunk characteristics, shape and weight distribution of the crown may contribute to making conditions hazardous to a climber or a felling or trimming operation inclement weather may also contribute to making working conditions difficult and hazardous.

RANGE STATEMENT	
Climbing tools and equipment may include:	<ul style="list-style-type: none"> • ropes • safety harnesses • ascending and descending devices • ladders • safety equipment (helmets, ear and eye protection, gloves, boots, etc.) • pulleys and blocks • shackles and karabiners.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check application and personal protective equipment	<p>1.1. Carry out pre-operational checks of application equipment in accordance with manufacturer's specification and OHS requirements.</p> <p>1.2. Prepare application equipment for use in accordance with manufacturer's specification and directions.</p> <p>1.3. Identify and replace any damaged or worn components.</p> <p>1.4. Check personal protective equipment in accordance with manufacturer's specification and OHS requirements.</p>
2. Prepare application equipment	<p>2.1. Apply label information regarding precautions for the chemical mix/substance being used.</p> <p>2.2. Select and use appropriate personal protective and mixing equipment in accordance with MSDSs and chemical label.</p> <p>2.3. Measure, mix and load chemical mix or substances in accordance with directions on chemical label.</p> <p>2.4. Follow legislative and regulatory requirements regarding chemical use including OHS.</p> <p>2.5. Confirm instructions from chemical MSDSs in the event of a spill.</p> <p>2.6. Check that output of application equipment is correct and in accordance with application/spray plan.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Apply chemicals	3.1. Assess and record meteorological conditions and forecasts prior to and during application. 3.2. Select and use appropriate personal protective equipment in accordance with MSDSs and chemical label. 3.3. Apply chemical in accordance with the application/spray plan and/or instructions. 3.4. Assess and minimise risks to others, product integrity and the environment prior to and during application.
4. Finalise work	4.1. Clean and store Personal Protective Equipment (PPE) and application equipment in accordance with manufacturer's specification and OHS requirements. 4.2. Dispose of excess chemicals and use triple rinse drums in accordance with label and MSDSs requirements. 4.3. Complete incident reports as required in accordance with legislative and/or regulatory requirements. 4.4. Complete application records. 4.5. Store unused chemical/products in accordance with label requirements and MSDSs. 4.6. Adhere to all re-entry and withholding periods.
5. Transport and handle chemical	5.1. Confirm precautions for the transport and handling of chemicals. 5.2. Transport and handle chemicals in accordance with legislative and/or regulatory requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and adopt safe work practices
- conduct pre-operational checks of application equipment
- use and maintain personal protective equipment
- measure, mix and load chemical mixes

REQUIRED SKILLS AND KNOWLEDGE

- use hand held and small powered application equipment relevant to the industry sector using safe and environmentally responsible work practices
- interpret labels, record relevant information and measure application amounts
- follow chemical label requirements and application/spray plan
- record activities and maintain records
- transport and handling techniques
- respond to emergencies and apply first aid in the event of pesticide poisoning
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- applied principles of Integrated Pest/Resistance Management
- structure of chemical label and MSDS
- types, applications, storage and fitting of personal protective equipment
- legislation and regulations including OHS and licensing requirements in relation to chemical use
- features and functions of a range of application equipment relevant to the industry sector
- risk factors including human and animal health, spillage and environmental
- principles of transport, handling and storage for chemicals
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- transport and handling requirements
- environmental effects of selected chemicals and how to minimise damaging effects of chemicals
- different broad chemical types, eg, insecticides, herbicides and fungicides and their mode of action symbols on the label
- paths of entry of poisons into the body and methods of limiting exposure
- methods of minimising risk during application
- Regulations and Codes of Practices with regard to hazardous substances of the use of chemicals
- OHS concerning personal safety and safety of others in the workplace
- alternatives to chemicals for pest management
- possible effects on health of bystanders/public in addition to applicators
- weather conditions and means of assessing them in line with risks, and recognising when they become unsuitable for application to continue.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • apply chemicals using handheld or small powered equipment • check, prepare, use and maintain application equipment and personal protective equipment • measure, mix, transport, handle store and dispose of chemicals • comply with OHS, chemical label and MSDSs requirements.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the need for chemical use	1.1.Nature and level of the pest, weed infestation or disease is identified. 1.2.Need for control is assessed. 1.3.The requirement for chemical use as an option within an integrated pest management strategy is assessed. 1.4.Hazard and risk analysis of different chemical options is undertaken. 1.5.Requirement for chemical application is identified and confirmed.
2. Prepare application/spray plan	2.1.Mixing rates for chemical is defined and calculated. 2.2.Application equipment type and set up requirements are determined for intended application. 2.3.The quantity of mix required is determined. 2.4.Meteorological conditions and forecasts prior to and during application are accessed. 2.5.An application/spray plan is completed. 2.6.Notify neighbours as required in accordance with industry practice or regulatory requirements

ELEMENT	PERFORMANCE CRITERIA
3. Prepare chemical mixes	<p>3.1. Requirements from chemical labels and Material Safety Data Sheets (MSDSs) are interpreted and applied.</p> <p>3.2. Appropriate first aid supplies are at hand.</p> <p>3.3. Appropriate personal protective and mixing equipment is selected and used in accordance with MSDSs and chemical label.</p> <p>3.4. A suitable location for mixing and loading is selected.</p> <p>3.5. Chemicals are prepared in accordance with registered use.</p> <p>3.6. MSDSs are followed in the event of a spill.</p>
4. Calibrate application equipment	<p>4.1. Pre-operational checks of application equipment are carried out.</p> <p>4.2. Equipment is calibrated in accordance with manufacturer specifications and application/spray plan.</p> <p>4.3. Calibration is checked for conformity to the requirements of the application/spray plan.</p> <p>4.4. Chemical is loaded wearing appropriate Personal Protective Equipment (PPE) and controlling risks to human health and the environment.</p>
5. Apply chemicals	<p>5.1. Appropriate personnel protective equipment is selected and used in accordance with MSDSs and chemical label.</p> <p>5.2. Chemical is applied in accordance with the application/spray plan and/or instructions and legislative and/or regulatory requirements.</p> <p>5.3. Risks to others, product integrity and the environment are assessed and minimised.</p>
6. Clean up equipment and complete records	<p>6.1. Excess chemical is disposed of in accordance with label and MSDSs requirements.</p> <p>6.2. Application equipment is cleaned and decontaminated.</p> <p>6.3. Requirements for the disposal of unused chemical, containers spilled materials are determined and implemented</p> <p>6.4. PPE and mixing equipment is cleaned and stored.</p> <p>6.5. Incidents are reported as required in accordance with legislative and/or regulatory requirements.</p> <p>6.6. All records, e.g. calibration, application, DG/hazard</p>

ELEMENT	PERFORMANCE CRITERIA
	substances, risk assessments, are completed in accordance with legislative, industry and enterprise requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and implement risk control procedures
- identify appropriate treatment for pest, disease or weed
- mix and load chemicals
- conduct pre-operational checks of application equipment
- calibrate handheld and/or powered application equipment relevant to the industry sector
- interpret and apply chemical label requirements in the preparation of an application/spray plan
- apply chemicals
- use and maintain PPE
- dispose of surplus chemical and containers
- record activities and maintain records
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- options for pest control based on Integrated Pest/Resistance Management principles
- plant, pest, weed and/or diseases relative to industry sector
- chemical label and MSDSs formats
- meteorological and other conditions and impacts on safe and effective chemical

REQUIRED SKILLS AND KNOWLEDGE

application

- types and application of personal protective equipment
- features, functions and calibration techniques for a range of hand held and/or powered application equipment relevant to the industry sector
- risk factors including human and animal health, weather, spray drift, spillage and environmental
- spray nozzle identification, selection, operation and use
- chemical mix including mixing order, adjuvants, water quality, efficacy etc
- application techniques for a range of equipment types
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- legislation including Occupational Health and Safety (OHS) and environment, and licensing requirements, in relation to chemical use.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess the need for chemical use
- comply with safety, chemical label and MSDSs requirements
- prepare an application/spray plan
- prepare and apply chemicals
- calibrate application equipment
- maintain chemical records

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

EVIDENCE GUIDE

	enterprise circumstances.
--	---------------------------

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Chemical types may include:

- all types of chemical mixes used in the control of pests, weeds and diseases including animal health products.

This unit does not cover:

- operation of specialised equipment and machinery transport
- handling and storage of chemicals set up of advanced operation
- specialised on-board control equipment.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Transport and handle chemicals and biological agents	<p>1.1. Transport requirements are identified and followed from legislative and regulatory requirements, including Occupational Health and Safety (OHS).</p> <p>1.2. Risks involved in the transport and handling of chemical and biological agents are assessed and minimised.</p> <p>1.3. Containers are confirmed as being in a sound condition to transport.</p> <p>1.4. PPE is used as required according to manufacturer specifications and OHS requirements.</p> <p>1.5. Instructions from chemical material safety data sheets (MSDS) are followed in the event of a spill.</p> <p>1.6. Transport incidents are reported as required according to legislative and/or regulatory requirements.</p> <p>1.7. Appropriate first aid kit and spill kit are confirmed as being on hand for all stages of transport, handling and storage.</p>
2. Store chemicals in the workplace	<p>2.1. Appropriate storage methods are used according to chemical labels, MSDS, and/or legislative and regulatory requirements.</p> <p>2.2. Risks involved in storage of chemical and biological agents are assessed and minimised.</p> <p>2.3. Storage area is maintained according to legislative</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and regulatory requirements, including OHS and environmental protection.</p> <p>2.4. Products are retained in original containers with labels intact.</p> <p>2.5. Storage methods are utilised to prevent contact with people or animals, contamination of produce or the environment.</p> <p>2.6. Correct disposal procedures are applied for used chemical drums and storage containers.</p> <p>2.7. Unwanted and/or out-of-date chemicals are disposed of according to legislative and/or regulatory requirements and industry programs.</p>
3. Record storage details	<p>3.1. Chemical storage inventory and records are maintained according to legislative and regulatory requirements, including OHS.</p> <p>3.2. Storage incidents are reported as required according to legislative and/or regulatory requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- transport, handle and store chemicals safely
- follow chemical label and MSDS requirements for transport handling and storage
- maintain records
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- transport handling and storage requirements on chemical labels and MSDS
- types and application of PPE used in transport and handling
- legislation and regulations, including OHS and licensing requirements in relation to chemical storage and transport
- risk factors, including human, animal health and environmental associated with transport, handling and storage
- requirements for disposal of excess, unwanted and/or out-of-date chemicals
- requirements for disposal of used chemical containers and/or drums
- processes for clearing spillages and clean up.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- transporting, handling and storing chemicals safely
- identify the standard required to correctly maintain and use PPE according to label
- follow emergency procedures for chemical spillage
- follow legislative requirements for the safe transport of chemicals
- maintain storage area and chemical manifest.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Chemicals handling may include:	<ul style="list-style-type: none"> requirements for the safe transport, handling and storage of chemicals and products used in the control of pest, weeds and diseases, including animal health products.
This unit does not cover:	<ul style="list-style-type: none"> operation of specialised chemical application equipment and machinery, application of chemicals. See separate units of competency under the appropriate category.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hazards and risks	<p>1.1.Guidelines, legislation, regulations and industry requirements relating to chemical use are identified and sourced.</p> <p>1.2.Hazards involved in chemical handling and application are identified.</p>
2. Assess risks and develop control procedures	<p>2.1.Risks associated with chemicals used are assessed.</p> <p>2.2.Risk control measures and emergency action plans are developed.</p> <p>2.3.Control procedures are developed for transport, handling, storage, application, decontamination and disposal.</p> <p>2.4.A continuous improvement strategy is developed to minimise risk.</p>
3. Implement and monitor adherence to chemical risk procedures	<p>3.1.Appropriate personal protective equipment (PPE) is provided for people in the workplace using chemicals.</p> <p>3.2.Select application equipment is selected according to procedures.</p> <p>3.3.Restrictions on chemical use, application, decontamination and disposal are followed according to procedures.</p> <p>3.4.Risk control procedures are followed in the workplace.</p>
4. Evaluate risk control measures and maintain record	<p>4.1.Procedures for evaluating the effectiveness of risk control measures are developed.</p> <p>4.2.Shortfalls identified during evaluation are addressed and rectified.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Risk assessment records are maintained according to industry, label, legislative and regulatory requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- develop procedures
- evaluate implementation
- identify hazards, assess risks, and implement and monitor risk control procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- sources of information relating to chemical use, including:
 - guidelines
 - legislation and regulations
 - industry requirements
- hazard identification and risk assessment strategies
- risk factors, including human and animal health, product integrity, weather, spray drift, spillage and environmental
- principles of transport, handling and storage for chemicals
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- chemical application equipment capabilities and limitations.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • implement, monitor and evaluate a chemical risk control strategy • identify potential hazards and assess risks • develop risk control procedures • monitor and evaluate the risk control strategy.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and document an application/spray plan	1.1. Assess risks associated with proposed control strategy. 1.2. Select preferred control procedures. 1.3. Document preferred control procedures as application/spray plan.
2. Identify requirements for chemical use	2.1. Identify and interpret guidelines, legislation and regulations and industry requirements relating to chemical use. 2.2. Assess the need for chemical use as an option within an integrated pest management and/or animal health strategy. 2.3. Ensure that personnel are adequately trained in chemical use.
3. Ensure that risk control measures are followed	3.1. Provide appropriate Personal Protective Equipment for people in the workplace using chemicals. 3.2. Monitor the implementation of safe practice in the workplace including preparation and application of chemicals. 3.3. Monitor implementation of procedures for transport, handling, storage, decontamination and disposal. 3.4. Monitor implementation of procedures to mitigate residues in produce and the environment.
4. Plan and implement a maintenance program for chemical use equipment	4.1. Develop and implement a maintenance strategy for application equipment and personal protective equipment. 4.2. Monitor implementation of maintenance procedures.

ELEMENT	PERFORMANCE CRITERIA
	4.3.Ensure that faulty or damaged equipment is repaired or replaced.
5. Ensure the correct selection and application of chemicals	5.1.Ensure that the correct chemicals and equipment is selected in accordance with the application/spray plan. 5.2.Ensure that pre-operational checks of application equipment are carried out. 5.3.Check to ensure that calibration conforms to the requirement of the application/spray plan. 5.4.Ensure that meteorological conditions are monitored and assessed during application where relevant. 5.5.Monitor the application procedures in the event of a chemical spill.
6. Ensure work activities are finalised in accordance with procedure	6.1.Ensure that excess chemical are disposed of in accordance with label and Material Safety Data Sheet requirements. 6.2.Ensure incident reports are completed as required in accordance with legislative and/or regulatory requirements. 6.3.Ensure all required records are completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- develop strategies to monitor the implementation of procedures
- evaluate conformance with procedures
- identify hazards and oversee the safety of the working environment
- develop and document an application/spray plan
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex

REQUIRED SKILLS AND KNOWLEDGE

workplace measures and data

- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- sources of information relating to chemical use including:
 - guidelines
 - legislation and regulations
 - industry requirements
 - hazard identification and risk assessment strategies
 - methodologies for the development of procedures
 - risk factors including human and animal health, weather, spray drift, spillage, residue, product integrity and environmental
 - transport, handling and storage for chemicals
 - requirements for disposal of excess chemicals, clearing spillages and equipment clean up
 - OHS, environmental and pesticides legislation, codes of practice and enterprise procedures.
 - chemical application equipment capabilities and limitations.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- plan and implement a program for chemical use
- supervise others in chemical use
- apply and monitor risk control procedures
- select and manage chemical application equipment

EVIDENCE GUIDE

AHCEXP303A Prepare and use explosives

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit covers carrying out explosive procedures including preparation, mixing, detonation and clean up safely in the field and defines the standard required to: obtain the appropriate permits and licenses for blasting; inform neighbours and post notices for blasting; prepare the blast site to place the explosive; prepare explosives and the initiator device according to best safety practice and regulations; place and fire charges according to best safety practice and regulations; conduct post-firing procedures for misfires; site checks; the disposal of surplus, unserviceable and defective explosives; recording procedures.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>The preparation and use of explosives is likely to be under limited supervision with checking related to overall progress. Responsibility for the notification of others, and the duty of care for their safety, is also involved.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for blasting	1.1. Permits/ licences are obtained and approved warning signs installed and prominently displayed according to legislative requirements. 1.2. Property manager and relevant controlling authorities are notified of blasting plans and timing as required by legislation. 1.3. The area where the charges are to be used is cleared of stones and other potential missiles. 1.4. The blast site is cleared and made safe prior to charges being placed. 1.5. All explosive products are placed at the required safety distance from any identified hazards. 1.6. Appropriate holes are drilled/dug to place the charge(s) in line with blasting plans. 1.7. Drilling/digging equipment is removed to the prescribed safe distance in accordance with Australian Standards, Acts and Regulations. 1.8. Neighbours and members of the public likely to be concerned or disturbed by shock effects are advised of the blasting program.

ELEMENT	PERFORMANCE CRITERIA
2. Prepare explosives	<p>2.1. Quantities of explosives components required are calculated to match the application and prevailing conditions.</p> <p>2.2. Required explosives are assembled on site, or an explosives mix (of homogenous composition) is calculated precisely to ensure minimum residual mix to be destroyed, and is prepared in accordance with defined requirements.</p> <p>2.3. Required fusing and detonating components are assembled to match the established explosive requirements in preparation for blasting.</p>
3. Place charges	<p>3.1. Explosives elements are placed in holes or packed using safe working procedures and methods and in accordance with Australian Standards, Acts and Regulations.</p> <p>3.2. All holes are stemmed and tamped prior to the attachment of the firing system to maximise safety to all personnel and the efficiency of the blasting.</p> <p>3.3. Electrical firing circuits or fire fuses are checked for continuity and/or earthing as required.</p> <p>3.4. All extraneous materials are cleared from the site to safe distances in accordance with enterprise standards.</p> <p>3.5. Routine re-checks of the site and surrounds are performed to ensure that no non-essential personnel are endangered.</p> <p>3.6. Blasting mats or other control devices are placed as appropriate according to the blasting plan.</p> <p>3.7. Blast area is guarded according to legislative requirements and enterprise practices.</p>
4. Fire charges	<p>4.1. Prescribed warning notification procedures are carried out in accordance with enterprise and industry standards.</p> <p>4.2. The blasting site is re-checked to ensure correct placement of explosives and ensure that all safety procedures have been implemented according to supervisor or shot firer's instructions.</p> <p>4.3. Warning signals including audible and visual signals are issued to ensure that the site is clear.</p> <p>4.4. Firing procedures are initiated through manual or electric firing systems.</p>
5. Conduct post-firing	<p>5.1. Charges are counted as they fire or are inspected</p>

ELEMENT	PERFORMANCE CRITERIA
procedures	<p>safely post blasting to ensure that misfires are readily identified prior to all clear signals being given.</p> <p>5.2. Misfire procedures are implemented after prescribed timing and/or practice drills conducted using water jets or additional charges in accordance with Australian Standards, Acts and Regulations.</p> <p>5.3. Site checks are carried out to ensure that the site is safe and the all-clear signal is given in line with industry practice and legislative requirements.</p> <p>5.4. Surplus, unserviceable and defective explosives and detonators are destroyed or discarded or stored in line with prescribed procedures and in consideration of the environmental impact.</p> <p>5.5. Accurate records are completed and kept in line with enterprise and legislative requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- use explosives safely and effectively according to enterprise requirements
- dispose of surplus, defective or unwanted detonators or explosives safely
- correctly and uniformly mix explosives components
- apply the regulations relating to explosives use according to enterprise requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- fire precautions and prevention procedures

<p>REQUIRED SKILLS AND KNOWLEDGE</p> <ul style="list-style-type: none"> • appropriate explosives mixing procedures • the calculation of explosives quantities • explosives preparation, placement, firing and post firing procedures • the regulations relating to explosives use in the enterprise • relevant standards issued by Standards Association of Australia • related environmental issues and risks to livestock (including poisoning).

Evidence Guide

<p>EVIDENCE GUIDE</p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • obtain the appropriate permits and licenses for blasting • inform neighbours and post notices for blasting • prepare the blast site to place the explosive • prepare explosives and the initiator device according to best safety practice and regulations • place and fire charges according to best safety practice and regulations • conduct post-firing procedures for misfires, site checks, the disposal of surplus, unserviceable and defective explosives, and recording procedures.
<p>Context of and specific resources for assessment</p>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Requirements and scope may include:

- the Australian Standard relating to preparing and using explosives (AS 2187, Part 2 1993) which includes:
 - operations prior to charging
 - charging
 - preparation for firing
 - firing
 - misfires
 - preparation of primers.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist with preparations for the burn	<p>1.1. Machinery and equipment to be used in the burn are prepared for use as directed.</p> <p>1.2. Safety equipment is checked and prepared for use.</p> <p>1.3. Information about contingency plans is read or listened to and clarification sought where required.</p> <p>1.4. Assets requiring protection during the burn are recognised and noted.</p> <p>1.5. Personal role and activities during the burn are checked with supervisor.</p> <p>1.6. Location and extent of the burn is discussed and clarified with the supervisor.</p>
2. Support conduct of burn	<p>2.1. Assistance with pre-burn checks is provided as directed by the supervisor.</p> <p>2.2. Burn operations are undertaken in a safe manner.</p> <p>2.3. Problems or concerns during the burn are raised with the supervisor.</p> <p>2.4. Communication is maintained at all times in accordance with the organisation's procedures.</p> <p>2.5. Conditions at the fire are observed and their effect on fire behaviour and development are noted and reported to the supervisor.</p> <p>2.6. Weather conditions and changes to fire behaviour are observed and reported to the supervisor.</p> <p>2.7. A safe escape route is identified and maintained at all times.</p> <p>2.8. Personal protective equipment is fitted properly and worn throughout the burn.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Participate in clean-up activities	3.1. Cleaning-up activities are carried out under direction in accordance with the organisation's procedures. 3.2. Personal protective equipment is cleaned and returned to storage. 3.3. Machinery and equipment used in the burn are cleaned and returned to storage. 3.4. Cleaning and maintenance are carried out in accordance with the organisation's procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and adopt safe work practices
- assist with preparations for the burn
- support conduct of the burn
- monitor fire behaviour and risk
- participate in clean-up activities
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- fire behaviour
- extinguishing media and equipment
- burning tactics and techniques
- fire hazards, safety techniques
- organisations operating procedures
- OHS and environmental legislative and enterprise requirements.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • prepare machinery and equipment before burning • undertake burn operations and monitor weather conditions • use PPE as required and check, clean and store on completion of the burn • carry out clean up operations and monitor the site.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess maintenance work required	1.1.Works required under the plan of management and enterprise procedures are identified. 1.2.Machine, equipment and materials to carry out maintenance works are identified. 1.3.Type and amount of materials required for maintenance work are estimated.
2. Prepare for maintenance	2.1.Machine, equipment and materials to carry out maintenance works are organised. 2.2.Safety equipment and materials are prepared and assembled according to enterprise Occupational Health and Safety (OHS) policy.
3. Maintain condition of place	3.1.Maintenance work is undertaken according to work programs and according supervisor's instructions. 3.2.Presence of threats is reported to supervisor. 3.3.Evidence of deterioration and wear is reported to supervisor. 3.4.Site is made good on completion of maintenance works according to supervisor's instructions enterprise guidelines.
4. Protect cultural place	4.1.Any evidence of damage to place is reported to supervisor. 4.2.Any breach of legislation or enterprise regulations is reported to supervisor.

ELEMENT	PERFORMANCE CRITERIA
	4.3. Protective barriers and signs are maintained according to enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and adopt safe work practices
- assess maintenance work required
- maintain condition of place
- protect cultural places
- prepare for maintenance
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- OHS responsibilities
- common pests and diseases
- techniques of site protection
- range of maintenance works undertaken on cultural sites
- enterprise procedures relating to the reporting of deterioration or damage to place or reporting of incidents
- site recording systems used by the enterprise or community
- relevant archaeological practices and procedures.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • assess the level of work required to maintain the cultural place • carry out maintenance activities in accordance with organisational and cultural requirements • report deterioration or damage to place • report incidents of breaches of legislation including vandalism.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Cultural places may include:	<ul style="list-style-type: none"> • areas of non-indigenous activity • buildings and other structures • natural areas of indigenous cultural significance, historical events and monuments • areas of indigenous activity such as burial, occupation and contact sites, engravings, grinding grooves, sacred trees, rock pictures, fish traps, middens and mounds.

AHCILM401A Protect places of cultural significance

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the protection of places of cultural significance and defines the standard required to: develop working relationships with stakeholders in cultural sites; canvass views in determining the heritage value and preservation issues of a cultural site; plan for the protection of a cultural site including resources required and submissions to be completed; observe cultural protocols in dealing with stakeholders and land managers; identify threats and develop action and emergency plans to mitigate and manage the risk of damaging incidents or loss of heritage value; document the submissions to implement conservation and restoration activities and support the incident management activities.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to those whose work includes protecting indigenous peoples' places of culture in co-operation with stakeholders and protecting places of cultural significance with reference to indigenous communities and/or line management. A high level of cultural awareness and the need to observe cultural protocols are important in parts of the process. Note: for indigenous cultural places, the delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate with stakeholders	<p>1.1. Working relationships are developed with stakeholders that assist in the management of culturally significant places.</p> <p>1.2. Communication approaches are developed that accommodate cultural views.</p> <p>1.3. Views are regularly obtained on the way in which the cultural significance and resource can be conserved and used.</p> <p>1.4. Views obtained are conveyed into enterprise and park/reserve planning process.</p>
2. Conserve significance	<p>2.1. Enterprise conservation policies and plans are used with stakeholder views to plan ongoing conservation actions.</p> <p>2.2. Operational activities are developed and implemented to implement the conservation strategies and plans in a culturally sensitive manner.</p> <p>2.3. Staff are organised to implement conservation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>actions that minimise deterioration and damage.</p> <p>2.4. Staff are supervised during restoration projects.</p> <p>2.5. Resources are obtained for conservation and restoration activities.</p> <p>2.6. Submissions are made to the enterprise budget process for funds to implement the conservation and restoration activities.</p>
3. Manage incident	<p>3.1. Operational plans are developed to manage incidents consistent with plan of management and risk management analysis.</p> <p>3.2. Staff responsibilities are assigned to manage types of incidents.</p> <p>3.3. Equipment and supplies are obtained and maintained to enable effective response to incidents.</p> <p>3.4. Staff are trained in the management of the types of incidents for which they have an involvement.</p> <p>3.5. Submissions are made to the enterprise budget process for funds to support the incident management activities.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- consult with indigenous communities
- observe cultural protocols
- plan ongoing conservation actions
- conserve significance of place of culture
- manage incidents and threats
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex

REQUIRED SKILLS AND KNOWLEDGE

workplace measures and data

- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- enterprise policies and procedures for conservation of places of cultural significance
- indigenous protocols, consultation processes and networks
- non-indigenous cultural groups
- budgetary and financial approval processes.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- develop working relationships with stakeholders in cultural sites
- canvass views in determining the heritage value and preservation issues of a cultural site
- plan for the protection of a cultural site including resources required and submissions to be completed
- observe cultural protocols in dealing with stakeholders and land managers
- identify threats and develop action and emergency plans to mitigate and manage the risk of damaging incidents or loss of heritage value
- document the submissions to implement conservation and restoration activities and support the incident

EVIDENCE GUIDE	
	management activities.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Cultural places may include:	<ul style="list-style-type: none"> • areas of non-indigenous activity • buildings and other structures • natural areas of indigenous cultural significance • historical events and monuments • areas of indigenous activity such as: <ul style="list-style-type: none"> • burial • occupation and contact sites • engravings • grinding grooves • rock pictures • fish traps • middens • mounds.

AHCINF202A Install, maintain and repair fencing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of installing, maintaining and repairing fencing and defines the standard required to: select the appropriate materials and tools; erect fence; install gates and components; assess the fencing site for environmental impacts of the fence; undertake repairs, record work activities and clean up the fencing site; remove and dispose of, or recycle waste.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to workers in rural organisations who operate under limited supervision with checking only related to overall progress within established enterprise routines and procedures.
--------------------------------	---

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for fencing work	<p>1.1. Appropriate tools and materials are selected in accordance with task requirements, manufacturer's guidelines and fence design.</p> <p>1.2. Faulty or unsafe tools are identified and put aside for repair or replacement.</p> <p>1.3. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p> <p>1.4. Transport of fencing materials, tools and equipment to worksite is arranged.</p>
2. Undertake fence installation	<p>2.1. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>2.2. Posts and stays are installed and secured in accordance with industry practice.</p> <p>2.3. Wire is strung and tensioned in accordance with manufacturer's guidelines and industry practice.</p> <p>2.4. Wire netting or other fencing materials are attached in accordance with manufacturer's guidelines and industry practice.</p> <p>2.5. Gates are positioned and attached and checked for correct operation.</p>
3. Maintain and repair fencing	<p>3.1. Faults or structural damage are identified and necessary repairs are carried out in accordance with industry practice and manufacturer's guidelines.</p> <p>3.2. Dismantling operations are carried out recovering re-useable materials.</p> <p>3.3. Further maintenance or repair works are identified</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and reported.</p> <p>3.4. Used fencing material is packed for reuse or disposed of according to enterprise procedures.</p>
4. Complete fencing work	<p>4.1. Work area is cleared and tidied and all non re-useable materials are disposed of in an environmentally responsible manner.</p> <p>4.2. Tools, personal protective equipment and re-useable materials are cleaned and stored.</p> <p>4.3. Work activities are recorded in accordance with industry practice.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and follow safe work practices
- site fencing materials and tools for efficient use
- use fencing tools safely and in accordance with manufacturer's guidelines
- install fence posts and stays
- tension fencing wire and netting in accordance with manufacturers guidelines
- string, strain and tie off wires safely and efficiently
- use hand tools safely
- operate powered fencing machinery in a safe, efficient and controlled manner
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- designs and purpose of a range of conventional fencing
- wire types, knots, tensions applications and limitations
- common hazards involved in fencing installation, maintenance and repair

REQUIRED SKILLS AND KNOWLEDGE

- uses and types of fencing tools and equipment
- fencing materials manufacturers specifications and guidelines
- OHS and environmental legislation, codes of practice and enterprise procedures.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select the appropriate materials and tools
- erect fence, install gates and components
- assess the fencing site for environmental impacts of the fence
- undertake repairs
- record work activities
- clean up the fencing site and remove and dispose of, or recycle, waste.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement**RANGE STATEMENT**

RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Fences may include:

- post and wire
- wire netting.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm maintenance requirements	<p>1.1. Visual inspections are conducted of structures and facilities to locate and evaluate defects, deterioration and impending defects.</p> <p>1.2. Property infrastructure and resources are checked for correct operation, minor maintenance needs and damage.</p> <p>1.3. Maintenance plan is confirmed according to supervisor's instructions and enterprise requirements.</p>
2. Select and prepare tools, equipment and materials	<p>2.1. Tools, equipment and materials appropriate to the job requirements are selected and checked for serviceability according to manufacturer's specifications.</p> <p>2.2. Faulty or unsafe tools are identified and segregated for repair or replacement and reported according to enterprise requirements.</p> <p>2.3. Existing and potential hazards to health and safety are identified, assessed and reported according to Occupational Health and Safety (OHS) and enterprise requirements.</p>
3. Carry out routine maintenance	<p>3.1. Suitable personal protective equipment is selected, used, maintained and stored according to OHS requirements.</p> <p>3.2. Routine maintenance to structures and surroundings is carried out according to the maintenance plan and enterprise requirements.</p> <p>3.3. Minor repairs to building cladding, and treatments to structural finishes, are carried out as required to minimise deterioration.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete maintenance activities	<p>4.1. Worksite, tools and materials are cleaned, returned to operating order, and stored according to OHS and enterprise requirements.</p> <p>4.2. Unwanted materials and waste from maintenance activities is collected, treated and disposed or recycled according to enterprise, OHS and environmental requirements.</p> <p>4.3. Relevant information is documented according to industry, enterprise requirements and OHS requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and follow safe work practices
- interpret and apply task instructions
- operate a broad range of tools and equipment
- carry out building and maintenance operations
- work in team environment
- observe and report on the condition of structures and equipment
- communicate with work team and supervisor
- estimate and calculate volumes and usage.

Required knowledge

- characteristics, capabilities and limitations of materials, equipment and tools
- operation of water taps and reticulation systems
- types of building cladding and finishes, purpose and use
- identification of defects and appropriate repair methods
- appropriate selection of repair materials
- OHS legislative requirements and Codes of Practice
- relevant Codes of Practice and procedures with regard to protection of the environment.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine fencing requirements	<p>1.1.Fencing requirements are assessed and clarified according to enterprise objectives.</p> <p>1.2.Equipment, materials and labour requirements are determined, and estimated costings are maintained within budgetary constraints.</p> <p>1.3.Plan is prepared giving consideration to siting fences in relation to natural features and proposed uses.</p> <p>1.4.Legal requirements associated with fencing construction are identified.</p>
2. Prepare for construction	<p>2.1.Proposed fencing is checked and verified against property maps and work plan.</p> <p>2.2.Services, structures and features, which may impact on the fencing work, are identified and incorporated into the fencing plan.</p> <p>2.3.Tools and fencing equipment (including safety equipment), are arranged and safely and efficiently transported to the work site.</p> <p>2.4.Labour requirements are arranged and confirmed according to enterprise requirements.</p> <p>2.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented.</p>
3. Construct conventional fence	<p>3.1.Suitable personal protective equipment is selected, used, maintained and stored according to enterprise requirements.</p> <p>3.2.Fence lines are marked out and checked against work plan and property maps.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3.Fence is constructed according to work plan and fence design.</p> <p>3.4.Gates are attached and appropriately positioned for correct operation and function according to work plan.</p> <p>3.5.All work is carried out safely according to enterprise requirements.</p>
4. Complete fencing operations	<p>4.1.Work site is cleared and tidied and all waste is disposed of in an environmentally responsible manner.</p> <p>4.2.Tools and fencing equipment are transported safely from the work site and stored according to manufacturer's recommendations and enterprise requirements.</p> <p>4.3.Tools and equipment faults or malfunctions are reported for repair or replacement according to enterprise requirements.</p> <p>4.4.Relevant information is recorded and maintained according to enterprise requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and implement safe work procedures
- construct end assemblies
- construct gate assemblies and swing gates
- string and strain wires to manufacturer's recommended tension
- tie fencing knots
- use and maintain fencing machinery and equipment
- select fencing materials
- arrange and purchase supplies
- demonstrate safe workplace practices
- consult with and report to management
- minimise environmental impacts
- use literacy skills to read, interpret and follow organisational policies and

REQUIRED SKILLS AND KNOWLEDGE

procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- issues affecting property fence planning and construction
- procedures for planning fencing in relation to the whole property plan
- range of fencing designs, construction methods and materials
- types of fencing construction tools and equipment
- fencing materials and costings
- common fencing hazards and safety precautions
- OHS legislative requirements and Codes of Practice
- relevant Codes of Practice with regard to the protection of the environment
- hazard identification, assessment and control.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- site the fence line according to property or land management plan
- estimate, cost and source fencing materials and arrange delivery
- carry out fencing operations safely and efficiently

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare job	<p>1.1. Materials required for the job are transported to the location and stacked in a safe position.</p> <p>1.2. Tools, equipment and machinery are selected consistent with the requirements of the job.</p> <p>1.3. Quality Assurance requirements are recognised and adhered to.</p> <p>1.4. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p>
2. Set out and excavate trenches	<p>2.1. Location and depths of trenches is determined from job drawings.</p> <p>2.2. Trench location is set out with pegs and string line and clearly marked with appropriate marking material.</p> <p>2.3. Manual support is provided to machine operator with excavation of trenches, shoring or battering in accordance with OHS requirements.</p> <p>2.4. Trenches are cleaned out by hand and corners left square.</p> <p>2.5. Trench depths and grades are checked for conformity to job requirements.</p>
3. Lower and position pipes	<p>3.1. Bedding materials are laid and consolidated to specified depths and grades.</p> <p>3.2. Pipes are installed/lowered into position with appropriate mechanical equipment according to</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications. 3.3.Pipe joints and fittings are installed to job specification. 3.4.Pipes are back filled to specifications and cover left level with surrounding ground.
4. Clean up	4.1.Site is cleared and excess soil, debris and unwanted materials removed in accordance with organisational procedures and environmental requirements. 4.2.Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and adopt safe work practices
- read and interpret scale drawings and specifications
- use hand signals for communicating with machine operator
- measure trench width, depth, grade and location
- lay and join irrigation pipe
- level cover with existing ground
- use power tools and hand tools
- handle materials safely
- work safely to instructions
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- OHS requirements for excavating, filling trenches and laying pipes, including relevant legislation regulations and codes
- irrigation and/or drainage pipes, types and sizes
- hand and power tools and equipment
- bedding and backfill materials and handling methods

REQUIRED SKILLS AND KNOWLEDGE

- scale drawings for laying irrigation and/or drainage pipes
- hand signals for communication
- OHS issues and procedures related to trenching and pipe laying
- Quality Assurance procedures for excavating, filling trenches and laying pipes
- environmental impacts and procedures for laying pipe.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- set out and excavate trenches using manual equipment and a machine operator
- check trench depth and grade
- lay bedding materials
- position irrigation and/or drainage of varying types and sizes
- install pipe joints and fittings to job specification.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement**RANGE STATEMENT**

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Irrigation and drainage pipes may include:	<ul style="list-style-type: none"> • concrete • metal • polythene • polyvinylchloride (PVC) • the type and size of pipe will vary with the terrain, soil type and traffic load.
Fittings may include:	<ul style="list-style-type: none"> • valves • outlets • thrust blocks and connecting surfaces such as O-rings.
Mechanical equipment may include:	<ul style="list-style-type: none"> • equipment for lowering irrigation and/or drainage pipes but does not include operating excavation machinery such as trench diggers or ditch witches.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out pre- and post-season maintenance	<p>1.1. Equipment is prepared pre-season for effective operation in accordance with design specifications and enterprise standards.</p> <p>1.2. System is flushed, cleaned, closed down and maintained post-season in accordance with design specifications and enterprise standards.</p> <p>1.3. Equipment requiring storage is dismantled, loaded, transported and stored without damage according to enterprise standards and safe working practices.</p>
2. Carry out routine maintenance activities on pressurised irrigation delivery systems	<p>2.1. All maintenance activities are carried out according to the maintenance program and the manufacturer's specifications.</p> <p>2.2. Mechanical equipment is serviced in accordance with the operator's manual or as directed.</p> <p>2.3. Supply and distribution systems are flushed and cleaned with sprinklers, emitters and/or drip line tapes replaced as directed.</p> <p>2.4. Outlets, strainers, pump screens and filters are cleaned and replaced as directed.</p> <p>2.5. System is visually inspected for leaks, operating faults and dry areas, and observations recorded in the maintenance book.</p> <p>2.6. Operation area is maintained in a clean and safe condition, and Occupational Health and Safety (OHS) procedures are followed.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Maintain system components	<p>3.1. System maintenance is carried out at scheduled times using equipment and materials in accordance with enterprise standards and manufacturer's specifications.</p> <p>3.2. Parts are inspected for wear or blockage and reported or replaced according to enterprise guidelines.</p> <p>3.3. Outlets are removed and cleaned and damaged ones are reassembled and replaced according to manufacturer's specifications.</p> <p>3.4. Operation area is maintained in a clean and safe condition, and OHS procedures are followed.</p>
4. Record and report maintenance activities	<p>4.1. All damage and blockage caused by pests and vermin is recorded by damage type, location and the section of the system affected.</p> <p>4.2. Damage or faulty pumps, valves, electrical components and computer systems are recorded and reported, and action taken to effect repairs.</p> <p>4.3. All routine maintenance activities are recorded and reported in accordance with enterprise standards.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and adopt safe work practices
- read and follow an operator's manual and manufacturer's specifications for pressurised irrigation systems
- maintain selected irrigation system components
- rectify damage caused by weeds or pests
- record and report maintenance observations and activities
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures

REQUIRED SKILLS AND KNOWLEDGE

- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- OHS and environmental legislative and enterprise procedures relating to pressurised irrigation system maintenance
- major components of a pressurised irrigation delivery system
- maintenance requirements and procedures for system components
- environmentally safe disposal procedures for chemical containers and residues, oils/grease and used parts.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read and follow an operators manual and manufacturers specifications for pressurised irrigation systems
- maintain irrigation system components including supply and distribution systems, outlets, strainers, pump screens and filters
- inspect for dry areas and leaks
- clear or replace worn or blocked parts and outlets
- record and report maintenance observations and activities.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Pressurised irrigation systems include:	<ul style="list-style-type: none"> • micro-irrigation systems and spray irrigation systems ranging from manual operation and monitoring to fully automated with computer control and monitoring.
Micro-irrigation systems may include:	<ul style="list-style-type: none"> • mains pressure • low pressure • below or above ground • sprays systems • drip emitter trickle • t-tape • mini-sprinklers • capillary.
Spray irrigation systems may include:	<ul style="list-style-type: none"> • travelling irrigators (soft hose, hard hose boom type) • centre pivot • linear move • powered side roll hand shift permanent (installed) • bike shift/easy shift.

ELEMENT	PERFORMANCE CRITERIA
1. Interpret an irrigation maintenance program	<p>1.1.Scope of maintenance works is determined according to the irrigation maintenance program.</p> <p>1.2.Frequency of maintenance works is determined and implemented according to the irrigation maintenance program.</p> <p>1.3.Irrigation maintenance standards are established in line with the irrigation maintenance program.</p> <p>1.4.Maintenance works are planned and prepared.</p> <p>1.5.Occupational Health and Safety (OHS) requirements are identified, associated hazards and risks assessed, and suitable controls implemented.</p> <p>1.6.Environmental considerations of irrigation maintenance activities are identified.</p>
2. Inspect irrigation system	<p>2.1.An inspection checklist is established according to the irrigation maintenance program.</p> <p>2.2.System is regularly inspected according to the checklist.</p> <p>2.3.Remedial action and repairs are identified and undertaken to restore system to full effectiveness.</p> <p>2.4.Servicing of mechanical equipment is undertaken according to the irrigation maintenance program.</p> <p>2.5.Results of maintenance works are assessed and recorded to ensure repairs or maintenance standards have been achieved according to the irrigation maintenance program.</p> <p>2.6.Surroundings are tidied and materials and equipment cleared from the site on completion of maintenance</p>

ELEMENT	PERFORMANCE CRITERIA
	works.
3. Record and report maintenance activities	3.1. Damage and blockage caused by pests and animals are recorded by damage type, location and the section of the system affected. 3.2. Damage or faulty pumps, valves, electrical components and computer systems are recorded and reported, and action taken to effect repairs. 3.3. Routine and preventative maintenance activities are recorded and reported in accordance with enterprise standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and implement safe work procedures
- inspect irrigation system
- test irrigation equipment
- record all test results clearly and concisely with attention to detail
- undertake minor repairs of equipment
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- soil/plant/water relationships
- environmental impacts of irrigation
- irrigation system components

REQUIRED SKILLS AND KNOWLEDGE

- common operational and maintenance problems
- enterprise, OHS and environmental policies and procedures
- environmentally safe disposal procedures for chemical containers and residues, oils/grease and used parts.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- inspect irrigation systems
- test irrigation equipment
- undertake minor repairs of equipment
- record and report maintenance activities
- dispose of unused or waste materials from site.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

System may include:

- pressurised irrigation systems such as

RANGE STATEMENT	
	micro-irrigation and spray irrigation systems, or gravity-fed systems. They may range from manual operation and monitoring to fully automated with computer control and monitoring.

AHCIRG306A Troubleshoot irrigation systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of troubleshooting faults and blockages in irrigation systems and defines the standard required to: read and apply system specifications, technical manuals and supply/spare parts inventories; locate and identify faulty components and blockages; apply shutdown sequence and isolation procedures; remove faulty components from the system and install replacements; clear blockages or replace blocked sections; and return isolated or shutdown components to service.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to workers on irrigation farms or to irrigation contractors. The work is likely to be carried out under routine supervision within enterprise guidelines.
--------------------------------	---

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate and identify faulty components and blockages	<p>1.1.Irrigation system and component function is determined by reference to system specifications and technical manuals.</p> <p>1.2.Monitoring and maintenance records are checked and reviewed.</p> <p>1.3.Operational tests are carried out according to system specifications, technical manuals and Occupational Health and Safety (OHS) requirements.</p> <p>1.4.Faulty components and blockages are identified and documented according to enterprise policy and procedures.</p>
2. Shut down/isolate component	<p>2.1.Shut own sequence and isolation procedures are applied as required according to system specifications and technical manuals.</p> <p>2.2.Safe shutdown or isolation is verified.</p> <p>2.3.Safety/security lock off devices and signage is installed according to enterprise policy and procedures.</p>
3. Replace faulty components and clear blockages	<p>3.1.Access to faulty components and blockages is arranged.</p> <p>3.2.Faulty components are removed from the system, according to system specifications and technical manuals, and repaired or disposed of in an environmentally responsible way.</p> <p>3.3.Replaceable components are selected from</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer catalogues and procured using enterprise procedures.</p> <p>3.4.Replacement components are installed to meet system specifications according to technical manuals.</p> <p>3.5.Replace faulty components and clear blockages are carried out without unnecessary damage to surrounding site and structures.</p> <p>3.6.Blockages are cleared or blocked sections replaced according to enterprise procedures.</p>
4. Return system to normal operating status	<p>4.1.Isolated or shutdown components are returned to service.</p> <p>4.2.Operational tests are carried out according to system specifications, technical manuals and OHS requirements.</p> <p>4.3.System is returned to normal operational set-up.</p> <p>4.4.Repair activities are reported and recorded according to enterprise policy and procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- operate, maintain and repair irrigation systems
- shut down and isolate components
- replace components
- carry out operational tests
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required

REQUIRED SKILLS AND KNOWLEDGE

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- identification, characteristics and operation of replaceable components of irrigation systems
- system malfunctions and their likely causes
- environmental impacts of irrigation, using water from any ground or underground source
- purchasing procedures
- isolation procedures
- enterprise policies and procedures
- irrigation, OHS and environmental guidelines.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read and apply system specifications, technical manuals and supply/spare parts inventories
- locate and identify faulty components and blockages
- apply shutdown sequence and isolation procedures
- remove faulty components from the system and install replacements
- clear blockages or replace blocked sections
- return isolated or shutdown components to service.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Appraise contract documentation and translate into operational requirements	<p>1.1. Copy of building approval and conditions is obtained as required.</p> <p>1.2. Contract documentation is reviewed for any unusual aspects of construction, use of materials and penalties.</p> <p>1.3. Availability of sub-contractors is ascertained and selected to suit job requirements.</p> <p>1.4. Availability of materials is checked with suppliers.</p> <p>1.5. Site access limitations are assessed.</p> <p>1.6. Relevant authorities controlling construction work advised of commencement date for project as required.</p>
2. Develop strategies for implementing the construction operations	<p>2.1. Procedures for controlling and recording site deliveries are established.</p> <p>2.2. Procedures for recording the hire of plant and equipment are determined.</p> <p>2.3. Occupational Health and Safety (OHS) procedures are established, including hazard/risk management.</p> <p>2.4. Procedures are established for dealing with environmental issues associated with irrigation construction work.</p> <p>2.5. Procedures required for the control of multiple projects are determined.</p>
3. Prepare project schedule for irrigation installation and construction	<p>3.1. Construction operations are prepared in sequence.</p> <p>3.2. Operations are entered into a manually prepared schedule or computer based software package.</p> <p>3.3. 'Critical path' is identified and schedule revised with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>new activities/projects, as needed, and documented.</p> <p>3.4. Timeframe is adjusted to take account of anticipated delays.</p>
4. Determine all the required resources for project	<p>4.1. Temporary services and site accommodation is determined as required.</p> <p>4.2. Plant requirements and dates are selected and accessed.</p> <p>4.3. On site labour requirements are determined.</p>
5. Prepare dilapidation report	<p>5.1. Records are made of the condition of existing building(s) to be retained and structures on the adjacent site boundaries.</p> <p>5.2. Copies of reports are submitted to adjacent building owners prior to commencing construction.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analyse contract conditions
- develop strategies
- schedule projects
- determine resources
- identify adverse environmental impacts of irrigation activities and appropriate remedial/preventative action
- incorporate legislative and enterprise OHS and environmental procedures into planning
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

REQUIRED SKILLS AND KNOWLEDGE
abilities.
Required knowledge
<ul style="list-style-type: none"> • installation and construction processes for on-site irrigation systems • logical construction sequence for the system • analysis of the required project resources • environmental impacts of irrigation using water from any ground or underground source • relevant enterprise OHS and environmental procedures • relevant Australian Standards (e.g. AS3500) • effect of main soil types on approach to excavation work and installation of irrigation components.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment

AHCIRG503A Design irrigation, drainage and water treatment systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the designing of irrigation, draining and water treatment systems and defines the standard required to: identify design requirements for drainage and water treatment; determine specifications for suitable pumping and power systems; design distribution, drainage, storage and treatment systems; design water transfer, recharge, reuse and harvesting systems to conserve natural resources and; assess the environmental impacts of the irrigation system to ensure it will comply with environmental protection agency regulations.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to those who design irrigation, drainage and/or water treatment systems with advice from technical advisers.
--------------------------------	--

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine design requirements	<p>1.1. Water is predicted to be available in sufficient quantity and quality for the particular crop or situation at the time it is needed by the enterprise.</p> <p>1.2. Water transfer, recharge, reuse and harvesting systems are designed to conserve natural resources.</p> <p>1.3. The process of collecting or storing water does not degrade the water quality for the enterprise or the environment.</p> <p>1.4. Construction specifications define the work required to make suitable water available to the enterprise in accordance with environmental and Occupational Health and Safety (OHS) requirements.</p> <p>1.5. Environmentally sensitive areas are identified and protected according to local, State and National legislation.</p> <p>1.6. Design calculations and decisions are documented to enterprise requirements.</p>
2. Define pumping and power systems	<p>2.1. Pumps are selected to deliver water efficiently when needed, from the water storage at the flow and pressure required to operate the distribution system to the design specifications.</p> <p>2.2. The pump motor combinations are efficient and the pumps are reliable, functional, serviceable and flexible for the intended application.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Energy requirements are determined, and layout of electricity lines are determined and checked with local authority.</p> <p>2.4. The relationship between capital and operational costs are optimised including a comparison of energy sources.</p> <p>2.5. Structures, valves and accessories are selected and integrated into a functional system that can be monitored and maintained according to enterprise guidelines.</p> <p>2.6. Performance indicators, design calculations and decisions are documented according to enterprise guidelines.</p> <p>2.7. Construction specifications define work required to make suitable pumping and power system available to enterprise.</p> <p>2.8. Power supply design specification is checked with power authorities.</p>
3. Design an irrigation distribution system	<p>3.1. Detailed topographic survey is conducted or an accurate map is obtained showing extent of irrigation, planting layout, physical constraints and contours with suitable interval.</p> <p>3.2. Detailed soil survey is conducted at suitable intervals and mapped to show variation in readily available water.</p> <p>3.3. Water budgets are determined having regard to the evapotranspiration state of the crop/plants, soil moisture characteristics and cultural practices.</p> <p>3.4. Distribution systems are evaluated and designed with respect to a range of key variables.</p> <p>3.5. Pipes, valves and fittings are sized according to design system specifications so that capital cost is balanced against operation costs over the anticipated system life.</p> <p>3.6. Flows, water levels and pressures are calculated and documented to be within the acceptable tolerances for optimum performance.</p> <p>3.7. Flows, water levels and pressures are achievable by the pumps operating at optimum efficiency and according to enterprise standards.</p> <p>3.8. Mechanisms for controlling and adjusting pressure are included, and isolation valves direct water to areas with different irrigation schedules.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.9. Channel systems and attendant structures are designed according to industry recommendations, and channel flow velocities are calculated according to enterprise standards.</p> <p>3.10. Soil types have been compared for erodeability and suitable fill has been selected for construction according to enterprise standards.</p> <p>3.11. Construction plans and specifications define work required to achieve the required standards of uniformity and efficiency of water application according to industry standards</p>
4. Design a drainage, storage and treatment system	<p>4.1. Regional geology and geography is investigated to predict sustainability of irrigation and storage.</p> <p>4.2. Site investigations to assess depth of clay, depth of ground water, soil and water salinity, and structural or chemical impediments are used to determine the most cost effective storage system.</p> <p>4.3. Predictions of leaching fractions and salt movements are documented, and soil amelioration and drainage management plans are developed.</p> <p>4.4. The need for leachate interception and dewatering system is determined, and if required, construction specification prepared for interception and collection, water treatment, disposal, and reuse or recycle.</p> <p>4.5. Drains and structures are capable of carrying the design water volumes and intensities according to enterprise standards.</p> <p>4.6. Damage from water logging is minimised according to enterprise standards.</p> <p>4.7. Hydrological calculations predict volumes and rates of surface run-off according to enterprise standards.</p>
5. Determine capital expense budget	<p>5.1. Design calculations and decisions are documented and relevant information is communicated clearly through plans, specifications and manuals.</p> <p>5.2. Design output is checked by a competent designer against enterprise objectives.</p> <p>5.3. Materials requirements are determined and documented from plans and specifications.</p> <p>5.4. Labour requirements are estimated, based upon documented work schedule with reasonable allowance for variances in work schedules.</p> <p>5.5. Costing attributed to each component is based upon quoted information from suppliers, or sound analysis</p>

ELEMENT	PERFORMANCE CRITERIA
	of individual elements.
6. Determine operating expense budget	6.1. Operating expense budget indicates all expenses applicable to the completed irrigation system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect and analyse information
- identify adverse environmental impacts of irrigation, drainage and water treatment activities and appropriate remedial action
- identify design requirements
- develop specifications
- compare costings
- develop budgets
- document outcomes
- develop and implement relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- design processes
- developments in irrigation technology
- drainage and storage development technology
- latest treatment technology
- automatic control and monitoring systems
- waste management and environmental issues
- budgeting

REQUIRED SKILLS AND KNOWLEDGE

- contractual development and obligations
- environmental protection agency regulations
- environmental impacts of irrigation, drainage and water treatment using water from any ground or underground source
- cost/benefit analysis
- OHS and environmental protection legislation, codes of practice and enterprise policies and procedures.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify design requirements for drainage and water treatment
- determine specifications for suitable pumping and power systems
- design distribution, drainage, storage and treatment systems
- design water transfer, recharge, reuse and harvesting systems to conserve natural resources
- assess the environmental impacts of the irrigation system to ensure it will comply with environmental protection agency regulations.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Reuse systems may include:	<ul style="list-style-type: none"> • dis-infestation and filtering equipment.
Irrigation distribution systems covered by this standard are:	<ul style="list-style-type: none"> • micro-irrigation systems • spray irrigation systems • surface irrigation systems • basin irrigation.
Systems may range from:	<ul style="list-style-type: none"> • manual operation and monitoring to fully automated with computer control and monitoring.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	1.1.Plans and specifications are interpreted and clarified with the supervisor. 1.2.The quantity and quality of materials are checked to ensure they conform to design drawings and specifications. 1.3.Tools and equipment are selected and checked for serviceability according to enterprise guidelines. 1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented. 1.5.Environmental implications of constructing concrete structures are identified and reported to the supervisor.
2. Set out and prepare the site	2.1.Services are determined and located from site plans. 2.2.The position of the structure or feature is marked out according to design drawings and specifications. 2.3.Profiles are established to conform to the tolerances nominated within the design drawings and specifications. 2.4.Subsoil is prepared by removing all debris, vegetable matter and topsoil to provide a solid foundation for concrete. 2.5.Drainage systems are installed according to design drawings and specifications. 2.6.Form work is installed to the site in a manner that will ensure it remains rigid during concrete pouring operations. 2.7.Sub-base material is placed and compacted to the required finished levels. 2.8.Preparation of the site is completed according to the type of structure or feature to be constructed.
3. Mix and pour	3.1.Proportions for concrete mix are determined

ELEMENT	PERFORMANCE CRITERIA
concrete	<p>according to the strength requirements of the project.</p> <p>3.2. Volume of dry materials necessary to produce final concrete mix is determined.</p> <p>3.3. All dry ingredients and required additives are mixed together to ensure a thorough blending of all materials is achieved.</p> <p>3.4. Sufficient water is introduced to produce a concrete mix to the required consistency.</p> <p>3.5. Concrete mix samples are taken for testing, if required, to check for conformity to specifications.</p> <p>3.6. Concrete is poured to designated levels in a manner to avoid segregation of materials.</p> <p>3.7. Concrete is consolidated using an approved vibration method to industry standard (AS3600) to ensure air pockets are eliminated.</p>
4. Finish concrete	<p>4.1. Concrete is screeded to a flat surface to maintain the desired finished level.</p> <p>4.2. Surface is trowelled according to design drawings and specifications.</p> <p>4.3. A Concrete is finished off according to design drawings and specifications.</p>
5. Check quality of work and clean up site	<p>5.1. Quality of finished works is inspected to ensure the standard of the finished structure or feature is in accordance with design drawings and specifications.</p> <p>5.2. Form work is removed and cleaned in a manner which will allow for re-use of the form work.</p> <p>5.3. All debris is removed and disposed of in a manner that minimises risk to the environment.</p> <p>5.4. All tools and equipment are cleaned and stored according to enterprise guidelines.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- measure and construct profiles using mathematical techniques

REQUIRED SKILLS AND KNOWLEDGE

- establish levels using levelling equipment
- undertake and interpret tests performed on a concrete mix
- place, consolidate and finish concrete
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- MPA testing theory and what effects MPA specifications in a concrete mix
- the comparative environmental implications associated with soil removal and the establishment of drainage systems
- industry standards in relation to reinforcing and consolidating concrete.
- sub-base and sub-grade materials and preparation.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	<p>1.1.Plans and specifications are interpreted.</p> <p>1.2.The quantity and quality of materials are checked for conformation to design drawings and specifications.</p> <p>1.3.Tools and equipment are selected and checked for serviceability according to industry practice.</p> <p>1.4.Personal Protective Equipment (PPE) is selected, used and maintained according to procedures.</p> <p>1.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed, and controls are implemented.</p>
2. Position the structure and prepare the profile and footings	<p>2.1.Services are identified and located from site plans.</p> <p>2.2.The position of the structure is marked out according to design drawings and specifications.</p> <p>2.3.Profiles are established to conform to the tolerances nominated within the design drawings and specifications.</p> <p>2.4.Footings are excavated and prepared according to the type of structure to be erected.</p>
3. Prepare and cut timber components	<p>3.1.Components are prepared for assembly to the requirements contained in the design drawings and specifications.</p> <p>3.2.The length of components and the positions of cuts and joints are marked out with a pencil according to designated specifications in design drawings.</p> <p>3.3.Cutting tools are selected, used and maintained</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to manufactures recommendations and OHS specifications.</p> <p>3.4.Components are cut, checked out and drilled accurately in preparation for joining and assembly.</p>
4. Assemble and erect structure	<p>4.1.Timber components are fixed, joined or assembled into position and fixed into place according to design drawings and specifications.</p> <p>4.2.Remaining components are installed and fixed into position according to design drawings and specifications.</p> <p>4.3.Structure is finished off to ensure all components are secure and complete.</p> <p>4.4.Coatings are applied according to specifications and manufacturer's recommendations.</p>
5. Check quality of work and clean up site	<p>5.1.Quality of finished works is checked for compliance with design drawings and specifications.</p> <p>5.2.Debris is cleaned from structure and site according to industry practice.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- measure and mark lengths of timber accurately
- fix, join or assemble timbers using a variety of recognised methods
- apply surface finishes
- use surveyors' instruments
- excavate footings
- use hand and power tools according to OHS requirements
- estimate quantities
- demonstrate safe working practices
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening,

REQUIRED SKILLS AND KNOWLEDGE

clarifying information and consulting with supervisors as required

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- levelling principles and techniques
- timber properties and characteristics
- common timber joints
- timber fixing methods and product
- footings and their construction used for timber structures
- OHS requirements associated with erecting structures and features
- environmental implications associated with excavation and construction activity.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

AHCMOM301A Coordinate machinery and equipment maintenance and repair

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of coordinating machinery and equipment maintenance and repair for a small enterprise and defines the standard required to: seek technical advice on scale of repairs required where necessary; establish priorities for work to be carried out; calculate material and resource requirements and place orders; respond to contingencies and take corrective actions where necessary; monitor and document personnel, activities, timelines and materials usage; monitor and report on activities undertaken.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to workers in agriculture, horticulture and land management who ensure that machinery and equipment for the enterprise is maintained and repaired in a way that allows the core business of the enterprise to continue with minimal disruption.
--------------------------------	---

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for maintenance and repair work	1.1. Requirements of the work responsibilities are clarified with the supervisor and according to enterprise guidelines. 1.2. Equipment and material resource requirements are identified according to the scope of the coordination work and the supervisor's instructions. 1.3. The priorities for maintenance and repair activities and time allocation is identified, documented and presented to the supervisor for verification. 1.4. The environmental implications of the proposed maintenance and repair work are identified and the likely outcomes assessed and reported to the supervisor. 1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented. 1.6. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures.
2. Maintain and repair machinery and	2.1. Equipment/machinery is maintained and repaired as authorised by the supervisor and according to

ELEMENT	PERFORMANCE CRITERIA
equipment	<p>enterprise guidelines and work place priorities.</p> <p>2.2. Materials to assist in maintenance and repair work are purchased, stored and/or used as required.</p> <p>2.3. Delivery of materials to the site is organised according to workplace priorities.</p> <p>2.4. Machinery and equipment is organised to be on-site in good order when they are required.</p> <p>2.5. Maintenance and repairs requiring specialist attention and work are identified and organised according to enterprise guidelines.</p>
3. Co-ordinate and report on maintenance and repair activities	<p>3.1. Resources are coordinated and timed to suit the maintenance and repair activities and priority of work.</p> <p>3.2. Operators are informed of appropriate use and their responsibilities in respect to operational maintenance requirements of machinery and equipment.</p> <p>3.3. Personnel, activities, timelines and materials usage are monitored and documented according to enterprise guidelines.</p> <p>3.4. Contingency situations are recognised and reported to the supervisor and corrective actions taken according to enterprise guidelines.</p> <p>3.5. A simple report is written to inform management of maintenance and repair activities undertaken and completed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- implement safe work procedures and ensure a safe workplace
- read and interpret documentation associated with work site activities
- calculate material and resource requirements
- co-ordinate a team to achieve optimum performance
- document results clearly and concisely
- perform an OHS risk assessment

REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- work schedule programming
- possible causes of disruption to work activities and their effect on quality and time schedules
- responsibilities and requirements for maintaining and repairing machinery and equipment
- the range, use and availability of materials, equipment and machinery that may be required for the project
- environmental awareness associated with undertaking maintenance and repair work on machinery and equipment to ensure the impact on the environment is minimal
- OHS issues, legislative requirements and codes of practice.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- seek technical advice on scale of repairs required where necessary
- establish priorities for work to be carried out
- calculate material and resource requirements and place orders
- respond to contingencies and take corrective actions

EVIDENCE GUIDE	
	where necessary <ul style="list-style-type: none"> • monitor and document personnel, activities, timelines and materials usage • monitor and report on activities undertaken.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Hazards may include:	<ul style="list-style-type: none"> • disturbance of services • solar radiation • dust • noise • through traffic • uneven surfaces and holes • moving machinery and machinery parts • powered equipment and hand tools • hazards from use of hired equipment • overhead hazards including powerlines.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare maintenance plan	<p>1.1. Maintenance requirements for property, machinery and equipment are identified from relevant information sources.</p> <p>1.2. Maintenance costs are identified and quantified.</p> <p>1.3. Maintenance requirements are checked against warranty, insurance agreements and indemnity provisions.</p> <p>1.4. Maintenance plan is developed to promote and sustain performance and production systems in line with enterprise requirements.</p> <p>1.5. Effective workplace communication strategies are established with regard to maintenance plan, environmental and Occupational Health and Safety (OHS) policies, and enterprise requirements.</p>
2. Implement maintenance plan	<p>2.1. Resource and supply requirements are identified, secured and included in enterprise budgets and operational considerations.</p> <p>2.2. Prepared maintenance schedules and procedures are effectively communicated to staff, contractors and suppliers to minimise negative impacts on production and costs.</p> <p>2.3. Maintenance plan is implemented and scheduled to minimise disruption to enterprise operations.</p> <p>2.4. Potential risks are assessed with regard to staff and supply problems, and contingency plans prepared accordingly.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.5.Tasks required are aligned to staff capability, and training is provided where required.</p> <p>2.6.Machinery and equipment are operated to manufacturer's specifications, OHS and enterprise requirements.</p>
<p>3. Monitor maintenance plan</p>	<p>3.1.Maintenance activities and performance are monitored against maintenance plan for efficiency and effectiveness.</p> <p>3.2.Workplace hazards and environmental implications associated with maintenance procedures are monitored and controlled in line with OHS and enterprise requirements.</p> <p>3.3.Costs are monitored and controlled within enterprise budget requirements.</p> <p>3.4.Relevant information with regard to the maintenance plan is documented in accordance with enterprise requirements.</p> <p>3.5.Property, machinery and equipment are maintained in clean and safe operational conditions.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and oversee safe work practices
- plan, cost and schedule maintenance requirements
- establish and monitor performance targets for maintenance team
- monitor and access performance of maintenance activities
- observe the emergence and supervise the removal of workplace hazards and risks
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex

REQUIRED SKILLS AND KNOWLEDGE
<p>workplace measures and data</p> <ul style="list-style-type: none"> • use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.
Required knowledge
<ul style="list-style-type: none"> • types of maintenance requirements with regard to property, machinery and equipment • maintenance and servicing cycles for property, machinery and equipment • relevant State/Territory legislation, regulations and Codes of Practice with regard to workplace OHS and environmental protection requirements, and the use and control of hazardous substances • hazards and risks and respective control measures • training and instruction techniques for directing the learning of staff.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare equipment and materials	<p>1.1. Tools and materials are selected for the task to be undertaken according to manufacturer guidelines and Occupational Health and Safety (OHS) regulations.</p> <p>1.2. Plant materials are identified, obtained and stored according to enterprise guidelines.</p> <p>1.3. Labour and machinery requirements are estimated and organised.</p> <p>1.4. Schedule of works is prepared and provided to management/client.</p>
2. Prepare the revegetation site	<p>2.1. Site hazards are identified, risks assessed and suitable risk controls implemented.</p> <p>2.2. Site preparation is undertaken according to planting plan and/or supervisor's instructions.</p> <p>2.3. Soil ameliorants are used, if necessary, according to plan specifications.</p> <p>2.4. Revegetation site is marked out according to supervisor's directions and/or plans.</p> <p>2.5. All competing plants, debris and pollutants are treated according to the plan specifications and risk controls implemented.</p> <p>2.6. Treatments are selected according to the risk controls selected and applied according to documented guidelines and manufacturer instructions.</p> <p>2.7. Protective structures are installed where indicated by the risk controls implemented.</p>
3. Effect revegetation works	<p>3.1. Revegetation works are implemented according to enterprise guidelines.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2.All plants materials are inspected prior to revegetation works and defective materials are discarded.</p> <p>3.3.Plant materials to be installed are treated according to documented guidelines.</p> <p>3.4.Plant materials are installed according to planting program.</p> <p>3.5.Remedial action is undertaken to ensure all of the revegetation program requirements have been implemented.</p> <p>3.6.Potential threats to revegetation works are identified and reported.</p>
4. Maintain revegetated site	<p>4.1.Site is maintained according to the planting program requirements.</p> <p>4.2.Remedial action and plant protection is undertaken according to the needs of the species.</p> <p>4.3.Tools and equipment are cleaned, maintained and stored consistent with manufacturer specifications.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- prepare equipment and materials
- prepare a planting site
- effect revegetation works
- maintain revegetated site
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- revegetation techniques
- ecosystems, provenance and habitat requirements
- factors affecting the timing and method of planting
- identification of pests and diseases of trees
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- nutrient requirements of a range of plant species and cultivars
- physiology of plant growth
- techniques for protecting and securing/anchoring trees and shrubs
- plant selection and culture
- soils and nutrients
- calculations for materials.

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out preliminary planning activities for revegetation works	<p>1.1. Client preferences and contract requirements including the scope of the work for the revegetation project are confirmed and verified.</p> <p>1.2. Specific statutory obligations and site responsibilities that may affect the implementation of works are identified.</p> <p>1.3. An initial site visit is conducted to verify the biophysical and other factors of the project area including environmental considerations and historical modifications.</p> <p>1.4. Occupational Health and Safety (OHS) obligations associated with the revegetation works are identified, OHS hazards are assessed and controls developed, costed and documented in the implementation plan according to enterprise guidelines.</p> <p>1.5. The availability, quantity and costs of plants and other materials listed in the project schedules are verified.</p>
2. Prepare a staged plan of work	<p>2.1. Resources, tools and equipment required for revegetation procedures and ongoing maintenance of the site are identified, costed and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.2. Site access and establishment issues are investigated to consider and plan for the environmental impacts of site work practices, avoid safety hazards to workers or the public, and minimise disruption to site works during the construction period.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3.A program of works is prepared to provide a sequential allocation of resources and work tasks to meet the project contract timelines.</p> <p>2.4.Timelines are developed for site establishment, the establishment period and maintenance of works.</p> <p>2.5.Seasonal factors and impacts are incorporated in the staging strategy to allow for planting supply and care, wet day access, machinery use, fire hazards and establishment period.</p> <p>2.6.Where required, special project works related to habitat resource development and enhancement are included in the staged implementation plan.</p> <p>2.7.Document the staged implementation plan.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess a site for opportunities and constraints associated with implementation of revegetation works
- prepare schedules for implementation of revegetation works
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- awareness of the role of revegetation works in the restoration of the environment
- practical understanding of the environmental issues associated with undertaking revegetation works, and the need to comply with legislation and ensure that the

REQUIRED SKILLS AND KNOWLEDGE

- impact on the environment is minimal
- principles of ecology including specific native plant and animal relationships and habitat requirements
 - identification, propagation and establishment techniques of specific native plant species
 - site evaluation techniques including methods of analysing soils, waterways and their condition
 - practical understanding of the advantages and disadvantages of a range of revegetation procedures
 - chemical, cultural and biological weed and feral animal control techniques
 - soil conservation and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
 - soil erosion control and stormwater management techniques
 - maintenance requirements and practices for native plants prior to and after initial establishment
 - growth habits and cultural requirements of specific native plants under a range of soil and environmental conditions
 - OHS hazards associated with undertaking revegetation works and the controls necessary to remove or minimise risks associated with them
 - contract documents including specifications, plans of landscape works, services, supplies and surveyors documents.

Evidence Guide

AHCNSY201A Pot up plants

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the production procedure of staged containerisation of nursery plants after propagation in production nurseries and defines the standard required to: prepare tools, equipment and plants for potting up; prepare growing media for potting up plants; pot up plants to required specification pot size; type and carry out follow-up procedures to potting up.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to transplanting established plants with developed root systems sown from seed, from cuttings, layering, growing on tissue cultured plants, division or splitting, spores, cloning, and budding or grafting into larger appropriate sized containers of growing media. Potting up involves working within routine methods and procedures under supervision with intermittent checking. Responsibility for some roles and co-ordination within a team may be required.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for potting up operations	1.1. Workplace information is interpreted and clarified according to instructions. 1.2. Occupational Health and Safety (OHS) hazards are identified and reported to the supervisor. 1.3. Tools and equipment for potting up are selected and used according to documented guidelines. 1.4. Work area is cleaned and disinfected according to company hygiene practices. 1.5. Materials are collected and checked to ensure sufficient quantity and quality for potting up operations.
2. Prepare growing media	2.1. Suitable Personal Protective Equipment (PPE) is selected, used and maintained. 2.2. Media components are measured and mixed according to documented guidelines. 2.3. Growing media is tested to ensure the product complies with media specifications.
3. Pot up propagated plants	3.1. Plants are prepared for potting in accordance with enterprise guidelines. 3.2. Plants are graded during the potting process

ELEMENT	PERFORMANCE CRITERIA
	<p>according to quality specifications.</p> <p>3.3. Media level in pots is adjusted to produce a well-furnished plant according to documented guidelines.</p> <p>3.4. Placement and depth of plants comply with the planting method and plan.</p> <p>3.5. Potting operations are carried out according to written OHS requirements.</p>
4. Complete potting up operation	<p>4.1. Plants are watered in to eliminate air pockets and prevent dehydration.</p> <p>4.2. Cleaning procedures are performed and hygiene practices followed according to enterprise guidelines.</p> <p>4.3. Waste is collected and disposed of or recycled to minimise damage to the external environment.</p> <p>4.4. Records of potting up operations are maintained in the appropriate format.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- prepare tools, equipment, media and plants
- handle plants with care
- grade plants for quality
- apply different types of potting media
- measure out media components accurately
- produce a uniform media level in the pot
- use and maintain tools
- disinfect selected work areas
- treat common problems of plants in a controlled environment
- participate in teams and contribute to team objectives
- interpret work procedures
- maintain required records
- minimise damage of waste products on the environment
- use literacy skills to follow sequenced written instructions and record information

REQUIRED SKILLS AND KNOWLEDGE

accurately and legibly

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- appropriate use of personal protective equipment
- properties of relevant potting media
- basic plant physiology
- enterprise plants and their characteristics
- hygiene and quality control
- common problems in a controlled environment
- methods of disposing of waste.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare tools, equipment and plants for potting up
- prepare growing media for potting up plants
- pot up plants to required specification
- carry out follow-up procedures to potting up.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain the nursery environment	<p>1.1. Occupational Health and Safety (OHS) hazards in the nursery environment are identified, risks assessed and reported to the supervisor.</p> <p>1.2. Plant growth and health requirements are clarified with the supervisor.</p> <p>1.3. Irrigation system components are serviced for basic operational use and basic user serviceable parts are repaired or replaced.</p> <p>1.4. Performance of the irrigation system is checked to ensure optimum results.</p> <p>1.5. Temperature controls are monitored to ensure specified levels are maintained.</p> <p>1.6. Hygiene practices are followed to minimise risk of contamination.</p>
2. Maintain nursery plants	<p>2.1. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p> <p>2.2. Common problems in nursery plants are recognised, and rectified and/or reported to the supervisor.</p> <p>2.3. Tools and equipment are selected and used for plant maintenance.</p> <p>2.4. Treatments are applied to assist plant growth as directed by the supervisor.</p> <p>2.5. Water is applied in the quantity and method specified.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.6. Nursery operations are undertaken according to OHS requirements. 2.7. Plant quality is maintained.
3. Complete nursery plant maintenance operation	3.1. Workplace information is recorded in the appropriate format. 3.2. Waste is collected and disposed of or recycled. 3.3. Tools and equipment are cleaned and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- recognise common problems in nursery plants
- monitor temperature controls
- apply plant growth treatments as directed
- apply specified watering
- select and use tools and equipment
- check irrigation system performance
- service basic irrigation system components
- repair or replace user serviceable irrigation components
- maintain nursery hygiene
- participate in teams and contribute to team objectives
- read and interpret enterprise work procedures
- communicate effectively with team members and supervisor
- measure quantities and calculate application rates
- minimise environmental disturbance
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- daily water requirements of nursery plants
- botany and plant physiology
- environmental requirements of a range of containerised plants growing in a nursery setting
- applied understanding of the importance of hygiene and quality control when

REQUIRED SKILLS AND KNOWLEDGE

- tending nursery plants
- common problems that may occur with containerised plants in a controlled environment and their treatment
 - Nursery Industry Water Management Best Practice Guidelines 2005
 - principles and operations of a range of irrigation systems used in nurseries
 - methods of disposing of waste to minimise damage to the external environment.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- establish the requirements of plants
- monitor irrigation and temperature control systems
- maintain nursery hygiene
- monitor plants
- maintain nursery records
- implement procedures for waste disposal and tool maintenance.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Nursery environments may include:	<ul style="list-style-type: none"> • glasshouses • shade houses • hardening-off areas.
Plants may include:	<ul style="list-style-type: none"> • plants common in production nurseries and commonly used and produced in the region.
Plant physiological processes may include:	<ul style="list-style-type: none"> • principles of transpiration • water intake • nutrient uptake • photosynthesis • respiration • translocation.

AHCNSY203A Undertake propagation activities

Modification History

Release	TP Version	Comments
2	AHC10v5	Included missing information in Required Skills and Knowledge
1	AHC10	Initial release. Supersedes and is equivalent to RTC2026A

Unit Descriptor

Unit descriptor	This unit covers the process of undertaking propagation activities and defines the standard required to: collect and maintain suitable plant material; apply a range of propagation techniques; maintain and monitor propagated plants; maintain plant hygiene.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to the process of carrying out a range of propagation tasks, such as preparing plant stock, collecting propagation materials, pre-planting treatments and basic plant propagation techniques. This standard involves working within routine methods and procedures under supervision with intermittent checking. Responsibility for some roles and coordination within a team may be required.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for plant propagation	1.1. Workplace information is interpreted and clarified according to instructions. 1.2. Occupational Health and Safety (OHS) hazards in the work area are identified, rectified and/or reported. 1.3. Suitable Personal Protective Equipment (PPE) is selected, used, maintained and stored. 1.4. Tools and equipment appropriate to the task being undertaken are selected and prepared according to written guidelines. 1.5. Propagation material is collected using the appropriate method for the species. 1.6. Propagation material is maintained and stored to ensure maximum viability.
2. Propagate plants	2.1. Pre-treatment is applied and/or carried out appropriate to the propagation method and species. 2.2. Propagation techniques are carried out according to

ELEMENT	PERFORMANCE CRITERIA
	<p>the requirements of the species.</p> <p>2.3. Propagation material is handled in a way that minimises damage and maximises viability.</p> <p>2.4. Water and nutrients are applied to suit the media conditions, plant requirements and propagation techniques employed.</p> <p>2.5. Labels are applied according to enterprise guidelines.</p> <p>2.6. Plant health is monitored and remedial action is taken according to written guidelines.</p> <p>2.7. Propagation activities are carried out according to OHS requirements.</p>
3. Complete propagation activities	<p>3.1. Records are completed accurately and at the required time according to written guidelines.</p> <p>3.2. Tools and equipment are cleaned and stored according to manufacturer specifications.</p> <p>3.3. Waste is removed and hygiene practices are followed according to enterprise and OHS requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect propagation material
- maintain environmental parameters and temperature controls
- apply pre-treatments
- carry out a variety of propagation techniques
- minimise damage and maximise viability
- apply water and nutrients
- read and interpret instructions
- participate in teams and contribute to team objectives
- communicate effectively with fellow team members
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- propagation methods required for a range of plant species
- enterprise hygiene requirements
- quality specifications/characteristics of a range of parent plants and propagation materials
- basic plant nutrition
- botany and physiology
- maintenance requirements of tools and equipment used for propagation
- OHS requirements of employees
- record keeping relevant to the work function
- enterprise requirements for handling and disposal of nursery wastes
- common problems that may occur while performing propagation activities in a controlled environment
- OHS legislative requirements and Codes of Practice
- OHS procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- collect suitable plant material
- successfully apply a range of propagation techniques
- maintain and monitor propagated plants
- maintain plant hygiene.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

EVIDENCE GUIDE	
	enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Propagation techniques may include:	<ul style="list-style-type: none"> • seed - (small seed sown in modules and pricked out or sown in seedbeds by hand) • cuttings - (hardwood stem, semi-ripe stem, leaf, root) • simple layering • growing on tissue-cultured plants • division or splitting • spores.
Propagation techniques does not include:	<ul style="list-style-type: none"> • budding and grafting.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor and maintain the nursery environment	<p>1.1.Environmental parameters are monitored against the needs of the plants and enterprise guidelines.</p> <p>1.2.Environmental parameters are altered, as required, to meet the needs of nursery plants and market requirements.</p> <p>1.3.Irrigation system components are serviced for basic operational use and basic user serviceable parts are repaired or replaced.</p>
2. Determine daily water requirements	<p>2.1.Water requirements are determined according to the needs of the plant and environmental parameters.</p> <p>2.2.Water is applied according to the needs of the plant group.</p> <p>2.3.Water requirements of the plant are monitored according to enterprise guidelines.</p>
3. Promote plant growth by intervention	<p>3.1.Potting media is tested in production areas to ensure quality specifications are met.</p> <p>3.2.Health of the plant is monitored according to enterprise guidelines.</p> <p>3.3.Plant interventions are undertaken according to marketing plans, appropriate stage of plant growth for the particular intervention, and Occupational Health and Safety (OHS) requirements.</p> <p>3.4.Waste is disposed of with full consideration of the environmental implications.</p> <p>3.5.Records are kept on all maintenance activities according to enterprise requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- select, fit and use appropriate personal protective equipment
- calculate daily water needs
- recognise stages of plant growth
- monitor plant health
- integrate range of plant maintenance activities
- monitor the effects of plant interventions
- prepare, mix and use chemicals as required
- service basic irrigation system components
- repair or replace user serviceable irrigation components
- interpret and record required workplace information
- operate irrigation systems
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- effects of environmental parameters on plant growth
- methods of calculating daily water needs
- relationship between plant water needs and environmental parameters
- characteristics of various types of potting media
- factors affecting the growth of nursery plants
- optimum growing conditions for a range of plants in a nursery
- quality parameters for a range of nursery plants
- symptoms of unhealthy plants
- common problems that occur with nursery plants and their treatment
- botany and plant physiology
- effect of different pruning and intervention methods
- processes for modifying environmental parameters
- phenological stages of plant growth
- treatments required by plants at different phenological stages and environmental parameters
- principles and operations of a range of irrigation systems used in nurseries

REQUIRED SKILLS AND KNOWLEDGE

- OHS hazards and the associated risks when maintaining plants
- environmental impacts of applying plant interventions
- Nursery Industry Water Management Best Practice Guidelines 2005.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- calculate daily water needs
- recognise stages of plant growth
- monitor plant health
- integrate range of plant maintenance activities
- monitor the effects of plant interventions
- prepare, mix and use chemicals as required.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

RANGE STATEMENT	
Plants may include:	<ul style="list-style-type: none"> a wide range of plants common in production and retail nurseries and commonly used and produced in the region.
Plant cultural practices may include:	<ul style="list-style-type: none"> practices relevant to maintenance activities in diverse environments and a varying ability to control the environmental parameters.
Plant physiological processes may include:	<ul style="list-style-type: none"> principles of transpiration, water intake, nutrient uptake, photosynthesis, respiration and translocation.

AHCNSY302A Receive and dispatch nursery products

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of facilitating client orders for products and the receiving and dispatching of plants and other nursery products from a production or retail nursery and defines the standard required to: communicate with client and advise on product; select and evaluate individual product quality; fulfil orders for nursery products in quantity and meet client quality requirements; maintain stock inventory; advise on nursery product availability and record sales quantities of product; record financial details of transactions.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to the process of selection and collection of product for the purpose of dispatch, delivery or pickup by client and the process of receiving and processing of products from suppliers. Some discretion and judgement may be required in relation to the selection, presentation and preparation for transportation of particular nursery products. Receiving and dispatching involves the application of a diverse range of knowledge in horticulture, warehousing, storage and transportation techniques.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select product for an order	<p>1.1. Materials, equipment and Personal Protective Equipment (PPE) required for the job are selected and used.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified and reported and suitable risk controls implemented.</p> <p>1.3. Product is selected from stock batches in accordance with order forms or by client request.</p> <p>1.4. Clients onsite are assisted with selection or directed to particular product or display areas.</p> <p>1.5. Quality of product is evaluated visually to meet the standard order requirements for quality.</p> <p>1.6. Special order requirements are detailed on the order forms or requested verbally.</p> <p>1.7. Stockholding areas are blocked up for presentation.</p> <p>1.8. Volume of product remaining is observed and information is retained to inform other clients.</p>

ELEMENT	PERFORMANCE CRITERIA
2. Maintain the stock inventory	2.1.Orders are collated in the sales/dispatch area. 2.2.Orders are checked for enterprise quality of a sales product and for accuracy in quantity. 2.3.Records are kept of outgoing sales in the product inventory by manual or electronic means. 2.4.Adjustments are made in the inventory about the quantity of nursery stock available for sale.
3. Prepare for dispatch or delivery	3.1.Product is checked for correct labelling and incorrect labelling is replaced. 3.2.Product is packaged for delivery and presentation to the client. 3.3.Product is packed into containers for ease of handling. 3.4.Delivery of product is assisted by loading and stacking product according to the configuration of the transportation vehicle. 3.5.Product quality is checked at each stage in the delivery process. 3.6.Sales/dispatch areas and packing/packaging materials are maintained and tidied.
4. Receive products	4.1.Incoming product is received and checked for quality and correct quantities. 4.2.Product is transferred to stock holding areas with appropriate manual handling techniques. 4.3.Incoming documentation, receipts of delivery and invoices are transferred to administration.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with clients, suppliers and work team members
- interpret order forms
- select product for order requirements
- evaluate product quality

REQUIRED SKILLS AND KNOWLEDGE

- meet client service requirements
- maintain product records accurately, either manually or on a computer
- use a calculator
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- environmental controls necessary for transporting plants
- common sources of cross contamination from transport vehicles
- enterprise quarantine policies and relevant quarantine legislation
- enterprise stock control procedures
- best practice guidelines for nursery hygiene
- enterprise quality standards for the packing, packaging and labelling of products.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- communicate with client and advise on product
- select and evaluate individual product quality
- fulfil orders for nursery products in quantity and meet client quality requirements
- maintain stock inventory
- advise on nursery product availability
- record sales quantities of product and record financial details of transactions.

Context of and specific resources for

Competency requires the application of work practices

AHCNSY306A Implement a propagation plan

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of plant propagation by both sexual and asexual methods and defines the standard required to: prepare tools and propagation materials for work; prepare workspaces for propagation activities; use a range of propagation methods to produce new crops; place or prepare for placing newly propagated material in appropriate growing environment; record propagation activities.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the process of implementing a propagation plan and involves working within routine methods and procedures under limited supervision, with checking only related to overall progress. Some discretion and judgement is required in the selection of equipment, work organisation, services, actions and achieving outcomes within time constraints.
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for propagation activities	<p>1.1. Workplace information is interpreted and tasks organised to achieve daily work routine within time constraints.</p> <p>1.2. Tools, equipment and machinery are selected according to propagation method and enterprise work procedures.</p> <p>1.3. Growing environment is prepared to suit species and propagation method.</p> <p>1.4. Hygiene practices are implemented according to enterprise guidelines.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p>
2. Select propagation material	<p>2.1. Parent plant is identified and selected according to health, vigour and desired characteristics.</p> <p>2.2. Propagation material is selected and collected according to the propagation method, and species.</p> <p>2.3. Conditioning and storage requirements are selected to ensure maximum viability of propagating material.</p>
3. Prepare propagating media	<p>3.1. Media components are selected according to manufacturer directions, enterprise guidelines, propagation method and plant needs.</p> <p>3.2. Propagation media is tested to ensure the product complies with media specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Media and components are handled according to OHS requirements. 3.4. Storage requirements for the unused propagation media are selected.
4. Propagate plants	4.1. Propagation material is prepared according to the propagation method and species. 4.2. Propagation techniques are performed according to plant species and documented guidelines. 4.3. Plants are handled in a way that minimises damage. 4.4. Aftercare is applied to suit the media conditions, plant requirements and propagation techniques employed.
5. Complete propagation operations	5.1. Ensure work site is cleaned according to hygiene requirements. 5.2. Waste is collected and disposed of or recycled to minimise damage to the external environment in accordance with enterprise guidelines. 5.3. Records are completed accurately and at the required time according to documented guidelines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- select appropriate propagation material
- identify and assess hazards in the work area
- recognise and rectify problems and anomalies with parent plants, propagation material, propagation media, equipment and materials
- use propagation techniques for a range of plants
- use a diversity of propagation techniques
- prepare, mix and use chemicals as required
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening,

REQUIRED SKILLS AND KNOWLEDGE

clarifying information and consulting with supervisors as required

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- quality specifications for parent plants and propagation materials
- enterprise and industry hygiene standards required for propagation activities
- common problems that may occur while performing propagation activities in a controlled environment, and preventative/corrective action that may apply
- propagation techniques required for a range of plants
- aftercare requirements for a range of propagated plants
- testing methods applied to propagation media
- preferred types of propagation media for different species.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare tools and propagation materials for work
- prepare workspaces for propagation activities
- use a range of propagation methods to produce new crops
- place or prepare for placing newly propagated material in appropriate growing environment
- record propagation activities.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources

EVIDENCE GUIDE

	for some worksites may differ due to the regional or enterprise circumstances.
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Methods of propagation may include:

- sexual and asexual methods of propagation including tissue culture.

Propagation material may include:

- seeds
- cuttings
- spores
- rootstock
- scion
- rootlings
- buds
- separations/divisions
- tissue cultures
- rhizomes
- plantlets.

Propagating media may include:

- sand
- potting mix
- agar
- gravel
- scoria
- rock wool
- gro-wool
- sawdust
- pine bark
- perlite
- vermiculite
- water (hydroponics).

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify issues affecting the growing-on program	1.1. Production requirements are determined in consultation with management. 1.2. Factors that could limit the production of nursery plants are identified. 1.3. Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented. 1.4. The environmental implications in relation to a growing-on program are considered. 1.5. Sustainable practices are incorporated into the plan.
2. Develop the growing-on plan	2.1. Activities involved in the growing-on program are identified. 2.2. Labour, materials, tools and equipment needs are identified. 2.3. Environmental parameters are selected and altered to meet plant needs and production plans. 2.4. Growing media requirements are determined according to the needs of the plant and production plans. 2.5. Planting dimensions and layout are determined according to production plans. 2.6. Treatments required for the growing-on program are identified. 2.7. Hygiene requirements for the growing-on program are identified according to industry best practice.
3. Document the growing-on plan	3.1. The growing-on plan is documented, including all information identified in the development stage. 3.2. A budget supporting the plan is documented and approval sought by management. 3.3. A schedule of activities is organised according to production plans. 3.4. The growing-on plan and schedule of activities are communicated clearly to staff.

ELEMENT	PERFORMANCE CRITERIA
4. Oversee and monitor the growing-on program	4.1. The health of the plants is monitored to ensure they are at optimum growth. 4.2. Treatments are modified as required to maintain optimum growth. 4.3. Plants ready for dispatch are checked to ensure they meet customer specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- conduct literature and consultative research to obtain information about production requirements, growth conditions and marketing implications
- negotiate, budget and document plans
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- Worksafe Australia criteria for the labelling and handling of hazardous substances
- enterprise and industry hygiene standards required for growing-on activities
- environmental implications of the disposal of chemicals or chemical containers, and the drainage of high nutrient effluent
- optimal growing requirements of nursery plants
- enterprise and industry quality standards of nursery plant production
- common problems that may occur while performing growing-on activities in a controlled environment and preventative/corrective actions that may apply
- processes and techniques for preparing, costing and documenting plans for and scheduling growing-on activities

REQUIRED SKILLS AND KNOWLEDGE

- testing methods applied to propagation media
- preferred types of propagation media for different species
- chemical, cultural and biological pest, weed and disease control techniques
- application techniques for chemical and non-chemical intervention or treatments.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine requirements for growing-on program
- schedule potting program
- develop budgets and plans for a growing-on program
- monitor the implementation of the program.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out preliminary planning activities for a plant propagation program	<p>1.1. Management and marketing requirements are confirmed and understood.</p> <p>1.2. Space requirements for propagation program are evaluated.</p> <p>1.3. Propagation techniques are determined according to species and sound horticultural practice.</p> <p>1.4. Environmental parameters that impact on propagation are determined.</p> <p>1.5. Budget for the propagation program is negotiated with management.</p> <p>1.6. Occupational Health and Safety (OHS) hazards associated with the propagation program are identified, risks assessed and controls implemented.</p>
2. Develop the propagation plan	<p>2.1. Labour, materials, equipment and machinery needs are identified.</p> <p>2.2. Propagation media requirements are determined according to the propagation method and needs of the plant.</p> <p>2.3. Strategies to modify environmental conditions are determined according to the type of plant and propagation method used.</p> <p>2.4. Selection criteria for the propagation material are determined according to the type of plant and propagation method.</p> <p>2.5. Hygiene requirements for propagation activities are determined.</p> <p>2.6. Propagation plan is documented and schedule of</p>

ELEMENT	PERFORMANCE CRITERIA
	activities are communicated clearly to staff.
3. Monitor success of propagation activities	3.1. Variances from plan and scheduled activities are identified and recorded. 3.2. Propagated plants are assessed for health, quality and viability according to enterprise quality standards. 3.3. Remedial procedures are planned to meet marketing objectives and business imperatives.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- plan a propagation program applies to the
- conduct literature and consultative research to obtain information about propagation requirements, growth conditions, and marketing implications
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- OHS hazards associated with undertaking propagation activities, and the controls necessary to remove or minimise risks associated with them
- practical understanding of the OHS and environmental issues associated with use and disposal of propagation media
- enterprise and industry hygiene standards required for propagation activities, including relevant quarantine regulations
- industry and enterprise quality specifications for parent plants and propagation materials
- common problems that may occur while performing propagation activities in a

REQUIRED SKILLS AND KNOWLEDGE

- controlled environment, and preventative/corrective action that may apply
- processes and techniques for preparing, costing and documenting plans for and scheduling propagation activities
 - identification, propagation and establishment techniques required for a range of plant varieties and cultivars
 - monitoring staff performance
 - Plant Breeders Rights (PBR) and related legislation
 - aftercare requirements for a range of propagated plant varieties and cultivars
 - testing methods applied to propagation media
 - preferred types of propagation media for different species
 - chemical, cultural and biological pest, weed and disease control techniques
 - application techniques for chemical and non-chemical intervention or treatments.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine propagation techniques and resources required
- select propagation materials and media and determine optimal environmental conditions
- determine plant hygiene requirements
- review propagation plan by monitoring strike rate and health and quality of propagated plants
- negotiate and document plans.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

EVIDENCE GUIDE

enterprise circumstances.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Propagation techniques may include:

AHCPGD402A Plan a plant establishment program

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of developing a plant establishment program and a relevant site plan and specifications, and defines the standard required to: develop a concept plan that reflects client needs, site factors and the growing requirements of plants; select the plant species and cultivars, and the required quantities of plant material and other resources; develop and document detailed site plan, specifications and quotation; detail on-site procedures for implementing the plan and maintaining the site.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to those whose job role includes planning a plant establishment programs.
--------------------------------	---

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out preliminary planning activities for the plant establishment program	<p>1.1. Client preferences and requirements for the plant establishment program are understood and confirmed.</p> <p>1.2. The plant establishment site is assessed for legal attributes, biophysical factors, services and historical modifications.</p> <p>1.3. Research is conducted into plant species and cultivars, and local by-laws and restrictions that may affect the plant establishment program.</p> <p>1.4. Environmental implications of the planned programs are identified and if necessary, reported to relevant personnel for further research.</p> <p>1.5. A concept plan that reflects client preferences and requirements, takes into account site factors and any identified environmental requirements, is developed and presented to the client for discussion and approval.</p>
2. Determine requirements of the plant establishment program	<p>2.1. Plant species and cultivars that are appropriate to the site and consistent with the agreed concept plan are identified, and the required quantity calculated, costed, and availability confirmed with suppliers.</p> <p>2.2. Plant establishment procedures are selected consistent with the agreed concept plan, and according to the characteristics of available plant materials, the resources and equipment available, and the environmental factors affecting the success of the plant establishment program.</p> <p>2.3. Post-planting care is provided for according to client</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements, enterprise standards and site capabilities.</p> <p>2.4. Resources, tools, equipment and machinery required for planting and post-planting care are identified, costed, and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.5. Occupational Health and Safety (OHS) hazards associated with the plant establishment program are identified; risks assessed and controls developed according to enterprise guidelines, costed and documented in the plan.</p> <p>2.6. Staged implementation and development are outlined, where appropriate, with access for future works provided for according to client, enterprise and site requirements.</p> <p>2.7. Timelines for preparations, planting and post-planting care are determined taking into account the needs of the plant species and cultivars, site conditions, and any other planning requirements.</p>
3. Prepare and document the plant establishment program and specification	<p>3.1. Detailed plan, specifications and quotation are prepared based on the requirements of the plant establishment program, and presented to appropriate personnel and the client for acceptance.</p> <p>3.2. Scaled site plan is produced which can be readily interpreted and understood by on-site personnel according to enterprise standards.</p> <p>3.3. Detailed on-site procedures and schedules required for the planting of the site and post-planting care of plants are developed and documented.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- comply with legislative requirements
- document plans, specifications and work procedures, and write reports for the understanding of staff, clients and contractors

<p>REQUIRED SKILLS AND KNOWLEDGE</p> <ul style="list-style-type: none"> • calculate the cost and spatial and logistical requirements of components of the plant establishment program • use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks • use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views • use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data • use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.
<p>Required knowledge</p> <ul style="list-style-type: none"> • identification, propagation and establishment techniques of specific plant species and cultivars • the advantages and disadvantages of a range of plant establishment procedures • maintenance requirements and practices for specific plant species and cultivars, prior to and after initial establishment • processes and techniques for preparing, costing and documenting plans for and scheduling plant establishment activities.

Evidence Guide

<p>EVIDENCE GUIDE</p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • develop a concept plan that reflects client needs, site factors and the growing requirements of plants • select the plant species and cultivars, and the required

EVIDENCE GUIDE	
	<p>quantities of plant material and other resources</p> <ul style="list-style-type: none"> • develop and document detailed site plan, specifications and quotation • detail on-site procedures for implementing the plan and maintaining the site.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Establishment sites may include:	<ul style="list-style-type: none"> • large-scale or broad acre woodlots • revegetation areas • parks and gardens • landscaped areas • recreational reserves • sports turf or recreational turf surfaces • commercial nursery, floriculture and production horticulture sites.
Plant species and cultivars may include:	<ul style="list-style-type: none"> • exotic • native • endemic • evergreen • deciduous • conifer and palm trees and shrubs • turf • grasses • ground cover plants • bedding displays • aquatic plants.

AHCPT503A Manage a controlled growing environment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the process of managing controlled growing environments, and defines the standard required to: identify the growing requirements of the crop; prepare specifications for controlled growing infrastructure; develop a management plan to cover staff training, budgets, operating procedures and remedial actions; develop environmental monitoring procedures; and evaluate and document the achievements towards management objectives.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the management of a horticultural production site consisting of one or several controlled growing environments. The work is usually undertaken without supervision, with only general guidance on progress sought by senior management. Responsibility for the work of others may be involved and team coordination may be required. Management of controlled growing environments requires extensive horticultural knowledge and practical skills, particularly in plant physiology and growth needs, controlled environment systems, monitoring, reporting and forward planning.
--------------------------------	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify crop requirements	<p>1.1.Crop growth and production requirements are determined according to a documented production plan.</p> <p>1.2.Environmental parameters for optimal growing conditions for the specific crop are researched using available information resources.</p> <p>1.3.Controlled growing environment factors are identified, evaluated and recorded.</p>
2. Determine requirements for controlled growing environment	<p>2.1.Structures, machinery, equipment and resources required to control environmental conditions are identified, costed and availability confirmed.</p> <p>2.2.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</p> <p>2.3.Detrimental environmental impacts associated with the controlled growing environment system are identified and controls sanctioned.</p>
3. Prepare a	3.1.Management objectives for controlled growing

ELEMENT	PERFORMANCE CRITERIA
management plan for controlled growing environment	<p>environment are determined consistent with production plan and market requirements for crop quantity and quality.</p> <p>3.2.A schedule of environmental control procedures is developed according to controlled environment management objectives.</p> <p>3.3.Staff training needs are evaluated in regard to operation and maintenance of environmental control systems, and reported.</p> <p>3.4.A budget supporting the controlled environment management plan is documented and approval sought.</p> <p>3.5.The schedule of environmental control procedures is communicated clearly to staff.</p>
4. Manage controlled growing environment	<p>4.1.Controlled environment indicators and thresholds for remedial action are identified for monitoring according to industry best practice.</p> <p>4.2.Monitoring frequency and schedule is developed according to the requirements of the production plan and communicated clearly to staff.</p> <p>4.3.All monitoring data is recorded, analysed and applied to management of the controlled environment system to ensure optimal plant development.</p> <p>4.4.Remedial action undertaken is documented and reported.</p> <p>4.5.Costs of the controlled growing environment system are monitored against budget.</p> <p>4.6.Budget adjustments are recorded and reported.</p> <p>4.7.Recorded information, budget data and production outputs are evaluated and operational achievements towards management objectives are documented in a report.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- research information using available technology
- evaluate training needs
- assess risk
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- plant physiology and biochemistry
- techniques and methods of implementing optimal growing conditions for a range of horticultural crops
- controlled environmental conditions in regard to crop plant physiology, growth stages, and product quality and quantity
- quality production methods and techniques for a range of controlled environment plants
- legislation and regulations relating to the controlled environment systems
- market requirements for crop quantity and quality
- monitoring, analysis and recording systems
- staff training requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to treat weeds	<p>1.1. Weeds which impact on commercial crops, gardens and turf, and natural areas are recognised by common name.</p> <p>1.2. Details of the weed occurrence are recorded and reported to the supervisor.</p> <p>1.3. Treatment methods are selected in consultation with the supervisor.</p> <p>1.4. Equipment is selected and prepared for use according to enterprise guidelines and manufacturers specifications.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p>
2. Treat weeds	<p>2.1. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>2.2. Treatments are prepared according to supervisor's instructions and manufacturer's guidelines.</p> <p>2.3. Treatments are applied in such a way that non-target damage is minimised.</p> <p>2.4. Treatments are applied according to OHS and environmental regulatory requirements.</p>
3. Carry out post treatment operation	<p>3.1. Equipment is shut down and cleaned with full consideration of environmental impacts and OHS requirements.</p> <p>3.2. Treatment waste is disposed of causing minimal environmental damage.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and implement safe work practices
- read and interpret chemical labels, Material Safety Data Sheets (MSDSs), manufacturer's specifications for setting up equipment
- use and maintain PPE
- prepare to treat weeds
- apply weed treatments
- carry out post treatment operations
- maintain spray records
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- recognition of common weeds for a particular enterprise/situation
- weed growth characteristics
- different types of control measures, treatments and their principles
- modes of action of different chemicals
- equipment capability and limitations
- legislation relation to the use of chemicals for weed control
- OHS responsibilities of employers and employees
- OHS legislative requirements and associated hazardous substances regulations and Codes of Practice
- correct wearing/fit of personal protective equipment
- environmental considerations when using chemicals for weed control.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess weed infestation	<p>1.1. Identify the scope and size of the weed infestation that adversely impacts on the landscape.</p> <p>1.2. Identify weeds and record details of the weeds and beneficial organisms.</p> <p>1.3. Identify tolerable levels of infestation according to client, market, environmental and IPM requirements.</p> <p>1.4. Determine if plant health or growth requirements are compromised by level of infestation.</p> <p>1.5. Seek professional advice if required in the assessment of the weed infestation.</p>
2. Plan control measures	<p>2.1. Determine suitable control options according to Integrated Pest Management principles and industry practice.</p> <p>2.2. Identify the hazards, assess and control risks to others and the environment.</p> <p>2.3. Identify appropriate tools, equipment and machinery for the planned control measure.</p> <p>2.4. Select appropriate Personal Protective Equipment (PPE) in accordance with Occupational Health and Safety (OHS) requirements.</p> <p>2.5. Prepare a control plan for the control measure/strategy.</p>
3. Implement control	3.1. Implement control measures in accordance with IPM

ELEMENT	PERFORMANCE CRITERIA
measures	principles, industry practice and control plan. 3.2.Ensure that control measures minimise non-target damage. 3.3.Maintain records of the control measure/s applied.
4. Monitor control measures	4.1.Monitor control measures to identify signs of adverse impact on humans, animals, non-target plants or environment. 4.2.Assess effectiveness of control measures in accordance with IPM guidelines and/or available industry standards. 4.3.Record assessment of control measures and report to client or organisation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify a range of weeds and beneficial organisms
- identify threshold level of weeds for treatment
- conduct a site hazard identification and risk control assessment
- prepare a control plan
- use appropriate cultural, biological or chemical controls
- minimise damage to non-target species
- complete records of control treatments
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- economic, aesthetic and environmental threshold for a range of weeds
- IPM principles and strategies
- lifecycle and biology of weeds
- hazard identification and risk assessment methodologies

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none"> • types of control measures (cultural, biological, chemical) commonly used in industry/sector • types of equipment including personal protective equipment appropriate to the control measure • risk factors including human, animal health and environmental associated with a range of control measures/options • OHS requirements pertaining to the use of cultural, biological, chemical agents.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess pests and disease infestation	1.1.Scope and size of the infestation is assessed. 1.2.Plants pests, diseases and disorders and beneficial organisms are identified and reported or recorded in field notes. 1.3.Levels of pest infestations tolerated by the client, market or environment are identified from the IPM strategy.
2. Plan the implementation of control measures	2.1.Control measures suitable for the infestation are selected from IPM strategy. 2.2.Tools, equipment and machinery are selected for each work activity according to enterprise work procedures. 2.3.Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented. 2.4.Personal Protective Equipment (PPE) is selected, used and maintained according to procedures. 2.5.Control measures selected need to be in full consideration of OHS and environmental implications.
3. Implement control measures	3.1.Enterprise work team, contractors and IPM product suppliers are coordinated in a sequential, timely and effective manner in consultation with the supervisor. 3.2.Control measures are implemented according to the

ELEMENT	PERFORMANCE CRITERIA
	IPM standards or industry Code of Practice. 3.3.A clean and safe work area is maintained throughout and on completion of each activity. 3.4.Records are maintained as required by legislation and enterprise guidelines.
4. Monitor control methods	4.1.Control methods are monitored to identify side effects to other plants, animals or external environment. 4.2.Effectiveness of control methods are assessed in reference to specified industry, OHS and enterprise standards. 4.3.Adjustments to IPM control methods are implemented where necessary to meet enterprise specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- recognise a range of pests, diseases and beneficial organisms within a particular enterprise
- communicate with work team members, supervisors, contractors and consultants
- understand IPM symbols and information
- interpret and apply an IPM- based program
- utilise proforma reporting, analysis and work procedure documents
- interpret and apply plant pest and disease spatial and logistical specifications
- interpret and apply test results, and calculate the quantities and application rates of control materials
- coordinate work groups, contractors and own activities to sequentially and effectively complete activities in a timely and cost effective manner
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- pests and disease recognition
- economic, aesthetic or environmental thresholds for a range of plant pests, diseases

REQUIRED SKILLS AND KNOWLEDGE
<p>and disorders</p> <ul style="list-style-type: none"> • chemical, biological and cultural control methods and treatments available to the enterprise within the parameters of an IPM program • range and use of tools, equipment and machinery available to the enterprise for implementing the control measures • range of site monitoring and analysis techniques that may be used to implement and IPM program • choice of plant pest and disease methods with site limitations, environmental implications, end market and production or environmental objectives for the site • IPM standards or industry Code of Practice • occupational health and safety responsibilities for employees and employers • correct use and maintenance of personal protective equipment. • OHS and environmental legislative requirements including hazardous substances regulations.

AHCPMG402A Develop a pest management action plan within a local area

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit covers developing a pest management action plan within a local area and defines the standard required to: determine the lifecycle, distribution and loss of production caused by the pest; document the economic losses and environmental risks and impacts of the pest; develop control measures based on a combination of strategies to control the pest at its most vulnerable stage with minimal environmental impact; establish the costs and benefits of implementing the selected control strategies; select management options to eradicate or manage the pest across a local region; negotiate an action plan to implement the management options across an area or region.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to regional pest management officers and is likely to be undertaken independently, with reference to specialist advice.</p>

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine land management/production objectives	<p>1.1.Land users and other stakeholders are consulted regarding local objectives.</p> <p>1.2.Objectives address major land uses and production activities in the local area affected by the impacts of the target pests.</p> <p>1.3.Objectives relate to the problem definition and the reduction in the pest impacts and associated losses.</p> <p>1.4.Objectives comply with national, state and regional legislation and regulations.</p> <p>1.5.Objectives support strategies for land and pest management.</p>
2. Estimate costs and advantages for management units	<p>2.1.The diversity of land management and production values that the target pests affect within the local area is defined.</p> <p>2.2.The likely costs of preferred options for control of pest populations and/or changes to land management or production activities associated with each value are estimated.</p> <p>2.3.The likely costs are compared with the impacts and losses caused by the target pests.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4.The management units most affected, both actually and potentially, by the target pests are defined and prioritised.
3. Define the performance level for each land management/production objective	3.1.Performance levels are defined in accordance with sustainable land use principles to address target pests population levels, economic impacts and environmental impacts. 3.2.Performance levels are realistic and measurable.
4. Select management options for the target pests	4.1.Options for controlling pest populations and/or changing land management or production practices are assessed in terms of economic factors, technical difficulty, practical feasibility, social and/or environmental acceptability. 4.2.A range of management options are assessed in terms of current and future financial support, when control activities are to be implemented, level of target pests population reduction required, and the most suitable control methods and techniques. 4.3.A management option is selected in accordance with sustainable land use principles, economic feasibility, environmental acceptability, Integrated Pest Management (IPM) principles, and statutory requirements for pest control.
5. Negotiate possible actions with relevant stakeholder	5.1.The action is based on the definition of the problem using data from measurement of abundance and impacts. 5.2.The action clearly documents the pest problem, the objectives, the stakeholders, the prioritised management units, the performance criteria, and the most suitable management options.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and implement safe work practices
- determine land use objectives

REQUIRED SKILLS AND KNOWLEDGE

- estimate costs and advantages for areas affected by the target pest/s
- define performance levels for pest management for each land use
- select management control options for the target pest/s
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- relevant local, regional, state and national strategies for pest management including those for individual species
- motivational effects of stakeholder involvement
- community facilitation processes
- local land management process
- relevant legislative and regulatory requirements including statutory requirements for pest control
- environmental protection legislation
- principles of IPM
- pest control methods and techniques
- defining local land management and production values
- determining cost benefit analysis of management options
- sustainable land use principles
- Occupational Health and Safety (OHS), environmental and pesticides legislation, codes of practice and enterprise procedures.

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine land management/production objectives	<p>1.1. Other land users, regional land management bodies, landcare committees and relevant stakeholders are consulted regarding regional and local objectives.</p> <p>1.2. Outcomes of consultation incorporating regional and local objectives are recorded according to enterprise guidelines.</p> <p>1.3. Objectives address major land uses and production activities affected by the impacts of the target pests.</p> <p>1.4. Objectives relate to the problem definition and the reduction in the pest impacts and associated losses.</p> <p>1.5. Objectives comply with national, State and regional strategies for land and pest management.</p>
2. Estimate costs and advantages for the management units most affected by the target pests	<p>2.1. The diversity of land management and production values that the target pests affect within the affected region or area is defined.</p> <p>2.2. The likely costs of preferred options for control of pest populations and/or changes to land management or production activities associated with each value are documented.</p> <p>2.3. The likely costs of control are compared with the impacts and losses caused by the target pests.</p> <p>2.4. The management units most affected, both actually</p>

ELEMENT	PERFORMANCE CRITERIA
	and potentially, by the target pests are defined and prioritised.
3. Define the performance criteria for each land management/production objective	<p>3.1. Performance criteria are defined in accordance with sustainable land use principles to address target pests population levels, economic impacts and environmental impacts.</p> <p>3.2. Performance criteria are realistic and measurable.</p>
4. Select management options for the target pests	<p>4.1. Options for controlling pest populations and/or changing land management or production practices are assessed and documented in terms of economic factors, technical difficulty, practical feasibility, social and/or environmental acceptability.</p> <p>4.2. A range of management options are assessed in terms of current and future financial support, when control activities are to be implemented, level of target pests population reduction required, and the most suitable control methods and techniques.</p> <p>4.3. A management option is selected in accordance with sustainable land use principles, economic feasibility, integrated pest management principles, environmental acceptability, and statutory requirements for pest control.</p>
5. Negotiate strategies with relevant stakeholders in the affected area	<p>5.1. The strategy is based on the definition of the problem using data from measurement of abundance and impacts.</p> <p>5.2. The strategy clearly documents the pest problem, the objectives, the prioritised management units, the performance criteria, and the most suitable management options.</p> <p>5.3. Strategies are agreed and confirmed through relevant stakeholder consultation and negotiation.</p> <p>5.4. Strategies are published and distributed to relevant stakeholders, organisations and interest groups.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- estimate costs and advantages
- plan
- report and document strategies
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- relevant legislative and regulatory requirements
- environmental protection legislation
- pest control methods and techniques
- social and environmental issues
- statutory requirements for pest control
- land use processes, ecological systems and production systems
- pest management options and strategies
- plant and animal identification
- pest biology
- Occupational Health and Safety (OHS) and environmental legislation, codes of practice and enterprise procedures.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for implementation and construction	1.1.Erosion and sediment control plan and schedule of works match site conditions. 1.2.Survey pegs and site indicators are identified on site. 1.3.Equipment and tools are matched to program works and terrain on site. 1.4.Work readiness of selected equipment and tools are verified in line with contractor policy. 1.5.Materials are selected to complete proposed works in line with construction schedule.
2. Carry out implementation and construction	2.1.Earthworks are constructed in accordance with details specified in the plan and to industry standards. 2.2.Erosion and sediment control products and materials are installed in accordance with manufacturer's recommendation and industry guidelines and plans.
3. Carry out repairs and maintenance procedures	3.1.Site works maintenance inspection schedule is applied to reinstate operating effectiveness of erosion and sediment control measures on site.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify hazards and implement safe work procedures
- prepare for implementation and construction
- carry out implementation and construction
- carry out repairs and maintenance procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- materials cartage pollution control
- sequence of working and timing/duration
- Occupational Health and Safety (OHS) issues relating to the equipment and the site
- equipment used
- construct, install and maintain includes materials, quantity and where to source them on site
- construction/installation techniques for all measures on the plan
- limitations of structures including timing of maintenance, structure life cycle, specifications and standards
- environmental impacts and procedures for erosion and sediment control.

Evidence Guide

AHCWAT502A Manage water systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers managing water systems and defines the standard required to: identify adverse environmental impacts of irrigation activities and appropriate remedial action; determine the feasibility of using or up-grading an irrigation system; install or modify an irrigation and drainage system as necessary; evaluate irrigation system outputs and performance and strategically manage irrigated production systems
------------------------	--

Application of the Unit

Application of the unit	This unit of competency applies to water managers and covers the process of strategically managing an integrated system involving relationships between irrigation, drainage and environmental systems.
--------------------------------	---

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the feasibility of using or up-grading irrigation system	1.1. Water resources and drainage implications are assessed to determine suitability for irrigation. 1.2. Water quality and treatment requirements are determined. 1.3. Water requirements and most suitable application systems are determined for each crop/plant type and area, and for each soil type. 1.4. Other water requirements, such as climate control, are determined. 1.5. Soil types are assessed to determine suitability for irrigation and the range of crop/plant types that could be grown. 1.6. Drainage requirements are determined in relation to each soil and crop/plant type and type of irrigation system. 1.7. Performance data, audit reports, environmental and Occupational Health and Safety (OHS) data for existing systems are assessed if available. 1.8. Information is obtained from irrigation specialists on all relevant aspects of irrigation design. 1.9. Available irrigation system types and components are assessed and costed, and a decision is made on the particular system to be used or upgrades to existing system.
2. Install or modify an irrigation and drainage system as necessary	2.1. Materials and equipment making up the system are determined and acquired. 2.2. Irrigation system is installed using advice, as

ELEMENT	PERFORMANCE CRITERIA
	<p>necessary, from irrigation specialists.</p> <p>2.3. Checking that irrigation and drainage systems are supervised to ensure there are no leaks or blockages; that the water is being evenly distributed; that drainage is effective and the system is in good working order.</p>
3. Evaluate irrigation system performance	<p>3.1. Plant growth /yield increases from irrigation are determined and valued.</p> <p>3.2. Costs of irrigation are calculated.</p> <p>3.3. Cost benefit of irrigation is determined and compared with alternative systems/approaches.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- analyse performance and audit data
- evaluate irrigation system performance
- strategically manage irrigated production systems
- develop and implement relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- plant requirements
- water quality

REQUIRED SKILLS AND KNOWLEDGE

- environmental impacts of irrigation, using water from any ground or underground source
- cost/benefit analysis
- enterprise policies and procedures.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- determine the feasibility of using or up-grading an irrigation system
- install or modify an irrigation and drainage system as necessary
- evaluate irrigation system outputs and performance
- strategically manage irrigated production systems.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement**RANGE STATEMENT**

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Irrigation system types may include:	<ul style="list-style-type: none"> • flood • furrow • micro-sprinklers • pop-ups • impact sprinklers • low-level lines • overhead sprinklers • drippers and micro-jets.
Irrigated systems may include:	<ul style="list-style-type: none"> • water harvesting • delivery • drainage collection • drainage storage and treatment as well as natural drainage and treatment systems involving the removal of pollutants through evaporation, and/or clearance by filtration through surface layers.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check weather and climate information	<p>1.1. Weather and climate information is checked to determine likely conditions.</p> <p>1.2. Changed weather and climate situations are recognised.</p> <p>1.3. Likely impact of changes in weather and climate are anticipated in respect to work tasks, safety of others, property, natural resources and local environment.</p> <p>1.4. Report is made to supervisor of anticipated impact of weather and climate.</p>
2. Carry out preventative action	<p>2.1. Information and advice is promptly disseminated to relevant personnel.</p> <p>2.2. Preventative action is determined according to the known effects on livestock, crops and work tasks.</p> <p>2.3. Actions to minimise loss and damage are implemented.</p> <p>2.4. Livestock, horticultural or crop management program or schedule of work tasks are adjusted and revised according to weather and climatic changes.</p>
3. Monitor weather and climate	<p>3.1. Regular updates are accessed to determine ongoing suitability of current programs.</p> <p>3.2. Viability of livestock, horticultural or crop management practices are reviewed to ensure suitability within meteorological conditions.</p> <p>3.3. Research on forecasting techniques is undertaken to</p>

ELEMENT	PERFORMANCE CRITERIA
	maintain currency of information. 3.4.Relevant information is documented and recorded according to enterprise requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- monitor physical signs of weather in the context of available information
- relate forecasts to impact on current operations and activities
- communicate information on weather and situations that may be impacted
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- effects of wind and rain on wind chill
- effects of wind shear and wind chill exposure
- enterprise and industry policies for monitoring weather and climate conditions, and recording and reporting weather and climate conditions.
- weather and climate conditions impact upon farming and grazing activities
- working knowledge of climate and weather
- effects of wind chill on metabolism of animals
- effects of prolonged dry periods on pastures and animal production, and natural resources
- effects of extreme heat on animals, including during birthing, and effects of heat stress on neonates
- relevant legislative health and OHS requirements, especially as they relate to weather and climate monitoring and preparations for hazardous weather.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • monitor and interpret weather information • communicate warnings and concerns • identify weather and climate conditions and its impact upon farming and grazing activities • follow directions to minimise loss and damage to staff, livestock, crops, property and produce • review farm enterprises and operations for weather risk.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Weather information may include:	<ul style="list-style-type: none"> • reports • warnings • data collected from property weather stations • internet research • grazier alerts.

AHCWRK203A Operate in isolated and remote situations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the ability to plan, prepare for and work safely in isolated and remote situations and defines the standard required to: develop and maintain operating and emergency plans for working remotely; source and interpret maps of the area; implement workplace procedures for notifying management of location, activities and travel in remote areas; prepare provisions to cover essential and emergency needs; prepare for emergencies and carry communication equipment to send a request for help; use bushcraft skills to modify the living environment and reduce risk of mishap in remote areas.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to all workers in agricultural, horticultural and land management industries that have to work in remote areas. Work is carried out under routine supervision and may involve operating in a team environment.
--------------------------------	--

Licensing/Regulatory Information

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for operating in remote environments	<p>1.1.Information relating to the operating environment and location is collated and recorded to meet established enterprise policy.</p> <p>1.2.Detailed operating and travel plans, including a disaster plan and fallback position requirements are established in consultation with supervising staff.</p> <p>1.3.Appropriate authorities are notified of the action plans and time schedules according to enterprise policy.</p> <p>1.4.Relevant maps are identified and sourced.</p>
2. Prepare for operating in remote environments	<p>2.1.Personal needs are prepared for activities or travel in remote areas.</p> <p>2.2.Transportation and equipment are prepared for use in prescribed work location or along prescribed routes.</p> <p>2.3.Relevant maps are obtained and studied prior to departure.</p> <p>2.4.Planned activities and itinerary are accurately reported and recorded prior to departure in accordance with enterprise requirements.</p>
3. Prepare for	3.1.Provisioning meets expected operational and

ELEMENT	PERFORMANCE CRITERIA
emergency situations	<p>possible emergency needs.</p> <p>3.2. Initial planning and regular monitoring ensures structured usage of available provisions and resources.</p> <p>3.3. Operating plan is structured to include training in remote area survival techniques prior to operating in remote situations.</p> <p>3.4. Emergency management procedures are included as an integral part of operating plans and enterprise policy.</p>
4. Operate in remote environment	<p>4.1. Activities are completed according to instructions and established time schedules.</p> <p>4.2. All activities carried out in remote situations are executed in accordance with prescribed procedures.</p> <p>4.3. Emergency situations are handled in accordance with prescribed procedures and enterprise policy.</p> <p>4.4. Established reporting procedures are followed on completion of planned activities and on return to base in line with enterprise policy.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- plan for operating in remote environments
- prepare for operating in remote environments
- prepare for emergency situations
- operate in remote environments
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- map reading and navigation skills including direction finding (e.g., GPS, use of compass, stars or watch)
- local topography, nearby inhabitants and locations within that area
- survival techniques and human needs relating to survival situations
- clothing requirements for sun or heat protection
- basic first aid
- bush craft including making a fire, cooking and wild food gathering
- water supplies, sources and generation methods
- emergency vehicle and mechanical equipment repair
- the operation of communication equipment (e.g., field communications by two-way, satellite telephony and HF radio), and distress signalling including use of signalling mirrors
- weather and weather indicators
- basic rope skills including useful knots (reef, clove hitch, truckie's hitch, bowline); simple lashings and tying down loads.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- develop and maintain operating and emergency plans for working remotely
- source and interpret maps of the area
- implement workplace procedures for notifying of location, activities and travel in remote areas
- prepare provisions to cover essential and emergency needs

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • prepare for emergencies and carry communication equipment to send a request for help • use bushcraft skills to modify the living environment and reduce risk of mishap in remote areas.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Workplaces may include:	<ul style="list-style-type: none"> • any workplace where the ability to get help because of distance is such that personal safety may be at risk.

Elements and Performance Criteria Pre-Content

Not Applicable

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret weather and climate information	<p>1.1. Weather and climate information and warnings are regularly monitored to determine likely conditions.</p> <p>1.2. Potential variations in weather and climate conditions are anticipated and assessed according to warnings, weather patterns and historical experience.</p> <p>1.3. Possible impacts of weather and climate on crops, livestock and work tasks are identified to determine appropriate preventative action.</p> <p>1.4. Suitable preventative actions are reviewed to ensure availability of appropriate resources and responses.</p>
2. Carry out preventative action	<p>2.1. Information and advice is promptly disseminated to relevant personnel.</p> <p>2.2. Preventative action is determined according to the known effects on livestock, crops and work tasks.</p> <p>2.3. Actions to minimise loss and damage are implemented.</p> <p>2.4. Livestock or crop management program and work schedules are adjusted and revised according to climatic changes.</p>
3. Monitor weather and climate	<p>3.1. Regular updates are accessed to determine the ongoing suitability of current programs.</p> <p>3.2. Viability of livestock and crop management practices and scheduling of work tasks are reviewed to ensure suitability within meteorological conditions.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Research on forecasting techniques is undertaken to maintain currency of information.</p> <p>3.4. Relevant information is documented and recorded according to enterprise requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- relate forecasts to impact on current operations and activities
- relate weather and climate conditions and changes to decision-making and prevention of loss and damage
- monitor physical signs in the context of available information
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- working knowledge of climate and weather
- weather and climate conditions and its impact upon farming and grazing activities
- effects of wind and rain on wind chill
- relevant legislative health and Occupational Health and Safety (OHS) requirements especially as they relate to weather and climate monitoring and preparations for hazardous weather
- enterprise and industry policies for monitoring weather and climate conditions and recording and reporting weather and climate conditions
- if applicable, effects of shearing and/or parturition and wind chill exposure
- if applicable, effects of wind chill on metabolism of animals
- if applicable, effects of prolonged dry periods on pastures and animal production and natural resources.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> • monitor and interpret weather and climate information • communicate warnings and concerns • identify resource requirements and dangers • minimise loss and damage to staff, livestock, crops, natural resources, property, and produce • implement alternative livestock or other programs and continue to monitor weather changes.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for response	<p>1.1. Equipment checked to ensure availability and serviceability.</p> <p>1.2. Task and operational instructions are obtained in accordance with enterprise procedures.</p> <p>1.3. Location details of incident is obtained in accordance with enterprise procedures.</p>
2. Respond to incident	<p>2.1. Travel to incident location is undertaken in a safe and efficient manner.</p> <p>2.2. Communication with base station and other personnel is maintained at all times in accordance with enterprise procedures.</p> <p>2.3. On site search activities are carried out as necessary in accordance with enterprise procedures and Occupational Health and Safety (OHS) requirements.</p>
3. Rescue is effected	<p>3.1. Incident scene is assessed and monitored for hazards and appropriateness of planned procedures.</p> <p>3.2. Planned procedures are modified where necessary in response to local circumstances in accordance with enterprise procedures, safety and OHS requirements.</p> <p>3.3. Support to other rescue services is provided as appropriate in accordance with enterprise procedures.</p> <p>3.4. Access to casualties is gained safely in accordance with enterprise procedures and OHS requirements.</p> <p>3.5. Protective equipment and clothing is used as appropriate in accordance with enterprise procedures, manufacturer's guidelines and OHS requirements.</p> <p>3.6. Equipment is operated safely and appropriately in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with enterprise procedures, manufacturer's guidelines and OHS requirements.</p> <p>3.7. Progress of rescue is communicated in accordance with enterprise procedures.</p> <p>3.8. Casualties are treated, monitored and moved to safety in accordance with first aid and OHS procedures.</p>
4. Implement post incident responses	<p>4.1. Equipment recovered, cleaned and serviced in accordance with enterprise procedures, manufacturer's guidelines and OHS requirements.</p> <p>4.2. Documentation is completed in accordance with enterprise requirements.</p> <p>4.3. Incidents are reported in accordance with enterprise procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- prepare for response
- respond to incident
- effect the rescue
- implement post-incident responses
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- local environmental conditions
- search and rescue methods

REQUIRED SKILLS AND KNOWLEDGE

- operation and characteristics of rescue equipment, tools and vehicles
- environmental, public health and safety issues
- types of hazards and how they should be handled
- enterprise procedures, legislative and OHS requirements
- first aid, life preservation.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- investigate the circumstances and logistics for the emergency
- carry out preparation and move to the rescue site
- assess the situation and establish communication with additional or specialist help
- carry out the required rescue or response to emergency
- implement post incident responses.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Rescue incidents may include:

- fires
- drowning
- accidents
- vehicle
- boating
- accidents
- exposure to hazardous materials
- injury
- damage to equipment
- environment
- significant sites
- stranding
- exposure
- lost persons
- vehicle, boating and aircraft accidents.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify scope and extent of work	<p>1.1.Trial/research hypothesis and parameters are identified according to researchers' requirements.</p> <p>1.2.Trial/research is planned to meet research objectives.</p> <p>1.3.Data relevant to managing trial/research materials is assessed according to research parameters.</p> <p>1.4.Data relevant to managing trial/research materials is assessed according to enterprise policy.</p> <p>1.5.Occupational Health and Safety (OHS) hazards associated with managing trial/research materials are identified, risks assessed, and controls developed according to enterprise guidelines, costed and documented in the survey design.</p> <p>1.6.Tools, equipment and machinery required for managing trial/research materials are identified, costed, and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>1.7.Research design is determined according to the trial/research plan.</p>
2. Oversee management of trial/research materials	<p>2.1.Trial/research is prepared, maintained and monitored according to project parameters.</p> <p>2.2.Field work is conducted to verify and collect data according to the trial/research design and research parameters.</p> <p>2.3.Work activities are monitored for accuracy, validity and compliance to the parameters of the trial/research design.</p> <p>2.4.Staged data collection is undertaken according to trial/research design, scheduling and access</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements.</p> <p>2.5. Monitoring and data is recorded faithfully, promptly and accurately according to the specifications of the trial/research design.</p>
3. Prepare reports on work complete	<p>3.1. Collected data is recorded according to trial/research requirements and guidelines.</p> <p>3.2. Data is statistically analysed to determine significance of research results.</p> <p>3.3. Hypothesis is accepted or rejected based on data collected.</p> <p>3.4. Reports are produced which conform to the structure and content required by the researcher.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- define the purpose of the trial
- identify scope and extent of work
- collate data
- oversee management of trial/research materials
- comply with legislative and enterprise requirements
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

Required knowledge

- scheduling and programming work within timelines
- ecological principles and terminology

REQUIRED SKILLS AND KNOWLEDGE

- data collection and reporting
- research procedures and best practice techniques
- enterprise work team management guidelines
- data analysis techniques
- research planning and design
- research methodologies.

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- define the purpose of the trial and the scope and extent of the work

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Advise on resource requirements	1.1. Calculate estimates of future and present <i>business resource needs</i> in accordance with <i>organisational requirements</i> 1.2. Ensure advice is clear, concise and relevant to achievement of organisational requirements 1.3. Provide information on the most economical and effective choice of equipment, materials and suppliers 1.4. Identify resource shortages and possible impact on operations
2. Monitor resource usage and maintenance	2.1. Ensure resource handling is in accordance with established organisational requirements including <i>occupational health and safety requirements</i> 2.2. Use <i>business technology</i> to monitor and identify the effective use of resources 2.3. Use consultation with individuals and teams to facilitate effective decision making on the appropriate allocation of resources 2.4. Identify and adhere to relevant <i>policies regarding resource use</i> in the performance of operational tasks 2.5. Routinely monitor and compare resource usage with estimated requirements in budget plans
3. Acquire resources	3.1. Ensure acquisition and storage of resources is in

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with organisational requirements, is cost effective and consistent with organisational timelines</p> <p>3.2.Acquire resources within available time lines to meet identified requirements</p> <p>3.3.Review <i>resource acquisition processes</i> to identify improvements in future resource acquisitions</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and understand organisation's policies and procedures; to write simple instructions for a particular routine task
- evaluation skills to diagnose faults and to monitor resource usage
- problem-solving skills to determine appropriate fault repair actions
- numeracy skills to calculate resource expenditure
- technology skills to select and use technology appropriate to a task.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational resource acquisition policies, plans and procedures
- functions of a range of business equipment
- organisational procedures for record keeping/filing systems, security and safe recording practices.

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • collecting and recording data on resource use • observing resource use over defined and operational timeframes • carrying out routine maintenance • knowledge of organisational resource acquisition policies, plans and procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of documentation estimating future and present business resource needs • analysis of responses to case studies and scenarios • demonstration of techniques • oral or written questioning to assess knowledge of equipment maintenance procedures • review of information provided on the most economical and effective choice of equipment, materials and suppliers • evaluation of documentation reviewing resource acquisition processes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Business resources</i> may include:	<ul style="list-style-type: none"> • equipment • facilities • human resources • raw materials • software • stock and supplies
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • access and equity principles and practice • business and performance plans • defined resource parameters • ethical standards • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • management and accountability channels • manufacturer's and operational specifications • OHS policies, procedures and programs • quality and continuous improvement processes and standards • quality assurance and/or procedures manuals • security and confidentiality requirements
<i>Occupational health and safety requirements</i> may include:	<ul style="list-style-type: none"> • decision making delegations • equipment use • first aid kit • medical attention • reporting requirements • site access
<i>Business technology</i> may include:	<ul style="list-style-type: none"> • computer applications • computers • modems • personal schedules • photocopiers
<i>Policies regarding resource use</i>	<ul style="list-style-type: none"> • budgeting limits

RANGE STATEMENT	
may include:	<ul style="list-style-type: none"> • ordering procedures • purchasing authorities • recruitment and personnel • time management • transport/travel policies
<i>Resource acquisition processes</i> may include:	<ul style="list-style-type: none"> • contracted supplier ordering • internal approvals • non-tendered processes • periodic forecasts • tendered processes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess quality audit scope and objectives	1.1. Determine and discuss <i>audit objectives</i> with the auditee, client and all other relevant parties 1.2. Determine and discuss <i>scope</i> of the quality audit with the auditee, client and all other relevant parties 1.3. Identify <i>relevant standards</i> that impact on the environment in which the audit operates 1.4. Determine scope commensurate with identified risks
2. Communicate with auditee regarding proposed quality audit	2.1. Determine audit history, organisational structure and culture through consultation with the auditee 2.2. Negotiate and ensure agreement with auditee, the proposed <i>audit methods and techniques</i> to be applied 2.3. Outline audit processes to establish sequence of

ELEMENT	PERFORMANCE CRITERIA
	audit activities, and the roles of the auditors and auditees in the process
3. Identify resources required to conduct quality audit	3.1. Identify <i>resources</i> required to perform the quality audit efficiently and effectively 3.2. Select audit team members on the basis of relevant expertise 3.3. Confirm availability of resources required to conduct the audit with auditee 3.4. Assign roles and responsibilities to audit team members
4. Develop and submit quality audit plan	4.1. Develop <i>quality audit plan</i> according to established scope and objectives 4.2. Assign timing, schedules and responsibilities for implementation of the audit plan 4.3. Develop audit priorities and ensure agreement with auditees and audit team members 4.4. Document and submit audit plan to auditee
5. Prepare audit team	5.1. Inform audit team members of their responsibilities, audit objectives and scope 5.2. Communicate audit plan and schedules to all audit team members 5.3. Discuss and clarify audit methods and techniques with audit team members
6. Review auditee documentation	6.1. Review auditee's previous audits to establish possible impact on the conduct of the current audit 6.2. Review and check relevant organisational documents for accuracy 6.3. Resolve arising problems with auditee and relevant parties
7. Identify and prepare checklists and audit related documentation	7.1. Develop checklists to reflect audit scope and objectives 7.2. Develop or obtain documentation required for the audit 7.3. Prepare agenda for entry meeting 7.4. Include value-adding activities in audit related documentation where required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to listen to and question clients and other audit team members
- culturally appropriate communication skills to relate to people from diverse backgrounds and abilities
- interpersonal skills to establish rapport with clients and to liaise with other audit team members
- literacy skills to read, write, edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- organisational, planning and time management skills to sequence tasks, meet time lines, conduct inspections and arrange meetings
- problem-solving skills to overcome any issues which may potentially affect the auditing process or outcome
- teamwork skills
- technology skills to use equipment required to conduct quality auditing activities.

Required knowledge

- auditing codes of practice or ethics
- auditing methods and techniques
- auditing regulations and standards, including:
 - AS/NZS ISO: 9000:2006: Quality management systems - Fundamentals and vocabulary
 - AS/NZS ISO 19011:2003: Guidelines for quality and/or environmental management systems auditing
- current audit practices
- industry, product and/or service knowledge
- quality auditing principles, techniques and systems
- requirements of house or other style manual protocols for written communications
- relevant legislation affecting business operations including appropriate occupational health and safety, environmental, and privacy legislation
- software applications relevant to conducting quality auditing activities
- terminology relating to quality auditing.

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> documented audit plans for auditees across a variety of contexts including the scope and objectives of the audit, proposed audit methods and techniques to be used, required resources and schedules, and allocation of individual audit team member responsibilities for conducting the proposed audit knowledge of relevant legislation, national standards and compliance issues.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to workplace documentation including previous quality audit reports, checklists, risk management plans and audit plans.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence by third party workplace reports of on-the-job performance by the candidate review quality auditing documentation demonstration of quality auditing techniques in a workplace observations of interactions with team members and colleagues observations of presentations of audit plans oral or written questioning to assess knowledge of auditing codes of practice or ethics assessment of audit plan.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> other quality auditing units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Audit objectives</i> may include:</p>	<ul style="list-style-type: none"> • compliance with contractual and/or legislative requirements • evaluation of follow-up corrective action since previous audit • evaluation of level of compliance of auditee's activities, systems, processes, products or services with quality system's objectives • identifying areas of potential improvement • measuring performance in achieving quality objectives and confirming the effectiveness of the implemented quality system in meeting specified objectives
<p><i>Scope</i> may include:</p>	<ul style="list-style-type: none"> • depth and focus of audit • industry specific issues, for example seasonal factors • legal and regulatory issues • organisational customs and protocols • products, services, processes and/or activities to be audited • sites • standards to be applied
<p><i>Relevant standards</i> may include:</p>	<ul style="list-style-type: none"> • industry standards • professional standards • regulations • relevant legislation
<p><i>Audit methods and techniques</i> may include:</p>	<ul style="list-style-type: none"> • analysis • determining information flows • evaluating the effectiveness of system controls • questioning • sampling • scanning • tracing • trend analysis

RANGE STATEMENT	
Resources may include:	<ul style="list-style-type: none"> • auditee-provided resources • experience and technical expertise of auditors • facilities • financial requirements • number of auditors required • reference materials • time • travel and accommodation
Quality audit plan may include:	<ul style="list-style-type: none"> • audit requirements and/or identification of relevant quality system documentation • auditee provision of personnel for audit • confidentiality requirements • contingency actions • distribution of reports • entry meeting • exit interview • follow-up procedures • measurement criteria • reporting procedures • resource requirements • roles and responsibilities of auditors • safety of auditors • sampling techniques • scope and objectives of audit • time lines and schedules

BSBCMM301B Process customer complaints

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBCMM301A Process customer complaints</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to handle formal and informal negative feedback and complaints from customers. Operators may exercise discretion and judgement using appropriate knowledge of products, customer service systems and organisational policies to provide technical advice and support to a team.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various customer service contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Respond to complaints	<p>1.1 Process <i>customer complaints</i> using <i>effective communication</i> according to organisational procedures established under organisational policies, legislation or codes of practice</p> <p>1.2 Obtain, <i>document and review reports relating to customer complaints</i></p> <p>1.3 Make decisions about customer complaints, taking into account applicable legislation, organisational policies and codes</p> <p>1.4 Negotiate resolution of the complaint and obtain agreement where possible</p> <p>1.5 Maintain a register of complaints/disputes</p> <p>1.6 Inform customer of the outcome of the investigation</p>
2. Refer complaints	<p>2.1 Identify complaints that require referral to other personnel or external bodies</p> <p>2.2 Make <i>referrals</i> to appropriate personnel for follow-up in accordance with individual level of responsibility</p> <p>2.3 Forward all documents and investigation reports</p> <p>2.4 Follow-up appropriate personnel to gain prompt decisions</p>
3. Exercise judgement to resolve customer service issues	<p>3.1 Identify implications of issues for customer and organisation</p> <p>3.2 Analyse, explain and negotiate appropriate options for resolution with customer</p> <p>3.3 Propose viable options in accordance with appropriate legislative requirements and enterprise policies</p> <p>3.4 Ensure matters for which a solution cannot be negotiated are referred to appropriate personnel</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to:
 - interpret customer complaints
 - monitor and advise on customer service strategies and resolutions
- communication skills to:
 - people with diverse abilities
 - relate to people from culturally diverse backgrounds
- literacy skills to:
 - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
 - prepare general information and papers according to target audience
 - read and understand a variety of texts
- problem-solving skills to:
 - apply organisational procedures to a range of situations
 - deal with customer enquiries or complaints
 - exercise judgement in this application
- self-management skills to:
 - comply with policies and procedures
 - consistently evaluate and monitor own performance
 - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- importance of good communication skills and the individual's role in processing customer complaints
- organisational procedures and standards for processing complaints and recommending appropriate action.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • applying judgement in the application of industry and/or organisational procedures • working with customer complaints • knowledge of organisational procedures and standards for processing complaints.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints • examples of documents relating to customer complaints policies and procedures.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • analysis of responses to case studies and scenarios • demonstration of techniques • observation of presentations • oral or written questioning to assess knowledge of individual's role in processing customer complaints • review of documentation outlining necessary reports relating to customer complaints • review of complaints/disputes register.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customers may include:	<ul style="list-style-type: none"> • customers with routine or specific requests • internal or external customers • people from a range of social, cultural or ethnic backgrounds • people who may be unwell, drug affected or emotionally distressed • people with varying physical and mental abilities • regular and new customers.
Complaints may include:	<ul style="list-style-type: none"> • different types of severity, formality and sources • scenarios where external bodies such as police are required • straightforward customer dissatisfaction • level of documentation required.
Effective communication may include:	<ul style="list-style-type: none"> • giving customers full attention • maintaining eye contact (for face-to-face interactions), except where eye contact may be culturally inappropriate • speaking clearly and concisely • using appropriate language and tone of voice • using clear written information/communication • using appropriate non-verbal communication (body language) personal presentation (for face-to-face interactions).
Document and review reports relating to customer complaints may include:	<ul style="list-style-type: none"> • completing forms and written reports • using audio-visual tapes • using computer-based systems.
Referrals may include:	<ul style="list-style-type: none"> • external bodies: <ul style="list-style-type: none"> • Ombudsman • Independent Commission Against Corruption (ICAC) • police • relevant superiors in the organisational hierarchy.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare a presentation	<p>1.1. Plan and document presentation approach and intended outcomes</p> <p>1.2. Choose <i>presentation strategies, format and delivery methods</i> that match the <i>characteristics</i> of the target audience, location, resources and personnel needed</p> <p>1.3. Select <i>presentation aids, materials and techniques</i> that suit the format and purpose of the presentation, and will enhance audience understanding of key concepts and central ideas</p> <p>1.4. Brief others involved in the presentation on their roles/responsibilities within the presentation</p> <p>1.5. Select <i>techniques to evaluate presentation effectiveness</i></p>
2. Deliver a presentation	<p>2.1. Explain and discuss desired outcomes of the presentation with the target audience</p> <p>2.2. Use presentation aids, materials and examples to support target audience understanding of key concepts and central ideas</p> <p>2.3. Monitor non-verbal and verbal communication of participants to promote attainment of presentation outcomes</p> <p>2.4. Use persuasive communication techniques to secure audience interest</p> <p>2.5. Provide opportunities for participants to seek</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>clarification on central ideas and concepts, and adjust the presentation to meet participant needs and preferences</p> <p>2.6. Summarise key concepts and ideas at strategic points to facilitate participant understanding</p>
3. Review the presentation	<p>3.1. Implement <i>techniques to review the effectiveness</i> of the presentation</p> <p>3.2. Seek and discuss reactions to the presentation from participants or from key personnel involved in the presentation</p> <p>3.3. Utilise feedback from the audience or from key personnel involved in the presentation to make changes to central ideas presented</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- facilitation and presentation skills to communicate central ideas of a message in an informative and engaging manner, and to utilise verbal and non-verbal techniques to sustain participant engagement
- literacy skills to prepare presentation information and to write in a range of styles for different target audiences.

Required knowledge

- data collection methods that will support review of presentations
- industry, product/service
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety

REQUIRED SKILLS AND KNOWLEDGE

- principles of effective communication
- range of presentation aids and materials available to support presentations.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- preparation, delivery and evaluation of the effectiveness of at least two presentations related to the candidate's occupation or area of interest
- knowledge of the principles of effective communication.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment, documentation and resources.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- demonstration of preparation, delivery and evaluation of a presentation
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- review of selected presentation aids, materials and techniques
- review of briefing provided for others involved in the presentation
- evaluation of techniques implemented to review the effectiveness of the presentation.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive enquiry	1.1. Establish nature of <i>enquiry</i> 1.2. Ensure interactions with <i>person making enquiry</i> are in accordance with <i>organisation's standards and procedures</i> and meet the person's <i>needs and expectations</i> 1.3. Clearly outline <i>legal and other limits</i> of own responsibility to person making the enquiry 1.4. Record person's details and issues
2. Identify and apply appropriate communication techniques	2.1. Use <i>communication strategies</i> that reflect organisational standards and procedures 2.2. Use effective <i>communication techniques</i> during the enquiry 2.3. Ensure confidentiality of the enquiry is respected
3. Determine action to be taken	3.1. Identify personal limitations in taking action and seek appropriate assistance from <i>designated individuals</i> 3.2. Respond in an <i>appropriate manner</i> 3.3. Involve <i>other parties</i> in action if appropriate 3.4. Manage expectations of person making enquiry
4. Review outcomes of communication	4.1. Follow up with person making enquiry to ensure action was effected 4.2. Seek feedback about the communication strategies

ELEMENT	PERFORMANCE CRITERIA
	4.3.Undertake appropriate record keeping and reporting

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - listen to and interpret enquiries
 - provide clear and specific information
- computer skills to:
 - access information from a range of online sources
 - keep records
 - provide reports in required format
- literacy skills to document and record details of enquiries
- research skills to:
 - locate necessary information from internal and external sources
 - identify and evaluate status of information sought
- interpersonal skills to:
 - handle and tactfully screen enquiries of a sensitive nature
 - interact with a range of culturally and linguistically diverse clients
- problem-solving skills to assess enquiries and to allocate them to appropriate sources for further information

Required knowledge

- legislation, regulations and standards relevant to job role
- organisation's policies and procedures required for the full range of tasks associated with role and responsibilities
- accepted codes of practice relevant to the workplace, including those relating to:
 - privacy and confidentiality
 - use of company property
 - duty of care
 - ethical behaviour
 - non-discriminatory practice
 - conflict of interest
 - compliance with reasonable direction

REQUIRED SKILLS AND KNOWLEDGE

- extent of legal professional privilege

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the ability to:

- conduct work according to accepted codes of conduct
- convey appropriate options to person making enquiry according to organisation's policies and procedures
- exercise judgement and tact in decisions as to when enquiries should be transferred to a more experienced person
- select appropriate communication techniques with regard to culturally and linguistically diverse clients.

Context of and specific resources for assessment

Assessment must ensure access to:

- an actual workplace or simulated environment
- workplace manuals and reference materials, such as company policies, procedural manuals, checklists and sample forms
- appropriate technology, such as computers with relevant software and communication mediums
- appropriate resources and people with expert knowledge of communication techniques appropriate to the specific workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of communication techniques
- direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- review of documentation recording details of person making enquiry, and issues
- evaluation of needs and expectations of person making enquiry

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Enter into a collaborative creative process	1.1. Adopt a <i>personal philosophy of trustworthy and ethical behaviour</i> 1.2. Maximise the possibilities of sustaining creative partnerships through trustworthy and ethical behaviour 1.3. Use <i>professional discretion and judgement</i> in dealing with others 1.4. Acknowledge and respect the <i>different ways that different people may contribute</i> to the creative process 1.5. Acknowledge and work within the legal framework that applies to creative content as part of individual commitment to an ethical approach 1.6. Respect collaborative efforts by relinquishing individual ownership of ideas
2. Engage in a collaborative creative	2.1. Maintain a <i>belief in personal ideas</i> , combined with a willingness to move on as ideas are discarded and

ELEMENT	PERFORMANCE CRITERIA
process	<p>others evolve</p> <p>2.2.Be prepared to let go of own vanity and ego to allow new ideas to emerge</p> <p>2.3.Use <i>language</i> and adopt a <i>demeanour</i> that demonstrates respect and trust for others</p> <p>2.4.Listen to, value, respect and trust the contributions of others as material to work with rather than positions to argue against</p> <p>2.5.Challenge, test and share ideas in a supportive way as part of the creative process</p> <p>2.6.Move on from initial positions and preconceptions to accept and embrace new and unpredictable ideas as they emerge during the creative process</p> <p>2.7.Play a role that encourages the <i>movement and shift of ideas</i> within the group towards a well-conceived solution</p>
3. Reflect on own role in the collaborative creative process	<p>3.1.Reflect on own level of participation, relationships with others and personal behaviour in the collaborative process</p> <p>3.2.Identify ways to do better next time and follow up on any issues that need to be resolved</p> <p>3.3.Identify and seek opportunities to refine and expand own skills and knowledge, including learning from failing</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to nurture trust, to model open and supportive communication, and to articulate potentially complex ideas
- creative thinking skills to generate and explore ideas
- learning and self-management skills to reflect on and enhance own ability to contribute effectively to a collaborative creative process
- problem-solving skills to continually be evaluating and challenging ideas and moving them forward towards solutions.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- concept of shared intellectual property from collaborative creativity
- concepts of trust and ethical behaviour in the context of creative endeavour
- different roles people may play in a collaborative creative process and how this contributes to the overall effort
- how the creative process works in different situations (e.g. as an individual, as part of a group)
- how the potential for creativity can be maximised within a team
- legal framework that affects copyright, moral rights and intellectual property issues
- what stops creativity in a group environment.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- positive and full participation in a collaborative creative process that generates, expands and develops ideas into a well-conceived solution
- communication and creative-thinking skills that make a positive contribution to the collaborative effort
- knowledge and understanding of the ethical framework in which any type of creative endeavour operates.

Context of and specific resources for assessment

Assessment must ensure:

- involvement of a team of people in the collaborative creative process.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • direct observation of the candidate participating in collaborative creative activity • interviews with others participating in the process to determine the nature and quality of the candidate's participation and interactions • evaluation of candidate presentation (verbal or written) on the collaborative process, including challenges, benefits and key learning for the future • oral or written questioning to assess knowledge of concepts of trust and ethical behaviour in the context of creative endeavour.
Guidance information for assessment	<p>A collaborative creative effort always occurs in a specific context. Therefore holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended. Assessors must, however, retain a strong focus on the key aspects of collaboration and creativity detailed in this unit. Combined assessment with the following unit would also be appropriate:</p> <ul style="list-style-type: none"> • BSBCRT301A Develop and extend critical and creative thinking skills.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Personal philosophy of trustworthy and ethical behaviour</i> may relate to:</p>	<ul style="list-style-type: none"> • acknowledging discomfort or anger • being prepared to fully participate • communicating in an open way • honesty • honouring commitments • sensitivity to social, cultural, personal situations and dynamics • showing respect • understanding of the consequences of actions

RANGE STATEMENT	
<i>Professional discretion and judgement</i> may relate to:	<ul style="list-style-type: none"> • assessing when to keep quiet • being aware of and responding to different personality types • knowing when it is appropriate or inappropriate to share information • knowing with whom information should be shared
<i>Different ways that different people may contribute</i> may relate to:	<ul style="list-style-type: none"> • different approaches to expressing opinions or ideas • inclinations to lead or follow • influence with others • interpersonal skills • networks • past experience • technical skills and expertise
<i>Belief in personal ideas</i> may be demonstrated by:	<ul style="list-style-type: none"> • backing ideas up with information and rationale • being prepared to argue for own ideas • confidence in own ability to create many ideas • confidence to share ideas • confident articulation of ideas • spending time developing and refining own ideas
<i>Language</i> that demonstrates respect for others may involve:	<ul style="list-style-type: none"> • acknowledging new ideas and effort • avoiding negative words • avoiding personal negatives like 'you cannot' or 'you should not' • choosing words wisely • listening • making differentiations between ideas and people • managing tone • speaking at a level appropriate to the listener
<i>Demeanour</i> that demonstrates respect for others may relate to:	<ul style="list-style-type: none"> • avoiding intellectual bullying • encouraging others to express ideas • facial expression • keeping a positive mindset • listening before speaking • physical position • refraining from blame or accusation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • other non-verbal behaviour • understanding the balance between constructive comment and attention seeking
<i>Movement and shift of ideas</i> may involve:	<ul style="list-style-type: none"> • building in 'what if' scenarios • encouraging a stocktake before moving forward • making connections between seemingly disparate ideas • refining ideas that seem positive • returning to earlier ideas • returning to key objectives • suggesting new processes • turning ideas 'on their head' to resolve blockages

BSBCUS301B Deliver and monitor a service to customers

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i></p> <p>Revised unit. Performance criteria amended so that the learner is not required to 'incorporate evidence of customer satisfaction in decision to modify products or services'. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBCUS301A Deliver and monitor a service to customers</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify customer needs and monitor service provided to customers. Operators may exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over either a short or long term interaction.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Identify customer needs	<p>1.1 Use <i>appropriate interpersonal skills</i> to accurately identify and clarify <i>customer needs and expectations</i></p> <p>1.2 Assess customer needs for urgency to determine priorities for service delivery according to <i>organisational requirements</i></p> <p>1.3 Use <i>effective communication</i> to inform customers about available choices for meeting their needs and assist in the selection of preferred options</p> <p>1.4 Identify limitations in addressing customer needs and seek appropriate assistance from <i>designated individuals</i></p>
2. Deliver a service to customers	<p>2.1 Provide prompt service to customers to meet identified needs in accordance with organisational requirements</p> <p>2.2 Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery</p> <p>2.3 Sensitively and courteously handle <i>customer complaints</i> in accordance with organisational requirements</p> <p>2.4 Provide assistance or respond to customers with <i>specific needs</i> according to organisational requirements</p> <p>2.5 Identify and use available <i>opportunities</i> to promote and enhance services and products to customers</p>
3. Monitor and report on service delivery	<p>3.1 Regularly review customer satisfaction with service delivery using <i>verifiable evidence</i> according to organisational requirements</p> <p>3.2 Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements</p> <p>3.3 Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements</p>

	<p>3.4 Regularly seek customer feedback and use to improve the provision of products and services</p> <p>3.5 Ensure reports are clear, detailed and contain recommendations focused on critical aspects of service delivery</p>
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to monitor and advise on customer service strategies
- literacy skills to:
 - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
 - prepare general information and papers according to target audience
 - read and understand a variety of texts
- problem-solving skills to deal with customer enquiries or complaints
- technology skills to select and use technology appropriate to a task
- self-management skills to:
 - comply with policies and procedures
 - consistently evaluate and monitor own performance
 - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identifying needs and priorities of customers • distinguishing between different levels of customer satisfaction • treating customers with courtesy and respect • responding to and reporting on, customer feedback • knowledge of organisational policy and procedures for customer service.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints • examples of documents relating to customer service standards and policies.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of reports on customer service delivery • analysis of responses to case studies and scenarios • demonstration of techniques • oral or written questioning to assess knowledge of customer service strategies.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Appropriate interpersonal skills</i> may include:</p>	<ul style="list-style-type: none"> • listening actively to what the customer is communicating • providing an opportunity for the customer to confirm their request • questioning to clarify and confirm customer needs • seeking feedback from the customer to confirm understanding of needs • summarising and paraphrasing to check understanding of customer message • using appropriate body language.
<p><i>Customers</i> may include:</p>	<ul style="list-style-type: none"> • corporate customers • individual members of the organisation • individual members of the public • internal or external • other agencies.
<p><i>Customer needs and expectations</i> may include:</p>	<ul style="list-style-type: none"> • accuracy of information • advice or general information • complaints • fairness/politeness • further information • making an appointment • prices/value • purchasing organisation's products and services • returning organisation's products and services • specific information.
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • access and equity principles and practice • anti-discrimination and related policy • defined resource parameters • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs • payment and delivery options • pricing and discount policies • quality and continuous improvement processes and

	<p>standards</p> <ul style="list-style-type: none"> • quality assurance and/or procedures manuals • replacement and refund policy and procedures • who is responsible for products or services.
Effective communication may include:	<ul style="list-style-type: none"> • giving customers full attention • maintaining eye contact, except where eye contact may be culturally inappropriate • speaking clearly and concisely • using active listening techniques • using appropriate language and tone of voice • using clear written information/communication • using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions) • using open and/or closed questions.
Designated individuals may include:	<ul style="list-style-type: none"> • colleagues • customers • line management • supervisor.
Customer complaints may include:	<ul style="list-style-type: none"> • administrative errors such as incorrect invoices or prices • customer satisfaction with service quality • damaged goods or goods not delivered • delivery errors • product not delivered on time • service errors • warehouse or store room errors such as incorrect product delivered.
Specific needs of customers may relate to:	<ul style="list-style-type: none"> • age • beliefs/values • culture • disability • gender • language • religious/spiritual observances.
Opportunities to promote and enhance services and products may include:	<ul style="list-style-type: none"> • extending time lines • packaging procedures • procedures for delivery of goods • returns policy • system for recording complaints • updating customer service charter.
Verifiable evidence may include:	<ul style="list-style-type: none"> • customer satisfaction questionnaires • audit documentation and reports

	<ul style="list-style-type: none">• quality assurance data• returned goods• lapsed customers• service calls• complaints.

BSBCUS402B Address customer needs

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBCUS402A Address customer needs</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the ongoing relationship with a customer, which includes assisting the customer to articulate their needs, meeting customer needs and managing networks to ensure customer needs are addressed. The customer relationship would typically involve direct interaction a number of times over an extended period.

This unit is appropriate to workers who are expected to have detailed product knowledge in order to recommend customised solutions. They would be expected to apply organisational procedures and be aware of, and apply as appropriate, broader factors involving ethics, industry practice and relevant government policies and regulations.

Application of the Unit

This unit applies to workers required to be familiar with a product and service that varies widely and is capable of significant customisation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Assist customer to articulate needs	<p>1.1 Ensure customer needs are fully explored, understood and agreed</p> <p>1.2 Explain and match available services and products to customer needs</p> <p>1.3 Identify and communicate rights and responsibilities of customers to the customer as appropriate</p>
2. Satisfy complex customer needs	<p>2.1 Explain possibilities for meeting customer needs</p> <p>2.2 Assist customers to evaluate service and/or product options to satisfy their needs</p> <p>2.3 Determine and prioritise preferred actions</p> <p>2.4 Identify potential areas of difficulty in customer service delivery and take appropriate actions in a positive manner</p>
3. Manage networks to ensure customer needs are addressed	<p>3.1 Establish effective regular communication with customers</p> <p>3.2 Establish, maintain and expand relevant networks to ensure appropriate referral of customers to products and services from within and outside the organisation</p> <p>3.3 Ensure procedures are in place to ensure that decisions about targeting of customer services are based on up-to-date information about the customer, and the products and services available</p> <p>3.4 Ensure procedures are put in place to ensure that referrals are based on the matching of the assessment of customer needs and availability of products and services</p> <p>3.5 Maintain records of customer interaction in accordance with</p>

	<i>organisational procedures</i>
--	----------------------------------

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to relate to people from diverse backgrounds and people with diverse abilities.
- information management skills to summarise information verbally and non-verbally
- literacy and numeracy skills to:
 - interpret product and service features or sales data
 - read a variety of texts to prepare general information and papers
 - summarise information obtained from a variety of verbal and non-verbal sources
 - write formal and informal text
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- problem-solving skills to develop solutions unique to a customer
- self-management skills to:
 - comply with policies and procedures
 - seek learning and development opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- organisational procedures and standards for customer service relationships
- detailed product and service knowledge which may:
 - be of significant breadth so as to propose alternative products and services, or
 - of significant depth so as to propose variations within a limited product and service range.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assisting customers to articulate their needs • documenting processes used and customer satisfaction with the products/services offered • assisting customers to address their needs.

BSBCUS501C Manage quality customer service

Modification History

Release	Comments
Release 1	<p>New release of this Qualification released with <i>version 6 of BSB07 Business Services Training Package</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation.

Operators may have staff involved in delivering customer service and are responsible for the quality of their work. In many instances the work will occur within the organisation's policies and procedures framework. At this level, the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies, will be required.

Application of the Unit

Many managers are involved in ensuring that products and services are delivered and maintained to standards agreed by the organisation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Plan to meet internal and external customer requirements	<p>1.1 Investigate, identify, assess, and include the needs of customers in planning processes</p> <p>1.2 Ensure plans achieve the quality, time and cost specifications agreed with customers</p>
2. Ensure delivery of quality products and services	<p>2.1 Deliver products and services to customer specifications within organisation's business plan</p> <p>2.2 Monitor team performance to consistently meet the organisation's quality and delivery standards</p> <p>2.3 Assist colleagues to overcome difficulty in meeting customer service standards</p>
3. Monitor, adjust and review customer service	<p>3.1 Develop and use strategies to monitor progress in achieving product and/or service targets and standards</p> <p>3.2 Develop and use strategies to obtain customer feedback to improve the provision of products and services</p> <p>3.3. Develop, procure and use resources effectively to provide quality products and services to customers</p> <p>3.4 Make decisions to overcome problems and to adapt customer services, products and service delivery in consultation with appropriate individuals and groups</p> <p>3.5 Manage records, reports and recommendations within the organisation's systems and processes</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to:
 - coach and mentor staff and colleagues
 - monitor and advise on customer service strategies
- literacy skills to:
 - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
 - prepare general information and papers according to target audience
 - read and understand a variety of texts
- problem-solving skills to:
 - deal with customer enquiries or complaints
 - deal with complex and non-routine difficulties
- technology skills to select and use technology appropriate to a task
- self-management skills to:
 - comply with policies and procedures
 - consistently evaluate and monitor own performance
 - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - Australian consumer law
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs
- techniques for solving complaints including the principles and techniques involved in the management and organisation of:
 - customer behaviour
 - customer needs research
 - customer relations
 - ongoing product and/or service quality

- problem identification and resolution
- quality customer service delivery
- record keeping and management methods
- strategies for monitoring, managing and introducing ways to improve customer service relationships
- strategies to obtain customer feedback.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • plans, policies or procedures for delivering quality customer service • demonstrated techniques in solving complex customer complaints and system problems that lead to poor customer service • knowledge of techniques for solving complaints.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • assessment of written reports • demonstration of techniques • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • evaluation of leadership, supervision, coaching and mentoring used to assist colleagues to overcome difficulty in meeting customer service standards • review of strategies developed and used to monitor progress in achieving product and/or service targets and standards • review of records, reports and recommendations about managing customer service.

Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain daily financial records	<p>1.1. Correctly maintain daily financial records and in accordance with <i>organisational requirements</i> for accounting purposes</p> <p>1.2. Identify and rectify or refer <i>discrepancies</i> or errors in <i>documentation</i> or transactions to <i>designated persons</i> in accordance with organisational requirements</p> <p>1.3. Accurately credit and debit transactions and promptly enter into <i>journals</i> in accordance with organisational requirements</p>
2. Maintain general ledger	<p>2.1. Maintain general ledger in accordance with organisational requirements</p> <p>2.2. Post <i>transactions</i> into general ledger in accordance with organisational reporting requirements</p> <p>2.3. <i>Reconcile systems for accounts payable and receivable</i> with general ledger</p> <p>2.4. Accurately prepare trial balance from general ledger in accordance with organisational requirements</p>
3. Monitor cash control	<p>3.1. Ensure cash flow is accurately accounted for in accordance with organisational requirements</p> <p>3.2. Make and receive <i>payments</i> in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	organisational requirements 3.3. Collect or follow-up outstanding accounts within designated time lines 3.4. Check payment documentation for accuracy of information and despatch to creditors within <i>designated time line</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to identify financial information; to read and understand the organisation's accounting procedures; and to edit and proofread documents to ensure conformity and consistency of information
- communication skills to clarify information and to refer errors or discrepancies to appropriate people
- numeracy skills to read and interpret financial data and to prepare cash analysis sheets
- problem-solving skills to reconcile figures.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policies and procedures relating to maintaining financial records
- definition of credits/creditors and debits/debtors
- principles of double entry bookkeeping and accrual accounting
- methods of presenting financial data.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan financial management approaches	1.1. Access <i>budget/financial plans</i> for the work team 1.2. Clarify budget/financial plans with <i>relevant personnel</i> within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible 1.3. Negotiate any changes required to be made to budget/financial plans with relevant personnel within the organisation 1.4. Prepare <i>contingency plans</i> in the event that initial plans need to be varied
2. Implement financial management approaches	2.1. Disseminate relevant details of the agreed budget/financial plans to team members 2.2. Provide <i>support</i> to ensure that team members can competently perform <i>required roles</i> associated with the management of finances 2.3. Determine and access <i>resources and systems</i> to manage financial management processes within the

ELEMENT	PERFORMANCE CRITERIA
	work team
3. Monitor and control finances	3.1. Implement <i>processes</i> to monitor actual expenditure and to control costs across the work team 3.2. Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns 3.3. Implement, monitor and modify contingency plans as required to maintain financial objectives 3.4. Report on budget and expenditure in accordance with organisational protocols
4. Review and evaluate financial management processes	4.1. Collect and collate for analysis, <i>data and information on the effectiveness of financial management processes</i> within the work team 4.2. Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes 4.3. Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills to read and understand a budget and to update a budget
- technology skills to use software associated with financial record keeping.

Required knowledge

- basic accounting principles
- organisational requirements related to financial management
- relevant legislation and current requirements of the Australian Taxation Office, including GST
- requirements for organisational record keeping and auditing
- principles and techniques involved in:
 - budgeting

REQUIRED SKILLS AND KNOWLEDGE

- cash flows
- electronic spreadsheets
- GST
- ledgers and financial statements
- profit and loss statements.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- financial skills required to work with and interpret budgets, ageing summaries, cash flow, petty cash, GST, and profit and loss statements
- knowledge of the record keeping requirements for the ATO and for auditing purposes.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- assessment of written reports indicating broad knowledge of managing budgets and managing financial resources in the organisation
- demonstration of techniques using financial record keeping software
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of requirements for organisational record keeping and auditing

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • review of contingency plans • review of identification of cost variations and expenditure overruns • evaluation of documentation reporting on budget and expenditure • review of documentation identifying and recommending improvements to financial management processes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Diploma of Management.

Range Statement

RANGE STATEMENT

confidence	2.2. Encourage effective relationships within the framework of <i>the organisation's social, ethical and business standards</i> 2.3. Gain and maintain the trust and confidence of <i>colleagues, customers and suppliers</i> through competent performance 2.4. Adjust interpersonal styles and methods in relation to the organisation's social and cultural environment
3. Identify and use networks and relationships	3.1. Identify and utilise <i>workplace networks</i> to help build relationships 3.2. Identify and describe the value and benefits of networks and other work relationships for the team and the organisation
4. Contribute to positive outcomes	4.1. Identify difficulties and take action to rectify the situation within own level of responsibility according to organisational and legal requirements 4.2. Support colleagues in resolving work difficulties 4.3. Regularly review <i>workplace outcomes</i> and implement improvements in consultation with relevant personnel 4.4. Identify and resolve <i>poor work performance</i> within own level of responsibility and according to organisational policies 4.5. Deal constructively with conflict, within the organisation's established processes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- coaching and mentoring skills to provide support to colleagues
- functional literacy skills to access and use workplace information
- relationship management and communication skills to:
 - interpret information from a variety of people
 - respond to unexpected demands from a range of people

REQUIRED SKILLS AND KNOWLEDGE

- gain the trust and confidence of colleagues
- deal with people openly and fairly
- forge effective relationships with internal and/or external people.

Required knowledge

- principles and techniques associated with relationship management, including:
 - developing trust and confidence
 - behaving consistently in work relationships
 - identifying the cultural and social environment
 - identifying and assessing interpersonal styles
 - establishing networks
 - identifying and resolving problems
 - handling conflict
 - managing poor work performance
 - monitoring and improving work relationships
 - using anti-discrimination/bias strategies and making contributions
- relevant legislation from all levels of government that may affect business operation, especially in regard to:
 - occupational health and safety and environmental issues
 - equal opportunity
 - industrial relations
 - anti-discrimination.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- using culturally appropriate communication techniques to share work-based information with teams and individuals in accordance with organisation policies
- developing networks and building team relationships

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> regularly reviewing workplace outcomes to identify and resolve issues and implement improvements within own level of responsibility and according to organisational policies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- coaching and mentoring skills to provide support to colleagues
- functional literacy skills to access and use workplace information
- skills to:
 - maintain a safe workplace and environment
 - access and use feedback to improve operational performance
 - prepare recommendations to improve operations
 - access and use established systems and processes.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- principles and techniques of:
 - short-term operational scheduling
 - physical resources and services acquisition procedures and/or systems
 - budget and performance figures interpretation
 - performance monitoring within defined job role
 - performance reporting
 - problem identification and resolution
 - alternative approaches to improving resource usage and eliminating resource inefficiencies and waste within defined job role
- relevant legislation from all levels of government that may affect business operations, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- support for individuals and teams who have difficulty in performing to the required standard.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- sharing information with members of the work team about implementing and monitoring the operational plan
- assisting in planning resource acquisition and usage including human resources, risk management and contingency planning
- monitoring, analysing and reporting individual and team performance against identified targets.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess

EVIDENCE GUIDE	
	<p>practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • records produced while working with the operational plan, such as: <ul style="list-style-type: none"> • suggestions for variations to the operational plan • rosters and staff allocation • short-term resource acquisition planning, contingency planning and/or risk management plans • induction programs conducted • suggestions and input into management decisions related to the operational plan • records of actions taken to address day-to-day resource shortfalls.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBFLM303C Contribute to effective workplace relationships • BSBFLM306C Provide workplace information and resourcing plans • BSBFLM312C Contribute to team effectiveness • BSBCMN311B Maintain workplace safety.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Resource requirements</i> may include:</p>	<ul style="list-style-type: none"> • purchasing or ordering of goods • stock requirements and requisitions

RANGE STATEMENT	
	<ul style="list-style-type: none"> supply of resources.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> colleagues, supervisors and managers OHS committees and other people with specialist responsibilities specialist resource managers unions/employee groups other employees.
<i>Operational plan</i> may include:	<ul style="list-style-type: none"> organisational plans tactical plans developed by the department or section to detail product and service performance.
<i>Key performance indicators</i> may refer to:	<ul style="list-style-type: none"> measures for monitoring or evaluating the efficiency or effectiveness of a system, and which may be used to demonstrate accountability and identify areas for improvements.
<i>Contingency planning</i> may refer to:	<ul style="list-style-type: none"> contracting or outsourcing human resource and other functions or tasks diversification of outcomes finding cheaper or lower quality raw materials and consumables increasing sales or production recycling and re-use rental, hire purchase or alternative means of procurement of required materials, equipment and stock restructuring of organisation to reduce labour costs risk identification, assessment and management processes seeking further funding strategies for reducing costs, wastage, stock or consumables succession planning.
<i>The organisation's policies practices and procedures</i> may include:	<ul style="list-style-type: none"> organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources organisational culture Standard Operating Procedures undocumented practices in line with organisational operations.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to team outcomes	1.1. Consult team members to identify <i>team purpose, roles, responsibilities, goals, plans and objectives</i> 1.2. Support team members to meet expected outcomes
2. Support team cohesion	2.1. Encourage team members to participate in the planning, decision making and operational aspects of the work team to their level of responsibility 2.2. Encourage team members to take responsibility for their own work and to assist each other in undertaking required roles and responsibilities 2.3. Provide <i>feedback</i> to team members to encourage, value and reward team members' efforts and contributions 2.4. Identify and address issues, concerns and problems identified by team members to <i>relevant persons</i> as

ELEMENT	PERFORMANCE CRITERIA
	required
3. Participate in work team	3.1. Actively encourage and support team members to participate in team activities and communication processes and to take <i>responsibility for their actions</i> 3.2. Support the team to identify and resolve problems which impede its performance 3.3. Utilise own contribution to work team to serve as a role model for others and enhance the organisation's image within the work team, the organisation and with clients/customers
4. Communicate with management	4.1. Maintain open <i>communication</i> with <i>line manager/management</i> at all times 4.2. Communicate information from line manager/management to the team 4.3. Communicate <i>unresolved issues</i> to line manager/management and follow-up to ensure action is taken in response to these matters

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- communication skills, including listening
- basic training skills, including mentoring and coaching
- planning and organising skills
- problem solving skills
- attributes:
 - empathic
 - communicative
 - self aware
 - supportive
 - trusting

REQUIRED SKILLS AND KNOWLEDGE

- open
- flexible
- accommodating
- initiating
- loyal
- fair
- adaptable

Required knowledge**Required knowledge**

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- organisational policies and procedures
- organisational goals, objectives and plans at both tactical and strategic levels
- organisational structure including organisational chart
- learning and development options available within and through organisation
- a general understanding of the principles and techniques of:
 - group dynamics and processes
 - motivation
 - planning
 - negotiation
- individual behaviour and difference

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstrate leadership in contributing to team plans
- lead and facilitate teamwork
- actively communicate with management
- manage communication within the team

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • induct new team members • implement performance management system • handle problems
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • that this unit can be assessed in the workplace or in a closely simulated work environment • access by the learner and trainer to appropriate documentation and resources normally used in the workplace • where assessment is part of a learning experience, evidence will need to be collected over a period of time, involving both formative and summative assessment • that examples of actions taken by candidate to contribute to team effectiveness are provided
Method of assessment	<p>A range of assessment methods should be used to assess skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • Direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • Records produced from working in a team, such as: <ul style="list-style-type: none"> • reports • minutes or records of meetings • work journals or diaries • learning and development plans developed with team members • records of actions taken to address issues raised by team members
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect information	1.1. Collect <i>information</i> in a timely manner and ensure that it is relevant to organisational needs 1.2. Use <i>business equipment/technology</i> available in the work area to effectively obtain information 1.3. Apply <i>organisational requirements</i> relating to security and confidentiality in handling information
2. Process workplace information	2.1. Use business equipment/technology to process information in accordance with organisational requirements 2.2. Process information in accordance with defined timeframes, guidelines and procedures 2.3. Update, modify and file information in accordance with organisational requirements 2.4. Collate and despatch information in accordance with specified timeframes and organisational requirements
3. Maintain information systems	3.1. Maintain information and filing systems in accordance with organisational requirements 3.2. Identify, <i>remove</i> and/or <i>relocate inactive or dead files</i> in accordance with organisational requirements 3.3. Establish and assemble new files in accordance with organisational requirements 3.4. Update reference and index systems in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and understand organisation's recordkeeping and information systems(including classification systems), to follow sequenced written instructions and to comprehend/interpret nature of record content
- numeracy skills to sequence and index files
- planning skills to organise work priorities and arrangements
- problem-solving skills to solve routine problems
- technology skills to select and use technology appropriate to maintaining workplace information.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety
- organisational policies and procedures relating to collecting and processing workplace information
- organisational recordkeeping/filing systems and security procedures
- organisation's business and structure
- range of filing systems including paper-based and software-based.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and source information needs	1.1. Determine and locate <i>information</i> required by teams 1.2. Acquire and review information held by the organisation to determine suitability, accessibility, currency and reliability according to <i>organisational policies</i>
2. Collect, analyse and report information	2.1. Collect information, which is adequate and relevant to the needs of teams, in a timely manner 2.2. Ensure information is in a format suitable for analysis, interpretation and dissemination 2.3. Analyse information to identify and report relevant trends and developments in terms of the needs for which it was acquired
3. Implement information systems	3.1. Implement management information systems effectively to store, retrieve and regularly review data for decision making purposes 3.2. Use <i>technology</i> available in the work area to manage information effectively

ELEMENT	PERFORMANCE CRITERIA
	3.3. Submit recommendations for improving the information system to <i>designated persons and/or groups</i>
4. Prepare for information system changes	4.1. Collect information about information system future needs in consultation with <i>colleagues</i> , including those who have a specialist role in resource management 4.2. Ensure estimates of information system future needs reflect the organisation's <i>business plans</i> , and customer and supplier requirements 4.3. Support proposals to secure resources by clearly presenting submissions that describe realistic options, benefits, costs and outcomes 4.4. Prepare team members to work with new technology and information system changes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to work with information, and to research and present information in ways that are appropriate to the work team
- technology skills to work with a range of information systems.

Required knowledge

- information management systems and technology that would be associated with the workplace such as:
 - budgets and financial management systems
 - customer information software or records
 - databases
 - personal digital assistant (PDA)
 - product and service information
 - project management software
 - record management systems
 - spreadsheets.

Evidence Guide

Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> demonstration of techniques in working with information management systems direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate oral or written questioning to assess knowledge of relevant technology review of documentation analysing information trends and developments written reports on future information system needs review of preparation undertaken for team members to work with new technology and information system changes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> other units from the Certificate IV in Frontline Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Information</i> may include:</p>	<ul style="list-style-type: none"> • archived, filed and historical background data • continuous improvement and quality assurance data • data available internally or externally • data shared and retrieved in various forms such as in writing or verbally, electronically or manually • financial and contractual data • marketing and customer-related data • organisational performance data • planning and organisational documents • policies and procedures
<p><i>Organisational policies</i> may include:</p>	<ul style="list-style-type: none"> • guidelines for decision making throughout the organisation that link the formulation of strategy with its implementation • sets of accepted actions approved by the organisation • Standard Operating Procedures
<p><i>Technology</i> may include:</p>	<ul style="list-style-type: none"> • computerised systems and software such as databases, project management and word processing • telecommunications devices • any other technology used to carry out work roles and responsibilities
<p><i>Designated persons and/or groups</i> may include:</p>	<ul style="list-style-type: none"> • groups designated in workplace policies and procedures • managers or supervisors with management roles and responsibilities concerning information systems • other stakeholders accessing the information system such as customers and service providers • other work groups or teams whose work will be affected by the system

RANGE STATEMENT*Colleagues* may include:

- employees at the same level or more senior managers
- occupational health and safety committee members and other specialists
- people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- team members

Business plans may include:

- cash flow projections
- long-term budgets/plans
- operational plans
- short-term budgets/plans
- spreadsheet-based financial projections
- targets or key performance indicators for production, productivity, wastage, sales, income and expenditure

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise learning to use information or knowledge management system	1.1. Identify learning needs of <i>relevant personnel and stakeholders</i> for input into, and use of, <i>an information or knowledge management system</i> 1.2. Identify and secure human, financial and physical resources required for <i>learning activities</i> to use an information or knowledge management system 1.3. Organise and facilitate learning activities 1.4. Promote and support use of the system throughout the organisation 1.5. Monitor and document effectiveness of learning activities
2. Manage use of information or knowledge management system	2.1. Ensure implementation of <i>policies and procedures for the information or knowledge management system</i> are monitored for compliance, effectiveness and efficiency 2.2. Address implementation issues and problems as they arise

ELEMENT	PERFORMANCE CRITERIA
	2.3. Monitor integration and alignment with data and information systems 2.4. Collect information on achievement of <i>performance measures</i> 2.5. Manage contingencies such as system failure or technical difficulties by accessing technical specialist help as required
3. Review use of information or knowledge management system	3.1. Analyse effectiveness of system and report on strengths and limitations of the system 3.2. Review business and operational plan and determine how effectively the system is contributing to intended outcomes 3.3. Make recommendations for improvement to system, policy or work practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical and problem-solving skills to ensure the system is working in accordance with organisational expectations and to deal with contingencies
- technology skills to work with and manage the use of the information or knowledge management system.

Required knowledge

- legislation, codes of practice and national standards, for example:
 - privacy and confidentiality legislation
 - freedom of information legislation
 - AS 5037:2005 Knowledge management - A guide
- organisational policies and procedures, for example:
 - records management
 - information management
 - customer service
 - commercial confidentiality
- organisational operations, and existing data and information systems.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> analysis of the strengths and weaknesses of information or knowledge management system/s and evaluation of suitability for a particular work or organisational context knowledge of relevant legislation, codes of practice and national standards.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to system access to system user feedback.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> assessment of written reports reviewing and evaluating information or knowledge management systems direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate observation of presentations oral or written questioning to assess knowledge of relevant organisational policies and procedures review of identified learning needs personnel and stakeholders regarding the information or knowledge management system evaluation of monitoring and documentation about the effectiveness of learning activities analysis documentation reporting on the strengths and limitations of the system review of recommendations made for improvements to the system, policy or work practices.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE

assessment	<p>industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Diploma of Management.
-------------------	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Relevant personnel</i> include:	<ul style="list-style-type: none"> • managers, leaders, supervisors and coordinators • owners • staff, team members and colleagues
<i>Stakeholders</i> include:	<ul style="list-style-type: none"> • clients and customers • employee representatives • funding bodies • industry, professional and trade associations • regulatory bodies and authorities • sponsors • tenderers, suppliers and contractors
<i>Information or knowledge management</i> is defined as:	<ul style="list-style-type: none"> • equipment, strategies, methods, activities and techniques used formally and informally by individuals and the organisation to identify, collect, organise, store, retrieve, analyse, share and draw on information and knowledge valuable to the work of the organisation
<i>An information or knowledge management system:</i>	<ul style="list-style-type: none"> • comprises policies, protocols, procedures and practices to manage information or knowledge within the organisation and among relevant stakeholders
<i>Learning activities</i> include:	<ul style="list-style-type: none"> • coaching and mentoring programs • help desks • information sessions, briefings, workshops and training programs • paper-based or electronic (including intranet)

RANGE STATEMENT	
	<p>learning opportunities</p> <ul style="list-style-type: none"> • use of expert workers such as coaches and mentors to help other personnel use the system
<i>Policies and procedures for the information or knowledge management system</i> cover:	<ul style="list-style-type: none"> • complying with legislative requirements (such as privacy, confidentiality and defamation requirements) and other policies and procedures • content guidelines • ensuring accuracy and relevance of knowledge input into the system • mechanisms, formats and styles of input to system, including appropriate alternative formats for people with a disability • permissions for input • removing out-of-date, inaccurate and content that is no longer relevant • selecting, maintaining and disposing of knowledge in the system • sharing knowledge in the system
<i>Performance measures</i> include:	<ul style="list-style-type: none"> • key performance indicators • other systems and measures to enable assessment of how, when, where and why outcomes are being achieved • performance objectives • performance standards (including codes of conduct) • qualitative or quantitative mechanisms to measure individual performance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunities to do things better	1.1. Be aware of <i>own role</i> in workplace innovation 1.2. Pro-actively identify <i>opportunities for improvement</i> in own area of work 1.3. Gather and review <i>information which may be relevant to ideas</i> and which might assist in gaining support for ideas
2. Discuss and develop ideas with others	2.1. Identify <i>people who could provide input</i> into ideas for improvements 2.2. Select the <i>best way of approaching people</i> to begin sharing ideas 2.3. Seek <i>feedback</i> on improvement of ideas, and discuss and develop <i>options and possible variations</i> 2.4. Review and select ideas for follow-up based on feedback and further review
3. Address the	3.1. Take action to implement <i>routine changes</i> in

ELEMENT	PERFORMANCE CRITERIA
practicalities of change	consultation with others and within scope of own responsibility 3.2. Identify and articulate <i>issues and practical processes</i> for implementing proposed ideas 3.3. Present ideas and practical suggestions to the appropriate people about how improvements could be made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with other team members, to discuss a range of ideas and to be open to different opinions
- comprehension skills to review and interpret information from a wide range of sources
- organisational skills to articulate practical processes and actions for change
- problem-solving skills to identify and anticipate problems at a practical operational level and to develop possible solutions.

Required knowledge

- role and impact of innovation in the workplace at a practical operational level and the 'bigger picture' for innovation in the relevant work or community context
- role of individuals in suggesting and making improvements and the importance of pro-active involvement
- positive impacts and the challenges of change and innovation
- types of changes that can occur as a result of effective individual participation
- typical reasons why suggested improvements or innovations may not be implemented, including operational and management constraints
- ways in which improvements and change can be suggested to maximise likelihood of support.

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • generation of practical ideas in response to a specific workplace situation • effective and open interaction with others to discuss and develop ideas • knowledge and understanding of the role of individuals in contributing to workplace innovation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • interaction with others to reflect the collaborative nature of the improvement/innovation process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of the candidate participating in brainstorming, discussions and other collaborative activities to develop ideas • evaluation of candidate's ability to generate ideas to address a range of practical operational situations • evaluation of feedback from other people involved in the collaborative process about the candidate's communication approaches and abilities • oral or written questioning to assess knowledge of the role of innovation, the role of individuals in the innovation process and the types of techniques that can be used.
Guidance information for assessment	Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Own role</i> may relate to:</p>	<ul style="list-style-type: none"> • current organisational practice in relation to new ideas • knowledge of ways to suggest new ideas • scope of individual discretion and freedom in relation to new ideas • who needs to be involved in the process
<p><i>Opportunities for improvement</i> may relate to:</p>	<ul style="list-style-type: none"> • changes in the physical work environment • different storage or maintenance procedures • different ways of communicating within the team • introduction of new technology • job role changes • new customer base • new work practices or services • staffing changes • work processes and procedures
<p><i>Information which may be relevant to ideas</i> may include:</p>	<ul style="list-style-type: none"> • examples of similar approaches in other contexts or organisations • media articles about similar ideas • notes about how the idea could improve efficiency or service levels • pricing information
<p><i>People who could provide input</i> may include those who might:</p>	<ul style="list-style-type: none"> • challenge and test the ideas • have supervisory or management responsibility • promote the ideas to others • provide technical knowledge • resource the ideas going forward • review any budgetary implications • work in the same area
<p><i>Best way of approaching people</i> may be influenced by:</p>	<ul style="list-style-type: none"> • degree of formality required • location of people (e.g. may not be on-site) • need for any supporting documentation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • time pressures and priorities
<i>Feedback</i> could be gained in a range of ways and may include:	<ul style="list-style-type: none"> • asking questions • talking to colleagues or supervisors • using brainstorming techniques • using 'what if' scenarios
<i>Options and possible variations</i> development may occur by:	<ul style="list-style-type: none"> • considering resources needed • considering time required • taking on board ideas from other people • thinking through all aspects of the ideas • whole new concepts that come out of discussions
<i>Routine changes</i> may include:	<ul style="list-style-type: none"> • adjustments to work practices with minimal impact on others or within a small team • changes that do not require management approvals • changes that have the support of management and for which authority is given for immediate action to be taken
<i>Issues and practical processes</i> may relate to:	<ul style="list-style-type: none"> • any approvals required • cost of implementation • internal politics • need for a planned communication approach (internal or external) • personalities and philosophies of others in the workplace • relationship of the idea to organisation priorities

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research context for new system development	1.1. Explore and analyse the <i>impact</i> of <i>systems</i> in the overall context of innovation 1.2. Explore and gain clarity around <i>system objectives</i> , particularly in relation to innovation 1.3. Analyse current organisational systems to identify <i>gaps or barriers</i> to innovation 1.4. Research and analyse current and emerging information about systems in <i>other organisations and contexts</i> 1.5. Evaluate the <i>resources and other commitment</i> required to foster innovation 1.6. Identify <i>key stakeholders</i> who can play a role in conceptualising or supporting new system ideas
2. Generate system	2.1. Create system concepts that will foster innovation

ELEMENT	PERFORMANCE CRITERIA
concepts and options	<p>using <i>individual and group techniques</i></p> <p>2.2. Evaluate and discuss a range of ideas with relevant stakeholders</p> <p>2.3. Clearly articulate the ways in which innovation is better supported by system ideas and options</p> <p>2.4. Clearly articulate how the system itself is innovative</p> <p>2.5. Expose ideas and options to <i>ongoing testing, exploration and challenge</i></p> <p>2.6. Select and refine system ideas that meet the workplace requirements and which are both feasible and innovative</p>
3. Develop a plan for the system	<p>3.1. Determine the need for <i>specialised assistance</i> and integrate into system planning</p> <p>3.2. Analyse the potential impact of the new system on people, resources and other organisational practices</p> <p>3.3. Consult with all stakeholders who will be involved with, or affected by, the new system</p> <p>3.4. Develop an operational plan for the system, with budget, time lines and responsibilities</p> <p>3.5. Develop a communication strategy to support the introduction of the new system</p> <p>3.6. Evaluate the coaching and training needs of those who will use the system and plan a learning and development strategy</p>
4. Trial the system	<p>4.1. Present and consult on system proposals with relevant stakeholders</p> <p>4.2. Analyse and integrate feedback into the system development process</p> <p>4.3. Determine appropriate context and parameters for the trialling process</p> <p>4.4. Initiate the trial, taking account of all required consultative, coaching and technical issues</p> <p>4.5. Monitor and review the trial in relation to its goals for fostering innovation</p> <p>4.6. Open the improvement process to ongoing collaborative input and challenge</p> <p>4.7. Adjust system to reflect evaluation feedback</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to conduct potentially complex and challenging negotiations and consultations on new systems development and implementation
- creative thinking skills to explore and generate innovative concepts
- learning skills to stretch boundaries of own knowledge and skills, and to foster similar approaches in others
- literacy skills to analyse and develop potentially complex organisational requirements and documentation for work systems
- numeracy skills to develop and interpret financial estimates
- planning and organisational skills to plan the implementation of new systems and to organise and implement training and learning activities
- research skills to investigate the broader context for system development
- self-management skills to take responsibility for driving system development with a focus on innovation

Required knowledge

- concepts and theories of change management, including ways of introducing change in different organisational contexts and change management communication strategies
- concepts and theories of innovation and how these link to innovation in practice
- in-depth understanding of the ways in which workplace systems can contribute to innovation in the workplace
- project planning and management techniques
- technical context in which the system is being developed
- typical ways in which systems may present barriers to innovation

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and

Evidence of the following is essential:

EVIDENCE GUIDE	
evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • designing, trialling and reviewing more than one work system that is planned and structured to maximise opportunities for innovation by workers and managers in the workplace • clearly articulating and understanding how and why the work system fosters workplace innovation among workers and managers • knowledge of concepts and theories of innovation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • interaction with others to reflect the collaborative nature of systems development and of innovation more broadly • use of current industry technology in the development of systems.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of systems developed by the candidate for a particular workplace context, with a focus on innovation (both in terms of process and outcome) • oral or written questioning to assess knowledge of links between systems and innovation, wider innovation concepts and change management processes • review of analysis of current organisational systems to identify gaps or barriers to innovation • review of operational plan developed for the system • review of communication strategy developed to support the introduction of the new system • evaluation of learning and development strategy for users of the system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is strongly recommended, for example:</p> <ul style="list-style-type: none"> • BSBHRM506A Manage recruitment, selection and induction processes • BSBINM601A Manage knowledge and information • BSBINN601B Manage organisational change

EVIDENCE GUIDE

- BSBLED705A Plan and implement a mentoring program.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Impact of systems may be positive or negative and relate to:

- administrative processes
- degree of freedom or restriction for individuals, workers and teams
- extent of collaboration and cooperation within the organisation
- operational procedures
- quality of communication channels and processes
- quality of the physical environment
- responsiveness of the organisation to customer needs.

Systems might relate to:

- human resources
- innovation reward systems
- learning and development systems
- product or service review processes
- project management
- quality management
- team management.

System objectives may include:

- addressing operational or service problems
- changing the culture of the organisation
- developing workforce skills
- diversifying the business
- enhancing customer service quality
- generating more income
- improving competitiveness
- reducing operating costs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • winning more projects.
<i>Gaps or barriers</i> might relate to:	<ul style="list-style-type: none"> • differences between management rhetoric and reality • hierarchical system of management • inadequate reporting or recording • managers who do not accept new ideas • overly bureaucratic processes • people not communicating with each other or sharing information • staff not being involved in decisions • teams who work in rigid and inflexible ways.
<i>Other organisations and contexts</i> may be:	<ul style="list-style-type: none"> • competitor organisations • local, national or international • organisations of similar size or structure • totally different organisations who have developed interesting or successful systems • wider community or business contexts in which innovation occurs.
<i>Resources and other commitment</i> may include:	<ul style="list-style-type: none"> • financial • human • management commitment • physical • preparedness to change at all levels of the organisation.
<i>Key stakeholders</i> may include:	<ul style="list-style-type: none"> • boards or committees • customers • government departments or other statutory authorities • management • specialist advisors • work colleagues.
<i>Individual and group techniques</i> may include:	<ul style="list-style-type: none"> • brainstorming • cost-benefit analysis • flow charts • jotting down words • mind maps • process analysis • review of approaches/procedures used by competitors • strengths, weaknesses, opportunities and

RANGE STATEMENT	
	threats (SWOT) analysis <ul style="list-style-type: none"> • value analysis • visual imagining • other creative thinking strategies.
<i>Ongoing testing, exploration and challenge</i> may include:	<ul style="list-style-type: none"> • comparing • contrasting • gaining input from those who do not support the concept • playing 'devil's advocate' • seeking objective internal or external review.
<i>Specialised assistance</i> may include:	<ul style="list-style-type: none"> • external consultants or advisers • internal colleagues with specialist or technical knowledge relevant to the system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lead innovation by example	1.1. Make innovation an integral part of <i>leadership and management activities</i> 1.2. Demonstrate positive reception of ideas from others and provide constructive advice 1.3. Establish and maintain relationships based on mutual respect and trust 1.4. Take considered <i>risks</i> to open up opportunities for innovation 1.5. Regularly evaluate own approaches for consistency with the wider organisational or project context
2. Establish work practices that support innovation	2.1. Consult on and establish <i>working conditions</i> that reflect and encourage innovative practice 2.2. Introduce and maintain <i>workplace procedures</i> that foster innovation and allow for rigorous <i>evaluation of innovative ideas</i> 2.3. Facilitate and participate in <i>collaborative work arrangements</i> to foster innovation

ELEMENT	PERFORMANCE CRITERIA
	2.4. Build and lead teams to work in <i>ways that maximise opportunities for innovation</i>
3. Promote innovation	3.1. Acknowledge suggestions, improvements and innovations from all colleagues 3.2. Find appropriate <i>ways of celebrating and promoting innovation</i> 3.3. Promote and reinforce the value of innovation according to the vision and objectives of the organisation or project 3.4. Promote and support the evaluation of innovative ideas within the wider organisational or project context
4. Create a physical environment which supports innovation	4.1. Evaluate the <i>impact of the physical environment</i> in relation to innovation 4.2. Collaborate with colleagues about ideas for enhancing the physical work environment before taking action 4.3. Consider potential for supporting innovation when selecting physical resources and equipment 4.4. Design, fit-out and decorate workspaces to encourage creative mindsets, collaborative working and the development of positive workplace relationships
5. Provide learning opportunities	5.1. Pro-actively share relevant information, knowledge and skills with colleagues 5.2. Provide or encourage <i>formal and informal learning opportunities</i> to help develop the skills needed for innovation 5.3. Create opportunities in which individuals can learn from the experience of others

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, consultation and negotiation skills to model and lead, open and collaborative relationships

REQUIRED SKILLS AND KNOWLEDGE

- comprehension skills to interpret and develop information that may deal with complex ideas and relate to issues both within and outside a given workplace context
- planning and organisational skills to implement wide-ranging practical processes and procedures that support innovation
- problem-solving skills to assess and respond to challenges and risks around innovation at an operational management level
- self-management and learning skills to evaluate and enhance personal effectiveness, and to promote a culture of ongoing learning and development.

Required knowledge

- benefits of providing coaching and learning opportunities in relation to innovation
- concept of innovation, what it is and what it means for different people either working independently or within an organisation
- context for innovation in the relevant workplace context including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- different ways of rewarding performance
- factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- legislative framework that impacts on operations in the relevant workplace context
- management principles and leadership styles, including the impact of different approaches on innovation
- typical challenges and barriers to innovation within teams and organisations, and ways of overcoming these
- ways in which workplace climate can affect individual attitudes and performance.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- establishment of procedures and practices (for a project or a workplace) which support and foster innovative work practice and include sound

EVIDENCE GUIDE	
	<p>evaluation processes</p> <ul style="list-style-type: none"> • modelling of behaviour that supports innovative work practice • knowledge and understanding of the role of leaders and managers in encouraging innovation, and the issues and challenges associated with building and sustaining an innovative work environment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • involvement of a team for which the candidate provides leadership and guidance.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of outcomes and processes from activities managed by the candidate, particularly in relation to how innovation and innovative practice was encouraged and supported • oral or written questioning to assess knowledge of ways that innovation can be fostered and the typical challenges and barriers to innovation.
Guidance information for assessment	<p>Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Leadership and management activities</i> may include:</p>	<ul style="list-style-type: none"> • people management practices • planning processes

RANGE STATEMENT	
	<ul style="list-style-type: none"> • regular management meetings • review processes
Risks may include:	<ul style="list-style-type: none"> • budgetary issues • challenging changes in relationships, work practices and general workplace climate • unforeseen impacts of innovative ideas
Working conditions may include:	<ul style="list-style-type: none"> • family-friendly leave entitlements • flexible working hours • social leave • study leave • time provided for coming up with ideas
Workplace procedures may relate to:	<ul style="list-style-type: none"> • briefing processes • client relations • performance management • project management • staff meetings • training
Evaluation of innovative ideas may relate to:	<ul style="list-style-type: none"> • analysing consistency with overall goals, values or vision • assessing resource requirements and practicalities • assessing the potential to find 'champions' or supporters • evaluating the external factors that may impact on the idea • exploring the implications of ideas that may stretch or change existing ways of doing things
Collaborative work arrangements might be:	<ul style="list-style-type: none"> • cross section • vertical teams • within a section • working with supplier organisations or partner organisations
Ways that maximise opportunities for innovation may relate to:	<ul style="list-style-type: none"> • collaborating • collecting data • creative thinking • future scanning • getting feedback • making suggestions • networking
Ways of celebrating and	<ul style="list-style-type: none"> • congratulating the project team

RANGE STATEMENT	
<i>promoting innovation</i> may include:	<ul style="list-style-type: none"> • ensuring management acknowledgment • providing a newsletter story about the idea • using the idea to help foster other ideas • well-planned group incentive schemes
<i>Impact of the physical environment</i> may relate to:	<ul style="list-style-type: none"> • eating areas • extent to which design or style links with declared philosophies or objectives • external areas • general ambience of the work environment • location of different people • presence and ambience of relaxation areas • style of décor • use of creative messages or images in the workplace • workspace design and décor • workstation arrangements and opportunities for interaction
<i>Formal and informal learning opportunities</i> may include:	<ul style="list-style-type: none"> • coaching • conferences • formal training courses/programs • information seminars • job rotation • mentoring • online learning

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify change requirements and opportunities	<p>1.1. Identify <i>strategic change needs</i> through an analysis of organisational objectives</p> <p>1.2. Review existing policies and practices against strategic objectives to identify change requirements</p> <p>1.3. Monitor trends in the <i>external environment</i> to identify events or trends that impact on the achievement of organisation's objectives</p> <p>1.4. Identify major operational change requirements due to performance gaps, business opportunities or threats, or management decisions</p> <p>1.5. Review and prioritise change requirements or opportunities with <i>relevant managers</i></p> <p>1.6. Consult specialists and experts to assist in the identification of major change requirements and opportunities</p>
2. Develop change management strategy	<p>2.1. Undertake cost-benefit analysis for high priority change requirements and opportunities</p> <p>2.2. Undertake risk analysis, identify <i>barriers to change</i>, and agree and record mitigation strategies</p> <p>2.3. Develop change management project plan</p> <p>2.4. Obtain approvals from relevant authorities to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>confirm the change management process</p> <p>2.5. Assign <i>resources</i> to the project and agree reporting protocols with relevant managers</p>
3. Implement change management strategy	<p>3.1. In consultation with relevant groups and individuals, develop communication or education plan to promote the benefits of the change to the organisation and to minimise loss</p> <p>3.2. Arrange and manage activities to deliver the communication or education plans to relevant groups and individuals</p> <p>3.3. Consult with relevant groups and individuals for input into the change process</p> <p>3.4. Identify and respond to barriers to the change according to risk management plans</p> <p>3.5. Action <i>interventions and activities</i> set out in project plan according to project timetable</p> <p>3.6. Activate strategies for embedding the change</p> <p>3.7. Conduct regular evaluation and review, and modify project plan where appropriate to achieve change program objectives</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- high level interpersonal and leadership skills to obtain acceptance of change processes and to inspire trust
- innovation skills to think laterally and to develop creative means to enable people to accept change positively
- learning skills to enable openness to new ideas and techniques which could contribute to ongoing organisational improvement
- planning and organising skills to sequence events and to enable staff to be clear in times of change or turbulence
- problem-solving skills to identify and respond to barriers to the change and analyse risks
- project management skills to implement the change management strategy
- teamwork skills to consult with relevant groups and individuals for input to the

REQUIRED SKILLS AND KNOWLEDGE
change process <ul style="list-style-type: none"> • verbal communication skills to consult with relevant stakeholders and promote the change management plan
Required knowledge
<ul style="list-style-type: none"> • change management process or cycle • components of a change management project plan • impact of the external environment on change strategies • organisational behaviour • potential barriers to change • range of strategies for embedding change

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of a change process that details rationale for the change and its objectives • implementation of a change process • critical evaluation of how the change process was managed • demonstration of techniques for responding to resistance to change.
Context of and specific resources for assessment	Assessment must ensure access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios around change management • assessment of reports on change management • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • review of change management project plan and communication

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> or education plans • review of records outlining consultation with relevant groups and individuals for input to the change process • oral or written questioning to assess knowledge of change management strategies.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Strategic change needs</i> may include:	<ul style="list-style-type: none"> • actions arising from strategic planning activities to bring about major change in the organisation, which may relate to: <ul style="list-style-type: none"> • people • processes • technology • structure.
<i>External environment</i> may refer to factors that are:	<ul style="list-style-type: none"> • consumer-driven • ecological • economic • ethical • global • legal • political • social • technological • the drive to corporate sustainability • the move to a knowledge economy • workforce-driven.
<i>Relevant managers</i> may	<ul style="list-style-type: none"> • affected by the change

RANGE STATEMENT	
include those:	<ul style="list-style-type: none"> • holding a leadership position in the organisation • participating in the change project.
<i>Barriers to change</i> may include:	<ul style="list-style-type: none"> • challenges to group norms or established roles • existing organisational culture • existing reward systems • fear of loss of status, security, power or friends • interdepartmental rivalry or conflict • lack of involvement in the change • low morale • vested interests.
<i>Resources</i> may include:	<ul style="list-style-type: none"> • contractors • employees and managers • external and internal consultants • financial and budget allocation • hardware and software • physical assets.
<i>Interventions and activities</i> may include:	<ul style="list-style-type: none"> • action research • career planning • job redesign • sensitivity training • succession planning • surveys (with feedback) • team building • termination or redeployment • training • transition analysis.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Generate innovative thinking and creativity	1.1. Research and use a <i>range of techniques and tools</i> to generate new ideas and thinking 1.2. Research and analyse trends shaping organisation's current and future thinking and practice 1.3. Introduce and promote creative thinking techniques to foster personal and team innovation 1.4. Evaluate <i>overall context</i> for individual and collective innovative thinking and creativity 1.5. Research and analyse specific <i>conditions for innovation</i> and issues that impact on individual and collective innovative thinking and creativity 1.6. Research and review innovation <i>drivers</i> and <i>enablers</i>
2. Lead innovative	2.1. Develop personal <i>leadership style</i> to model positive

ELEMENT	PERFORMANCE CRITERIA
practices	<p>innovative thinking and practice</p> <p>2.2. Review, challenge and refine own style and practice in relation to modelling and supporting innovation</p> <p>2.3. Assess and determine the requirements to promote sustainable innovative activity for the operational context and people involved</p> <p>2.4. Devise and implement most appropriate means to promote knowledge transfer</p> <p>2.5. Identify, evaluate and manage <i>risks</i> associated with innovation within an organisation</p>
3. Generate and support a culture of innovation	<p>3.1. Introduce and promote innovative practices, processes, products or services appropriate to audience and organisational requirements</p> <p>3.2. Establish ways to capture, communicate and share innovative ideas and practices</p> <p>3.3. Initiate and foster communication, consultation and team development approaches that support innovation</p> <p>3.4. Identify, assess and provide adequate resources for innovation to occur</p> <p>3.5. Develop and apply strategies to foster a workplace culture capable of encouraging innovation</p> <p>3.6. Establish <i>mechanisms at system and process</i> level that can support innovation</p>
4. Sustain innovative thinking and practice	<p>4.1. Develop strategies to make innovation an integral part of organisational activity</p> <p>4.2. Develop and monitor processes to ensure ongoing awareness of individual and collective contributions to innovative thinking and practice</p> <p>4.3. Analyse potential barriers and risks to innovation and devise strategies to respond</p> <p>4.4. Analyse and reflect on innovation performance as a basis for developing strategies for improvement</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- communication, consultation and negotiation skills to model and lead open and collaborative relationships
- planning and organisational skills to develop, implement and sustain practical strategies for innovation
- problem-solving skills to assess challenges and risks at a strategic level and to develop appropriate responses
- research and analytical skills to work with structurally intricate and conceptually complex innovation texts and broader industry contexts; and to develop materials which deal with complex ideas and concepts
- self-management and learning skills to evaluate and enhance personal effectiveness, and to promote a culture of ongoing learning and development
- team and leadership skills to generate, promote and sustain innovation in an organisational or community setting
- technology skills to use computers for document production and research of innovative practices and theories

Required knowledge

- current and past theories and thinking about innovation and creativity
- leadership styles including the way that different approaches impact on innovation in organisations, and specific approaches that foster innovation
- legislative framework that affects business operations in a given context, including particular legislation with a direct impact on innovation, for example concerning copyright, trademarks, intellectual property, occupational health and safety (OHS)
- management techniques and tools for the encouragement of creative thinking and for turning good ideas and creative thinking into innovation
- organisational and industry context for innovation including overarching mission, objectives and strategies
- relationship between theory and thinking on innovation and creativity, and applied practice
- risk assessment and management strategies in the context of innovation
- social, political, economic and technological developments that determine the broad context for innovation in the relevant workplace context
- theories, processes and practice of organisational transformation and the management of the stages of change
- typical strategic challenges and barriers to innovation within organisations and ways of overcoming these challenges and barriers

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> comprehensive understanding and application of key concepts, current theories and processes for promoting innovative thinking and practices in an organisational context critical examination of trends in thinking and emerging practices as they relate to an organisation's current thinking and practices knowledge of social, political, economic and technological developments that determine the broad context for innovation in the relevant workplace context.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment over a sufficient timeframe to allow holistic assessment of the candidate's capacity to lead and sustain innovative thinking and practice opportunities for interaction with others to reflect the collaborative nature of the innovation process access to current organisational documentation and support materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate evaluation of reports prepared by the candidate to propose strategies and techniques for building innovative thinking and practice within a given organisational context oral or written questioning to assess knowledge of innovation theory and practice, context for innovation, and factors that affect innovation in a particular organisation.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBINN601B Manage organisational change
- BSBLED701A Lead personal and strategic transformation
- BSBLED702A Lead learning strategy implementation
- PSPMNGT614A Facilitate knowledge management.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Range of techniques and tools for creative thinking may include:

- brainstorming
- concept maps
- creative thinking matrix
- DeBono tools (e.g. six hats)
- foresight tools
- Kirton Adaptation Innovation Inventory
- mindmapping (Buzan)
- nominal group technique
- scenario analysis.

Overall context may include the environment relating to:

- culture
- electronic and non-physical context
- global
- local or regional
- national
- work group or community.

Conditions for innovation may span causal factors and issues relating to:

- ability to gain and respond to customer feedback
- available resources (in all their forms)
- business systems

RANGE STATEMENT	
	<ul style="list-style-type: none"> • changes to workflow and processes • competency, capability and skills of the workforce • culture and values • economic change • emerging technologies • executive support for innovation • external • globalisation • government regulations, policy or funding initiatives • internal • labour market and industry changes and restructures • learning culture • management practices • new business models • new markets • organisational sociocultural circumstances and issues (for example, within Indigenous organisations) • research and development focus and support • shift to knowledge economy or new economy • structure and design of work in the organisation • technology change and convergence • vision, core purpose and capabilities.
<p>Drivers are factors or changes that impel innovative practice and may include:</p>	<ul style="list-style-type: none"> • customer expectations • globalisation • market shifts • new legislation (such as compliance) • policies (such as environmental protection) • price and profitability • technology change.
<p>Enablers are factors that help innovation overcome barriers and may include:</p>	<ul style="list-style-type: none"> • breakthroughs • collaboration • culture • development • intellectual property • inventions • management support

RANGE STATEMENT	
	<ul style="list-style-type: none"> • profitability • research • resources • responsiveness • skilled workforce • technology.
<i>Leadership style</i> will usually be differentiated by five classical approaches:	<ul style="list-style-type: none"> • autocratic (non-participative) • charismatic flexibility • democratic (participative) • laissez faire (free reign) • paternalistic.
<i>Risks</i> may include:	<ul style="list-style-type: none"> • damage to property/equipment • environmental • market changes • OHS (including disease) • product failure • professional incompetence • resource deficiencies • systems and process failures.
<i>Mechanisms at system and process level</i> may be physical or electronic and relate to:	<ul style="list-style-type: none"> • customer management • human resources • information technology • learning • market • OHS • operations • planning (strategic and corporate) • quality • research and development • risk • resource management • supply chain management • structural and performance hierarchies (strata).

Co-requisite units		

BSBITS401B Maintain business technology

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBITS401A Maintain business technology</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain the effectiveness of business technology in the workplace. It includes maintaining existing technology and planning for future technology requirements.

Application of the Unit

This unit applies to individuals with a broad knowledge of business technology who contribute well developed skills in creating solutions to maintenance and upgrade issues with existing technology. They may have responsibility to provide guidance or to delegate aspects of these tasks to others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Maintain performance of hardware and software	<p>1.1 Monitor and evaluate system effectiveness to ensure it meets <i>organisational and system requirements</i></p> <p>1.2 Use operating system, drive and disk structure, reports and files to identify performance problems</p> <p>1.3 <i>Maintain disk drives and peripherals</i> according to manufacturers' and organisational requirements</p> <p>1.4 Replace <i>consumables</i> in accordance with manufacturers' and organisational requirements</p>
2. Provide basic system administration	<p>2.1 Carry out system back-up procedure at regular intervals according to organisational and system requirements</p> <p>2.2 Install and operate <i>software</i> applications in accordance with developers' and organisational requirements</p> <p>2.3 Maintain and update security access procedures in line with organisational requirements</p> <p>2.4 Ensure that licence for use of software is used, checked and recorded in accordance with organisational requirements</p> <p>2.5 Regularly maintain and update virus programs in accordance with organisational requirements</p>
3. Identify future technology requirements	<p>3.1 Maintain knowledge of current and new <i>technology</i> by regularly accessing <i>sources of information</i></p> <p>3.2 Identify and develop <i>improved technology systems</i> using feedback from clients and colleagues</p> <p>3.3 Assess existing technology against newly available technology to determine future needs and priorities</p> <p>3.4 Identify and select new technologies to achieve and maintain continuous organisational development</p> <p>3.5 Obtain management and budget approval for new selected</p>

	technologies
--	--------------

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain the operation and troubleshooting of technology in the work environment
- literacy skills to interpret and evaluate the purposes and objectives of various uses of technology; to display logical organisation of written information
- problem-solving skills to address routine and non-routine faults with hardware and software
- research and analytical skills to analyse and identify organisation's future technology requirements.

Required knowledge

- costs and benefits of technology maintenance strategies
- general features and capabilities of current industry accepted hardware and software products
- principles of environmental sustainable practice in implementing business technology
- importance of back-up and security procedures; maintenance and diagnostic procedures; licensing, installation and purchasing procedures
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety (OHS).

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
-------------------------------	--

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: <ul style="list-style-type: none"> installing software and hardware organising and accessing software, materials and consumables maintaining technology security and maintenance systems knowledge of costs and benefits of technology maintenance strategies.
Context of and specific resources for assessment	Assessment must ensure: <ul style="list-style-type: none"> access to an actual workplace or simulated environment access to office equipment and resources access to examples of technology maintenance and security procedures.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate analysis of responses to case studies and scenarios demonstration of techniques oral or written questioning to assess knowledge of general features and capabilities of current industry accepted hardware and software products.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: <ul style="list-style-type: none"> other information and communications technology or general administration units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Organisational and system requirements</i> may include:</p>	<ul style="list-style-type: none"> • back-up procedures • Code of Conduct • ethical standards • legal and organisational policy/guidelines and requirements • maintenance of customised software • OHS policies, procedures and programs • quality assurance and/or procedures manuals • register of licenses • restore procedures • security and confidentiality procedures • software licence documentation • storage of information technology documentation • storage retrieval and type of product licenses • updating of virus protection systems.
<p><i>Disk drive and peripherals maintenance</i> may include:</p>	<ul style="list-style-type: none"> • backing up files before major maintenance • checking hard drive for errors • cleaning dust from internal and external surfaces • creating more free space on the hard disk • defragmenting the hard disk • deleting unwanted files • reviewing programs • using up-to-date anti-virus programs.
<p><i>Consumables</i> may include:</p>	<ul style="list-style-type: none"> • disks • magnetic tape and cassettes • print heads • print media • printer ribbons and cartridges.
<p><i>Software</i> may include:</p>	<ul style="list-style-type: none"> • accounting applications • commercial software applications • database applications • internet/intranet/extranet related programs • organisation-specific software • presentation applications • spreadsheet applications • word processing applications.
<p><i>Technology</i> may include:</p>	<ul style="list-style-type: none"> • client services • computers • data transfer devices • modems • peripherals, including:

	<ul style="list-style-type: none"> • printers, scanners, tape cartridges • speakers, multimedia kits • personal computer, modems • input equipment such as mouse, touch pad, keyboard, pens • mobile phones, palmtops and personal digital assistants (PDAs), laptops and desktop computers • Bluetooth devices, universal serial bus (USB), Firewire (IEEE 1394) • photocopiers • printers • scanners • software.
Sources of information may include:	<ul style="list-style-type: none"> • computer hardware manufacturers • computer magazines and journals • computer software designers • industry associations • internal/external clients • internet • retail outlets • seminars, workshops and training sessions • trade fairs.
Improved technology systems may include:	<ul style="list-style-type: none"> • access protocols • cable data transmissions • delivery and installation systems • hardware upgrades • implementing a new system • maintenance options • multimedia • networking options • new hardware • new software • resource usage monitoring • software upgrades • environmentally sustainable design practices.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce documents	<p>1.1. Use safe work practices to ensure <i>ergonomic, work organisation, energy and resource conservation requirements</i> are addressed</p> <p>1.2. Identify <i>document</i> purpose, audience and presentation requirements, and clarify with relevant personnel as required</p> <p>1.3. Identify <i>organisational</i> and task <i>requirements</i> for document layout and design</p>
2. Produce documents	<p>2.1. <i>Format</i> document using appropriate <i>software functions</i> to adjust page layout to meet information requirements, in accordance with organisational style and presentation requirements</p> <p>2.2. Use system features to identify and manipulate <i>screen display options and controls</i></p> <p>2.3. Use manuals, user documentation and online help to overcome problems with document presentation and production</p>
3. Finalise documents	<p>3.1. Ensure final document is previewed, <i>checked</i>, adjusted and <i>printed</i> in accordance with organisational and task requirements</p> <p>3.2. Ensure document is prepared within <i>designated time lines</i> and organisational requirements</p> <p>3.3. <i>Name and store document</i> in accordance with organisational requirements and exit application</p>

ELEMENT	PERFORMANCE CRITERIA
	without information loss/damage

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify document requirements
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures, and to use basic models to produce a range of correspondence
- problem-solving skills to solve routine problems.

Required knowledge

- formatting styles and their effect on formatting, readability and appearance of documents
- purpose, use and function of word processing software
- organisational requirements for ergonomics, work periods and breaks, and conservation techniques
- organisational style guide.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- knowledge of simple word processing functions, standard document layout and design principles
- production of a minimum of three simple, word processed documents.

EVIDENCE GUIDE	
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • access to examples of word processed documents and style guides.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of formatted document • review of final document • demonstration of techniques • oral or written questioning to assess knowledge of word processing software functions.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • general administration units • other IT use units.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Ergonomic requirements</i> may include:</p>	<ul style="list-style-type: none"> • avoiding radiation from computer screens • chair height, seat and back adjustment • document holder • footrest • keyboard and mouse position

RANGE STATEMENT	
	<ul style="list-style-type: none"> • lighting • noise minimisation • posture • screen position • workstation height and layout
<i>Work organisation requirements</i> may include:	<ul style="list-style-type: none"> • exercise breaks • mix of repetitive and other activities • rest periods
<i>Conservation requirements</i> may include:	<ul style="list-style-type: none"> • disposing of non-confidential waste paper in recycling bins • double-sided paper use • re-using paper for rough drafts (observing confidentiality requirements) • utilising power-save options for equipment
<i>Documents</i> may include:	<ul style="list-style-type: none"> • agendas • briefing papers • envelopes • faxes • labels • letters • mail merges • memos • minutes • short reports • simple one-page flyers • standard form letters
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • company colour scheme • company logo • consistent corporate image • content restrictions • established guidelines and procedures for document production • house styles • observing copyright legislation • organisation name, time, date, document title, filename etc. in header/footer • templates
<i>Formatting</i> may include:	<ul style="list-style-type: none"> • alignment on page • columns • company logo/letterhead

RANGE STATEMENT	
	<ul style="list-style-type: none"> • enhancements to format - borders, patterns and colours • enhancements to text - colour, size, orientation • headers/footers • margins • page orientation
<i>Software functions</i> may include:	<ul style="list-style-type: none"> • default settings • document protection • grammar check • headers/footers • indent • line spacing • page numbers • page set up • paragraph formatting • spell check • tabs • text formatting
<i>Screen display options and controls</i> may include:	<ul style="list-style-type: none"> • layout view • maximise/minimise • normal view • page view • print preview • ruler • toolbars • zoom percentage
<i>Checking</i> may include:	<ul style="list-style-type: none"> • accuracy of information • consistency of layout • ensuring instructions with regard to content and format have been followed • grammar • proofreading • spelling, electronically and manually
<i>Printing</i> may include:	<ul style="list-style-type: none"> • basic print settings • multiple copies • odd or even pages • print preview • printer setup • specified pages • whole document

RANGE STATEMENT	
<i>Designated time lines</i> may include:	<ul style="list-style-type: none"> • organisational time line e.g. deadline requirements • time line agreed with internal/external client • time line agreed with supervisor/person requiring document/s
<i>Naming and storing documents</i> may include:	<ul style="list-style-type: none"> • appropriate file type • authorised access • file names according to organisational procedure e.g. numbers rather than names • file names which are easily identifiable in relation to the content • file/directory names which identify the operator, author, section, date etc. • filing locations • organisational policy for backing up files • organisational policy for filing hard copies of documents • security • storage in folders/sub-folders • storage on hard/floppy disk drives, CD-ROM, tape back-up

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare resources	1.1. Select and use appropriate <i>technology</i> and <i>software</i> applications to produce required <i>business documents</i> 1.2. Select layout and style of publication according to information and <i>organisational requirements</i> 1.3. Ensure document design is consistent with company and/or client requirements, using basic design principles 1.4. Discuss and clarify format and style with person requesting document/publication
2. Design document	2.1. Identify, open and generate files and records according to task and organisational requirements 2.2. Design document to ensure efficient entry of information and to maximise the presentation and appearance of information 2.3. Use a range of <i>functions</i> to ensure consistency of design and layout 2.4. Operate <i>input devices</i> within designated requirements
3. Produce document	3.1. Complete document production within designated time lines according to organisational requirements 3.2. Check document produced to ensure it meets task requirements for style and layout 3.3. Store document appropriately and save document to

ELEMENT	PERFORMANCE CRITERIA
	avoid loss of data 3.4. Use manuals, training booklets and/or help-desks to overcome basic difficulties with document design and production
4. Finalise document	4.1. Proofread document for readability, accuracy and consistency in language, style and layout prior to final output 4.2. Make any modifications to document to meet requirements 4.3. <i>Name</i> and <i>store</i> document in accordance with organisational requirements and exit the application without data/loss damage 4.4. Print and present document according to requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- keyboarding and computer skills to complete a range of formatting and layout tasks
- literacy skills to read and understand a variety of texts; to prepare general information and papers according to target audience; and to edit and proofread documents to ensure clarity of meaning and conformity to organisational requirements
- numeracy skills to access and retrieve data
- problem-solving skills to determine document design and production processes.

Required knowledge

- appropriate technology for production requirements
- functions and features of contemporary computer applications
- organisational policies, plans and procedures
- organisational requirements for document design e.g. style guide.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> designing and producing a minimum of 3 completed business documents, using at least 2 software applications in the production of each document using appropriate data storage options knowledge of the functions and features of contemporary computer applications.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to an actual workplace or simulated environment access to office equipment and resources access to examples of style guides and organisational procedures.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate review of final printed documents demonstration of techniques observation of presentations oral or written questioning to assess knowledge of software applications.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Technology may include:

- computers
- photocopiers
- printers
- scanners

Software may include:

- accounting packages
- database packages
- presentation packages
- spreadsheet packages
- word processing packages

Business documents may include:

- accounts statements
- client databases
- newsletters
- project reviews
- proposals
- reports
- web pages

Organisational requirements may include:

- budgets
- correctly identifying and opening files
- legal and organisational policies, guidelines and requirements
- locating data
- log-on procedures
- manufacturers' guidelines
- occupational health and safety policies, procedures and programs
- quality assurance and/or procedures manuals
- saving and closing files
- security
- storing data

Functions may include:

- alternating headers and footers
- editing
- merging documents

RANGE STATEMENT	
	<ul style="list-style-type: none"> • spell checking • table formatting • using columns • using styles
<i>Input devices</i> may include:	<ul style="list-style-type: none"> • keyboard • mouse • numerical key pad • scanner
<i>Naming</i> documents may include:	<ul style="list-style-type: none"> • appropriate file type • authorised access • file names according to organisational procedure e.g. numbers rather than names • file names which are easily identifiable in relation to the content • file/directory names which identify the operator, author, section, date etc. • filing locations • organisational policy for backing up files • organisational policy for filing hard copies of documents • security
<i>Storing</i> documents may include:	<ul style="list-style-type: none"> • storage in directories and sub-directories • storage on CD-ROMs, disk drives or back-up systems • storing/filing hard copies of computer generated documents • storing/filing hard copies of incoming and outgoing facsimiles • storing/filing incoming and outgoing correspondence

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine development needs	<p>1.1. Systematically identify and implement <i>learning and development needs</i> in line with <i>organisational requirements</i></p> <p>1.2. Ensure that a learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and implemented</p> <p>1.3. Encourage individuals to self-evaluate performance and identify areas for improvement</p> <p>1.4. Collect <i>feedback on performance</i> of team members from relevant sources and compare with established team learning needs</p>
2. Develop individuals and teams	<p>2.1. Identify learning and development program goals and objectives, ensuring a match to the specific knowledge and skill requirements of competency standards relevant to the industry</p> <p>2.2. Ensure that <i>learning delivery methods</i> are appropriate to the learning goals, the learning style of participants, and availability of <i>equipment and resources</i></p> <p>2.3. Provide workplace learning opportunities, and <i>coaching and mentoring assistance</i> to facilitate individual and team achievement of competencies</p> <p>2.4. Create development opportunities that incorporates a</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>range of activities and support materials appropriate to the achievement of identified competencies</p> <p>2.5. Identify and approve resources and time lines required for learning activities in accordance with organisational requirements</p>
3. Monitor and evaluate workplace learning	<p>3.1. Use feedback from individuals or teams to identify and implement improvements in future learning arrangements</p> <p>3.2. Assess and record outcomes and performance of individuals/teams to determine the effectiveness of development programs and the extent of additional development support</p> <p>3.3. Negotiate modifications to learning plans to improve the efficiency and effectiveness of learning</p> <p>3.4. Document and maintain records and reports of competency according to organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to receive and report on feedback, to maintain effective relationships and to manage conflict
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- leadership skills to gain trust and confidence of clients and colleagues
- literacy skills to read, write and understand a variety of texts; and to edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- negotiation skills to achieve mutually acceptable outcomes
- technology skills to support effective communication and presentation.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles

REQUIRED SKILLS AND KNOWLEDGE

- codes of practice
- privacy laws
- occupational health and safety (OHS)
- facilitation techniques to encourage team development and improvement
- organisational policies, plans and procedures
- career paths and competency standards relevant to the industry.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- identifying and implementing learning opportunities for others
- giving and receiving feedback from team members to encourage participation in and effectiveness of team
- creating learning plans to match skill needs
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of learning and development plans, policies and procedures
- examples of documents relating to diversity policies and procedures.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses to case studies and scenarios

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create learning opportunities	1.1. Identify potential formal and informal <i>learning opportunities</i> 1.2. Identify <i>learning needs</i> of individuals in relation to the needs of the team and/or enterprise, and available learning opportunities 1.3. Develop and implement <i>learning plans</i> as an integral part of individual and team performance plans 1.4. Develop strategies to ensure that learning plans reflect the <i>diversity of needs</i> 1.5. Ensure organisational procedures maximise individual and team access to, and participation in, learning opportunities 1.6. Ensure effective liaison occurs with <i>training and development specialists</i> and contributes to learning opportunities which enhance individual, team and organisational performance

ELEMENT	PERFORMANCE CRITERIA
2. Facilitate and promote learning	<p>2.1. Develop strategies to ensure that workplace learning opportunities are used and that team members are encouraged to share their skills and knowledge to <i>encourage a learning culture</i> within the team</p> <p>2.2. Implement organisational procedures to ensure workplace learning opportunities contribute to the development of appropriate workplace knowledge, skills and attitudes</p> <p>2.3. Implement policies and procedures to encourage team members to assess their own competencies, and to identify their own learning and development needs</p> <p>2.4. Share the benefits of learning with others in the team and organisation</p> <p>2.5. Recognise workplace achievement by timely and appropriate recognition, feedback and rewards</p>
3. Monitor and improve learning effectiveness	<p>3.1. Use strategies to ensure that team and individual learning performance is monitored to determine the type and extent of any additional work-based support required, and any occupational health and safety (OHS) issues</p> <p>3.2. Use feedback from individuals and teams to identify and introduce improvements in future learning arrangements</p> <p>3.3. Make adjustments, negotiated with training and development specialists, for improvements to the efficiency and effectiveness of learning</p> <p>3.4. Use processes to ensure that records and reports of competency are documented and maintained within the organisation's systems and procedures to inform future planning</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - deal with people openly and fairly

REQUIRED SKILLS AND KNOWLEDGE

- encourage colleagues to share their knowledge and skills
- gain the trust and confidence of colleagues
- use consultation skills effectively
- literacy skills to access and use workplace information
- planning and organisational skills to facilitate, promote and monitor learning by:
 - developing learning plans
 - establishing a workplace which is conducive to learning
 - evaluating the effectiveness of learning
 - identifying learning needs
 - negotiating learning arrangements with training and development specialists
 - selecting and using work activities to create learning opportunities
 - using coaching and mentoring to support learning.

Required knowledge

- management of relationships to achieve a learning environment
- principles and techniques involved in the management and organisation of:
 - adult learning
 - coaching and mentoring
 - consultation and communication
 - improvement strategies
 - leadership
 - learning environment and learning culture
 - monitoring and reviewing workplace learning
 - problem identification and resolution
 - record keeping and management methods
 - structured learning
 - work-based learning.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • methods for reviewing performance development needs and techniques for providing feedback on those needs • models for planning professional development • options available for professional development • knowledge of relationship management required to achieve a learning environment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of written reports • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • observation of presentations • oral or written questioning to assess knowledge of the principles and techniques involved in the management and organisation of adult learning • review of the development and implementation of learning plans • evaluation of how workplace achievement is recognised • review of processes used to record and report competency.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Diploma of Management.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Learning opportunities</i> may include:</p>	<ul style="list-style-type: none"> • structured learning activities conducted outside and within the workplace such as: <ul style="list-style-type: none"> • accredited training through an independent organisation such as a state/territory OHS authority • action learning • short courses • training through a Registered Training Organisation (RTO) leading to a nationally recognised Australian Qualifications Framework (AQF) qualification or Statement of Attainment • workshops • workplace learning activities, that may also contribute to a recognised credential, such as: <ul style="list-style-type: none"> • coaching • exchange/rotation • induction • mentoring • shadowing
<p><i>Learning needs</i> may include:</p>	<ul style="list-style-type: none"> • developmental learning, for example the learning required to progress through an organisation and take on new tasks and roles • gaps between the competencies held by the employee, and the skills and knowledge required to effectively undertake workplace tasks
<p><i>Learning plans</i> may include:</p>	<ul style="list-style-type: none"> • codes of conduct • key performance indicators • negotiated agreement with individual/s • OHS requirements • performance standards • team competencies • team roles and responsibilities • work outputs and processes

RANGE STATEMENT	
<i>Diversity of needs</i> may include:	<ul style="list-style-type: none"> learning needs that relate to social, cultural and other types of workplace diversity, such as the need for varied communication styles and approaches
<i>Training and development specialists</i> may be:	<ul style="list-style-type: none"> internal external
<i>Encourage a learning culture</i> may refer to:	<ul style="list-style-type: none"> encouraging learning and sharing skills and knowledge across the work team and the wider organisation to develop competencies of individual team members and the team as a whole

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement operational plan	<p>1.1. Collate, analyse and organise details of <i>resource requirements</i> in consultation with <i>relevant personnel, colleagues and specialist resource managers</i></p> <p>1.2. Implement <i>operational plans</i> to contribute to the achievement of organisation's performance/business plan</p> <p>1.3. Identify and use <i>key performance indicators</i> (KPIs) to monitor operational performance</p> <p>1.4. Undertake <i>contingency planning</i> and <i>consultation processes</i></p> <p>1.5. Provide assistance in the development and presentation of proposals for resource requirements in line with operational planning processes</p>
2. Implement resource acquisition	<p>2.1. Recruit and induct employees within <i>organisation's policies, practices and procedures</i></p> <p>2.2. Implement plans for acquisition of physical</p>

ELEMENT	PERFORMANCE CRITERIA
	resources and services within organisation's policies, practices and procedures and in consultation with relevant personnel
3. Monitor operational performance	<p>3.1. Monitor <i>performance systems and processes</i> to assess progress in achieving profit/productivity plans and targets</p> <p>3.2. Analyse and use budget and actual financial information to monitor profit/productivity performance</p> <p>3.3. Identify unsatisfactory performance and take prompt action to rectify the situation according to organisational policies</p> <p>3.4. Provide mentoring, coaching and supervision to support individuals and teams to use resources effectively, economically and safely</p> <p>3.5. Present recommendations for variation to operational plans to the <i>designated persons/groups</i> and gain approval</p> <p>3.6. Implement <i>systems, procedures and records</i> associated with performance in accordance with organisation's requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- coaching and mentoring skills to provide support to colleagues
- literacy skills to access and use workplace information, and to prepare reports
- planning and organising skills to monitor performance and to sequence work of self and others to achieve planned outcomes.

Required knowledge

- principles and techniques associated with:
 - contingency planning
 - methods for monitoring and reporting on performance
 - monitoring and implementing operations and procedures
 - problem identification and methods of resolution

REQUIRED SKILLS AND KNOWLEDGE

- relevant budgeting and financial analysis, interpretation and reporting requirements
- resource management systems at the tactical implementation level
- resource planning and acquisition
- tactical risk analysis including identification and reporting requirements.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- ability to monitor and adjust operational performance, produce short-term plans for the department or section, plan and acquire resources, and provide reports on performance as required
- knowledge of principles and techniques associated with monitoring and implementing operations and procedures.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation outlining contingency planning and consultation processes undertaken
- demonstration of techniques in managing performance
- evaluation of mentoring, coaching and supervision provided to support individuals and teams to use resources effectively, economically and safely.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Frontline Management.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Resource requirements may refer to:

- goods and services to be purchased and ordered
- human, physical and financial resources - both current and projected
- stock requirements and requisitions

Relevant personnel, colleagues and specialist resource managers may include:

- colleagues and specialist resource managers
- managers
- occupational health and safety committees and other people with specialist responsibilities
- other employees
- people from a wide range of social, cultural and ethnic backgrounds, and people with a range of physical and mental abilities
- supervisors

Operational plans may refer to:

- organisational plans
- tactical plans developed by the department or section to detail product and service performance

Key performance indicators may refer to:

- measures for monitoring or evaluating the efficiency or effectiveness of a system, and which may be used to demonstrate accountability and to identify areas for improvements

RANGE STATEMENT	
<i>Contingency planning</i> may refer to:	<ul style="list-style-type: none"> • contracting out or outsourcing human resources and other functions or tasks • diversification of outcomes • finding cheaper or lower quality raw materials and consumables • increasing sales or production • recycling and re-use • rental, hire purchase or alternative means of procurement of required materials, equipment and stock • restructuring of organisation to reduce labour costs • risk identification, assessment and management processes • seeking further funding • strategies for reducing costs, wastage, stock or consumables • succession planning
<i>Consultation processes</i> may refer to:	<ul style="list-style-type: none"> • mechanisms used to provide feedback to the work team in relation to outcomes of consultation • meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans
<i>Organisation's policies, practices and procedures</i> may include:	<ul style="list-style-type: none"> • organisational culture • Standard Operating Procedures • organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources • undocumented practices in line with organisational operations
<i>Performance systems and processes</i> may refer to:	<ul style="list-style-type: none"> • informal systems used by frontline managers for the work team in the place of existing organisation-wide systems • formal processes within the organisation to measure performance, such as: <ul style="list-style-type: none"> • feedback arrangements • individual and teamwork plans

RANGE STATEMENT	
	<ul style="list-style-type: none"> • KPIs • specified work outcomes
<i>Designated persons/groups</i> may include:	<ul style="list-style-type: none"> • other affected work groups or teams and groups designated in workplace policies and procedures • those who have the authority to make decisions and/or recommendations about operations such as workplace supervisors, other managers
<i>Systems, procedures and records</i> may include:	<ul style="list-style-type: none"> • databases and other recording mechanisms for ensuring records are kept in accordance with organisational requirements • individual and team performance plans • organisational policies and procedures relative to performance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement continuous improvement systems and processes	<p>1.1. Implement <i>systems</i> to ensure that individuals and teams are actively encouraged and supported to <i>participate in decision making processes</i>, assume responsibility and exercise initiative</p> <p>1.2. Communicate the organisation's <i>continuous improvement processes</i> to individuals and teams, and obtain feedback</p> <p>1.3. Ensure effective <i>mentoring and coaching</i> allows individuals and teams to implement the organisation's continuous improvement processes</p>
2. Monitor and review performance	<p>2.1. Use the organisation's systems and <i>technology</i> to monitor and review progress and to identify ways in which planning and operations could be improved</p> <p>2.2. Improve <i>customer service</i> through continuous improvement techniques and processes</p>

ELEMENT	PERFORMANCE CRITERIA
	2.3. Formulate and communicate recommendations for adjustments to those who have a role in their development and implementation
3. Provide opportunities for further improvement	3.1. Implement <i>processes to ensure that team members are informed of savings and productivity/service improvements</i> in achieving the business plan 3.2. Document work performance to aid the identification of further opportunities for improvement 3.3. Manage records, reports and recommendations for improvement within the organisation's systems and processes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - coach and mentor team members
 - gain the commitment of individuals and teams to continuously improve
- innovation skills to design better ways of performing work.

Required knowledge

- principles and techniques associated with:
 - benchmarking
 - best practice
 - change management
 - continuous improvement systems and processes
 - quality systems.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Allocate work	1.1. Consult relevant groups and individuals on work to be allocated and resources available 1.2. Develop work plans in accordance with operational plans 1.3. Allocate work in a way that is efficient, cost effective and outcome focussed 1.4. Confirm <i>performance standards, Code of Conduct</i> and work outputs with relevant teams and individuals 1.5. Develop and agree <i>performance indicators</i> with relevant staff prior to commencement of work 1.6. Conduct <i>risk analysis</i> in accordance with the organisational risk management plan and legal requirements
2. Assess performance	2.1. Design <i>performance management</i> and review processes to ensure consistency with organisational

ELEMENT	PERFORMANCE CRITERIA
	<p>objectives and policies</p> <p>2.2. Train participants in the performance management and review process</p> <p>2.3. Conduct performance management in accordance with organisational protocols and time lines</p> <p>2.4. Monitor and evaluate performance on a continuous basis</p>
3. Provide feedback	<p>3.1. Provide informal feedback to staff on a regular basis</p> <p>3.2. Advise relevant people where there is poor performance and take necessary actions</p> <p>3.3. Provide on-the-job coaching when necessary to improve performance and to confirm <i>excellence in performance</i></p> <p>3.4. Document performance in accordance with the organisational performance management system</p> <p>3.5. Conduct formal structured feedback sessions as necessary and in accordance with organisational policy</p>
4. Manage follow up	<p>4.1. Write and agree performance improvement and development plans in accordance with organisational policies</p> <p>4.2. Seek assistance from human resources specialists where appropriate</p> <p>4.3. Reinforce excellence in performance through recognition and continuous feedback</p> <p>4.4. Monitor and coach individuals with poor performance</p> <p>4.5. Provide support services where necessary</p> <p>4.6. Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary</p> <p>4.7. <i>Terminate</i> staff in accordance with legal and organisational requirements where serious misconduct occurs or ongoing poor-performance continues</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to articulate expected standards of performance, to provide effective feedback and to coach staff who need development
- risk management skills to analyse, identify and develop mitigation strategies for identified risks
- planning and organisation skills to ensure a planned and objective approach to the performance management system.

Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant awards and certified agreements
- performance measurement systems utilised within the organisation
- unlawful dismissal rules and due process
- staff development options and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- documented performance indicators and a critical description and analysis of performance management system from the workplace
- techniques in providing feedback and coaching for improvement in performance
- knowledge of relevant awards and certified agreements.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

EVIDENCE GUIDE	
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of written reports • demonstration of techniques in providing feedback and coaching • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of work plans, performance indicators, risk analysis, performance management and review processes, performance improvement and development plans.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other management units.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review programs, systems and processes	1.1. Establish strategies to monitor and evaluate performance and <i>sustainability</i> of key systems and processes 1.2. Undertake detailed analyses of <i>supply chains</i> , and operational, product and service delivery systems 1.3. Identify performance measures, and assessment tools and techniques, and evaluate their effectiveness 1.4. Analyse <i>performance reports</i> and variance from plans for key result areas of the organisation 1.5. Identify and analyse changing trends and opportunities relevant to the organisation 1.6. Seek advice from specialists, where appropriate, to identify technology and electronic commerce opportunities

ELEMENT	PERFORMANCE CRITERIA
2. Develop options for continuous improvement	2.1. Brief groups on performance improvement strategies and innovation as an essential element of competition 2.2. Foster creative climate and organisational learning by promoting interaction within and between work groups 2.3. Encourage, test and recognise new ideas and entrepreneurial behaviour where successful 2.4. Accept failure of an idea during trialling, and recognise, celebrate and embed success into systems 2.5. Undertake risk management and cost-benefit analysis for each option or idea approved for trial 2.6. Approve innovations through agreed organisational processes
3. Implement innovative processes	3.1. Promote continuous improvement and sustainability as essential to doing business 3.2. Address impact of change and consequences for people, and implement transition plans 3.3. Ensure objectives, timeframes, measures and communication plans are in place to manage implementation 3.4. Implement contingency plans in the event of non-performance 3.5. Follow up failure by prompt investigation and analysis of causes and manage emerging challenges and opportunities effectively 3.6. Ensure that learnings from activities are captured and managed to inform future work 3.7. Regularly evaluate continuous improvement systems and processes 3.8. Communicate costs and benefits of innovations and improvements to relevant groups and individuals

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none"> • analytical skills to identify improvement opportunities in relation to: <ul style="list-style-type: none"> • concepts and ideas developed • services or products delivered • flexibility and creativity skills to think laterally • learning skills to develop options for continuous improvement • teamwork and leadership skills to foster a commitment to quality and an openness to innovation
Required knowledge
<ul style="list-style-type: none"> • cost-benefit analysis methods • creativity and innovation theories and concepts • organisational learning principles • quality management and continuous improvement theories • risk management • sustainability practices

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • demonstration of consultation processes to introduce or evaluate an existing continuous improvement process or system, including suggested actions or an action plan • generation of an idea or concept that exhibits creative thinking and offers the possibility of benefiting the organisation • demonstration of how the concept or idea was introduced, tested and evaluated, which does not have to have been shown to work or to be adopted by the business • application of knowledge of quality management and continuous improvement theories.
Context of and specific resources for assessment	<p>Assessment must ensure access to appropriate documentation and resources normally used in the workplace.</p>

EVIDENCE GUIDE	
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of reports • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of creativity and innovation theories and concepts • evaluation of strategies established to monitor and evaluate performance of key systems and processes • review of briefing of groups on performance improvement strategies and innovation • review of documentation communicating costs and benefits of innovations and improvements to relevant groups and individuals.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Sustainability</i> may include:	<ul style="list-style-type: none"> • addressing environmental and resource sustainability initiatives, such as environmental management systems, action plans, green office programs, surveys and audits • applying the waste management hierarchy in the workplace • complying with regulations and corporate social responsibility considerations for sustainability to enhance the organisation's standing in business and community environments • determining organisation's most appropriate waste treatment, including waste to landfill, recycling, re-use,

RANGE STATEMENT	
	<p>recoverable resources and wastewater treatment</p> <ul style="list-style-type: none"> • implementing ecological footprint • implementing environmental management systems, e.g. ISO 14001:1996 Environmental management systems life cycle analyses • implementing government initiatives, e.g. Australian government's Greenhouse Challenge Plus • improving resource and energy efficiency • initiating and maintaining appropriate organisational procedures for operational energy consumption • introducing a green office program - a cultural change program • introducing green purchasing • introducing national and international reporting initiatives, e.g. Global Reporting Initiative • introducing product stewardship • reducing emissions of greenhouse gases • reducing use of non-renewable resources • referencing standards, guidelines and approaches, such as sustainability covenants and compacts or triple bottom line reporting • supporting sustainable supply chain.
<i>Supply chains</i> include:	<ul style="list-style-type: none"> • network of facilities that procures raw materials, transforms them into intermediate products or services and then finished goods or service, and delivers them through a distribution system • procurement, production and distribution, viewed as interlinked not as discrete elements.
<i>Performance reports</i> may include:	<ul style="list-style-type: none"> • budget or cost variance • customer service • environmental • financial • OHS • quality • other operating parameters.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm organisational vision and mission	1.1. Check with <i>stakeholders</i> that organisational vision and mission are still held to be current and are supported 1.2. Make any changes or refinements to vision or mission statement as required 1.3. Review or develop organisational values to support the vision and mission statement 1.4. Gain support for strategic planning process from all relevant stakeholders
2. Analyse the internal and external environment	2.1. Determine information requirements and undertake or commission <i>research</i> to deliver relevant information 2.2. Analyse political, economic, social, and technological developments in a <i>global context</i> 2.3. Seek advice from appropriate experts wherever necessary 2.4. Identify and consider strengths and weaknesses of

ELEMENT	PERFORMANCE CRITERIA
	<p>existing and potential competitors and allies</p> <p>2.5. Analyse organisation's strengths, weaknesses, opportunities and threats</p> <p>2.6. Consider co-operative ventures that are supported by risk and cost-benefit analyses, are consistent with the organisational vision, mission and values, and provide for <i>due diligence</i></p> <p>2.7. Check that analysis of internal and external environment is consistent with the perspectives of other informed people</p>
3. Write strategic plan	<p>3.1. Document relevant research and background for inclusion in the strategic plan</p> <p>3.2. Formulate strategic objectives and strategies needed for the future</p> <p>3.3. Detail each strategy with an assigned priority, a timeframe, responsible parties and measurable performance indicators</p> <p>3.4. Circulate strategic plan for comment, support and endorsement</p>
4. Implement strategic plan	<p>4.1. Communicate strategic plan to all relevant parties</p> <p>4.2. Brief people with a specific role in relation to strategies</p> <p>4.3. Use performance indicators to monitor progress in implementing plan</p> <p>4.4. Make necessary refinements to plan</p> <p>4.5. Evaluate achievement of objectives at agreed milestones</p> <p>4.6. Review effectiveness of plan and consider methods for improving strategic planning processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to undertake value chain analysis, to review strengths and weaknesses, and to collate and interpret statistical data including trend analysis

REQUIRED SKILLS AND KNOWLEDGE

- financial skills to consider resource implications of proposed strategies
- research skills to ensure accurate, up-to-date information is available for the environmental analysis
- risk management skills to plan and undertake appropriate due diligence.

Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- strategic planning methodologies including political, economic, social and technological (PEST) analysis and strengths, weaknesses, opportunities and threats analysis (SWOT)
- competitor knowledge
- codes and by-laws relevant to the organisation's operations.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- thorough analysis of the organisation's own capabilities, those of their existing potential competitors and allies, and the external environment
- strategic plan which includes objectives, strategies, timeframes, performance indicators and methods for monitoring the implementation of the plan
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of

EVIDENCE GUIDE	
	<p>portfolios of evidence and third party workplace reports of on-the-job performance by the candidate</p> <ul style="list-style-type: none"> • observation of presentations • oral or written questioning to assess knowledge of strategic planning methodologies • review of documentation outlining strengths and weaknesses of existing and potential competitors and allies • review of strategies and their assigned priority, timeframe, responsible parties and performance indicators.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify marketing opportunities	<p>1.1. Analyse <i>information on market and business needs</i> to identify <i>marketing</i> opportunities</p> <p>1.2. Research potential <i>new markets</i> and assess opportunities to enter, shape or influence the market in terms of likely <i>contribution to the business</i></p> <p>1.3. Explore entrepreneurial, innovative approaches and creative ideas for their potential business application, and develop into potential marketing opportunities</p>
2. Investigate marketing opportunities	<p>2.1. Identify and analyse opportunities in terms of their likely fit with organisational goals and capabilities</p> <p>2.2. <i>Evaluate</i> each opportunity to determine its impact on current business and customer base</p> <p>2.3. Use an assessment of <i>external factors</i>, costs, benefits, risks and opportunities to determine the financial viability of each marketing opportunity</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Determine probable return on investment and potential competitors 2.5. Describe and rank marketing opportunities in terms of their viability and likely contribution to the business
3. Evaluate required changes to current operations	3.1. Identify and document changes needed to current operations to take advantage of viable marketing opportunities 3.2. Ensure organisational changes to service an increased or different customer base include provision for continued quality of service to existing customers 3.3. Estimate <i>resource requirements</i> for changed operations 3.4. Determine and communicate viability of making changes to current operations to <i>key stakeholders</i> 3.5. Document newly identified marketing opportunities and required changes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- literacy skills to identify and interpret market information, to write in a range of styles for different audiences and to document outcomes and requirements
- numeracy skills to calculate and evaluate financial information on new marketing options
- research and evaluation skills to gain information on and interpret market trends to identify marketing opportunities.

Required knowledge

- key provisions of relevant legislation from all forms of government, codes of practice and national standards that may affect aspects of business operations such as:
 - anti-discrimination legislation and the principles of equal opportunity, equity

REQUIRED SKILLS AND KNOWLEDGE

- and diversity
- ethical principles
 - marketing codes of practice and conduct such as the Australian Direct Marketing Association (ADMA) Direct Marketing Code of Practice; Free TV Australia Commercial Television Industry Code of Practice; and the Australian E-commerce Best Practice Model
 - privacy laws
 - Trade Practices Act
 - organisational marketing plan, structure, products and services
 - principles of marketing and the marketing mix
 - statistical methods and techniques to evaluate marketing opportunities, including forecasting techniques.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- identifying and evaluating marketing opportunities to determine whether they will meet organisational objectives
- documenting how current business operations will need to be modified and what resources will be required to take advantage of newly identified and evaluated opportunities.

Context of and specific resources for assessment

Assessment must ensure:

- access to office equipment and resources
- access to organisational strategic and marketing plans.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies

BSBPMG414A Apply project information management and communications techniques

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Services Training Package Version 8.0</i>.</p> <p>Replaces BSBPMG406A Apply communications management techniques.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to provide a critical link between people, ideas and information at all stages in the project life cycle. It involves assisting the project team to plan communications, communicating information related to the project, and reviewing communications.

Application of the Unit

This unit applies to a project practitioner working in a project support role.

The individual may be operating in a large or small organisation and applying skills in the context of enterprise projects.

The project practitioner may be part of a project team under the direction of a project manager, or may work as part of a smaller scale self-directed team.

This unit has generic application to a range of industries and organisations and a range of projects, from simple to complex.

In the context of this unit a project is defined as involving:

- a practical and comprehensive project plan
- a documented communications strategy
- a detailed project budget

- strategic engagement with stakeholders
- a risk, issues and change-management methodology
- a quality plan with assurance and control processes
- a supportive team-based environment.

The functions performed in project work, where formal project management methodology is not the main focus, are covered by BSBPMG522A Undertake project work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Contribute to communications planning	1.1 Identify, source and contribute relevant information requirements to initial project documentation 1.2 Contribute to developing and implementing the project <i>communications plan</i> and communications networks
2. Conduct information-management activities	2.1 Act on and <i>process project information</i> according to agreed procedures as directed, to aid decision-making processes throughout project life cycle

	2.2 Maintain information to ensure data is secure and auditable
3. Communicate project information	<p>3.1 <i>Communicate with clients and other stakeholders</i> during project using agreed networks, processes and procedures to ensure flow of necessary information</p> <p>3.2 Ensure reports are prepared and released according to authorisation, or produced for release by <i>others</i></p> <p>3.3 Seek information and advice from appropriate project authorities as required</p>
4. Contribute to assessing effectiveness of communication	<p>4.1 Assist in the ongoing review of project outcomes to determine the effectiveness of communications-management activities</p> <p>4.2 Report communications-management issues and responses to higher project authorities for application of lessons learned to future projects</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to produce reports and project communications for stakeholders
- planning and organising skills to sort and prioritise information and ideas
- teamwork and communication skills to acquire and disseminate relevant project information
- technology skills to manage information dissemination, storage and retrieval.

Required knowledge

- communications theory
- models and methods of communications management in the context of the project life cycle and other project-management functions.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • contributing to the development and implementation of communications plans in relation to a workplace project • knowledge of communications theory.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • examples of project management documentation for communications-management purposes • records of project team involvement in communications activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • written reports or examples of project communications • observation of performance in role plays that demonstrate techniques in communicating important project information • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • analysis of responses addressing different project scenarios presenting issues and problems in project communications management • oral or written questioning to assess knowledge of strategies for managing project communications • review of communication-management issues and responses reported to higher project authorities.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Communications plan</i> may include:	<ul style="list-style-type: none"> • list of which team member is responsible for particular communication activities • methods and protocols for communicating information • which stakeholders need what information • when information is communicated.
<i>Process project information</i> may include:	<ul style="list-style-type: none"> • gather • filter • validate • disseminate • store • retrieve.
<i>Communication with clients and other stakeholders:</i>	<ul style="list-style-type: none"> • will be: <ul style="list-style-type: none"> • in a multi-disciplinary environment subject to frequent change • under limited guidance and supervision • within agreed authorisation and limits • within established organisational framework, procedures and routines • may include: <ul style="list-style-type: none"> • written reports, briefs, minutes, letters and other documentation • oral briefings, advice, conversations and telephone calls • computer-generated communications, for example electronic data transfer and internet.
<i>Others</i> may include:	<ul style="list-style-type: none"> • higher project authorities • project manager • project specialists and other personnel • team members.

Management and Leadership – Project Management

BSBPMG415A Apply project risk-management techniques

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Services Training Package Version 8.0</i>.</p> <p>Replaces BSBPMG407A Apply risk management techniques.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to assist with aspects of risk management in a project. It specifically involves planning for, controlling and reviewing risks associated with the project, and assisting in this process where required.

Application of the Unit

This unit applies to a project practitioner working in a project support role.

The individual may be operating in a large or small organisation and applying skills in the context of enterprise projects.

The project practitioner may be part of a project team under the direction of a project manager, or may work as part of a smaller scale self-directed team.

This unit has generic application to a range of industries and organisations and a range of projects, from simple to complex.

In the context of this unit a project is defined as involving:

- a practical and comprehensive project plan
- a documented communications strategy
- a detailed project budget
- strategic engagement with stakeholders
- a risk, issues and change-management methodology
- a quality plan with assurance and control processes

- a supportive team-based environment.

The functions performed in project work, where formal project management methodology is not the main focus, are covered by BSBPMG522A Undertake project work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Assist with risk analysis and planning	1.1 Contribute to identifying and prioritising potential risks throughout the project life cycle, using established <i>risk-analysis methods</i> , techniques and tools 1.2 Contribute to developing <i>risk-management strategies</i> and <i>risk-management plans</i> according to established guidelines 1.3 Contribute to developing and implementing risk-reporting mechanisms
2. Perform risk-control activities	2.1 <i>Monitor risks</i> according to agreed project and risk-management plans and advise project manager of changing circumstances 2.2 Regularly review progress and future activity for the purpose of

	<p>identifying potential and actual risks and opportunities</p> <p>2.3 Contribute to implementing agreed risk-management approaches and amending plans to reflect the changing environment</p> <p>2.4 Contribute to corrective action on risks according to the risk-management plan and delegated authority</p> <p>2.5 Contribute to the review of contingency plans on an ongoing basis and, where required, ensure tasks allocated to individuals and/or team are clarified with the project manager before implementation</p> <p>2.6 Apply and monitor risk-contingency measures according to the risk-management plan</p> <p>2.7 Identify and report opportunities in the same way as risks</p>
3. Contribute to assessing risk-management outcomes	<p>3.1 Contribute to the ongoing review of project outcomes to determine the effectiveness of risk-management activities by accessing project risk records and other available information</p> <p>3.2 Report risk-management issues and responses to others for lessons learned or application to future projects</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and teamwork skills to contribute to collective processes for risk management
- initiative and enterprise skills to think laterally about risks and how they may occur
- planning, organising and analytical skills to assist with risk analysis, risk-management planning and review of risk-management outcomes.

Required knowledge

- risk-management methods and standards
- risk-management processes.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • applying risk-management techniques in relation to workplace projects • knowledge of risk-management methods, techniques and tools.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • examples of project-management documentation for risk management.
Method of assessment	<p>A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • analysis of responses addressing case studies and scenarios that present issues and problems in project risk management • oral or written questioning to assess knowledge of strategies for managing project risk and their application to different situations • review of risk-analysis methods, techniques and tools • review of risk-management plans • evaluation of reporting of risk-management issues and responses.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Risk-analysis methods</i> may include:	<ul style="list-style-type: none"> • risk categorisation • risk data quality assessment • risk likelihood and consequence ranking • risk urgency assessment.
<i>Risk-management strategies</i> may include:	<ul style="list-style-type: none"> • accepting some or all of the consequences of a particular risk • avoiding the risk • mitigating the likelihood of the risk • sharing risk with another party • transferring risk to another party.
<i>Risk-management plans</i> may include:	<ul style="list-style-type: none"> • definitions of risk likelihood and consequence • identified risks • methodologies • risk categories and priorities • risk context for project • roles and responsibilities in regard to risk management • stakeholder tolerances • tools for determining risk rank and priority • tracking risks.
<i>Monitoring risks</i> may include:	<ul style="list-style-type: none"> • recommended corrective actions • recommended preventative actions • requested changes • reserve analysis • risk audits • risk reassessment • risk register and updates • status meetings • technical performance information • variance and trend analysis.
<i>Risk-management approaches</i> may include:	<ul style="list-style-type: none"> • risk identification • risk quantification • risk response control • risk response development.

<i>Delegated authority</i> may be:	<ul style="list-style-type: none"> • subject to frequent change in different project contexts • under limited guidance and supervision • within agreed authorisation and limits • within established organisational framework, procedures and routines.
<i>Risk-contingency measures</i> may include:	<ul style="list-style-type: none"> • alternative project plans and approaches • degree of acceptable variation • planning for risk • project planning tolerances.
<i>Opportunities</i> may include:	<ul style="list-style-type: none"> • better means of achieving a result • changes in the project or broader environment that offer scope for rescheduling activities to better effect • efficiencies or methods to work more effectively, such as ways of shortening an activity • initial project activities that reveal entirely different sets of priorities, for example product development, research and policy development • responses to changing commercial or competitive conditions.
<i>Risk records</i> may include:	<ul style="list-style-type: none"> • lists of potential risk events • project and/or organisation files and records • risk analysis and reappraisal • risk diaries, risk registers, incident logs, occurrence reports and other such documentation • risk-management lessons learned • risk-management plan.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Assist with procurement planning	1.1 Contribute to establishing <i>procurement requirements</i> to achieve project objectives 1.2 Act under <i>delegated authority</i> to contribute to the development of the <i>procurement-management plan</i> 1.3 Contribute to developing <i>procurement documentation</i>
2. Contribute to supplier selection process	2.1 Gather and evaluate information on potential <i>suppliers</i> 2.2 Make recommendations to assist in selection of preferred

	<p>suppliers</p> <p>2.3 Contribute to establishing agreed terms and conditions with preferred suppliers</p> <p>2.4 Identify and act in line with <i>probity and project governance constraints</i></p> <p>2.5 Assist in developing <i>contractual documentation</i></p>
3. Conduct procurement activities	<p>3.1 Test and accept supplies to ensure quality and suitability for purpose</p> <p>3.2 Undertake <i>procurement activities</i> and maintain information in line with reporting, confidentiality and audit requirements</p> <p>3.3 Receive, reconcile and register supplies according to established procedures</p> <p>3.4 Monitor and control suppliers according to contractual supply documentation</p>
4. Assist in finalising procurement activities	<p>4.1 Assist in finalising procurement agreements</p> <p>4.2 Assist in the review of project outcomes using available records to determine the effectiveness of procurement activities</p> <p>4.3 Contribute to identifying lessons learned and possible improvements to procurement management</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- interpersonal skills to communicate effectively with contractors and suppliers about contract performance and obligations
- literacy skills to read and interpret contracts and procurement documentation
- numeracy skills to calculate and confirm procurement specifications
- planning and organising skills to participate in contract and procurement management.

Required knowledge

- broad legal contractual obligations of each party to supply arrangement

- procurement-management policy, processes and procedures as applied to project management
- project procurement-management tools and techniques
- types of supply contracts.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identifying procurement requirements in relation to a workplace project • applying procurement-management procedures in relation to a workplace project.

Management and Leadership – Project Management

BSBPMG522A Undertake project work

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Services Training Package Version 8.0</i>.</p> <p>Replaces BSBPMG510A Manage projects.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake a straightforward project or a section of a larger project. This unit addresses the management of projects, including developing a project plan, administering and monitoring the project, finalising the project, and reviewing the project to identify lessons learned for application to future projects.

Application of the Unit

The unit focuses on the application of project-management skills and the requirement to meet timelines, quality standards, budgetary limits and other requirements set for the project.

The unit does not apply to specialist project managers. For specialist project managers, the other units of competency in the project management field (BSBPMG) will be applicable.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Define project	1.1 Access <i>project scope and other relevant documentation</i> 1.2 Define project stakeholders 1.3 Seek clarification from <i>delegating authority</i> of issues related to project and <i>project parameters</i> 1.4 Identify limits of own responsibility and reporting requirements 1.5 Clarify relationship of project to other projects and to the organisation's objectives 1.6 Determine and access available resources to undertake project
2. Develop project plan	2.1 Develop <i>project plan</i> in line with the project parameters 2.2 Identify and access appropriate <i>project-management tools</i> 2.3 Formulate risk-management plan for project, including work health and safety (WHS) 2.4 Develop and approve project budget 2.5 Consult team members and take their views into account in planning the project 2.6 Finalise project plan and gain necessary approvals to commence project according to documented plan
3. Administer and monitor project	3.1 Take action to ensure project team members are clear about their responsibilities and the project requirements 3.2 Provide <i>support for project team members</i> , especially with regard to specific needs, to ensure that the quality of the expected outcomes of the project and documented time lines are met 3.3 Establish and maintain <i>required record-keeping systems</i> throughout the project 3.4 Implement and monitor plans for managing project finances,

	<p>resources and quality</p> <p>3.5 Complete and forward project reports as required to stakeholders</p> <p>3.6 Undertake risk management as required to ensure project outcomes are met</p> <p>3.7 Achieve project deliverables</p>
4. Finalise project	<p>4.1 Complete financial record keeping associated with project and check for accuracy</p> <p>4.2 Ensure transition of staff involved in project to new roles or reassignment to previous roles</p> <p>4.3 Complete project documentation and obtain necessary sign-offs for concluding project</p>
5. Review project	<p>5.1 Review project outcomes and processes against the project scope and plan</p> <p>5.2 Involve team members in the project review</p> <p>5.3 Document lessons learned from the project and report within the organisation</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to work with team members and other stakeholders to maintain project schedules
- communication skills to relate to people with diverse abilities and from diverse backgrounds in a culturally appropriate way
- literacy skills to read, write and review a range of documentation
- numeracy skills to:
 - analyse data
 - compare time lines and promotional costs against budgets
- planning and organising skills to develop, monitor and maintain implementation schedules.

Required knowledge

- organisation's mission, goals, objectives and operations and how the project relates to them
- organisational structure, and lines of authority and communication in the organisation
- relevant legislation and codes from all levels of government that may affect aspects of business operations, including:
 - anti-discrimination legislation
 - codes of practice
 - environmental issues
 - ethical principles
 - WHS
 - privacy laws.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing a project plan • examples of monitoring arrangements and evaluation of the efficacy of the project plan in addressing project time lines and budget • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to workplace project documentation • demonstration of all required skills, knowledge and performance in a workplace-based project.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of presentations

	<ul style="list-style-type: none"> oral or written questioning to assess knowledge of the organisation's mission, goals, objectives and operations and how the project relates to them review of project risk-management plan and project plan evaluation of project reports forwarded to stakeholders analysis of documentation reviewing project outcomes and processes against the project scope and plan evaluation of documentation outlining lessons learned from the project.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> other project management units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Project scope and other relevant documentation</i> may include:	<ul style="list-style-type: none"> contract or other agreement project brief project plan or summary other documents outlining: <ul style="list-style-type: none"> expected outcomes of the project inclusions and exclusions from project project resources quality standards for project timeframes for project.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> clients or customers (internal and external) funding bodies management, employees and relevant key personnel (internal and external) with special responsibilities project sponsor.
<i>Delegating authority</i> may include:	<ul style="list-style-type: none"> customer or client funding body manager or management representative

	<ul style="list-style-type: none"> • project sponsor.
Project parameters may include:	<ul style="list-style-type: none"> • project finances or budget • integration of project within organisation • legislative and quality standards • physical, human and technical resources available or required for project • procurement requirements associated with project • reporting requirements • risks associated with project, including WHS • scope of project • time lines.
Project plan may include:	<ul style="list-style-type: none"> • details of how the project will be managed • roles and responsibilities • time lines • work breakdown structure.
Project management tools may include:	<ul style="list-style-type: none"> • cost schedule control system • Critical Path Method • Gantt and bar charts • life cycle cost analysis • logistics support analysis • PERT charts • project management software • risk and issues logs • spreadsheets • technical resources required for the project, for example WHS management-system tools.
Support for project team members may include:	<ul style="list-style-type: none"> • additional physical, human and technical resources (within allocated budget) if and as required • encouragement • feedback • learning and development • regular project team meetings • supervision, mentoring and coaching.
Required record-keeping systems may include systems for:	<ul style="list-style-type: none"> • correspondence • financial data, including costs, expenditure, income generated and purchases • project outcomes • quality data, including any test results • recording of time spent on project and progress in completing project • samples, prototypes and models.

Resources may include:	<ul style="list-style-type: none"> • human • physical • technical.
Risk management may include:	<ul style="list-style-type: none"> • changing roles and responsibilities in project team • negotiating an extension of deadline, or redefining completion or quantity or quality of outcomes • outsourcing some aspects of the project • reducing costs • researching and applying more efficient methods for completing project tasks • seeking further resources to meet deadline • sharing ideas to gain improvements to work undertaken in the project.
Necessary sign-offs may be required by:	<ul style="list-style-type: none"> • clients • funding body • management • project sponsor.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate to influence relevant individuals and stakeholders	<p>1.1. Generate trust, confidence and support from <i>relevant individuals</i>, other <i>stakeholders</i> and <i>potential learners</i> by demonstrating a high standard of personal performance and conduct</p> <p>1.2. Implement <i>communication strategies</i> to represent the organisation positively to media, local community and stakeholders</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3. Make decisions in consultation with relevant stakeholders and relevant individuals where appropriate</p> <p>1.4. Use a range of <i>influencing strategies</i> to increase commitment from staff and stakeholders to achieve organisational requirements and to contribute to desired culture</p> <p>1.5. Undertake selected community and/or professional engagements that project a positive image of the organisation to the broader community and stakeholders</p>
2. Cultivate new and existing partnerships with stakeholders	<p>2.1. Establish outcomes to be achieved from a learning <i>partnership</i></p> <p>2.2. Analyse models for effective consultation and collaboration within a partnership</p> <p>2.3. Cultivate <i>collaborative communities</i> and partnerships through application of a range of learning and communication solutions</p> <p>2.4. Forge relationships, collaborative communities or partnerships between a <i>training and assessment organisation</i> and a <i>public or private sector enterprise</i></p> <p>2.5. Consult stakeholders to establish vocational education and training <i>partnership learning programs</i></p>
3. Establish positive collaborative relationships	<p>3.1. Establish processes that contribute to the creation and maintenance of a positive culture that embraces collaboration</p> <p>3.2. Establish processes to <i>resolve conflict in a fair, equitable and collaborative manner</i></p> <p>3.3. Organise and allocate work activities in a cost effective and equitable manner with clear, quantifiable and agreed <i>performance standards</i></p> <p>3.4. Encourage staff to embrace a learning culture and to undertake activities that develop their personal competence and performance</p> <p>3.5. Empower individuals to develop their own ways of working within agreed boundaries of competence, cultural, <i>diversity</i> and <i>organisational and legal requirements</i></p> <p>3.6. Establish <i>indicators</i> and <i>feedback processes</i> that can be used to evaluate the health of the work environment</p>

ELEMENT	PERFORMANCE CRITERIA
4. Lead establishment of a partnership program	4.1. Identify and address <i>relevant organisational policies and procedures</i> in partnership learning program plans 4.2. Identify and incorporate relevant legal requirements into planning of learning programs established in a community or partnership setting 4.3. Form partnership learning programs in collaborative and consultative processes involving public or private sector enterprises 4.4. Plan and allocate <i>resource requirements</i> to accomplish a partnership learning program 4.5. Establish relevant organisational policies and procedures relating to partnerships, and training and assessment services
5. Establish reporting mechanisms for partnership program	5.1. Establish <i>reporting systems</i> for <i>reporting results</i> , that meet <i>reporting requirements</i> , against planned partnership outcomes 5.2. Implement <i>reporting systems</i> to map learner progress against partnership outcomes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
 - evaluate organisational information management systems, policies and procedures
 - select relevant evaluation information and documentation
 - identify any potential and current non-compliance
 - access and interpret organisation's standards and values
 - analyse records or notes of the evaluation process
- initiative and enterprise skills to establish collaborative partnerships and relationships
- interpersonal and communication skills to negotiate, to question, to listen and investigate, to network and clarify issues
- planning and organising skills to:
 - research and evaluate validation processes, and to determine and implement

REQUIRED SKILLS AND KNOWLEDGE

improvements to these processes

- develop and establish agreement to plans
- problem-solving skills to review feedback and to plan improvements
- teamwork skills to lead and motivate a team in establishing productive networks, partnerships and other relationships.

Required knowledge

- relevant legislation that affects the business operation, especially in regard to OHS and environmental issues, equal opportunity and anti-discrimination, industrial relations
- organisation mission, purpose and values
- organisation objectives, plans and strategies
- leadership styles
- personal development planning methodologies
- data collection methods
- external environment scanning relating to social, political, economic and technological developments
- emotional intelligence and its relationship to individual and team effectiveness
- organisational transformation and the management of the stages of change
- organisational design and building in responsiveness of operations to change in customer or market conditions.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstrated capacity to foster learning partnerships, conduct stakeholder consultation and use strategic and personally enhancing communication skills
- developing collaborative approaches to enhance individual, team and organisational outcomes
- initiating and implementing learning program partnerships in line with relevant regulatory, employment and organisational requirements

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> knowledge of relevant policy, legislation, codes of practice and national standards.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> competence is consistently demonstrated over time, and over a range and variety of situations access to required assessment facilities and resources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate review of applied projects or learning activities, especially relating to formation of professional networks and stakeholder consultation in relation to forming partnerships for vocational education and training programs direct observation of contextual application of skills submission of a portfolio of evidence including previous work forging partnerships oral or written questioning to assess knowledge of development of industry learning partnerships.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> BSBLED702A Lead learning strategy implementation BSBLED707A Establish career development services BSBLED709A Identify and communicate trends in career development PSPMNGT614A Facilitate knowledge management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT	
conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Relevant individuals may include:	<ul style="list-style-type: none"> • employees • employers • government agencies and departments • learners/students • industry associations, employer bodies, professional associations • industry representatives • national Industry Skills Councils • people working in the roles targeted by training • regulatory and licensing authorities • research agencies • state/territory industry training advisory bodies • subject or technical specialists or experts • unions • universities
Stakeholders may include:	<ul style="list-style-type: none"> • administrative and regulatory bodies • coordinators, teachers, assessors, coaches, mentors and support staff • employees • industry, employee, employer, professional and peak bodies or associations • learners/students • other training and assessment organisations • public or private sector enterprise
Potential learners may include:	<ul style="list-style-type: none"> • apprentices and trainees • current or ongoing learners and clients • existing industry and enterprise employees • individuals changing careers • individuals learning new skills and knowledge • individuals or groups meeting licensing or other regulatory requirements • individuals seeking to upgrade competencies • individuals who are unemployed • individuals who have a disability • members of target groups such as Aboriginal and Torres Strait Islander communities

RANGE STATEMENT	
	<ul style="list-style-type: none"> • overseas learners and international students • potential learners and clients • recent migrants and people from culturally and linguistically diverse backgrounds • school leavers, new entrants to the workforce
<i>Communication strategies</i> may include:	<ul style="list-style-type: none"> • conducting presentations • developing and applying interview and interpersonal communication protocols • developing and circulating marketing materials • developing promotional materials and course outlines • initiating and conducting a public communication strategy
<i>Influencing strategies</i> may include:	<ul style="list-style-type: none"> • debate • dialogue • discussion • formal and informal techniques • levels of participation • moderated negotiations • networking • strategies applied face-to-face or collectively (e.g. in a learning community or community of practice)
<i>Partnerships</i> may:	<ul style="list-style-type: none"> • be informal • be physical or virtual (e.g. online) • involve a formal agreement • involve one or more enterprises, and training and assessment organisations • involve one or more learning programs
<i>Collaborative communities</i> may include:	<ul style="list-style-type: none"> • communities of practice • formal or informal relationships • informal and formal groups in collaborative relationships • knowledge communities • knowledge networks • learning communities • physical or virtual relationships • supply chain communities • virtual circles
<i>Training and assessment</i>	<ul style="list-style-type: none"> • organisation that delivers non-recognised vocational education and training

RANGE STATEMENT	
<i>organisation</i> may include:	<ul style="list-style-type: none"> • organisation working in a partnership arrangement with an RTO to deliver recognised vocational education and training • RTO delivering recognised vocational education and training services such as TAFE institutes, private commercial colleges and organisations, enterprises, community organisations, group training companies and secondary schools
<i>Public or private sector enterprises</i> may include:	<ul style="list-style-type: none"> • community bodies • government agencies • privately owned companies
<i>Partnership learning program</i> may include:	<ul style="list-style-type: none"> • accredited course which includes Training Package outcomes • community education program • nationally endorsed qualification from a Training Package or accredited course • part of a VET in Schools program • part of an apprenticeship or traineeship • professional development program • short course or non-recognised vocational program • short-term development plan • short-term induction program • subset of a learning strategy • traineeship or apprenticeship • workplace learning program
<i>Resolving conflict in a fair, equitable and collaborative manner</i> may include:	<ul style="list-style-type: none"> • adherence to relevant legislative, legal, workplace requirements • application of organisational complaints procedures • internal or external specialists
<i>Performance standards</i> may be based on:	<ul style="list-style-type: none"> • personal or task outcomes • span short- or long-term outcomes • strategic, operational outcomes
<i>Diversity</i> includes difference in:	<ul style="list-style-type: none"> • age • belief systems and values • culture • expertise, experience and working styles • gender • interpersonal style

RANGE STATEMENT	
	<ul style="list-style-type: none"> • interests • language, literacy and numeracy • physical differences • politics • race • religion • sexual orientation • thinking and learning styles
<i>Organisational and legal requirements</i> may include:	<ul style="list-style-type: none"> • collaborative and partnership arrangement agreements such as memoranda of understanding • confidentiality and privacy requirements • licensing requirements • requirements for initial and continuing registration as defined in the AQTF Standards for Registered Training Organisations and state/territory legislation and regulations governing provider registration and course accreditation • requirements of awards and enterprise bargaining agreements • requirements of endorsed Training Packages • requirements of other relevant commonwealth and state/territory legislation, for example relating to matters such as OHS, anti-discrimination, workplace and industrial relations, workers compensation, apprenticeships and traineeships • requirements set by professional associations • requirements set by quality systems
<i>Indicators</i> may include:	<ul style="list-style-type: none"> • formal human resources and related indicators to provide benchmark, comparative measures on: <ul style="list-style-type: none"> • average hours in relation to output per employee • down-time • related operational and planning indicators • revenue per employee/team • staff absenteeism • staff satisfaction • staff turnover

RANGE STATEMENT	
	<ul style="list-style-type: none"> • training hours
<i>Feedback processes</i> include:	<ul style="list-style-type: none"> • formal complaints or suggestions procedures • formal-informal • independent audits • management audits/workplace checks • surveys • virtual or physical • whistleblower policy
<i>Relevant organisational policies and procedures</i> may include:	<ul style="list-style-type: none"> • access and equity • assessment procedures and options • client services • confidentiality requirements • ethical standards • fees and payment schedule • grievance and appeals processes • learner selection, enrolment, induction and orientation procedures • mutual recognition obligations • policies and procedures being available to all personnel, learners, clients and candidates • staff recruitment, induction and ongoing development and monitoring • support services available • human resources policies and procedures and legal requirements including anti-discrimination, equal employment, OHS • administrative and records management systems, for example that relating to: <ul style="list-style-type: none"> • contract manager • document version control • maintenance, retention, archiving, retrieval, storage and security of training and assessment information and records • personnel responsible for analysing statistics and data to ensure organisation complies with relevant standards across all of its operations and training and assessment activities • privacy and access to training and assessment information and records • reporting and recording requirements and

RANGE STATEMENT	
	<p>arrangements</p> <ul style="list-style-type: none"> • supervisors and managers • union and employee representatives • users of training information such as finance personnel, human resources personnel, employers
<i>Resource requirements</i> may include:	<ul style="list-style-type: none"> • additional staff • distribution costs • equipment • production costs • promotional costs • research and development • re-tooling • staff training
<i>Reporting systems</i> for reporting results may include:	<ul style="list-style-type: none"> • arrangements for the issuing of Australian Qualifications Framework (AQF) qualifications and Statements of Attainment • arrangements for recognising and recording current competencies • electronic student management system which complies with AVETMISS or other reporting or statistical collection requirements • internal organisational recording and reporting systems • record keeping policies and procedures
<i>Reporting results</i> may include:	<ul style="list-style-type: none"> • Australian Apprenticeship Centre forms and letters such as for incentives and completions • availability of all reports and records for audit and monitoring purposes • enrolment forms • financial reporting for funding and payments from funding body • OHS incident reporting systems • performance agreements • reporting for apprenticeship and traineeship program delivery • reporting for in-house or internal program delivery • Training Contract and RTO notifications
<i>Reporting requirements</i> may include those specified in:	<ul style="list-style-type: none"> • AQTF Standards for Registered Training Organisations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AVETMISS process documentation • organisational documentation
<p><i>Reporting systems</i> to map learner progress against partnership outcomes may include:</p>	<ul style="list-style-type: none"> • electronic systems including those using business technology such as: <ul style="list-style-type: none"> • computers • hardware • software • telephone networks • physical systems such as face-to-face and print communications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather and organise information	<p>1.1. Gather and organise <i>information</i> in a format suitable for analysis, interpretation and dissemination in accordance with <i>organisational requirements</i></p> <p>1.2. Access information held by the organisation ensuring accuracy and relevance in line with established organisational requirements</p> <p>1.3. Ensure that <i>methods of collecting information</i> are reliable and make efficient use of resources in accordance with organisational requirements</p> <p>1.4. Identify research requirements for combining online research with non-electronic sources of information</p> <p>1.5. Use <i>business technology</i> to access, organise and monitor information in accordance with organisational requirements</p> <p>1.6. Update, modify, maintain and store information, in accordance with organisational requirements</p>
2. Research and analyse information	<p>2.1. Clearly define <i>objectives of research</i> ensuring consistency with organisational requirements</p> <p>2.2. Ensure that data and <i>research strategies</i> used are valid and relevant to the requirements of the research and make efficient use of available resources</p> <p>2.3. Identify <i>key words and phrases</i> for use as part of any online search strategy, including the use of <i>Boolean operators</i> and other search tools</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4. Use reliable <i>methods of data analysis</i> that are suitable to research purposes 2.5. Ensure that assumptions and conclusions used in analyses are clear, justified, supported by evidence and consistent with research and <i>business objectives</i>
3. Present information	3.1. Present recommendations and issues in an appropriate format, style and structure using suitable business technology 3.2. Structure and format reports in a clear manner that conforms to organisational requirements 3.3. Report and distribute research findings in accordance with organisational requirements 3.4. Obtain <i>feedback</i> and comments on suitability and sufficiency of findings in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read, write and understand a variety of texts; and to edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- problem-solving skills to deal with information which is contradictory, ambiguous, inconsistent or inadequate
- technology skills to select and use technology appropriate to a task
- research skills to identify and access information.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational record keeping/filing systems, security procedures and safe

REQUIRED SKILLS AND KNOWLEDGE

recording practices

- organisational policies and procedures relating to distribution of workplace information, and legal and ethical obligations
- research processes and strategies to identify new sources (online and print) of information and to use them most efficiently and effectively.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- presenting information and data
- maintaining and handling data and documents systematically
- analysing and interpreting data to support organisational activities
- knowledge of research processes and strategies to identify new sources of information.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of research tasks and resources.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses to case studies and scenarios
- demonstration of techniques
- observation of presentations
- review of documentation outlining recommendations and issues

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • review of reports outlining research findings.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • general administration units • IT use units • Governance units

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Information</i> may include:	<ul style="list-style-type: none"> • demographic data • service delivery records • computer databases (library catalogue, customer records, subscription database, internet) • computer files (letters, memos and other documents) • correspondence (faxes, memos, letters, email) • financial figures • forms (insurance forms, membership forms) • information on training needs • invoices (from suppliers, to debtors) • marketing reports/plans/budgets • personnel records (personal details, salary rates) • production targets • sales records (monthly forecasts, targets achieved)
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • anti-discrimination and related policy • business and performance plans • Code of Conduct/Code of Ethics

RANGE STATEMENT	
	<ul style="list-style-type: none"> • defined resource parameters • ethical standards • goals, objectives, plans, systems and processes • information protocols • legal and organisational policies, guidelines and requirements • management and accountability channels • OHS policies, procedures and programs • procedures for updating records • quality assurance and/or procedures manuals • security and confidentiality requirements
Methods of collecting information may include:	<ul style="list-style-type: none"> • checking research provided by others • checking written material including referrals and client files • individual research • information from other organisations • interviews with community members, colleagues/customers • observation and listening • previous file records • questioning (in person or indirect) • recruitment applications and other forms
Business technology may include:	<ul style="list-style-type: none"> • answering machine • computer • fax machine • photocopier • telephone
Objectives of research may include:	<ul style="list-style-type: none"> • comparative analysis • hypothesis testing • identification of trends • industry pricing policies • process mapping • situational diagnosis
Research strategies may include:	<ul style="list-style-type: none"> • data analysis • documentation reviews • focus groups • interviewing colleagues and clients • online searching • product sampling • subscription databases

RANGE STATEMENT	
<i>Key words and phrases</i> may include:	<ul style="list-style-type: none"> • American spellings when searching online • cultural or geographic terms • using different thesauri in different databases
<i>Boolean operators</i> may include:	<ul style="list-style-type: none"> • exclude - / NOT • include + / AND • or • phrase searching " "() • variations, depending on the resource being used
<i>Methods of data analysis</i> may include:	<ul style="list-style-type: none"> • data sampling • feedback on results • peer review • review of previous research • statistical analysis
<i>Business objectives</i> may include:	<ul style="list-style-type: none"> • community capacity building • community development • service provision • business planning • financial performance • flexibility, responsiveness • interpersonal communication • marketing and customer service • organisational values and behaviours • people management • work procedures and quality assurance manuals
<i>Feedback</i> may include:	<ul style="list-style-type: none"> • audit documentation and reports • comments from community, board members, clients and colleagues • customer satisfaction questionnaires • quality assurance data • returned goods

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Construct an applied research strategy	1.1. Clarify and confirm <i>applied research purpose</i> and needs of the <i>target group</i> 1.2. Determine policies and procedures in relation to conducting applied research 1.3. Establish mechanisms for collecting and maintaining data in a systematic manner 1.4. Analyse <i>factors affecting the reliability and validity of data</i> 1.5. Review relevant research ethics and codes of conduct 1.6. Prepare <i>applied research strategy</i> and <i>hypothesis</i> 1.7. Frame a research strategy in consideration of available <i>tools</i> and <i>resources</i>

ELEMENT	PERFORMANCE CRITERIA
2. Use a range of applied research techniques	2.1. Review and evaluate a range of <i>applied research methods, theories</i> and <i>data collection techniques</i> 2.2. Select appropriate methods to gather and analyse data 2.3. Use, as appropriate, <i>suitable technology</i> and technology services to support data collection and analysis 2.4. Access <i>appropriate sources of information</i> and <i>contributors</i> relevant to the research 2.5. Optimise <i>relevance of the research</i> through integrity of the data collected and analysis tools used
3. Analyse and present findings	3.1. Evaluate how research findings such as trends and changes will impact on learning strategy 3.2. Review data and research findings for accuracy of details and adherence to any <i>legal requirements</i> 3.3. Collate and analyse data for relevance against the original applied research strategy 3.4. Document and <i>present research findings</i> in a clear and logical manner consistent with audience needs 3.5. Identify the need for and an appropriate approach to, further research

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and teamwork skills to:
 - analyse and interpret structurally intricate information in the area being researched
 - consult with target groups using a range of communication techniques
 - develop written texts which deal with complex ideas and concepts
 - present research results creatively to meet audience needs
- initiative and enterprise skills to discover and source appropriate information, and to identify future implication of information and data collected
- planning and organising skills to:
 - construct an applied research strategy

REQUIRED SKILLS AND KNOWLEDGE

- initiate and design research methodology
- manage an applied research project
- frame research strategy in consideration of available resources
- problem-solving skills to:
 - develop and examine the validity of the hypothesis using a range of applied research techniques
 - collect, organise, analyse and present data
 - analyse research
 - check the integrity of data collected
 - conduct trend analyses
- self-management and learning skills to:
 - manage own time and determine priorities
 - review and adhere to relevant ethics and codes of conduct
 - store data to maintain privacy and confidentiality of information
 - conduct research to develop capabilities and learning related activities
- technical skills to:
 - select suitable technology and technical services
 - use a range of software programs
 - use technology and the internet to discover, access, collect and store data, information and research in a systematic manner.

Required knowledge

- communication processes and methods
- data collection methods
- legislation, regulations, policies, procedures and guidelines relating to handling or storing data, including privacy and freedom of information
- presentation techniques
- reporting methods
- research ethics and codes of conduct
- research tools and methods
- selection of appropriate applied research techniques.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • formulating a research proposal or plan which includes: <ul style="list-style-type: none"> • specific research questions or hypotheses • valid population or sample size • description of the geographical, cultural, social or institutional context within which the research will be carried out • full description of the data collection methods • analysis of the limitations to research design • designing an applied research project using appropriate tools and techniques • research report with analysis of data, and valid and reliable findings • utility and relevance of the research results • knowledge of applied research techniques.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • research activity relates to an actual workplace or simulated context and topic • competence is consistently demonstrated over time, over a range of applied topics, and using a range of tools and techniques appropriate to the given situations and research topic.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • applied projects or assessment activities relating to conducting applied research • observation of contextual application of skills • oral or written questioning to assess knowledge of applied research.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify risks	1.1. Identify the <i>context</i> for risk management 1.2. Identify <i>risks</i> using <i>tools</i> , ensuring all reasonable steps have been taken to identify all risks 1.3. Document identified risks in accordance with relevant policies, procedures and legislation
2. Analyse and evaluate risks	2.1. Analyse and document risks in consultation with relevant <i>stakeholders</i> 2.2. Undertake <i>risk categorisation</i> and determine <i>level of risk</i> 2.3. Document analysis processes and outcomes
3. Treat risks	3.1. Determine appropriate <i>control measures</i> for risks and assess for strengths and weaknesses 3.2. Identify control measures for all risks

ELEMENT	PERFORMANCE CRITERIA
	3.3.Refer risks relevant to whole of organisation or having an impact beyond own work responsibilities and area of operation to others as per established policies and procedures 3.4.Choose and implement control measures for own area of operation and/or responsibilities 3.5.Prepare and implement treatment plans
4. Monitor and review effectiveness of risk treatment/s	4.1.Regularly review implemented treatment/s against <i>measures of success</i> 4.2.Use review results to improve the treatment of risks 4.3.Provide assistance to auditing risk in own area of operation 4.4.Monitor and review management of risk in own area of operation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills sufficient to read and understand a variety of texts; and to write, edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- research and data collection skills to monitor and evaluate risks
- problem-solving skills to appropriately address identified risks.

Required knowledge

- Australian and international standards for risk management
- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- organisational policies and procedures relating to risk management processes and

REQUIRED SKILLS AND KNOWLEDGE

strategies

- auditing requirements relating to risk management.

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- identification, analysis and evaluation of risks
- demonstrated understanding of personal role in relation to wider organisational or project context
- demonstrated understanding of risk management processes and procedures.

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace documentation relating to risk management
- access to risk management tools and frameworks.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation outlining risk analysis processes and outcomes
- analysis of responses to case studies and scenarios
- oral or written questioning to assess knowledge of Australian and international standards for risk management
- review of implementation of treatment plans.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

EVIDENCE GUIDE

- general administration units
- other risk management units.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Context may include:

- any related projects or organisations
- any resources, including physical assets, which are vital to operations
- key operational elements and service of the organisation
- organisation or project, how it is organised and its capabilities
- own role and responsibilities in relation to overall project or organisation design

Risks may include:

- commercial and legal relationships
- economic circumstances and scenarios
- human behaviour
- individual activities
- management activities and controls
- natural events
- political circumstances
- positive risk
- technology - technological issues

Tools may include:

- documentation to assist in process of identifying risk, and assessing impact and likelihood of occurrence
- standard instruments developed for the organisation and contextualised for sections of the workplace's operations, such as checklists and testing procedures
- tools to prioritise risks, including where relevant, numerical scoring systems for risks

RANGE STATEMENT	
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • contractors • employees • financial managers • insurance agents • managers • public • service providers • suppliers • unions • volunteers
<i>Risk categorisation</i> may include:	<ul style="list-style-type: none"> • likelihood of risks: <ul style="list-style-type: none"> • almost certain • likely • possible • unlikely • rare • consequences of risks: <ul style="list-style-type: none"> • insignificant • minor • moderate • major • catastrophic • current control measures
<i>Level of risk</i> may include:	<ul style="list-style-type: none"> • low, treated with routine procedures • moderate, with specific responsibility allocated for the risk, and monitoring and response procedures implemented • high, requiring action, as it has potential to be damaging to the organisation or project • extreme, requiring immediate action, as it has potential to be devastating to the organisation or project
<i>Control measures</i> may include:	<ul style="list-style-type: none"> • hierarchy of controls: <ul style="list-style-type: none"> • reduction in likelihood of risks • reduction of consequences of risks • retention of risks • risk aversion • transfer of responsibility of risks

RANGE STATEMENT

<i>Measures of success</i> may include:	<ul style="list-style-type: none"> • costs • reductions in impact • reductions in likelihood • reductions in occurrence

BSBRSK501B Manage risk

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i>.</p> <p>Revised unit. Required knowledge updated to incorporate current Australian Standards.</p> <p>Replaces BSBRSK501A Manage risk</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage risks in a range of contexts across the organisation or for a specific business unit or area.

Application of the Unit

This unit addresses the management of the risk across the organisation or within a business unit or area. It does not assume any given industry setting.

This unit applies to individuals who are working in positions of authority and are approved to implement change across the organisation, business unit, program or project area. They may or may not have responsibility for directly supervising others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Establish risk context	<p>1.1 Review organisational processes, procedures and requirements for undertaking risk management</p> <p>1.2 Determine scope for risk management process</p> <p>1.3 Identify internal and external stakeholders and their issues</p> <p>1.4 Review political, economic, social, legal, technological and policy context</p> <p>1.5 Review strengths and weaknesses of existing arrangements</p> <p>1.6 Document critical success factors, goals or objectives for area included in scope</p> <p>1.7 Obtain support for risk management activities</p> <p>1.8 Communicate with relevant parties about the risk management process and invite participation</p>
2. Identify risks	<p>2.1 Invite relevant parties to assist in the identification of risks</p> <p>2.2 Research risks that may apply to scope</p> <p>2.3 Use tools and techniques to generate a list of risks that apply to the scope, in consultation with relevant parties</p>
3. Analyse risks	<p>3.1 Assess likelihood of risks occurring</p> <p>3.2 Assess impact or consequence if risks occur</p> <p>3.3 Evaluate and prioritise risks for treatment</p>
4. Select and implement treatments	<p>4.1 Determine and select most appropriate options for treating risks</p> <p>4.2 Develop an action plan for implementing risk treatment</p> <p>4.3 Communicate risk management processes to relevant parties</p> <p>4.4 Ensure all documentation is in order and appropriately stored</p>

	4.5 Implement and monitor action plan 4.6 Evaluate risk management process
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills to consult and negotiate, to prepare communications about risk management, and to encourage stakeholder involvement
- organisational and management skills to plan and implement risk management processes
- problem-solving and innovation skills to find practical ways to manage identified risks.

Required knowledge

- AS/NZS ISO 31000:2009 Risk Management - Principles and Guidelines
- legislation, codes of practice and national standards, for example:
 - duty of care
 - company law
 - contract law
 - environmental law
 - freedom of information
 - industrial relations law
 - privacy and confidentiality
 - legislation relevant to organisation's operations
 - legislation relevant to operation as a business entity
- organisational policies and procedures, including:
 - risk management strategy
 - policies and procedures for risk management
- overall operations of organisation
- reasonable adjustment in the workplace for people with a disability
- types of available insurance and insurance providers.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • risk management plan which includes a detailed stakeholder analysis, explanation of the risk context, critical success factors, identified and analysed risks, and treatments for prioritised risks • details of monitoring arrangements for risk management plan and an evaluation of the risk management plan's efficacy in treating risks • knowledge of relevant legislation, codes of practice and national standards.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to workplace documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of risk management policies and procedures • review of documented critical success factors, and goals or objectives for area • review of risks prioritised for treatment • evaluation of action plan for implementing risk treatment • evaluation of documentation communicating risk management processes to relevant parties.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • financial management units, governance units, human resource management units, or technology units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Risks</i> may include those relating to:</p>	<ul style="list-style-type: none"> • commercial relationships • economic circumstances and scenarios • human behaviour • individual activities • legislation • management activities and controls • natural events • political circumstances • technology.
<p><i>Scope</i> may apply to:</p>	<ul style="list-style-type: none"> • given project • specific business unit or area • specific functional such as: <ul style="list-style-type: none"> • financial management • OHS • governance • external environment • internal environment • whole organisation.
<p><i>Relevant parties</i> may include:</p>	<ul style="list-style-type: none"> • all staff • internal and external stakeholders • senior management • specific teams or business units • technical experts.
<p><i>Research</i> may include:</p>	<ul style="list-style-type: none"> • data or statistical information • information from other business areas • lessons learned from other projects or activities • market research • previous experience • public consultation • review of literature and other information sources.
<p><i>Tools and techniques</i> may include:</p>	<ul style="list-style-type: none"> • brainstorming • checklists • fishbone diagrams

	<ul style="list-style-type: none"> • flowcharts • scenario analysis.
Likelihood may refer to:	<ul style="list-style-type: none"> • probability of a given risk occurring, such as: <ul style="list-style-type: none"> • very likely • likely • possible • unlikely • rare.
Impact or consequence may refer to:	<ul style="list-style-type: none"> • significance of outcomes if the risk occurs, such as: <ul style="list-style-type: none"> • disastrous • severe • moderate impact • minimal impact.
Evaluation of risks includes:	<ul style="list-style-type: none"> • considering the likelihood of the risk occurring • considering the impact of the risk • determining which risks are most significant and are therefore priorities for treatment.
Options may include:	<ul style="list-style-type: none"> • avoiding the risk • changing the consequences • changing the likelihood • retaining the risk • sharing the risk with a third party.
Action plans should include:	<ul style="list-style-type: none"> • what actions are required • who is taking responsibility • time lines • monitoring processes.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify elements of the business plan	1.1. Identify purpose of the <i>business plan</i> 1.2. Identify and review the essential components of the business plan 1.3. Identify and document <i>business goals and objectives</i> as a basis for measuring business performance
2. Develop a business plan	2.1. Research resources, legal and compliance requirements, specifically in relation to <i>occupational health and safety (OHS)</i> , in accordance with business goals and objectives 2.2. Research market needs, and market size and potential 2.3. Identify sources and costs of finance, from the <i>financial plan</i> , to provide required liquidity and profitability for the business 2.4. Identify methods, from the <i>marketing strategies</i> , to promote the market exposure of the business 2.5. Identify methods/means of production/operation from the <i>production/operations plan</i> to conform with business goals and objectives 2.6. Identify <i>staffing requirements</i> to effectively produce/deliver products/services 2.7. Identify <i>specialist services</i> and sources of advice, where required, and cost in accordance with resources available
3. Develop strategies for minimising risks	3.1. Identify specific interests and objectives of <i>relevant people</i> and seek and confirm their support of the planned business direction 3.2. Identify and develop <i>risk management strategies</i>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to business goals and objectives, and relevant legal requirements</p> <p>3.3.Develop <i>contingency plan</i> to address possible areas of non-conformance with the plan</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to assess business performance
- literacy skills to enable interpretation of business information
- numeracy skills to analyse data.

Required knowledge

- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations and anti-discrimination
- methods of evaluation
- OHS responsibilities and procedures for identifying hazards relevant to the business
- planning processes
- preparation of a business plan
- principles of risk management relevant to business planning
- reasons for and benefits of, business planning
- relevant industry codes of practice
- setting goals and objectives
- types of business planning - feasibility studies; strategic, operational, financial and marketing planning.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of a business plan which provides for finance, marketing and provision of products/services to facilitate the business goals and objectives • identification of and planning for, OHS and duty of care responsibilities • development of risk management strategies • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including a business plan and risk management strategies • oral or written questioning to assess knowledge of OHS responsibilities and procedures for identifying hazards relevant to the business • demonstration of practical skills • review of documented business goals and objectives • review of contingency plans developed to address possible areas of non-conformance with the business plan.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB401A Establish legal and risk management requirements of small business • BSBSMB402A Plan small business finances • BSBSMB403A Market the small business.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Business plan may include:

- business opportunities, which may be influenced by:
 - amount and types of finance available
 - expected financial viability
 - skills of operator
- details of ownership/management
- finance, expenditure statement, balance sheet and cash flow forecast, projections for the initial years of operation assumptions underlying the business plan, expected level of inflation and taxation, expected trend of interest rate, capital expenditure and its timing, stock turnover, debtors collection period, creditor payment period, return on investment
- level of risk involved, risk assessment and management
- market focus of the business
- marketing requirements
- need to raise finance and requirements of lenders
- organisation/operational arrangements
- proposed size and scale of the business
- recognition of any seasonal or cyclical (time-based) elements which are crucial to the success of the business
- resources required and available
- sources of funding
- specialist services and sources of advice that may be required
- staffing
- stages in the business development

Business goals and objectives may include:

- customer needs/marketing projections
- family or community benefits

RANGE STATEMENT	
	<ul style="list-style-type: none"> • financial projections • goals, objectives, plans, systems and processes • lifestyle issues • market focus of the business • proposed size and scale of the business • short-, medium- or long-term goals • social responsibility
<i>Occupational health and safety issues</i> must include:	<ul style="list-style-type: none"> • identification of specific hazard issues such as occupational violence, security, manual handling, equipment and hazardous substances • management of the organisation and operation of OHS as part of the business plan • procedures for managing hazards in the workplace (identify, assess and control) • provisions for ensuring safety of members of the public and contractors visiting the premises/worksite
<i>Financial plan</i> may include:	<ul style="list-style-type: none"> • analysis of sales by product/service, identifying where they were sold and to whom • cash flow estimates for each forward period • current financial state of the enterprise (or owner/operator) • estimates of profit and loss projections for each forward period • financial performance to date (if applicable) • likely return on investment • monthly, quarterly or annual returns • non-recurrent assets calculations • profit, turnover, capital and equity targets • projected profit targets, pricing strategies, margins • projections of likely financial results (budgeting) • projections, which may vary depending on the importance of such information and the stage in the life of the business • resources required to implement the proposed marketing and production strategies (staff, materials, plant and equipment) • review of financial inputs required (sources

RANGE STATEMENT	
	<p>and forms of finance)</p> <ul style="list-style-type: none"> • risks and measures to manage or minimise risks • working, fixed, debt and equity capital
<i>Marketing strategies</i> may include:	<ul style="list-style-type: none"> • achieving lower costs of production and distribution than competitors • creating a very different product line or service so that the business becomes a class leader in the industry • distribution • pricing, presentation and display of products/services • product design and packaging • product range and mix • promotion and advertising • pursuing cost leadership and/or product differentiation within a specialist market segment
<i>Production/operations plan</i> may include:	<ul style="list-style-type: none"> • customer requirements, market expectations, budgetary constraints • industrial relations climate and quality assurance considerations • means of supply and distribution • operational targets and action plan, which may include short-, medium- or long-term goals • options for production, delivery, technical and customer service and support
<i>Staffing requirements</i> may include:	<ul style="list-style-type: none"> • full-time, part-time staff, permanent, temporary or casual staff • owner/operator • sub-contractors or external advisers/consultants
<i>Specialist services</i> may include:	<ul style="list-style-type: none"> • accountants • business advisors and consultants • business brokers • contractors • government agencies • industry/trade associations • lawyers and providers of legal advice • mentors

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement financial plan	<p>1.1. Identify <i>financial information</i> requirements and obtain <i>specialist services</i>, as required, to profitably operate and extend the business in accordance with the business plan</p> <p>1.2. Produce financial budgets/projections, including <i>cash flow</i> estimates, as required for each forward period, and distribute to <i>relevant people</i> in accordance with legal requirements</p> <p>1.3. Negotiate, secure and manage business capital to best enable implementation of the business plan and to meet the requirements of <i>financial backers</i></p> <p>1.4. Develop and maintain strategies to enable adequate financial provision for taxation in accordance with legal requirements</p> <p>1.5. Develop, monitor and maintain client <i>credit policies</i>, including contingencies for debtors in default, to maximise cash flow</p> <p>1.6. Select key performance indicators to enable ongoing monitoring of financial performance</p> <p>1.7. Record and communicate financial procedures to relevant people to facilitate implementation of the business plan</p>
2. Monitor financial performance	2.1. Regularly monitor and report on financial performance targets and analyse data to establish the

ELEMENT	PERFORMANCE CRITERIA
	<p>extent to which the <i>financial plan</i> has been met</p> <p>2.2. Monitor marketing and operational strategies for their effects on the financial plan</p> <p>2.3. Calculate and evaluate <i>financial ratios</i> according to own/industry benchmarks</p> <p>2.4. Assess financial plan to determine whether variations or alternative plans are needed, and change as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret financial data
- communication skills to negotiate capital and to report on performance
- literacy skills to interpret legal requirements and financial reports
- numeracy skills to calculate costs, prices, profit and other financial information.

Required knowledge

The following knowledge must be assessed as part of this unit:

- benchmarking
- financial decision making relevant to the business
- financial indicators
- purpose of financial reports
- preparation and interpretation of budget/actual reports
- principles for preparation of balance sheets and their interpretation
- principles for preparation of profit and loss statements and their interpretation
- stock records/stock control relevant to the business.

BSBSUS501A Develop workplace policy and procedures for sustainability

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to develop and implement a workplace sustainability policy, including the modification of the policy to suit changed circumstances.</p> <p>This unit requires the ability to access industry information, applicable legislative and occupational health and safety (OHS) guidelines.</p> <p>While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit addresses the knowledge, processes and techniques necessary to develop approaches to sustainability within workplaces, including the development and implementation of policy.</p> <p>This unit applies to people with managerial responsibility who undertake work developing approaches to create strategies within workplaces, including the development and implementation of policy and includes:</p> <ul style="list-style-type: none"> • communicating with relevant stakeholders • developing and monitoring policies • reviewing and improving policies. <p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to develop and implement integrated sustainability policies and</p>
--------------------------------	--

	<p>procedures within an enterprise. The review of the policy after implementation will also need to be evidenced.</p> <p>The context of the unit applies to all sectors of the business industry; it may be applied to all sections of an organisation, including the office, the factory floor, or work area. With such a broad application, the unit will need to be contextualised as it is applied across an organisation and across different industry sectors.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy	1.1. Define <i>scope</i> of sustainability policy 1.2. Gather information from a range of <i>sources</i> to plan and develop policy 1.3. Identify and consult <i>stakeholders</i> as a key component of the policy development process 1.4. Include appropriate <i>strategies</i> in policy at all stages of work for minimising resource use, reducing toxic material and hazardous chemical use, and employing life cycle management approaches 1.5. Make recommendations for policy options based on likely effectiveness, timeframes and cost 1.6. Develop policy that reflects the organisation's commitment to sustainability as an integral part of business planning and as a business opportunity 1.7. Agree to appropriate methods of implementation
2. Communicate workplace sustainability policy	2.1. Promote workplace sustainability policy, including its expected outcome to key stakeholders 2.2. Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned
3. Implement workplace sustainability policy	3.1. Develop and communicate procedures to help implement workplace sustainability policy 3.2. Implement strategies for continuous improvement in resource efficiency 3.3. Establish and assign responsibility to use recording systems for tracking continuous improvements in sustainability approaches
4. Review workplace sustainability policy implementation	4.1. Document outcomes and provide feedback to key personnel and stakeholders 4.2. Investigate successes or otherwise of policy 4.3. Monitor records to identify trends that may require remedial action and use to promote continuous improvement of performance 4.4. Modify policy and or procedures as required to ensure improvements are made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to adjust communication to suit different audiences; to respond effectively to diversity; to work as a member of a team to consult on and validate policy
- literacy skills to read and evaluate complex and formal documents such as policy and legislation
- problem skills to effectively manage different points of view and dissenting stakeholders
- research, analytical and writing skills to research, analyse and present information; to prepare written reports requiring precision of expression and language and structures suited to the intended audience

Required knowledge

- best practice approaches relevant to own work area
- environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy being developed
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational policies, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • candidate's involvement as a key person in planning, developing and implementing organisational policy and that the developed policy complies with legislative requirements • implementation strategy, as part of the policy, that has been devised, implemented and reviewed showing a measurable improvement utilising the chosen benchmark indicators • communicating with stakeholders to discuss possible approaches to policy development and implementation, and contributing to the resolution of disputes among stakeholders • developing and monitoring policies for analysing data on enterprise resource consumption • using software systems for recording and filing documentation for measurement of current usage and using word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information • reviewing and improving policies by identifying improvements and benchmarking against industry best practice and attempting new approaches continuously over time.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to relevant legislation/standards/guidelines • access to a range of workplace documentation and personnel, information and resources (such as compliance obligations, organisational plans, work responsibilities) • access to reports from other parties involved in the development and implementation of policy • evidence is collected over time, involving both formative and summative assessment • evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p>

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on the job performance by the candidate • response to case studies • review of policy developed and procedural documentation outlining the approach taken • review of implementation strategy, plans and work plans • analysis of methods used to involve stakeholders in policy development, implementation and review • analysis of inefficiencies or opportunities for improvements identified in the workplace • evaluation of participation in sustainability work practices and programs such as an environmental management framework • observation over time in relation to review of work area relating to policy and procedures being developed to assess measurement of resources used, hazards and compliance.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBATSIM419A Contribute to the development and implementation of organisational policies • BSBHRM506A Manage recruitment, selection and induction processes • BSBHRM602B Manage human resources strategic planning • BSBINN502A Build and sustain an innovative work environment • BSBMGT515A Manage operational plan • BSBMGT516C Facilitate continuous improvement • BSBMGT608C Manage innovation and continuous improvement • BSBMGT616A Develop and implement strategic plans • BSBMGT617A Develop and implement a business plan • BSBRSK501A Manage risk.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of workplace sustainability policy may include:

- addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
 - ecological foot printing
 - Energy Efficiency Opportunities Bill 20051
 - Global Reporting Initiative
 - green office program
 - green purchasing
 - Greenhouse Challenge Plus (Australian government initiative)
 - ISO 14001:1996 Environmental management systems life cycle analyses
 - life cycle analyses
 - product stewardship
 - supply chain management
 - sustainability covenants/compacts
 - triple bottom line reporting
- integrated approach to sustainability which includes environmental, economic and social aspects, or a specific approach that focuses on each aspect individually
- investigating particular business and market context of the industry/organisation
- meeting relevant laws, by laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act):
 - international
 - commonwealth
 - state/territory
 - industry

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisation • parts of the organisation to which it is to apply, including whether it is for the whole organisation, one site, one work area or a combination of these.
<i>Sources</i> may include:	<ul style="list-style-type: none"> • regulatory sources • relevant personnel • organisational specifications.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • individuals and groups both inside and outside the organisation who have some direct interest in the organisation's conduct, actions, products and services, including: <ul style="list-style-type: none"> • customers • employees at all levels of the organisation • government • investors • local community • other organisations • regulators • suppliers • key personnel within the organisation and specialists outside the organisation who may have particular technical expertise.
<i>Strategies</i> may include:	<ul style="list-style-type: none"> • promotional activities • raising awareness among stakeholders • training staff in sustainability principles and techniques.

Co-requisite units

Co-requisite units		

BSBWHS503A Contribute to the systematic management of WHS risk

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>BSB07 Business Training Package version 7.0</i>.</p> <p>Replaces and is equivalent to BSBOHS504B Apply principles of OHS risk management.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to contribute to the systematic management of work health and safety (WHS) risk. It addresses the processes and techniques necessary to contribute to the systematic management of WHS risk.

Application of the Unit

This unit applies to people who work in a range of WHS roles across all industries and who apply a substantial knowledge base and well-developed skills in a wide variety of WHS contexts.

NOTE: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Access information and data to contribute to the systematic management of WHS risk	1.1 Identify <i>sources of information and data</i> 1.2 Obtain information and data to determine the purposes, objectives, principles and framework of a systematic approach to managing WHS risk
2. Contribute to effective consultation and participation during all stages of the risk-management process	2.1 Identify <i>individuals and parties</i> who need to participate and be consulted 2.2 Apply knowledge of effective consultation and participation to contribute to ensuring effective consultation and participation processes occur
3. Contribute to establishing the context for risk management	3.1 Apply knowledge of <i>WHS legislation</i> to identify <i>duty holders</i> and legislative requirements for WHS risk management 3.2 Identify individuals and parties impacting on risk management 3.3 Apply knowledge of organisation to identify factors that will impact on risk control 3.4 Contribute to establishing the <i>context of the risk-management process</i> 3.5 Contribute to defining <i>risk criteria</i>
4. Contribute to risk assessment	4.1 Apply knowledge of workplace hazards and risks to contribute to <i>risk identification</i> 4.2 Apply knowledge of WHS legislation, risk assessment and workplace WHS information and data to contribute to <i>risk</i>

	<i>analysis and evaluation</i>
5. Contribute to risk treatment	<p>5.1 Apply knowledge of WHS hazard and risk control, and WHS legislation to contribute to the selection of <i>risk treatment options</i></p> <p>5.2 Apply knowledge of the organisation's WHS management system (WHSMS) and WHS information system (WHSIS) to prepare and implement risk treatments</p>
6. Contribute to monitoring, reviewing and recording risk-management process	<p>6.1 Apply knowledge of the organisation's WHSMS to contribute to monitoring and reviewing risk-management process</p> <p>6.2 Apply knowledge of the organisation's WHSIS to contribute to recording risk-management process</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret relevant workplace information and data
- communication skills to:
