visually**

**Release: 1**

# Assessment Requirements for FWPCOT3339 Grade wood product visually

## Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

## Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has graded, sorted and marked one product selected from the following list for one production run according to workplace procedures:

- chipboard
- coated and/or treated timber products
- cross arms for overhead lines
- crossings
- debarked logs
- decking for wharves and bridges
- dressed timber
- fibreboard
- in-the-rough timber
- laminated veneer
- medium density fibreboard
- mine guides
- piles
- plywood
- poles
- preservative treated timber
- recycled timber
- sleepers
- stress and non-stress graded timber
- timber from imported species
- timber from native species
- other engineered wood products.

In performing each of these tasks, the individual has:

- assessed wood product characteristics visually for strength and/or appearance
- complied with legislation, standards and codes of practice relevant to visual grading operations
- measured wood product moisture content and length requirements and tolerances against allowable limits for the wood product type and end-use application
- identified defects in wood products
- identified products that require docking, regrading or reworking and those that are rejected
- branded, labelled, stamped or marked each graded wood product to indicate compliance with relevant Australian Standard and/or CodeMark certification requirements
- safely used workplace equipment for lifting and moving materials
- arranged reuse, recycling or disposal of sub-standard wood product
- coordinated movement of graded material to storage or processing operations
- reported grading outcomes to appropriate personnel.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- markings used on wood products to identify grades
- key requirements of legislation, standards and codes of practice relevant to visual grading operations, including:
  - Australian Standards
  - CodeMark certification
  - industry standards for cross-sections and lengths for different types of wood products
  - grade classifications for different types of wood products
- typical flow of material supply in and out of the grading area
- methods to label wood products for storage locations, and common terms used
- purpose, features and operation of equipment used to grade wood products, including moisture meters
- workplace health and safety procedures, with particular emphasis on use of personal protective equipment (PPE) and safe manual handling techniques
- types of risk and hazards and mitigation measures associated with grading and sorting activities
- equipment used for lifting and moving wood products
- types of timber products for grading and sorting
- methods of visual estimation, grading, colour identification and tagging of different types of wood products
- procedures for sorting, marking, distribution and storage of different types of wood products
- methods of assessing wood products for number and frequency of defects
- methods for determining and recording moisture content of wood products
- wood products defects, including:

- warp
- wane
- cupping
- shakes
- insect defects
- loose or missing knots
- resin pockets
- dents
- loose surface
- lifting coatings
- thin or missing coatings
- chipped edges
- splits
- voids
- splintered or missing edges
- pin holes
- criteria for disposal, recycling and reuse of sub-standard wood products
- methods for safe disposal of waste preservative treated timber.

## Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - moving equipment
  - PPE suitable for grading, sorting and marking wood products
  - labelling materials
  - three different wood products for grading
  - storage locations for graded wood products
- specifications:
  - workplace procedures for grading and sorting activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
