**Assessment Requirements for
FWPWPP2209 Saw products from
continuous ply**

Release: 1

Assessment Requirements for FWPWPP2209 Saw products from continuous ply

Modification History

Release	Comment
1	<p>Replaces equivalent unit FPIWPP2209B Saw products from continuous ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.</p> <p>Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.</p>

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce sawn panels from continuous ply in line with individual work orders prescribing different lengths and tolerances and number of panels for each job
- across the above jobs, complete cutting patterns and sequences for single straight cuts and angles requiring one cutting pass set for multiple cuts of the same size
- for each of the above jobs, stack batches of sawn panels in storage location according to common length
- after each of the above jobs, complete operator maintenance on the saw used.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber ply and other waste
- storage layout and categories for:
 - raw materials
 - stacking finished panels
- typical continuous ply defects and how they affect ability to produce quality sawn panels:

- warp
- wane
- cupping
- shakes
- insect defects
- knots
- resin pockets
- cutting patterns and sequences for single straight cuts and angles requiring one cutting pass
- range of industry standard lengths, tolerances and applicable terminology
- purpose, features and operation of equipment used to saw products from continuous ply:
 - measuring equipment
 - power operated, manually controlled docking and trimming saws with carriages
 - saws with adjustable angle
 - saws with one or multiple blades
 - bandsaws
 - panel saws
 - table saws
 - bench saws
 - feed systems with rollers which support continuous ply
- methods for assessing saw blade condition and completing and basic non-specialist repair and maintenance for saws
- organisational procedures specific to sawing products from continuous ply:
 - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- tools and equipment for sawing products from continuous ply:
 - measuring equipment
 - saws which must include one or more of the following:
 - power operated, manually controlled docking and trimming saws with carriages
 - saws with adjustable angle
 - saws with one or multiple blades
 - bandsaws
 - panel saws
 - table saws

- bench saws
 - feed system with rollers which support continuous ply
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for sawing products from continuous ply
- a diverse range of continuous ply rolls
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for sawing and storing panels
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for sawing products from continuous ply

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
